   A. Pipe Rails and Pickets: ASTM A500 Grade B, C or D, or ASTM A53 Grade B for standard weight pipe (Schedule 40) and ASTM A36 for bars.
   B. Structural Tube: ASTM A500 Grade A, B, C, or D or ASTM A501
   C. Steel Plate: ASTM A36 or ASTM A709 Grade 36
   D. U-Channels and Filler plates: ASTM A36 or ASTM A1011 (Grade 36).
   E. Stainless steel (SS) screws: Type 316 or 18-8 Alloy
   F. Galvanized Steel Fasteners: coated in accordance with Specification Section 962.
      a. Hex Head Bolts: ASTM A 307
         1. ½" diameter single bolt option, Grade 36
         2. ⅝" four bolt option, Grade 55
      b. ASTM A307 Grade A or F1554 fully threaded rods, Grade 55
      c. Hex Nuts: ASTM A563
      d. Flat Washers: ASTM F436
      e. Plate Washers: ASTM A36 or ASTM A706 Grade 36.
   G. Shims: ASTM B209 Alloy 6061
   H. Bearing Pads: ⅛" Plain, Fabric Reinforced or Fabric Laminated pads that meet the requirements of Specification Section 932 for Ancillary Structures.
4. Fabricate pickets and vertical panel elements parallel to the posts; except Type 2, 3 and 5 panel infills may be fabricated parallel to the longitudinal grade. Maintain a maximum clear opening of 3⅞" for standard installations and 3½" when a 9" sphere requirement is indicated in the Data Tables.
5. Maximum spacing between expansion joints is 40'-0". Locate an Expansion Joint between the posts on either side of the Deck Expansion Joint.
6. Field splices are similar to the Expansion Joint Detail and may be approved by the Engineer to facilitate handling, but the top rail must be continuous across a minimum of two posts.
7. For intermediate and bottom horizontal rails, the scarfed joints shown may be substituted with alternate joints shown in detail "K".
8. Make corners and changes in tangential longitudinal alignment with a 9" bend radius or terminate adjoining sections with mitered end sections when handrails are not required.
9. For changes in tangential longitudinal alignment greater than 45, position posts a maximum of 2'-0" each side of the corner but not at the corner apex.
10. For curved longitudinal alignments, stop bend the top and bottom rails and handrails to match the alignment radius.
11. Handrails are required and must be continuous at landings for:
    A. Three or more steps
    B. Three or more risers
12. Installation: Cutting of reinforcing steel is permitted for post installed anchors.

PLANT LIST

PLANT QUANTITY / PLANT SYMBOL	SYMBOL	BOTANICAL NAME (COMMON NAME)	MINIMUM SIZE / SPACING
		TREES	
7 / AZ	QV	LIVE OAK (QUERCUS VIRGINIANA)	10' HT., 2.5" CAL. 1 TREE EVERY 25'

LANDSCAPE NOTES

1. ALL PLANT MATERIAL SHALL BE GRADE No. 1 OR BETTER AS OUTLINED IN THE AMERICAN STANDARD FOR NURSERY STOCK AS PUBLISHED BY THE AMERICAN ASSOCIATION OF NURSERYMEN, LATEST EDITION.

2. CONTRACTOR, IN PREPARING BIDS, SHALL VERIFY THE AVAILABILITY OF ALL PLANT MATERIAL SHOWN ON THESE PLANS. IF CERTAIN PLANT MATERIAL IS NOT AVAILABLE AT THAT TIME, THE CONTRACTOR SHALL CONTACT THE LANDSCAPE ARCHITECT, TO DISCUSS EQUIVALENT SUBSTITUTIONS.

3. IN THE EVENT OF DISCREPANCY BETWEEN THE PLANT LIST AND ACTUAL NUMBER OF PLANTS SHOWN ON THE PLAN, THE PLAN SHALL CONTROL. THE LANDSCAPE CONTRACTOR SHALL NOTIFY INTERPLAN LLC OF ANY DISCREPANCIES PRIOR TO ISSUANCE OF BIDS.

4. LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE OCCURRING ON SITE OR ADJACENT AREAS, INCLUDING BUT NOT LIMITED TO BUILDINGS, PAVING, UTILITIES, ETC., WHICH IS CAUSED BY PREPARING OR INSTALLING ANY AND ALL PLANT MATERIAL.

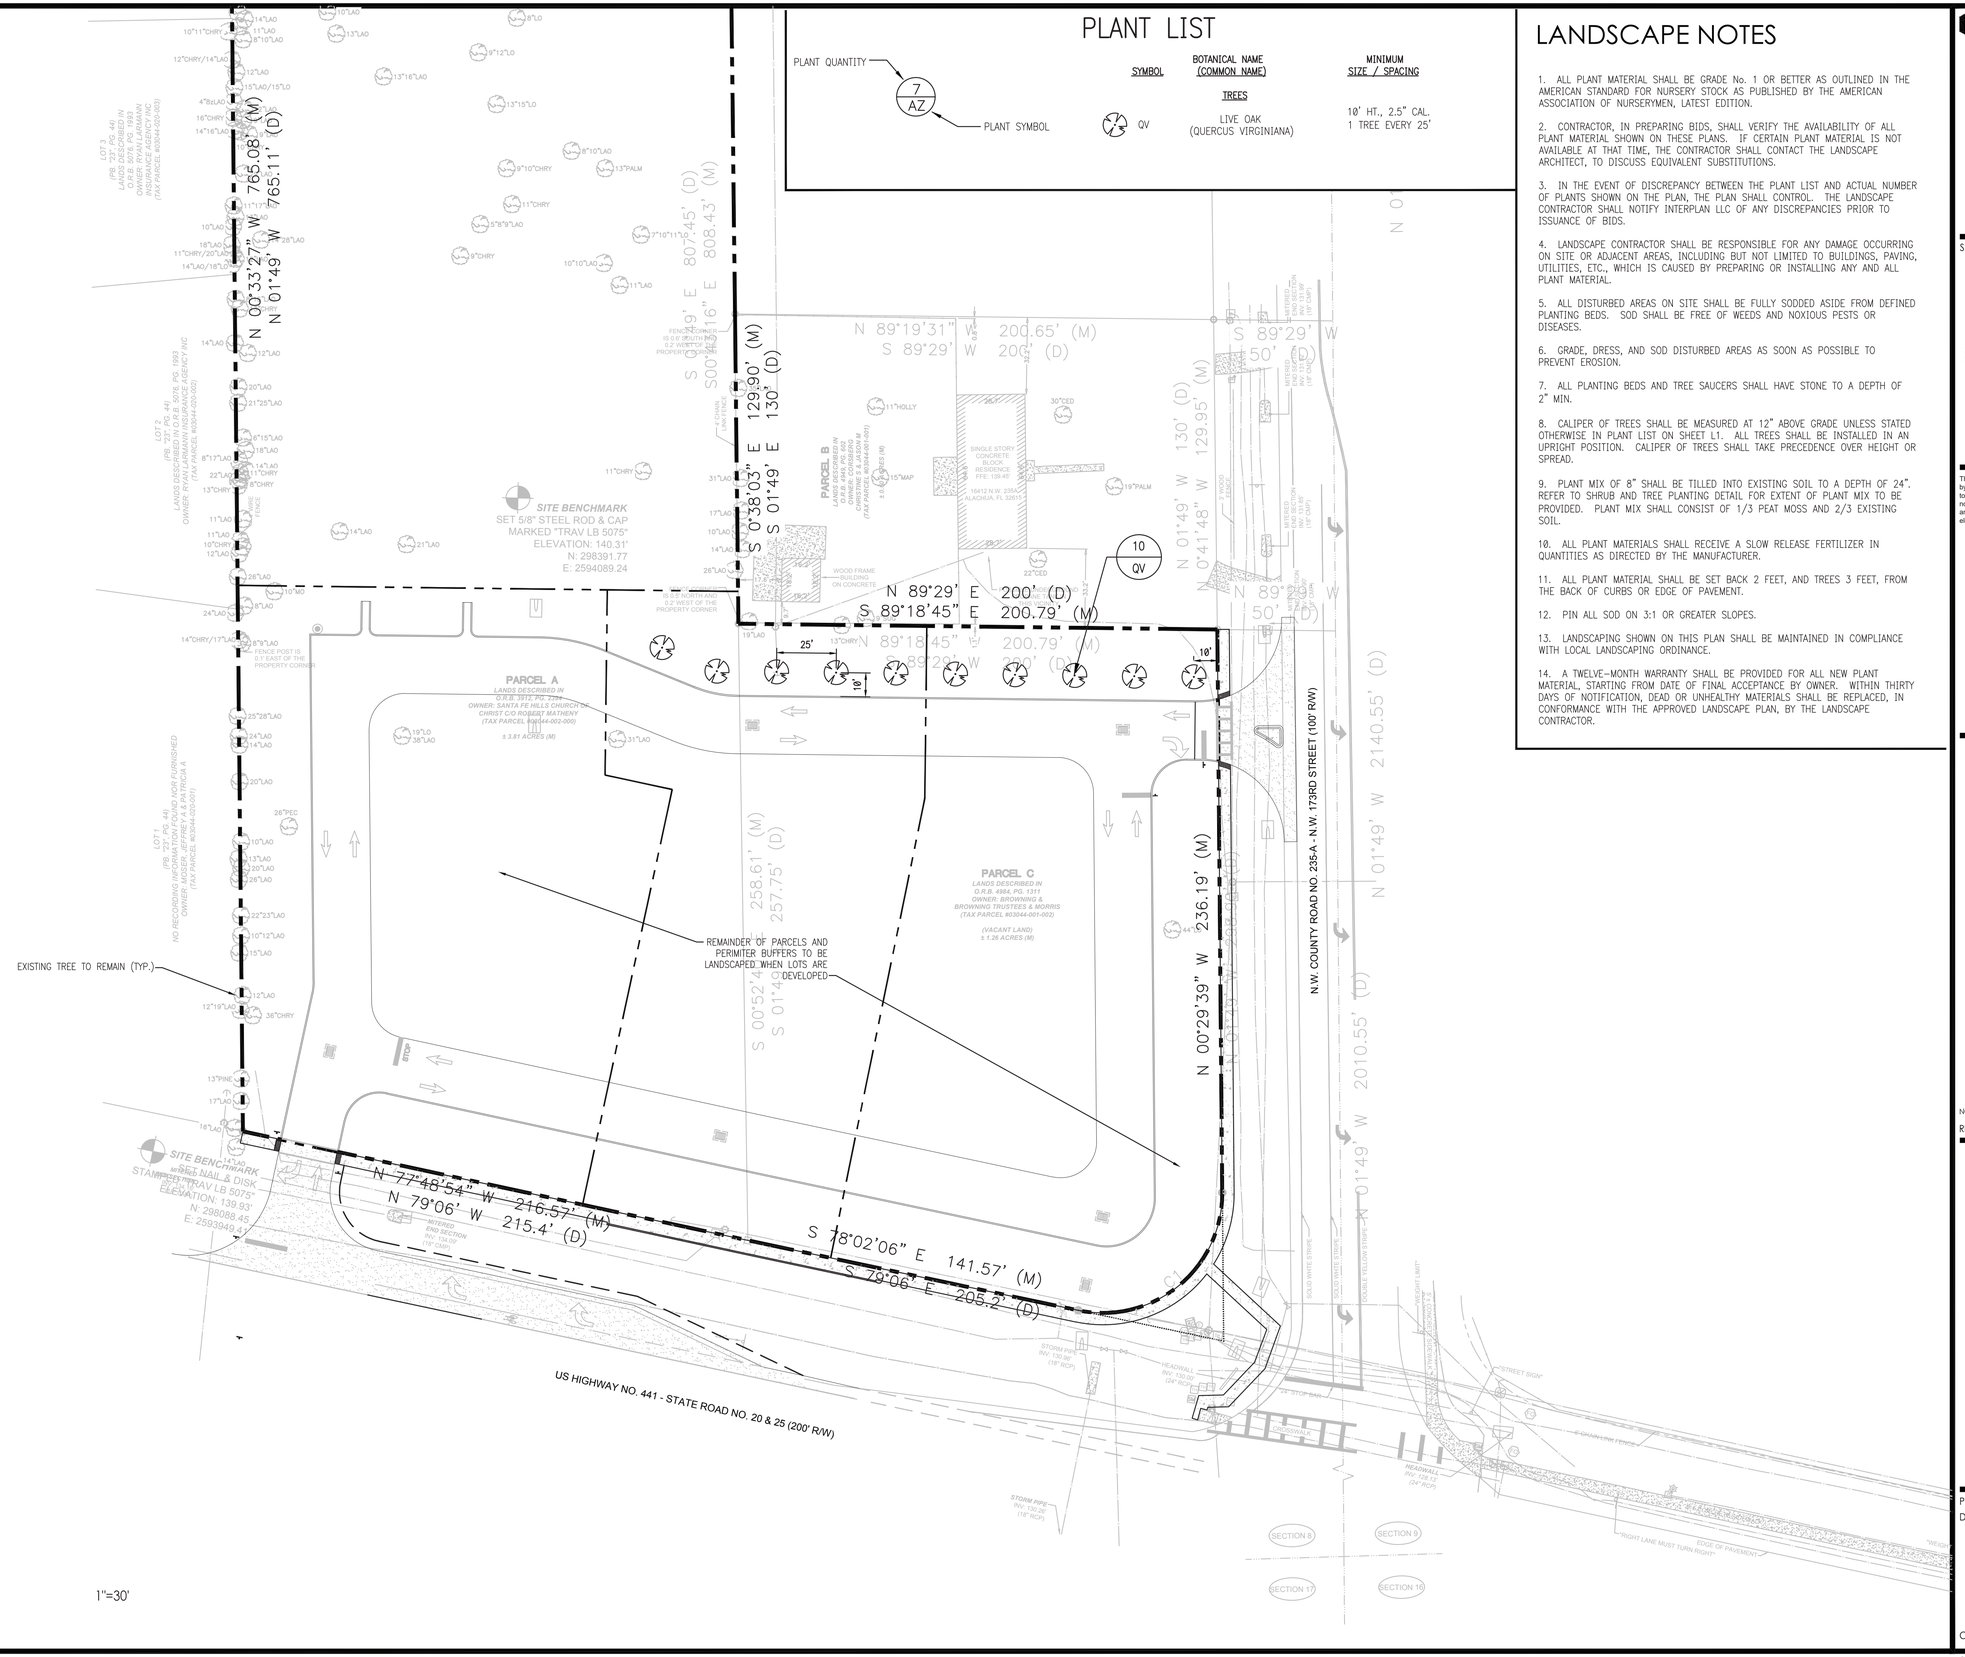
5. ALL DISTURBED AREAS ON SITE SHALL BE FULLY SODDED ASIDE FROM DEFINED PLANTING BEDS. SOD SHALL BE FREE OF WEEDS AND NOXIOUS PESTS OR DISEASES.

6. GRADE, DRESS, AND SOD DISTURBED AREAS AS SOON AS POSSIBLE TO PREVENT EROSION.

7. ALL PLANTING BEDS AND TREE SAUCERS SHALL HAVE STONE TO A DEPTH OF 2" MIN.

8. CALIPER OF TREES SHALL BE MEASURED AT 12" ABOVE GRADE UNLESS STATED OTHERWISE IN PLANT LIST ON SHEET L1. ALL TREES SHALL BE INSTALLED IN AN UPRIGHT POSITION. CALIPER OF TREES SHALL TAKE PRECEDENCE OVER HEIGHT OR SPREAD.

9. PLANT MIX OF 8" SHALL BE TILLED INTO EXISTING SOIL TO A DEPTH OF 24". REFER TO SHRUB AND TREE PLANTING DETAIL FOR EXTENT OF PLANT MIX TO BE PROVIDED. PLANT MIX SHALL CONSIST OF 1/3 PEAT MOSS AND 2/3 EXISTING SOIL.



10. ALL PLANT MATERIALS SHALL RECEIVE A SLOW RELEASE FERTILIZER IN QUANTITIES AS DIRECTED BY THE MANUFACTURER.

11. ALL PLANT MATERIAL SHALL BE SET BACK 2 FEET, AND TREES 3 FEET, FROM THE BACK OF CURBS OR EDGE OF PAVEMENT.

12. PIN ALL SOD ON 3:1 OR GREATER SLOPES.

13. LANDSCAPING SHOWN ON THIS PLAN SHALL BE MAINTAINED IN COMPLIANCE WITH LOCAL LANDSCAPING ORDINANCE.

14. A TWELVE-MONTH WARRANTY SHALL BE PROVIDED FOR ALL NEW PLANT MATERIAL, STARTING FROM DATE OF FINAL ACCEPTANCE BY OWNER. WITHIN THIRTY DAYS OF NOTIFICATION, DEAD OR UNHEALTHY MATERIALS SHALL BE REPLACED, IN CONFORMANCE WITH THE APPROVED LANDSCAPE PLAN, BY THE LANDSCAPE CONTRACTOR.

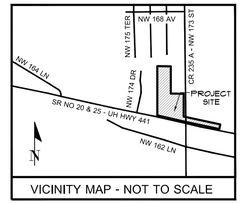
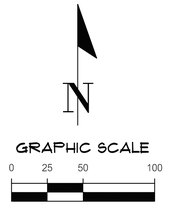
ALTA/NSPS LAND TITLE SURVEY

LOCATED IN THE SOUTHEAST QUARTER (SE 1/4) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST CITY OF ALACHUA, ALACHUA COUNTY, FLORIDA

DESCRIPTION: (AS FURNISHED VIA FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-002-000)("PARCEL A")



COMMENCE AT THE SOUTHEAST CORNER OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, THENCE RUN NORTH 1 DEGREE 49 MINUTES, WEST ALONG THE EAST LINE OF SAID SECTION 2560.55 FEET, THENCE RUN SOUTH 89 DEGREES 29 MINUTES WEST 250 FEET TO THE POINT OF BEGINNING, THENCE RUN SOUTH 1 DEGREE 49 MINUTES, EAST 807.75 FEET TO THE NORTH OF RIGHT OF WAY OF STATE ROAD NO. 20, THENCE RUN NORTH 79 DEGREES 06 MINUTES WEST ALONG SAID RIGHT OF WAY 215,4 FEET, THENCE RUN NORTH 1 DEGREE, 49 MINUTES WEST 765,11 FEET, THENCE RUN NORTH 89 DEGREES 29 MINUTES EAST 210 FEET TO THE POINT OF BEGINNING, ALL BEING AND LYING IN THE SOUTHEAST QUARTER (SE) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA.



DESCRIPTION: (AS FURNISHED VIA FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-001-002)("PARCEL B")

A TRACT OF LAND LOCATED IN THE SOUTHEAST 1/4 OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

FOR A POINT OF REFERENCE, COMMENCE AT THE SOUTHEAST CORNER OF SAID SECTION 8: THENCE RUN NORTH 01 DEG. 49 MIN. WEST, ALONG THE EAST LINE OF SAID SECTION 8 A DISTANCE OF 2010.55 FEET; THENCE RUN SOUTH 89 DEG. 29 MIN. WEST, 50 FEET TO THE WESTERLY RIGHT-OF-WAY OF STATE ROAD S-235A BEING THE POINT OF BEGINNING; THENCE FROM SAID POINT OF BEGINNING CONTINUE SOUTH 89 DEG. 29 MIN. WEST, A DISTANCE OF 200 FEET; THENCE RUN SOUTH 01 DEG. 49 MIN. EAST, A DISTANCE OF 257.75 FEET TO THE NORTHERLY RIGHT-OF-WAY LINE OF STATE HIGHWAY NO. 20; THENCE RUN SOUTH 79 DEG. 06 MIN. EAST, ALONG SAID NORTHERLY RIGHT-OF-WAY LINE A DISTANCE OF 205.2 FEET TO THE SAID WESTERLY RIGHT-OF-WAY LINE OF STATE ROAD NO. S235A; THENCE RUN NORTH 01 DEG. 49 MIN. WEST, ALONG SAID WESTERLY RIGHT-OF-WAY LINE, A DISTANCE OF 298.4 FEET TO CLOSE ON SAID POINT OF BEGINNING.

LESS ANY AND EXCEPT THAT PORTION DESCRIBED AND RECORDED IN OFFICIAL RECORDS BOOK 107, PAGE 609 OF SAID PUBLIC RECORDS.

ZONING RESTRICTIONS:
(PER ALACHUA COUNTY, MUNICODE)
ZONING: A - AGRICULTURE
MINIMUM SETBACK REQUIREMENTS:

- FRONT: 40'
- REAR: 40'
- SIDE (INTERIOR): 20'
- SIDE (STREET): 40'
- REAR: 25'

FLOOD ZONE:
THIS PROPERTY IS LOCATED IN FEDERAL FLOOD ZONE "X", AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN, AS INTERPOLATED FROM FEMA F.I.R.M. PANEL NO. 120 OF 640, COMMUNITY NUMBER AND PANEL "120664 0120 D, EFFECTIVE DATE: JUNE 16, 2006.

SURVEYOR'S NOTES:

1. HORIZONTAL DATUM SHOWN HEREON IS DERIVED FROM THE FLORIDA STATE PLANE COORDINATE SYSTEM, NORTH ZONE, NAD 83 / 2011 ADJUSTMENT, AS DERIVED FROM FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) PRIMARY CONTROL MONUMENT NAMED "2602009CP", BEING A FDOT ALUMINUM CAP STAMPED "CP 2602009" AND PRIMARY CONTROL MONUMENT NAMED "2602018CP", BEING A FDOT ALUMINUM CAP STAMPED "CP 2602018", MEASURED BEARINGS SHOWN HEREON WOULD NEED TO BE ROTATED 01°13'13" COUNTERCLOCKWISE TO BE ON THE SAME BEARING STRUCTURE OF THE RECORDED DEEDS AND/OR FURNISHED DESCRIPTIONS.
2. VERTICAL DATUM IS SHOWN IN NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND IS BASED ON FLORIDA DEPARTMENT OF TRANSPORTATION CONTROL MONUMENT NAMED 2602009BM2, BEING A ROUND CONCRETE MONUMENT WITH FDOT BRASS DISK, STAMPED "BM2 2602009" WITH A PUBLISHED ELEVATION 132.13 FEET (NAVD 88).
3. UNDERGROUND UTILITIES SHOWN HEREON ARE BASED ON VISIBLE SURFACE EVIDENCE, IN CONJUNCTION WITH PAINT MARKINGS DELINEATED BY OTHERS, AND BY ELECTROMAGNETIC INDUCTION PERFORMED BY THIS OFFICE. THIS SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE AND/OR ABANDONED.
4. THE SURVEYOR HAS NO KNOWLEDGE OF UNDERGROUND FOUNDATIONS WHICH MAY ENCROACH.
5. FENCING, SYMBOLS AND MONUMENTATION SHOWN HEREON MAY BE EXAGGERATED FOR PICTORIAL PURPOSES ONLY AND MAY NOT BE SHOWN TO SCALE.
6. IN THE OPINION OF THIS SURVEYOR, THE PERIMETER LINES AS SHOWN HEREON REPRESENT THE LOCATION OF THE BOUNDARY LINES OF THE SUBJECT PARCEL IN RELATION TO THE DESCRIPTION OF RECORD AND THOSE EXISTING LAND CORNERS FOUND TO BE ACCEPTABLE BY THIS SURVEYOR.
7. THIS SURVEY WAS PRODUCED WITH THE BENEFIT OF FURNISHED TITLE INFORMATION PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-002-000) AND, FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-001-002). A SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN PERFORMED BY THE SURVEYOR.
8. INFORMATION FROM FEDERAL EMERGENCY MANAGEMENT AGENCY, (F.E.M.A.) FLOOD INSURANCE RATE MAP(S), SHOWN ON THIS MAP WAS CURRENT AS OF THE REFERENCED DATE. MAP REVISIONS AND AMENDMENTS ARE PERIODICALLY MADE BY LETTER AND MAY NOT BE REFLECTED ON THE MOST CURRENT MAP.
9. PARCEL B IS IN UNINCORPORATED ALACHUA COUNTY, FLORIDA, WHILE PARCEL "A" HAS BEEN ANNEXED INTO THE CITY OF ALACHUA.
10. THERE WERE NO MARKED PARKING SPACES OBSERVED AT THE TIME OF THIS SURVEY.
11. THERE WAS NO OBSERVED EVIDENCE OF CURRENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS BEING CONDUCTED AT THE TIME OF THIS SURVEY.
12. THERE WAS NO EVIDENCE OF CHANGES IN STREET RIGHT OF WAY LINES. THERE WAS NO OBSERVED EVIDENCE OF CURRENT STREET CONSTRUCTION OR REPAIRS. THERE WAS NO OBSERVED EVIDENCE OF CURRENT SIDEWALK CONSTRUCTION OR REPAIRS.
13. THERE IS NO OBSERVED EVIDENCE OF SITE USE AS A CEMETERY, SOLID WASTE DUMP, SUMP OR SANITARY LANDFILL.
14. ADDITIONAL POINTS MAY BE FOUND BY TURNING ON THE SV-NODE* LAYERS IN THE SUPPLIED DIGITAL FILE.
15. TOPOGRAPHIC INFORMATION SHOWN HEREON BASED ON GROUND SURVEY, CONTOURS SHOWN HEREON REFLECT 1-FOOT INTERVALS.
16. PROJECT LIMITS ARE PER CLIENT SPECIFICATIONS.
17. THIS SURVEY IS A TOTAL OF FOUR (4) SHEETS. SEE SHEET ONE (1) FOR OVERALL BOUNDARY INFORMATION. SEE SHEET TWO (2) THROUGH FOUR (4) FOR DETAILED TOPOGRAPHIC INFORMATION AND IMPROVEMENT LOCATIONS.

SCHEDULE B-II EXCEPTIONS:
(PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-002-000)

ITEM NO. 4: THIS PROPERTY IS SUBJECT TO ORDINANCE NO. O-01-42 RECORDED IN OFFICIAL RECORDS BOOK 2387, PAGE 736. (ORDINANCE ANNEXING PARCEL A IN THE CITY OF ALACHUA)

SCHEDULE B-II EXCEPTIONS:
(PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-001-002)

ITEM NO. 4: THIS PROPERTY IS SUBJECT TO THE ORDINANCE 24-09 RECORDED AUGUST 27, 2024 IN OFFICIAL RECORDS BOOK 5176, PAGE 1, OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA. (ORDINANCE ANNEXING PARCEL B IN THE CITY OF ALACHUA)

ALTA/NSPS LAND TITLE SURVEY

LOCATED IN THE SOUTHEAST QUARTER (SE 1/4) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST CITY OF ALACHUA, ALACHUA COUNTY, FLORIDA

SURVEYOR'S NOTES:

1. HORIZONTAL DATUM SHOWN HEREON IS DERIVED FROM THE FLORIDA STATE PLANE COORDINATE SYSTEM, NORTH ZONE, NAD 83 / 2011 ADJUSTMENT, AS DERIVED FROM FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) PRIMARY CONTROL MONUMENT NAMED "2602009CZ", BEING A FDOT ALUMINUM CAP STAMPED "CZ 2602009" AND PRIMARY CONTROL MONUMENT NAMED "2602018CS", BEING A FDOT ALUMINUM CAP STAMPED "CS 2602018". MEASURED BEARINGS SHOWN HEREON WOULD NEED TO BE ROTATED 01°13'13" COUNTERCLOCKWISE TO BE ON THE SAME BEARING STRUCTURE OF THE RECORDED DEEDS AND/OR FURNISHED DESCRIPTIONS.
2. VERTICAL DATUM IS SHOWN IN NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND IS BASED ON FLORIDA DEPARTMENT OF TRANSPORTATION CONTROL MONUMENT NAMED 2602009RMZ, BEING A ROUND CONCRETE MONUMENT WITH FDOT BRASS DISK, STAMPED "RMZ 2602009" WITH A PUBLISHED ELEVATION 132.13 FEET (NAVD 88).
3. UNDERGROUND UTILITIES SHOWN HEREON ARE BASED ON VISIBLE SURFACE EVIDENCE, IN CONJUNCTION WITH PAINT MARKINGS DELINEATED BY OTHERS, AND BY ELECTROMAGNETIC INDUCTION PERFORMED BY THIS OFFICE. THIS SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE AND/OR ABANDONED.
4. THE SURVEYOR HAS NO KNOWLEDGE OF UNDERGROUND FOUNDATIONS WHICH MAY ENCROACH.
5. FENCING, SYMBOLS AND MONUMENTATION SHOWN HEREON MAY BE EXAGGERATED FOR PICTORIAL PURPOSES ONLY AND MAY NOT BE SHOWN TO SCALE.
6. IN THE OPINION OF THIS SURVEYOR, THE PERIMETER LINES AS SHOWN HEREON REPRESENT THE LOCATION OF THE BOUNDARY LINES OF THE SUBJECT PARCEL IN RELATION TO THE DESCRIPTION OF RECORD AND THOSE EXISTING LAND CORNERS FOUND TO BE ACCEPTABLE BY THIS SURVEYOR.
7. THIS SURVEY WAS PRODUCED WITH THE BENEFIT OF FURNISHED TITLE INFORMATION PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-002-000) AND FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-001-002). A SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN PERFORMED BY THE SURVEYOR.
8. INFORMATION FROM FEDERAL EMERGENCY MANAGEMENT AGENCY, (F.E.M.A.) FLOOD INSURANCE RATE MAP(S), SHOWN ON THIS MAP WAS CURRENT AS OF THE REFERENCED DATE. MAP REVISIONS AND AMENDMENTS ARE PERIODICALLY MADE BY LETTER AND MAY NOT BE REFLECTED ON THE MOST CURRENT MAP.

ALTA/NSPS LAND TITLE SURVEY

LOCATED IN THE SOUTHEAST QUARTER (SE 1/4) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST CITY OF ALACHUA, ALACHUA COUNTY, FLORIDA

SURVEYOR'S NOTES:

1. HORIZONTAL DATUM SHOWN HEREON IS DERIVED FROM THE FLORIDA STATE PLANE COORDINATE SYSTEM, NORTH ZONE. NAD 83 / 2011 ADJUSTMENT, AS DERIVED FROM FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) PRIMARY CONTROL MONUMENT NAMED "2602009C2", BEING A FDOT ALUMINUM CAP STAMPED "C2 2602009" AND PRIMARY CONTROL MONUMENT NAMED "2602018C3", BEING A FDOT ALUMINUM CAP STAMPED "C3 2602018". MEASURED BEARINGS SHOWN HEREON WOULD NEED TO BE ROTATED 01°13'13" COUNTERCLOCKWISE TO BE ON THE SAME BEARING STRUCTURE OF THE RECORDED DEEDS AND/OR FURNISHED DESCRIPTIONS.
2. VERTICAL DATUM IS SHOWN IN NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND IS BASED ON FLORIDA DEPARTMENT OF TRANSPORTATION CONTROL MONUMENT NAMED 2602009BM2, BEING A ROUND CONCRETE MONUMENT WITH FDOT BRASS DISK, STAMPED "BM2 2602009" WITH A PUBLISHED ELEVATION 132.13 FEET (NAVD 88).
3. UNDERGROUND UTILITIES SHOWN HEREON ARE BASED ON VISIBLE SURFACE EVIDENCE, IN CONJUNCTION WITH PAINT MARKINGS DELINEATED BY OTHERS, AND BY ELECTROMAGNETIC INDUCTION PERFORMED BY THIS OFFICE. THIS SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE AND/OR ABANDONED.
4. THE SURVEYOR HAS NO KNOWLEDGE OF UNDERGROUND FOUNDATIONS WHICH MAY ENCROACH.
5. FENCING, SYMBOLS AND MONUMENTATION SHOWN HEREON MAY BE EXAGGERATED FOR PICTORIAL PURPOSES ONLY AND MAY NOT BE SHOWN TO SCALE.
6. IN THE OPINION OF THIS SURVEYOR, THE PERIMETER LINES AS SHOWN HEREON REPRESENT THE LOCATION OF THE BOUNDARY LINES OF THE SUBJECT PARCEL IN RELATION TO THE DESCRIPTION OF RECORD AND THOSE EXISTING LAND CORNERS FOUND TO BE ACCEPTABLE BY THIS SURVEYOR.
7. THIS SURVEY WAS PRODUCED WITH THE BENEFIT OF FURNISHED TITLE INFORMATION PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-002-000) AND FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-001-002). A SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN PERFORMED BY THE SURVEYOR.
8. INFORMATION FROM FEDERAL EMERGENCY MANAGEMENT AGENCY, (F.E.M.A.) FLOOD INSURANCE RATE MAP(S), SHOWN ON THIS MAP WAS CURRENT AS OF THE REFERENCED DATE. MAP REVISIONS AND AMENDMENTS ARE PERIODICALLY MADE BY LETTER AND MAY NOT BE REFLECTED ON THE MOST CURRENT MAP.
9. PARCEL B IS IN UNINCORPORATED ALACHUA COUNTY, FLORIDA, WHILE PARCEL "A" HAS BEEN ANNEXED INTO THE CITY OF ALACHUA.
10. THERE WERE NO MARKED PARKING SPACES OBSERVED AT THE TIME OF THIS SURVEY.
11. THERE WAS NO OBSERVED EVIDENCE OF CURRENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS BEING CONDUCTED AT THE TIME OF THIS SURVEY.
12. THERE WAS NO EVIDENCE OF CHANGES IN STREET RIGHT OF WAY LINES. THERE WAS NO OBSERVED EVIDENCE OF CURRENT STREET CONSTRUCTION OR REPAIRS. THERE WAS NO OBSERVED EVIDENCE OF CURRENT SIDEWALK CONSTRUCTION OR REPAIRS.
13. THERE IS NO OBSERVED EVIDENCE OF SITE USE AS A CEMETERY, SOLID WASTE DUMP, SUMP OR SANITARY LANDFILL.
14. ADDITIONAL POINTS MAY BE FOUND BY TURNING ON THE SV-NODE* LAYERS IN THE SUPPLIED DIGITAL FILE.
15. TOPOGRAPHIC INFORMATION SHOWN HEREON BASED ON GROUND SURVEY. CONTOURS SHOWN HEREON REFLECT 1-FOOT INTERVALS.
16. PROJECT LIMITS ARE PER CLIENT SPECIFICATIONS.
17. THIS SURVEY IS A TOTAL OF FOUR (4) SHEETS. SEE SHEET ONE (1) FOR OVERALL BOUNDARY INFORMATION. SEE SHEET TWO (2) THROUGH FOUR (4) FOR DETAILED TOPOGRAPHIC INFORMATION AND IMPROVEMENT LOCATIONS.

PERMIT TERMS AND CONDITIONS

FDOT Gainesville Maintenance

All construction and/or maintenance on the Department's right-of-way shall conform to the most recent editions of: FDOT Design Standards, the FDOT Standard Specifications for Road and Bridge Construction, the FDOT Plans Preparation Manual Volume 1, and the Manual on Uniform Traffic Control.

The permittee shall be responsible for any damage caused by the construction associated with this permit. The permittee shall repair any damages according to the most current standards.

All damaged concrete within the project limits shall be replaced joint to joint.

All portions of the right-of-way disturbed during construction associated with this permit shall be sodded as follows:

- Urban Areas: sod with St. Augustine, Bermuda, or Centipede, FDOT will specify.
- Rural Areas: sod to match existing.

48 hours before digging operations the contractor shall call Sunshine State One Call at 811. The permittee is cautioned that utilities may be present within the construction area.

No tree trimming or tree removal will be allowed unless special permission is granted by the FDOT.

The permittee shall maintain proper placement and condition of all existing FDOT regulatory and/or informational signs.

Notify the Department of Transportation Maintenance office 48 hours in advance of starting proposed work at (352) 381-4342 or (352) 381-4300.

The connection to or modification of any portion of the FDOT stormwater system is prohibited unless approved by a separate drainage permit.

All permits shall include a maintenance of traffic plan before any work can begin. A worksite traffic supervisor with a certification from the FDOT approved Work Zone Traffic Control Course must be on-site anytime the contractor is working in the FDOT right-of-way.

All lane closure shall be called in to the FDOT Maintenance Office at (352) 381-4300 when the lane is closed and immediately after the lane is open.

Pedestrian traffic shall be detoured around the work area in a safe manner and in accordance with the FDOT Design Standards Index 660.

Lane closure will only be allowed Monday – Friday between the hours of 9:00AM Thru 3:30 PM or unless otherwise approved by FDOT.

An onsite preconstruction conference will be held prior to starting any work.

No unapproved signs are to be placed on or overhanging into the right-of-way.

There shall be no tracking of soil from the permitted job site onto the roadway. If tracking does occur, the permittee and or contractor shall install the "Soil Tracking Prevention Device" per Standard Index 106.

EROSION CONTROL NOTES

ALL EROSION CONTROL MEASURES SHALL REMAIN IN PLACE UNTIL COMPLETION OF CONSTRUCTION.

1. ALL EROSION AND SEDIMENT CONTROL WORK SHALL CONFORM WITH LOCAL CITY/COUNTY AND WATER MANAGEMENT DISTRICT SPECIFICATIONS, SUBJECT TO AUTHORIZED AND APPROVED VARIANCES, WAIVERS AND/OR CONDITIONAL CHANGES.

2. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE PLACED PRIOR TO OR AS THE FIRST STEP IN, CONSTRUCTION. SEDIMENT CONTROL PRACTICES WILL BE APPLIED AS A PERIMETER DEFENSE AGAINST ANY TRANSPORTATION OF SILT OFF THE SITE.

3. ALL AREAS AFFECTED BY THIS WORK SHALL BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING CONDITION, UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. THE COST FOR SUCH RESTORATION SHALL BE INCIDENTAL TO OTHER CONSTRUCTION AND NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

4. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES BETWEEN THESE PLANS AND FIELD CONDITIONS PRIOR TO CONSTRUCTION.

5. PRIOR TO CONSTRUCTION THE CONTRACTOR SHALL PROVIDE TREE PROTECTION BARRIERS TO MEET THE REQUIREMENTS OF LOCAL SPECIFICATIONS.

6. THE CONTRACTOR SHALL SELECTIVELY CLEAR ONLY THE AREAS REQUIRED FOR CONSTRUCTION AND STABILIZE ANY POTENTIAL EROSION AREAS IMMEDIATELY FOLLOWING COMPLETION OF CONSTRUCTION.

7. CONTRACTOR SHALL KEEP ANY AND ALL SAND, SILT OR OTHER DEBRIS FROM MOVING OFF-SITE. USE AND MAINTAIN SILT FENCE JUST INSIDE OF PROPERTY LINE.

8. CONTRACTOR SHALL BLOCK INTRUSION OF SAND, SILT OR OTHER DEBRIS INTO ANY DRAINAGE OR SANITARY SEWER STRUCTURE OR PIPING ON OR ADJACENT TO SITE.

9. ALL CLEARED AREAS FOR IMPROVEMENT AND/OR CONSTRUCTION SHALL BE WATERED TO PREVENT WIND EROSION.

10. FOR ADDITIONAL INFORMATION AND DETAILS, **SEE F.D.O.T. INDEX NO. 102**.

11. UNLESS SPECIFIED, SILT FENCES MAY BE USED IN LIEU OF HAY BARRIERS.

12. ADDITIONAL POSTS AND RAILS MAY BE NECESSARY TO SECURE AND SUPPORT BARRIERS.

13. ADDITIONAL BARRIER LENGTHS MAY BE REQUIRED BY THE CITY ENGINEER OR BY REGULATORY AGENCIES. (1)

14. FILTER FABRIC MUST BE INSTALLED UNDER ALL INLET GRATES, AT ALL TIMES WHEN INLETS ARE NOT PROTECTED BY SILT FENCE OR HAY BALES, UNTIL THE LIMEROCK BASE IS FINISHED AND PRIMED.

15. THE CONTRACTOR IS REQUIRED TO HAVE THE EROSION CONTROL PLAN POSTED IN A VISIBLE LOCATION ON THE CONSTRUCTION SITE AT ALL TIMES.

16. NON STORMWATER DISCHARGES SUCH AS FIRE HYDRANT FLUSHING, ETC SHALL BE DISCHARGED TO EXISTING UNDERGROUND STORMWATER FACILITY.

17. ANY POTENTIALLY HAZARDOUS CHEMICALS BROUGHT ONTO THE JOB SITE WILL BE LIMITED AND KEPT IN ORIGINAL CONTAINER WITH MSDS LABEL.

18. NO SILT SHALL BE TRACKED ONTO PUBLIC ROADWAYS. ANY SILT DEPOSITED ON PUBLIC ROADWAYS SHALL BE REMOVED BY THE END OF THE WORK DAY.

GC NOTE:

A COPY OF THIS SHEET C0.1 SHALL BE PROVIDED TO ALL BIDDERS AND SUB-CONTRACTORS.

DEMOLITION NOTES

1. PRIOR TO COMMENCEMENT OF DEMOLITION THE CONTRACTOR WILL COORDINATE HIS ACTIVITIES WITH ALL THE UTILITY COMPANIES SERVING THIS AREA. CONTRACTOR IS TO COORDINATE FULLY WITH UTILITY COMPANIES ON EXACT LOCATION OF UNDERGROUND UTILITIES PRIOR TO EXCAVATION.

2. THE CONTRACTOR IS TO COMPLETELY REMOVE AND DISPOSE OF ALL STRUCTURES AND BUILDINGS THAT IS SO INDICATED INCLUDING FOUNDATIONS, TIMBER AND BRUSH, EXCEPT AS OTHERWISE INDICATED; STUMPS AND ROOTS; EXISTING PAVEMENT; OTHER STRUCTURES AS SHOWN OR REASONABLY IMPLIED IN THE DRAWINGS.

3. EXCEPT IN AREAS WHERE EXISTING TREES SHALL BE PRESERVED, A MINIMUM DEPTH OF REMOVAL SHALL BE (2) FOOT BELOW SUBGRADE IN ROADWAY AREAS AND TO ORIGINAL SOILS ELSEWHERE. WHERE EXISTING BUILDINGS ARE TO BE DEMOLISHED, ALL TRACES OF FOUNDATIONS AND UNDERGROUND UTILITIES ARE TO BE REMOVED (UNLESS OTHERWISE NOTED ON PLANS). THE CONTRACTOR IS RESPONSIBLE FOR PROPER DISPOSAL OF ALL WASTE MATERIAL.

4. WHERE PAVING OR STRUCTURES ARE TO BE REMOVED WHICH ABUT OR ARE A PART OF CONNECTED FACILITIES (THAT ARE OFF-SITE), RESTORATION OF ANY DAMAGE THAT MIGHT RESULT FROM DEMOLITION IS TO BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. THE COST FOR SUCH RESTORATION SHALL BE INCIDENTAL TO OTHER CONSTRUCTION AND NO EXTRA COMPENSATION WILL BE ALLOWED.

5. THE LOCATION OF ALL EXISTING UTILITIES, STORM DRAINAGE AND TREES SHOWN ON THE PLANS HAVE BEEN DETERMINED FROM AVAILABLE INFORMATION AND IS GIVEN FOR THE CONVENIENCE OF THE CONTRACTOR. THE OWNER OR ENGINEER ASSUMES NO RESPONSIBILITY FOR ACCURACY. PRIOR TO THE START OF DEMOLITION THE CONTRACTOR SHALL VISIT THE SITE AND DETERMINE THE EXISTANCE & LOCATION OF ALL STRUCTURES, UTILITIES & TREES SHOWN OR NOT ON THE PLANS, WHICH WOULD NEED TO BE REMOVED OR PRESERVED.

6. THE CONTRACTOR IS TO COORDINATE THE RELOCATION OR REMOVAL OF ALL OVERHEAD/UNDERGROUND UTILITIES, UTILITY POLES, LIGHTS AND LINES IN THE RIGHT-OF-WAY AND ON THE PROPERTY WITH THE APPROPRIATE SERVICE PROVIDER.

7. THE CONTRACTOR SHALL REFERENCE AND RESTORE PROPERTY CORNERS AND LAND MARKERS DISTURBED DURING CONSTRUCTION. (UNDER THE DIRECTION OF A (**FLORIDA**) REGISTERED LAND SURVEYOR).

UTILITY SEPARATION NOTES

(1) HORIZONTAL SEPARATION BETWEEN UNDERGROUND WATER MAINS AND SANITARY OR STORM SEWERS, WASTEWATER OR STORM WATER FORCE MAINS, RECLAIMED WATER PIPELINES, AND ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEMS.

(A) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST THREE FEET BETWEEN THE OUTSIDE OF THE WATER MAIN AND THE OUTSIDE OF ANY EXISTING OR PROPOSED STORM SEWER, STORM WATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.

(B) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST THREE FEET, AND PREFERABLY TEN FEET, BETWEEN THE OUTSIDE OF THE WATER MAIN AND THE OUTSIDE OF ANY EXISTING OR PROPOSED VACUUM-TYPE SANITARY SEWER.

(C) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST SIX FEET, AND PREFERABLY TEN FEET, BETWEEN THE OUTSIDE OF THE WATER MAIN AND THE OUTSIDE OF ANY EXISTING OR PROPOSED GRAVITY- OR PRESSURE-TYPE SANITARY SEWER, WASTEWATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER NOT REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C. THE MINIMUM HORIZONTAL SEPARATION DISTANCE BETWEEN WATER MAINS AND GRAVITY-TYPE SANITARY SEWERS SHALL BE REDUCED TO THREE FEET WHERE THE BOTTOM OF THE WATER MAIN IS LAID AT LEAST SIX INCHES ABOVE THE TOP OF THE SEWER.

(D) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST TEN FEET BETWEEN THE OUTSIDE OF THE WATER MAIN AND ALL PARTS OF ANY EXISTING OR PROPOSED "ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEM" AS DEFINED IN SECTION 381.0065(2), F.S., AND RULE 64E-6.002, F.A.C.

(2) VERTICAL SEPARATION BETWEEN UNDERGROUND WATER MAINS AND SANITARY OR STORM SEWERS, WASTEWATER OR STORM WATER FORCE MAINS, AND RECLAIMED WATER PIPELINES:

(A) NEW OR RELOCATED, UNDERGROUND WATER MAINS CROSSING ANY EXISTING OR PROPOSED GRAVITY- OR VACUUM-TYPE SANITARY SEWER OR STORM SEWER SHALL BE LAID SO THE OUTSIDE OF THE WATER MAIN IS AT LEAST SIX INCHES, AND PREFERABLY 12 INCHES, ABOVE OR AT LEAST 12 INCHES BELOW THE OUTSIDE OF THE OTHER PIPELINE. HOWEVER, IT IS PREFERABLE TO LAY THE WATER MAIN ABOVE THE OTHER PIPELINE.

(B) NEW OR RELOCATED, UNDERGROUND WATER MAINS CROSSING ANY EXISTING OR PROPOSED PRESSURE-TYPE SANITARY SEWER, WASTEWATER OR STORM WATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER SHALL BE LAID SO THE OUTSIDE OF THE WATER MAIN IS AT LEAST 12 INCHES ABOVE OR BELOW THE OUTSIDE OF THE OTHER PIPELINE. HOWEVER, IT IS PREFERABLE TO LAY THE WATER MAIN ABOVE THE OTHER PIPELINE.

(C) AT THE UTILITY CROSSINGS DESCRIBED IN PARAGRAPHS (A) AND (B) ABOVE, ONE FULL LENGTH OF WATER MAIN PIPE SHALL BE CENTERED ABOVE OR BELOW THE OTHER PIPELINE SO THE WATER MAIN JOINTS WILL BE AS FAR AS POSSIBLE FROM THE OTHER PIPELINE. ALTERNATIVELY, AT SUCH CROSSINGS, THE PIPES SHALL BE ARRANGED SO THAT ALL WATER MAIN JOINTS ARE AT LEAST THREE FEET FROM ALL JOINTS IN VACUUM-TYPE SANITARY SEWERS, STORM SEWERS, STORM WATER FORCE MAINS, OR PIPELINES CONVEYING RECLAIMED WATER REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C., AND AT LEAST SIX FEET FROM ALL JOINTS IN GRAVITY- OR PRESSURE-TYPE SANITARY SEWERS, WASTEWATER FORCE MAINS, OR PIPELINES CONVEYING RECLAIMED WATER NOT REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.

(3) SEPARATION BETWEEN WATER MAINS AND SANITARY OR STORM SEWER MANHOLES.

(A) NO WATER MAIN SHALL PASS THROUGH, OR COME INTO CONTACT WITH, ANY PART OF A SANITARY SEWER MANHOLE.

(B) EFFECTIVE AUGUST 28, 2003, WATER MAINS SHALL NOT BE CONSTRUCTED OR ALTERED TO PASS THROUGH, OR COME INTO CONTACT WITH, ANY PART OF A STORM SEWER MANHOLE OR INLET STRUCTURE.

(4) SEPARATION BETWEEN FIRE HYDRANT DRAINS AND SANITARY OR STORM SEWERS, WASTEWATER OR STORM WATER FORCE MAINS, RECLAIMED WATER PIPELINES, AND ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEMS.
NEW OR RELOCATED FIRE HYDRANTS WITH UNDERGROUND DRAINS SHALL BE LOCATED SO THAT THE DRAINS ARE AT LEAST THREE FEET FROM ANY EXISTING OR PROPOSED STORM SEWER, STORM WATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.; AT LEAST THREE FEET, AND PREFERABLY TEN FEET, FROM ANY EXISTING OR PROPOSED VACUUM-TYPE SANITARY SEWER; AT LEAST SIX FEET, AND PREFERABLY TEN FEET, FROM ANY EXISTING OR PROPOSED GRAVITY- OR PRESSURE-TYPE SANITARY SEWER, WASTEWATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER NOT REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.; AND AT LEAST TEN FEET FROM ANY EXISTING OR PROPOSED "ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEM" AS DEFINED IN SECTION 381.0065(2), F.S., AND RULE 64E-6.002, F.A.C.

UTILITY NOTES

PRIOR TO COMMENCING ANY CONSTRUCTION, THE CONTRACTOR SHALL FIELD VERIFY ALL EXISTING UTILITIES, INCLUDING WITHOUT LIMITATION POTABLE WATER, RECLAIMED WATER, SANITARY SEWER, AND SERVICE UTILITIES, AT POINTS OF CONNECTION, POINTS OF CROSSING, AND/OR POTENTIAL CONFLICT. NOTIFY ENGINEER OF ANY DISCREPANCIES BETWEEN THE PLANS AND FIELD CONDITIONS.

A. GENERAL

1. THE LOCATIONS OF EXISTING UTILITIES, SUCH AS WATER MAINS, SEWERS, GAS LINES, ETC., SHOWN ON THE PLANS ARE BASED ON THE BEST AVAILABLE INFORMATION AND ARE SHOWN FOR THE CONVENIENCE OF THE CONTRACTOR. THE ENGINEER AND OWNER ASSUME NO LIABILITY FOR ACCURACY AND COMPLETENESS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO CONTACT ALL UTILITY COMPANIES 48 HOURS PRIOR TO COMMENCEMENT OF CONSTRUCTION AND TO HAVE THEIR FACILITIES LOCATED IN THE FIELD PRIOR TO ANY WORK.

2. DUE TO GRAPHIC LIMITATIONS OF THE DRAWING SCALE, ALL STORM SEWER, DRAINAGE, WATER AND SANITARY SEWER MAINS, SERVICES, LATERALS, CONNECTIONS, AND APPURTENANCES DEPICTED HEREIN – UNLESS OTHERWISE LOCATED BY DIMENSIONS – REFLECT SCHEMATIC LOCATIONS ONLY. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE FINAL LOCATIONS IN ACTUAL CONSTRUCTION AND INSTALLATION OF THE PROPOSED IMPROVEMENTS, INCLUDING ANY REQUISITE COORDINATION WITH THE RESPECTIVE GOVERNING AGENCY/UTILITY PROVIDER.

3. ALL WATER AND SEWER CONSTRUCTION SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS OF THE **CITY OF ALACHUA**, AND WILL BE SUBJECT TO THEIR INSPECTION AND ACCEPTANCE. WATER AND WASTEWATER SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH "CITY OF ALACHUA, PUBLIC SERVICES, DESIGN AND CONSTRUCTION MANUAL, LATEST EDITION."

4. CONTRACTOR SHALL INSPECT PIPING AND MATERIALS BEFORE INSTALLATION TO DETECT APPARENT DEFECTS. MARK DEFECTIVE MATERIALS WITH WHITE PAINT AND PROMPTLY REMOVE FROM SITE.

5. LAY SEWER PIPING BEGINNING AT LOW POINT OF SYSTEM (CONNECTION TO OFF SITE SYSTEM OR PUMP STATION), TRUE TO GRADES AND ALIGNMENT INDICATED WITH UNBROKEN CONTINUITY OF INVERTS. PLACE BELL ENDS OR GROOVE ENDS OF PIPING FACING UPSTREAM.

6. CLEAR INTERIOR OF PIPE OF DIRT AND OTHER SUPERFLUOUS MATERIAL AS WORK PROGRESSES. MAINTAIN SWAB OR DRAG IN LINE AND PULL PAST EACH JOINT AS IT IS COMPLETED. PLACE PLUGS IN ENDS OF UNCOMPLETED CONDUIT WHENEVER WORK STOPS.

7. MAINTAIN **36"** COVER OVER MAINS, AND **30"** OVER SERVICES/LATERALS.

8. WHEN PROPOSED CONSTRUCTION OCCURS AT EXISTING MANHOLES, INLETS, VAULTS, AND OTHER STRUCTURES, THE CONTRACTOR SHALL MODIFY THE STRUCTURES, FRAMES, AND GRATES TO MEET THE PROPOSED GRADES UNLESS OTHERWISE DIRECTED.

9. INSTALL CONTINUOUS LOCATOR TAPE/WIRE, LOCATED DIRECTLY OVER POTABLE WATER MAINS AND SANITARY SEWER MAINS AT 6" TO 8" ABOVE PIPE.

10. WHERE APPLICABLE, UTILITY TRENCHES CROSSING PAVEMENT AREAS SHALL BE BACK FILLED WITH COMPACTED GRANULAR MATERIAL IN ACCORDANCE WITH A.A.S.H.T.O.-T-99.

11. CONTRACTOR SHALL PROVIDE SLEEVES FOR IRRIGATION LINES UNDER PAVEMENT. COORDINATE WITH GENERAL CONTRACTOR.

12. ALL TRENCHES EXCAVATED FOR THE PURPOSES OF UTILITY/STORM INSTALLATION SHALL BE KEPT DRY FOR THE DURATION OF UTILITY/STORM CONSTRUCTION. DEWATERING OF UTILITY/STORM TRENCHES MAY BE REQUIRED TO PREVENT FLOTATION OF UTILITY/STORM PIPES DURING INSTALLATION.

13. THE CONTRACTOR SHALL NOTIFY THE ENGINEER WHEN CONSTRUCTION IS COMPLETE FOR WATER, WASTEWATER AND STORMWATER SYSTEMS SO TIMELY CERTIFICATIONS MAY BE INITIATED. SATISFACTORY BACTERIOLOGICAL TEST RESULTS, PRESSURE TEST RESULTS, AND AN AS BUILT SURVEY SHALL BE SUBMITTED TO ENGINEER PRIOR TO FINAL CERTIFICATION.

14. SUITABLE COUPLINGS COMPLYING WITH ASTM SPECIFICATIONS ARE REQUIRED FOR JOINING DISSIMILAR MATERIALS.

15. DEFLECTION TESTS ARE REQUIRED FOR ALL FLEXIBLE PIPE. TESTING REQUIREMENTS: 1) NO PIPE SHALL EXCEED A DEFLECTION OF 5%; 2) USING A RIGID BALL OR MANDREL FOR THE DEFLECTION TEST WITH A DIAMETER NOT LESS THEN 95% OF THE BASE INSIDE DIAMETER OR AVERAGE INSIDE DIAMETER OF THE PIPE; 3) PERFORMING THE TEST WITHOUT MECHANICAL PULLING DEVICES.

B. MATERIALS (WATER) (1)

1. SERVICE PIPE DOWNSTREAM EACH BACKFLOW PREVENTER SHALL BE POLYETHYLENE (PE), DR9.

2. WATER MAINS SHALL BE PVC ASTM C900, DR 18 WITH INTEGRAL BELLS AND ELASTOMERIC JOINTS PER ASTM C3139 AND GASKETS PER ASTM F477.

3. DUCTILE IRON PIPE (D.I.P.), IF REQUIRED, SHALL CONFORM TO ANSI/AWWA A21.51/C151, CLASS 50 (MIN.) PIPE FOR ALL SIZES.

4. CORPORATION STOPS SHALL BE 1 1/2" BRASS, EQUIPPED WITH CONNECTIONS COMPATIBLE WITH SERVICE PIPE AND THREADED IN ACCORDANCE WITH SPECIFICATIONS IN AWWA C800. CURB STOPS SHALL BE SIZED TO MATCH THE METER SIZE AND CONFORM WITH AWWA C800 AND AWWA C901.

5. FITTINGS SHALL BE BRASS, CAST AND MACHINED IN ACCORDANCE WITH AWWA C800 AND AWWA C901, WITH COMPATIBLE PIPE CONNECTIONS.

6. SERVICE SADDLES SHALL BE USED FOR ALL SERVICE LINE TAPS. SERVICE SADDLES SHALL BE DOUBLE STRAP, ANCHORED BY A MINIMUM FOUR (4) BOLT PATTERN ON A DUCTILE IRON SADDLE BODY. FOR PVC PIPE, DOUBLE STRAPS SHALL BE CORROSION RESISTANT ALLOY STEEL, SIZED EXACTLY TO THE PIPE OUTSIDE DIAMETER. SEALING GASKETS SHALL BE BUNA-N RUBBER.

7. ALL PIPE AND PIPE FITTINGS INSTALLED UNDER THIS PROJECT WILL BE COLOR CODED USING BLUE AS A PREDOMINANT COLOR. (1)

8. SERVICE WATER PIPING UPSTREAM THE WATER METER SHALL BE PVC, TYPE AS SHOWN ON THE DETAILS.

9. SERVICE WATER PIPING BETWEEN THE WATER AND THE BACKFLOW PREVENTER SHALL BE OF THE SIZE AND TYPE AS SHOWN ON THE DETAILS.

10. WATER PIPING BETWEEN WATER METER AND BFP SHALL BE GALVANIZED STEEL.

11. WATER METER APPURTENANCES SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR. THE WATER METER ITSELF WILL BE FURNISHED AND INSTALLED BY THE CITY.

12. FOR EACH BACKFLOW PREVENTER, PROVIDE AN ENCLOSURE AS PER THE DETAILS.

13. WET TAP(S) TO PRESSURIZED WATER MAINS SHALL BE DONE BY A SUB-CONTRACTOR PRE-APPROVED BY THE CITY OF ALACHUA.

14. PROVIDE TRACER WIRE SYSTEM FOR WATER PIPING AS SHOWN ON THE DETAILS AND AS PER THE COA DCM.

15. TRACER WIRE SYSTEM SHALL COMMENCE AT THE TIE-IN(S) AT EXISTING WATER MAIN(S) AND TERMINATE AT EACH COA END OF MAINTENANCE POINT.

C. MATERIALS (SEWER)

1. ALL GRAVITY SEWER PIPE AND FITTINGS SHALL BE NON-PRESSURE POLYVINYL CHLORIDE PIPE (PVC) CONFORMING TO ASTM D 3034, SDR 26, WITH PUSH-ON RUBBER GASKET JOINTS.

2. ALL FITTINGS AND ACCESSORIES SHALL BE MANUFACTURED OR SUPPLIED BY THE PIPE MANUFACTURER OR PRIOR-APPROVED EQUAL.

3. BEDDING AND INITIAL BACK FILL OVER SEWER MAINS AND SERVICES SHALL BE SAND WITH NO ROCK LARGER THAN 1" IN DIAMETER.

D. MATERIALS (STORM)

1. REINFORCED CONCRETE PIPE (RCP): O-RING PIPE SHALL CONFORM TO ASTM C 76 (CLASS III, UNLESS OTHERWISE SPECIFIED) AND AASHTO M 170 STANDARD SPECIFICATIONS, AND ASTM C 443 STANDARD SPECIFICATION FOR JOINTS FOR RCP USING RUBBER GASKETS.

2. ELLIPTICAL RCP SHALL CONFORM TO ASTM C 507 (CLASS III) AND AASHTO M 207 STANDARD SPECIFICATIONS.

3. HDPE PIPE AND FITTINGS SHALL MEET THE REQUIREMENTS OF AASHTO M-25 (3"-10"), M-294 (12" AND LARGER), TYPE S (CORRUGATED OUTSIDE – SMOOTH INSIDE, 4"-60"), AND MP7 (60" TYPE S).

A. BELL/SPIGOT GASKET FOR HDPE PIPE SHALL BE SOIL/SILT TIGHT PER AASHTO SECTION 26 WITH RUBBER GASKET MEETING ASTM F-477.

4. PVC STORM SEWER PIPE (12" OR LESS) AND FITTINGS SHALL BE NON-PRESSURE POLYVINYL CHLORIDE PIPE (PVC) CONFORMING TO ASTM D 3034, SDR 26, WITH PUSH-ON RUBBER GASKET JOINTS. (1)

5. UNLESS AN ALTERNATE IS APPROVED BY COA, GROUT BOTTOM OF ALL STORMWATER DRAINAGE STRUCTURE INVERTS AS PER FDOT INDEX 425-001 AND AS PER COA STANDARD DETAIL 210.

GENERAL NOTES

A. GENERAL
1. ALL INFRASTRUCTURE AND IMPROVEMENTS SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS OF THE LOCAL JURISDICTION AND WILL BE SUBJECT TO THEIR INSPECTION AND ACCEPTANCE.

2. SITE LOCATION: **N.W.C OF US HIGHWAY 441 & NW 173 STREET, ALACHUA, FL 32615**

3. THIS SITE LIES IN FLOOD ZONE **X**, F.I.R.M. PANEL **12001C0120D**, DATED **JUNE 16, 2006** .

4. BOUNDARY, TOPOGRAPHIC, AND TREE SURVEY BY **CHW-INC, 11801 RESEARCH DRIVE, ALACHUA, FLORIDA 32615**.

5. BENCHMARK – REFER TO TOPOGRAPHIC SURVEY BY **CHW-INC, 11801 RESEARCH DRIVE, ALACHUA, FLORIDA 32615**.

6. LEGAL DESCRIPTION SHOWN HEREIN IS FURNISHED BY SURVEYOR, AND IS INCLUDED FOR PERMITTING AND APPROVAL PURPOSES, AND AS A COURTESY FOR THE CONTRACTOR. INTERPLAN LLC. ASSUMES NO LIABILITY FOR ITS ACCURACY OR COMPLETENESS.

7. SITE GEOTECHNICAL INVESTIGATION PERFORMED BY **UES** ENGINEERING. INTERPLAN LLC. ASSUMES NO RESPONSIBILITY FOR THE CORRECTNESS, ACCURACY AND COMPLETENESS OF THEIR WORK. **THE CONTRACTOR SHALL OBTAIN A COPY OF THE GEOTECHNICAL ENGINEER'S REPORT FOR THIS SITE AND COMPLY WITH RECOMMENDATIONS CONTAINED THEREIN.** IF ADDITIONAL SERVICES ARE REQUIRED, THE CONTRACTOR SHALL MAKE A REQUEST TO THE OWNER.

8. CONTRACTOR SHALL PROVIDE AND INSTALL EROSION CONTROL DEVICES (SILT FENCE OR OTHER METHODS) AT LIMITS OF CONSTRUCTION AND AROUND EACH STORM INLET PRIOR TO CONSTRUCTION, AND SHALL MAINTAIN SAID EROSION CONTROL DEVICES DURING CONSTRUCTION. ALL IN CONFORMANCE WITH CURRENT LOCAL, COUNTY AND STATE CRITERIA.

9. THE SITE SHALL BE CLEARED AS MAY BE NOTED ON THE PLANS, OF ALL OBSTRUCTIONS AND DELETERIOUS MATERIAL SUCH AS FENCES, WALLS, FOUNDATIONS, LOGS, SHRUBS, BRUSH, WEEDS, OTHER VEGETATION, AND ACCUMULATION OF RUBBISH OF WHATEVER NATURE. OFF-SITE DISPOSAL, INCLUDING ANY HAZARDOUS MATERIAL ENCOUNTERED, SHALL BE IN ACCORDANCE WITH APPLICABLE LOCAL, STATE, AND FEDERAL RULES AND REGULATIONS.

10. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY INTERPLAN LLC. OF ANY DISCREPANCIES BETWEEN THE PLANS AND FIELD CONDITIONS PRIOR TO START OF CONSTRUCTION.

11. THE CONTRACTOR SHALL REMAIN SOLELY RESPONSIBLE FOR ANY DESIGN CHANGES WHICH HE MAY INCORPORATE INTO THE PLANS WITHOUT PRIOR WRITTEN CONSENT AND/OR APPROVAL FROM THE OWNER AND THE ENGINEER.

12. THE CONTRACTOR SHALL COORDINATE ALL WORK WITHIN EACH EXISTING RIGHT OF WAY WITH THE CITY OF **ALACHUA** AND THE FLORIDA DEPARTMENT OF TRANSPORTATION.

13. SCS SOILS: **–ARREDONDO FINE SAND, 0 TO 5 PERCENT SLOPES**
–ARREDONDO–URBAN LAND COMPLEX, 0 TO 5 PERCENT SLOPES
–FORT MEADE FINE SAND, 0 TO 5 PERCENT SLOPES

14. STORMWATER MANAGEMENT IS PROVIDED BY **MASTER RETENTION POND**.

15. THE CONTRACTOR SHALL RESTORE OFF-SITE AREAS TO A CONDITION EQUAL TO OR BETTER THAN THE CONDITION EXISTING PRIOR TO COMMENCEMENT OF CONSTRUCTION.

16. ALL DISTURBED AREAS SHALL BE SODDED.

17. AT LEAST 30 DAYS PRIOR TO ANTICIPATED COMPLETION OF SITE CONSTRUCTION, THE FINAL CERTIFICATION PROCESS WILL BEGIN. THE CONTRACTOR SHALL PROVIDE DOCUMENTS AND INFORMATION, IN A TIMELY MANNER, TO ENGINEER, INCLUDING, WITHOUT LIMITATION:
- **a. SURVEYED "AS-BUILTS" PER AS-BUILT SURVEY SCOPE IN SPEC MANUAL.**
- **b. COMPACTION AND DENSITY TEST REPORTS, AND**
- **c. PRESSURE TESTING AND BACTERIOLOGICAL TESTING RESULTS, AS**

REQUIRED, FOR WATER DISTRIBUTION AND/OR WASTEWATER COLLECTION/TRANSMISSION SYSTEMS.

THE CONTRACTOR SHALL HAVE TWO (2) SETS OF AS-BUILT PLANS, SIGNED AND SEALED BY SURVEYOR OF RECORD, ON SITE THE DAY OF THE CIVIL ENGINEERING FINAL PUNCH LIST INSPECTION. THE GENERAL CONTRACTOR IS TO GIVE THE TWO AS-BUILT PLANS TO THE REPRESENTATIVE FROM INTERPLAN COMPLETING THE INSPECTION. IF ANY DEFICIENCIES ARE NOTED, ONE SET OF RED-LINED AS-BUILT PLANS WILL BE GIVEN TO THE GC FOR REVISIONS TO BE MADE. REVISED AS-BUILTS WILL NEED TO BE FORWARDED TO INTERPLAN BEFORE ANY CERTIFICATIONS CAN BE INITIATED.

18. ALL TRAFFIC CONTROL DEVICES, EQUIPMENT AND INSTALLATION SHALL MEET THE REQUIREMENTS OF THE LOCAL JURISDICTION AND/OR (**FLORIDA**) DEPARTMENT OF TRANSPORTATION.

19. PARKING STALLS SHALL CONFORM WITH LOCAL CODE. ACCESSIBLE PARKING SPACES AND ACCESS ROUTES SHALL FURTHER CONFORM WITH CURRENT ADA REQUIREMENTS.

20. HANDICAP PAVEMENT MARKINGS AND SIGNAGE SHALL CONFORM WITH CURRENT ADA REQUIREMENTS AND LOCAL ORDINANCE.

21. LANDSCAPE SHALL BE TRIMMED TO ENSURE SIGHT VISIBILITY OF TRAFFIC CONTROL DEVICES.

22. ALL PAVEMENT IS DIMENSIONED TO FACE OF CURB.

23. ALL BUILDING DIMENSIONS AND TIES ARE TO OUTSIDE FACE. SEE ARCHITECTURAL PLANS.

24. ALL CURB RETURN RADII ARE 5' UNLESS NOTED.

25. BUILDING AND SITE IMPROVEMENTS ARE PARALLEL AND PERPENDICULAR TO **EAST** PROPERTY LINE.

5 DITCH BOTTOM INLET

6 EROSION CONTROL SOCK

PROTECTION AROUND INLETS OR SIMILAR STRUCTURES

POLLUTION CONTROL NOTES

ALL EROSION CONTROL MEASURES SHALL REMAIN IN PLACE UNTIL COMPLETION OF CONSTRUCTION.

1. ALL EROSION AND SEDIMENT CONTROL WORK SHALL CONFORM WITH LOCAL CITY/COUNTY AND WATER MANAGEMENT DISTRICT SPECIFICATIONS, SUBJECT TO AUTHORIZED AND APPROVED VARIANCES, WAIVERS AND/OR CONDITIONS OF SITE PERMITS.

2. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE PLACED PRIOR TO OR AS THE FIRST STEP IN, CONSTRUCTION. SEDIMENT CONTROL PRACTICES WILL BE APPLIED AS A PERIMETER DEFENSE AGAINST ANY TRANSPORTATION OF SILT OFF THE SITE.

3. ALL AREAS AFFECTED BY THIS WORK SHALL BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING CONDITION, UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. THE COST FOR SUCH RESTORATION SHALL BE INCIDENTAL TO OTHER CONSTRUCTION AND NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

4. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES BETWEEN THESE PLANS AND FIELD CONDITIONS PRIOR TO CONSTRUCTION.

5. PRIOR TO CONSTRUCTION THE CONTRACTOR SHALL PROVIDE TREE PROTECTION BARRIERS TO MEET THE REQUIREMENTS OF LOCAL SPECIFICATIONS.

6. THE CONTRACTOR SHALL SELECTIVELY CLEAR ONLY THE AREAS REQUIRED FOR CONSTRUCTION AND STABILIZE ANY POTENTIAL EROSION AREAS IMMEDIATELY FOLLOWING COMPLETION OF CONSTRUCTION.

7. CONTRACTOR SHALL KEEP ANY AND ALL SAND, SILT OR OTHER DEBRIS FROM MOVING OFF-SITE. USE AND MAINTAIN SILT FENCE JUST INSIDE OF PROPERTY LINE.

8. CONTRACTOR SHALL BLOCK INTRUSION OF SAND, SILT OR OTHER DEBRIS INTO ANY DRAINAGE OR SANITARY SEWER STRUCTURE OR PIPING ON OR ADJACENT TO SITE.

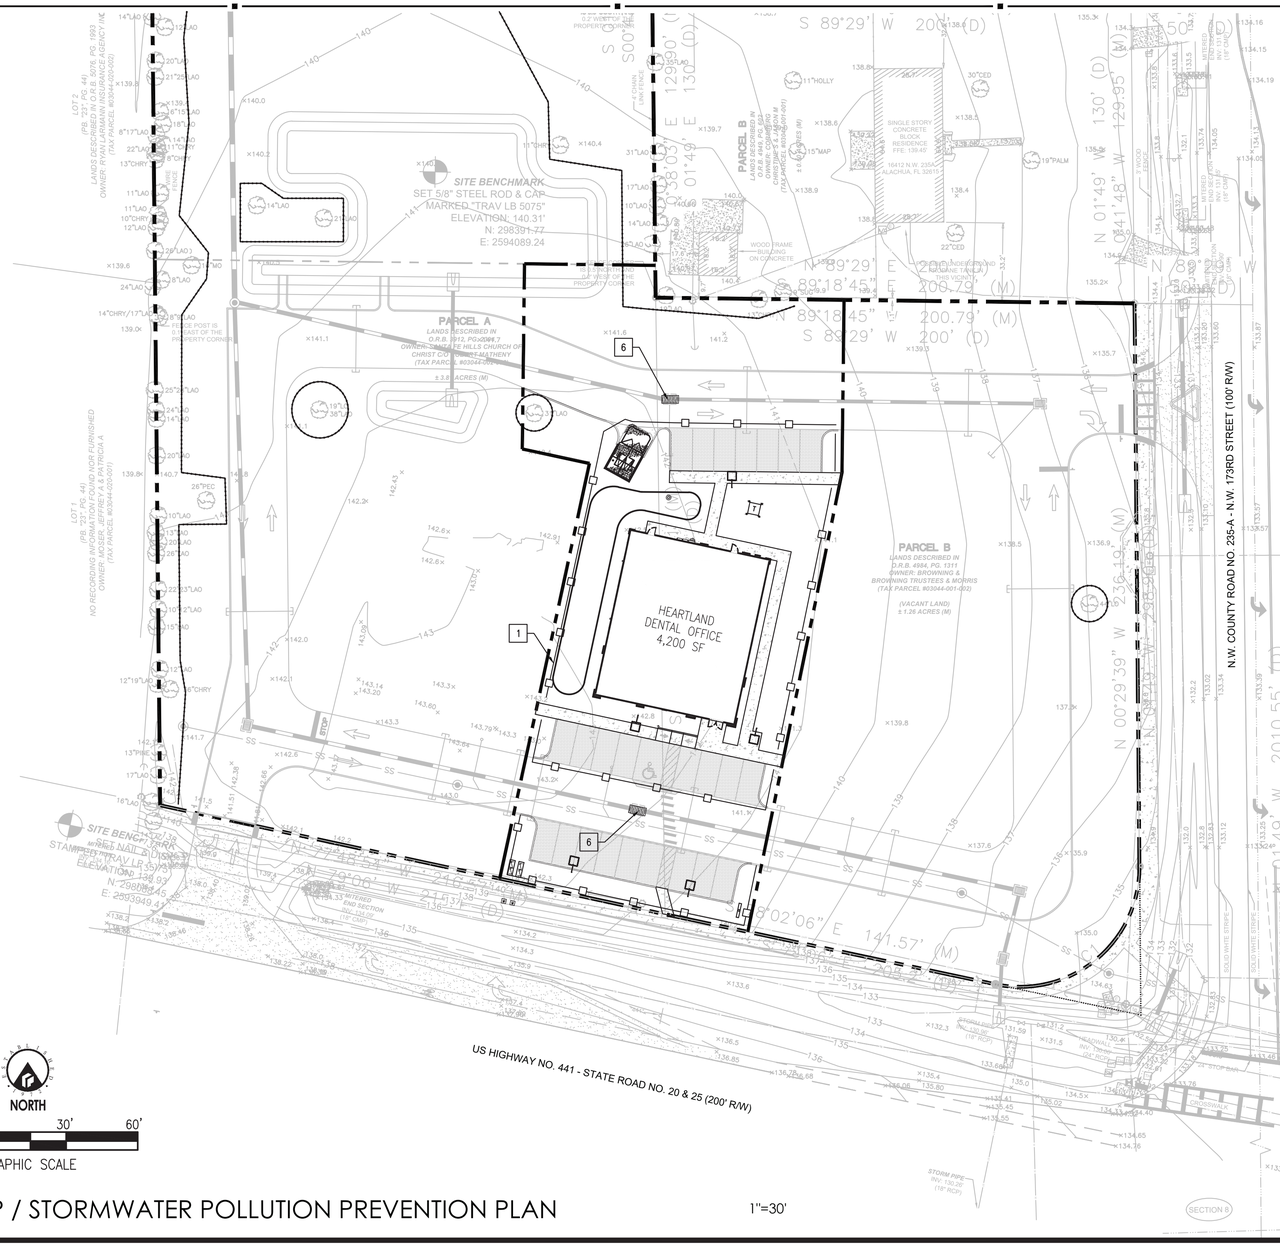
9. ALL CLEARED AREAS FOR IMPROVEMENT AND/OR CONSTRUCTION SHALL BE WATERED TO PREVENT WIND EROSION.

10. FOR ADDITIONAL INFORMATION AND DETAILS, SEE F.D.O.T. INDEX NO. 102.

11. UNLESS SPECIFIED, SILT FENCES MAY BE USED IN LIEU OF SYNTHETIC BARRIERS.

12. ADDITIONAL POSTS AND RAILS MAY BE NECESSARY TO SECURE AND SUPPORT BARRIERS.

13. ADDITIONAL BARRIER LENGTHS MAY BE REQUIRED BY THE COUNTY ENGINEER OR BY REGULATORY AGENCIES.



14. FILTER FABRIC MUST BE INSTALLED UNDER ALL INLET GRATES, AT ALL TIMES WHEN INLETS ARE NOT PROTECTED BY SILT FENCE OR SYNTHETIC BALES, UNTIL THE LIMEROCK BASE IS FINISHED AND PRIMED.

15. THE CONTRACTOR IS REQUIRED TO HAVE THIS PLAN ALONG WITH A COPY OF THE NPDES NOTICE OF INTENT POSTED IN A VISIBLE LOCATION ON THE CONSTRUCTION SITE AT ALL TIMES.

16. "CONTRACTOR IS REQUIRED BY NPDES TO KEEP A LOG ON SITE FOR THE SOIL EROSION AND SEDIMENT CONTROL MEASURES INDICATED ON THE PLAN. THE LOG SHALL CONTAIN DATES FOR: INSTALLATION OF CONTROL MEASURES, MAJOR SITE CONSTRUCTION ACTIVITIES, INSPECTION ON AT LEAST A WEEKLY BASIS AND INSPECTION AFTER ANY RAINFALL EVENT THAT IS 1/2" OR GREATER".

17. THE CONTRACTOR IS REQUIRED TO SUBMIT A COPY OF THIS LOG ALONG WITH A NOTICE OF TERMINATION TO THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION UPON THE COMPLETION OF CONSTRUCTION.

REFER TO SHEET C0.1 FOR GENERAL NOTES, SPECIFICATIONS, AND LEGENDS, IN ADDITION TO SITE-SPECIFIC NOTES AND REQUIREMENTS.

TREE PROTECTION NOTES

1. DURING CONSTRUCTION, PROTECTIVE BARRIERS SHALL BE PLACED BY SITE CONTRACTOR TO PREVENT DESTRUCTION OF TREES WHICH ARE DESIGNATED TO REMAIN. PROTECTION BARRIERS SHALL BE ERECTED PRIOR TO CONSTRUCTION OF ANY KIND ON THE SITE.
2. BARRIERS SHALL CONSIST OF PROTECTIVE WOODEN POSTS TWO (2) INCHES BY TWO (2) INCHES OR LARGER PLANTED IN SUFFICIENT DEPTH TO BE STABLE WITH AT LEAST FOUR (4) FEET OF POST VISIBLE ABOVE THE GROUND. POSTS SHALL BE PLACED NO CLOSER THAN TEN (10) FEET TO THE TRUNK UNLESS PROPOSED PAVING CONSTRUCTION WILL BE WITHIN TEN (10) FEET, IN NO CASE FURTHER THAN SIX (6) FEET APART. REFER TO TREE PROTECTION BARRIER DETAILS.
3. PROPOSED GRADES AROUND TREES TO REMAIN SHALL BE MAINTAINED TO WITHIN FOUR (4) INCHES OF THE EXISTING GRADE.
4. THE CONTRACTOR SHALL FOLLOW TREE REMOVAL, TREE PROTECTION AND GENERAL NOTES AS SHOWN ON THE TREE PROTECTION PLAN.
5. PROTECTIVE BARRIERS SHALL REMAIN IN PLACE AND INTACT UNTIL SUCH TIME AS CONSTRUCTION IS COMPLETE AND ALL EQUIPMENT IS REMOVED FROM SITE.
6. NO BUILDING MATERIALS SUCH AS MASONRY OR TEMPORARY SOIL DEPOSITS SHALL BE PLACED WITHIN THE PROTECTIVE BARRIER ZONES.
7. BARRIERS SHALL BE PLACED AT THE TREE CANOPY LINE EXCEPT ADJACENT TO THE PROPERTY CONSTRUCTION AREA WHERE IT MAY BE AT ONE HALF OF THE CANOPY DISTANCE ON ONE SIDE ONLY.

TREE PROTECTION BARRICADE LOCATION
20' RADIUS FOR GRAND TREES AND
10' RADIUS FOR PROTECTED TREES

EXISTING TREE TO BE REMOVED

GENERAL LANDSCAPE NOTES

1. ALL PLANTS TO BE FLORIDA NO. 1, OR BETTER AS OUTLINED UNDER GRADES AND STANDARDS FOR NURSERY PLANTS, PART I AND II, STATE OF FLORIDA, DEPARTMENT OF AGRICULTURE, TALLAHASSEE, FLORIDA, AND ANY AMENDMENTS THERETO.
2. ALL TREES AND PLANT MATERIAL SHALL BE PLANTED IN ACCORDANCE WITH THE SPECIFICATIONS DESCRIBED IN THE STATE DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES, DIVISION OF FORESTRY, "TREE PROTECTION MANUAL FOR BUILDERS AND HOMEOWNERS" (LATEST EDITION).
3. THE LANDSCAPE CONTRACTOR (CONTRACTED BY OWNER, N.I.C.) SHALL BE RESPONSIBLE FOR ALL MATERIALS AND ALL WORK AS CALLED FOR ON THE LANDSCAPE PLANS. THE LIST OF PLANT QUANTITIES ACCOMPANYING THE PLANS SHALL BE USED AS A GUIDE ONLY. IF A VARIATION OCCURS BETWEEN THE PLANS AND THE ACTUAL FIELD CONDITIONS, THE PLANS SHALL GOVERN.
4. ALL TREES, SHRUBS AND GROUND COVERS SHALL BE PLANTED USING A SOIL MIXTURE PREPARED ACCORDINGLY (2/3 EXISTING SOIL, 1/3 PEAT).
5. THE LANDSCAPE CONTRACTOR SHALL INSURE ADEQUATE VERTICAL DRAINAGE IN ALL PLANT BEDS AND PLANTERS. VERTICAL DRILLING THROUGH ANY COMPACTED FILL TO A DEPTH OF 24" MINIMUM MAY BE REQUIRED IN SOME AREAS.
6. ALL PLANT BEDS AND TREE WATERING BASINS SHALL BE TOP DRESSED WITH THREE INCHES (3") OF SHREDDED ORGANIC (NON-CYPRESS) BROWN MULCH.
7. NO TREES SHALL BE PLANTED CLOSER THAN 3 FEET (3') FROM THE EDGE OF PAVEMENT OR CURB. SHRUBS SHALL BE PLANTED NO CLOSER THAN 2 FEET.
8. LANDSCAPE CONTRACTOR SHALL BE WHOLLY RESPONSIBLE FOR STAKING AND PLANS CONDITION OF ALL TREES AND SHALL BE LEGALLY LIABLE FOR ANY DAMAGE CAUSED BY THE INSTABILITY OF ANY PLANT MATERIAL.
9. ALL LAWN AREAS TO RECEIVE SOD SHALL BE DEBRIS FOUND,1 TO 5(NS") INCHES AND SHALL BE GRADED TO ESTABLISH A LEVEL FINISH GRADE. ALL DEBRIS TO BE REMOVED FROM THE SITE.
10. SOD SHALL BE FREE OF WEEDS AND PESTS. IT SHALL BE LAID EVENLY AND ROLLED, WITH TIGHT FITTING JOINTS. THE SOD SHALL CONTAIN MOIST SOIL WHICH DOES NOT FALL APART OR TEAR WHEN LIFTED. ALL AREAS NOT PAVED OR OTHERWISE LANDSCAPED SHALL BE SODDED AS SHOWN ON THE LANDSCAPE PLAN.
11. ALL LANDSCAPE AREAS TO BE IRRIGATED WITH AN AUTOMATIC UNDERGROUND SYSTEM, WITH 100% COVERAGE, BACKFLOW PREVENTOR, & RAIN SENSOR DEVICE.
12. THE TREE DIAMETER OF ALL CANOPY TREES SPECIFIED ON THE PLANT LIST SHALL BE MEASURED AT FOUR AND ONE HALF (4 1/2) FEET ABOVE GROUND.
13. THE CONTRACTOR SHALL REPAIR ANY DAMAGE TO EXISTING IMPROVEMENTS OCCURRING ON SITE OR ADJACENT AREAS, INCLUDING BUT NOT LIMITED TO BUILDINGS, PAVING, UTILITIES, ETC. WHICH IS CAUSED BY PREPARING OR INSTALLING ANY AND ALL PLANT MATERIAL.

NOTE: ALL DISTURBED AREAS TO BE SODDED AND RESTORED TO A CONDITION EQUAL TO OR BETTER THAN PRE-CONSTRUCTION CONDITION.

NOTE: LANDSCAPE PLAN CONFORMS TO FLORIDA FRIENDLY STANDARDS.

SCALE: 1/4" = 1'-0"

4 NORTH ELEVATION (ACCESS ROAD)

SCALE: 1/4" = 1'-0"

1 GLAZING REQUIREMENT COMPLIANCE CALCULATION:
864 SF TOTAL BUILDING FRONTAGE (FINISHED GRADE TO UNDERSIDE OF ROOF STRUCTURE OF THE FACADE)
GLAZING REQUIRED: 129.6 SF; 15% TRANSPARENCY
GLAZING PROVIDED: 136 SF; 15.7%

3/20/2026 1:22 PM

GENERAL NOTES

TO THE FULLEST EXTENT POSSIBLE, BUILDING COMPONENTS WILL BE MARKED AS 'TYPICAL' (TYP.). WHERE SO, KEYED NOTES WILL NOT BE DUPLICATED FOR COMPONENTS OF LIKE KIND. SHOULD THE CONTRACTOR REQUIRE CLARIFICATION OF ANY SUCH COMPONENT, A REQUEST FOR INFORMATION (RFI) SHALL BE SUBMITTED TO THE ARCHITECT PRIOR TO BID

REFER TO SHEET A0.5 FOR THE KEYNOTES REFERENCED THROUGHOUT THE CONSTRUCTION DRAWINGS

REFER TO WALL SECTIONS AND DETAILS, SHEET A5 SERIES, FOR SPECIFIC HEIGHTS, INCLUDING BUT NOT LIMITED TO, LIGHT FIXTURES, CANOPY, EIFS TRIM, ETC.

REFER TO SHEET A3.0 FOR THE EXTERIOR FINISH SCHEDULE

SIGNAGE NOTES:

ANY BUILDING MOUNTED SIGNAGE DEPICTED IN THESE DOCUMENTS IS FOR COORDINATION PURPOSES ONLY AND IS NOT INTENDED FOR FABRICATION OR INSTALLATION BY THE GENERAL CONTRACTOR. IT SHALL BE UNDERSTOOD THAT ALL EXTERIOR BUILDING MOUNTED AND SITE SIGNAGE WILL BE PERMITTED SEPARATELY BY THE OWNER'S SIGN VENDOR. AT THAT TIME, COMPLETE DETAILS INCLUDING, BUT NOT LIMITED TO, SIGN FABRICATION, SIGN INSTALLATION, SIGN AREA AND QUANTITIES, ETC. SHALL BE SUBMITTED (BY THE SIGN VENDOR) FOR PERMIT AND APPROVAL PRIOR TO COMMENCEMENT OF WORK.
SEE ELECTRICAL DRAWINGS FOR POWER REQUIREMENTS

FACILITY ADDRESS REQUIREMENTS:
ADDRESS NUMBERS SHALL CONTRAST WITH THEIR BACKGROUND. ADDRESS NUMBERS SHALL BE MADE OF DURABLE WEATHER RESISTANT MATERIAL, SHALL BE PERMANENTLY AFFIXED TO THE STRUCTURE AND POSTED FRONTING THE STREET THE STRUCTURE IS ADDRESSED TO. COMMERCIAL ADDRESS NUMBERS ARE TO BE A MINIMUM OF SIX (6) IN HEIGHT AND ONE-HALF (1/2") INCH IN WIDTH

UNIT NUMBERS SHALL BE A MINIMUM OF 3" INCHES IN HEIGHT, POSTED ABOVE OR ASIDE ALL MEANS OF INGRESS/EGRESS, CLEARLY VISIBLE UPON APPROACH AND CLEAR OF ANY OBSTRUCTION SUCH AS AWNINGS. ALL LETTERING TO BE CONSISTENT IN STYLE.

ADDRESS NUMBERS SHALL BE ARABIC NUMERALS OR ALPHABET LETTERS

EXTERIOR FINISH NOTES

EXTERIOR INSULATION FINISH SYSTEM (EIFS) REQUIREMENTS:

1. THE STANDARD FINISH COAT OVER CEMENT PLASTER SURFACES SHALL BE AN ACRYLIC EIFS FINISH COAT, "DRYVIT TAFTS" (OPTION 1) AS MANUFACTURED BY DRYVIT SYSTEMS, INC. COLORS, AS SPECIFIED ON THE EXTERIOR FINISH SCHEDULE, HAVE BEEN SELECTED FROM DRYVIT'S STANDARD COLORS. THIS SYSTEM CONSISTS OF A TINTED PRIMER AND TEXTURED ACRYLIC FINISH WITH INTEGRAL COLOR. THE SPECIFIED SYSTEM HAS A 10-YEAR MANUFACTURER WARRANTY

2. WHERE A CUSTOM COLOR IS REQUIRED FOR THE FINISH COAT OVER CEMENT PLASTER SURFACES, AN ACRYLIC EIFS FINISH COAT, "DRYVIT TAFTS" (OPTION 1) WITH STRATOTONE COLOR MATCHING SYSTEM AS MANUFACTURED BY DRYVIT SYSTEMS, INC. SHALL BE PROVIDED. CUSTOM COLORS ARE SPECIFIED ON THE EXTERIOR FINISH SCHEDULE. THIS SYSTEM CONSISTS OF A TINTED PRIMER AND TEXTURED ACRYLIC FINISH WITH INTEGRAL COLOR. THE SPECIFIED SYSTEM HAS A 5-YEAR MANUFACTURER WARRANTY

3. ALL FINISH COAT TEXTURES SHALL BE "FINESSE" (SPECIALTY TEXTURE BY DRYVIT) UNLESS OTHERWISE NOTED

4. WHERE FOAM TRIM, CORNICE MOLDING OR OTHER SHAPES ARE SPECIFIED, COMPONENTS SHALL BE AS MANUFACTURED BY "DRYVIT SHAPES BY ACROCORE" AND SHALL BE COMPRISED OF A TYPE I CLASSIFICATION EXPANDED POLYSTYRENE WRAPPED IN A FLEXIBLE IMPACT RESISTANT FIBERGLASS MESH AND COATED WITH A FACTORY APPLIED POLYMER MODIFIED, FLEXIBLE CEMENT COATING

5. ALL GENERAL CONTRACTOR BIDS SHALL INCLUDE THE ABOVE STATED SYSTEMS / PRODUCTS IN THEIR BASE BIDS. SUBSTITUTIONS WILL BE CONSIDERED FOR APPROVAL BUT ONLY IF FULLY QUALIFIED IN BIDS INCLUDING COMPLETE SYSTEM / PRODUCT SPECIFICATIONS AND ASSOCIATED COSTS
ALUMINUM COPING, DRIP EDGES, SCUPPERS AND DOWNSPOUT REQUIREMENTS:

1. ALL COMPONENTS SHALL BE PREFINISHED WITH A FACTORY APPLIED, KYNAR 500 FINISH OR MANUFACTURER EQUIVALENT. COLORS SHALL BE AS SPECIFIED FROM THE MANUFACTURER'S STANDARD COLOR OPTIONS

GENERAL:

1. WHERE PLASTER REVEALS ARE NOT PREFINISHED, REVEALS SHALL BE PAINTED TO MATCH THE ADJACENT WALL COLOR UNLESS OTHERWISE NOTED

2. ALL EXPOSED, BUILDING MOUNTED UTILITIES AND CONDUITS SHALL BE PAINTED TO MATCH THE ADJACENT WALL SURFACES UNLESS OTHERWISE NOTED

3. EXTERIOR SITE AND WALL MOUNTED LIGHT FIXTURES TO BE FINISH "BLACK".

THE CONTRACTOR SHALL REQUEST A COLORIZED COPY OF THE ELEVATIONS FROM THE ARCHITECT PRIOR TO ORDERING OR APPLYING EIFS, PAINT AND OTHER EXTERIOR FINISHES. THE COLORIZED ELEVATIONS WILL HELP CONFIRM COLORS AND ASSIST THE PAINTER WHERE COLOR CHANGES OCCUR

CRITICAL NOTES

WALL FINISHES AT PARAPET RETURNS:
THE DESIGN INTENT FOR PARAPET WALLS THAT RETURN ONTO THE ROOF SURFACE IS THAT THEY, WHERE EXPOSED TO VIEW, ARE TO BE PROVIDED WITH WALL FINISHES THAT ARE CONSISTENT WITH THE ADJACENT BUILDING ELEVATIONS. FOR EXAMPLE, IF CEMENT PLASTER IS PROVIDED ALONG THE MAIN BUILDING ELEVATION, THE PARAPET RETURNS ARE TO BE PROVIDED WITH EQUAL FINISHES

THE SHELL GENERAL CONTRACTOR SHALL FULLY REVIEW AND COORDINATE WALL FINISHES WITH APPLICABLE TRADES PRIOR TO INSTALLATION. UNDER NO CIRCUMSTANCES WILL EXPOSED ROOF MEMBRANE BE ACCEPTED AS A WALL FINISH AT THE PARAPET RETURN CONDITIONS NOTED

WALL COUNTERFLASHING DETAILS:
REFER TO WALL SECTIONS AND ENLARGED DETAILS FOR THE SPECIFIED COUNTERFLASHING REQUIRED ABOVE CANOPIES, AWNINGS, PILASTER CAPS AND, WHERE APPLICABLE, TRIM MOULDING. IN SUCH CASES, THE DESIGN INTENT IS TO LIMIT THE VISABILITY OF COUNTERFLASHINGS BY INCORPORATING LOW PROFILE OR CONCEALED FLASHINGS

THE SHELL GENERAL CONTRACTOR SHALL FULLY REVIEW AND COORDINATE ALL WALL COUNTERFLASHING REQUIREMENTS WITH THE ROOFER AND APPLICABLE TRADES PRIOR TO INSTALLATION. SHOULD CLARIFICATION OF ANY DETAIL BE NEEDED, THE SHELL GENERAL CONTRACTOR SHALL SUBMIT AN RFI TO THE ARCHITECT PRIOR TO INSTALLATION

UNDER NO CIRCUMSTANCES WILL EXPOSED SINGLE-PLY MEMBRANE BE AN ACCEPTABLE MEANS OF FLASHING AT THE CONDITIONS NOTED

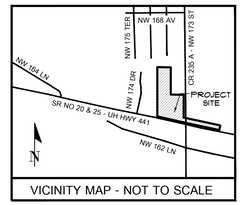
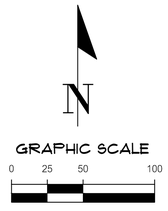
ALTA/NSPS LAND TITLE SURVEY

LOCATED IN THE SOUTHEAST QUARTER (SE 1/4) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST CITY OF ALACHUA, ALACHUA COUNTY, FLORIDA

DESCRIPTION: (AS FURNISHED VIA FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-002-000)("PARCEL A")



COMMENCE AT THE SOUTHEAST CORNER OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, THENCE RUN NORTH 1 DEGREE 49 MINUTES, WEST ALONG THE EAST LINE OF SAID SECTION 2560.55 FEET, THENCE RUN SOUTH 89 DEGREES 29 MINUTES WEST 250 FEET TO THE POINT OF BEGINNING, THENCE RUN SOUTH 1 DEGREE 49 MINUTES, EAST 807.75 FEET TO THE NORTH OF RIGHT OF WAY OF STATE ROAD NO. 20, THENCE RUN NORTH 79 DEGREES 06 MINUTES WEST ALONG SAID RIGHT OF WAY 215.4 FEET, THENCE RUN NORTH 1 DEGREE, 49 MINUTES WEST 765.11 FEET, THENCE RUN NORTH 89 DEGREES 29 MINUTES EAST 210 FEET TO THE POINT OF BEGINNING. ALL BEING AND LYING IN THE SOUTHEAST QUARTER (SE) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA.



DESCRIPTION: (AS FURNISHED VIA FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-001-002)("PARCEL B")

A TRACT OF LAND LOCATED IN THE SOUTHEAST 1/4 OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

FOR A POINT OF REFERENCE, COMMENCE AT THE SOUTHEAST CORNER OF SAID SECTION 8: THENCE RUN NORTH 01 DEG. 49 MIN. WEST, ALONG THE EAST LINE OF SAID SECTION 8 A DISTANCE OF 2010.55 FEET; THENCE RUN SOUTH 89 DEG. 29 MIN. WEST, 50 FEET TO THE WESTERLY RIGHT-OF-WAY OF STATE ROAD S-235A BEING THE POINT OF BEGINNING; THENCE FROM SAID POINT OF BEGINNING CONTINUE SOUTH 89 DEG. 29 MIN. WEST, A DISTANCE OF 200 FEET; THENCE RUN SOUTH 01 DEG. 49 MIN. EAST, A DISTANCE OF 257.75 FEET TO THE NORTHERLY RIGHT-OF-WAY LINE OF STATE HIGHWAY NO. 20; THENCE RUN SOUTH 79 DEG. 06 MIN. EAST, ALONG SAID NORTHERLY RIGHT-OF-WAY LINE A DISTANCE OF 205.2 FEET TO THE SAID WESTERLY RIGHT-OF-WAY LINE OF STATE ROAD NO. S235A; THENCE RUN NORTH 01 DEG. 49 MIN. WEST, ALONG SAID WESTERLY RIGHT-OF-WAY LINE, A DISTANCE OF 298.4 FEET TO CLOSE ON SAID POINT OF BEGINNING.

LESS ANY AND EXCEPT THAT PORTION DESCRIBED AND RECORDED IN OFFICIAL RECORDS BOOK 107, PAGE 609 OF SAID PUBLIC RECORDS.

ZONING RESTRICTIONS:
(PER ALACHUA COUNTY, MUNICODE)
ZONING: A - AGRICULTURE
MINIMUM SETBACK REQUIREMENTS:

- FRONT: 40'
- REAR: 40'
- SIDE (INTERIOR): 20'
- SIDE (STREET): 40'
- REAR: 25'

FLOOD ZONE:
THIS PROPERTY IS LOCATED IN FEDERAL FLOOD ZONE "X", AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN, AS INTERPOLATED FROM FEMA F.I.R.M. PANEL NO. 120 OF 640, COMMUNITY NUMBER AND PANEL "120664 0120 D, EFFECTIVE DATE: JUNE 16, 2006.

SURVEYOR'S NOTES:

1. HORIZONTAL DATUM SHOWN HEREON IS DERIVED FROM THE FLORIDA STATE PLANE COORDINATE SYSTEM, NORTH ZONE, NAD 83 / 2011 ADJUSTMENT, AS DERIVED FROM FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) PRIMARY CONTROL MONUMENT NAMED "2602009CP", BEING A FDOT ALUMINUM CAP STAMPED "CP 2602009" AND PRIMARY CONTROL MONUMENT NAMED "2602018CS", BEING A FDOT ALUMINUM CAP STAMPED "CS 2602018". MEASURED BEARINGS SHOWN HEREON WOULD NEED TO BE ROTATED 01°13'13" COUNTERCLOCKWISE TO BE ON THE SAME BEARING STRUCTURE OF THE RECORDED DEEDS AND/OR FURNISHED DESCRIPTIONS.
2. VERTICAL DATUM IS SHOWN IN NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND IS BASED ON FLORIDA DEPARTMENT OF TRANSPORTATION CONTROL MONUMENT NAMED 2602009BM2, BEING A ROUND CONCRETE MONUMENT WITH FDOT BRASS DISK, STAMPED "BM2 2602009" WITH A PUBLISHED ELEVATION 132.13 FEET (NAVD 88).
3. UNDERGROUND UTILITIES SHOWN HEREON ARE BASED ON VISIBLE SURFACE EVIDENCE, IN CONJUNCTION WITH PAINT MARKINGS DELINEATED BY OTHERS, AND BY ELECTROMAGNETIC INDUCTION PERFORMED BY THIS OFFICE. THIS SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE AND/OR ABANDONED.
4. THE SURVEYOR HAS NO KNOWLEDGE OF UNDERGROUND FOUNDATIONS WHICH MAY ENCROACH.
5. FENCING, SYMBOLS AND MONUMENTATION SHOWN HEREON MAY BE EXAGGERATED FOR PICTORIAL PURPOSES ONLY AND MAY NOT BE SHOWN TO SCALE.
6. IN THE OPINION OF THIS SURVEYOR, THE PERIMETER LINES AS SHOWN HEREON REPRESENT THE LOCATION OF THE BOUNDARY LINES OF THE SUBJECT PARCEL IN RELATION TO THE DESCRIPTION OF RECORD AND THOSE EXISTING LAND CORNERS FOUND TO BE ACCEPTABLE BY THIS SURVEYOR.
7. THIS SURVEY WAS PRODUCED WITH THE BENEFIT OF FURNISHED TITLE INFORMATION PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-002-000) AND FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-001-002). A SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN PERFORMED BY THE SURVEYOR.
8. INFORMATION FROM FEDERAL EMERGENCY MANAGEMENT AGENCY, (F.E.M.A.) FLOOD INSURANCE RATE MAP(S), SHOWN ON THIS MAP WAS CURRENT AS OF THE REFERENCED DATE. MAP REVISIONS AND AMENDMENTS ARE PERIODICALLY MADE BY LETTER AND MAY NOT BE REFLECTED ON THE MOST CURRENT MAP.
9. PARCEL B IS IN UNINCORPORATED ALACHUA COUNTY, FLORIDA, WHILE PARCEL "A" HAS BEEN ANNEXED INTO THE CITY OF ALACHUA.
10. THERE WERE NO MARKED PARKING SPACES OBSERVED AT THE TIME OF THIS SURVEY.
11. THERE WAS NO OBSERVED EVIDENCE OF CURRENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS BEING CONDUCTED AT THE TIME OF THIS SURVEY.
12. THERE WAS NO EVIDENCE OF CHANGES IN STREET RIGHT OF WAY LINES. THERE WAS NO OBSERVED EVIDENCE OF CURRENT STREET CONSTRUCTION OR REPAIRS. THERE WAS NO OBSERVED EVIDENCE OF CURRENT SIDEWALK CONSTRUCTION OR REPAIRS.
13. THERE IS NO OBSERVED EVIDENCE OF SITE USE AS A CEMETERY, SOLID WASTE DUMP, SUMP OR SANITARY LANDFILL.
14. ADDITIONAL POINTS MAY BE FOUND BY TURNING ON THE SV-NODE* LAYERS IN THE SUPPLIED DIGITAL FILE.
15. TOPOGRAPHIC INFORMATION SHOWN HEREON BASED ON GROUND SURVEY. CONTOURS SHOWN HEREON REFLECT 1-FOOT INTERVALS.
16. PROJECT LIMITS ARE PER CLIENT SPECIFICATIONS.
17. THIS SURVEY IS A TOTAL OF FOUR (4) SHEETS. SEE SHEET ONE (1) FOR OVERALL BOUNDARY INFORMATION. SEE SHEET TWO (2) THROUGH FOUR (4) FOR DETAILED TOPOGRAPHIC INFORMATION AND IMPROVEMENT LOCATIONS.

SCHEDULE B-II EXCEPTIONS:
(PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-002-000)

ITEM NO. 4: THIS PROPERTY IS SUBJECT TO ORDINANCE NO. O-01-42 RECORDED IN OFFICIAL RECORDS BOOK 2387, PAGE 736. (ORDINANCE ANNEXING PARCEL A IN THE CITY OF ALACHUA)

SCHEDULE B-II EXCEPTIONS:
(PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-001-002)

ITEM NO. 4: THIS PROPERTY IS SUBJECT TO THE ORDINANCE 24-09 RECORDED AUGUST 27, 2024 IN OFFICIAL RECORDS BOOK 5176, PAGE 1, OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA. (ORDINANCE ANNEXING PARCEL B IN THE CITY OF ALACHUA)

ALTA/NSPS LAND TITLE SURVEY

LOCATED IN THE SOUTHEAST QUARTER (SE 1/4) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST CITY OF ALACHUA, ALACHUA COUNTY, FLORIDA

SURVEYOR'S NOTES:

1. HORIZONTAL DATUM SHOWN HEREON IS DERIVED FROM THE FLORIDA STATE PLANE COORDINATE SYSTEM, NORTH ZONE, NAD 83 / 2011 ADJUSTMENT, AS DERIVED FROM FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) PRIMARY CONTROL MONUMENT NAMED "2602009CS", BEING A FDOT ALUMINUM CAP STAMPED "CS 2602009" AND PRIMARY CONTROL MONUMENT NAMED "2602018CS", BEING A FDOT ALUMINUM CAP STAMPED "CS 2602018". MEASURED BEARINGS SHOWN HEREON WOULD NEED TO BE ROTATED 01°13'13" COUNTERCLOCKWISE TO BE ON THE SAME BEARING STRUCTURE OF THE RECORDED DEEDS AND/OR FURNISHED DESCRIPTIONS.
2. VERTICAL DATUM IS SHOWN IN NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND IS BASED ON FLORIDA DEPARTMENT OF TRANSPORTATION CONTROL MONUMENT NAMED 2602009BM2, BEING A ROUND CONCRETE MONUMENT WITH FDOT BRASS DISK, STAMPED "BM2 2602009" WITH A PUBLISHED ELEVATION 132.13 FEET (NAVD 88).
3. UNDERGROUND UTILITIES SHOWN HEREON ARE BASED ON VISIBLE SURFACE EVIDENCE, IN CONJUNCTION WITH PAINT MARKINGS DELINEATED BY OTHERS, AND BY ELECTROMAGNETIC INDUCTION PERFORMED BY THIS OFFICE. THIS SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE AND/OR ABANDONED.
4. THE SURVEYOR HAS NO KNOWLEDGE OF UNDERGROUND FOUNDATIONS WHICH MAY ENCROACH.
5. FENCING, SYMBOLS AND MONUMENTATION SHOWN HEREON MAY BE EXAGGERATED FOR PICTORIAL PURPOSES ONLY AND MAY NOT BE SHOWN TO SCALE.
6. IN THE OPINION OF THIS SURVEYOR, THE PERIMETER LINES AS SHOWN HEREON REPRESENT THE LOCATION OF THE BOUNDARY LINES OF THE SUBJECT PARCEL IN RELATION TO THE DESCRIPTION OF RECORD AND THOSE EXISTING LAND CORNERS FOUND TO BE ACCEPTABLE BY THIS SURVEYOR.
7. THIS SURVEY WAS PRODUCED WITH THE BENEFIT OF FURNISHED TITLE INFORMATION PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-002-000) AND FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-001-002). A SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN PERFORMED BY THE SURVEYOR.
8. INFORMATION FROM FEDERAL EMERGENCY MANAGEMENT AGENCY, (F.E.M.A.) FLOOD INSURANCE RATE MAP(S), SHOWN ON THIS MAP WAS CURRENT AS OF THE REFERENCED DATE. MAP REVISIONS AND AMENDMENTS ARE PERIODICALLY MADE BY LETTER AND MAY NOT BE REFLECTED ON THE MOST CURRENT MAP.
9. PARCEL B IS IN UNINCORPORATED ALACHUA COUNTY, FLORIDA, WHILE PARCEL "A" HAS BEEN ANNEXED INTO THE CITY OF ALACHUA.
10. THERE WERE NO MARKED PARKING SPACES OBSERVED AT THE TIME OF THIS SURVEY.
11. THERE WAS NO OBSERVED EVIDENCE OF CURRENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS BEING CONDUCTED AT THE TIME OF THIS SURVEY.
12. THERE WAS NO EVIDENCE OF CHANGES IN STREET RIGHT OF WAY LINES. THERE WAS NO OBSERVED EVIDENCE OF CURRENT STREET CONSTRUCTION OR REPAIRS. THERE WAS NO OBSERVED EVIDENCE OF CURRENT SIDEWALK CONSTRUCTION OR REPAIRS.
13. THERE IS NO OBSERVED EVIDENCE OF SITE USE AS A CEMETERY, SOLID WASTE DUMP, SUMP OR SANITARY LANDFILL.
14. ADDITIONAL POINTS MAY BE FOUND BY TURNING ON THE SV-NODE* LAYERS IN THE SUPPLIED DIGITAL FILE.
15. TOPOGRAPHIC INFORMATION SHOWN HEREON BASED ON GROUND SURVEY. CONTOURS SHOWN HEREON REFLECT 1-FOOT INTERVALS.
16. PROJECT LIMITS ARE PER CLIENT SPECIFICATIONS.
17. THIS SURVEY IS A TOTAL OF FOUR (4) SHEETS. SEE SHEET ONE (1) FOR OVERALL BOUNDARY INFORMATION. SEE SHEET TWO (2) THROUGH FOUR (4) FOR DETAILED TOPOGRAPHIC INFORMATION AND IMPROVEMENT LOCATIONS.

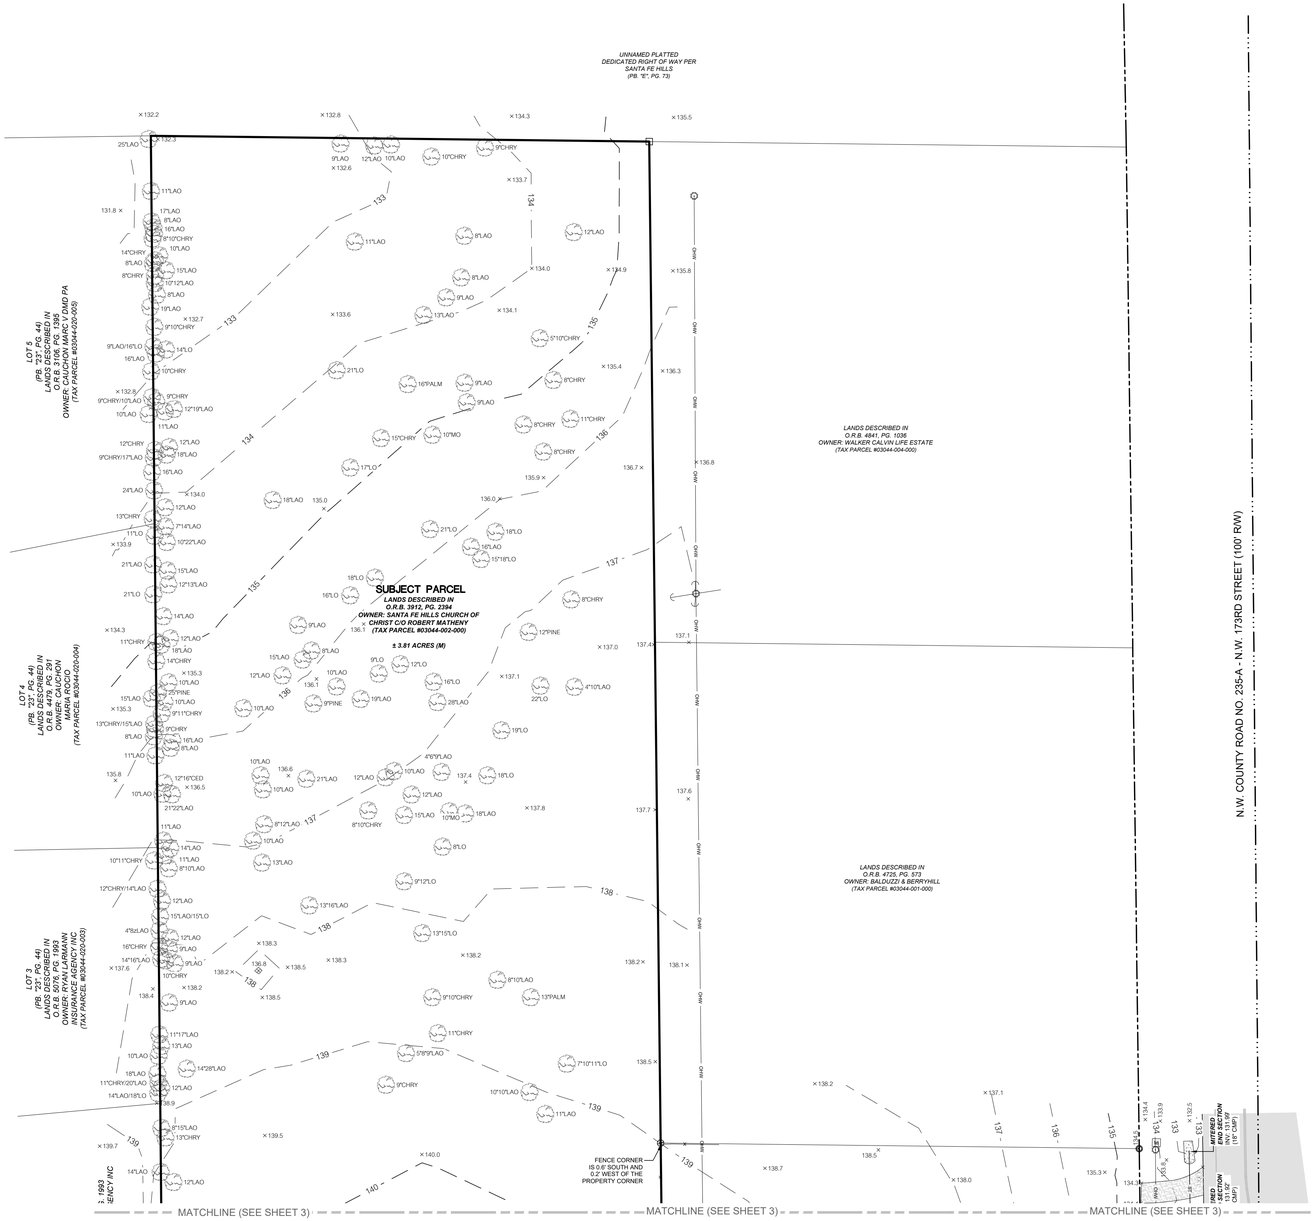
ALTA/NSPS LAND TITLE SURVEY

LOCATED IN THE SOUTHEAST QUARTER (SE 1/4) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST CITY OF ALACHUA, ALACHUA COUNTY, FLORIDA

SURVEYOR'S NOTES:



1. HORIZONTAL DATUM SHOWN HEREON IS DERIVED FROM THE FLORIDA STATE PLANE COORDINATE SYSTEM, NORTH ZONE, NAD 83 / 2011 ADJUSTMENT, AS DERIVED FROM FLORIDA DEPARTMENT OF TRANSPORTATION (FDOT) PRIMARY CONTROL MONUMENT NAMED "2602009C2", BEING A FDOT ALUMINUM CAP STAMPED "C2 2602009" AND PRIMARY CONTROL MONUMENT NAMED "2602018C3", BEING A FDOT ALUMINUM CAP STAMPED "C3 2602018". MEASURED BEARINGS SHOWN HEREON WOULD NEED TO BE ROTATED 01°13'13" COUNTERCLOCKWISE TO BE ON THE SAME BEARING STRUCTURE OF THE RECORDED DEEDS AND/OR FURNISHED DESCRIPTIONS.
2. VERTICAL DATUM IS SHOWN IN NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND IS BASED ON FLORIDA DEPARTMENT OF TRANSPORTATION CONTROL MONUMENT NAMED 2602009BM2, BEING A ROUND CONCRETE MONUMENT WITH FDOT BRASS DISK, STAMPED "BM2 2602009" WITH A PUBLISHED ELEVATION 132.13 FEET (NAVD 88).
3. UNDERGROUND UTILITIES SHOWN HEREON ARE BASED ON VISIBLE SURFACE EVIDENCE, IN CONJUNCTION WITH PAINT MARKINGS DELINEATED BY OTHERS, AND BY ELECTROMAGNETIC INDUCTION PERFORMED BY THIS OFFICE. THIS SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE AND/OR ABANDONED.
4. THE SURVEYOR HAS NO KNOWLEDGE OF UNDERGROUND FOUNDATIONS WHICH MAY ENCROACH.
5. FENCING, SYMBOLS AND MONUMENTATION SHOWN HEREON MAY BE EXAGGERATED FOR PICTORIAL PURPOSES ONLY AND MAY NOT BE SHOWN TO SCALE.
6. IN THE OPINION OF THIS SURVEYOR, THE PERIMETER LINES AS SHOWN HEREON REPRESENT THE LOCATION OF THE BOUNDARY LINES OF THE SUBJECT PARCEL IN RELATION TO THE DESCRIPTION OF RECORD AND THOSE EXISTING LAND CORNERS FOUND TO BE ACCEPTABLE BY THIS SURVEYOR.
7. THIS SURVEY WAS PRODUCED WITH THE BENEFIT OF FURNISHED TITLE INFORMATION PER FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091092, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-002-000) AND FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024 (TAX PARCEL #03044-001-002). A SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN PERFORMED BY THE SURVEYOR.
8. INFORMATION FROM FEDERAL EMERGENCY MANAGEMENT AGENCY, (F.E.M.A.) FLOOD INSURANCE RATE MAP(S), SHOWN ON THIS MAP WAS CURRENT AS OF THE REFERENCED DATE. MAP REVISIONS AND AMENDMENTS ARE PERIODICALLY MADE BY LETTER AND MAY NOT BE REFLECTED ON THE MOST CURRENT MAP.
9. PARCEL B IS IN UNINCORPORATED ALACHUA COUNTY, FLORIDA, WHILE PARCEL "A" HAS BEEN ANNEXED INTO THE CITY OF ALACHUA.
10. THERE WERE NO MARKED PARKING SPACES OBSERVED AT THE TIME OF THIS SURVEY.
11. THERE WAS NO OBSERVED EVIDENCE OF CURRENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS BEING CONDUCTED AT THE TIME OF THIS SURVEY.
12. THERE WAS NO EVIDENCE OF CHANGES IN STREET RIGHT OF WAY LINES. THERE WAS NO OBSERVED EVIDENCE OF CURRENT STREET CONSTRUCTION OR REPAIRS. THERE WAS NO OBSERVED EVIDENCE OF CURRENT SIDEWALK CONSTRUCTION OR REPAIRS.
13. THERE IS NO OBSERVED EVIDENCE OF SITE USE AS A CEMETERY, SOLID WASTE DUMP, SUMP OR SANITARY LANDFILL.
14. ADDITIONAL POINTS MAY BE FOUND BY TURNING ON THE SV-NODE* LAYERS IN THE SUPPLIED DIGITAL FILE.
15. TOPOGRAPHIC INFORMATION SHOWN HEREON BASED ON GROUND SURVEY. CONTOURS SHOWN HEREON REFLECT 1-FOOT INTERVALS.
16. PROJECT LIMITS ARE PER CLIENT SPECIFICATIONS.
17. THIS SURVEY IS A TOTAL OF FOUR (4) SHEETS. SEE SHEET ONE (1) FOR OVERALL BOUNDARY INFORMATION. SEE SHEET TWO (2) THROUGH FOUR (4) FOR DETAILED TOPOGRAPHIC INFORMATION AND IMPROVEMENT LOCATIONS.

City of ALACHUA

NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning and Zoning Board of the City of Alachua will hold a public hearing on April 21, 2026, at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following:

Application #: PSP25-0012 | Westside Commons – Heartland Dental

A request by Alakai Acquisitions, LLC (Applicant/Agent) on behalf of Alachua Outparcel LLC and Santa Fe Hills Church of Christ, Inc. (Property Owners) for a site plan proposing the construction of a ± 4,200 square foot dental clinic with associated site improvements on a 0.69-acre subject property generally located along the north side of US Highway 441, just west of the intersection of US Highway 441 and NW 173rd Street (CR 235A) (Tax parcel 03044-001-002 (portion thereof); 03044-002-000 (portion thereof)). FLU: Commercial, Zoning: Community Commercial (CC).

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application, staff report, and any related materials are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. one week prior to the date of hearing. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

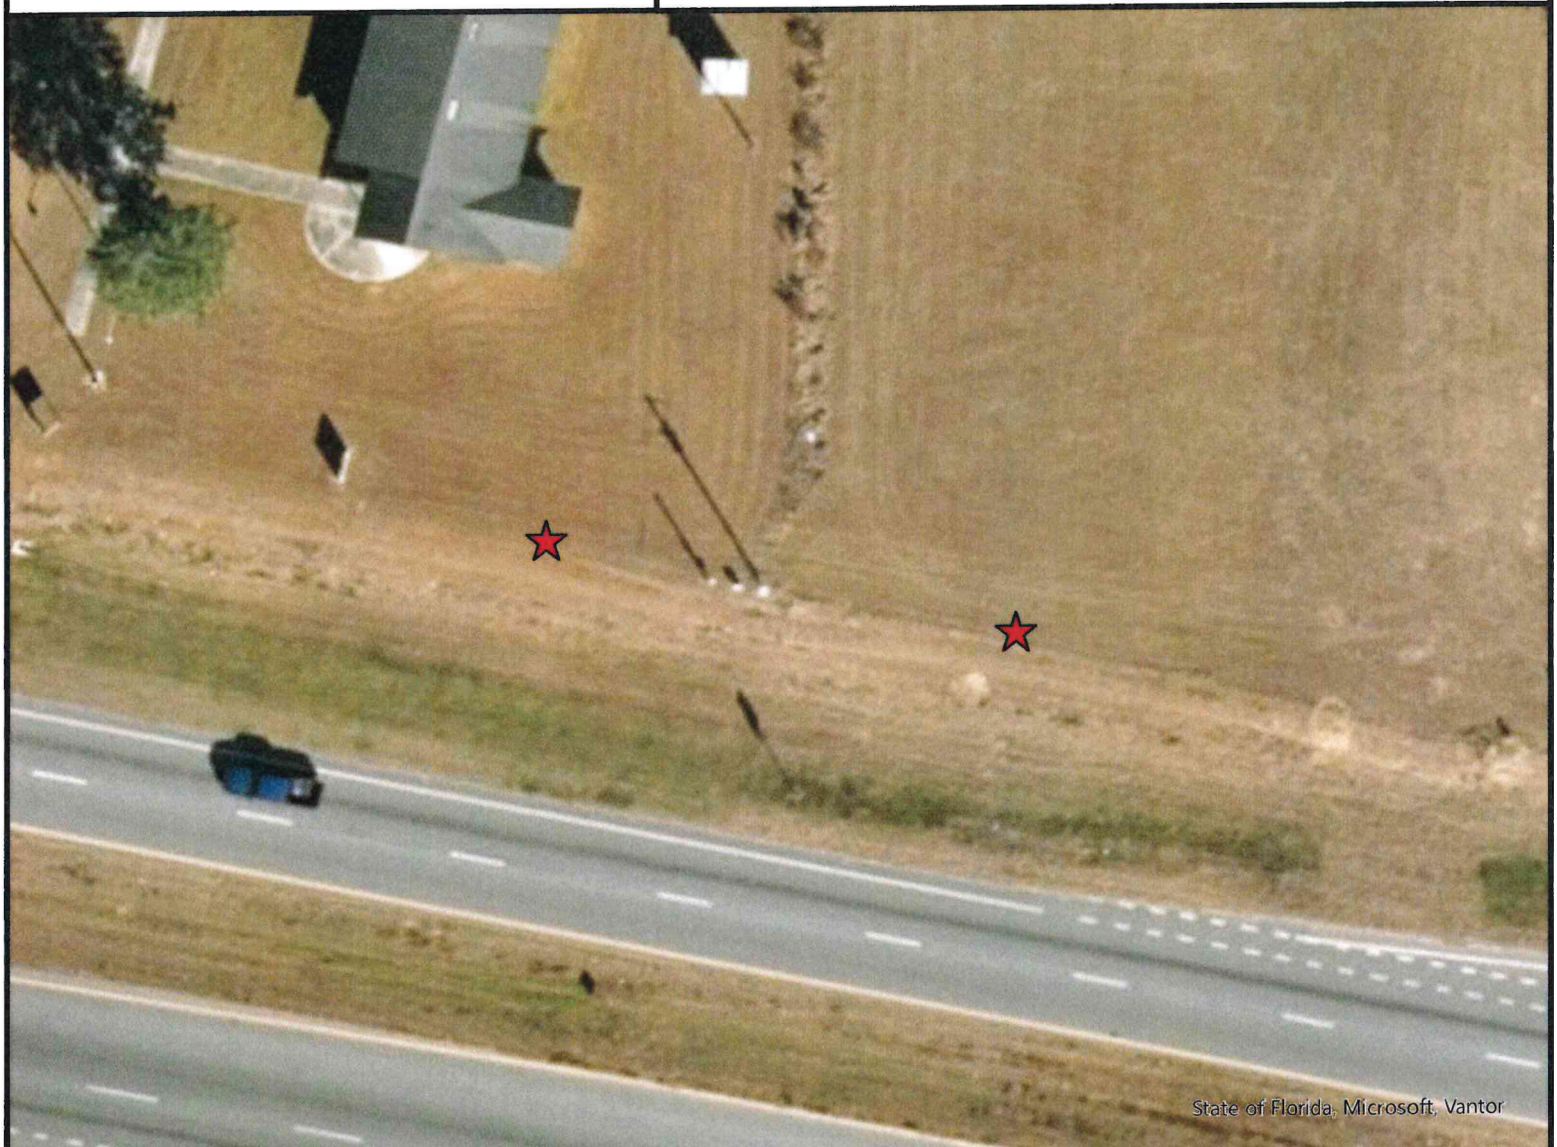
Posted Notice Location Map
PSP25-0012 | Heartland Dental

Pursuant to Section 2.2.9(D) of the City's Land Development Regulations, posted notice signs must be placed on the land that is the subject of the application, along each street which is adjacent to or runs through the land in a manner that makes them clearly visible. Signs shall be posted at regular intervals of not more than 400 feet when the land subject to the application has less than 1,500 feet of road frontage. When the land subject to the application has 1,500 feet or more of road frontage, signs shall be posted at intervals of not more than 1,320 feet.

Signs shall be inspected by the City subsequent to their posting. The applicant shall be responsible for ensuring that the posted notice is maintained on the land subject to the application until the completion of the final public hearing on the application.



SIGNS MUST BE REMOVED BY THE APPLICANT WITHIN TEN DAYS AFTER THE FINAL DECISION ON THE APPLICATION

Board Agenda Item

MEETING DATE: April 21, 2026

SUBJECT: PSP25-0009 | Westside Commons – Chipotle Site Plan Permit. A request by Alakai Acquisitions, LLC (Applicant/Agent) on behalf of Alachua Outparcel LLC (Property Owner) for a site plan proposing the construction of a ± 2,366 square foot restaurant with drive-through service with associated site improvements on a ± 0.88-acre subject property generally located at the northwest corner of US Highway 441 and NW 173rd Street (CR 235A) (Tax parcel 03044-001-002 (portion thereof)). FLU: Commercial; Zoning: Community Commercial (CC).(Quasi-judicial hearing)

PREPARED BY: Bryan Thomas

RECOMMENDED ACTION:

Staff recommends that the Planning & Zoning Board find the site plan application for Alachua Outparcel, LLC, to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approve the site plan subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report. Recommended Motion: *I move that, based upon the competent substantial evidence, the presentation before this Board, and Staff's recommendation, this Board finds the site plan application for Alachua Outparcel, LLC to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approves the site plan, subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report.*

Summary

This application is a request by Alakai Acquisitions (applicant/agent), on behalf of Alachua Outparcel LLC (property owner), for a site plan which proposes the construction of a ± 2,366 square foot restaurant with drive-through service with associated site improvements on a ± 0.88-acre subject property.

The ± 0.88-acre subject property (Tax Parcel 03044-001-002) is generally located at the northwest corner of US Highway 441 and NW 173rd Street. The site plan proposes to provide two points of ingress/egress via shared driveways, with the southern driveway accessing US Highway 441 and the northern driveway accessing NW 173rd Street. Stormwater is proposed to be directed to an onsite facility that is part of the Westside Commons Infrastructure Plan approved on December 8, 2025.

FINANCIAL IMPACT

None.

Staff Report

Planning & Zoning Board Hearing Date: April 21, 2026
Quasi-Judicial Hearing **Application #: PSP25-0009**

SUBJECT:	A request for a site plan proposing the construction of a ± 2,366 square foot restaurant with drive-through service and associated site improvements.
APPLICANT/AGENT:	Alakai Acquisitions
PROPERTY OWNER:	Alachua Outparcel, LLC
LOCATION:	Generally located on the northeast intersection of US Highway 441 and NW 173rd Street
PARCEL ID NUMBER:	03044-001-002
FLUM DESIGNATION:	Commercial
ZONING:	Community Commercial
OVERLAY:	N/A
ACREAGE:	± 0.88
PROJECT PLANNER:	Bryan S. Thomas, AICP
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board find the site plan application for Alachua Outparcel, LLC, to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approve the site plan subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report.
RECOMMENDED MOTION:	*I move that, based upon the competent substantial evidence, the presentation before this Board, and Staff's recommendation, this Board finds the site plan application for Alachua Outparcel, LLC to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approves the site plan, subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report.*

SUMMARY

This application is a request by Alakai Acquisitions (applicant/agent), on behalf of Alachua Outparcel LLC (property owner), for a site plan which proposes the construction of a ± 2,366 square foot restaurant with drive-through service with associated site improvements on a ± 0.88-acre subject property.

The ± 0.88-acre subject property (Tax Parcel _03044-001-002) is generally located at the northwest corner of US Highway 441 and NW 173rd Street. The site plan proposes to provide two points of ingress/egress via shared driveways, with the southern driveway accessing US Highway 441 and the northern driveway accessing NW 173rd Street. Stormwater is proposed to be directed to an on-site facility that is part of the Westside Commons Infrastructure Plan approved on December 8, 2025.

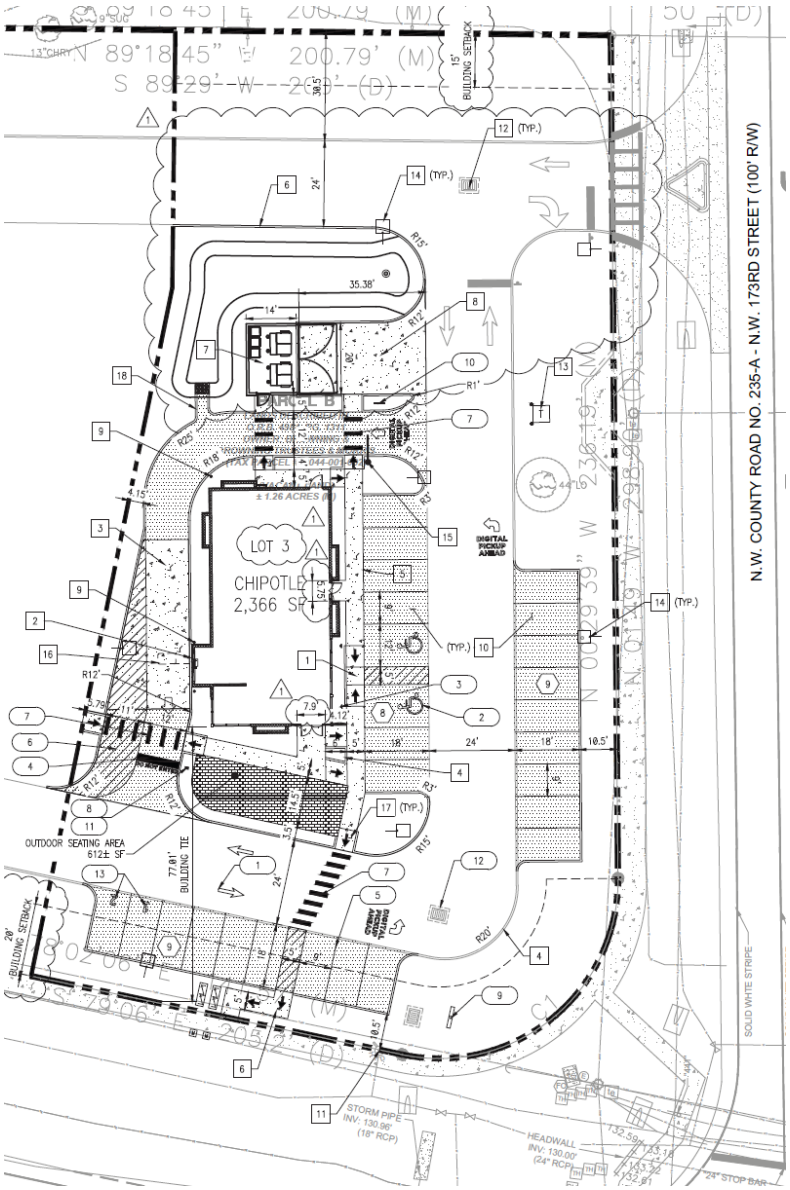

Figure 1. Proposed Site Plan Overview

EXISTING USES

The subject property is currently undeveloped and mostly cleared.

SURROUNDING USES

The existing uses, Future Land Use Map (FLUM) designations, and zoning districts of the surrounding area are identified in Table 1. Figure 2. provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. The information below is not intended to be all-inclusive, and may not identify all existing uses, FLUM designations, and/or zoning districts surrounding the subject property.)

Table 1. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Residential	Agriculture	Agricultural
South	Gas Station	Commercial	Commercial Intensive
East	High School	Public	Agricultural
West	Church	Commercial	Community Commercial

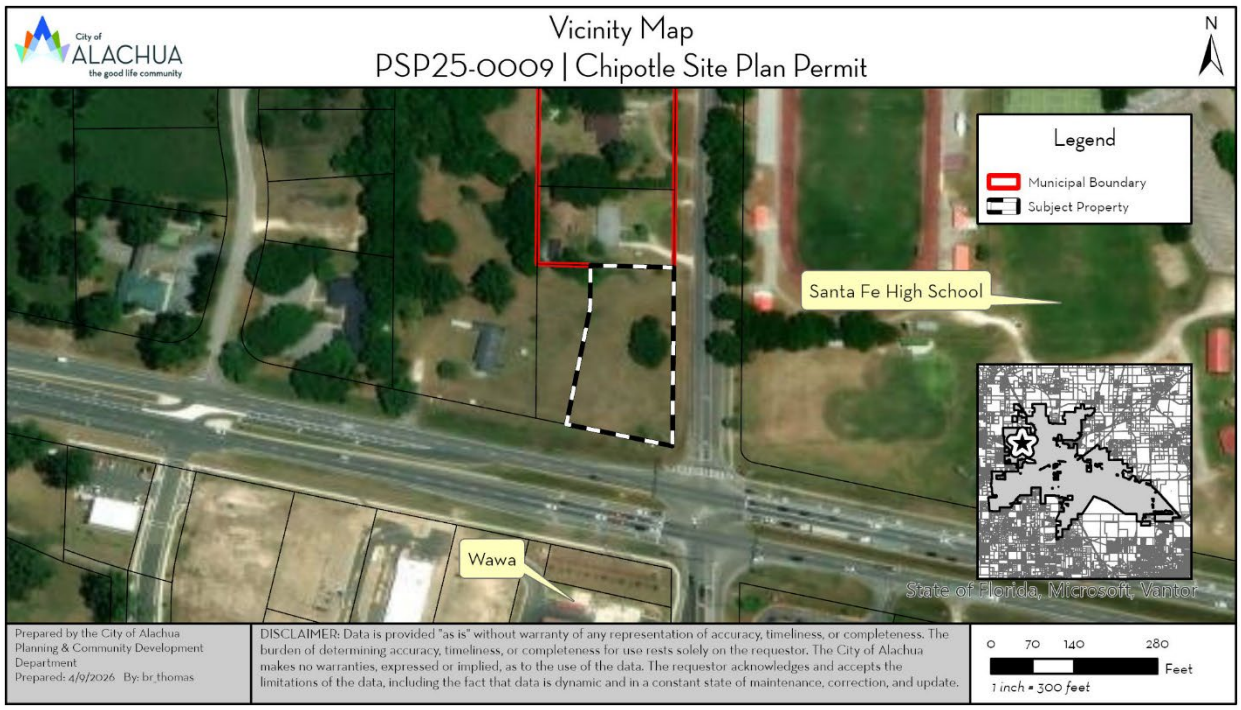

Figure 2. Vicinity Map

NEIGHBORHOOD MEETING

The purpose of a neighborhood meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. Neighborhood meetings are required for site plan applications.

A neighborhood meeting was held on June 2, 2025 at the Legacy Park Multipurpose Center, Meeting Room #2. As required by Section 2.2.4 of the City's Land Development Regulations, all property owners within 400 feet of the subject property were notified and notice of the meeting was published in a newspaper of general circulation. The applicant was available to answer questions. Materials submitted by the applicant indicate that the meeting was attended by 3 members of the public.

COMPREHENSIVE PLAN CONSISTENCY ANALYSIS

The goals, objectives, and policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

Future Land Use Element

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.3: *Commercial & Mixed-Use*

The City shall establish three commercial and mixed-use land use categories: Community Commercial, Commercial, and Central Business District. These land use categories shall provide a broad range of commercial uses, including retail sales and services, personal services, offices, and tourist-oriented uses, and the potential for mixed-use developments in order to provide for the availability of goods and services, both to the citizens and visitors of Alachua and to the citizens of the North Central Florida region while diversifying the housing stock.

Policy 1.3.b: *Commercial*: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses may locate. The following uses are allowed within the Commercial land use category:

1. Retail sales and services;
2. Personal services;
3. Financial institutions;
4. Recreation and entertainment;

5. Tourist-related uses;
6. Visitor accommodations;
7. Commercial shopping centers;
8. Auto-oriented uses;
9. Traditional Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/business parks;
13. Limited industrial services;
14. Eating establishments;
15. Single family attached units;
16. Apartments and townhomes;
17. Duplexes and quadplexes;
18. Single-family and multi-family residential above first floor commercial uses;
19. Convention centers; and,
20. Supporting community services such as schools, houses of worship, parks, and community centers.

Development in the Commercial land use category may occur as mixed-use or non-mixed-use.

Evaluation & Findings: The subject property's future land use category is Commercial. The proposed use of a restaurant with drive-through service falls under eating establishments, which is an allowed use in the Commercial future land use category. The use supports the objective of the commercial and mixed-use future land use categories by providing goods to citizens and visitors of the Alachua and North Central Florida region.

Policy 1.3.d: *Design and performance standards*: The following criteria shall apply when evaluating commercial development proposals in the commercial & mixed-use future land use categories:

21. Integration of vehicular and non-vehicular access into the site and access management features of site in terms of driveway cuts and cross access between adjacent sites, including use of frontage and/or shared access;

Evaluation & Findings: The proposed site plan includes an interior shared driveway with two vehicular ingress/egress points from NW 173rd Street and US Highway 441 to provide for safe and efficient vehicular movements. One pedestrian connection to the sidewalk adjacent to US Highway 441 is proposed to provide for safe pedestrian access.

22. Buffering from adjacent existing/potential uses;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the required buffer standards as established in Section 6.2.2 and Section 6.2.3 of the City's Land Development Regulations.

23. Open space provisions and balance of proportion between gross floor area and site size;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the minimum required open space standards as established in Section 6.7 of the City's Land Development Regulations.

24. Adequacy of pervious surface are in terms of drainage requirements;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the maximum allowable impervious area standard as established in Table 5.1-3. Of the City's Land Development Regulations. Additionally, all stormwater will be conveyed to an offsite stormwater management facility that is part of the Westside Commons Infrastructure Plan approved on December 8, 2025.

25. Placement of signage;

Evaluation & Findings: Commercial signage is to be permitted separately from the proposed site plan and the applicant has been notified of such requirement under Section 2.4.11. All incidental signage and signage required for traffic control has been reviewed and the site plan demonstrates that the placement of signage will not interfere with visibility, landscaping, utilities, or site circulation.

26. Adequacy of site lighting and potential impacts of lighting upon surrounding area. Lighting should be designed to minimize impacts to preserve the ambiance and quality of the nighttime sky by reducing light trespass and light pollution in adjacent properties by utilizing lighting at appropriate intensities, directions and times to ensure light is not overused or impacting areas where it is not intended;

Evaluation & Findings: The proposed site plan included a photometric plan and has demonstrated compliance with the outdoor lighting standards as established in Section 6.4 of the City's Land Development Regulations.

27. Safety of on-site circulation patterns (patron, employee, and delivery vehicles), including parking layout, drive aisles, and points of conflict;

Evaluation & Findings: The proposed site plan has demonstrated a safe on-site circulation pattern, including an exhibit demonstrating access and maneuverability of a typical Alachua County Fire Rescue vehicle (40 feet in length, 8.17 feet in width). Two turn-around spaces are provided at the entrance of the drive-through lanes. A loading space is not required for the proposed site plan by Section 6.1 of the City's Land Development Regulations; however, the applicant has stated that deliveries are to occur during non-peak or non-business hours only.

28. Landscaping, as it relates to the requirements and goals of the Comprehensive Plan and Land Development Regulations;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the tree protection and landscaping standards as established in Section 6.2 of the City's Land Development Regulations.

29. Unique features and resources which may constrain site development such as soils, existing vegetation and historic significance; and,

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. The soils present are well drained soils in hydrologic group A, with only slight limitations for development. There is no existing vegetation on the site other than grass/sod cover as it was cleared as part of the Westside Commons Infrastructure Plan approved on December 8, 2025. No historically significant structures are present on the site.

30. Performance based zoning requirements, which may serve as a substitute for or accompany land development regulations in attaining acceptable site design.

Evaluation & Findings: No performance-based zoning requirements are being applied to the development.

Policy 1.3.e: *Density and intensity standards*.

1. *Non-mixed-uses*. The following density and intensity standards shall apply to non-mixed-use development proposals in the commercial & mixed-use future land use categories:
    a. *Density*. Residential uses are limited to a density of 10 dwelling units per acre in the Community Commercial land use category and 15 dwelling units per acre in the Commercial and Central Business District land use categories.
    b. *Intensity*. Non-residential uses are limited to an intensity of less than or equal to 0.5 floor area ratio for parcels 5 acres or greater, 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less.

Evaluation & Findings: The proposed site plan is a non-residential development consisting of ± 2,366 square feet of floor area on a ± 1.26-acre subject property. As such the permitted floor area ratio is 0.75 and the floor area ratio of the proposed site plan is ± 0.04 and is therefore acceptable.

Objective 5.1: *Natural Features*

The City shall coordinate land use categories with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.a: *Topography*: The City shall protect the natural topography of the City. Including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes

during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Policy 5.1.b: *Soils*: The City shall ensure soil protection and intervention measures are included in the development process.

Policy 5.1.c: *Flood prone areas*: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permits when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d: *Wetlands*: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and Suwannee River Water Management District.

Policy 5.1.e: *Habitat*: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory may be established in the City's Land Development Regulations.

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. There are no concerns related to environmental features, topography, soils, flood prone areas, wetlands, or habitat on the subject property.

Objective 9.1: *Connections to Water and Wastewater Systems*

The City will require new development and significant redevelopment projects to connect to the City's potable water and wastewater systems when such connections can be made to such systems.

Policy 9.1.a: Any new development or redevelopment within a Commercial or Industrial land use category within the corporate limits, where potable water and wastewater service are available, as defined in Policy 1.2.a and Policy 4.2.b of the Community Facilities Element of the City's Comprehensive Plan, shall connect to the City's potable water and wastewater system.

Evaluation & Findings: The proposed site plan is located with the City's potable water and wastewater service areas and will connect to these City services as required.

Transportation Element

Objective 1.1: *Level of Service*

The City shall establish a safe, convenient, and efficient level of service standard for all motorized and non-motorized transportation systems.

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of any affected roadway segment.

Policy 1.4.d: The City shall require pedestrian paths within subdivision and within new developments to be connected to paths outside the development.

Evaluation & Findings: The proposed site plan shows a sidewalk connection from the internal pedestrian network to the sidewalk running along to NW US Highway 441, adjacent to the proposed development.

Policy 1.5.c: The City shall require new development and redevelopment which is compatible with an adjacent existing development(s) to interconnect with existing development (s) through one or more of the following methods:

1. Through the extension of a public or private street from the new development to the adjacent existing development or adjacent lands; and/or,
2. Through joint use of driveways and cross access agreements among adjoining properties to allow circulation between sites. Cross access between new development and existing development shall be configured to provide safe and convenient interconnectivity between the new development and all other existing development located along the cross access corridor.

Evaluation & Findings: The proposed site plan shows access to shared use driveways to the north and south, with connections to US Highway 441 and NW 173rd Street to provide for safe and efficient vehicular movements.

Community Facilities Element

Policy 1.1.d: The City hereby establishes the following level of service standards for sanitary sewer facilities:

a) *Quality*: Compliance with all applicable standards of the U.S. Environmental Protection Agency (EPA) and the Florida Department of Environmental Protection (FDEP).

b) *Quantity*: System-wide wastewater collection and treatment will be sufficient to provide a minimum of 250 gallons per day per equivalent residential unit (ERU) on an average annual basis. Plant expansion shall be planned in accordance with Rule 62-600.405, Florida Administrative Code, or subsequent provision.

c) *System capacity*: If the existing demand and reserved capacity of the committed use of the City's wastewater facility reaches 85% of the permitted capacity design, no further development orders for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement.

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of the City's wastewater facilities.

Policy 2.1.a: The City hereby establishes the following level of service standards for solid waste disposal facilities for residential uses:

Facility Type	Level of Service Standard
Solid Waste Landfill	0.73 tons per capita per year

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of the City's solid waste facilities.

Policy 4.1.c: The City establishes the following level of service standards for potable water:

3. *Quality*: Compliance with all applicable standards of the U.S. Environmental Protection Agency (EPA) and the Florida Department of Environmental Protection.

4. *Quantity*: System-wide potable water distribution and treatment will be sufficient to provide a minimum 275 gallons per day per equivalent residential unit (ERU) on an average annual basis.

5. *Capacity*: Plant expansion shall be planned in accordance with Florida Administrative Code. Additionally, if the existing demand and reserved capacity f the City's potable water facility reaches 85% of the permitted design capacity, no further development orders or permits for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement.

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of the City's potable water facilities.

Conservation and Open Space Element

Policy 1.3.d: The City shall require prior to development approval, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The inventory shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. De minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. There are no concerns related to listed species or their habitat on the subject property. As such. A listed species inventory is not required prior to development approval.

Objective 1.10: *Wetlands*

The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrological disturbances.

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. There are no concerns related to wetlands on the subject property.

ENVIRONMENTAL CONDITIONS ANALYSIS

Wetlands

Wetlands are areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal conditions do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

Evaluation & Findings: There are no delineated wetlands on the subject property. Should wetlands be discovered, the development will be required to conform with the applicable policies and regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Strategic Ecosystems

Strategic Ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1987 and updated in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation & Findings: The subject property is not located within or adjacent to a strategic ecosystem; therefore, the development will have no impact upon any strategic ecosystems identified within the ecological inventory report.

Regulated Plant & Animal Species

The Florida Natural Areas Inventory (FNAI) has identified areas throughout the State of Florida which may contain good quality natural communities. This data layer is known as the Potential Natural Areas (PNA) data layer, and identifies privately owned lands that are not managed or listed for conservation purposes. These areas were delineated by FNAI scientific staff through interpretation of natural vegetation from 1988-1993 FDOT aerial photographs and from input received during Regional Ecological Workshops held for each regional planning council. These workshops were attended by experts familiar with natural areas in the region.

Potential Natural Areas were assigned ranks of Priority 1 through Priority 5 based on size, perceived quality, and type of natural community present. The areas included in Priority 5 are exceptions to the above criteria. These areas were identified through the same process of aerial photographic interpretation and regional workshops as the PNA 1 through 4 ranked sites, but do not meet the standard criteria.

Evaluation & Findings: No species identified as endangered, threatened, or of special concern are known to exist on the subject property. No areas of the subject property have been prioritized as part of the Florida Natural Areas Inventory. If a regulated plant or animal species is discovered, the development will be required to conform with the applicable policies and regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Soil Survey

The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff.) There are four hydrologic groups: A, B, C, and D. "Group A" soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. "Group D" soils have a lower infiltration rate and therefore a higher runoff potential.

There is one soil type found within the subject property, shown in Table 2.

Table 2. Soil Types

Soil Type	Hydrologic Group	Drainage Class	Limitations		% of Subject Property (may not total to 100% due to rounding)
			Dwellings Without Basements	Small Commercial Buildings	
Arredondo-Urban Land Complex; 0-5% Slopes	A	Well Drained	Slight	Slight	100%

Evaluation & Findings: The soil types present on the subject property do not pose any significant limitations for development.

Flood Potential

Panel 12001C0120D of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated June 16, 2006 indicates that the development area is in Flood Zone X (areas determined to be outside of the 500-year floodplain).

Evaluation & Findings: Since the subject property is located in Flood Zone X, there are no issues related to flood potential.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations.

Evaluation & Findings: The subject property is located within a Karst sensitive area. No potential sink holes are known to exist on the site. Stormwater is being conveyed to an onsite management facility approved as part of the Westside Commons Infrastructure Plan and no new stormwater management facilities are proposed.

Wellfield Protection Zones

Policy 7.2.1 of the Future Land Use Element of the City's Comprehensive Plan establishes a 500-foot radius area around each city-owned potable water well.

Evaluation & Findings: The subject property is not located within a City of Alachua wellfield protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the City's Comprehensive Plan, therefore, there are no issues related to wellfield protection.

Historic Structures/Markers and Historic Features

The State of Florida and the Alachua County Historic Resources Inventory identify historic structures in addition to the City's Historic Overlay District, as established by Section 3.7 of the City's Land Development Regulations.

Evaluation & Findings: The subject property is not within the City's Historic Overlay District and the State of Florida and Alachua County Historic Resources Inventory note no historic structures or markers on the subject property.

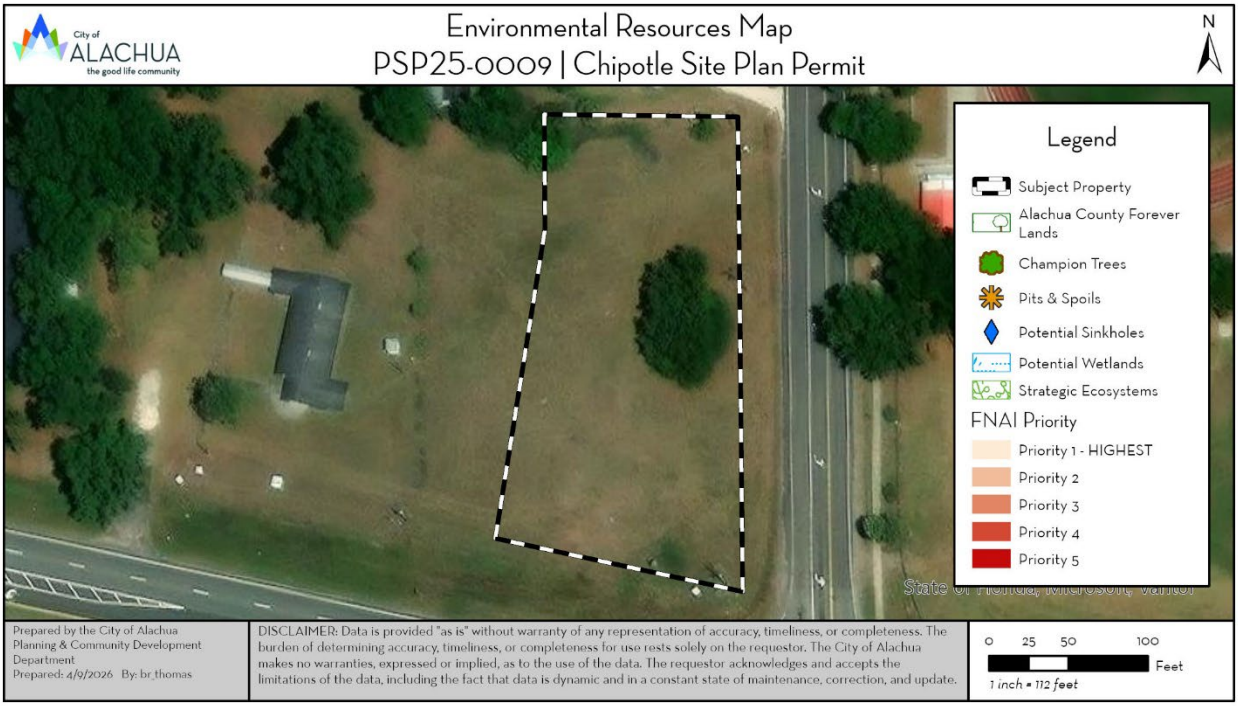

Figure 3. Environmental Resources Map

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

Site Plan Standards

Section 2.4.9(E)(1) of the City's Land Development Regulations (LDRs) establishes the standards with which all site plans must be found compliant. The application has been reviewed for compliance with the standards of Section 2.4.9(E)(1). An evaluation of the findings of the applicant's compliance with the standards of Section 2.4.9(E)(1) is provided below.

(1) *Minor site plan and site plan standards*. A minor site plan or site plan shall be approved only upon a finding the applicant demonstrates all the following requirements are met:

(a) *Consistency with the Comprehensive Plan*. The development and uses proposed by the minor site plan or site plan comply with the goals, objectives and policies of the Comprehensive Plan.

Evaluation & Findings: An evaluation of the application's consistency with the Comprehensive Plan has been included within this report. Staff has found the application to be consistent with the City of Alachua Comprehensive Plan.

(b) *Use allowed in zone district*. The use is allowed in the zone district in accordance with Article 4, Use Regulations.

Evaluation & Findings: The use type of restaurant with drive-through or drive-in service is a permitted use in the Community Commercial (CC) zone district.

(c) *Zone district use specific standards*. The development and uses proposed by the minor site plan or site plan comply with Section 4.3, Use specific standards.

Evaluation & Findings: Use specific standards for restaurant with drive-through or drive-in service are established in Section 4.3.4(A)(2) of the City's Land Development Regulations. The application has been reviewed against, and found to comply with, the use specific standards.

(d) *Development and design standards*. The development proposed by the minor site plan or site plan and its general layout and design comply with all applicable standards in Article 6, Development Standards.

Evaluation & Findings: The application has been reviewed for compliance with all relevant standards of Article 6, including Section 6.1, *Off-street parking and loading standards*, Section 6.2, *Tree protection and landscaping standards*, Section 6.3, *Fencing standards*, Section 6.4, *Exterior lighting standards*, Section 6..6, *Infill standards*, Section 6.7, *Open space standards*, Section 6.8, *Design standards for business uses*, and Section 6.9, *Environmental protection standards*.

(e) *Subdivision standards*. In cases where a subdivision has been approved or is pending, the development proposed by the minor site plan or site plan and its general layout and design comply with all applicable standards in Article 7, Subdivision Standards.

Evaluation & Findings: No subdivision of land is proposed as part of this application; therefore, this standard is not applicable.

(f) *Complies with all other relevant City laws, ordinances, regulations, requirements, and State and Federal laws and regulations*. The proposed development and use complies with all other relevant City laws, ordinances, regulations, requirements, and with all State and Federal laws and regulations.

Evaluation & Findings: The application complies with all other relevant City laws, ordinances, regulations, requirements, and State and Federal laws and regulations.

Design Standards for Business Uses

Section 6.8.2 of the City's Land Development Regulations (LDRs) establishes the standards with which all business uses, unless exempted by Section 6.8.1, must be found compliant. The application has been reviewed for compliance with the standards of Section 6.8.2. An evaluation of the findings of the applicant's compliance with the standards of Section 6.8.2 is provided below.

(A) *Façade and material design*.

(1) *Generally*. All façades facing a street, lands containing existing residential uses, or vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8, or RMF-15, shall be subject to the standards set forth in Subsection 6.8.2(A)(2).

(2) *Standards*.

(a) *Glazing*.

(i) Glazing of the front facade in the following amounts:

a. Twenty percent of the ground floor façade area when it faces a street or a publicly-accessible parking area which is a part of the development and consists of 15 percent or more of the development's minimum off-street parking requirement pursuant to Section 6.1.4(B);

b. Fifteen percent of the ground floor façade area when it faces any vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.

(ii) For the purposes of this section, the ground floor façade area of single-story buildings shall be calculated by measuring the applicable building wall between the finished grade and the underside of the roof of the facade. When a building wall includes a parapet, the ground floor façade area shall be calculated by measuring to the top of the parapet. For buildings with more than one story, the ground floor façade area shall be calculated by measuring the applicable building wall between the finished grade and the underside of the floor above the ground level floor.

(iii) Windows shall not use reflective or heavily tinted glass that obstructs views into the building.

(iv) Spandrel glass may be used only when an architectural floorplan demonstrates that windows cannot be provided due to a limitation presented by the interior layout or functional purpose of such interior space.

Evaluation & Findings: Three of the four façade faces substantially face a street, publicly accessible parking area which consists of 15 percent or more of the development's minimum off-street parking requirement, and/or vacant lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8, or RMF-15 or lands containing existing residential uses. The south, north, and east elevations all consist of a minimum 20% glazing.

(b) *Façade massing*.

(i) *Offset required*. Front facades and street-facing facades shall incorporate wall offsets of at least two feet in depth (projections or recesses) a minimum of every 30 feet. Each required offset shall have a minimum width of ten feet.

(ii) *Offset alternatives*. The following alternatives can be used in place of the required front façade offsets:

a. Façade color changes following the same dimensional standards as the offset requirements;

b. Pilasters having a minimum depth of one foot, a minimum width of one foot, and a minimum height of 80 percent of the façade's height; and/or

c. Roofline changes when coupled with correspondingly aligned façade material changes.

Evaluation & Findings: Two of the four façade faces substantially face a street. The south façade is approximately 34 feet in width and incorporates one wall offset at least two feet in depth to ensure no expanse exceeds 30 feet. The north façade is approximately 34 feet in width and incorporates one wall offset at least two feet in depth to ensure no expanse exceeds 30 feet. The east façade is approximately 67 feet in length and incorporates two wall offsets at least two feet in depth that ensures no expanse exceeds 30 feet.

(c) *Material design*.

(i) A minimum of 25 percent of the materials utilized for each side facade and the rear façade shall be the same as the materials utilized for the front or street-facing façade(s).

Evaluation & Findings: All four façade faces use an approximately similar ratio of the same three materials and glazing.

(d) *Prohibited materials*. The following materials shall be prohibited:

(i) Metal siding in more than 50 percent of any façade when visible from a street, lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses;

(ii) Exposed smooth finished concrete block when visible from a street, lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses; and,

(iii) Exposed split face concrete block in more than 60 percent of any façade.

Evaluation & Findings: The façade is comprised of two different paint colors and minimal finished metal for accents on each façade face and the parapet wall, comprising under 5% of the building materials.

(3) *Screening of mechanical equipment*. Mechanical equipment shall be fully concealed from visibility from a street, lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.

Evaluation & Findings: The applicant has submitted an exhibit demonstrating that all rooftop mechanical equipment will be screened from view of the adjacent streets by use of parapet wall and other mechanical equipment will be screened from view with landscaping.

(B) *Connections to sidewalk system.*

(1) When a sidewalk system exists within a right-of-way which is contiguous to the development, a minimum of one pedestrian connection to the sidewalk system shall be provided. On-site pedestrian circulation patterns shall be configured to provide safe and convenient access from the off-site sidewalk system to the main entrance(s) of the building(s). Sidewalks shall be constructed in accordance with Subsection 7.3.2(B), Configuration.

Evaluation & Findings: A sidewalk system is present along U.S. Highway 441 and NW 173rd Street. One sidewalk connection is proposed from the south side of the proposed building to the sidewalk running along US Highway 441.

(C) *Interconnectivity with adjacent business uses.*

(1) All uses subject to this section shall provide interconnection with adjacent existing compatible developments through one or more of the following methods:

(a) Through extension of a public or private street from the new development to the adjacent existing development or adjacent lands; and/or

(b) Through joint use of driveways and cross access agreements among adjoining properties to allow circulation between sites. Cross access between new development and existing development shall be configured to provide safe and convenient interconnectivity between the new development and all other existing development located along the cross-access corridor.

Evaluation & Findings: The proposed site plan shows connection to the internal driveway system on both the north and south sides of the development to provide for safe and efficient vehicular movements.

PUBLIC FACILITIES IMPACT ANALYSIS

Section 2.4.14 of the City's Land Development Regulations (LDRs) establishes the standards for a Certificate of Concurrency Compliance which applies to all development orders unless exempted by Section 2.4.14(C). The application has been reviewed for impacts to roads, sanitary sewer, solid waste, stormwater management, potable water, and recreation facilities to ensure the application's potential impacts do not negatively impact the level of service (LOS) for those public facilities.

Traffic Impact

The following impacts are expected on the roadway segments identified in Table 3-1.

Table 3-1. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2]	Segment Description	Lanes	Functional Classification	Area Type	LOS
6	U.S. Hwy 441 From I-75 to CR 235A	4/D	Principle Arterial	Urban	D
7	U.S. Hwy 441 From CR235A to NW 188th Street	4/D	Principal Arterial	Urban	D
16	CR 235A From U.S. Hwy 441 to North City Limit	2/U	Major Collector	Comm	D
17	CR 235A From U.S. Hwy 441 to CR 235	2/U	Major Collector	Comm	D

1 City of Alachua Comprehensive Plan, Transportation Element.
2 (i) For proposed developments generating greater than 1,000 external average daily trips (ADT), affected roadway segments are those on which the development's impacts are five percent or greater of the maximum service volume of the roadway; and
(ii) The study area for proposed developments generating greater than 1,000 external average daily trips (ADT) shall include all roadway segments located partially or wholly within one-half mile of the development's ingress/egress, or to the nearest major intersection, whichever is greater. [Section 2.4.14(H)(2)(b) of the LDRs].

Table 3-2. Projected Impact on Affected Comprehensive Plan Roadway Segment

Traffic System Category	Segment 6 US 441		Segment 7 US 441		Segment 16 CR 235A		Segment 17 CR235A	
	AADT	Peak Hour	AADT	Peak Hour	AADT	Peak Hour	AADT	Peak Hour
Maximum Service Volume[1]	39,000	3,510	43,000	3,870	15,120	1,359	15,120	1,359
Existing Traffic[2]	32,500	2,782	24,000	2,093	2,524	227	7,200	647
Reserved Trips[3]	2,138	207	1,658	150	1,174	117	4,772	448
Available Capacity[3]	4,362	521	17,342	1,627	11,422	1,015	3,148	264
Increase/Decrease in Trips Generated by Development[4]	631	45	351	25	70	5	117	8
Residual Capacity	3,731	476	16,991	1,602	11,352	1,010	3,031	256
Residual Percentage of Permitted Design Capacity Utilized	90.43%	86.44%	60.49%	41.40%	24.92%	25.68%	79.95%	81.16%

1 AADT & Peak Hour MSVs calculated using LOSPLAN 2012. County Facilities reflect a 10 percent reduction in the MSV calculated within LOSPLAN 2012 as set forth in the Generalized Tables for AADT / Peak Hour Volumes, FDOT 2018 Q/LOS Handbook.
2 Florida Department of Transportation. (2025). *2024 Count Data*. Accessed via Florida Traffic Online April 2025.
3 Source: City of Alachua April 2026 Development Monitoring Report.
4 Trip Generation Formula: ITE Trip Generation 11th edition, ITE Code 934; Trip Distribution: Segment 6 – 54%; Segment 7 – 30%; Segment 16 – 6%; Segment 17 – 10%.

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of the affected roadway segments; therefore, the impacts are acceptable. Note that impacts of the proposed site plan may negatively impact the capacity of roadway segment 6 for average annual daily trips (AADT); however, level of service standards are maintained and monitored for PM peak hour trips per Policy 1.1.a of the Transportation Element of the City of Alachua Comprehensive Plan. A site plan is a final development order, and if approved, concurrency will be reserved.

Potable Water Impacts

Table 4. Potable Water Impacts

System Category	Gallons Per Day
Current Permitted Capacity[1]	3,000,000
Less Actual Potable Water Flows[1]	1,447,333
Reserved Capacity[2]	350,100
Available Capacity	1,202,567
Increase/Decrease in Potable Water Demand from Application[3]	1,480
Residual Capacity	1,201,087
Residual Percentage of Permitted Design Capacity Utilized	59.96%

1 City of Alachua Public Services Department, April 2026
2 City of Alachua April 2026 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 4.1.c(2): 275 GPD / Unit

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of the City's potable water facilities; therefore, the impacts are acceptable. Note that Policy 4.1.c(3) of the Community Facilities Element of the City of Alachua Comprehensive Plan states if the existing demand and reserved capacity of the City's potable water facility reaches 85% of the permitted design capacity, no further development orders or permits for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement. Funds have been allocated in the Fiscal Year 2025 – 2029 Capital Improvements Program to address capacity of potable water facilities; therefore, there are no issues related to exceeding the 85% design capacity. A site plan is a final development order, and if approved, concurrency will be reserved.

Sanitary Sewer Impacts

Table 5. Sanitary Sewer Impacts

System Category	Gallons Per Day
Treatment Plant Permitted Capacity[1]	1,500,000
Less Actual Treatment Plant Flows[1]	756,000
Reserved Capacity[2]	325,846
Available Capacity	418,154
Increase/Decrease in Sanitary Sewer Demand from Application[3]	1,480
Residual Capacity	416,674
Residual Percentage of Permitted Design Capacity Utilized	72.22%

1 City of Alachua Public Services Department, April 2026
2 City of Alachua April 2026 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 1.1.d(b): 250 GPD / Unit

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of the City's wastewater facilities; therefore, the impacts are acceptable. A site plan is a final development order, and if approved, concurrency will be reserved.

Solid Waste Impacts

Table 6. Solid Waste Impacts

System Category	Pounds Per Day	Tons Per Year
Existing Demand[1]	45,412.00	8,287.69
Reserved Capacity[2]	43,496.82	7,938.17
Increase/Decrease in Demand Generated by Application[3]	211	38.5
New River Solid Waste Facility Anticipated Capacity[4]	30+ Years	

1 Bureau of Economic & Business Research, University of Florida, Estimates of Population by County and City in Florida (2025); Policy 2.1.a, Community Facilities Element. Formula: 11,015 Persons x 0.73 tons per year.
2 City of Alachua April 2026 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 2.1.a: 0.73 tons / year per capita
4 New River Solid Waste Association, April 2026

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of solid waste facilities; therefore, the impacts are acceptable. A site plan is a final development order, and if approved, concurrency will be reserved.

Recreation Facilities

The proposed development is a nonresidential development; therefore, there are no impacts to recreation facilities. The development will have no impact to the Level of Service (LOS) of recreation facilities.

Public School Facilities

The proposed development is a nonresidential development; therefore, there are no impacts to public school facilities. The development will have no impact to the Level of Service (LOS) of public school facilities.

Stormwater Management Facilities

The proposed site plan application is part of the Westside Commons Infrastructure Plan approved on December 8, 2025, and will convey stormwater to off-site stormwater management facilities as part of the Westside Commons Infrastructure Plan. A stormwater management report was submitted by the applicant as part of the application materials and demonstrates compliance with the level of service standard for stormwater management facilities. No City maintained facilities are to be impacted by the site plan. The proposed site plan application is not anticipated to impact the level of service of stormwater management facilities; therefore, the impacts are acceptable. A site plan is a final development order, and if approved, concurrency will be reserved.

EXHIBIT "A"

CHIPOTLE SITE PLAN
STAFF REPORT

CONDITIONS

1. The applicant acknowledges and agrees that deliveries of supplies and materials to the site made by any vehicle with more than two axels must occur during non-business hours or during non-peak hours whenever practicable to ensure a safe and efficient vehicular and pedestrian circulation pattern. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
2. The applicant acknowledges and agrees that any proposed tree planting (canopy and understory) shown on the landscape plans that is located within 5' of a public utility line will be relocated to be a minimum distance of 5', and a preferred distance of 10', from a public utility line and a revised landscape plan sheet will be submitted demonstrating compliance with this condition. The applicant further agrees that administrative approval of the revision must be obtained prior to the issuance of a building permit for any building activity associated with this development order. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
3. The applicant acknowledges and agrees that it shall obtain all other applicable local, state, and federal permits before the commencement of site plan work. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
4. The applicant acknowledges and agrees that to ensure the continued compliance with the City of Alachua Comprehensive Plan and Land Development Regulations, the development order authorizing this site plan shall be recorded in the public records of Alachua County, Florida, and shall run with the land. The applicant shall be responsible for all costs associated with recording the development order in the public records of Alachua County, Florida. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
5. The applicant acknowledges and agrees that Conditions 1 – 4 as stated above do not inordinately burden the land and shall be binding upon the property owner, including any subsequent property owners, successors, or assigns, and that the site plan shall comply with Conditions 1 -5 as stated herein.

RE: **Notice of Hearing to be Scheduled for Westside Commons-Chipotle Site Plan Application**

Dear Zach Pinel,

On March 23, 2026, the City of Alachua received your revised site plan application for the Westside Commons-Chipotle project submitted on behalf of Alachua Outparcel LLC. Based on review of the materials submitted, the City has determined that this application can now be scheduled for a hearing before the Planning & Zoning Board.

The application has been tentatively scheduled for the **April 21, 2026** Planning & Zoning Board meeting, pending resubmittal of final landscaping plans that meet City of Alachua landscaping requirements as set forth in Sec. 6.2. of the City's Land Development Regulations.

You must provide two *double sided, three-hole punched, color sets* of each **complete** application package, seven full size sets of site plans, and a digital copy of all materials in PDF format on a CD or by emailing a Cloud/FTP link to download the materials to planning@cityofalachua.org *no later than 10 business days prior to the Planning & Zoning Board meeting at which your application is scheduled to be heard*; therefore, the above referenced materials must be submitted to the City no later than ***Thursday, April 9, 2026***. Materials may be submitted earlier than this date.

Additionally, Section 2.2.9(D) of the Land Development Regulations requires the applicant to place posted notice signs on the subject property at least 14 days prior to the public hearing; therefore, posted notice signs must be placed on the property no later than ***Tuesday, April 7, 2026***. These signs will be ready for pickup after 12:00 PM on Thursday, April 2, 2026. You will be notified again when the signs are available.

If you plan to utilize a PowerPoint presentation or would like other materials to be available for reference during the public hearing, please submit the presentation or materials no later than 12:00 PM on the last business day prior to the Planning & Zoning Board meeting; therefore, the presentation or materials must be submitted no later than 12:00 PM on ***Monday, April 20, 2026***. Any presentation or materials may be submitted electronically by emailing them to planning@cityofalachua.org.

If you have any questions regarding the information above, please contact me at (386) 418-6122 or at br_thomas@cityofalachua.com.

Sincerely,

Bryan S. Thomas
Director of Planning & Community Development

RE: Project Assistance Team (PAT) Comments for Westside Commons~Chipotle Site Plan Application

Dear Zach Pinel,

On January 21, 2026, the Planning & Community Development Department received your revised site plan application for the Westside Commons~Chipotle project, which proposes the construction of a ± 2,366 square foot building with associated site improvements on a ± 1.28-acre subject property (tax parcel 03044-001-002).

The revised application has been reviewed by the City's Planning Assistance Team (PAT). Upon review of the application materials, the following insufficiencies must be addressed. A meeting to review these comments may be scheduled by request.

Please address all insufficiencies in writing and provide an indication as to how they have been addressed by 5:00 PM on Monday, March 30, 2026. A total of four copies of the application package, plans, and a digital copy of all materials in PDF format on a CD or sent by emailing a Cloud/FTP link must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the Planning & Zoning Board. If all comments are addressed by the resubmission date above, the application may be scheduled for the **April 21, 2026, Planning & Zoning Board (PZB) Meeting.**

Please address the following insufficiencies:

Deficiencies to be Addressed

***Unless otherwise noted, references to the code sections are to the City of Alachua Land Development Regulations. ***

1. Chipotle – Westside Commons, Plan Set, Sheet C0.1, General Notes
    a. Please amend the Landscape Buffer, Front (South) Required buffer to read, "10 FT." It currently reads 5 FT.
2. Chipotle – Westside Commons, Plan Set, Sheet SD-5, Exterior Elevations
    a. Design Standard for Single Use Retail <20,000 S.F., under Glazing, please revise number 3, North Façade. Per Section 6.8.2(A)(2)(i)b., "*Fifteen percent of the ground floor façade area when it faces any vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.*" The parcel to the rear (north) of the restaurant has been developed as a residential use in the Agricultural zoning district. Please note, you may use spandrel glass to meet this requirement.
3. Chipotle – Westside Commons, Plan Set, Sheet L1, Landscape Plan
    a. Please provide a revised landscape plan sheet that demonstrates compliance with the various components of Section 6.2, including landscape calculations, as outlined in my email to you dated March 9, 2026.

If you have any questions regarding the information above, please contact me at (386) 418-6126 or via email at br_thomas@cityofalachua.com.

Sincerely,

Bryan S. Thomas
Director of Planning & Community Development

RE: **Chipotle Site Plan**

Public Services has reviewed the subject project (Feb 2026 Submittal Documents) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
1	**Comment on Nov Submittal** **Fire Flow** As per submitted documents, needed fire flow is 1500 gpm, with an available fire flow of 1800 gpm. The Engineer thus concludes that available fire flow is sufficient. The City does not necessarily share this conclusion for the following reasons: (1) The test and residual fire hydrants have not been physically identified. Please **submit** a sketch calling out these fire hydrants, preferable the piping as well. Using a GIS map as the base sheet is suggested. Upon request, the City can provide this base map. (2) The fire flow test was conducted at the SE corner of intersection at 441 & 173rd St, yet the Chipotle site is located at the NW corner. This adds uncertainty to the fire flow tests. Due to the fact that NW corner is higher than the SE corner, as well as

NO.	COMMENTS
	piping configuration, the fire flow available at the NW corner may be less than at the SE corner. (3) While the hydrant sketch is being resubmitted, the City will model the available fire flow at the NW site. This issue is unresolved. **Comment on Feb Submittal** **Approved**
2	**Comment on Nov Submittal** **Sheet C0.0** After "CHIPOTLE", add "SITE PLANS" to be consistent with COA practices. Please **Revise & Resubmit** this sheet. **Comment on Feb Submittal** **Approved**
3.	**Comment on Nov Submittal** **Sheet C0.1** **Utility Notes A. General** Note 3: Keep existing text, but add the following: " WATER AND WASTEWATER SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH "CITY OF ALACHUA, PUBLIC SERVICES, DESIGN AND CONSTRUCTION MANUAL, LATEST EDITION". **Utility Notes B. Materials (Water)** Modify Note 1 as follows: "1. SERVICE PIPE **DOWNSTREAM EACH BACKFLOW PREVENTER** SHALL BE POLYETHYLENE (PE), DR9". Add the following notes: "8. SERVICE WATER PIPING UPSTREAM THE WATER METER SHALL BE PVC, TYPE AS SHOWN ON THE DETAILS. 9.SERVICE WATER PIPING BETWEEN THE WATER AND THE BACKFLOW PREVENTER SHALL BE OF THE SIZE AND TYPE AS SHOWN ON THE DETAILS 10. WATER METER APPURTENANCES SHALL BE FURNISHED AND

NO.	COMMENTS
	INSTALLED BY THE CONTRACTOR. THE WATER METER ITSELF WILL BE FURNISHED AND INSTALLED BY THE CITY. 11. FOR EACH BACKFLOW PREVENTER, PROVIDE AN ENCLOSURE AS PER THE DETAILS. 12. WET TAP(S) TO PRESSURIZED WATER MAINS SHALL BE DONE BY A SUB-CONTRACTOR PRE-APPROVED BY THE CITY OF ALACHUA. 13. PROVIDE TRACER WIRE SYSTEM FOR WATER PIPING AS SHOWN ON THE DETAILS AND AS PER THE COA DCM. 14. TRACER WIRE SYSTEM SHALL COMMENCE AT THE TIE-IN(S) AT EXISTING WATER MAIN(S) AND TERMINATE AT EACH COA END OF MAINTENANCE POINT." **Utility Notes D. Materials (Storm)** **Add the following note:** "5. "UNLESS AN ALTERNATE IS APPROVED BY COA, GROUT BOTTOM OF ALL STORMWATER DRAINAGE STRUCTURE INVERTS AS PER FDOT INDEX 425-001 AND AS PER COA STANDARD DETAIL 210." Please **Revise & Resubmit** this sheet. **Comment on Feb Submittal** **Approved**
4.	**Comment on Nov Submittal** **Sheet C2.0** See attached markup. Call-out the pipe downstream the gate valve (keynote 19) as "2-INCH SCH 40 PVC – NSF 61" Site Utility Note 14: Add the following: "(1) INSTALL ELECTRONIC MARKER TWO-FEET BELOW GRADE AND ONE FOOT FROM CLEANOUT. MARKER SHALL BE TEMPO OMNI MARKER II; SANITARY GREEN; MODEL OM-6; PART 52085009 (2) CITY OF ALACHUA END OF MAINTENANCE" Site Utility Note 20: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE".

NO.	COMMENTS
	Site Utility Note 22: Change tee size to 2 X 2 X 2 Site Utility Note 23: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE" Site Utility Note 28: Add text "AT CITY WATER MAIN INTERSECTION, ROUTE GAS PIPE UNDER WATER MAIN WITH 1-FOOT VERTICAL CLEARANC" Please **Revise & Resubmit** this sheet. **Comment on Feb Submittal** **Approved**
5.	**Comment on Nov Submittal** **Sheet C2.0** **Domestic Water Meter Sizing Calculations** Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Building Design Flow (gpm) Proposed Water Meter Size (size using building design flow with meter flow ranges identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email Also, on either the cover sheet or the utility plan, call-out the: Building Design Flow Water Meter Size **Submit** the supporting calculations The meter sizing method used must be acceptable to COA. Although the City may consider other methods, the City will accept the Florida plumbing code method that calculates facility water supply design flow coupled with flow meter ranges as set forth by City ordinances.

NO.	COMMENTS
	Resubmit affected sheets **Comment on Feb Submittal** **Approved**
6.	**Comment on Nov Submittal** **Sheet C2.0** **Irrigation Water Meter Sizing Calculations** Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Irrigation System Design Flow (gpm) Proposed Water Meter Size (size using irrigation system design flow with meter flow ranges identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email Also, on either the cover sheet, the utility plan or the landscaping plan, call-out the: Irrigation System Design Flow Water Meter Size **Resubmit** affected sheets **Comment on Feb Submittal** **Approved**
7	**Comment on Nov Submittal** **Sheet C4.0** **Detail 2 Drop Cleanout** Add the following text: "NOTE: PROVIDE VALVE COVER AS PER DETAIL 127"

NO.	COMMENTS
	Please **resubmit** this sheet. **Comment on Feb Submittal** **Approved**
8	**Comment on Nov Submittal** **Sheet C4.1** Replace Detail 115 Add the following details: 127 210 307 318 321A 321B COA will forward these details. If not forwarded, please contact COA. Please **resubmit** applicable sheets. **Comment on Feb Submittal** **Approved**
9	**Comment on Nov Submittal** **Sheet L1** See markup. Remove shrubs/tress so there is at least 10 feet horizontal clearance with backflow preventer. Please **resubmit** this sheet. **Comment on Feb Submittal** **Approved**

RE: Project Assistance Team (PAT) Comments for West Side Commons~Chipotle Site Plan Application

Dear Zach Pinel,

On September 15, 2025, the Planning & Community Development Department received your revised site plan application for the West Side Commons~Chipotle project, which proposes the construction of a ± 2,366 square foot building with associated site improvements on a ± 1.28-acre subject property (tax parcel 03044-001-002).

The application has been reviewed by the City's Planning Assistance Team (PAT). Upon review of the application materials, the following insufficiencies must be addressed. A meeting to review these comments may be scheduled by request.

Please address all insufficiencies in writing and provide an indication as to how they have been addressed by **5:00 PM on Monday, December 29, 2025**. A total of four copies of the application package, plans, and a digital copy of all materials in PDF format on a CD or sent by emailing a Cloud/FTP link must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the Planning & Zoning Board. If all comments are addressed by the resubmission date above, the application may be scheduled for the **March 10, 2026, Planning & Zoning Board (PZB) Meeting.**

Please address the following insufficiencies:

Deficiencies to be Addressed

***Unless otherwise noted, references to the code sections are to the City of Alachua Land Development Regulations. ***

1. **Site Plan Application, Project**
   - **a.** The subject property address shown on the application is 16313 NW Highway 441. This address does not align with the referenced parcel identification number (PIN), 03044-001-002, which has not been assigned an address. Therefore, the address listed in GIS does not correspond to the identified parcel. The Response to Comments Letter dated September 10, 2025, acknowledges this correction. However, while the response states **"Acknowledges,"** this comment, as presented in the previous Letter of Completeness dated August 27, 2025, remains unaddressed. Although it is understood that the property is intended for Chipotle, accurate information on the application is essential. Please remove the address, as this property has not been assigned an address at this time.

   - **b.** The acreage of the subject property is listed as 5.07 Acres on the application, while the Property Appraiser's site indicates that the parcel for the stated address measures 1.28 acres. The Response to Comments Letter dated September 10, 2025, acknowledges this correction. However, the response claims, "Acknowledged: information was revised on the application, per parcel #0311-001-002, which shows 1.28 acres." Upon reviewing Sheet C0.2, Site Demolition Plan of the Chipotle – Westside Commons Site Plan, the site is identified as "Parcel C." In contrast, on Sheet C1.0, Site Dimension Plan; Sheet C3.1, Stormwater Pollution Prevention Plan; Sheet SL1, Site Lighting Plan; and Sheets No. 1 and 2 of 4, Land Title Survey of the Chipotle-Westside Commons Site Plan, the site is identified as "Parcel B," which measures 1.26 acres. The property measurement should be based on the results of the boundary survey. Please correct the acreage and ensure consistent measurements across all related documents.

     Additionally, Sheet No. 3 of 4, titled ALTA/NSPS Land Title Survey, refers to a site as "Subject Parcel," measuring 3.91 acres, which does not correspond to the property under review. For reference, the parcel identification number is 03044-002-000. Please correct the information to reflect site-specific details accurately.

   - **c.** The acreage of the proposed building is not indicated on the Site Plan Application; this information needs to be provided.

2. **Site Plan Application, Applicant**
   - **a.** The name of the applicant and agent for the application is Zach Pinel of Alakai Acquisitions. This authorization was confirmed on May 08, 2025, which differs from Sheet 5 of 5 of the application, which was signed by Ashley Rosado as the agent and dated June 17, 2025. **Per the Response to Comments Letter dated September 10, 2025, states, "A Letter of Authorization was provided from the applicant, Zach Pinel, for Interplan LLC-Ashley Rosado to act as an agent for submittals."** However, the only Letter of Authorization received was for Interplan, LLC, without a specific name included. Please provide an authorization explicitly naming Ashley Rosado, as the current documentation does not confirm her status.

3. **Site Plan Application, Attachment #1.e, Topographic Survey**
   a. Provide the required attachments that demonstrate each contour line representing the variations in elevation that could potentially affect construction on the property. According to the Response to Comments Letter dated September 10, 2025, it states, **"The plan set included in this submittal now shows a complete survey that has detailed topographic information."** In future submittals, please specify the title of the reference plan sheet.

4. **Site Plan Application, Attachment #3, Fire Department Access and Water Supply Plan**
   a. Provide the necessary attachments that demonstrate the availability of adequate fire flow to meet the demands of the proposed project at the subject property. The Response to Comments Letter dated September 10, 2025, it states, **"Test results of a fire flow test for the project site are now provided in this submittal. As well as a fire flow analysis in our included concurrency/consistency with the comprehensive plan report."** In the future submittals, please specify the title of the reference plan sheet.

5. **Site Plan Application, Attachment #6, Site Plans for Buildings Less than 80,000 Square Feet in Area.**
   a. Provide the required one (1) set of mailing labels for all property owners within 400 feet of the subject property. Additionally, all registered individuals listed on the city's website must be provided on a set of address labels, not just a list. The City can provide mailing labels upon request (a $35 fee per Resolution 24-05). The Response to Comments Letter dated September 10, 2025, states, **"We would request that the City provide these labels; the additional $35 fee has been added to the site plan payment of $1500."** However, the only record of fees for PSP25-0009, Chipotle, is the Standard Site Plan Fe totaling $2,700. Due to the lack of evidence regarding the alleged $1,500 fee, please explain its purpose and provide proof of payment. Furthermore, PSP25-0009, Chipotle, will not be scheduled for the Planning & Zoning Board hearing until the $35 fee is paid.

6. **Site Plan Application, Attachment #8, Legal Description**
   a. Provide the required attachments that demonstrating the subject property's legal description on 8.5" x 11" paper and in an electronic file in Word format. The Response to Comments Letter dated September 10, 2025, states, **"A Word document as well as an 8.5" x 11" pdf of the legal description for the project site is provided in this submittal."** The legal description provided refers to Parcel A (Tax Identification Number: 03044-002-000) and Parcel B (Tax Identification Number: 03044-001-002). Please revise the legal description to reference only the subject property for the proposed Chipotle.

7. **Site Plan Application, Attachment #9, Proof of Ownership**
   a. Provide the necessary attachments that demonstrate ownership of the subject property. According to the Response to Comments Letter dated September 10, 2025, it states, **"Deeds of the two subject parcels are provided with this submittal."** However, the subject property is identified on Sheet C0.2, Site Demolition Plan of the plan set titled, "CHIPOTLE – WESTSIDE COMMONS." Only one parcel is involved in this application. Therefore, the applicable parcel number is 03044-001-

002. The Warranty Deed for parcel 03044-002-000 is unrelated. Please revise this response to acknowledge the correct parcel.

8. **Site Plan Application, Attachment #10, Proof of Payment of Taxes**
   a. Provide the required attachments demonstrating that property taxes are paid and up to date. According to the Response to Comments Letter dated September 10, 2025, it states, **"Proof of payment of taxes for the two subject parcels is provided with this submittal."** However, the application for Chipotle references only one parcel number, 03044-001-002, not two (2) parcels. Please correct this discrepancy.

9. **Comprehensive Plan Consistency Analysis**

   a. Policy 1.3.d, Design and Performance Standards
      i. The response to this referenced policy states, **"The site plans for the subject property conform to the above requirements. The proposed density is well below the maximum allowable."** This indicates a misunderstanding and misapplication of terms. Density is primarily a residential metric, typically measured in dwelling units per acre (DU/acre). In contrast, intensity is the more appropriate measure for commercial development, evaluated using metrics such as Floor Area Ratio (FAR), height limits, and lot coverage, etc. The proposed commercial development must be assessed against the established intensity standards outlined in the Future Land Use Element of the Comprehensive Plan. Please revise the response to provide a proper analysis of the project's intensity and its alignment with the relevant commercial policies.

   b. Policy 1.3.e, Density and Intensity Standards
      i. This Policy is referenced incorrectly; the policy text shown is actually Policy 1.3.f, according to the City of Alachua's Comprehensive Plan. Please correct this.

      ii. As previously noted, Policy 1.3.e is misreferenced. Upon correcting the reference to Policy 1.3.f.3 correctly read, "Setbacks and Landscaped or other appropriate buffers shall be established to mitigate the visual impacts of commercial development upon surrounding land uses." The response to Policy 1.3.f.3 partially states, **"The proposed Chipotle restaurant is compatible with adjacent properties along US 441, and large landscape buffers are provided from adjacent agriculturally zoned property (currently used as single family residential)."** All required landscaping and buffering must be contained within the boundaries of the subject property being developed. The proposed buffer must be established and maintained on land that is permanently dedicated for this purpose and under the control of the property owner. If there is interest in incorporating features from an adjacent parcel, that area must be formally made part of the subject property, and a perpetual landscape buffer easement or similar recorded mechanism must be established and recorded in the public records. This ensures the buffer exists indefinitely and is legally enforceable for the benefit of the adjacent properties and the City. Please revise this response accordingly.

   c. Policy 1.3.f is currently misrepresented. **The language presented in the application packet corresponds to the language for Policy 1.3.g.** Please correct this.

d. Policy 2.7.a, response reads, **"This project will not promote the use of land far from existing urban areas for low density, single use developments, nor will they create a need for the costly extension of services. All public roads and utilities are available adjacent to or close to the development, and the property is surrounded by existing development on all sides."** This language suggests that the application includes more than one proposed use. While the property consists of multiple lots, the Chipotle is the only use being reviewed in this application. Please revise the language accordingly.

e. Policy 5.1.c, Flood-prone areas: The response reads, **"The subject property is not within any documented FEMA Flood Zone areas."** However, according to FEMA's National Flood Hazard Layer (NFHL) Viewer, the subject property is located in Flood Zone X, which denotes an area of minimal flood hazard (outside the 0.2% annual chance floodplain/500-year flood event area). Please revise this response to accurately reflect this information.

f. Objective 5.2: Availability of facilities and services: The response states, **"Section 2 of this report demonstrates the impacts that the proposed development will have on public facilities and services. Sufficient capacity appears to exists for this development."** This comment needs to be addressed properly. Each applicable section must include comments or data from other pages or similar criteria; simple referencing is not adequate. Please correct.

g. Objective 5.2.a: The response states, **"Section 2 demonstrates how the proposed plan for the project site will impact City of Alachua facilities and adopted level of service. It is not anticipated that the proposed plan for the project site will exceed the adopted LOS standards."** This comment will also need proper addressing. Similar to the previous point, comments or data from other pages or criteria must be included for each applicable section; referencing along is insufficient. Please revise.

h. Policy 5.2.b: The response reads, "**Acknowledged.**" Please specify what is being acknowledged.

10. Concurrency Impact Analysis

    a. The Concurrently Analysis narrative partially states, **"Shown below is an analysis of the proposed development's concurrency demands and the existing infrastructure available to serve the project."** When referencing existing infrastructure available for the project, supportive data must be included with the submitted materials. Any referenced materials should be part of the submission set to ensure consistency.

11. Chipotle – West Commons, Plan Set

    a. Sheet C0.0, Cover Sheet: The submitted plan set does not contain a completed title identifying the specific type of permit being sought (e.g., Site Plan Review, Conditional Use Permit, Minor Subdivision, etc.). Please resubmit with a clearly labeled plan type to ensure proper review under the appropriate code standards.

b. The Sheet Index on SHT No. C0.0 shows discrepancies in sheet numbers and titles. The following mismatches require correction:

i. SHT No. C0.1 on the Sheet Index is titled "Civil Data Sheet," while the title on the specific sheet reads "General Notes."

ii. SHT No. C4.0, on the Sheet Index, is titled "Details Sheet." On the specific sheet, the title reads, "Civil Details."

iii. SHT No. -, on the Sheet Index, is titled "Survey," but this sheet is not showing an assigned sheet number. The sheets included with the title, ALTA/NSPS LAND TITLE SURVEY, included Sheet Nos. 1 of 4, 2 of 4, 3 of 4, and 4 of 4. This will need to be titled and numbered for both the Sheet Index and Sheets to match exactly.

iv. SHT No. -, on the Sheet Index, is titled "Building Elevation," but this sheet is not showing an assigned sheet number. The sheets titled "Exterior Elevations," SD-5, and "Exterior Perspectives," SD-6, need to be properly represented in the plan set.

12. **Chipotle – West Commons, Plan Set, Sheet C0.1, General Notes (Site Data Table)**

a. The site area is shown as 38,450 SF (0.90 AC) on Plan Set, Sheet C0.1, General Notes (Site Data Table), which differs from the 1.28 acres indicated on Page 1 of 5 of the Site Plan Application.

b. The Site Data Table does not give full property details. A note indicating the current zoning is required. See sample below.

SITE DATA TABLE:		
SITE ADDRESS (or PARCEL NO.):		
SITE SIZE:		
FUTURE LAND USE:		
ZONING:		
EXISTING USE:		
PROPOSED USE:		
SETBACKS:	REQUIRED:	PROPOSED:
Front:	25'	35'
Side:	10'	15'
Rear:	15'	20'
BUILDING HEIGHT:	60'	60'
LOT COVERAGE:	50%	32%
*Per Ordinance No. O-03-09, Turkey Creek Planned Unit Development, Exhibit A		

SAMPLE

Please review Article 5 of the LDRs to ensure all details are provided at the time of resubmittal.

c. The Site Data Table indicates the required front, side, and rear yard setbacks. However, the provided column reads, "N/A." This designation is incorrect, as shown on the sample data table above; information stating the required setbacks and proposed setbacks shall both be depicted in the table to demonstrate compliance.

d. The Site Data Table references the Landscape Buffer for the rear (north) side, indicating that it abuts residential properties. According to Table 6.2-2, Business Uses, a drive-through eating establishment requires a 25-foot buffer, or Type "D" buffer.

e. The Site Data Table also indicates that the Landscape Buffer for the front (south) side, which faces an Arterial Roadway, necessitates a 10-foot buffer (Type "C" buffer), not a 5-foot buffer.

f. The Site Data Table states that **"6 PARKING SPACES AT REAR OF SITE TO BE DEDICATED TO ADJACENT PARCEL."** To formalize this arrangement and ensure it becomes a permanent, legally binding agreement tied to the land, the following is required:

   i. **Updated Plans:** Revise the site plans to clearly delineate the location of these six (6) shared parking spaces. Additionally, label both the dominant (benefiting) and servient (providing) parcels with their respective Parcel Identification Numbers (PINs).
   ii. **Legal Document:** Provide a signed and notarized legal document, in a format acceptable to the City Attorney, that recognizies the perpetual cross-access or shared parking easement. This agreement must include provisions for ongoing maintenance, liability, and a clause stating that it runs with the land and cannot be terminated without the City's approval of replacement parking.
   iii. **Public Hearing Condition (Notice of Expectations):** The shared parking agreement and all related documentation will be a condition of approval during the Planning & Zoning Board public hearing. They must be recorded in the public records of Alachua County, Florida Clerk of Court prior to the issuance of any building permits or certificates of occupancy.

13. **Chipotle – West Commons, Plan Set, Sheet C0.2, Site Demolition Plan**

a. The submitted demolition plan lacks sufficient information regarding the existing structures on the subject site. Please revise the plans to include a comprehensive description and graphic representation of all existing buildings/structures. This information is essential for a complete review and to ensure compliance with relevant regulations.

   Please provide the following:

   i. Clear identification and labeling of all existing buildings/structures on the subject property.

ii. The dimensions and total square footage of each floor of every existing building.

iii. A statement concerning the specific use(s) of every existing building.

iv. Current photographs of all exterior elevations of the buildings/structures to be demolished.

v. A site plan clearly indicating the location of every existing building to be removed, including distances from property lines and adjacent buildings.

14. **Chipotle – West Commons, Plan Set, Sheet C1.0, Site Dimension Plan**

a. The Site Dimension Plan depicts several features that are not identified by a label or described in the accompanying site notes. Please revise the plan set to include a complete and consistent mapping symbols legend, or add identifying labels/callouts directly on the plan sheet to clarify the nature, use, and dimensions of all depicted items.

b. The front building setbacks are not shown; please update the plans.

c. All figures '6' and '9' on the site plan must be clearly distinguishable to prevent misinterpretation and potential miscalculation. It is recommended to underline both figures. (e.g., 6 and 9). Please revise all plan sheets to ensure that numbers 6 and 9 are oriented correctly and clearly discernible from one another.

15. **Chipotle – West Commons, Plan Set, Sheet L1, Landscape Plan**

a. The submitted Landscape Plan is incomplete. The Landscape Plan does not clearly and accurately delineate all existing trees on the site, specifically those identified for preservation in the project's Comprehensive Plan Analysis (Policy 5.1.a, Topography).

Required Revisions:

i. Delineation of Existing Trees: Revise the plan to clearly show the location, size (caliper/diameter), species (common and botanical names), and health/condition of all existing trees on the site.

ii. Conflict Resolution: Ensure that proposed development activities (grading, infrastructure, building footprints) do not encroach upon the tree protection areas, as any conflict must be addressed and approved by LDR Administrator.

The Landscape Plan lacking sufficient detail to facilitate a complete review and demonstrate conformance with applicable regulations. Therefore, a new submittal is required to address all missing information.

b. The five (5) Southern Live Oak trees located at the rear of the subject property, as shown on the Landscape Plan, are required for mitigation for trees removed due to the placement of a portion of infrastructure. Therefore, only one (1) Southern Live Oak tree qualifies to include in the required landscape buffer.

16. **Chipotle – West Commons, Plan Set, Sheet Nos. 1 of 4 to 4 of 4, Land Title Survey**

    a. The submitted property boundary survey and legal description for the specific lot under review are insufficient to clearly delineate the property boundaries and its relationship to the overall commercial development.

    b. Please provide a recorded plat or an updated boundary survey that accurately and clearly depicts the specific lot, with all bearings, courses, and dimensions matching the associated legal description.

    c. The current description does not, even with the aid of identifying the subject land to the exclusion of all other land, which is required for a complete review.

    d. The application must include an accurate legal description that a land surveyor can use to identify the precise location of the lot on the ground to confirm compliance with zoning setbacks and other regulations.

    Revise the submittal to include a complete and accurate legal description and boundary survey for the subject property related to Chipotle.

17. **Chipotle – West Commons, Plan Set, Sheet SD-5, Exterior Elevations**

    a. The proposed site plan is conceptually approved for location and design as part of the Development Plan Review; however, a separate sign permit application is required and must be approved by the Building Division prior to installation. Therefore, Sheet SD-5, Exterior Elevations, shall not include a sign; remove all signs from the façade.

    b. The information provided under the section titled "Glazing," particularly number 4, is not clear. It reads, the "West Façade Faces The Adjacent Building and None Of the Parking For Chipotle Nor A Street." Please explain or correct the verbiage for understanding.

18. **Chipotle – West Commons, Plan Set, Sheet SD-6, Exterior Perspectives**

    a. A complete review of the conceptual plan submitted will be performed against all zoning and sign code provisions upon the clear presentation of the information on Sheet SD-5, Exterior Elevations.

19. **Miscellaneous**

    a. Sheet C0.1 contains the General Notes for the Chipotle – Westside Commons unnamed plan type.

    b. Note, Resolution 24-05, Schedule of Fees, requires a resubmittal fee if an additional completeness review is required. Any resubmittal in response to this letter shall be accompanied by a $270 fee. The payment of this fee is required in accordance with the earlier resolution prior to further review of the application.

c. Please note that the current review is limited due to the absence of a complete set of all applicable plans. Once we receive all necessary plans, a full review will be conducted, allowing us to provide additional and more comprehensive comments.

If you have any questions regarding the information above, please contact me at (386) 418-6126 or via email at Be_Fisher@CityofAlachua.org.

Sincerely,

Bernadette Fisher

Ref: Site plans for Westside Commons - Chipotle

Dear Mr. Crockett:

The following are our latest comments for the site plan revisions for Westside Commons – Chipotle:

Sheet C.0.0

1) Parcel Zoning and Future Land Use is not shown. Please include.
2) Adjacent Parcel Zoning and Future Land Use is not shown. Please include.

Sheet C.1.0

1) All curves in the proposed curb need radii dimensions. Some are missing along the southern and eastern parking rows.
2) Door entrances should have dimensions. The southern and eastern door landings are missing dimensions.
3) Please add dimensions to the Dumpster Pad and Dumpster Pad Aisle.

Sheet C.2.0

1) All three bends in the water main should be included in the fitting schedule.
2) Please add the top elevations for all cleanouts to the fitting schedule.
3) Cleanouts in the drive aisles should have traffic rated tops.
4) Please add Utility Clearances to confirm horizontal separation requirements are met.
5) How are the proposed light poles being fed? Please show the conduits to confirm there are no conflicts with the rest of the proposed utilities.

Sheet C.3.0

1) Spot elevations should be added along the 20' southeastern curb to confirm no water is being trapped along that curve.
2) Please add additional spot elevations along the northern parking area to confirm no water is being trapped in these parking spots.

3) Add additional spot elevations along the other parking spots as well to confirm the proposed drainage pattern.
4) The portion of the drive-thru, north of the grade break, seems flat. Please add slope labels along this portion of the drive-thru.
5) Please include additional spot elevations along the drive-thru entrance to help confirm the proposed drainage pattern.

Sheet C.3.1

1) Please confirm if the existing 44" Live Oak is considered a Heritage Tree or not. If so, it will need additional protection.

Sheet C.4.0

1) Please confirm all provided details comply with the City of Alachua.

Landscape

1) Please show the proposed light pole conduits to confirm there are no conflicts with the proposed landscape design.
2) Is the existing 44" Live Oak being removed? Plans show that area being planted over and having irrigation installed.

Please do not hesitate to contact us if you have any questions/comments.

Sincerely,

Claudia Vega, P.E.

RE: **Chipotle Site Plan**

Public Services has reviewed the subject project (Nov 2025 Submittal Documents) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
1	**Comment on Nov Submittal** **Fire Flow** As per submitted documents, needed fire flow is 1500 gpm, with an available fire flow of 1800 gpm. The Engineer thus concludes that available fire flow is sufficient. The City does not necessarily share this conclusion for the following reasons: (1) The test and residual fire hydrants have not been physically identified. Please **submit** a sketch calling out these fire hydrants, preferable the piping as well. Using a GIS map as the base sheet is suggested. Upon request, the City can provide this base map. (2) The fire flow test was conducted at the SE corner of intersection at 441 & 173rd St, yet the Chipotle site is located at the NW corner. This adds uncertainty to the fire flow tests. Due to the fact that NW corner is higher than the SE corner, as well as piping configuration, the fire flow available at the NW corner may be less than at the SE corner. (3) While the hydrant sketch is being resubmitted, the City will model the available fire

NO.	COMMENTS
	flow at the NW site. This issue is unresolved.
2	**Comment on Nov Submittal** **Sheet C0.0** After "CHIPOTLE", add "SITE PLANS" to be consistent with COA practices. Please **Revise & Resubmit** this sheet.
3.	**Comment on Nov Submittal** **Sheet C0.1** **Utility Notes A. General** Note 3: Keep existing text, but add the following: " WATER AND WASTEWATER SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH "CITY OF ALACHUA, PUBLIC SERVICES, DESIGN AND CONSTRUCTION MANUAL, LATEST EDITION". **Utility Notes B. Materials (Water)** Modify Note 1 as follows: "1. SERVICE PIPE **DOWNSTREAM EACH BACKFLOW PREVENTER** SHALL BE POLYETHYLENE (PE), DR9". Add the following notes: "8. SERVICE WATER PIPING UPSTREAM THE WATER METER SHALL BE PVC, TYPE AS SHOWN ON THE DETAILS. 9.SERVICE WATER PIPING BETWEEN THE WATER AND THE BACKFLOW PREVENTER SHALL BE OF THE SIZE AND TYPE AS SHOWN ON THE DETAILS 10. WATER METER APPURTENANCES SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR. THE WATER METER ITSELF WILL BE FURNISHED AND INSTALLED BY THE CITY. 11. FOR EACH BACKFLOW PREVENTER, PROVIDE AN ENCLOSURE AS PER THE DETAILS. 12. WET TAP(S) TO PRESSURIZED WATER MAINS SHALL BE DONE BY A SUB-CONTRACTOR PRE-APPROVED BY THE CITY OF ALACHUA. 13. PROVIDE TRACER WIRE SYSTEM FOR WATER PIPING AS SHOWN ON THE

NO.	COMMENTS
	DETAILS AND AS PER THE COA DCM. 14. TRACER WIRE SYSTEM SHALL COMMENCE AT THE TIE-IN(S) AT EXISTING WATER MAIN(S) AND TERMINATE AT EACH COA END OF MAINTENANCE POINT." **Utility Notes D. Materials (Storm)** **Add the following note:** "5. "UNLESS AN ALTERNATE IS APPROVED BY COA, GROUT BOTTOM OF ALL STORMWATER DRAINAGE STRUCTURE INVERTS AS PER FDOT INDEX 425-001 AND AS PER COA STANDARD DETAIL 210." Please **Revise & Resubmit** this sheet.
4.	**Comment on Nov Submittal** **Sheet C2.0** See attached markup. Call-out the pipe downstream the gate valve (keynote 19) as "2-INCH SCH 40 PVC – NSF 61" Site Utility Note 14: Add the following: "(1) INSTALL ELECTRONIC MARKER TWO-FEET BELOW GRADE AND ONE FOOT FROM CLEANOUT. MARKER SHALL BE TEMPO OMNI MARKER II; SANITARY GREEN; MODEL OM-6; PART 52085009 (2) CITY OF ALACHUA END OF MAINTENANCE" Site Utility Note 20: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE". Site Utility Note 22: Change tee size to 2 X 2 X 2 Site Utility Note 23: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE" Site Utility Note 28: Add text "AT CITY WATER MAIN INTERSECTION, ROUTE GAS PIPE UNDER WATER MAIN WITH 1-FOOT VERTICAL CLEARANC" Please **Revise & Resubmit** this sheet.

NO.	COMMENTS
5.	**Comment on Nov Submittal** **Sheet C2.0** **Domestic Water Meter Sizing Calculations** Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Building Design Flow (gpm) Proposed Water Meter Size (size using building design flow with meter flow ranges identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email Also, on either the cover sheet or the utility plan, call-out the: Building Design Flow Water Meter Size **Submit** the supporting calculations The meter sizing method used must be acceptable to COA. Although the City may consider other methods, the City will accept the Florida plumbing code method that calculates facility water supply design flow coupled with flow meter ranges as set forth by City ordinances. **Resubmit** affected sheets
6.	**Comment on Nov Submittal** **Sheet C2.0** **Irrigation Water Meter Sizing Calculations** Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Irrigation System Design Flow (gpm) Proposed Water Meter Size (size using irrigation system design flow with meter flow ranges

NO.	COMMENTS
	identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email Also, on either the cover sheet, the utility plan or the landscaping plan, call-out the: Irrigation System Design Flow Water Meter Size **Resubmit** affected sheets
7	**Comment on Nov Submittal** **Sheet C4.0** **Detail 2 Drop Cleanout** Add the following text: "NOTE: PROVIDE VALVE COVER AS PER DETAIL 127" Please **resubmit** this sheet.
8	**Comment on Nov Submittal** **Sheet C4.1** Replace Detail 115 Add the following details: 127 210 307 318 321A 321B COA will forward these details. If not forwarded, please contact COA. Please **resubmit** applicable sheets.
9	**Comment on Nov Submittal** **Sheet L1**

   Mailing Address: 1026 NW 125th Drive / 627 SW 83rd Terrace
   City: Newberry / Gainesville State: FL / FL ZIP: 32669 / 32607
   ** Must provide an executed Authorized Agent Affidavit or other acceptable documentation (as deemed acceptable by the City in its sole discretion) authorizing the agent to act on behalf of the property owner.*

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☑ Yes ☐ No
   If yes, list names of all parties involved: Robert Matheny / Jeannette L. Browning, D. Holton Browning, Janice L. Morris
2. Has the applicant discussed possible utility/infrastructure fees with the Public Services Department?

If no, contact the Public Services Department at 386-418-6140. ☑ Yes ☐ No

D. ATTACHMENTS

1. Site Plan. Sheet size shall be 24" X 36" with a 3" left margin and ½" top, bottom, and right margin.

Site Plan shall include:

a. Name and location of project.
b. Name and contact information (address, telephone, and email address) of property owner, developer (if applicable), and all professional consultants (i.e., landscape architect, photometric, electrical engineer, architect, etc.) for the project.
c. Zoning of the subject property.
d. Vicinity map - indicating general location of the site and major adjacent streets and all adjacent properties.
e. Boundary and topographic survey. Survey shall be signed and sealed by the surveyor, and shall be no older than two (2) years.
f. Complete legal description of the subject property.
g. Statement of proposed uses.
h. Location of the subject property in relation to adjacent properties.
i. Date, north arrow, and graphic scale (not to exceed one (1) inch equal to 50 feet.)
j. Area and dimensions of the subject property.
k. Structures and major features – fully dimensioned – including setbacks from property lines and right-of-ways, distances between structures (if structures are within 25 feet of one another), floor area of each building, floor area ratio, and property lines.
l. Location of all property lines, existing and proposed adjacent right-of-ways, sidewalks, curbs, and gutters.
m. Distance between ingress and egress connections for the project and the ingress / egress connections for all contiguous properties and for properties on the opposite side of the road, measured from the interior radius of all ingress/egress connections.
n. Location of all existing and proposed utilities (electric, potable water, sanitary sewer, gas, etc.) on the subject property, and on adjacent properties if located within 50 feet of the subject property, and within adjacent rights-of-way.
o. Location of all existing and proposed fire hydrants.
p. Location of all existing easements on the property and on adjacent properties if located within 50 feet of the subject property, and recording information for such easements.
q. Location of all proposed easements (legal descriptions and sketches of all proposed easements shall be provided by the applicant following a review of proposed utility locations by Public Services).
r. Location and dimensions of all existing and proposed vehicular parking spaces, dimensions of all drive aisles, and the angle of parking spaces.
s. Location of all bicycle parking areas and specifications of bicycle racks.
t. Location, dimensions, and vertical clearance of all off-street loading spaces, if required by Section 6.1 of the LDRs.
u. Location and dimensions of all vehicle stacking spaces, if required by Section 6.1 of the LDRs.
v. Vehicular parking calculations, indicating the minimum and maximum number of required spaces and the number of parking spaces provided (regular and accessible spaces) in accordance with Section 6.1 of the LDRs.
w. Bicycle parking calculations, if required by Section 6.1 of the LDRs.
x. Striping and signage for all traffic control devices.
y. Landscape Plan, indicating the location, size, and design of required and proposed landscaped areas. Landscape Plans shall identify the following with sufficient detail and calculations to demonstrate compliance with Section 6.2.2 of the LDRs:
    i. Location, identification of the species, and size of all existing trees.
    ii. Required perimeter buffer areas.
    iii. Parking lot perimeter landscaping.
    iv. Parking lot interior landscaping.
    v. Building façade landscaping.
    vi. Calculation of landscaped areas (see Policy 2.4.a of the Comprehensive Plan Future Land Use Element).
    vii. Calculation of open space provided (see Section 6.7 of the LDRs).
    viii. Calculation of tree credits, if applicable. Calculations shall be as set forth in Sections 6.2.1(D)(4) and 6.2.2(D)(6) of the LDRs and shall be shown on the plan in tabular format (if tree credits are utilized, the Landscape Plan must identify in the landscape calculations where credit is applied).
    ix. Tree protection detail in accordance with Section 6.2.1(D)(2) of the LDRs.
    x. If tree removal is proposed, a tree survey, showing:
        (a) Each tree proposed for removal;
        (b) Each tree proposed for retention;
        (c) The size and species (both common and scientific names) of all trees proposed for removal/retention;

(d) Location, size, and species of all new trees proposed to meet mitigation requirements. Mitigation trees must be shown on the plans and a list of all mitigation trees and calculation of required mitigation must be provided on the plan in tabular format.

z. Location of waste receptacles and detail of waste receptacle screening, demonstrating compliance with Section 6.2.3(B) and, if within the Gateway Overlay District, with Section 3.7.2(C)(5)(c)(ii).

aa. Photometric Plan, demonstrating compliance with the applicable provisions of Section 6.4 of the LDRs.

bb. Location and size of any lakes, ponds, canals, or other waters and waterways, and required setbacks dimensioned on the plans from such waterways.

cc. For development consisting of a nonresidential use, except for single tenant retail sales and services uses greater than or equal to 20,000 square feet in area and except for use types within the industrial services, manufacturing and production, warehouse freight and movement, waste-related services, and wholesale sales use categories ***not*** located within 500 feet of the right-of-way of US Highway 441: Architectural plans demonstrating compliance with the design standards for business uses as provided in Section 6.8.2 of the LDRs. Architectural plans shall include:
   i. Calculation of glazing of:
      (a) the front façade;
      (b) any facade facing a street;
      (c) any façade facing a publicly-accessible parking area which is a part of the development and consisting of 15 percent or more of the minimum off-street parking required by Section 6.1.4(B) of the LDRs; and,
      (d) any façade facing vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.
   ii. Calculation of the area of all façades subject to glazing.
   iii. Detail on the architectural plans depicting façade massing or a massing alternative as defined in Section 6.8.2(A)(2)(b).
   iv. Identification of each material utilized in each façade and the percentage of the total area of the façade for each material used.

dd. For development consisting of a nonresidential use where a single retail services tenant is greater than or equal to 20,000 square feet in area: Architectural plans demonstrating compliance with the design standards for single tenant retail sales and service uses greater than or equal to 20,000 square feet in area as provided in Section 6.8.3 of the LDRs. Architectural plans shall include:
   i. Color plans depicting the color of all materials used in the façade.
   ii. Identification of each material utilized in each façade and the percentage of the total area of the façade for each material used.
   iii. Calculation of glazing of:
      (a) the front façade;
      (b) any facade facing a street;
      (c) any façade facing a publicly-accessible parking area which is a part of the development and consisting of 15 percent or more of the minimum off-street parking required by Section 6.1.4(B) of the LDRs; and,
      (d) any façade facing vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.
   iv. Calculation of the area of all façades subject to glazing.
   v. If a glazing alternative as defined in Section 6.8.3(A)(2)(a)(iv) is used, calculation of area of alternative materials used or identification of other architectural features meeting the requirements of Section 6.8.3 of the LDRs.
   vi. Detail on the architectural plans depicting façade massing or a massing alternative as defined in Section 6.8.2(A)(2)(b) of the LDRs.

ee. For development consisting multi-family residential uses and/or a mobile home park:
   i. Gross acreage.
   ii. Number of dwelling units proposed.
   iii. Density.
   iv. Location and percentage of total open space and recreation areas.
   v. Floor area of each dwelling unit.
   vi. Number of proposed parking spaces.
   vii. Street layout, if applicable.
   viii. Layout of mobile home stands (for mobile home parks only).
   ix. City of Alachua Public School Student Generation Form.

2. Stormwater management plan - including the following:
   a. Plans showing existing contours at one (1) foot intervals based on U.S. Coastal and Geodetic Datum.
   b. Proposed finished floor elevation of all buildings.
   c. Existing and proposed stormwater management facilities with size and grades.
   d. Proposed orderly disposal of surface water runoff.
   e. Drainage calculations.

3. Fire Department Access and Water Supply Plan. All fire protection plans are subject to review and approval by the Alachua County Fire Marshal and City of Alachua Public Services Department. Fire Department Access and Water Supply Plan shall include:
   a. Plans prepared by a professional engineer licensed in the State of Florida.
   b. Fire flow calculations for each newly constructed building. Calculations shall be performed in accordance with Chapter 18, Section 18.4 of the Florida Fire Prevention Code.
   c. Documentation from the water purveyor stating the available flow to the subject property.

4. Concurrency Impact Analysis showing the impact on public facilities, including potable water, sanitary sewer, transportation, solid waste, recreation, stormwater, and public schools (if applicable) in accordance with Section 2.4.14 of the LDRs.

5. Analysis of Consistency with the City of Alachua Comprehensive Plan (analysis must identify specific Goals, Objectives, and Policies and describe in detail how the application complies with the noted Goal, Objective, or Policy).

   For commercial/corporate park/industrial projects: In addition to submitting specific written information regarding the development's compliance with the relevant Goals, Objectives, and Policies of the City of Alachua Comprehensive Plan, a response to the design and performance standards as provided in Policy 1.3.d (for commercial projects), Policy 1.4.f (for corporate park projects), or Policy 1.5.d (for industrial projects) of the Future Land Use Element:

   The following criteria shall apply when evaluating commercial/corporate park/industrial development proposals:

   1. Integration of vehicular and non-vehicular access into the site and access management features of site in terms of driveway cuts and cross access between adjacent sites, including use of frontage roads and/or shared access;
   2. Buffering from adjacent existing/potential uses;
   3. Open space provisions and balance of proportion between gross floor area and site size;
   4. Adequacy of pervious surface area in terms of drainage requirements;
   5. Placement of signage;
   6. Adequacy of site lighting and intrusiveness of lighting upon the surrounding area;
   7. Safety of on-site circulation patterns (patron, employee and delivery vehicles), including parking layout and drive aisles, and points of conflict;
   8. Landscaping, as it relates to the requirements of the Comprehensive Plan and Land Development Regulations;
   9. Unique features and resources which may constrain site development, such as soils, existing vegetation and historic significance; and
   10. Performance based zoning requirements, which may serve as a substitute for or accompany land development regulations in attaining acceptable site design.
   11. Commercial/Corporate Park/Industrial uses shall be limited to an intensity of less than or equal to 0.50 floor area ratio for parcels 10 acres or greater, 0.50 floor area ratio for parcels less than 10 acres but 5 acres or greater, a 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio to parcels 1 acre or less.
   12. Complementary residential uses (corporate park only).

6. *For Site Plans for Buildings Less than 80,000 Square Feet in Area:* One (1) set of mailing labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits (obtain from the Alachua County Property Appraiser's web site) – and all persons/organizations registered to receive notice of development applications (current list may be obtained from the Planning & Community Development Department).
   For Site Plans for Buildings Greater than or Equal to 80,000 Square Feet in Area: Two (2) sets of mailing labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits (obtain from the Alachua County Property Appraiser's web site) – and all persons/organizations registered to receive notice of development applications (current list may be obtained from the Planning & Community Development Department).

7. Neighborhood Meeting Materials, including:
   i. Copy of the required published notice (advertisement) – must be published a newspaper of general circulation, as defined in Article 10 of the City's LDRs;
   ii. Copy of written notice (letter) sent to all property owners within 400 feet and to all persons/organizations registered with the City to receive notice, and a copy of the mailing labels or a list of those who received written notice; and,
   iii. Written summary of meeting – must include (1) those in attendance; (2) a summary of the issues related to the development proposal discussed; (3) comments by those in attendance about the development proposal; and, (4) any other information deemed appropriate.

8. Legal description: (1) on 8.5" x 11" paper; and (2) electronic file in Word format.

9. Proof of ownership (i.e., copy of deed.)

10. Proof of payment of taxes.

11. Traffic Impact Analysis or Statement, as deemed applicable to the project by the City of Alachua in its sole discretion.

12. Environmental Assessment or Study, as deemed applicable to the project by the City of Alachua in its sole discretion.

13. Environmental Resource Permit (or Letter of Exemption) from the Suwannee River Water Management District (SRWMD) or Self-Certification for a Stormwater Management System in Uplands Serving Less than 10 Acres of Total Project Area and Less than 2 Acres of Impervious Surfaces from the Florida Department of Environmental Protection (FDEP) pursuant to Section 403.814(12), Florida Statutes (or documentation which shows a permit application/exemption/self-certification has been submitted to SRWMD or FDEP).

14. If access is from a County Road, access management permit from Alachua County Public Works (or documentation which shows a permit application has been submitted).

15. If access is from a State Road, access management permit from Florida Department of Transportation (or documentation which shows a permit application has been submitted).

16. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any costs associated with outside professional consulting services deemed necessary by the City in its sole discretion will be billed to the applicant at the rate of the consultant. The invoice for such services shall be paid in full prior to any public hearing(s) on the application.

All applicable attachments are required for a complete application. A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

Under penalty of perjury, I/we certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

STATUTORY WARRANTY DEED

THIS **STATUTORY WARRANTY DEED** is made as of this 17th day of December, 2025, by **JANICE L. MORRIS**, a an unmarried person, whose address is 10213 S.W. 49th Lane, Gainesville, FL 32608 and **D. HOLTON BROWNING** and **JEANNETTE L. BROWNING**, a married couple, individually and as Co-Trustees of the **BROWNING FAMILY REVOCABLE TRUST** under Agreement dated January 19, 2022, whose address is 627 SW 83rd Terrace, Gainesville, Florida 32607 (collectively, the "Grantor"), to **ALACHUA OUTPARCEL, LLC**, a Florida limited liability company, whose address is 2469 N. John Young Parkway, Suite C, Orlando, Florida 32804 ("Grantee").

WITNESSETH:

THAT the Grantor, for and in consideration of the sum of TEN and 00/100 DOLLARS ($10.00), and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, hereby grants, bargains, sells, aliens, remises, releases, conveys, and confirms unto the Grantee, all that certain land situate in Alachua County, Florida (the "Property") more particularly described to wit:

A tract of land located in Southeast 1/4 of Section 8, Township 8 South, Range 18 East, Alachua County, Florida, being more particularly described as follows:

For a point of reference commence at the Southeast corner of said Section 8: thence run North 01 deg. 49 min. West, along the East line of said Section 8 a distance of 2010.55 feet; thence run South 89 deg. 29 min. West, 50 feet to the Westerly right-of-way of State Road S-235A being the point of beginning; thence from said point of beginning continue South 89 deg. 29 min. West, a distance of 200 feet; thence run South 01 deg. 49 min. East, a distance of 257.75 feet to the Northerly right-of-way line of State Highway No. 20; thence run South 79 deg. 06 min. East, along said Northerly right-of-way line a distance of 205.2 feet to the said Westerly right-of-way line of State Road No. S235A; thence run North 01 deg. 49 min. West, along said Westerly right-of-way line, a distance of 298.4 feet to close on said point of beginning.

Less and except that portion described and recorded in Official Records Book 107, Page 609 of said public records.

TOGETHER WITH all the tenements, hereditaments, and appurtenances thereto belonging or in anywise appertaining.

TO HAVE AND TO HOLD the same in fee simple forever.

And the Grantor hereby covenants with the Grantee that the Grantor is lawfully seized of the Property in fee simple; that the Grantor has good right and lawful authority to sell and convey the Property; that the Property is free from all encumbrances except as noted herein; and that the Grantor hereby fully warrants the title to the Property and will defend the same against the lawful claims of all persons whomsoever, and the Property is free of all encumbrances except ad valorem real property taxes and assessments for the year **2026**, and restrictions, covenants, conditions, and easements of record, if any, the reference to which shall not operate to reimpose same.

[Signatures pages to follow]

IN WITNESS WHEREOF, the Grantor has executed this Deed as of the day and year first above written.

Project Narrative

To Whom It May Concern;

Please accept the following as our narrative letter for submittal of a Site Plan for the above-mentioned project.

The subject property is part of a 5.05 acre development with an approved Infrastructure Plan through the City and referred to as 'Westside Commons', and the project is located on a 0.88 acre portion of Alachua County Tax Parcel # 03044-001-002 . The intent of this Site Plan review is to obtain approval for a proposed Chipotle restaurant with pick up window and indoor and outdoor dining. The project is located on Lot 3 of the Westside Commons development and the parcel lines are shown on the submitted plans and are also reflected on the infrastructure plans approved by the City. Legal descriptions for both the parent parcel as well as Lot 3 are provided.

Please feel free to contact me if you have any questions or require additional information at arosado@interplanllc.com or 407.645.5008. If I am not available, Chris Blurton is the Project Manager and can assist with any questions by email or phone at cblurton@interplanllc.com or 407.645.5008.

Sincerely,
INTERPLAN LLC

TABLE OF CONTENTS

1. Project Narrative and Concurrency Analysis
2. Consistency with City of Alachua Comprehensive Plan Analysis
3. Needed Fire Flow Analysis

1. Project Narrative and Concurrency Analysis

This site plan application requests to construct a new 2,366 square foot Chipotle quick service restaurant on an approximately 0.88 acre parcel referred to 'Lot 3' located at the Westside Crossing development. Shown below is an analysis of the proposed development's concurrency demands and the existing infrastructure available to serve the project.

Roadways/Transportation

Projected Trip Generation:

Land Use	ITE LU Code	Variable Type	Variable Quantity	Trip Rate	Daily	AM Peak	PM Peak
Proposed							
Fast Food Restaurant w/ Drive-Through	934	Per 1,000 SF	2,500 SF	Daily = 467.48 AM Peak = 44.61 PM Peak = 33.03	1,169 Trips	112 Trips	83 Trips

Conclusion: Approval of this application results in an additional 1,169 daily and 112 AM peak hour trips on the public road network. This does not include the effect of pass-by trips which the traffic study estimates to be approximately 614 trips.

Per the traffic study conducted by Traffic Planning and Design, Inc., the comprehensive plan roadway segment analysis showed that all of the segments currently operate at acceptable levels of service. At project build out, all of the roadway segments will continue to operate within their capacity similar to existing conditions.

Additionally, the intersection analysis conducted by TPD indicated that the intersection currently operates at an acceptable Level of Service, and will continue to operate at an acceptable LOS after project build-out.

Potable Water / Sanitary Sewer / Solid Waste

	Demand	Max Total Demand	Current Potable Water Residual Capacity	Residual Capacity After Proposed Project
Potable Water	20 GPD / Seat (Restaurant using single service articles only operating less than 16 hours a day)	@ 74 Seats = 1,480 GPD	138,980 GPD	137,500 GPD

Conclusion: The project site will be served by the City of Alachua potable water infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for potable water.

	Demand	Max Total Demand	Treatment Plant Current Residual Capacity	Residual Capacity After Proposed Project
Sanitary Sewer	20 GPD / Seat (Restaurant using single service articles only operating less than 16 hours a day)	@ 74 Seats = 1,480 GPD	168,166 GPD	166,686 GPD

Conclusion: The project site will be served by the City of Alachua wastewater infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for sanitary sewer.

	Max Total Demand	Existing Demand	Demand After Proposed Project
Solid Waste	Total Waste Per Year: 35 Tons per year or 211	10,184 Tons per year	10,219 Tons per year

	lbs. per day		

Conclusion: Solid waste facility capacity exists to adequately serve development of the proposed project. The New River Solid Waste Facility is anticipated to be able to have enough capacity for the next 50+ years. The maximum potential impact from approval of this application will not negatively or exceed the City's adopted LOS for the solid waste facility system.

The total estimated impact on public facilities for both proposed and existing development is as follows:

Water – 1,480 GPD
Sewer – 1,480 GPD
Solid Waste – 35 Tons per year or 211 lbs. per day
Transportation – 1,169 Max Daily Trips

Based on the fact that the utilities involved have sufficient capacity to serve the proposed development and the adjacent streets have sufficient capacity, it appears that sufficient capacity exists for all public facilities.

4. CONSISTENCY WITH CITY OF ALACHUA COMPREHENSIVE PLAN

This section identifies specific City of Alachua Comprehensive Plan Goals, Objectives, and Policies and explains how this application is consistent with each.

Policy 1.3.b: Commercial: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses may locate. The following uses are allowed within the Commercial land use category:

1. Retail sales and services;
2. Personal services;
3. Financial institutions;
4. Recreation and entertainment;
5. Tourist-related uses;
6. Visitor accommodations;
7. Commercial shopping centers;
8. Auto-orientated uses;
9. Traditional Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/businesses parks;
13. Limited industrial services;
14. Eating establishments;
15. Single family attached units;
16. Apartments and townhomes;
17. Duplexes and quadplexes;
18. Single-family and multi-family residential above first floor commercial uses;
19. Convention centers; and,
20. Supporting community services such as schools, houses of worship, parks, and community centers.

Development in the Commercial land use category may occur as mixed-use or non-mixed-use.

The proposed Chipotle development is allowed in the property's current land use and zoning classification. This project is proposed to provide quality food and drinks to the adjacent residential development and school.

Policy 1.3.d: Design and performance standards: The following criteria shall apply when evaluating commercial development proposals:
1. Integration of vehicular and non-vehicular access into the site and access management features of site in terms of driveway cuts and cross access between adjacent sites, including use of frontage roads and/or shared access;
2. Buffering from adjacent existing/potential uses;
3. Open space provisions and balance of proportion between gross floor area and site size;
4. Adequacy of pervious surface area in terms of drainage requirements;
5. Placement of signage;
6. Adequacy of site lighting and potential impacts of lighting upon the surrounding area. Lighting should be designed to minimize impacts to preserve the ambiance and quality of the nighttime sky by reducing light trespass and light pollution on adjacent properties by utilizing lighting at appropriate intensities, directions and times to ensure light is not overused or impacting areas where it is not intended;
7. Safety of on-site circulation patterns (patron, employee, and delivery vehicles), including parking layout, drive aisles, and points of conflict;
8. Landscaping, as it relates to the requirements and goals of the Comprehensive Plan and Land Development Regulations;
9. Unique features and resources which may constrain site development such as soils, existing vegetation and historic significance;
10. Performance based zoning requirements, which may serve as a substitute for or accompany land development regulations in attaining acceptable site design; and,
11. Commercial uses shall be limited to an intensity of less than or equal to 0.50 floor area ratio for parcels 5 acres or greater, 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less.

The site plans for the subject property conform to the above requirements. The proposed intensity is well below the maximum allowable FAR of 0.75.

Policy 1.3.e: Density and intensity standards.
1. Non-mixed-uses. The following density and intensity standards shall apply to non-mixed-use development proposals in the commercial &

mixed-use land use categories:
a. Density. Residential uses are limited to a density of 10 dwelling units per acre in the Community Commercial land use category and 15 dwelling units per acre in the Commercial and Central Business District land use categories.
b. Intensity. Non-residential uses are limited to an intensity of less than or equal to 0.5 floor area ratio for parcels 5 acres or greater, 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less.
2. Mixed-uses. The following density and intensity standards shall apply to mixed-use development proposals in the commercial & mixed-use land use categories:
a. Density. Residential uses are limited to a density of 15 dwelling units per acre in the Community Commercial and Commercial future land use categories and 20 dwelling units per acre in the Central Business District land use category.
b. Intensity. Non-residential uses are limited to an intensity of 0.6 floor area ratio for parcels 5 acres or greater, 0.85 for parcels less than 5 acres but greater than 1 acre, and 1.25 floor area ratio for parcels less than 1 acre.

The site plans for the subject property conform to the above requirements for non-mixed use developments. The proposed intensity is well below the maximum allowable intensity/FAR of 0.75.

Policy 1.3.f: The creation/promotion of strip pattern commercial development shall be discouraged. Infill within established commercial areas is preferred over extension of a strip commercial pattern. Extension of a commercial land use designation may be considered in circumstances where the extension is compatible with the existing land uses surrounding the land or the land use categories of surrounding lands. Extensions of a commercial land use category shall not encroach into a residential area. The following criteria shall be applied to limit the impacts of commercial development upon surrounding areas:
1. Impacts upon traffic circulation should be anticipated and mitigated through the reservation of right-of-way for road widening and marginal access streets when appropriate.
2. Access points for commercial development shall minimize points of conflict by utilizing frontage roads, providing cross access between parcels, or installing shared use ingress and egress access driveways connections to roadways.
3. Setbacks and landscaped or other appropriate buffers shall be established to mitigate the visual impacts of commercial development upon surrounding land uses.

4. A sidewalk or bicycle path shall be required where appropriate, to provide convenient access to the development from surrounding areas and to reduce traffic volumes on the roadways.

The subject property is located on a busy intersection on a state highway, is part of the City's Corporate Corridor Activity Center and is surrounded by other commercially zoned and developed property along US 441, making this 'infill' development. Access points are limited to 1 each per public road, with appropriate signage and traffic channelizing to limit traffic movements. The proposed Chipotle restaurant is compatible with adjacent properties along US 441 and appropriate landscaped buffers are provided, on the subject property, from adjacent properties. Public sidewalks, including a wider mixed-use path along NW 173rd, are proposed.
No additional right of way for public roads is required.

Policy 1.3.g: The City shall pursue the establishment of activity centers and similar criteria to guide the placement and design of commercial and business areas.
1. The City shall establish and maintain a Gateway Activity Center at the interchange of US 441 and Interstate 75. The boundaries of the Gateway Activity Center shall be based on the Generalized US 441/I-75 Activity Center Map provided in the Future Land Use Map Series. The intent of this activity center is to welcome existing and future residents and visitors to the City, and to promote Alachua as an attractive, vibrant, and economically prosperous community.
2. The City shall establish and maintain the US 441 corridor as a Corporate Corridor Activity Center. The intent of establishing this activity center is to implement economic development objectives and to promote a coordinated development plan to maximize existing and future land use patterns and preserve the function of the US 441 corridor.

The subject property is located in the US 441 Corporate Corridor Activity Center. The proposed site plan is being designed as part of a coordinated development plan and contributes to the goal of welcoming residents to the City with food and drink options and additional economic development opportunities.

Policy 2.7.a.: The City shall discourage the proliferation of urban sprawl. Applications foran amendment to the land use category of a property shall include an analysis of the application's discouragement of the proliferation of urban sprawl. Such analysis shall consider the primary indicators or the urban form criteria as set forth in Chapter 163.317(6)(a)9.a. and b., Florida Statutes, respectively.

This project will not promote the use of land far from existing urban areas for low

density, nor will it create a need for the costly extension of services. All public roads and utilities are available adjacent to or close to the development, and the property is located on a busy intersection and surrounded by existing development on all sides.

Policy 5.1.a: Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Changes to the existing topography will be limited, and there are no know seepage slopes on site. Existing vegetation, including several large trees, will be preserved where possible.

Policy 5.1.b: Soils: The City shall ensure soil protection and intervention measures are included in the development review process.

There are currently three (3) types of soils located onsite:

- **Arredondo Fine Sand, 0 to 5 Percent Slopes (Hydro. Group A)**
- **Arredondo-Urban Land Complex, 0 to 5 Percent Slopes (Hydro. Group A)**
- **Fort Meade Fine Sand, 0 to 5 Percent Slopes (Hydro. Group A)**

Appropriate development techniques and design considerations have been applied to the various soil types on this site. All soils are well drained and non-hydric.

Policy 5.1.c: Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

The subject property is not within any FEMA Special Flood Hazard Zone area, it is in Zone X, an area of minimal flood hazard.

Policy 5.1.d: Wetlands: The City shall utilize statewide wetland delineation

methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

There are no documented wetlands on the project site. All soils are well drained and non-hydric.

Policy 5.1.e: Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

There are no documented listed wildlife or plant species or their habitat onsite. As the proposed Chipotle is proposed on an existing developed lot that is regularly mowed, there appears to be no need to investigate further as the area does not appear to be inviting to listed species.

Objective 5.2: Availability of facilities and services: The City shall utilize a concurrency management system to ensure that the adopted level of service standards are maintained.

Section 2 of this report demonstrates the impacts that the proposed development will have on public facilities and services. Sufficient capacity appears to exist for this development. The analysis from Section 2 is repeated below:

Roadways/Transportation

Projected Trip Generation:

Land Use	ITE LU Code	Variable Type	Variable Quantity	Trip Rate	Daily	AM Peak	PM Peak
Proposed							
Fast Food Restaurant w/ Drive-Through	934	Per 1,000 SF	2,500 SF	Daily = 467.48 AM Peak = 44.61 PM Peak = 33.03	1,169 Trips	112 Trips	83 Trips

Conclusion: Approval of this application results in an additional 1,169 daily and 112 AM

peak hour trips on the public road network. This does not include the effect of pass-by trips which the traffic study estimates to be approximately 614 trips.

Per the traffic study conducted by Traffic Planning and Design, Inc., the comprehensive plan roadway segment analysis showed that all of the segments currently operate at acceptable levels of service. At project build out, all of the roadway segments will continue to operate within their capacity similar to existing conditions.

Additionally, the intersection analysis conducted by TPD indicated that the intersection currently operates at an acceptable Level of Service, and will continue to operate at an acceptable LOS after project build-out.

Potable Water / Sanitary Sewer / Solid Waste

	Demand	Max Total Demand	Current Potable Water Residual Capacity	Residual Capacity After Proposed Project
Potable Water	20 GPD / Seat (Restaurant using single service articles only operating less than 16 hours a day)	@ 74 Seats = 1,480 GPD	138,980 GPD	137,500 GPD

Conclusion: The project site will be served by the City of Alachua potable water infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for potable water.

	Demand	Max Total Demand	Treatment Plant Current Residual Capacity	Residual Capacity After Proposed Project
Sanitary Sewer	20 GPD / Seat (Restaurant using single service articles only operating less than 16 hours a day)	@ 74 Seats = 1,480 GPD	168,166 GPD	166,686 GPD

Conclusion: The project site will be served by the City of Alachua wastewater infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for sanitary sewer.

	Max Total Demand	Existing Demand	Demand After Proposed Project
Solid Waste	Total Waste Per Year: 35 Tons per year or 211 lbs. per day	10,184 Tons per year	10,219 Tons per year

Conclusion: Solid waste facility capacity exists to adequately serve development of the proposed project. The New River Solid Waste Facility is anticipated to be able to have enough capacity for the next 50+ years. The maximum potential impact from approval of this application will not negatively or exceed the City's adopted LOS for the solid waste facility system.

The total estimated impact on public facilities for both proposed and existing development is as follows:

Water – 1,480 GPD
Sewer – 1,480 GPD
Solid Waste – 35 Tons per year or 211 lbs. per day
Transportation – 1,169 Max Daily Trips

Based on the fact that the utilities involved have sufficient capacity to serve the proposed development and the adjacent streets have sufficient capacity, it appears that sufficient capacity exists for all public facilities.

Policy 5.2.a: All new development shall meet level of service requirements for roadways, potable water and sanitary sewer, stormwater, solid waste, public schools, and improved recreation in accordance with LOS standards adopted in the elements addressing these facilities.

Section 2 demonstrates how the proposed plan for the project site will impact City of Alachua facilities and adopted level of service. It is not anticipated that the proposed plan for the project site will exceed the adopted LOS standards. See analysis provided above.

Policy 5.2.b: The concurrency management system shall specify the period for which certification of level of service compliance shall be valid until actual development pursuant to a final development order or Ch. 163, Florida Statutes, development

agreement has commenced.

Acknowledged.

CONSERVATION AND OPEN SPACE ELEMENT

Objective 1.5: Soils. The City shall protect soil resources through erosion and sedimentation control, by requiring proper design criteria on specific soils.

None of the onsite soils are particularly susceptible to erosion issues. Standard erosion control measures are specified to be installed and used during construction and until final stabilization.

Objective 1.10: Wetlands. The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.

The National Wetlands Inventory database does not indicate any wetlands or hydric soils onsite. If any wetlands are found onsite, they will be adequately protected in development of the project site.

Needed Fire Flow Analysis

Per NFPA for a 2,366 SF building with type of construction V-B, the required fire flow is 1500 GPM for 2 hours. Per the most recent fire flow test done on-site the hydrant is capable of flowing 2725 gpm at 20 psi.

SELF-CERTIFICATION FOR A STORMWATER MANAGEMENT SYSTEM IN UPLANDS SERVING LESS THAN 10 ACRES OF TOTAL PROJECT AREA AND LESS THAN 2 ACRES OF IMPERVIOUS SURFACES

Owner(s)/Permittee(s):	Ashley Rosado, Nicholas Jones
File No:	0463846001EG
File Name:	WESTSIDE COMMONS - ALACHUA, FL
Site Address:	16313 NW US Highway 441 Alachua FL - 32615 8670
County:	Alachua
Latitude:	29° 48' 17.986"
Longitude:	-82° 31' 37.1064"
Total Project Area:	5.05
Total Impervious Surface Area:	.09
Approximate Date of Commencement of Construction:	
Registered Florida Professional:	STUART ANDERSON
License No.:	60848
Company:	

Date: August 19, 2025

Ashley Rosado certified through the Department's Enterprise Self-Service Application portal that the project described above was designed by the above-named Florida registered professional to meet the following requirements:

(a)The total project area involves less than 10 acres and less than 2 acres of impervious surface;
(b)Activities will not impact wetlands or other surface waters;
(c)Activities are not conducted in, on, or over wetlands or other surface waters;
(d)Drainage facilities will not include pipes having diameters greater than 24 inches, or the hydraulic equivalent, and will not use pumps in any manner;
(e)The project is not part of a larger common plan, development, or sale; and
(f)The project does not:

1.Cause adverse water quantity or flooding impacts to receiving water and adjacent lands;
2.Cause adverse impacts to existing surface water storage and conveyance capabilities;
3.Cause a violation of state water quality standards; or
4.Cause an adverse impact to the maintenance of surface or ground water levels or surface water flows established pursuant to s. 373.042 or a work of the district established pursuant to s. 373.086, F.S.

This certification was submitted before initiation of construction of the above project. The system is designed, and will be operated and maintained in accordance with applicable rules adopted pursuant to part IV of chapter 373, F.S. There is a rebuttable presumption that the discharge from such system will comply with state water quality standards.Therefore, construction, alteration, and maintenance of the stormwater management system serving this project is authorized in accordance with s.403.814(12), F.S.

In accordance with s. 373.416(2), F.S., if ownership of the property or the stormwater management system is sold or transferred to another party, continued operation of the system is authorized only if notice is provided to the Department within 30 days of the sale or transfer.This notice can be submitted to:

FDEP Northeast District
8800 Baymeadows Way West
Jacksonville, FL32256

This certification was submitted along with the following electronic documents:

File Description
Civil Plans
LOA
Stormwater Report
Survey

If you have submitted this certification as a Florida Registered Professional, you may wish to sign and seal this certification, and return a copy to the Department, in accordance with your professional practice act requirements under Florida Statutes.

I, STUART ANDERSON, License No. 60848, do hereby certify that the above information is true and accurate, based upon my knowledge, information and belief. In the space below, affix signature, date, seal, company name, address and certificate of authorization (if applicable).

This sealed certification may be submitted to the Department, either electronically (as an attachment in Adobe PDF or other secure, digital format) at DEP_NED@FloridaDEP.gov, or as a hardcopy, at the postal address below:

FDEP Northeast District

PART 5: SPECIAL PROVISIONS

NON-CONFORMING CONNECTIONS: ☐ YES ☐ NO

If this is a non-conforming connection permit, as defined in Rule Chapters 14-96 and 14-97, then the following shall be a part of this permit.

1. The non-conforming connection(s) described in this permit is (are) not permitted for traffic volumes exceeding the Permit Category on page 1 of this permit, or as specified in "Other Special Provisions" below.

2. All non-conforming connections will be subject to closure or relocation when reasonable access becomes available in the future.

OTHER SPECIAL PROVISIONS:

1.This permit only applies to work being done within FDOT right of way. 2. Contact FDOT Inspector Dale Hunter 48 hours in advance 352-575-3713 for a preconstruction meeting and before any work is performed within FDOT right of way. 3 Have all utilities located before the preconstruction meeting. 9.The Contractor must have a copy of the approved FDOT Permit on site during construction.

PART 6: APPEAL PROCEDURES

You may petition for an administrative hearing pursuant to sections 120.569 and 120.57, Florida Statutes. If you dispute the facts stated in the foregoing Notice of Intended Department Action (hereinafter Notice), you may petition for a formal administrative hearing pursuant to section 120.57 (1), Florida Statutes. If you agree with the facts stated in the Notice, you may petition for an informal administrative hearing pursuant to section 120.57(2), Florida Statutes. You must file the petition with:

Clerk of Agency Proceedings
Department of Transportation
Haydon Burns Building
605 Suwannee Street, M.S. 58
Tallahassee, Florida 32399-0458

The petition for an administrative hearing must conform to the requirements of Rule 28-106.201(2) or Rule 28-106.301(2), Florida Administrative Code, and be filed with the Clerk of Agency Proceedings by 5:00 p.m. no later than 21 days after you received the Notice. The petition must include a copy of the Notice, be legible, on 8 1/2 by 11 inch white paper, and contain:

1. Your name, address, telephone number, any Department of Transportation identifying number on the Notice, if known, the name and identification number of each agency affected, if known, and the name, address, and telephone number of your representative, if any, which shall be the address for service purposes during the course of the proceeding.
2. An explanation of how your substantial interests will be affected by the action described in the Notice;
3. A statement of when and how you received the Notice;
4. A statement of all disputed issues of material fact. If there are none, you must so indicate;
5. A concise statement of the ultimate facts alleged, including the specific facts you contend warrant reversal or modification of the agency's proposed action, as well as an explanation of how the alleged facts relate to the specific rules and statutes you contend require reversal or modification of the agency's proposed action;
6. A statement of the relief sought, stating precisely the desired action you wish the agency to take in respect to the agency's proposed action.

If there are disputed issues of material fact a formal hearing will be held, where you may present evidence and argument on all issues involved and conduct cross-examination. If there are no disputed issues of material fact an informal hearing will be held, where you may present evidence or a written statement for consideration by the Department.

Mediation, pursuant to section 120.573, Florida Statutes, may be available if agreed to by all parties, and on such terms as may be agreed upon by all parties. The right to an adminstrative hearing is not affected when mediation does not result in a settlement.

Your petition for an administrative hearing shall be dismissed if it is not in substantial compliance with the above requirements of Rule 28-106.201(2) or Rule 28-106.301(2), Florida Administrative Code. If you fail to timely file your petition in accordance with the above requirements, you will have waived your right to have the intended action reviewed pursuant to chapter 120, Florida Statutes, and the action set forth in the Notice shall be conclusive and final.

Mike Ogden, Tae Donn, and Cooper Biseinere
Time in: 0730
We arrived on site, and got everything ready for the flow test. Unfortunately we received a text message from the fire marshal saying that he believes that he's came down with the flu, so he will not be able to make the flow test. Emory with alachua county is on site and witnessed the flow test. Report will be sent to all parties involved.
Time out: 1000

Thank You

Wiginton thanks you for allowing us to assist you with your maintenance needs. We hope we have provided you with the prompt and high quality service that you deserve. We hope you will sincerely consider Wiginton first for any future maintenance demands.

Summary of Neighborhood Meeting for Proposed Site Plan
IP # 2024.0332
Westside Commons - Chipotle and Dutch Bros– Alachua, FL

A neighborhood meeting was held by Interplan LLC at 6:00 PM on Monday, June 2nd 2025 at the Legacy Park Multipurpose Center, Meeting Room #2. Notices advertising the meeting were sent to property owners within 400 feet (list attached) of the Subject Parcels and an advertisement was posted in the Gainesville Sun 10 business days prior to the meeting as required by the City of Alachua. Prior to the meeting we received two e-mails from interested parties, a person with Rockford Realty Group confirming the location of the proposed site and an e-mail from an interested resident who later attended the meeting.

The meeting itself was held from 6:00 pm until 6:45 PM at the Legacy Park Multipurpose Center, and Chris Blurton w/Interplan LLC attended on behalf of the applicant to discuss both proposed site plans with any interested parties. A full size plan (i.e. 24"x36" 'D' size) showing both proposed site plans for the Chipotle restaurant and the Dutch Bros coffee shop was provided for review. A total of three people attended the meeting, their names and contact information are provided on the attached sign in sheet. I provided a quick summary of the process and the proposed site plans with the attendees and answered their questions.

Several questions and/or concerns were raised by attendees. One question was raised asking if the Chipotle would have a drive through-I explained that it would but only for pick up orders and there was no speaker box proposed. The driveway onto NW 173rd/CR 235-A was raised as a concern due to traffic from the school, and I noted that the driveway was to be signed and marked as a right-in/right-out only similar to the driveway on US 441. I stated that we would discuss the possibility of additional restrictions on the driveway with the developer and that Alachua County would ultimately dictate any required improvements for that driveway. Drainage was discussed and I noted that the retention pond was proposed for the rear of the development and was designed to discharge to US 441 first with an emergency overflow to the north that would discharge to the unimproved right-of-way north of the project site. Development, specifically residential or multistory development, on the rear of the site was discussed and I let the attendees know that no development was currently planned for that area and that it was largely being used for stormwater retention. Signage was also discussed and I noted that each site was proposed to have their own stand alone monument sign located along US 441. At approximately 6:45 PM there were no further questions or comments so the meeting was adjourned.

A copy of the newspaper advertisement, mailed notice, list of recipients and sign in sheet is attached.

INTRODUCTION

This traffic analysis was performed to assess the impact of a proposed Westside Commons development, located in the northwest quadrant of the intersection of US 441 and NW 173rd Street, in the City of Alachua, Florida. The proposed development will consist of a Coffee Shop with drive through window and no indoor seating and two, 2,500 square foot fast food restaurants with drive through windows. The site is accessed via two driveways, a right in / right out driveway on US 441, and a full access driveway on NW 173rd Street. The project is anticipated to be built by the end of 2026. **Figure 1** depicts the location of the project site, and the surrounding roadway network. **Figure 2** provides the preliminary site plan which shows the access connections.

Methodology

This analysis was conducted in accordance with the traffic study methodology submitted to and approved by the City of Alachua and meets their Guidelines. The methodology coordination and correspondence are provided in **Appendix A.** Data utilized in the analysis consisted of a preliminary site plan provided by Project Engineers, traffic volume data and Level of Service standards obtained from the City of Alachua and intersection turning movement counts obtained by TPD Inc.

Study Area

The guidelines require that all 17 roadway segments contained in the Comprehensive Plan be evaluated along with the intersections within one-quarter mile (1/4). The roadway segments are shown in **Figure 3**. The following intersections were included in the analysis:

*(FDOT Road Segment #, COA Comprehensive Plan #).	

EXISTING CONDITIONS ANALYSIS

An existing conditions analysis was conducted for the Comprehensive Plan roadway segments and study intersection utilizing existing traffic volumes and roadway geometry to establish their current operating conditions.

Roadway Segment Analysis

The existing Comprehensive Plan roadway segments are summarized in **Table 1**. As shown, the existing peak hour conditions analysis reveals that the roadway segments currently operate within their adopted Maximum Service Volumes (MSV). Relevant information from the City of Alachua February 2025 Development Monitoring Report is included in **Appendix B.**

Intersection Analysis

The study intersection was analyzed in accordance with the procedures of the *Highway Capacity Manual (HCM)* using the latest version of the *Highway Capacity Software (HCS)*. The capacity analysis at the intersections was performed using the existing intersection geometry and traffic volumes during the A.M. and P.M. peak hours. **Figure 3** depicts the existing A.M. and P.M. peak hour traffic volumes. The traffic counts were taken on March 25, 2025, when FDOT's seasonal factor was 0.98 and therefore were not adjusted. The intersection counts are included in **Appendix C** along with the FDOT's seasonal factor report. The intersection capacity analysis results are summarized in **Table 2,** which shows that the study intersection operates within the adopted Levels of Service standard during A.M. and P.M. peak hours. Detailed capacity analysis *w*orksheets are included in **Appendix D**.

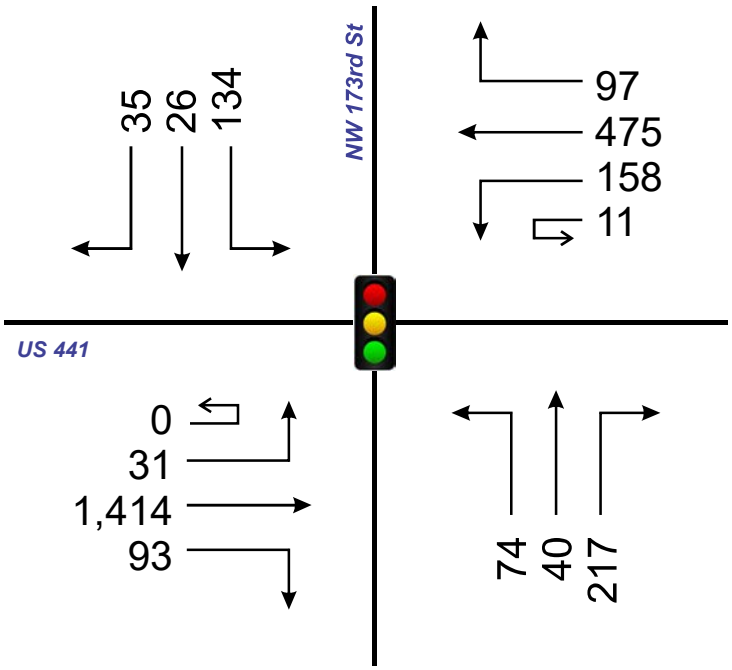

Table 2
Existing P.M. Intersection Capacity Analysis

A.M. Peak Hour

P.M. Peak Hour

PROPOSED DEVELOPMENT AND TRIP GENERATION

The proposed development consists of a Coffee Shop with a drive-through window and no indoor seating and two, 2,500 square foot fast food restaurants with drive through windows. To determine the impact of this development, an analysis of its trip generation characteristics was conducted. This included the determination of the trips to be generated as well as their distribution and assignment to the area roadways.

Trip Generation

Trip generation data was obtained from the 11th Edition of the Institute of Transportation Engineers (ITE) *Trip Generation Manual*. **Table 3** provides a summary of the trip generation for the proposed development. As indicated, the proposed development is projected to generate 1,127 net new daily trips, of which 116 and 70 will occur in the A.M. and P.M. peak hours, respectively. Copies of the ITE trip generation sheets are included in the study methodology in Appendix A.

Table 3
Trip Generation Summary

[1] KSF = 1,000 Square Feet, DTL = Drive Thru Lane [2]From ITE 11th Edition Pass-by Appendix

The Guidelines state that pass-by traffic shall not exceed 10% of the adjacent street traffic. **Table 4** presents an analysis of the pass-by trip reduction from US 441 and if it will exceed 10% of the respective A.M. and P.M. peak volumes, per the values from FDOT on-line count database. As can be seen, the background volumes on US 441 are greater than the pass-by trips generated by the development during the A.M. and P.M. peak hours, so no adjustments were made.

Table 4
Peak Hour Pass-By Traffic Consumption Verification – US 441

Background Trips[1]				Pass-By Trips		
Time Period	**Direction**	**US 441**	**10% of US 441**	**US 441 Enter**	**US 441 Exit**	**Equal to or less than 10% Requirement**

P.M.	WB	1,140	114	56	51	Yes

[1]From FDOT on-line County Station 260245, 2023 count.

Trip Distribution/Trip Assignment

A trip distribution pattern was estimated using the currently adopted Gainesville MPO Model. A Select Zone Analysis (SZA) was conducted by modifying the network to include a Traffic Analysis Zone (TAZ) representing the proposed project and the model's socio-economic data updated to reflect the proposed project buildout. The distribution pattern is illustrated in **Figure 5** and the model plot outputs are provided in Appendix A. Utilizing this distribution, the development project trips were assigned to the area roadways.

Project № 6064
Figure 5
Page 10

Project Trip Distribution

N
NTS

PROJECTED TRAFFIC CONDITIONS

Projected traffic conditions were assessed in order to evaluate the impact of the proposed development within its area of influence. The projected conditions were estimated by combining the P.M. peak hour project trips with background traffic volumes.

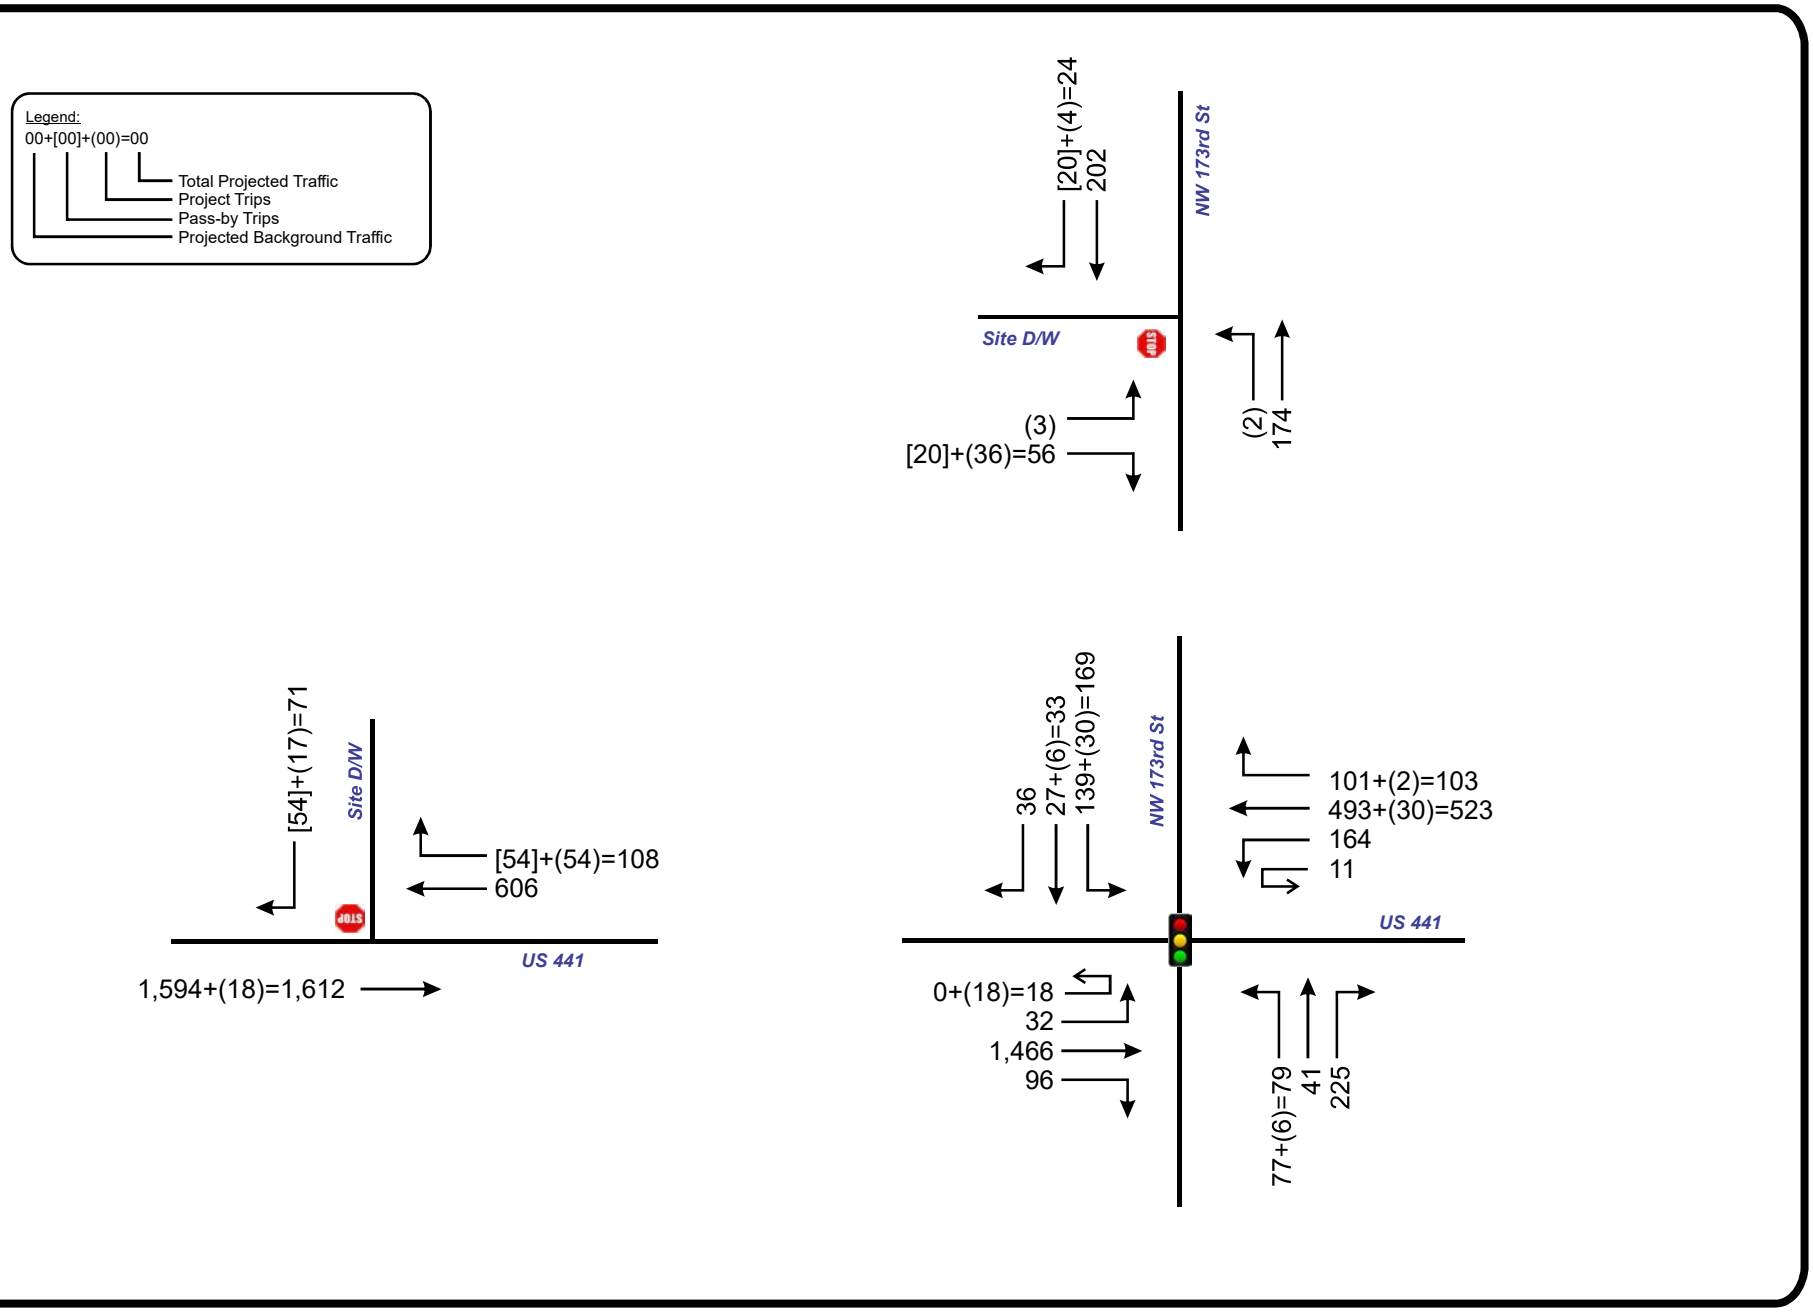
Background Traffic Projections

Background traffic volumes are determined by expanding existing peak hour traffic volumes to the buildout year using an annual growth rate. A historical trend analysis was conducted using the Annual Average Daily Traffic (AADT) data obtained from FDOT on-line Traffic database for the area roadways. As provided in the Study Methodology in Appendix A, the historical trend analysis for US 441 averaged 3.70% per year. This growth rate was applied to the existing traffic volumes as appropriate in order to determine the projected background volumes in the project buildout year of 2026.

Roadway Segment Analysis

The projected Comprehensive Plan roadway segment analysis was performed by comparing the total projected peak hour traffic volume of each segment with the respective capacity. The peak hour analysis, as summarized in **Table 5,** revealed that all the study roadway segments will operate within the adopted LOS standards similar to existing conditions upon buildout of the development.

Intersection Analysis



To assess the projected operating conditions at the study intersections, intersection capacity analyses were conducted using the *Highway Capacity Software (HCS)*. Total A.M. and P.M. peak hour traffic volumes were determined by combining background traffic and project trips. **Figures 6 and 7** show the projected A.M. and P.M. peak hour intersection turning movements, respectively, for the study intersections and site access driveways. The projected Levels of Service are summarized in **Table 6.** Detailed HCS analysis worksheets are included in **Appendix E**. The analysis indicates that the study intersections and site access driveway will operate at overall satisfactory Levels of Service, similar to existing conditions upon build out of the development.

		P.M.	9.3	A	--	--	7.7	A	--	--	--	--

Turn Warrant Analysis

Access to the site is proposed via two driveways, a right in / right out driveway on US 441 and a full access driveway NW 173rd Street. To determine the need for separate left or right turn lanes, a turn lane analysis was conducted at the proposed site access driveways using the guidelines of *NCHRP Report 457 – Evaluating Intersection Improvements: An Engineering Study Guide*. Based upon these guidelines, a separate westbound right turn lane is warranted for the US 441 driveway connection. The NW 173rd driveway connection does not warrant a separate left or right turn lane. The turn lane warrant charts are included in **Appendix F.**

To determine the length of the westbound right turn lane at the site driveway and US 441, the intersection analysis was utilized as follows:

Right turn lane length (TL) = Deceleration Distance (DD) + Queue Length (QL)

DD = 185 feet for posted speed of 45 mph (As per FDOT FDM 212)

QL = 0.7 * 25.0 = 17.5 feet (Use 25 feet for 1 vehicle, from HCS P.M. Analysis)

TL = 185 + 25 = 210 feet

The westbound right turn lane length should be a minimum of 210 feet in order to serve the site upon completion.

STUDY CONCLUSIONS

This traffic analysis was performed to assess the impact of the proposed Westside Commons development, located in the northwest quadrant of the intersection of US 441 and NW 173rd Street, in the City of Alachua, Florida. The proposed development will consist of a Coffee Shop with drive through window and no indoor seating and two, 2,500 square foot fast food restaurants with drive through windows. The site is accessed via two driveways, a right in / right out driveway on US 441, and a full access driveway on NW 173rd Street. The project is anticipated to be built by the end of 2026. The results of the study as documented herein are summarized below:

- The proposed development is projected to generate 1,127 net new daily trips, of which 116 and 70 trips will occur in the A.M. and P.M. peak hours, respectively.

- The Comprehensive Plan roadway segment analysis indicated that all of the segments currently operate at acceptable Levels of Service. At project build out, all of the roadway segments will continue to operate within their capacity similar to existing conditions.

- The intersection analysis indicated that the study intersection currently operates at acceptable Levels of Service. The study intersection and project driveways will continue to operate satisfactorily upon the addition of background and project trips.

- Access to the site will be provided via two driveways, a right in / right out driveway on US 441 and a full access driveway on NW 173rd Street. The site access driveways are projected to operate satisfactorily at project buildout. Based upon NCHRP 457, a westbound right turn lane is warranted for the US 441 driveway. The length should be a minimum of 210 feet, which includes a 50-foot taper. The NW 173rd Street driveway does not warrant a separate left or right turn lane.

Good morning,

Thanks for taking my call this morning and clarifying that the study methodology is approved.

We will schedule data collection and move forward with the analysis.

Thanks again and have a great day.

Good morning Carson,

Thanks for speaking with me last week concerning the City of Alachua Traffic Impact Analysis (TIA) study requirements.

Please find attached the Alachua Retail Center TIA Methodology. The site is located in the northwest quadrant of the intersection of US 441 and NW 173rd Street.

Please review and let me know if you have any questions.
Also, please send me your latest version of the City of Alachua Concurreny Database and segment map.

Thanks,

RE: Traffic Impact Analysis Methodology
City of Alachua, City of Alachua
TPD No. 6064

The following is an outline of the proposed methodology for the Traffic Impact Study for the Alachua Retail Center in the City of Alachua, Florida. The project site is located in the northwest quadrant of the intersection of US 441 and NW 173rd Street. **Figure 1** depicts the site location and the area roadways.

1. Proposed Development

The proposed development is for a Coffee Shop with drive through window and no indoor seating and two (2) fast-food restaurants with drive through windows. Access to the site is proposed via two driveways, a right in / right out access on US 441 and a full access driveway on NW 173rd Street. **Figure 2** depicts the conceptual site plan and its access configuration.

2. Trip Generation

Trip generation data from the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition* will be used for the trip generation estimation of the development. **Table 1** provides a summary of the trip generation for the proposed development calculated with the ITE data.

The project is expected to generate a total of 1,127 net new daily trips, of which 116 will occur during the A.M. peak hour and 70 will occur during P.M. peak hour. The ITE trip generation worksheets are included in **Attachment A**.

[1] KSF = 1,000 Square Feet [2] VFP = Vehicle Fueling Position

The pass-by trips were evaluated to verify that they do not exceed 10% of the adjacent street traffic. The traffic count volume was obtained from FDOT on-line AADT Traffic Report, excerpts provided in **Attachment B**. **Table 2** presents an analysis of the pass-by trip reduction from US 441 if it exceeds 10% of the respective A.M. and P.M. peak volumes. The project pass-by trips on US 441 utilized the existing count distribution. As can be seen, 10% of the background volume on US 441 is greater than the pass-by trips generated by the development during the A.M. and P.M. peak hours, so no adjustments were made.

Table 2
P.M. Peak Hour Pass-By Traffic Consumption Verification

A.M.	WB	1,140	114	74	74	Yes
P.M.	EB	1,187	118	0	0	Yes
P.M.	WB	1,140	114	56	55	Yes

[1]From FDOT on-line County Station 260245, 2023 count.

3. Trip Distribution

The trip distribution pattern for the proposed project was estimated utilizing the currently adopted Gainesville MPO Model. A Select Zone Analysis (SZA) was conducted by modifying the model network to include a Traffic Analysis Zone (TAZ) representing the proposed project and the model's socio-economic data updated to reflect the proposed project buildout. The trip distribution is shown in **Figure 3.** The model distribution plot is included in **Attachment C**.

4. Impact Area

As per City of Alachua Guidelines, the study area includes all the concurrency roadway segments within ½ mile (0.50) and any roadway that the project exceeds 5% of its level of service capacity along with the significant intersections within one-quarter (0.25) mile of the development. The following roadway segments and intersections are proposed to be included in the analysis:

The roadway segments will be included in the analysis:

- US 441, East of NW 173rd Street
- US 441, West of NW 173rd Street
- NW 173rd Street, North of US 441
- NW 173rd Street, South of US 441

The intersections to be included in the area analysis are:

- US 441 & NW 173rd Street
- Project Site Driveways

Note: Additional roadway segments and intersections will be added depending upon a significant analysis of the City of Alachua Concurrency Database.

Alachua Retail Center
Project № 6064
Figure 3
Page 6

Project Trip Distribution

N
NTS

5. Traffic Impact Assessment

a) Roadway

- Obtain existing traffic volumes for the study roadway segment from the turning movement counts at the study intersections for use in the traffic analysis.
- Background traffic will be determined with the use of an annual growth rate obtained from historical AADT in the vicinity of the project. From FDOT on-line, US 441 and NW 173rd Street have an average growth rate of 3.70% per year, which will be applied. Trend analysis worksheets are provided in **Attachment D**.
- Combine project traffic with background traffic to obtain total traffic volumes.
- Perform P.M. peak hour/peak direction roadway analyses utilizing Alachua County LOS standards.

b) Intersections

- Conduct intersection counts during the A.M. and P.M. peak period at the study intersections.
- Determine background traffic with the use of an annual growth rate. As developed for the roadway segment analysis, 3.70 % per year will be utilized.
- Turn lane analysis, access analysis and multi-modal assessment will be evaluated.
- Combine project traffic with background traffic to obtain total traffic.
- Perform intersection capacity analysis utilizing the HCM/HCS operational analysis procedures for the A.M. and P.M. peak hour.

6. Traffic Report

Prepare traffic report summarizing study procedures, analyses and recommendations.
If you have any questions or concerns, please contact us at (407) 628-9955.

APPENDIX B

City of Alachua February 2025 Monitoring Report

City of Alachua

MIKE DAROZA
CITY MANAGER

PLANNING & COMMUNITY DEVELOPMENT
DIRECTOR KATHY WINBURN

Date: February 26, 2025

To: Development Monitoring Report Recipients

From: Carson J. Crockett, AICP Candidate
Planner

RE: City of Alachua February 2025 Development Monitoring Report

Section 2.4.14(M)(1) of the City's Land Development Regulations requires monthly permit activity and available public infrastructure capacity needed to support development to be monitored in a development monitoring report to be published at least quarterly. This report assesses the impacts of development on the City's adopted level of service standards, including development that has been issued a certificate of level of service standard (preliminary development order) or a certificate of concurrency compliance (final development order).

The February 2025 Development Monitoring Report contains the following information:

- Table 1. Certificates of Level of Service Standard (Preliminary Development Orders) and Certificates of Concurrency Compliance (Final Development Orders
- Table 2. Traffic Impacts
- Table 3. Potable Water Impacts
- Table 4. Sanitary Sewer Impacts
- Table 5. Solid Waste Impacts
- Table 6. Recreation Impacts
- Table 7. Projects with Valid Public School Capacity Reservations
- Table 8. Traffic Impacts by Segment

While no deficiencies presently exist, the impacts of new developments upon public facilities will continue to be closely monitored to ensure that imminent deficiencies are identified and appropriately addressed. Note that level of service is monitored for certificates of concurrency compliance only and that certificates of level of service standard are monitored for informational purposes only.

Sincerely,

Carson J. Crockett, AICP Candidate
Planner

1.0 EXECUTIVE SUMMARY

The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida. One parcel is addressed at 16313 NW US Highway 441 while the other is not addressed, and the parcels are identified by the Alachua County Property Appraiser as Parcel Identification Nos. 03044-002-000 and 03044-001-002, respectively. Property ownership of the first parcel was identified as Browning & Browning Trustees & Morris, while the second parcel is owned by Santa Fe Hils Church of Christ.

The property appears to have been developed with a church sometime between 1961 and 1964, which was observed on the day of the site reconnaissance. No other uses were documented.

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.

The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition. Based on the observed use of the onsite structure, documented resources, and interviews with the property owner and church members, this limiting condition was not considered to affect the ability of the environmental professional to assess the property for environmental concerns.

Adjoining properties have been developed with single-family residences, a high school, retail and office uses, and (recently) a gas station.

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1,

Appendix A.

A standard environmental records search of available federal and state (and tribal) environmental record databases was obtained from Environmental Data Resources, Inc. (EDR).

No federal environmental records of concern were reported within the ASTM – E 1527-21 minimum search distances. Please refer to the EDR search report in Appendix C for federal environmental record sources reviewed.

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

Based on the lack of violations or releases documented at the property, this facility does not represent a Recognized Environmental Condition to the subject property.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was “In Compliance”. No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

Based on the lack of violations or releases documented at the property, the distance of the facility from the subject property, and the regulatory compliance, this facility does not represent a Recognized Environmental Condition to the subject property.

No other state and/or tribal environmental records were determined to represent an

environmental concern to the subject property, based on their distance, regulatory compliance status, and/or location cross- or down-gradient with respect to groundwater flow direction. Please refer to the EDR search report in Appendix C for state/tribal environmental record sources reviewed.

No additional environmental records of concern were reported for the property. Please refer to the EDR search report in Appendix C for additional environmental record sources reviewed.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

Based on the application of Tier 1 of the VES, it is concluded that a Vapor Encroachment Condition (VEC) does not exist.

Except for any limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM – E 1527-21.

Thomson Environmental Consulting, LLC, has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM – E 1527-21 of the property identified as the Alachua Property. Any exceptions to, or deletions from, this practice are described in Section 11 of this report.

The results of this assessment have revealed **no** recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** controlled recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** significant data gaps associated with the property:

No additional assessment is recommended as a result of this assessment.

2.0 INTRODUCTION

Alachua Outparcel, LLC engaged Thomson Environmental Consulting, LLC (THOMSON) to conduct a Phase I Environmental Site Assessment (ESA) of the property identified as the Alachua Property in Alachua, Florida, subsequently referred to in this report as "the subject property". The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida.

This assessment was prepared using the standard of care articulated in the American Society of Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM – E 1527-21) and the U.S. Environmental Protection Agency's (USEPA) Standards and Practices for All Appropriate Inquiries (AAI) contained in Protection of the Environment, Title 40, Chapter 1, Part 312, Congressional Federal Record (40 CFR Part 312).

2.1 Purpose

The purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the standard of care articulated in ASTM – E 1527-21, *recognized environmental conditions* (RECs) in connection with the property. A REC is defined as:

> The presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or material threat of a release of any hazardous substance or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

ASTM – E 1527-21 constitutes AAI for the purpose of Landowner Liability Protection (LLP), under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This report was prepared to qualify the User for a LLP to CERCLA liability.

2.2 Scope of Services

The scope of work for this assessment utilizes the standard of care articulated in ASTM – E 1527-21 and the USEPA's Standards and Practices for AAI contained in 40 CFR Part 312. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying RECs.

The scope of ASTM – E 1527-21 is not intended to provide a universal analysis of potential environmental risks and hazards. This assessment included no analysis of non-standard scope environmental risks and hazards unless otherwise listed above and/or detailed in Section 12.0. Analysis of other non-standard scope issues by THOMSON would require additional contractual arrangements.

2.3 Significant Assumptions

THOMSON has made certain assumptions in preparing the scope of this Phase I ESA:

- Data gathered from public information sources (e.g., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases and no intentional concealment of environmental conditions or releases has occurred.
- Interview information is directly reported as gathered by the assessor and is limited by the accuracy of the interviewee's recollection and experience.
- Published geologic information and site observations made by the environmental professional are used to estimate likely contaminant migration pathways in the subsurface. These estimates by the environmental professional are limited in accuracy and are generally cross-referenced with existing information about similar sites and environmental releases in the area.
- Regulatory information is often limited to sites identified after the late-1980s because reliable records were not kept by regulatory agencies prior to that time frame.

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all [potential] contaminants or all conditions above and below ground.

2.4 Limitations and Exceptions

The report has been prepared utilizing the standard of care articulated in ASTM – E 1527-21 and the USEPA's Standards and Practices for AAI contained in 40 CFR Part 312 and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report.

The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. Should such an event occur, Thomson Environmental Consulting, LLC, must be notified in order that we may determine if modifications to our conclusions are necessary (within 180 days of report production).

The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition.

The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past owners with applicable local, state, and federal government laws and regulations was not included in our contract for services.

Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

2.5 Special Terms and Conditions

There were no special terms or contractual conditions for this assessment.

2.6 User Reliance

This report may be distributed and relied upon by Alachua Outparcel, LLC, or successors and assigns of the aforementioned. THOMSON is not responsible for the conclusions, opinions, or recommendations of others. Reliance on the information and conclusions in this report by any other person or entity is not authorized without the express written consent of Thomson Environmental Consulting, LLC. Use and reliance of this report more than 180 days after the production date (as detailed in ASTM – E 1527-21, Sections 4.6 and 4.8) would require certain items to be updated to be considered valid. This ESA is not a statement of suitability of the property for any specific use or purpose.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida. One parcel is addressed at 16313 NW US Highway 441 while the other is not addressed, and the parcels are identified by the Alachua County Property Appraiser as Parcel Identification Nos. 03044-002-000 and 03044-001-002, respectively. Property ownership of the first parcel was identified as Browning & Browning Trustees & Morris, while the second parcel is owned by Santa Fe Hils Church of Christ.

Property record cards (obtained electronically from the Alachua County Property Appraiser's website) including full legal descriptions of the subject property parcels are provided in Appendix D.

3.2 Site and Vicinity General Characteristics

The property is in a moderately developed area of commercial and institutional development just west of the I-75 corridor.

3.3 Current Use of the Property

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.

3.4 Structures, Roads, Other Improvements on the Property

On the day of the site visit, the western parcel of the property was developed with a single-story church that according to property appraiser records was originally constructed circa 1978 (but was visible on the property in aerials prior to that time). The structure measured 2,511 square feet and was constructed of concrete block. A 98 square foot canopy was attached to the main structure that was constructed circa 1995. The church was serviced by a potable water well (contained within a small wellhouse) and septic tank.

3.5 Current Uses of Adjoining Properties

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the

intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

4.0 USER PROVIDED INFORMATION

A "User" is defined by ASTM – E 1527-21 as the party seeking to use the results of a Phase I ESA and may include a potential purchaser of land in the project area, a potential tenant of the project area, an owner of land in the project area, a lender, or a project area manager. A User Questionnaire was completed by Mr. Zach Pinel of Alachua Outparcel, LLC and returned to Thomson dated March 4, 2025.

4.1 Title Records and Environmental Liens or Activity and Use Limitations

Reasonably ascertainable recorded land title records and lien records that are filed under federal, tribal, state, or local law were to be reviewed by the User to identify Environmental Liens or Activity and Use Limitations (AULs), if any, that are currently recorded against the property. Environmental Liens and AULs that are imposed by judicial authorities may be recorded or filed in judicial records, and, where applicable, such records should be reviewed. Any Environmental Liens or AULs so identified were to be reported to the Environmental Professional (EP). Unless added by a change in the scope of work, this practice does not impose on the EP the responsibility to undertake a review of recorded land title records and judicial records for Environmental Liens or AULs. The user was to either (1) engage a title company or title professional to undertake a review of reasonably ascertainable recorded land title records and lien records for Environmental Liens or AULs currently recorded against or relating to the property, or (2) negotiate such an engagement of a title company or title professional as an addition to the scope of work to be performed by the EP.

The User responded that they had obtained a title search, but did not provide THOMSON with the results.

4.2 Specialized User Knowledge

If the User was aware of any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate any information based on such specialized knowledge or experience to the EP.

The User indicated he had no specialized knowledge or experience related to the property or nearby properties.

4.3 Commonly Known or Reasonably Ascertainable Information

If the User was aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate such information to the EP.

The User indicated that the past uses of the property included one vacant parcel and one occupied by a church.

4.4 Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the User was to consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User was to try to identify an explanation for a lower price which does not reasonably reflect fair market value if the property were not contaminated and make a written record of such explanation. This does not require that a real estate appraisal be obtained in order to ascertain fair market value of the property.

The User indicated that the purchase price being paid for this property reasonably reflects the fair market value of the property or whether they are aware of any reduction in value that has occurred for potential environmental reasons.

4.5 Owner, Property Manager and Occupant Information

The User did not indicate the current owner, property manager, or occupant information.

4.6 Reason for Performing Phase I ESA

ASTM – E 1527-21 states that the User shall make known to the EP the reason why the User is requesting the Phase I ESA. If the User does not identify the purpose of the Phase I ESA, the EP is to assume the purpose is to qualify for a Landowner Liability Protection (LLP) to CERCLA liability and state this in the report (see Section 2.1).

By not indicating another reason, it is assumed that the Phase 1 ESA was requested to qualify for a LLP to CERCLA liability and to satisfy the conditions of the lending institution.

4.7 Other

The User did not provide any other information that was utilized during the course of this assessment.

5.0 RECORDS REVIEW

The purpose of the records review was to obtain and review records that will help identify recognized environmental concerns in connection with the property.

Some records reviewed pertain not only to the property, but also to properties within an additional approximate minimum search distance in order to help assess the potential of environmental conditions resulting from migrating hazardous substances or petroleum products. Unless stated otherwise the approximate minimum search distances used below were as specified in the ASTM – E 1527-21.

5.1 Standard Environmental Records

A standard environmental record (SER) search of available federal and state environmental record databases was obtained from Environmental Data Resources, Inc. (EDR). A copy of this search is provided as Appendix C.

ASTM – E 1527-21 defines the approximate minimum search distances from the property to a facility located in a standard environmental record source (i.e. database) as follows:

Standard Environmental Record Sources	Approximate Minimum Search Distance (miles)
Federal	
NPL Site List	1.0
Delisted NPL Site List	0.5
CERCLIS List	0.5
CERCLIS NFRAP List	0.5
RCRA CORRACTS List	1.0
RCRA non-CORRACTS TSD List	0.5
RCRA Generators List	*Property* and *Adjoining Properties*
Institutional Control / Engineering Controls Registries	*Property* only
ERNS List	*Property* only
State (and Tribal)	
NPL (equivalent)	1.0
CERCLIS (equivalent)	0.5
Landfill and/or Solid Waste Disposal Site List	0.5
Leaking Storage Tank List	0.5
Registered Storage Tank List	*Property* and *Adjoining Properties*
Institutional Control / Engineering Controls Registries	*Property* only
Voluntary Cleanup Sites	0.5
Brownfield Sites	0.5

Due to discrepancies in the location of some facilities in the databases arising from incorrect or incomplete addresses, it is possible that some facilities may be listed as “orphan sites”, which are unmapped. No unmapped facilities were observed to be within the ASTM – E 1527-21 minimum search distance of the property.

A review of the regulatory information from this database search for possible recognized environmental conditions (RECs) within the ASTM – E 1527-21 approximate minimum search distance is provided in the Federal and State sections below. Note that the review of the regulatory records contained in the standard environmental records search takes into account the following factors:

- Not all facilities reported within the relevant EDR minimum search radii fall within the relevant ASTM – E 1527-21 minimum search distances.
- Facilities are evaluated for their potential impact on the property, and therefore documented soil and groundwater contamination at facilities that are down-gradient of the property (with respect to groundwater flow) are usually not considered RECs. Only if a contaminated facility is near the property or there is indeterminate local groundwater flow direction would a facility require more detailed inspection.
- With regard to off-site, documented contaminated facilities, the following criteria are primary considerations in determining the potential for impact to the property: facility status (active vs. closed); the identification of a Responsible Party (RP); inclusion of the facility in a government-funded cleanup program; results of onsite analytical sampling, and/or completion of remedial activities and/or monitoring sufficient to receive a No Further Action (NFA) or Site Rehabilitation Completion Order (SRCO), or equivalent, from the regulating agency.
- While the distance of a contaminated facility from the property is a consideration in evaluating its potential for being a REC, distance alone is not sufficient to determine whether or not it constitutes a REC.

5.1.1 Federal Environmental Records

No federal environmental records of concern were reported within the ASTM – E 1527-21 minimum search distances. Please refer to the EDR search report in Appendix C for federal environmental record sources reviewed.

5.1.2 State (and Tribal) Environmental Records

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was "In Compliance". No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

No other state and/or tribal environmental records were determined to represent an environmental concern to the subject property, based on their distance, regulatory compliance status, and/or location cross- or down-gradient with respect to groundwater flow direction. Please refer to the EDR search report in Appendix C for state/tribal environmental record sources reviewed.

5.2 Additional Environmental Records

Additional Environmental Records included those records that are proprietary to EDR. These included Historical Auto Stations and Cleaners. These records are based on the names of the business at specific addresses and are not based on the known presence or documented discharge of any specific constituent. These records are used by THOMSON as indicators to cross-reference actual regulatory database records during the assessment.

No additional environmental records of concern were reported for the property. Please refer to the EDR search report in Appendix C for additional environmental record sources reviewed.

5.3 Physical Setting Source(s)

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1, Appendix A.

5.4 Historical Use Information on the Property

The objective of consulting historical sources is to develop a history of the previous uses of the

property in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property.

5.4.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were prepared historically for many urban areas in the past and detail locations of potential environmental concerns, particularly as they related to potential fire-fighting concerns (such as fuel storage tanks). Sanborn Fire Insurance Maps were typically not produced for locations outside of urban areas.

A Certified Sanborn Map Report was obtained from Environmental Data Resources dated March 4, 2025. The report documented that there were no available Sanborn Map Reports for the area of the property.

A copy of the "Unmapped Property" Certified Sanborn Map Report is included in Appendix D.

5.4.2 Aerial Photography

Aerial photography is used to roughly determine the presence or absence of structures and discernible uses of the property over time. Aerial photographs from the following years were obtained from various sources and reviewed for this assessment: 1937, 1961, 1964, 1971, 1982, 1994, 2004, 2008, 2014, and 2023.

In the 1937 aerial photograph, the subject property is visible as undeveloped with no structures or discernible visible use.

In the 1961 aerial photograph, no significant changes are visible to the subject property, though perimeter vegetation growth may indicate perimeter fencelines.

In the 1964 aerial photograph, the western parcel of the property is visible with a structure on the southern portion of the property. The eastern parcel has no significant changes are visible.

In the 1971 through 1994 aerial photographs, no significant changes are visible to the subject property.

In the 2004 aerial photograph, a small canopy is visible added on to the northwest corner of the structure.

In the 2008 and 2014 aerial photographs, no significant changes are visible to the subject property.

In the 2023 aerial photograph, there is a small structure (shed) visible in the central portion of the western parcel.

Copies of the historical aerials reviewed for this assessment are included in Appendix D.

5.4.3 Other Historical Sources

City Directories contain the names of the occupants of properties, by address, over the years. A search of City Directories (The EDR-City Directory Abstract) was obtained from Environmental Data Resources dated March 4, 2025. City Directories were searched from 1992 through 2020.

The abstract identified the following listings for the subject property parcel addressed at 16313 NW US Highway 441:

2017 – Church of Christ Santa Fe Hills
2014 – Church of Christ Santa Fe Hills
2010 – Church of Christ Santa Fe Hills

No listings at the property address indicated the potential for an environmental concern (e.g., gas stations, automotive repair shops).

Historical topographic maps were reviewed on the internet at NETRonline's website (www.historicaerials.com) for the following years: 1963, 1976, 1991, 1993, 2012, 2015, 2018, and 2021.

In the 1963 topographic map, the subject property is not depicted with any structures.

In the 1976 and 1991 topographic maps, no significant changes are depicted to the subject property.

In the 1993 topographic map, the subject property is visible with a structure.

In the 2012 topographic map, the property is depicted in an area where individual building footprints are not depicted.

In the 2015 through 2021 topographic maps, no significant changes are depicted to the subject property.

The Alachua County Property Appraiser's website was used to obtain the property record cards. Property record cards (obtained electronically from the Alachua County Property Appraiser's website) including full legal descriptions of the subject property parcels are provided in Appendix D.

No other historical sources were utilized in determining historical use information on the subject property and were not deemed necessary to evaluate the impact of uses with regard to recognized environmental conditions for the property.

5.5 Historical Use Information on Adjoining Properties

The objective of consulting historical sources is to develop a history of the previous uses of the surrounding properties in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property.

5.5.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were prepared historically for many urban areas in the past and detail locations of potential environmental concerns, particularly as they related to potential fire-fighting concerns (such as fuel storage tanks). Sanborn Fire Insurance Maps were typically not produced for locations outside of urban areas.

A Certified Sanborn Map Report was obtained from Environmental Data Resources dated March 4, 2025. The report documented that there were no available Sanborn Map Reports for the adjoining properties.

A copy of the "Unmapped Property" Certified Sanborn Map Report is included in Appendix D.

5.5.2 Aerial Photography

Aerial photography is used to roughly determine the presence or absence of structures and discernible uses of the adjoining properties over time. Aerial photographs from the following years were obtained from various sources and reviewed for this assessment: 1937, 1961, 1964, 1971, 1982, 1994, 2004, 2008, 2014, and 2023.

In the 1937 aerial photograph, all adjoining properties are visible as undeveloped. County Road 235A is visible to the east.

In the 1961 aerial photograph, an east adjoining property is visible as developed with a residential structure, and the west adjoining property is visible as cleared for potential agriculture or grazing land. No significant changes are visible to the remaining adjoining properties.

In the 1964 aerial photograph, no significant changes are visible to the adjoining properties.

In the 1971 aerial photograph, the north adjoining properties are visible as developed with single-family residences. No significant changes are visible to the remaining adjoining properties.

In the 1982 aerial photograph, two additional single-family residences are visible on east adjoining properties, and the high school athletic field is visible on the other east adjoining property. The west adjoining property appears prepped for row crops. NW US Highway 441 is visible as improved.

In the 1994 aerial photograph, no significant changes are visible to the adjoining properties.

In the 2004 aerial photograph, a west adjoining property is visible as developed with a commercial structure. No significant changes are visible to the remaining adjoining properties.

In the 2008 through 2023 aerial photographs, no significant changes are visible to the adjoining properties.

Copies of the historical aerials reviewed for this assessment are included in Appendix D.

5.5.3 Other Historical Sources

City Directories contain the names of the occupants of properties, by address, over the years. A search of City Directories (The EDR-City Directory Abstract) was obtained from Environmental Data Resources dated March 4, 2025. City Directories were searched from 1992 through 2020.

The abstract identified the following listings for adjoining properties:

West Adjoining Property (16407 NW 174th Drive)
2020 – Alachua Title Service, Flowers Surveying-Mapping, Haskins Demolition LLC, Horizon Realty Intl Inc., Horizon Realty of Alachua Inc., Suwannee River Area Health Ed, Tanner Construction Group
2017 – Alachua Title Services, FL Citrus Business & Industries Fund, Horizon Realty of Alachua Inc., Quality Vision International, Surveying & Mapping Inc Flowers
2014 – Alachua Title Services, FL Citrus Business & Industries Fund, Horizon Realty of Alachua Inc., Sol Valley Farms
2010 – Alachua Title Svc, Hallmark Mortgage Svc, Horizon Realty, Suwannee River Area Health Ed
2005 – Alachua Title Services, Horizon Realty of Alachua Inc., Turner Stockton, Stockton T. Wolfe

East Adjoining Property (16213 NW US Highway 441)
2010 – Santa Fe High School
2005 – School Board Alachua County FL
2000 – Alachua County of Schools Public, Santa Fe High School

No listings at the adjoining property addresses indicated the potential for environmental concern (e.g., gas stations, automotive repair shops, dry cleaners).

Historical topographic maps were reviewed on the internet at NETRonline's website (www.historicaerials.com) for the following years: 1963, 1976, 1991, 1993, 2012, 2015, 2018,

and 2021.

In the 1963 topographic map, a south adjoining property is depicted with a structure. No other adjoining properties are depicted as developed with structures.

In the 1976 and 1991 topographic maps, no significant changes are depicted to the adjoining properties.

In the 1993 topographic map, the east adjoining properties and north adjoining properties are visible as developed with structures.

In the 2012 topographic map, the adjoining properties are depicted in an area where individual building footprints are not depicted.

In the 2015 through 2021 topographic maps, no significant changes are depicted to the adjoining properties.

No other historical sources were utilized in determining historical use information on adjoining properties and were not deemed necessary to evaluate the impact of adjoining uses with regard to recognized environmental conditions for the property.

6.0 SITE RECONNAISSANCE

The purpose of the site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the property.

6.1 Methodology and Limiting Conditions

The site reconnaissance was performed by Joel Thomson of Thomson Environmental Consulting, LLC, on March 11, 2025. The weather during the site visits was clear to partly cloudy and approximately 75 degrees Fahrenheit.

During the site reconnaissance, pedestrian transects through the accessible portions of the entire exterior of the site were performed. The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition. The entire property, as well as adjoining properties, was visually evaluated for any recognized environmental conditions (RECs).

6.2 General Site Setting

6.2.1 Current Use of the Property

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.

6.2.2 Past Use(s) of the Property

The property appears to have been developed with a church sometime between 1961 and 1964, which was observed on the day of the site reconnaissance. No other uses were documented.

6.2.3 Current Use(s) of Adjoining Properties

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

6.2.4 Past Use(s) of Adjoining Properties

Adjoining properties have been developed with single-family residences, a high school, retail and office uses, and (recently) a gas station.

6.2.5 Current or Past Uses in the Surrounding Area

The surrounding area has been developed with primarily residential and institutional uses since before the 1980s, with retail and commercial uses since the 2000s.

6.2.6 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

The regional geology of northeast Florida includes units of Eocene age and younger limestone and dolomite. These units are, in ascending order: the Oldsmar Limestone; the Lake City Limestone; the Avon Park Limestone; and the Ocala Group. The Ocala Group is comprised of the Inglis, Williston, and Crystal River Formations. Collectively, the Oldsmar, Lake City, and Avon Park Limestones with the Ocala Group comprise the geology of the Floridian Aquifer.

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1, Appendix A.

6.2.7 General Description of Structures

On the day of the site visit, the western parcel of the property was developed with a single-story church that according to property appraiser records was originally constructed circa 1978 (but was visible on the property in aerials prior to that time). The structure measured 2,511 square feet and was constructed of concrete block. A 98 square foot canopy was attached to the main structure that was constructed circa 1995. The church was serviced by a potable water well (contained within a small wellhouse) and septic tank.

6.2.8 Roads

No named roads were located on the property.

6.2.9 Potable Water Supply

Potable water was supplied to the property by an onsite groundwater well.

6.2.10 Sewage Disposal System

The property was serviced by an onsite sewage treatment and disposal system (OSTDS)

consisting of a septic tank and associated drainfield.

6.3 Interior and Exterior Observations

6.3.1 Hazardous Substances and Petroleum Products in Connection with Identified Uses

No hazardous substances or petroleum products in connection with identified uses were observed or documented on the property.

6.3.2 Storage Tanks

Determining the presence of Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs) is considered essential in assessing potential contamination sources. Visual inspection and the review of tank registration records are used to determine the possible existence of past and present storage tanks in the area of the property. It must be noted, however, that the absence of certain site conditions or lack of records may restrict or prevent the determination of the number and contents of storage tanks on the property.

No aboveground or underground storage tanks were documented, indicated, or observed on the property.

6.3.3 Odors

No strong, pungent, or noxious odors were observed.

6.3.4 Pools of Liquid

No standing pools of liquid were observed on the property.

6.3.5 Drums

No drums of materials were observed.

6.3.6 Hazardous Substances and Petroleum Products Containers

No hazardous substances or petroleum products containers were observed.

6.3.7 Unidentified Substance Containers

No open or damaged containers containing unidentified substances suspected of being hazardous substances or petroleum products were observed on the property.

6.3.8 PCBs

The past use of PCBs in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors was common. PCBs in electrical equipment are controlled by United States EPA

regulation 40 CFR, Part 761. According to this regulation there are three categories for classifying electrical equipment; less than 50 ppm of PCBs is considered “Non-PCB”; between 50 and 500 ppm is considered “PCB-Contaminated”; and greater than 500 ppm is considered “PCB”.

A pole-mounted electrical transformer was observed on the southeast property corner, in the right-of-way of the adjoining roadway corridors. It appeared to be in good working condition with no visible signs of leaking or staining.

No other suspect-containing PCB equipment, such as hydraulic lifts, were observed.

6.4 Interior Observations

6.4.1 Heating/Cooling

As observed from the exterior of the structure, heating/cooling was provided by a split-system, with interior air handler and exterior condensing unit, powered by electricity, as well as a window-mounted air conditioning unit powered by electricity.

6.4.2 Stains or Corrosion

The interior of the structure was not visibly observed during the site reconnaissance.

6.4.3 Drains and Sumps

The interior of the structure was not visibly observed during the site reconnaissance.

6.5 Exterior Observations

6.5.1 Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were observed on the property.

6.5.2 Stained Soil or Pavement

No stained soil or pavement was observed on the property.

6.5.3 Stressed Vegetation

No stressed vegetation was observed on the property.

6.5.4 Solid Waste

Solid waste was not currently generated at the property or observed on the day of the site reconnaissance.

6.5.5 Waste Water

There was no waste water or other liquids generated or being discharged into a drain, ditch, underground injection system, or stream on or adjacent to the property.

6.5.6 Wells

A groundwater wells for potable water was observed on the property.

6.5.7 Septic Systems

The property was serviced by an onsite sewage treatment and disposal system (OSTDS) consisting of a septic tank and associated drainfield.

7.0 INTERVIEWS

7.1 Interviews with Past and Present Owners, Occupants, and/or Key Site Manager

An interview questionnaire was completed by the current property owner of the western parcel, Mr. Robert M. Matheny, President of Santa Fe Hills Church of Christ, was completed and returned to Thomson dated March 20, 2025.

Mr. Matheny noted that the onsite business was a “Church Building” and that the past uses were known and were “Always used as a place of worship”. He did not know of any specific chemicals that are present or once were present at the property. He did not know of any spills or other chemical releases that have taken place at the property. He did not know of any environmental cleanups that have taken place at the property. He did not have any other knowledge or experience with the property that may be pertinent to the environmental professional.

Additionally, Ms. Gia Arvin of Matchmaker Realty responded by email on March 23, 2025, that a “church contact” noted that there has never been an onsite heating oil tank, and that there has never been a buried propane tank. She noted that there is a septic tank.

The interview questionnaire and email correspondence are included in Appendix D.

7.2 Interviews with State and/or Local Government Officials

THOMSON interviewed administration at the Florida Department of Environmental Protection’s (FDEP) Central District. Thomson was directed to the FDEP’s online document system (OCULUS) for information on the subject property and documented facilities in the relevant vicinity.

THOMSON requested information from Alachua Fire and Rescue regarding potential responses to the property (or immediate vicinity) related to hazardous substances or petroleum products. As of the date of publication, no response had been received from the Alachua Fire Rescue. If a response is received at a later date that has a material effect on the conclusions of this report, an addendum will be issued.

THOMSON searched the City of Alachua’s permitting website (https://www6.citizenserve.com/Portal/PortalController) for existing permits for the property. There were four entries for both parcels, generally related to roofing, and none of the permits documented by the City of Alachua were indicative of a potential environmental concern.

A permit summary as obtained from the City of Alachua’s permitting website is contained in Appendix D.

8.0 VAPOR ENCROACHMENT SCREENING

A Vapor Encroachment Screening (VES) was performed for the property in general accordance with ASTM E2600-22.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

9.0 FINDINGS

The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida. One parcel is addressed at 16313 NW US Highway 441 while the other is not addressed, and the parcels are identified by the Alachua County Property Appraiser as Parcel Identification Nos. 03044-002-000 and 03044-001-002, respectively. Property ownership of the first parcel was identified as Browning & Browning Trustees & Morris, while the second parcel is owned by Santa Fe Hils Church of Christ.

The property appears to have been developed with a church sometime between 1961 and 1964, which was observed on the day of the site reconnaissance. No other uses were documented.

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.
The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition.

Adjoining properties have been developed with single-family residences, a high school, retail and office uses, and (recently) a gas station.

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1, Appendix A.

A standard environmental records search of available federal and state (and tribal) environmental record databases was obtained from Environmental Data Resources, Inc. (EDR).

No federal environmental records of concern were reported within the ASTM – E 1527-21 minimum search distances. Please refer to the EDR search report in Appendix C for federal environmental record sources reviewed.

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was “In Compliance”. No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

No other state and/or tribal environmental records were determined to represent an environmental concern to the subject property, based on their distance, regulatory compliance status, and/or location cross- or down-gradient with respect to groundwater flow direction. Please refer to the EDR search report in Appendix C for state/tribal environmental record sources reviewed.

No additional environmental records of concern were reported for the property. Please refer to the EDR search report in Appendix C for additional environmental record sources reviewed.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

Except for any limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM – E 1527-21.

10.0 OPINION

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

OPINION – Based on the lack of violations or releases documented at the property, this facility does not represent a Recognized Environmental Condition to the subject property.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was “In Compliance”. No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

OPINION – Based on the lack of violations or releases documented at the property, the distance of the facility from the subject property, and the regulatory compliance, this facility does not represent a Recognized Environmental Condition to the subject property.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

OPINION – Based on the application of Tier 1 of the VES, it is concluded that a Vapor Encroachment Condition (VEC) does not exist.

The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition.

OPINION – Based on the observed use of the onsite structure, documented resources, and interviews with the property owner and church members, this limiting condition was not considered to affect the ability of the environmental professional to assess the property for environmental concerns.

11.0 CONCLUSION

Thomson Environmental Consulting, LLC, has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM – E 1527-21 of the property identified as the Alachua Property. Any exceptions to, or deletions from, this practice are described in Section 11 of this report.

The results of this assessment have revealed **no** recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** controlled recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** significant data gaps associated with the property:

No additional assessment is recommended as a result of this assessment.

12.0 DEVIATIONS

Except for any limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM – E 1527-21 and the EPA's Standards and Practices for All Appropriate Inquiries (AAI) contained in 40 CFR Part 312.

14.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Joel A. Thomson
Environmental Professional / President of Thomson Environmental Consulting, LLC

15.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

The qualifications of the Environmental Professional conducting this assessment are provided in Appendix F.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

EXECUTIVE SUMMARY

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.
Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in ***bold italics*** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

STANDARD ENVIRONMENTAL RECORDS

Lists of state and tribal landfills and solid waste disposal facilities

SWF/LF: The Solid Waste Facilities/Landfill Sites records typically contain an inventory of solid waste disposal facilities or landfills in a particular state. The data come from the Department of Environmental Protection's Facility Directory (Solid Waste Facilities).

A review of the SWF/LF list, as provided by EDR, has revealed that there is 1 SWF/LF site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ALACHUA COUNTY NW	15404 CR 235A	S 1/4 - 1/2 (0.451 mi.)	10	25
Database: SWF/LF, Date of Government Version: 10/04/2024				
Facility-Site Id: 29653				
Class Status: CLOSED, IN LTC, WITH GW MONITORING (Y)				
Class Status: PRE-AUTHORIZED (B)				

Lists of state and tribal registered storage tanks

UST: The Underground Storage Tank database contains registered USTs. Shortly after the September 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the UST list, as provided by EDR, has revealed that there is 1 UST site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ALACHUA CNTY SCHOOL	***16805 NW CR 235-A***	***NNE 0 - 1/8 (0.117 mi.)***	***A2***	***8***
Database: UST, Date of Government Version: 11/11/2024				
Tank Status: A-Closed In Place				
Tank Status: B-Removed from Site				
Tank Status: U-In Service				
Facility-Site Id: 8518896				
Facility Status: OPEN				

AST: Shortly after the Sept 11 event, the DEP was instructed to remove the detail about some of the storage tank facilities in the state from their reports. Federal-owned facilities and bulk storage facilities are included in that set.

A review of the AST list, as provided by EDR, has revealed that there is 1 AST site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ALACHUA CNTY SCHOOL	***16805 NW CR 235-A***	***NNE 0 - 1/8 (0.117 mi.)***	***A2***	***8***

Database: AST, Date of Government Version: 11/11/2024
Facility-Site Id: 8518896
Facility Status: OPEN
Facility Status: OPEN

ADDITIONAL ENVIRONMENTAL RECORDS

Other Ascertainable Records

UST FINDER: EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

A review of the UST FINDER list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER site within approximately 0.25 miles of the target property.

Equal/Higher Elevation	Address	Direction / Distance	Map ID	Page
ALACHUA CNTY SCHOOL	16805 NW CR 235-A	NNE 0 - 1/8 (0.117 mi.)	A3	19

UST FINDER RELEASE: US EPA's UST Finder data is a national composite of leaking underground storage tanks. This data contains information about, and locations of, leaking underground storage tanks. Data was collected from state sources and standardized into a national profile by EPA's Office of Underground Storage Tanks, Office of Research and Development, and the Association of State and Territorial Solid Waste Management Officials.

A review of the UST FINDER RELEASE list, as provided by EDR, and dated 06/08/2023 has revealed that there is 1 UST FINDER RELEASE site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
RACETRAC #413	***16300 MARTIN LUTHER***	***ESE 1/4 - 1/2 (0.333 mi.)***	***9***	***22***

DWM CONTAM: A listing of active or known sites. The listing includes sites that need cleanup but are not actively being working on because the agency currently does not have funding (primarily petroleum and drycleaning).

A review of the DWM CONTAM list, as provided by EDR, and dated 07/14/2023 has revealed that there is

1 DWM CONTAM site within approximately 0.5 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page
ALACHUA COUNTY NORTH	***ALACHUA COUNTY BCC***	***SSE 1/4 - 1/2 (0.484 mi.)***	***11***	***26***
Program Site Id: ERIC_10960				

ALACHUA CO. FL: List of all regulated facilities in Alachua County.

A review of the ALACHUA CO. FL list, as provided by EDR, and dated 09/10/2024 has revealed that there are 5 ALACHUA CO. FL sites within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

Close Date: 06/01/2008				
ACEPD Number: 3443				

HAZ WASTE: The records in this data set are generated by county SQG Assessment, Notification and Verification Programs on-site surveys (see 403.7225 FS). The waste records are wastes observed during county inspections. Even though this state program targets SQGs and VSQGs for outreach, some counties choose to additionally look at their LQGs.

A review of the HAZ WASTE list, as provided by EDR, and dated 11/11/2024 has revealed that there is 1 HAZ WASTE site within approximately 0.25 miles of the target property.

Lower Elevation	Address	Direction / Distance	Map ID	Page

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Lists of Federal NPL (Superfund) sites

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 12/19/2024

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Lists of Federal Delisted NPL sites

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Lists of Federal CERCLA sites with NFRAP

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Lists of Federal RCRA TSD facilities

RCRA-TSDF: RCRA - Treatment, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

Lists of Federal RCRA generators

RCRA-LQG: RCRA - Large Quantity Generators

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Large quantity generators (LQGs) generate over 1,000 kilograms (kg) of hazardous waste, or over 1 kg of acutely hazardous waste per month.

State and tribal institutional control / engineering control registries

ENG CONTROLS: Institutional Controls Registry

The registry is a database of all contaminated sites in the state of Florida which are subject to engineering controls. Engineering Controls encompass a variety of engineered remedies to contain and/or reduce contamination, and/or physical barriers intended to limit access to property. ECs include fences, signs, guards, landfill caps, provision of potable water, slurry walls, sheet pile (vertical caps), pumping and treatment of groundwater, monitoring wells, and vapor extraction systems.

Lists of state and tribal brownfield sites

BSRA: Brownfield Site Rehabilitation Agreements Listing

The BSRA provides DEP and the public assurance that site rehabilitation will be conducted in accordance with Florida Statutes and DEP's Contaminated Site Cleanup Criteria rule. In addition, the BSRA provides limited liability protection for the voluntary responsible party. The BSRA contains various commitments by the voluntary responsible party, including milestones for completion of site rehabilitation tasks and submittal of technical reports and plans. It also contains a commitment by DEP to review technical reports according to an agreed upon schedule. Only those brownfield sites with an executed BSRA are eligible to apply for a voluntary cleanup tax credit incentive pursuant to Section 376.30781, Florida Statutes.

BROWNFIELDS AREAS: Brownfields Areas Database

A "brownfield area" means a contiguous area of one or more brownfield sites, some of which may not be contaminated, that has been designated as such by a local government resolution. Such areas may include all or portions of community redevelopment areas, enterprise zones, empowerment zones, other such designated economically deprived communities and areas, and Environmental Protection Agency (EPA) designated brownfield pilot projects. This layer provides a polygon representation of the boundaries of these designated Brownfield Areas in Florida.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites

Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA Watch List

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

PFAS RCRA MANIFEST: PFAS Transfers Identified In the RCRA Database Listing

To work around the lack of PFAS waste codes in the RCRA database, EPA developed the PFAS Transfers dataset by mining e-Manifest records containing at least one of these common PFAS keywords: PFAS, PFOA, PFOS, PERFL, AFFF, GENX, GEN-X (plus the VT waste codes). These keywords were searched for in the following text fields: Manifest handling instructions (MANIFEST_HANDLING_INSTR), Non-hazardous waste description (NON_HAZ_WASTE_DESCRIPTION), DOT printed information (DOT_PRINTED_INFORMATION), Waste line handling instructions (WASTE_LINE_HANDLING_INSTR), Waste residue comments (WASTE_RESIDUE_COMMENTS).

PFAS ATSDR: PFAS Contamination Site Location Listing

PFAS contamination site locations from the Department of Health & Human Services, Center for Disease Control & Prevention. ATSDR is involved at a number of PFAS-related sites, either directly or through assisting state and federal partners. As of now, most sites are related to drinking water contamination connected with PFAS production facilities or fire training areas where aqueous film-forming firefighting foam (AFFF) was regularly used.

PFAS WQP: Ambient Environmental Sampling for PFAS

The Water Quality Portal (WQP) is a part of a modernized repository storing ambient sampling data for all environmental media and tissue samples. A wide range of federal, state, tribal and local governments, academic and non-governmental organizations and individuals submit project details and sampling results to this public repository. The information is commonly used for research and assessments of environmental quality.

PFAS NPDES: Clean Water Act Discharge Monitoring Information

Any discharger of pollutants to waters of the United States from a point source must have a National Pollutant Discharge Elimination System (NPDES) permit. The process for obtaining limits involves the regulated entity (permittee) disclosing releases in a NPDES permit application and the permitting authority (typically the state but sometimes EPA) deciding whether to require monitoring or monitoring with limits. Caveats and Limitations: Less than half of states have required PFAS monitoring for at least one of their permittees and fewer states have established PFAS effluent limits for permittees. New rulemakings have been initiated that may increase the number of facilities monitoring for PFAS in the future.

PFAS ECHO: Facilities in Industries that May Be Handling PFAS Listing

Regulators and the public have expressed interest in knowing which regulated entities may be using PFAS. EPA has developed a dataset from various sources that show which industries may be handling PFAS. Approximately 120,000 facilities subject to federal environmental programs have operated or currently operate in industry sectors with processes that may involve handling and/or release of PFAS.

PFAS ECHO FIRE TRAIN: Facilities in Industries that May Be Handling PFAS Listing

A list of fire training sites was added to the Industry Sectors dataset using a keyword search on the permitted facilitys name to identify sites where fire-fighting foam may have been used in training exercises. Additionally, you may view an example spreadsheet of the subset of fire training facility data, as well as the keywords used in selecting or deselecting a facility for the subset. as well as the keywords used in selecting or deselecting a facility for the subset. These keywords were tested to maximize accuracy in selecting facilities that may use fire-fighting foam in training exercises, however, due to the lack of a required reporting field in the data systems for designating fire training sites, this methodology may not identify all fire training sites or may potentially misidentify them.

PFAS PT 139 AIRPORT: All Certified Part 139 Airports PFAS Information Listing

Since July 1, 2006, all certified part 139 airports are required to have fire-fighting foam onsite that meet military specifications (MIL-F-24385) (14 CFR 139.317). To date, these military specification fire-fighting foams are fluorinated and have been historically used for training and extinguishing. The 2018 FAA Reauthorization Act has a provision stating that no later than October 2021, FAA shall not require the use of fluorinated AFFF. This provision does not prohibit the use of fluorinated AFFF at Part 139 civilian airports; it only prohibits FAA from mandating its use. The Federal Aviation Administration?s document AC 150/5210-6D - Aircraft Fire Extinguishing Agents provides guidance on Aircraft Fire Extinguishing Agents, which includes Aqueous Film Forming Foam (AFFF).

UST FINDER: UST Finder Database

EPA developed UST Finder, a web map application containing a comprehensive, state-sourced national map of underground storage tank (UST) and leaking UST (LUST) data. It provides the attributes and locations of active and closed USTs, UST facilities, and LUST sites from states and from Tribal lands and US territories . UST Finder contains information about proximity of UST facilities and LUST sites to: surface and groundwater public drinking water protection areas; estimated number of private domestic wells and number of people living nearby; and flooding and wildfires.

FL Cattle Dip. Vats: Cattle Dipping Vats

From the 1910's through the 1950's, these vats were filled with an arsenic solution for the control and eradication of the cattle fever tick. Other pesticides, such as DDT, were also widely used. By State law, all cattle, horses, mules, goats, and other susceptible animals were required to be dipped every 14 days. Under certain circumstances, the arsenic and other pesticides remaining at the site may present an environmental or public health hazard.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants
The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

CT MANIFEST: Hazardous Waste Manifest Data
Facility and manifest data. Manifest is a document that lists and tracks hazardous waste from the generator through transporters to a tsd facility.

Date of Government Version: 11/04/2024
Date Data Arrived at EDR: 11/05/2024
Date Made Active in Reports: 01/27/2025

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, and nursing homes - where individuals who are sensitive receptors are likely to be located.

AHA Hospitals:
Source: American Hospital Association, Inc.
Telephone: 312-280-5991
The database includes a listing of hospitals based on the American Hospital Association's annual survey of hospitals.

Medical Centers: Provider of Services Listing
Source: Centers for Medicare & Medicaid Services
Telephone: 410-786-3000
A listing of hospitals with Medicare provider number, produced by Centers of Medicare & Medicaid Services, a federal agency within the U.S. Department of Health and Human Services.

Nursing Homes
Source: National Institutes of Health
Telephone: 301-594-6248
Information on Medicare and Medicaid certified nursing homes in the United States.

Public Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on elementary and secondary public education in the United States. It is a comprehensive, annual, national statistical database of all public elementary and secondary schools and school districts, which contains data that are comparable across all states.

Private Schools
Source: National Center for Education Statistics
Telephone: 202-502-7300
The National Center for Education Statistics' primary database on private school locations in the United States.

GEOCHECK ®- PHYSICAL SETTING SOURCE ADDENDUM

TARGET PROPERTY ADDRESS

ALACHUA PROPERTY
16313 NW US HIGHWAY 441
ALACHUA, FL 32615

TARGET PROPERTY COORDINATES

Latitude (North):	29.805876 - 29° 48' 21.15''
Longitude (West):	82.527667 - 82° 31' 39.60''
Universal Tranverse Mercator:	Zone 17
UTM X (Meters):	352362.2
UTM Y (Meters):	3298074.5
Elevation:	139 ft. above sea level

USGS TOPOGRAPHIC MAP

Target Property Map:	17090184 HIGH SPRINGS, FL
Version Date:	2021

EDR's GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

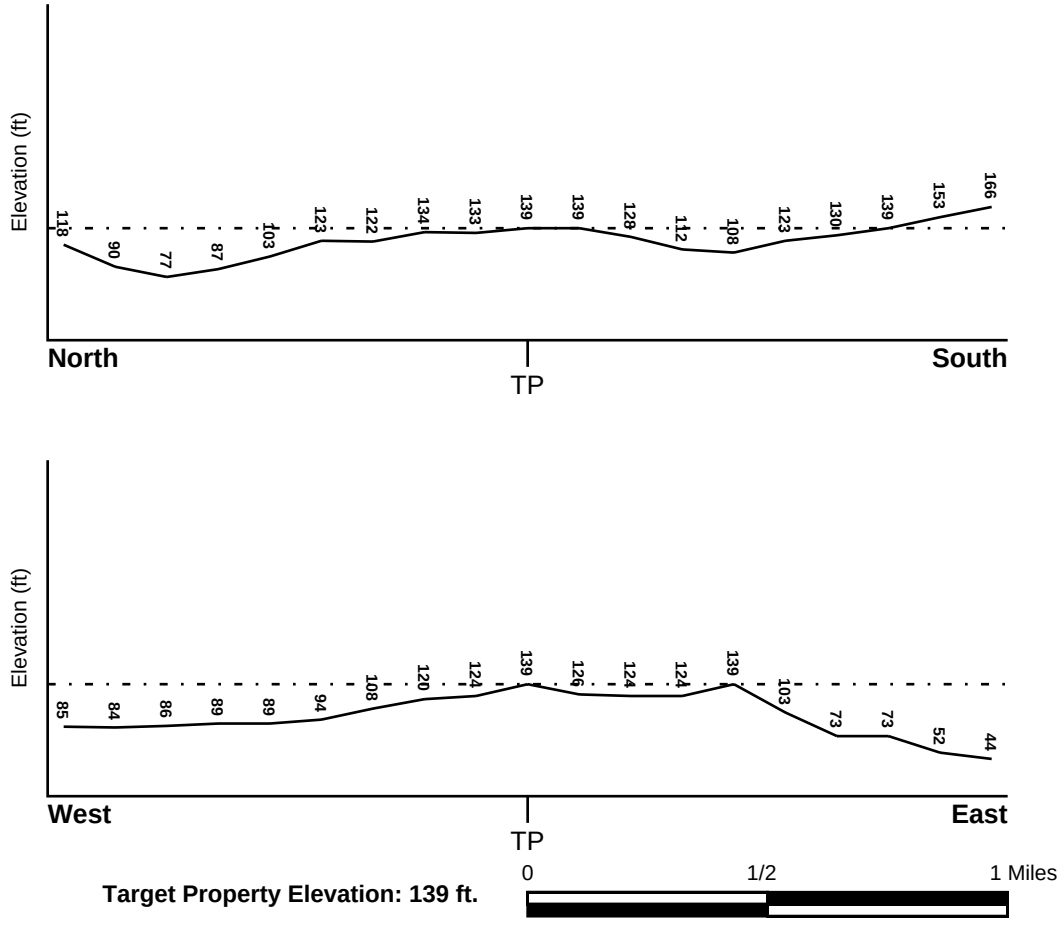
1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).



TOPOGRAPHIC INFORMATION

Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General SW

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES

Target Property Elevation: 139 ft.

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
12001C0120D	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
12001C0110D	FEMA FIRM Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
HIGH SPRINGS	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Site-Specific Hydrogeological Data*:

Search Radius:	1.25 miles
Status:	Not found

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
63	1/2 - 1 Mile ESE	NW
1G	1/2 - 1 Mile ESE	NW

For additional site information, refer to Physical Setting Source Map Findings.

* ©1996 Site−specific hydrogeological data gathered by CERCLIS Alerts, Inc., Bainbridge Island, WA. All rights reserved. All of the information and opinions presented are those of the cited EPA report(s), which were completed under a Comprehensive Environmental Response Compensation and Liability Information System (CERCLIS) investigation.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Fort Meade

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	14 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 42.34	Max: 6 Min: 4.5
2	14 inches	85 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141.14 Min: 42.34	Max: 6 Min: 4.5

Soil Map ID: 2

Soil Component Name: Arredondo

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	7 inches	49 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5
2	0 inches	7 inches	fine sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5
3	49 inches	53 inches	loamy sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5
4	53 inches	85 inches	sandy clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 42.34 Min: 4.23	Max: 6 Min: 4.5

Soil Map ID: 3

Soil Component Name: Arredondo

Soil Surface Texture: fine sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information							
	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	Upper	Lower	Soil Texture Class	AASHTO Group	Unified Soil		
1	0 inches	5 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14.11 Min: 0.42	Max: 6 Min: 4.5
2	5 inches	24 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14.11 Min: 0.42	Max: 6 Min: 4.5
3	24 inches	29 inches	sandy loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14.11 Min: 0.42	Max: 6 Min: 4.5
4	29 inches	75 inches	sandy clay loam	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Clayey sand.	Max: 14.11 Min: 0.42	Max: 6 Min: 4.5

Soil Map ID: 5

Soil Component Name: Millhopper

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Moderately well drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Low

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 145 inches

Soil Map ID: 7

Soil Component Name: Placid

Soil Surface Texture: sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class: Very poorly drained

Hydric Status: All hydric

Corrosion Potential - Uncoated Steel: High

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

TOPOGRAPHIC INFORMATION

USGS 7.5' Digital Elevation Model (DEM)
Source: United States Geologic Survey
EDR acquired the USGS 7.5' Digital Elevation Model in 2002 and updated it in 2006. The 7.5 minute DEM corresponds to the USGS 1:24,000- and 1:25,000-scale topographic quadrangle maps. The DEM provides elevation data with consistent elevation units and projection.

Current USGS 7.5 Minute Topographic Map
Source: U.S. Geological Survey

HYDROLOGIC INFORMATION

Flood Zone Data: This data was obtained from the Federal Emergency Management Agency (FEMA). It depicts 100-year and 500-year flood zones as defined by FEMA. It includes the National Flood Hazard Layer (NFHL) which incorporates Flood Insurance Rate Map (FIRM) data and Q3 data from FEMA in areas not covered by NFHL.
Source: FEMA
Telephone: 877-336-2627
Date of Government Version: 2003, 2015

NWI: National Wetlands Inventory. This data, available in select counties across the country, was obtained by EDR in 2002, 2005, 2010 and 2015 from the U.S. Fish and Wildlife Service.

State Wetlands Data: Wetlands Inventory
Source: Department of Environmental Protection
Telephone: 850-245-8238

HYDROGEOLOGIC INFORMATION

AQUIFLOW^{R} Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

PHYSICAL SETTING SOURCE RECORDS SEARCHED

LOCAL / REGIONAL WATER AGENCY RECORDS

FEDERAL WATER WELLS

PWS: Public Water Systems
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Public Water System data from the Federal Reporting Data System. A PWS is any water system which provides water to at least 25 people for at least 60 days annually. PWSs provide water from wells, rivers and other sources.

PWS ENF: Public Water Systems Violation and Enforcement Data
Source: EPA/Office of Drinking Water
Telephone: 202-564-3750
Violation and Enforcement data for Public Water Systems from the Safe Drinking Water Information System (SDWIS) after August 1995. Prior to August 1995, the data came from the Federal Reporting Data System (FRDS).

USGS Water Wells: USGS National Water Inventory System (NWIS)
This database contains descriptive information on sites where the USGS collects or has collected data on surface water and/or groundwater. The groundwater data includes information on wells, springs, and other sources of groundwater.

Division of Waste Management - Storage Tank Facility Registration Form
Registration Instructions and Codes List

Storage tank registration is available online through the DEP Business Portal in lieu of the paper form:

- *DEP Business Portal can be found:* Online Services Business Portal (ESSA)
- *Instructions on how to navigate the DEP Business Portal can be found on the DEP Registration web page:* Storage Tank Facility Registration

Storage Tank Facility Registration Form

In the first outlined section block, identify the types of information being submitted on the registration form.
[Forms 62-761.900(2) for Underground Storage Tanks (USTs), and 62-762.901(2) for Aboveground Storage Tanks (ASTs). For facilities with both types of tanks, one form may be used].
Check **New Registration** when the **location** is being registered for the first time and no Facility Identification number exists. If submitting a revised Registration form, check all other boxes that apply to designate the type(s) of revisions being submitted.

A. Facility Information

County List the county where the storage tank facility is located.

Facility ID Include the DEP Facility Identification number whenever possible. Write in "Pending" when submitting a new registration for the first time. Remember: the Facility ID number identifies the location, and it does not change even when a facility is transferred to a new owner upon sale of the facility.

Facility Name Provide the current name of the business establishment operating at the facility location. When registering an abandoned facility, where tanks exist but there is no operational business, identify the location with the property owner's name, as in "Smith Property", if no other facility name is being used.

Facility Address Include the street number and name. In a rural area with no street number associated with it, provide the parcel ID number along with directions (e.g., 'x' miles N of intersection...). Provide the name and telephone number of a contact person or manager *on location,* where possible.

Facility Type This information is an explanation or term that most closely describes the operational use of the facility. Select the code(s) that provides the best or most appropriate description of the facility.

1. If the facility is owned by a government entity, select the appropriate type from the following:
   F. Federal Government **H.** Local or City Government **N.** Native Tribal Lands
   G. State Government **I.** County Government

2. If the facility meets the definition of "bulk product facility" - a waterfront location with at least one aboveground tank with a capacity greater than 30,000 gallons which is used for the storage of pollutants ("Pollutants" includes oil of any kind and in any form, gasoline, pesticides, ammonia, chlorine, and derivatives thereof, excluding liquefied petroleum gas"); select the type from:
   T. Coastal bulk product facility - facility, as defined above and located on the Florida coast, may have storage tank systems that store hazardous substances in addition to pollutants. ("Coastline means the line of mean low water along the portion of the coast that is in direct contact with the open sea and the line marking the seaward limit of inland waters, as determined under the Convention on Territorial Seas and the Contiguous Zone, 15 U.S.T. (Pt. 2) 1606.").
   S. Inland waterfront bulk product facility – a facility, as defined above and located on "inland waterways" (lakes, rivers), may have storage tank systems that store hazardous substances in addition to pollutants.

3. When the facility is a "waterfront location", but not a *bulk product facility* as defined above, select the most appropriate type from:
   V. Marine fueling facility - a commercial, recreational, or retail coastal facility that provides fuel to vessels and may store other pollutants and/or hazardous substances on site.

Facility Type continued

W. Waterfront fueling facility - a commercial, recreational, or retail facility located on a non-coastal waterway that provides fuel to vessels and may store other pollutants and/or hazardous substances on site.

4. When the facility is not described as previously stated, select the most appropriate type from:

A. Retail Station - primarily supplies vehicular fuel to automotive customers; may store other regulated substances.

C. Fuel User, Non-retail - primarily stores motor fuel and/or other pollutants or hazardous substances for consumption by facility/owner/operator.

D. Inland Bulk Petroleum Storage - inland facility with no waterfront access, that has multiple active UST and/or AST storage systems used primarily for storage of pollutants intended for distribution. May also store hazardous substances on-site for facility consumption and/or distribution purposes.

E. Industrial Plant - inland facility with no waterfront access; may include power plants and facilities designed for manufacturing and/or chemical processing; may have multiple active UST and/or AST storage systems used for storage of pollutants and/or hazardous substances intended for facility consumption.

J. Collection Station - maintenance or other related facility that acquires and temporarily stores used and/or waste oil prior to recycling and/or disposal.

K. Inland Bulk Chemical Storage - inland facility with no waterfront access, that has multiple active UST and/or AST storage systems and/or compression vessels used for storage of hazardous substances intended for distribution. May also store pollutants on site for facility consumption and/or distribution purposes.

L. Chemical User - facility primarily uses regulated hazardous substance tanks on site; may also store pollutants.

M. Agricultural - facility actively used in production of crops, plants, or livestock.

P. UST Residential (>1100 gallons) - residence with USTs regulated by Federal Environmental Protection Agency.

Z. Other - Identify the type of establishment that you are registering.

Financial Responsibility – The demonstration of financial responsibility shall be made by the owner or operator in accordance with 40 CFR 280, Subpart H. Check box for Insurance or Other (includes all other financial responsibility methods).

24 Hour Emergency Contact - Provide the name and telephone number of the Emergency Contact for this facility.

B. Account Owner Information

1. Provide the name, address, contact name, telephone number, and email address of the individual(s) and/or business(es) that are responsible for the operation of the storage tanks and for the payment of DEP annual Storage Tank Registration fees. The Account Owner is responsible for payment of the annual storage tank registration fees and will receive the annual storage tank registration placard(s) upon payment. Please provide your account owner's (STCM) email address for your Accounts Payable (AP) or the contact to whom all invoices are to be emailed.

2. When submitting revisions to owner’s contact name or address information, please include their STCM Account Number.

3. When ownership changes, submit a registration form complete with the effective date of ownership and new account owner's signature.

C. Real Property Owner Information

1. Provide the legal entity name, address, contact name, telephone number, and email address of the individual(s) and/or business(es) that are vested with ownership, dominion or legal or rightful title to the real property.

2. Submit a registration form when the property ownership changes, complete with the date.

D. Tank/Compression Vessel Information - Complete one row in Section D for each storage tank and/or compression vessel system located at the facility. Use the following system description codes where appropriate.

1. **Tank ID** – number the systems sequentially, or provide a unique ID number; do not use symbols (#, %, -, etc.).
2. **Tank or Vessel Indicator** – choose T or V to describe the system type.
3. **Tank Placement** – choose A or U to designate aboveground or underground placement of the system.
4. **Tank Capacity** – enter the storage tank capacity in gallons.
5. **Installation Date** – record the date of installation in 'MM/YY' format; provide a best estimate if unknown.
6. **Tank Content** – record the current content (or last content, if system is closed or out-of-service) from the list below:

A	**Leaded Gasoline**	**M**	**Fuel Oil: On-site Heating Only; USTs or ASTs < 30K gals^**	**W**	**Petroleum-based Additive Product**
B	**Unleaded Gasoline (No Ethanol)**	**N**	**Fuel Oil: Distribution; or On-site Heating - ASTs > 30K gals¥**	**X**	**Miscellaneous Petroleum-based Product**
D	**Diesel Fuel**	**O**	**New and Lube Oil**	**Y**	**Unknown Substance**
E	**Aviation Gasoline**	**Q**	**Pesticide**	**Z**	**Other Substance (please identify)**
F	**Jet Fuel**	**R**	**Ammonia Compound**	**7**	**Biodiesel (B20)**
G	**Diesel Fuel-Emergency Generator**	**S**	**Chlorine Compound**	**8**	**E10 – Blend of 10% Ethanol/90% Gasoline**
J	**Used Oil**	**T**	**Hazardous Substance (CERCLA)**	**9**	**E85 – Blend of 85% Ethanol/15% Gasoline**
K	**Kerosene**	**U**	**Mineral Acid***		
L	**Waste Oil**	**V**	**Grades 5 & 6 Bunker "C" Residual Oils**		

* Mineral Acid = Hydrobromic acid, Hydrochloric acid, Hydrofluoric acid, Phosphoric acid and Sulfuric acid.
^ M = fuel is used solely to heat the facility premises and must be stored in a tank with capacity < 30,000 gallons; exempt from regulation.
¥ N = fuel is distributed as heating fuel, or fuel is used solely to heat the facility premises, but the storage tank capacity exceeds 30,000 gallons.

** Compartmented tanks – register as a single tank; itemize the size and contents of each compartment. See construction miscellaneous attributes.
** Manifold tanks – register as individual storage tanks; with individual size and content – even though they are "connected".

7. **Status** – record the current status of the system, and the status effective date (or best estimate) in 'MM/YY' format. Update the tank status timely, as necessary for tanks moving between "in service" and "out-of-service" status.

   A. Properly closed in-place UST filled with sand, concrete or other inert material; AST rendered unusable.

   B. Removed from the site.

   D. Deleted – Data Error – Added to STCM in error; may be a duplicate tank (and/or facility), or tank was registered prior to installation and decided not to have tank installed.

   E. Construction modified – AST constructed as a "mobile tank" or enclosed in a building; no longer retains a "regulated" status.

   M. Moved to New Site – Designation that identifies a tank as removed from a particular facility and reinstalled at a second facility.

   T. Out-of-service tank – Tank system that is designated as out-of-service by the owner or operator.

   U. In-service – Tank system that is NOT designated as out-of-service by the owner or operator.

   V. Temporary out-of-service – Field erected storage tank system that is designated as temporary out-of-service by the owner or operator.

   X. Non-regulated use/process – Exempt from regulation due to how the tank or substance is used; i.e., tank stores diesel used in FLOWTHROUGH process.

   Z. Non-regulated product – Stored in tank; provide status effective date when status relates to a 'change in product' from a regulated substance to a non-regulated substance for a particular storage tank.

8. **Construction, Piping, and Monitoring Attributes** – Select from the lists on the following page the codes that best describe the attributes of each storage tank system.

CONSTRUCTION

Primary Construction:	**C** Steel	**X** Concrete
	D Unknown	**Y** Polyethylene
	E Fiberglass	**Z** Other DEP approved protection method
	F Fiberglass-clad steel	
Overfill/Spill:	**A** Ball check valve	**O** Tight fill
	M Spill containment bucket	**P** Level gauges, high-level alarms
	N Flow shut-off	**Q** Other DEP approved protection method
Corrosion Protection	**G** Cathodic protection – sacrificial anode	**H** Cathodic protection – impressed current
Secondary Containment	**I** Double-walled construction: single material (outer tank material same as inner tank material)	
	R Double-walled construction: dual material (outer tank – concrete, approved synthetic material, or tank "jacket")	
	J Synthetic liner in tank excavation	
	K Concrete, synthetic material, and/or off-site clays beneath AST and in containment area	
	S Other DEP approved/registered containment system	
Construction:	**B** Internal Lining	**U** Field Erected
Miscellaneous Attributes	**L** Compartmented	**W** Built on supports

PIPING

Primary Construction	**B** Steel or Galvanized Metal	**X** No piping associated with tank
	C Fiberglass	**Y** Unknown
	N Approved Synthetic Material	**Z** Other DEP approved piping material
Corrosion Protection	**D** External Protective Coating	
	E Cathodically Protected with Sacrificial Anode or Impressed Current	
Secondary Containment	**F** Double-walled construction: single material (outer pipe material same as inner pipe material)	
	M Double-walled construction: dual material (outer pipe approved synthetic material or pipe "jacket")	
	G Synthetic liner or box/trench liner in piping excavation or pipe containment area	
	P Internal Piping: contained within an internal sump riser directly connected to tank and located beneath dispenser	
Piping:	**A** Aboveground – no contact with soil	**K** Dispenser Sumps
Miscellaneous Attributes	**I** Suction Piping System	**L** Bulk Product System
	J Pressurized Piping System	**H** Airport/Seaport Hydrant System
	W Piping over water	

MONITORING

External	**E** Monitoring of UST synthetic liner	**W** Fiber-optics Technologies
	Q Visual Inspection of AST Systems	**Z** Other DEP approved monitoring methods
	8 Manually Sampled Wells	
Internal	**F** Interstitial Space – Double-walled Tank	
	R Interstitial Monitoring of AST Tank Bottom	
Piping Monitoring	**G** Electronic Line Leak Detector with Flow Shutoff	**K** Interstitial Monitoring – Double-walled Piping
	H Mechanical Line Leak Detector	**U** Bulk Product Piping Pressure Test
	J Monitoring of Piping Liner	**6** External Monitoring
Miscellaneous	**I** Not Required – See Rule for Exemptions	**3** Electronic Monitoring of Piping Sumps
	Y Unknown	**4** Visual Inspections of Dispenser Sumps
	1 Continuous Electronic Sensing Equipment	**5** Electronic Monitoring of Dispenser Sumps
	2 Visual Inspections of Piping Sumps	

E. Certified Contractor and Certification

Record the name and the ***Department of Business and Professional Regulation License Number*** for the ***Certified Contractor*** whenever an underground storage tank has been installed or removed. Do not rely on the contractor to file this form. Storage Tank Registration Forms are required to be submitted by the storage tank system owner.

Please Remember - The Registration Form cannot be processed without the name and signature of the storage tank system owner and the date of the form submittal. Please print the name legibly in case a representative of the storage tank program should need to contact you.

Submit form to tankregistration@floridadep.gov

If you have questions, please call a storage tank registration representative at (850) 245-8839 or email tankregistration@floridadep.gov for assistance. Thank you for your cooperation.

Date: Monday, October 28, 2024 4:04:56 PM
Attachments: Wawa# 5438 Tank Registration Amendment for change in tank configuration signed.pdf
image002.png

Joshua,

Per your request to update tank information and add new tank please note the changes has been updated. Also, listed below steps to pay for new tank added and obtain copy of the Placard.

Thank you

- http://www.fldepportal.com

- Click on "Pay"
- Click on "Registration"
- Click on "Storage Tank Registration"
- Enter: e-mail address and password for the e-mail you want your placard sent to. (You need to have already registered this e-mail account with DEP).
- If you have not already registered, please click on Register to proceed.
- Click Yes for Do you have STCM#?
- Enter STCM # 68130
- You can click on Pay online to pay invoice and the placard will be emailed.
- or
- Request Placard (if you simply need to print your placard).
- Enter the STCM#
- Click: Search and Continue
- Select: Placard(s) you want printed and placard(s) will be emailed.

Cynthia,

As per our conversation, attached is the amended STRF with the effective date changed to 5/23/24. Thank you for all your help and I apologize for the confusion.

Thanks,

Josh

Ms. McGill:

The Alachua County Public Schools has a fuel site at one of our high schools in Alachua, Florida and the address has been changed. I just called FDEP and I was informed to email you with the correct address and when our 2007-2008 placard are mailed to us it will have the correct address on it. Here is the following information: Facility ID: 8518896, Placard No: 250287. The new address is: Alachua County School Board - Santa Fe High, 16805 NW County Road 235-A, Alachua, FL 32615, Alachua County.

A confirming PO has been sent to our finance department for our 2007-2008 storage tank registation.

Thank you for your help.

Sincerely,

Paula Davis

STORAGE TANK REGISTRATION

This placard certifies that the owner & facility named has complied with the registration requirements for petroleum &/or hazardous substance storage tanks regulated by the FL Department of Environmental Protection. The placard must be placed out of the weather and in plain view of storage tank compliance inspectors entering the facility.

SECONDARY CONTAINMENT INSTALLATION DEADLINES
12-31-2004: UST small diameter piping over surface water & UST remote fill pipes must have secondary containment.
01-01-2005: Dike-field areas of large ASTs must meet new standards.& AST small diameter piping over surface water must have secondary containment.
12-31-2009: Single-wall USTs & UST small diameter piping in contact with the soil must have secondary containment.
01-01-2010: Single-wall field erected ASTs & AST single-wall bulk product piping in contact with the soil must have secondary containment unless deferred by an API 570 Integrity Assessment.

The Department has never issued an extension to an upgrade deadline since the storage tank rules were adopted in 1984. If you have questions about these or other deadlines – or need general technical assistance – consult Rule 62-761, F.A.C., or contact a storage tank inspector from the DEP district office, or from the local storage tank program office for your county.

DEPARTMENT OF ENVIRONMENTAL PROTECTION IS ON THE INTERNET
The Web address for DEP is http:\\www.dep.state.fl.us.
You can access the site for Storage Tank Regulation directly by using: http:\\www.dep.state.fl.us/waste/categories/tanks.
Look under the HIGHLIGHTS section to find links to storage tank rules, forms, database reports and other program information.

EMAIL registration-related questions and comments to: TankRegistration@dep.state.fl.us – or telephone (850) 245-8839.
Registration staff members will assist you with your questions and will respond to you by phone or reply to your email address.

The Storage Tank Registration placard below must be posted at the facility.
It must be placed out of the weather and in plain view of inspectors entering the facility.

July 19, 2004

Ms. Lynda McKinnie
Department of Environmental Protection
Storage Tank Regulation Program
P.O. Box 3070
Tallahassee, Florida 32315

Dear Ms. KcKinnie:

I am writing in regard to an email I sent you last week. As I have not had any response from it, I am not sure that you ever received it.

The School Board of Alachua County Transportation Department recently registered our storage tanks #STCH-392 for 2004-2005 fiscal year. When we received the Storage Tank Registration Placards for all of our sites the addresses were all incorrect. All site addresses have changed. I am enclosing copies of the 2004-2005 placards with corrected addresses

Would you please print new placards with the corrected addresses and mail to the following address: School Board of Alachua County Transportation Department, 1800 SE Hawthorne Road, Gainesville, Florida 32641, ATTN: Paula Davis.

Thank you for your help in this matter.

Sincerely,

Paula J. Davis

Paula J. Davis

DER FORM 17-61.090(3) 11/29/87 (1/2)

NOTE: PUT "X" IF ANSWER IS UNKNOWN. This form may be reproduced. For each tank whether in use or out of use, use one row across. Use more than one letter per column, if applicable. When a mixture of several hazardous substances is stored in one tank, enter the name of the substance of greatest quantity. Provide a sketch of tank location in reference to a stationary structure. The tank number on the sketch must agree with the number on the form. Attach extra pages if necessary and write your facility number, if known, or name and address, exactly as it appears on the form.

INFORMATION CODE LIST

List (4) Facility Type

A. service station
B. residence
C. business (no fuel sold)
D. bulk petroleum storage
E. industrial plant
F. federal government (give CSA#)
G. state government
H. local government
I. collection station
K. bulk chemical storage
L. chemical user facility
M. agricultural facility
N. facility on Indian land.
S. small user facility
T. terminal facility/marina

List (9) Tank Number

List (10) Tank Size Gallons

List (11) Tank contents are:

A. leaded gasoline
B. unleaded gasoline
C. unleaded gasohol
D. vehicular diesel
F. aviation gas
G. jet fuel
H. concrete
I. sand
K. kerosene
L. used (waste) oil
M. diesel (boilers & generators)
N. leaded gasohol
O. new oil
P. pesticide (write in name) _____
R. ammonia compound (write in name) _____
S. chlorine compound(write in name) _____
V. hazardous substance (write in name or Chemical Abstract Service (CAS) number _____
W. water
Z. other (write in name) _____

List (12) Tank Installation Date/Month/Year

No skid or portable tanks

List (13) Underground or Aboveground (write U or A)

List (14) U

Underground tank
A. has overfill protection
B. is interior lined
C. is painted/asphalted steel
D. is of unknown type
E. is fiberglass type
F. is fiberglass-clad steel
G. is sacrificial anode type
H. is impressed current type
I. is double walled
K. is in secondary containment
L. compartmented

List (14) A

Aboveground tank
M. is double-walled
P. is surrounded by impervious dike
Q. is surrounded by earth dike
R. rests on an impervious base
S. rests on an earth/gravel base
T. has interior lined bottom
U. is cathodically protected
V. is built of/coated with corrosion resistant material
W. is supported above the soil

List (15)

Integral piping system has:
A. no parts in contact with the soil
Parts contacting the soil which are:
B. galvanized or unprotected metal
C. built of corrosion resistant metal
D. corrosion resistant coated
E. cathodically protected
F. double-walled
G. within a secondary containment
H. interior lined

List (16)

Monitoring system is:
A. automatically sampled well(s)
B. manually sampled well(s)
C. groundwater monitoring plan
D. SPCC plan
E. well/detector in secondary containment
F. in-ground detector
G. within walls of double-wall tank
H. continuous in piping
I. not required

List (17)

Tank disposal method
A. abandoned in place, filled w/sand or concrete
B. removed from site
C. retrofitted
F. abandoned in place, but not filled w/sand or concrete

List (18) Gallons Left

List (19) Date Abandoned Month/Year

Z. Other: _____

(4) County code
(5) Facility information

(#6) FINANCIAL RESPONSIBILITY CODES

A. State Program - Third Party Liability/State contractor (FPLIPA/AIG)
B. State Program - Third Party Liability/Self insurance with other carrier; other federal financial responsibility mechanism.
C. Other coverage meeting federal financial responsibility requirements.
D. None

(7) Owner information
(8) Tank site information
(9) Tank number
(10) Tank size

(#11) CONTENT CODES

A. Leaded gasoline
B. Unleaded gasoline
C. Gasohol
D. Vehicular diesel
E. Aviation gasoline
F. Jet Fuel
G. Diesel; emergency generator
H. Diesel; generator or pump
K. Kerosene
L. Waste oil
M. Fuel oil; on site heating
N. Fuel oil; distribution
O. New/lube oil
Q. Pesticide
R. Ammonia compound
S. Chlorine compound
T. Hazardous substance
U. Mineral acid
V. Bunker 'C' residual oil
W. Petroleum additive (pollutant)
Y. Unknown
Z. Other: _____

(12) Tank installation date
(13) Tank placement (U or A)

(#14) TANK CONSTRUCTION CODES

A. Overfill protection - ball check valve
B. Interior lined or lined bottom steel
C. Bare, painted, or asphalted steel
D. Unknown
E. Fiberglass
F. Fiberglass-clad steel, composite
G. Cathodically protected & coated steel, sacrificial anode
H. Cathodically protected & coated steel, impressed current
I. Double-walled
J. Secondary containment, synthetic liner
K. Secondary containment, concrete
L. Compartmented
M. Spill containment
N. Overfill protection - flow shut off
O. Overfill protection - tight fill
P. Impervious berm
Q. Earth berm
R. Impervious base
S. Earth base
T. Small use tank
U. Field erected tank
W. Tank built on supports
X. Concrete
Y. Other: _____
Z. Department approved alternate

(#15) PIPING CONSTRUCTION CODES

A. Aboveground, not in contact with soil
B. Galvanized or unprotected metal
C. Fiberglass
E. Cathodically protected steel
F. Double-walled
G. Secondary containment
H. Airport hydrant piping
I. Suction piping system
J. Pressurized piping system
K. Dispenser liners
L. Bulk product transfer lines
Y. Unknown
Z. Department approved alternate

(#16) LEAK DETECTION METHODS

A. Vapor monitoring
B. Groundwater monitoring
E. Interstitial monitoring, tank liners
F. Interstitial monitoring, double-walled tank
G. Piping/in-line leak detectors with automatic shut-off
H. Piping/in-line flow restrictors
I. Not required, see rule for exemptions
J. Interstitial monitoring, piping liners
K. Interstitial monitoring, double-walled piping
L. Automatic tank gauging system
M. Manual tank gauging system
Y. Unknown
Z. Department approved alternate

(#17) TANK STATUS/DISPOSAL CODES

*A. Properly closed in place: underground tank filled with sand or concrete; aboveground tank properly closed
*B. Removed from the site . . *A or B: Closure Assessment required
F. Unmaintained storage tank - tank not in use and not properly disposed; or tank discovered abandoned
T. Temporary out-of-service
U. In-service

1	3,000	D	1/85	A	N R	A	N	B

ENTER THE LETTERS WHICH APPLY TO EACH TANK IN THE BOXES ABOVE. WRITE ALL THAT APPLY.

List 14

Tank contents are:

A. leaded gasoline.
B. unleaded gasoline.
C. Alcohol enriched gasoline.
D. diesel fuel.
E. aviation fuel.
Z. other.

List 17U
UNDERground Tanks

Underground tank:

A. has overfill protection.
B. is interior lined.
C. is painted/asphalted steel.
D. is of unknown type.
E. is fiberglass type.
F. is fiberglass-clad steel.
G. is sacrificial anode type.
H. is impressed current type.
I. is double walled.
J. is concrete.
K. is in secondary containment.
N. is or has none of the above.

List 17A
ABOVEground Tanks

Aboveground tank:

O. has overfill protection.
P. is surrounded by impervious dike.
Q. is surrounded by earth dike.
R. rests on an inpervious base.
S. rests on a earth/gravel base.
T. has interior lined bottom.
U. is cathodically protected.
V. is built of/coated with corrosion resistant materals.
W. is supported above the soil.
Z. is or has none of the above.

List 18

Integral Piping System has:

A. no parts in contact with the soil.

Parts contacting the soil which are:

B. unprotected metal.
C. built of corrosion resistant materials.
D. corroson resistant coated.
E. cathodically protected.
F. double-walled.
G. within a secondary containment.
H. interior lined.
M. none of the above.

List 19

Monitoring system is:

A. automatically sampled well(s).
B. manually sampled well(s).

Stationary Tank Registration/Notification Form

Form 17-1.218(2)

FACILITY NAME AND MAILING ADDRESS:
SCHOOL BOARD OF ALACHUA COUNTY
620 E. UNIVERSITY AVE.
GAINESVILLE, FLA.

FACILITY LOCATION: SANTA FE HIGH SCHOOL
ALACHUA, FLA.

(Make corrections to name and addresses here)
1. Facility/Addressee name:
Facility address:
Mailing address:

Use this form to comply with the following requirements of the Stationary Tank Rule, Chapter 17-61, Florida Administrative Code.

1. Each owner or operator shall register the following with the department.
   a. All existing facilities by December 31, 1984. (Questions 1-19)
   b. All new storage systems or facilities at least 10 days prior to the start of installation of tanks except in the cases of emergency replacement. (Questions 1-19)
   c. A non-pollutant containing installation which is to be converted to a facility, at least 10 days prior to the placement of pollutants in such a facility. (Questions 1-19)
2. Each owner or operator shall notify the department of the following.
   a. All storage systems within 10 days of abandonment. (Questions 1-12, 16, 20)
   b. Facility sale within 10 days of sale. Notice shall be made by the seller. (Answer questions 1-7, and 11. Question 7 about the new owner.)
   c. Retrofitting within 10 days of completion. (Questions 1-19)
3. You may notify the department of a change of operator. (Questions 1-6)

PLEASE PRINT OR TYPE

2. Facility number (DER will provide this number): 0185188896 3. Date: 6-01-87
4. Federal Employment Identification (number used to file IRS forms) N/A
5. County Code (see enclosed letter): 01
6. Operator of facility: SCHOOL BOARD OF ALACHUA COUNTY
   Effective date (only for change of operator): N/A Telephone number: (904) 395-0555
7. Company/Person owning tanks and piping: SEE ITEM 6
   Address: 620 E. UNIVERSITY AVE.
   Contact person: PAUL FULLER Telephone number: (904) 395-0752
   Effective date (only for change of owner): N/A
8. How many tanks at this location have an individual storage capacity of greater than 550 gallons and store vehicular fuel made from petroleum?
   1 Underground ____ Aboveground
9. Facility location: Latitude: ° ' " Longitude: ° ' " Section: 09 Township: 08 Range: 18E
   This information is listed on property deeds, and in the offices of the property appraiser and tax assessor.
10. Sketch the facility on a separate page showing the APPROXIMATE location of buildings, tanks, and dispensers.
   A. Draw a line from tank to dispenser to show which are connected by piping.
   B. Label each tank as Tank 1, Tank 2, etc.
   C. Write the date and your facility number, if known, or name and address exactly as it appears above.
   D. Keep a copy of your sketch.

REFER TO TANKS BY THESE LABELS IN ANY COMMUNICATION WITH THE DEPARTMENT.
DESCRIBE PIPING BY THE NUMBER OF THE TANK IT IS ATTACHED TO.

11. TO THE BEST OF MY KNOWLEDGE AND BELIEF ALL INFORMATION SUBMITTED ON THIS FORM IS TRUE, ACCURATE, AND COMPLETE.

Tallahassee, Florida 32301

DER FORM 17-1.218(2) 9/1/84 (1/2)

FORM 17-1.22(2) 9/1/94 (2/2)

INSTRUCTIONS: Use one row across for each tank counted in question 8. The tank number must agree with the number on the sketch of your facility. A new tank installed where a registered tank was removed should be given the number of the removed tank with an R and a number added. Example: Tank 3R1 is first replacement for tank 3. It is in the same place where tank 3 was. Tank 3R2 is the second replacement for tank 3. Attach extra pages if necessary. Write your facility number, if known, or name and address, exactly as it appears on the front of the form, on all extra pages.

(12) Tank Number	(13) Tank Size in Gallons	(14) Tank Contents (see List 14 below)	(15) Tank Installation Date. Month/Year (put X if unknown)	(16) Underground or Aboveground Tank (write U or A)	(17) Tank Construction Specifics (see List 17U or 17A below)	(18) Integral Piping System Construction Specifics (see List 18 below)	(19) Monitoring System Type (see List 19)	(20) Tank Disposal Method (see List 20)
1	8,500	M	X	U	C	B	I	B

ENTER THE LETTERS WHICH APPLY TO EACH TANK IN THE BOXES ABOVE. WRITE ALL THAT APPLY.

List 14

Tank contents are:

A. leaded gasoline.
B. unleaded gasoline.
C. Alcohol enriched gasoline.
D. diesel fuel.
E. aviation fuel.
Z. other.

List 17U
UNDERground Tanks

Underground tank:

A. has overfill protection.
B. is interior lined.
C. is painted/asphalted steel.
D. is of unknown type.
E. is fiberglass type.
F. is fiberglass-clad steel.
G. is sacrificial anode type.
H. is impressed current type.
I. is double walled.
J. is concrete.
K. is in secondary containment.
N. is or has none of the above.

List 17A
ABOVEground Tanks

Aboveground tank:

O. has overfill protection.
P. is surrounded by impervious dike.
Q. is surrounded by earth dike.
R. rests on an impervious base.
S. rests on a earth/gravel base.
T. has interior lined bottom.
U. is cathodically protected.
V. is built of/coated with corrosion resistant materials.
W. is supported above the soil.
Z. is or has none of the above.

List 18

Integral Piping System has:

A. no parts in contact with the soil.

Parts contacting the soil which are:

B. unprotected metal.
C. built of corrosion resistant materials.
D. corroson resistant coated.
E. cathodically protected.
F. double-walled.
G. within a secondary containment.
H. interior lined.
M. none of the above.

List 19

Monitoring system is:

A. automatically sampled well(s).
B. manually sampled well(s).
C. groundwater monitoring plan.
D. SPCC plan.
E. well/detector in secondary containment.
F. in-ground detector.
G. within walls of double-walled tank.
H. continuous in piping.
I. not required.
N. none of the above.

List 20

State of Florida
DEPARTMENT OF ENVIRONMENTAL REGULATION

MOTOR FUEL TANK REGISTRATION

The 1986 Legislature imposed a $50 initial registration fee plus an annual $25 renewal fee on all motor fuel tanks over 550 gallons in size. Funds received will be used primarily to clean up contamination caused by leaking tanks and spills. The registration fee shown on the face of this form is based on the number of motor fuel storage tanks previously registered at this location. RETURN THIS CARD with a check for the amount indicated in the supplied return envelope to the Department of Environmental Regulation within 30 days of receipt of this notice. This will ensure accurate credit and prevent assessment of late fee charges of $20.00 per tank. After receipt of payment, and upon completion of processing, a certificate of registration will be issued to each facility. If several facilities are owned by one individual or one company, mail each registration separately. If there are any questions concerning this registration, call the Department of Environmental Regulation, Storage Tank Section at (904) 488-0300.

Make checks payable to: Department of Environmental Regulation.

Signature Page

The undersigned personnel of Stillwater Technologies, Inc. are responsible for the technical content of this document entitled "Dispenser and Piping Closure Report, Santa Fe High School." This document was prepared for the exclusive use of the School Board of Alachua County (SBAC), their affiliates, and attorneys and at the request of the SBAC is being submitted to the Alachua County Environmental Protection Department (ACEPD). This document has been prepared in accordance with standard industry practice and quality control procedures and in general accordance with the criteria outlined in Chapter 62-761 of the Florida Administrative Code (F.A.C.).

Section 1.0
Introduction

This report presents the results of a diesel dispenser and associated product piping closure assessment performed by Stillwater Technologies, Inc. (Stillwater) at the Santa Fe High School in Alachua County, Florida (Site). A Site Location Map is provided in **Figure 1**. The closure assessment was conducted for the closure of one diesel dispenser and approximately 50 feet of product piping. The Florida Department of Environmental Protection (FDEP) Facility ID number for the site is 8518896.

Section 2.0
Dispenser and Piping Closure

The closure activities were conducted in conjunction with the upgrade to the Site's existing diesel underground storage tank (UST) system. The upgrade included installing a new dispenser, new double-wall product piping, new tank STP sump, vent line, fill riser, and annular space riser. The petroleum system work was conducted by KC Petroleum (KC) between the dates of November 16 –December 4, 2009. Prior to Stillwater conducting site screening activities, KC excavated to the tank top and uncovered the product piping. KC's Pollutant Storage System Contractors License Number is PCC1256881.

Section 3.0
Soil Assessment

Stillwater conducted soil screening activities at the Site on November 17, 2009. Soil samples were screened from beneath the dispenser, from below the product piping run, and from several side wall points in the excavation. Photographs of the excavation are included in **Appendix A**. Samples were collected at depths of 1 foot below the dispenser, from depths of 1 foot below the product piping, and from a depth of approximately 1 foot into the side wall of the excavation. All sample locations are illustrated on **Figure 2**. The samples were placed into 16-ounce mason jars, half filled, and covered with aluminum foil. The samples were then allowed to temperature equilibrate for approximately five minutes. The headspace of each sample was then analyzed using an Organic Vapor Analyzer (OVA) equipped with a photoionization detector (PID). The OVA model used was a Mini RAE 2000 PID. A calibration certificate for the OVA is included in **Appendix B.**

The OVA screening only had one detection of 13.5 parts per million in soil sample SS-2, which was from the excavation sidewall. A summary of the OVA soil sample readings is included in **Table 1**. For OVA substantiation and release confirmation two soil samples (including SS-2) were also collected and analyzed by Flowers Chemical Laboratories, Inc. for petroleum constituents included in the Kerosene Analytical Group. No analyzed compounds were detected above the specified detection limits. A copy of the analytical data report is included in **Appendix C.**

Section 4.0
Conclusions and Recommendations

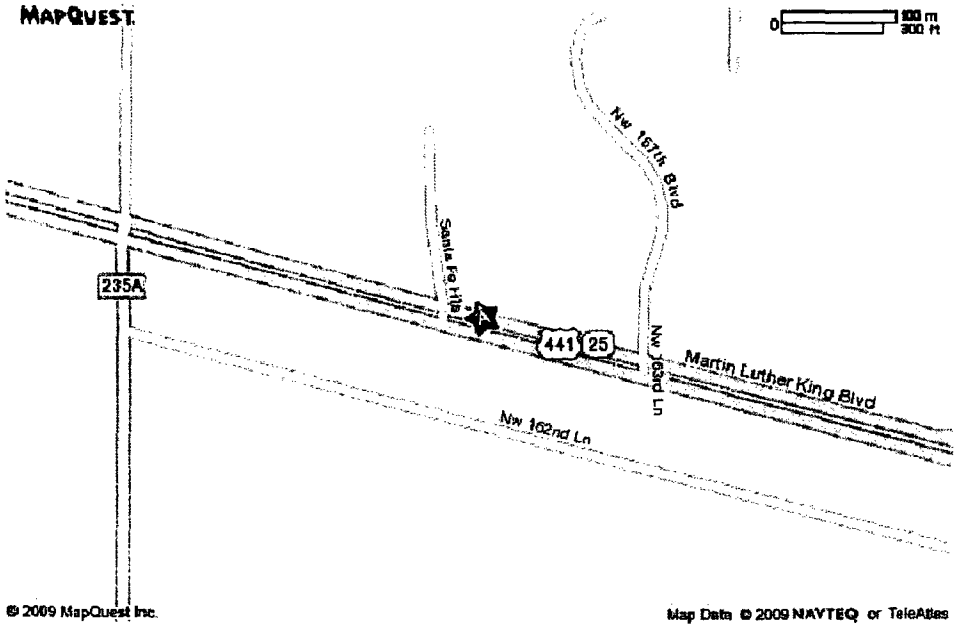
Having completed the dispenser and piping closure Stillwater concludes the following:

- One dispenser and approximately 50 feet of product piping were properly removed;
- OVA screening of soils detected only one low level reading (13.5 ppm); and
- Soil laboratory analytical data did not detect any constituents above their detection limits.

Based on the evidence collected during this closure, Stillwater does not recommend any additional assessment activities.

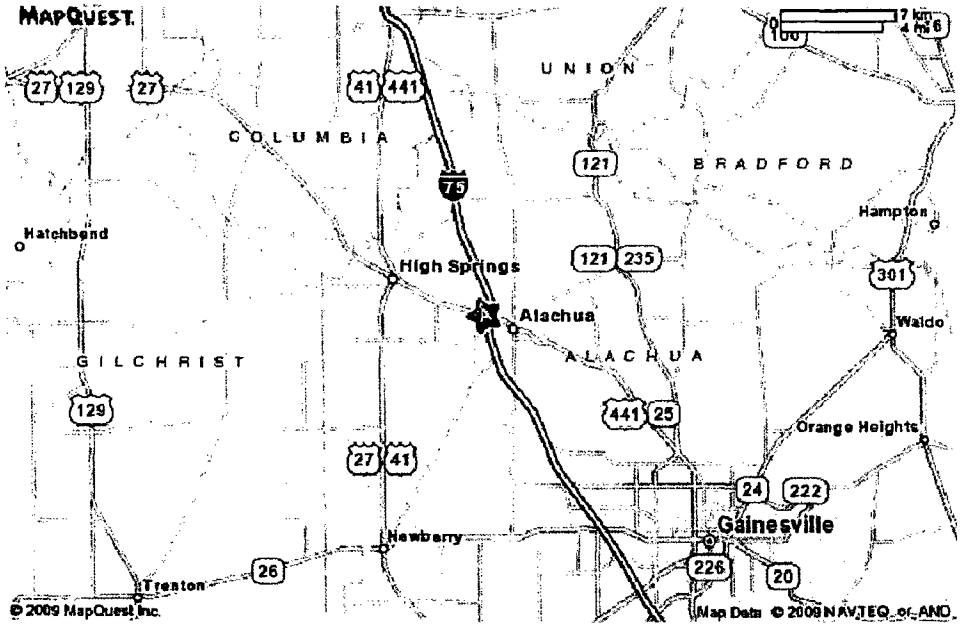
TABLE 1: SOIL SCREENING SUMMARY

Facility Name: Alachua County - Santa Fe High School



Facility ID# 8518896

BORING NO.	DATE COLLECTED	SAMPLE INTERVAL	OVA READING (ppm)
SS-1	11/17/09	sidewall	0
SS-2*	11/17/09	sidewall	13.5
SS-3	11/17/09	sidewall	0
SS-4	11/17/09	1' below pipe	0
SS-5	11/17/09	1' below pipe	0
SS-6*	11/17/09	1' below dispenser	0



* Sample also submitted to lab for full Kersosene Analytical Group analysis

Narrative Report

Sample Handling
Sample handling and holding time criteria were met for all samples. Samples collected by submitter. No unusual events occurred during analysis. Results are reported on a wet weight basis for aqueous matrices and on a dry weight basis for sludge and soil matrices unless otherwise noted. Sample results reported as dissolved were field filtered.

Quality Control
Enclosed analyses met method or FCL criteria, unless otherwise denoted on the sample results. Applied data qualifiers are defined below.

Attachments
Chain of Custody

Qualifier	Meaning
U	Compound was analyzed for but not detected.
J	One or more QC samples associated with this data value exceeded QC limits.
J1	Surrogate recovery limits have been exceeded.
J2	No known quality control criteria exist for the component.
J3	Reported value failed to meet established quality control criteria for either precision or accuracy.
J4	Sample matrix interfered with the ability to make an accurate determination on the spiked sample.
Q	Sample held beyond the accepted holding time.
L	Off-scale high; reported concentration exceeds the highest standard.
V	Analyte was detected in both the sample and the associated method blank.
ZTNTC	Too numerous to count. Numeric value represents filtration volume.
A	Absent
P	Present
T	Value reported is less than the statistical method detection limit. Reported for informational purposes only.
M	Value reported is greater than the statistical method detection limit, but less than the reported MDL.
G	The greatest of the dilutions performed did not yield sufficient oxygen depletion for valid data.
S	The least of the dilutions performed did not yield sufficient oxygen residual for valid data.
O	Result is greater than (over) the specified value.
I	Reported value is between the laboratory method detection limit and the laboratory practical quantitation limit.
B	Results based upon colony plate count outside ideal range.
Y	The laboratory analysis was from an improperly preserved sample. The data may not be accurate.

DEP Facility # 018518896
Chapter 62-761/762, FAC, Closure Assessment Report – Review

Dear Mr. Atwater:

The Alachua County Environmental Protection Department (ACEPD) is contracted with the Florida Department of Environmental Protection (Department) to conduct the Storage Tank System Compliance Verification Program for facilities located in Alachua County. ACEPD has reviewed the December 7, 2009 Dispenser and Piping Closure Report that was submitted by Stillwater Technologies, Inc. and received on December 14, 2009 for the above referenced facility. The Dispenser and Piping Closure Report appears to comply with the Department's April 1998 "Storage Tank Closure Assessment Requirements".

The results as provided in the Dispenser and Piping Closure Report do not indicate the presence of petroleum contamination in the area addressed in excess of Department Cleanup Target Levels. Please note that this letter does not certify that this site is not contaminated, and the Department reserves the right to require appropriate actions for this site in accordance with Chapter 62-770, Florida Administrative Code (FAC), if any contamination is discovered in the future in excess of Department Cleanup Target Levels.

If you have any questions please contact Tim Ramsey at (352) 264-6843 or email at thr@alachuacounty.us.

Sincerely,

Timothy H. Ramsey
Petroleum Contracts Supervisor

Three Years	Certificate of Financial Responsiblity	01/20/2022	01/18/2024	Insurance documents complete
Three Years	Monthly Maint. Visual Examinations and Results	01/20/2022	01/18/2024	Records complete

Inspection Comments

01/18/2024
Routine Compliance Inspection.

> Aaron Hardin assisted with the inspection.
> Inspection of 1 Double Wall underground Diesel fuel tank for Bus fleet
> Release detection methods for the facility's UST systems are: electronic monitoring for the interstice of the double-wall USTs and STP sumps, and visual inspections of the new double-wall spill bucket and dispenser sump.
> Current tank registration placard was reviewed.
> Financial responsibility records are complete.
> Monthly electronic and visual release detection records are complete.
> Test records indicate annual operability tests for the Veeder-Root system, line leak detector, ball valve were performed in December 2022 and are now due. Testing has been scheduled.
> Double wall spill bucket has been hydro tested.
> STP piping sump was hydro tested and all passed.
> Spill bucket and dispenser sump were dry.

> A copy of the inspection report and In Compliance Letter were emailed to Aaron Hardin (hardinam@gm.sbac.edu)

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Thomson Environmental Consulting, LLC were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. This Report is provided on an "AS IS", "AS AVAILABLE" basis. **NO WARRANTY EXPRESS OR IMPLIED IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, LLC AND ITS SUBSIDIARIES, AFFILIATES AND THIRD PARTY SUPPLIERS DISCLAIM ALL WARRANTIES, OF ANY KIND OR NATURE, EXPRESS OR IMPLIED, ARISING OUT OF OR RELATED TO THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT, INCLUDING WITHOUT LIMITATION, ANY WARRANTIES REGARDING ACCURACY, QUALITY, CORRECTNESS, COMPLETENESS, COMPREHENSIVENESS, SUITABILITY, MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE, TITLE, NON-INFRINGEMENT, MISAPPROPRIATION, OR OTHERWISE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, LLC OR ITS SUBSIDIARIES, AFFILIATES OR THIRD PARTY SUPPLIERS BE LIABLE TO ANYONE FOR ANY DIRECT, INCIDENTAL, INDIRECT, SPECIAL, CONSEQUENTIAL OR OTHER DAMAGES OF ANY TYPE OR KIND (INCLUDING BUT NOT LIMITED TO LOSS OF PROFITS, LOSS OF USE, OR LOSS OF DATA), ARISING OUT OF OR IN ANY WAY CONNECTED WITH THIS REPORT OR ANY OF THE DATA AND INFORMATION PROVIDED IN THIS REPORT.** Any analyses, estimates, ratings, environmental risk levels, or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only an assessment performed by a qualified environmental professional can provide findings, opinions or conclusions regarding the environmental risk or conditions in, on or at any property.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Report is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Report includes a search of available business directory data at approximately five year intervals.

RECORD SOURCES

The EDR City Directory Report accesses a variety of business directory sources, including Haines, InfoUSA, Polk, Cole, Bresser, and Stewart. Listings marked as EDR Digital Archive access Cole and InfoUSA records. The various directory sources enhance and complement each other to provide a more thorough and accurate report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer.

RESEARCH SUMMARY

The following research sources were consulted in the preparation of this report. A check mark indicates where information was identified in the source and provided in this report.

Owner or Site Manager Interview

Interview Date:	March 20, 2025
Name:	Robert M. Matheny
Title:	President
Company/Organization:	Santa Fe Hills Church of Christ

Status:

- ☐ Client/Owner
- ☐ Site Manager
- ☐ Occupant
- ☐ Government Official
- ☑ Other

President of Santa Fe Hills Church of Christ

During what time period were you the site manager of the property?

What was type of business did you have at the property?

Church Building

Do you know the past uses of the property?

- ☑ Yes
- ☐ No

If yes describe:

Always used as a place to worship

Do you know of specific chemicals that are present or once were present at the property?

- ☐ Yes
- ☑ No

If yes describe:

Do you know of spills or other chemical releases that have taken place at the property?

☐Yes
☑No

If yes describe:

_____

_____

_____

Do you know of any environmental cleanups that have taken place at the property?

☐Yes
☑No

If yes describe:

_____

_____

_____

Do you have any other knowledge or experience with the property that may be pertinent to the environmental professional?

☐Yes
☑No

If yes describe:

_____

Subject: Re: Church Property - Alachua

From the church contact:

Spoke to a member that has been there off and on since the beginning. She said as far as knows they never had fuel oil heat, only gas, and never buried a propane tank. There is a septic tank. I was quite sure there wasn't any sewer charge that was paid. She is also going to confirm those answers with her brother, Paul, who has always been a member there. If he has any different answers I will let you know ASAP.

Thanks Cabot. A couple of additional questions below...

Gia, to your knowledge did the church facility ever have a heating oil tank for the onsite furnace?

I believe it was connected to natural gas on the day of my field visit. Is that correct? Or is there a buried propane tank?

Does the church operate on a septic tank and field? Or is it hooked up to municipal sanitary sewer?

Thanks!

Hey Gia,

Can you or the owners please fill out the questionnaire attached? This is for the phase 1. I will also get an updated estimate for closing on the property. I am also copying Joel Thomson to this email as he had some questions regarding the Church Property.

Talk to you soon.

Thanks,

Cabot

APPENDIX E

User Questionnaire

PHASE I ENVIRONMENTAL SITE ASSESSMENT
ASTM STANDARD E1527-21 USER QUESTIONNAIRE
Alachua Property, Alachua County, Florida

In order to qualify for one of the Landowner Liability Protections (LLPs) offered by the Small Business Liability Relief and Brownfields Revitalization Act of 2001 (the "Brownfields Amendments"), the User must provide the following information (if available) to the Environmental Professional. Failure to provide this information could result in a determination that "all appropriate inquiry" is not complete.

(Please provide answers in the space provided after each question. Additional space is provided on the last page if required.)

Property Name and Address: West Side Commons

16313 NW US HWY 441; Unassigned. Parcel ID Numbers: 03044-002-000; 03044-001-002

Name of User: Alachua Outparcel Relationship to Property: Purchaser

Signature of User: Zachary Pinel Date: 3/4/2025

(1) Have you engaged a title company or title professional to undertake a review of reasonably ascertainable recorded land title records (often referred to as a chain of title)? ✓ YES ___ NO

(2) Are you aware of any environmental cleanup liens against the property that are filed or recorded under federal , tribal, state or local law? ___ YES ✓ NO

(3) Are you aware of any Activity and Use Limitations (AULs), such as engineering controls, land use restrictions or institutional controls that are in place at the site and/or have been filed or recorded in a registry under federal, tribal, state or local law? ___ YES ✓ NO

(4) As the User of this Environmental Site Assessment (ESA) do you have any specialized knowledge or experience related to the property or nearby properties? For example, are you involved in the same line of business as the current or former occupants of the property or an adjoining property so that you would have specialized knowledge of the chemicals and processes used by this type of business? ___ YES ✓ NO

(5) Does the purchase price being paid for this property reasonably reflect the fair market value of the property? If you responded "No", have you considered whether the lower purchase price is because contamination is known or believed to be present at the property? ✓ YES ___ NO

(6) Are you aware of any commonly known or reasonably ascertainable information about the property that would help the Environmental Professional to identify conditions indicative of releases or threatened releases? ✓YES ___NO

_____

For example, as User,

(a) Do you know the past uses of the property? ✓YES ___NO
1 parcel vacant, the other was a church

(b) Do you know of specific chemicals that are present or once were present at the property? ___YES ✓NO _____

(c) Do you know of spills or other chemical releases that have taken place at the property? ___YES ✓NO _____

(d) Do you know of any environmental cleanups that have taken place at the property? ___YES ✓NO _____

(7) As the User of this ESA, based on your knowledge and experience related to the property are there any obvious indicators that point to the presence or likely presence of contamination at the property? ___YES ✓NO _____

_____

(8) In accordance with Section 6.7 of ASTM Standard E1527-21, unless stated otherwise the reason for the User requesting this ESA shall be assumed to be "to qualify for a Landowner Liability Protection (LLP) to CERCLA liability". (State Reason if Different) _____

(9) Do you know whether any of the following documents exist and, if so, whether copies can and will be provided to the Environmental Professional within reasonable time and cost constraints?

a. Environment site assessment reports (___YES ✓NO)
b. Environment compliance audit reports (___YES ✓NO)
c. Environmental permits (for example, solid waste disposal permits, hazardous waste disposal permits, wastewater permits, NPDES permits, underground injection permits) (___YES ✓NO)
d. Registrations for underground and above-ground storage tanks (___YES ✓NO)
e. Registrations for underground injection systems (___YES ✓NO)
f. Material safety data sheets (___YES ✓NO)
g. Community right-to-know plan (___YES ✓NO)
h. Safety plans; preparedness and prevention plans; spill prevention, countermeasure, and control plans, etc. (___YES ✓NO)
i. Reports regarding hydrogeologic conditions on the property or surrounding area (___YES ✓NO)
j. Notices or other correspondence from any government agency relating to past or current violations of environmental laws with respect to the property or relating to environmental liens encumbering the property (___YES ✓NO)
k. Hazardous waste generator notices or reports (___YES ✓NO)

l. Geotechnical studies (___YES ✓NO)
m. Risk assessments (___YES ✓NO)
n. Recorded Activity and Use Limitations (AULs) (___YES ✓NO)

COPIES OF THE FOLLOWING WILL BE PROVIDED (Example: a, e, and k): _____
_____

(10) Are you aware of:

a. Any pending, threatened, or past litigation relevant to hazardous substances or petroleum products in, on, or from the property? ___YES ✓NO
_____

b. Any pending, threatened, or past administrative proceedings relevant to hazardous substances or petroleum products in, on, or from the property? ___YES ✓NO
_____

c. Any notices from any governmental entity regarding any possible violation of environmental laws or possible liability relating to hazardous substances or petroleum products? ___YES ✓NO
_____

ADDITIONAL SPACE FOR ANSWERS (AS NEEDED):

ENVIRONMENTAL CONSULTING

JOEL A. THOMSON
PRESIDENT

Mr. Thomson serves as President of Thomson Environmental Consulting, LLC. He combines an interdisciplinary background with extensive knowledge gained through applied fieldwork and exposure to a wide variety of consulting scenarios. He has provided both public and private clients with environmental consulting services for over 14 years.

Mr. Thomson meets the requirements of an Environmental Professional (EP) as defined in 40 CFR §312.10 by holding a baccalaureate degree in science and having more than five (5) years of full-time relevant experience (as defined by §312.1(c)).

Since prior to 2005, Mr. Thomson has performed numerous environmental site assessments and investigations of surface and subsurface conditions and has used professional judgment to develop opinions regarding conditions indicative of releases or threatened releases on the following types of properties, among others:

- Raw land
- Agricultural land
- Single-family homes
- Multi-family residences
- Commercial real estate parcels (undeveloped)
- Office buildings
- Shopping malls
- Ski resorts and snow-making operations
- Airport hangars

Mr. Thomson has provided Phase I Environmental Site Assessments (ESAs) to clients in the following states:

- Florida
- New Hampshire
- Vermont
- California
- Nevada
- Arizona

EDUCATION The College of William and Mary in Virginia, 1995, B.S., Biology and Environmental Science (Dual Majors)
Rollins College, 2002, M.B.A., Carl Osgood Award Recipient (Class Valedictorian)

CERTIFICATIONS AND TRAINING

- FDEP Stormwater, Erosion and Sedimentation Control Inspector #5859
- FDEP Stormwater, Erosion and Sedimentation Control Advanced Inspector Training
- FDEP Stormwater, Erosion and Sedimentation Control Instructor #407
- Commercial Herbicidal Applicator with Aquatics Designation (License No. CM19903)
- ASTM E 1527-05 Qualified Environmental Professional (EP)
- FFWCC Authorized Gopher Tortoise Agent (Permit No. GTA-10-00009)
- FDEP Bio-Reconnaissance Macroinvertebrate Sampling

VIII. REPORT OF GEOTECHNICAL EXPLORATION

I. PROJECT NARRATIVE

The Alachua commercial development project site is located at the northwest corner of NW 173rd Street, and M.L. King Boulevard in Alachua, Florida, and is approximately 5.04 acres in size. About half the site is forested, mostly vacant, and is grassed. A part of the land will be cleared and graded for a commercial development to be constructed, along with a stormwater retention pond.

The proposed development calls for construction of a private roadway and driveways for the commercial development. Additionally, there will also be off-site work done in order to accommodate the commercial development which consists of a right-hand turn lane into the site. Along with the grading for the building pads and roadway, one stormwater retention pond is proposed to treat and attenuate the runoff from all of the design storms.

II. EXISTING CONDITIONS

About half the site is forested, mostly vacant, and is grassed. There is also one church building on the site, and no parking lot.

A. 100-Year Flood Zone

The entire site lies in Flood Zone “X”, per the Flood Insurance Rate Map, community map number 12001C0120D, panel 120 of 640, dated 06-16-2006.

B. Wetlands

There are no wetlands located on the site.

C. Soils

Per the attached USDA Soils Map the on-site soils consist of Arredondo Fine Sand, 0 to 5 percent slopes, Arredondo-Urban land complex, 0 to 5 Percent Slopes, Fort Meade fine sand, 0 to 5 percent slopes, Millhopper sand, 0 to 5 percent slopes, and Kendrick sand, 5 to 8 percent slopes. These soils are in hydrologic group A.

D. Existing Drainage

The property’s existing drainage currently consists of two drainage basins. One drains out to the public right-of-way where it is conveyed and attenuated via a FDOT maintained swale which runs parallel to US-441. The other drainage basin drains to the north of the property where it is mostly forested, and can be percolated back into the soil. The peaking factor of (UH 256) is used in the pre-development stormwater routing.

E. Existing Zoning

The site had a designated zoning of Administrative and Professional, as well as Agricultural. However, the site was recently rezoned to Community Commercial in order to allow for the construction of commercial developments.

F. Tailwater Conditions and Positive Outfall

The site appears to be a closed basin, the site discharges to the US-441 ditch which ultimately drains to a low area at the NW quadrant of the I-75/441 interchange without a positive outlet. The existing runoff discharge rate must not be exceeded by the proposed build-out conditions.

Tailwater is not a concern as the elevation of the FDOT maintained swale and road is below the elevation of the weir in the control structure that drains to the swale.

III. PROPOSED DEVELOPMENT

A. Review and Permitting Agencies

- City of Alachua
- Suwanee River Water Management District (SRWMD)
- Florida Department of Transportation

B. Stormwater Management

The proposed stormwater management system consists of a variety of stormwater treatment BMP's – designed, permitted, and constructed to conform to the requirements of the City of Alachua, County, and the District. The primary treatment mechanism for the site is dry retention, provided in a proposed pond located on the north side of the site.

Stormwater runoff is determined using FDOT rainfall distribution for all stormwater that is conveyed towards the FDOT maintained swales, and SCS Unit Hydrograph method for all runoff that stays on-site or is conveyed to the north towards pond 1 or retained in pond 2. The program used to model the routing is PONDS v3.3. All post-development runoff from the site has been assumed to pass through the stormwater treatment system.

Storm event precipitation depth values were obtained from the SRWMD Environmental Resource Permit Applicant's Handbook Volume II for the 3, 10, 25, and 100-year storm events. NOAA Atlas 14 was used to obtain the precipitation depth values for the rest of the storm events.

In the PONDS routing, post-development discharge from the site is less than the discharge from the pre-development conditions for all modeled storms. An overflow from the proposed retention ponds is provided that will discharge any excess runoff to the existing FDOT swale and to the unimproved right of way to the north. Any discharge to the FDOT maintained swale will be less than in the pre-development conditions.

Additionally, we analyzed all of the storm events as required by the FDOT Drainage Connection Permit Handbook for all stormwater runoff that is conveyed to the FDOT maintained swale. The results of these calculations for both the pre and post development conditions can be found in the PONDS routing analysis results (Figure C in the attachments).

C. Water Quality Treatment Volume

Dry retention is the primary best management practice used to reduce the discharge of pollutants from stormwater runoff as well as reduce the volume of runoff. Per SRWMD requirements, the water quality treatment volume of 80 percent reduction of the average annual loading of total phosphorus (TP) and a 55 percent reduction in the average annual loading of total nitrogen (TN) from the proposed project, and percolate the stormwater back into the soil within 72 hours. Natural buffers shall also be utilized to reduce and treat stormwater runoff. The total retention volume of the ponds is in the attachments. As shown in the attached BMP Trains and PONDS calculations, the required water quality is provided and percolated back into the soil in less than 10 hours.

IV. DESIGN CALCULATIONS

A. Site Area and Drainage Basins

Total Site Area	**5.04 ac.**
Pre-Development Drainage Area to North (Basin 2)	**3.36 ac.**
Pre-Development Drainage Area to South (Basin 1)	**1.68 ac.**
Post-Development Drainage Basin 1	**4.19 ac.**
Post-Development Drainage Basin 2	**0.85 ac.**

B. Directly Connected Impervious Areas

All impervious areas are considered to be ‘directly connected’ to the retention pond. The stormwater pond, and its infrastructure will be designed for a future condition of 27.9% impervious area for Basin 1, and 46.7% impervious area for Basin 2. This is a total of 50,971 square feet of impervious area for Basin 1, and approximately 17,210 square feet of impervious area for Basin 2.

C. Curve Numbers

The selection of curve numbers used in PONDS modeling was based on USDA Technical Release-55, table 2-2C. The curve number for basin 1 in the pre-development conditions is 39 (pasture, grasslands or range – good condition, hydrological soil group A). The curve number for basin 2 in the pre-development conditions is 32 (Woods – grass combination – good condition, hydrological soil group A). For the analysis of post-development conditions, a curve number of 35 was used, for Basin 1 and it's an approximation between woods and pasture. As for Basin 2 we used a curve number of 39 for (pasture, grasslands or range – good condition, hydrological soil group A).

D. Time of Concentration

Pre-development TOC for basin 1 is 22 minutes, and 30 minutes for basin 2 as shown in the attached pre-development drainage map. The post-development drainage TOC for the site was calculated to be 24.6 minutes for Basin 1, and for Basin 2 we assume it to be 10 minutes due to the smaller size of the basin.

E. Pond Volumes

Stage-storage summary calculations for the retention ponds are included as Figure 1 of the attachments. Total volume provided is approximately 1.75-acre feet.

F. Infiltration Rates

Permeability (hydraulic conductivity) rates are taken from the empirical values given in the attached Geotechnical Exploration. The unsaturated vertical infiltration rate, is 5 feet per day. The estimated weighted horizontal hydraulic conductivity is 8 feet per day. We have applied a safety factor of 2 to the infiltration rates, and in the calculations a vertical infiltration rate of 2.5 ft/day is used, and for the horizontal conductivity 4 ft/day is used.

G. Groundwater and Confining Layer

Brown silty sand, and loose brown and orange sand, along with dense orange and green clay were generally found to a depth of 12 or more feet below grade, with stiff orange and green clay encountered at approximately between 12-22 feet below surface in 10 borings. Based on the recommendation in the Geotechnical Exploration, SHWT was established at an elevation of approximately 133 feet near the proposed pond area. The plans specify for the contractor to over-excavate the pond if necessary to remove any clayey soils within 2' of the bottom of the pond.

V. SUMMARY OF SIMULATION RESULTS

Pre-Development Basin 1 – North

Design Storm	Peak Runoff Rate	Runoff Volume
100-Yr, 24 Hour	0.47 CFS	17,586 FT^3
100-Yr, 8-Hour	0.83 CFS	8,212 FT^3
100-Yr, 4-Hour	0.82 CFS	5,121 FT^3
100-Yr, 2-Hour	0.44 CFS	2,632 FT^3
100-Yr, 1-Hour	0.42 CFS	1,319 FT^3

Pre-Development Basin 2 - South

Design Storm	Peak Runoff Rate	Runoff Volume
100-Yr, 24 Hour	1.64 CFS	22,148 FT^3
100-Yr, 8-Hour	0.79 CFS	8,562 FT^3
100-Yr, 4-Hour	0.53 CFS	4,626 FT^3
100-Yr, 2-Hour	0.31 CFS	1,953 FT^3
100-Yr, 1-Hour	0.27 CFS	1,022 FT^3

Post-Development Basin 1 – Discharge out to the FDOT ROW - Control Structure 1

Design Storm	Peak Runoff Rate	Runoff Volume	Pond 1 Peak Stage
100-Yr, 24 Hour	0.30 CFS	8,543 FT^3	135.70
100-Yr, 8-Hour	0.09 CFS	1,039 FT^3	135.37
100-Yr, 4-Hour	0.01 CFS	42 FT^3	135.17
100-Yr, 2-Hour	0 CFS	0 FT^3	134.75
100-Yr, 1-Hour	0 CFS	0 FT^3	134.45

Post-Development Basin 1 – Discharge to North – Control Structure 2

Design Storm	Peak Runoff - South	Runoff Volume	Pond 1 Peak Stage
100-Yr, 24 Hour	0.48 CFS	13,531 FT^3	135.70
100-Yr, 8-Hour	0.15 CFS	1,645 FT^3	135.37
100-Yr, 4-Hour	0.02 CFS	66 FT^3	135.17
100-Yr, 2-Hour	0 CFS	0 FT^3	134.75
100-Yr, 1-Hour	0 CFS	0 FT^3	134.45

Post-Development Basin 2 – Discharge contained entirely in Pond 2

Design Storm	Peak Runoff Rate	Peak Runoff Volume	Pond 2 Peak Stage
100-Yr, 24 Hour	0 CFS	0 FT^3	139.59
100-Yr, 8-Hour	0 CFS	0 FT^3	139.16
100-Yr, 4-Hour	0 CFS	0 FT^3	139.12
100-Yr, 2-Hour	0 CFS	0 FT^3	138.95
100-Yr, 1-Hour	0 CFS	0 FT^3	138.73

VI. MAINTENANCE INSTRUCTIONS FOR STORMWATER FACILITIES

- Inlets, pipes, the underground vault and weirs/orifices shall be kept free of trash and silt, and shall be inspected annually.

- Oils, paints, or other harmful chemicals shall be kept from the facilities. Any such materials inadvertently entering shall be immediately removed.

- During the earthwork, grading, landscaping, planting, etc., erosion protection such as synthetic bales/wattles, turbidity curtains, etc., shall be placed at inlets and outlet pipes to control stormwater quality and turbidity. Excessive compaction of pervious areas should be avoided.

- Inspections shall be made at least annually to check sump-type catch basins for major buildup of sedimentation or trash. The catch basin shall be cleaned if sedimentation level in the sump is 6 inches or greater. The sediment may be vacuumed, pumped, or manually removed from the basin.

- Remove grate or lid and remove sediment that has entered the control structure.

- Pond should be cleared of nuisance species such as cattails as necessary.

Pond Volume / Treatment Volume Calculations

Site and Catchment Information

Analysis: Specified Removal Efficiency

Catchment Name	Overall Site
Rainfall Zone	Florida Zone 2
Annual Mean Rainfall	50.00

Pre-Condition Landuse Information

Landuse	Undeveloped - Upland Hardwood: TN=1.042 TP=0.346
Area (acres)	5.05
Rational Coefficient (0-1)	0.02
Non DCIA Curve Number	32.00
DCIA Percent (0-100)	2.00
Nitrogen EMC (mg/l)	1.042
Phosphorus EMC (mg/l)	0.346
Runoff Volume (ac-ft/yr)	0.401
Groundwater N (kg/yr)	0.000
Groundwater P (kg/yr)	0.000
Nitrogen Loading (kg/yr)	0.515
Phosphorus Loading (kg/yr)	0.171

Post-Condition Landuse Information

Landuse	Low-Intensity Commercial: TN=1.13 TP=0.188
Area (acres)	5.05
Rational Coefficient (0-1)	0.33
Non DCIA Curve Number	39.00
DCIA Percent (0-100)	40.00
Wet Pond Area (ac)	0.00
Nitrogen EMC (mg/l)	1.130
Phosphorus EMC (mg/l)	0.188
Runoff Volume (ac-ft/yr)	6.893
Groundwater N (kg/yr)	0.000
Groundwater P (kg/yr)	0.000

Nitrogen Loading (kg/yr)	9.604
Phosphorus Loading (kg/yr)	1.598

Catchment Number: 1 Name: Overall Site

Summary Treatment Report Version: 4.3.1

Project: Alachua Commercial Development

Date:4/10/2025

Analysis Type: Specified Removal Efficiency

BMP Types:

Catchment 1 - (Overall Site) Retention

Based on % removal values to the nearest percent

Routing Summary

Catchment 1 Routed to Outlet

Total nitrogen target removal met? **Yes**

Total phosphorus target removal met? **Yes**

Summary Report

Nitrogen

Surface Water Discharge

Total N pre load	.51 kg/yr

Total N post load	9.6 kg/yr	
Target N load reduction	55 %	
Target N discharge load	4.32 kg/yr	
Percent N load reduction	82 %	
Provided N discharge load	1.74 kg/yr	3.85 lb/yr
Provided N load removed	7.86 kg/yr	17.33 lb/yr

Phosphorus

Surface Water Discharge

Total P pre load	.171 kg/yr	
Total P post load	1.598 kg/yr	
Target P load reduction	80 %	
Target P discharge load	.32 kg/yr	
Percent P load reduction	82 %	
Provided P discharge load	.29 kg/yr	.64 lb/yr
Provided P load removed	1.308 kg/yr	2.883 lb/yr

Project Data

Project Name:	Pre-Development - Commercial Development Alachua
Simulation Description:	
Project Number:	2024.0332
Engineer :	GFC
Supervising Engineer:	SAA
Date:	04-07-2025

Aquifer Data

Base Of Aquifer Elevation, [B] (ft datum):	131.50
Water Table Elevation, [WT] (ft datum):	132.00
Horizontal Saturated Hydraulic Conductivity, [Kh] (ft/day):	8.00
Fillable Porosity, [n] (%):	20.00

Vertical infiltration was not considered.

Geometry Data

Equivalent Pond Length, [L] (ft):	0.0
Equivalent Pond Width, [W] (ft):	0.0

Ground water mound is expected to intersect the pond bottom

Stage vs Area Data

Stage (ft datum)	Area (ft^2)

Discharge Structures

Discharge Structure #1 is inactive

Discharge Structure #2 is inactive

Discharge Structure #3 is inactive

Scenario Input Data

Scenario 1 :: Pre-Development Basin 1, 100-year, 10-Day

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	18.0
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 2 :: Pre-Development Basin 1, 100-year, 7-Day

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	16.0
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 3 :: Pre-Development Basin 1, 100-year, 72-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	13.8
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 4 :: Pre-Development Basin 1, 100-year, 24-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	11.0
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 5 :: Pre-Development Basin 1, 100-year, 8-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	8.0
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 6 :: Pre-Development Basin 1, 100-year, 4-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	6.7
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 7 :: Pre-Development Basin 1, 100-year, 2-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	5.4
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 8 :: Pre-Development Basin 1, 100-year, 1-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	4.4
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 9 :: Pre-Development Basin 1, 50-year, 10-Day

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	13.7
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 10 :: Pre-Development Basin 1, 50-year, 7-Day

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	12.8
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 11 :: Pre-Development Basin 1, 50-year, 72-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	11.5
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 12 :: Pre-Development Basin 1, 50-year, 24-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	8.7
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 13 :: Pre-Development Basin 1, 50-year, 8-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	6.7
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 14 :: Pre-Development Basin 1, 50-year, 4-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	5.5
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 15 :: Pre-Development Basin 1, 50-year, 2-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	4.6
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 16 :: Pre-Development Basin 1, 50-year, 1-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	3.7
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 17 :: Pre-Development Basin 1, 25-year, 10-Day

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	15.0
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 18 :: Pre-Development Basin 1, 25-year, 7-Day

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	13.0
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 19 :: Pre-Development Basin 1, 25-year, 72-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	11.0
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 20 :: Pre-Development Basin 1, 25-year, 24-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0

Design Rainfall Depth (inches)	6.5
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 36 :: Pre-Development Basin 1, 5-year, 24-hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	5.1
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 37 :: Pre-Development Basin 1, 5-year, 8-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	4.1
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 38 :: Pre-Development Basin 1, 5-year, 4-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	3.5
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 39 :: Pre-Development Basin 1, 5-year, 2-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	3.0
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 40 :: Pre-Development Basin 1, 5-year, 1-hour

Hydrograph Type: Inline SCS
• **Modflow Routing:** **Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	2.4
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 41 :: Pre-Development Basin 1, 3-year, 10-Day

Hydrograph Type: Inline SCS
• **Modflow Routing:** **Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	10.8
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 42 :: Pre-Development Basin 1, 3-year, 7-Day

Hydrograph Type: Inline SCS
• **Modflow Routing:** **Not routed**
Repetitions: 1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	9.5
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 43 :: Pre-Development Basin 1, 3-year, 72-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	7.6
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 44 :: Pre-Development Basin 1, 3-year, 24-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	6.0
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 45 :: Pre-Development Basin 1, 3-year, 8-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	4.5
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 46 :: Pre-Development Basin 1, 3-year, 4-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	3.8
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 47 :: Pre-Development Basin 1, 3-year, 2-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	3.2
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 48 :: Pre-Development Basin 1, 3-year, 1-hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	1.670
Time Of Concentration (minutes)	22.2
DCIA (%)	3.0
Curve Number	39
Design Rainfall Depth (inches)	2.6
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 49 :: Pre-Development Basin 2, 100-year, 24-Hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	3.340
Time Of Concentration (minutes)	30.0
DCIA (%)	2.0
Curve Number	32
Design Rainfall Depth (inches)	11.0
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 50 :: Pre-Development Basin 2, 100-Year, 8-Hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	3.340
Time Of Concentration (minutes)	30.0
DCIA (%)	2.0
Curve Number	32
Design Rainfall Depth (inches)	8.0
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 51 :: Pre-Development Basin 2, 100-Year, 4-Hour

Hydrograph Type:	Inline SCS
• **Modflow Routing:**	**Not routed**
Repetitions:	1

Basin Area (acres)	3.340
Time Of Concentration (minutes)	30.0
DCIA (%)	2.0
Curve Number	32
Design Rainfall Depth (inches)	6.7
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 52 :: Pre-Development Basin 2, 100-Year, 2-Hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1

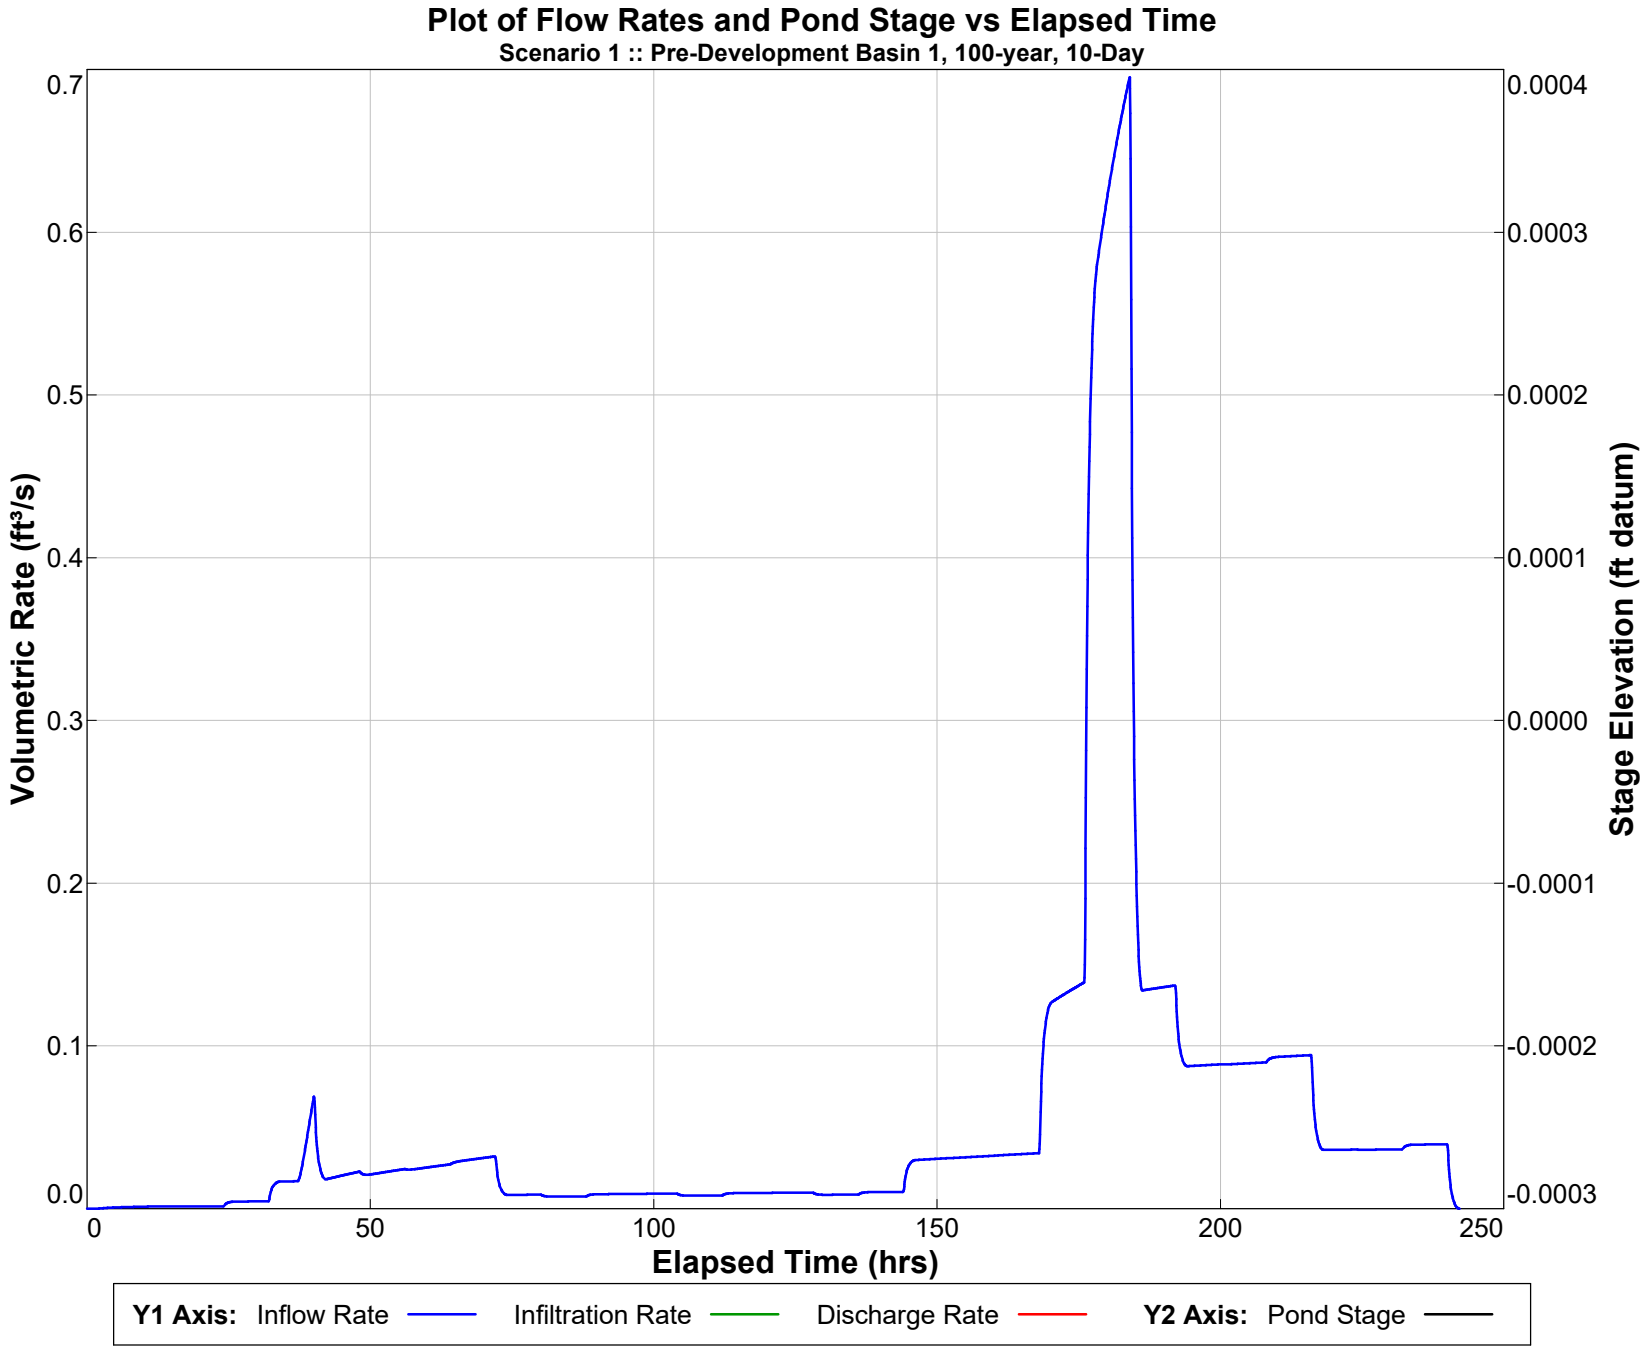
Basin Area (acres)	3.340
Time Of Concentration (minutes)	30.0
DCIA (%)	2.0
Curve Number	32
Design Rainfall Depth (inches)	5.4
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Scenario 53 :: Pre-Development Basin 2, 100-Year, 1-Hour

Hydrograph Type: Inline SCS
• **Modflow Routing: Not routed**
Repetitions: 1



Basin Area (acres)	3.340
Time Of Concentration (minutes)	30.0
DCIA (%)	2.0
Curve Number	32
Design Rainfall Depth (inches)	4.4
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 132.00 (default)

No times after storm specified.

Summary of Results *:: Scenario 1 :: Pre-Development Basin 1, 100-year, 10-Day*

Project Data

Project Name:	Pond 1 - Alachua, Commercial Development
Simulation Description:	
Project Number:	2024.0332
Engineer :	GFC
Supervising Engineer:	SAA
Date:	07/16/2025

Aquifer Data

Base Of Aquifer Elevation, [B] (ft datum):	130.50
Water Table Elevation, [WT] (ft datum):	131.00
Horizontal Saturated Hydraulic Conductivity, [Kh] (ft/day):	4.00
Fillable Porosity, [n] (%):	20.00
Unsaturated Vertical Infiltration Rate, [Iv] (ft/day):	2.5
Maximum Area For Unsaturated Infiltration, [Av] (ft²):	21486.0

Geometry Data

Equivalent Pond Length, [L] (ft):	160.0
Equivalent Pond Width, [W] (ft):	134.0

Ground water mound is expected to intersect the pond bottom

Stage vs Area Data

Stage (ft datum)	Area (ft²)
133.00	4478.0
134.00	12942.0
135.00	16137.0
136.00	19016.0
137.00	21486.0

Discharge Structures

Discharge Structure #1 is active as weir

Structure Parameters

Description: 2.5" DOT Discharge Weir

Weir elevation, (ft datum):	135.1
Weir coefficient:	3.13
Weir length, (ft):	.208333
Weir exponent:	1.5

Tailwater - disabled, free discharge

Discharge Structure #2 is active as weir

Structure Parameters

Description: 4" Overflow Weir to North

Weir elevation, (ft datum):	135.1
Weir coefficient:	3.13
Weir length, (ft):	0.33
Weir exponent:	1.5

Tailwater - disabled, free discharge

Discharge Structure #3 is inactive

Scenario Input Data

Scenario 1 :: Post-Development, 100-Year, 10-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	18.0
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 2 :: Post-Development, 100-Year, 7-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	16.0
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 3 :: Post-Development, 100-Year, 72-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	13.8
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 4 :: Post-Development, 100-Year 24-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	11.0
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 5 :: Post-Development, 100-Year 8-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	8.0
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 6 :: Post-Development, 100-Year 4-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	6.7
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 7 :: Post-Development, 100-Year 2-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	5.4
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 8 :: Post-Development, 100-Year 1-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	4.4
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 9 :: Post-Development, 50-Year, 10-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	13.7
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 10 :: Post-Development, 50-Year, 7-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	12.8
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 11 :: Post-Development, 50-Year, 72-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	11.5
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 12 :: Post-Development, 50-Year, 24-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	8.7
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 13 :: Post-Development, 50-Year, 8-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	6.7
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 14 :: Post-Development, 50-Year, 4-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	5.5
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 15 :: Post-Development, 50-Year, 2-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	4.6
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 16 :: Post-Development, 50-Year, 1-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	3.7
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 17 :: Post-Development, 25-Year, 10-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	15.0
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 18 :: Post-Development, 25-Year, 7-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	13.0
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 19 :: Post-Development, 25-Year, 72-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	11.0
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 20 :: Post-Development, 25-Year, 24-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	8.6
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 21 :: Post-Development, 25-Year, 8-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	6.6
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 22 :: Post-Development, 25-Year, 4-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	5.3
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 23 :: Post-Development, 25-Year, 2-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	4.4
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 24 :: Post-Development, 25-Year, 1-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	3.6
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 25 :: Post-Development, 10-Year, 10-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	12.5
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 26 :: Post-Development, 10-Year, 7-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	11.0
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 27 :: Post-Development, 10-Year, 72-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	8.9
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 28 :: Post-Development, 10-Year, 24-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	7.9
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 29 :: Post-Development, 10-Year, 8-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	5.8
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 30 :: Post-Development, 10-Year, 4-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	4.8
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 31 :: Post-Development, 10-Year, 2-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	4.0
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 32 :: Post-Development, 10-Year, 1-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	3.2
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 33 :: Post-Development, 5-Year, 10-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	8.8
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 34 :: Post-Development, 5-Year, 7-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	7.9
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 35 :: Post-Development, 5-Year, 72-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	6.5
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 36 :: Post-Development, 5-Year, 24-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	5.1
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 37 :: Post-Development, 5-Year, 8-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	4.1
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 38 :: Post-Development, 5-Year, 4-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	3.5
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 39 :: Post-Development, 5-Year, 2-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	3.0
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 40 :: Post-Development, 5-Year, 1-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	2.4
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 41 :: Post-Development, 3-Year, 10-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	10.8
Design Rainfall Duration (hours)	240.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 240 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 42 :: Post-Development, 3-Year, 7-Day

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	9.5
Design Rainfall Duration (hours)	168.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 168 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 43 :: Post-Development, 3-Year, 72-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	7.6
Design Rainfall Duration (hours)	72.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 72 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 44 :: Post-Development, 3-Year 24-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	6.0
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 24 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 45 :: Post-Development, 3-Year 8-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	4.5
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 8 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario Input Data (cont'd.)

Scenario 46 :: Post-Development, 3-Year 4-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	3.8
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 4 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 47 :: Post-Development, 3-Year 2-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	3.2
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 2 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

Scenario 48 :: Post-Development, 3-Year 1-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	4.194
Time Of Concentration (minutes)	24.6
DCIA (%)	27.9
Curve Number	35
Design Rainfall Depth (inches)	2.6
Design Rainfall Duration (hours)	1.0
Shape Factor	UHG 256
Rainfall Distribution	FDOT 1 Hour

Initial ground water level (ft datum) 131.00 (default)

No times after storm specified.

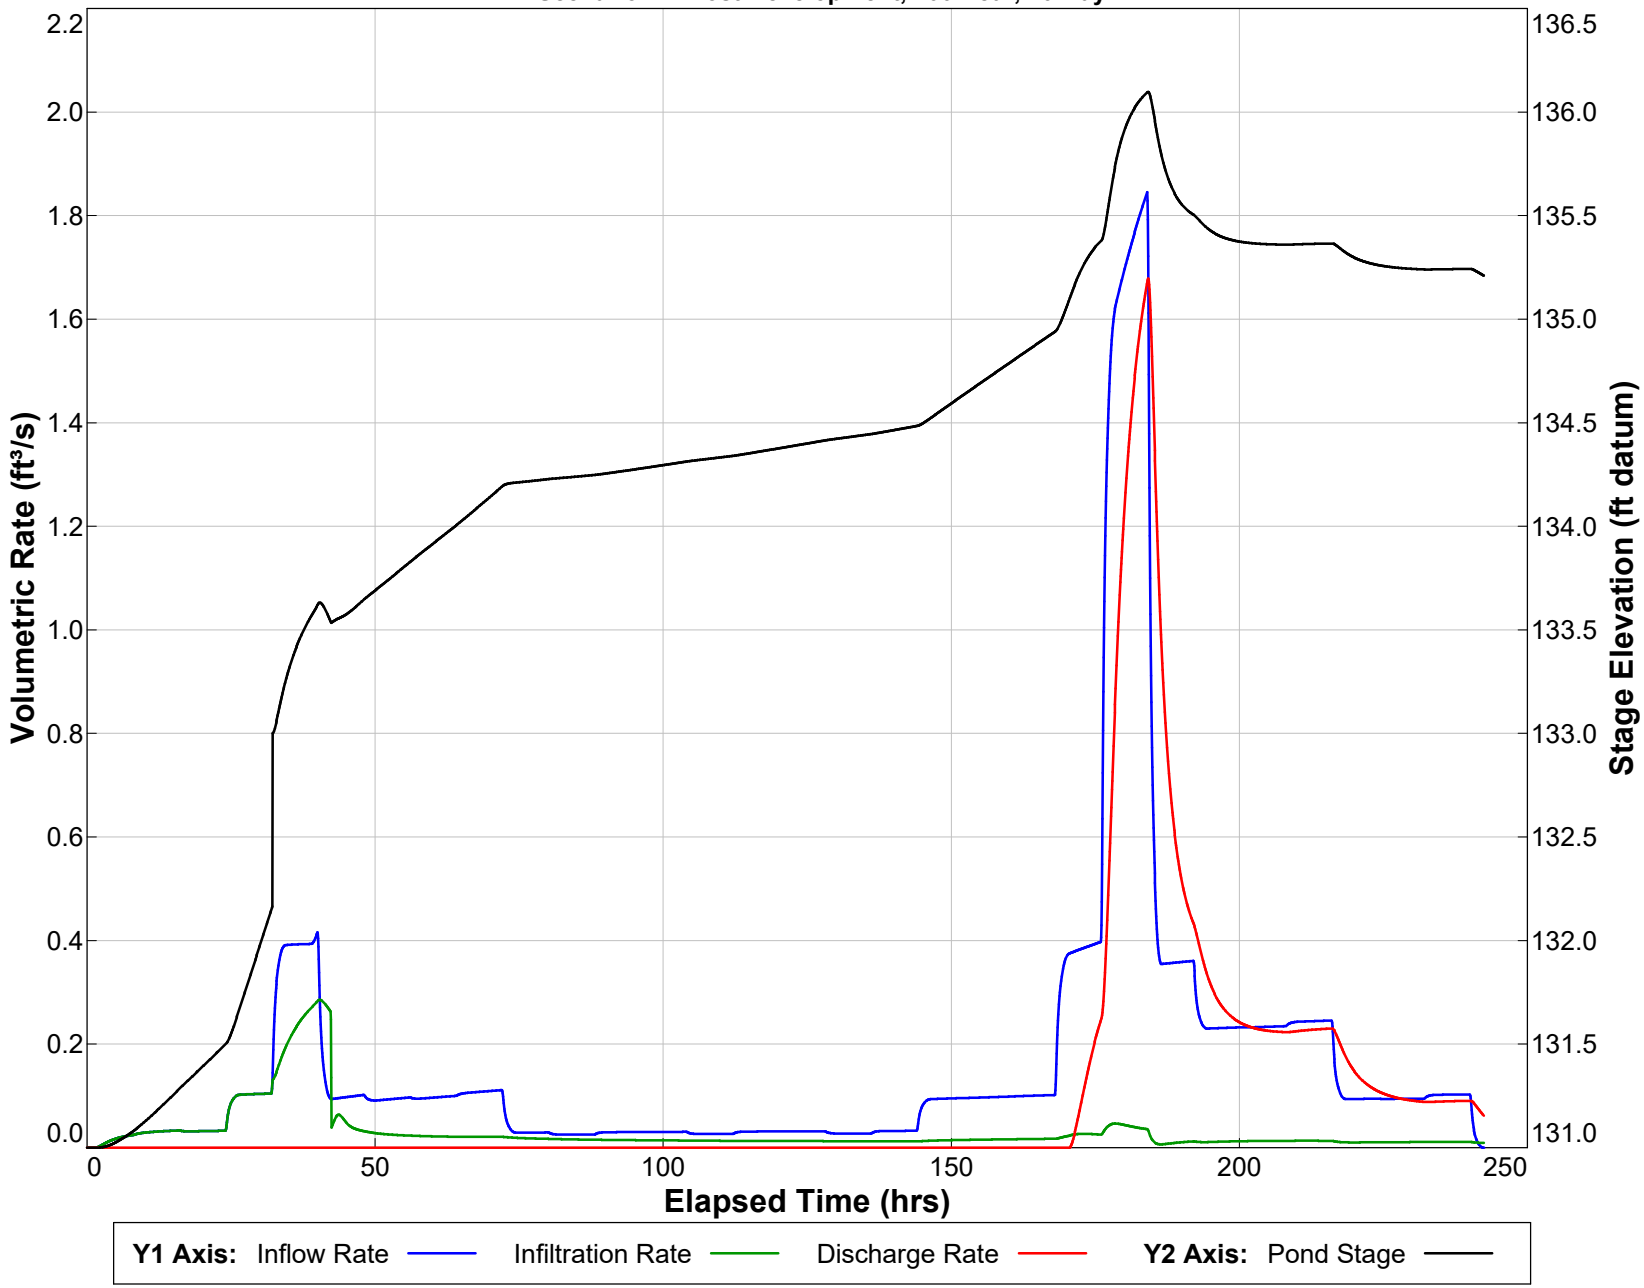
Scenario Input Data (cont'd.)

Scenario 49 :: Treatment Volume Recovery

Hydrograph Type: Slug Load
Modflow Routing: Routed with infiltration

Treatment Volume (ft^3) 10633.46

Initial ground water level (ft datum) 131.00 (default)



Time After Storm Event (days)	Time After Storm Event (days)	Time After Storm Event (days)
0.100	0.750	2.500
0.200	1.000	3.000
0.300	1.250	4.000
0.400	1.500	
0.500	2.000	

Summary of Results *:: Scenario 1 :: Post-Development, 100-Year, 10-Day*

	Time (hours)	Stage (ft datum)	Rate (ft^3/s)	Volume (ft^3)
Stage				
Minimum	0.000	131.00		
Maximum	184.172	136.10

Project Data

Project Name: Pond 2 - Alachua, Commercial Development

Simulation Description:
Project Number: 2024.0332

Engineer : GFC

Supervising Engineer: SAA

Date: 7/16/25

Aquifer Data

Base Of Aquifer Elevation, [B] (ft datum):	134.50
Water Table Elevation, [WT] (ft datum):	135.00
Horizontal Saturated Hydraulic Conductivity, [Kh] (ft/day):	4.00
Fillable Porosity, [n] (%):	20.00
Unsaturated Vertical Infiltration Rate, [Iv] (ft/day):	2.5
Maximum Area For Unsaturated Infiltration, [Av] (ft²):	9436.0

Geometry Data

Equivalent Pond Length, [L] (ft): 112.0

Equivalent Pond Width, [W] (ft): 84.3

Ground water mound is expected to intersect the pond bottom

Stage vs Area Data

Stage (ft datum)	Area (ft²)
138.00	5862.0
139.00	7597.0
140.00	9436.0

Discharge Structures

Discharge Structure #1 is active as weir

Structure Parameters

Description: Top of Bank

Weir elevation, (ft datum):	140
Weir coefficient:	2.69
Weir length, (ft):	100
Weir exponent:	2.0

Tailwater - disabled, free discharge

Discharge Structures (cont'd.)

Discharge Structure #2 is inactive

Discharge Structure #3 is inactive

Scenario Input Data

Scenario 1 :: Post-Development, 100-Year 24-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	0.846
Time Of Concentration (minutes)	10.0
DCIA (%)	46.7
Curve Number	39
Design Rainfall Depth (inches)	11.0
Design Rainfall Duration (hours)	24.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 135.00 (default)

Time After Storm Event (days)
1.500
4.000

Scenario 2 :: Post-Development, 100-Year 8-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	0.846
Time Of Concentration (minutes)	10.0
DCIA (%)	46.7
Curve Number	39
Design Rainfall Depth (inches)	8.0
Design Rainfall Duration (hours)	8.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 135.00 (default)

No times after storm specified.

Scenario 3 :: Post-Development, 100-Year 4-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	0.846
Time Of Concentration (minutes)	10.0
DCIA (%)	46.7
Curve Number	39
Design Rainfall Depth (inches)	6.7
Design Rainfall Duration (hours)	4.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 135.00 (default)

Scenario Input Data (cont'd.)

Scenario 3 (cont'd.) :: SCS :: Post-Development, 100-Year 4-Hour

No times after storm specified.

Scenario 4 :: Post-Development, 100-Year 2-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	0.846
Time Of Concentration (minutes)	10.0
DCIA (%)	46.7
Curve Number	39
Design Rainfall Depth (inches)	5.4
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 135.00 (default)

No times after storm specified.

Scenario 5 :: Post-Development, 100-Year 1-Hour

Hydrograph Type:	Inline SCS
Modflow Routing:	Routed with infiltration
Repetitions:	1

Basin Area (acres)	0.846
Time Of Concentration (minutes)	10.0
DCIA (%)	46.7
Curve Number	39
Design Rainfall Depth (inches)	4.4
Design Rainfall Duration (hours)	2.0
Shape Factor	UHG 256
Rainfall Distribution	SCS Type II Florida Modified

Initial ground water level (ft datum) 135.00 (default)

No times after storm specified.

Scenario 6 :: Treatment Volume Recovery

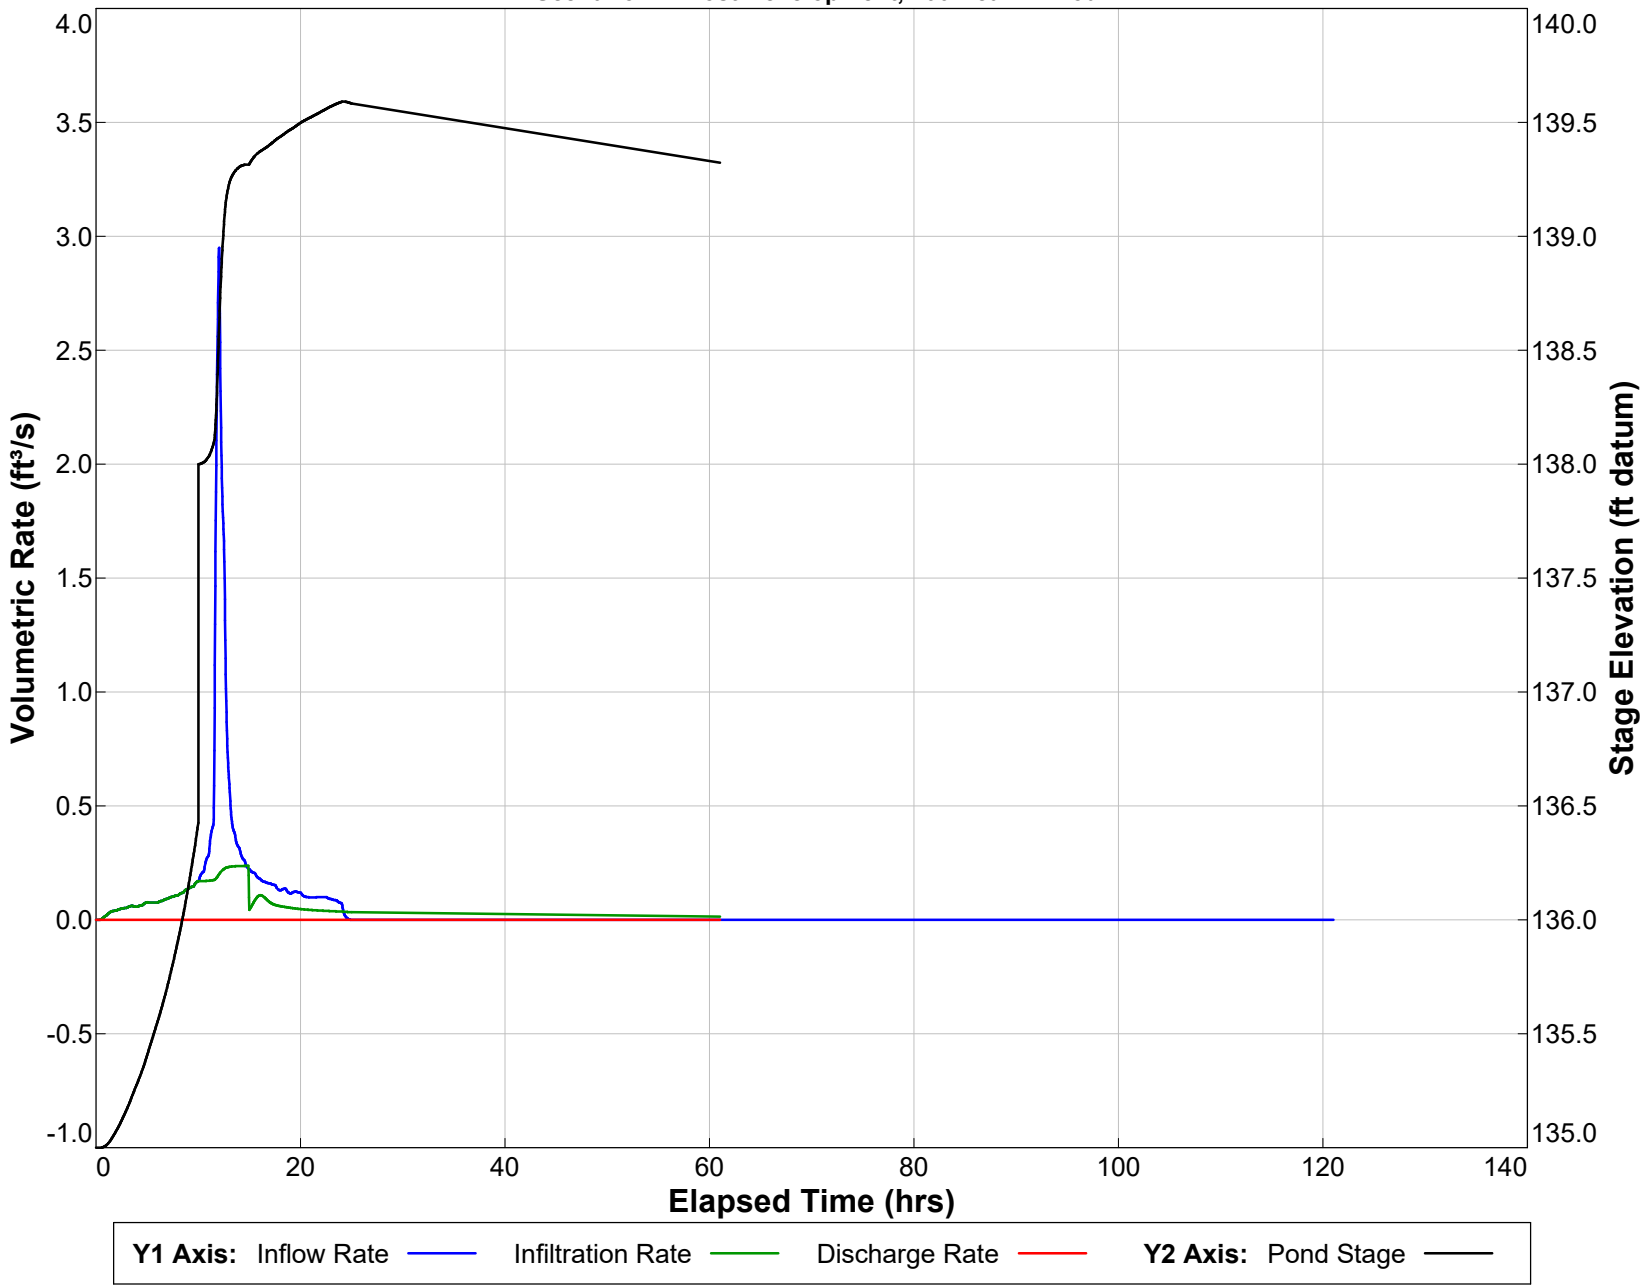
Hydrograph Type:	Slug Load
Modflow Routing:	Routed with infiltration

Treatment Volume (ft^3) 1303

Initial ground water level (ft datum) 135.00 (default)

Scenario Input Data (cont'd.)

Scenario 6 (cont'd.) :: Slug Load :: Treatment Volume Recovery



Time After Storm Event (days)	Time After Storm Event (days)	Time After Storm Event (days)
0.100	0.750	2.500
0.200	1.000	3.000
0.300	1.250	4.000
0.400	1.500	
0.500	2.000	

Summary of Results *:: Scenario 1 :: Post-Development, 100-Year 24-Hour*

MAP INFORMATION

The soil surveys that comprise your AOI were mapped at 1:15,800.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL:
Coordinate System: Web Mercator (EPSG:3857)

Maps from the Web Soil Survey are based on the Web Mercator projection, which preserves direction and shape but distorts distance and area. A projection that preserves area, such as the Albers equal-area conic projection, should be used if more accurate calculations of distance or area are required.

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Alachua County, Florida
Survey Area Data: Version 26, Aug 28, 2024

Soil map units are labeled (as space allows) for map scales 1:50,000 or larger.

Date(s) aerial images were photographed: Jan 9, 2022—Feb 10, 2022

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Map Unit Legend

Map Unit Symbol	Map Unit Name	Acres in AOI	Percent of AOI
3	Arredondo fine sand, 0 to 5 percent slopes	5.1	9.9%
4	Arredondo-Urban land complex, 0 to 5 percent slopes	29.0	55.8%
5	Fort Meade fine sand, 0 to 5 percent slopes	16.2	31.2%
8	Millhopper sand, 0 to 5 percent slopes	0.2	0.5%
73	Kendrick sand, 5 to 8 percent slopes	1.4	2.7%
Totals for Area of Interest		**52.0**	**100.0%**

NOTES TO USERS

This map is for use in administering the National Flood Insurance Program. It does not necessarily identify all areas subject to flooding, particularly from local drainage sources of small size. The **community map repository** should be consulted for possible updated or additional flood hazard information.

To obtain more detailed information in areas where **Base Flood Elevations** (BFEs) and/or **floodways** have been determined, users are encouraged to consult the Flood Profiles, Floodway Data and/or Summary of Stillwater Elevations tables contained within the Flood Insurance Study (FIS) report that accompanies this FIRM. Users should be aware that BFEs shown on the FIRM represent rounded whole-foot elevations. These BFEs are intended for flood insurance rating purposes only and should not be used as the sole source of flood elevation information. Accordingly, flood elevation data presented in the FIS report should be utilized in conjunction with the FIRM for purposes of construction and/or floodplain management.

Coastal Base Flood Elevations shown on this map apply only landward of 0.0' North American Vertical Datum of 1988 (NAVD 88). Users of this FIRM should be aware that coastal flood elevations are also provided in the Summary of Stillwater Elevations tables in the Flood Insurance Study report for this jurisdiction. Elevations shown in the Summary of Stillwater Elevations tables should be used for construction and/or floodplain management purposes when they are higher than the elevations shown on this FIRM.

Boundaries of the **floodways** were computed at cross sections and interpolated between cross sections. The floodways were based on hydraulic considerations with regard to requirements of the National Flood Insurance Program. Floodway widths and other pertinent floodway data are provided in the Flood Insurance Study report for this jurisdiction.

Certain areas not in Special Flood Hazard Areas may be protected by **flood control structures.** Refer to Section 2.4 "Flood Protection Measures" of the Flood Insurance Study report for information on flood control structures in this jurisdiction.

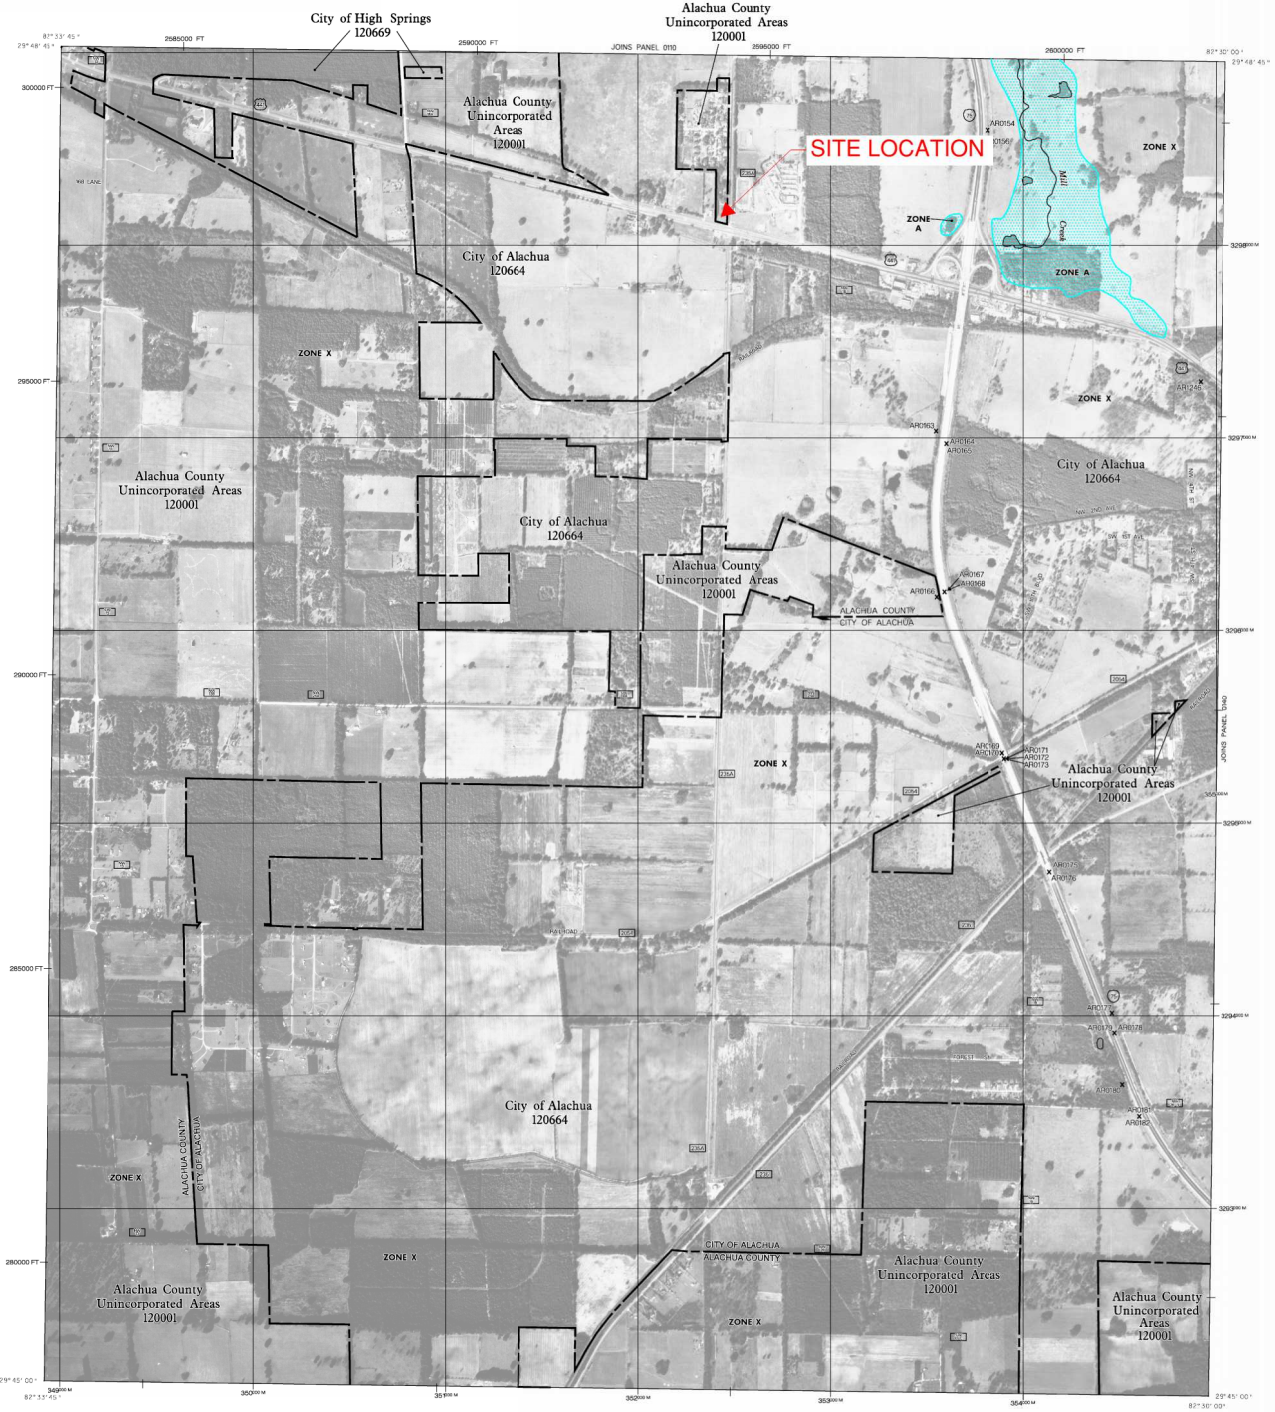
The **projection** used in the preparation of this map was Universal Transverse Mercator (UTM) zone 17. The **horizontal datum** was NAD 83, GRS80 spheroid. Differences in datum, spheroid, projection or UTM zones used in the production of FIRMs for adjacent jurisdictions may result in slight positional differences in map features across jurisdiction boundaries. These differences do not affect the accuracy of this FIRM.

Flood elevations on this map are referenced to the North American Vertical Datum of 1988. These flood elevations must be compared to structure and ground elevations referenced to the same **vertical datum**. For information regarding conversion between the National Geodetic Vertical Datum of 1929 and the North American Vertical Datum of 1988, visit the National Geodetic Survey website at www.ngs.noaa.gov or contact the National Geodetic Survey at the following address:

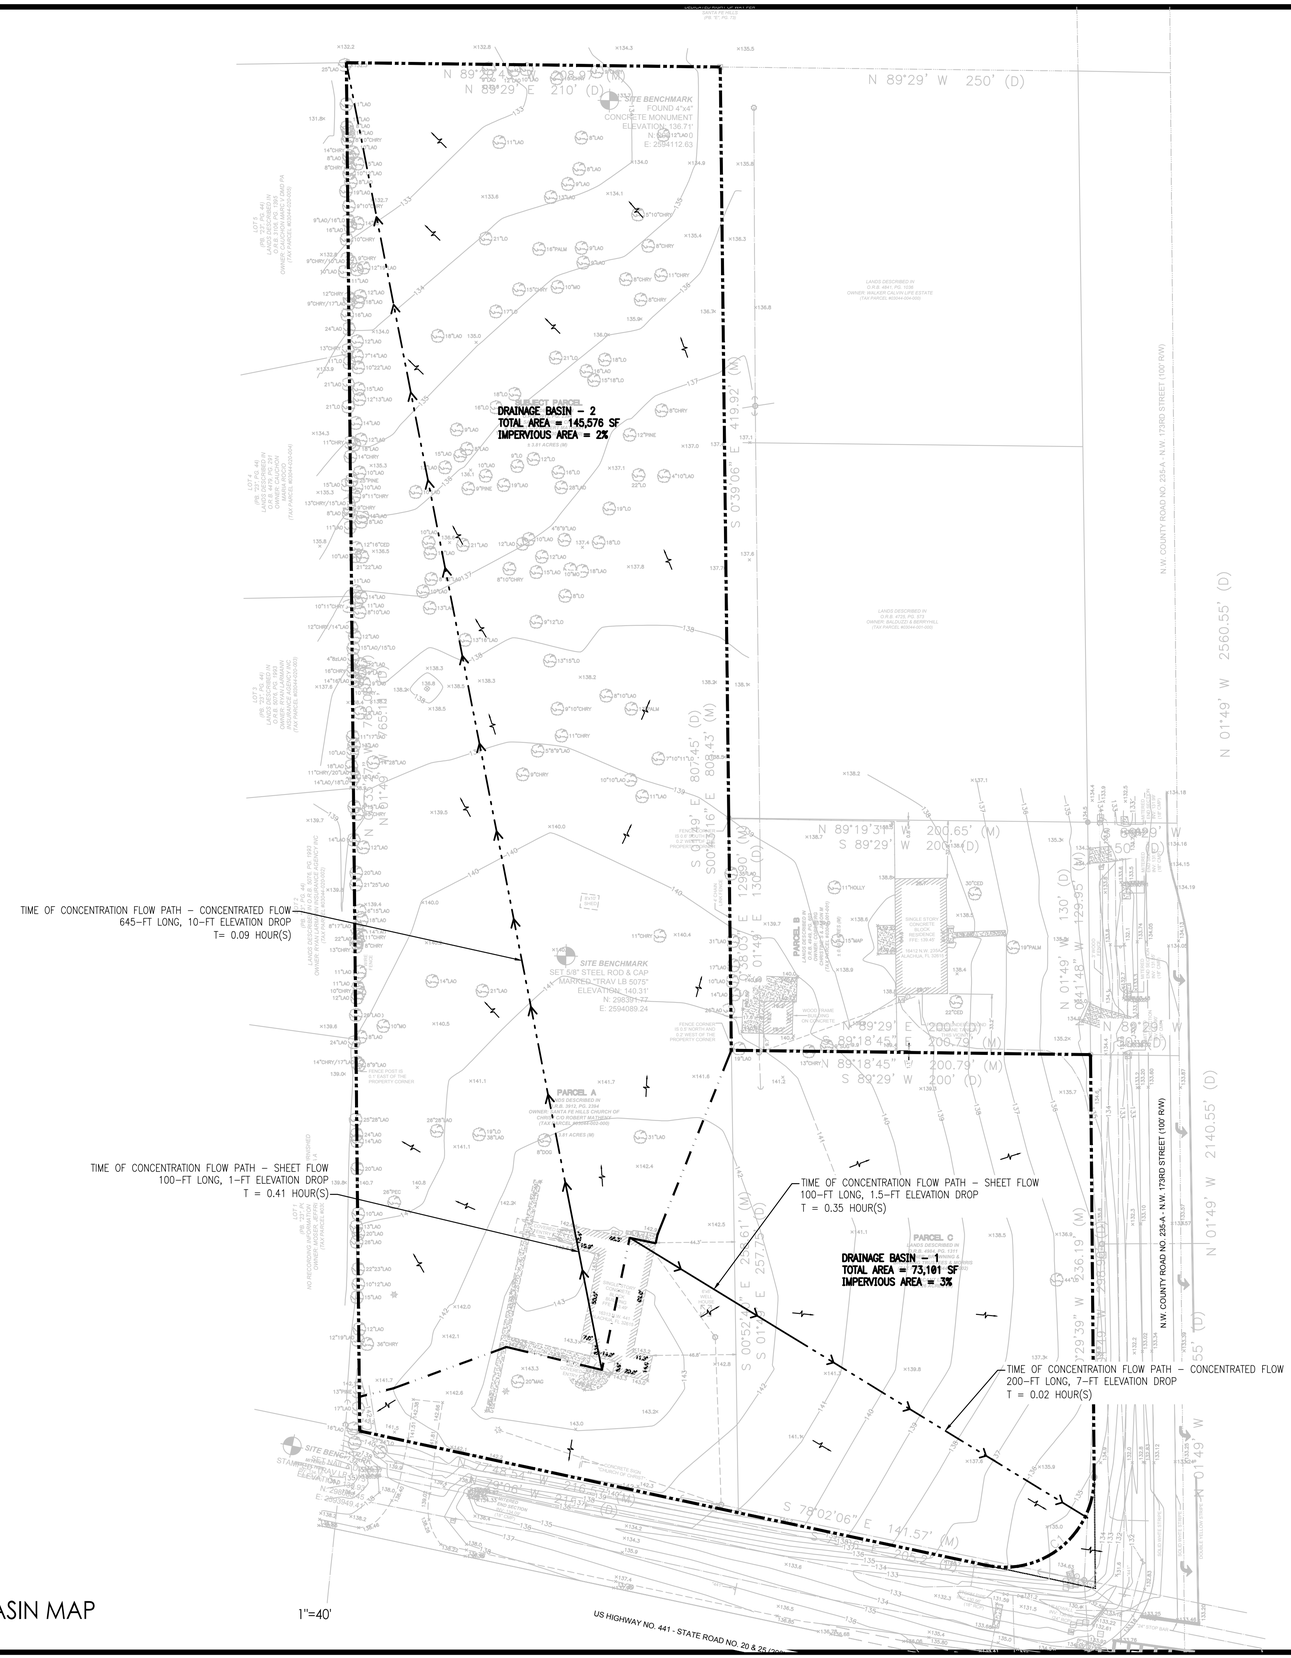
Spatial Reference System Division
National Geodetic Survey, NOAA
Silver Spring Metro Center
1315 East-West Highway
Silver Spring, Maryland 20910
(301) 713-3191

To obtain current elevation, description, and/or location information for **bench marks** shown on this map, please contact the Information Services Branch of the National Geodetic Survey at **(301) 713-3242**, or visit their website at www.ngs.noaa.gov.

Base map information shown on this FIRM was derived from U.S. Geological Survey Digital Orthophoto Quadrangles (DOQs) produced at a scale of 1:12,000 from photography dated 1994 or later.



This map reflects more detailed and up-to-date **stream channel configurations** than those shown on the previous FIRM for this jurisdiction. The floodplains and floodways that were transferred from the previous FIRM may have been adjusted to conform to these new stream channel configurations. As a result, the Flood Profiles and Floodway Data tables in the Flood Insurance Study report (which contains authoritative hydraulic data) may reflect stream channel distances that differ from what is shown on this map.



Corporate limits shown on this map are based on the best data available at the time of publication. Because changes due to annexations or de-annexations may have occurred after this map was published, map users should contact appropriate community officials to verify current corporate limit locations.

Please refer to the separately printed **Map Index** for an overview map of the county showing the layout of map panels; community map repository addresses; and a Listing of Communities table containing National Flood Insurance Program dates for each community as well as a listing of the panels on which each community is located.

Contact the **FEMA Map Service Center** at 1-800-358-9616 for information on available products associated with this FIRM. Available products may include previously issued Letters of Map Change, a Flood Insurance Study report, and/or digital versions of this map. The FEMA Map Service Center may also be reached by Fax at 1-800-358-9620 and their website at www.fema.gov/mac.

If you have **questions about this map** or questions concerning the National Flood Insurance Program in general, please call **1-877-FEMA MAP** (1-877-336-2627) or visit the FEMA website at www.fema.gov.

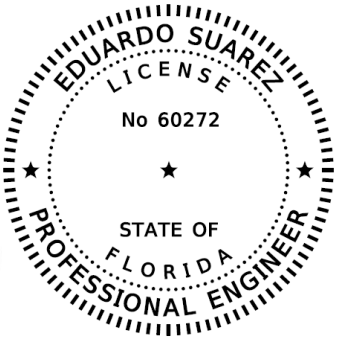
Dear Mr. Jones:



UES Professional Solutions, LLC (UES) has completed the geotechnical engineering services for the subject project in Alachua, Alachua County, Florida. This Geotechnical Report is submitted in satisfaction of the contracted scope of services as summarized in UES Proposal No. 2133148, dated February 19, 2025.

This Report presents the results of our field subsurface exploration and laboratory soil testing programs, and recommendations for geotechnical site preparation, foundation design and construction, pavement design, and stormwater management system soil design parameters.

We appreciate the opportunity to have assisted you on this project and look forward to a continued association. Please do not hesitate to contact our office if you should have any questions, or to assist your office with the remaining phases of project design and construction.

Respectfully submitted,
UES PROFESSIONAL SOLUTIONS, LLC

EXECUTIVE SUMMARY

We have prepared this executive summary solely to provide a general overview. Do not rely on this executive summary for any purpose except that for which it was prepared. Rely on the full report for information about findings, recommendations, and other concerns.

Project Location and Description

The project parcel is located at the northwest corner of US Highway 441 and County Road 235A in Alachua, Alachua County, Florida. Current site development plans include the construction of new Chipotle restaurant, a new Dutch Bros Coffee drive-thru, and another Quick Service Restaurant (QSR) with associated pavement and stormwater management areas. Our office was provided with a copy of a Boring Location Plan Exhibit, prepared by Interplan, LLC.

Soil and Groundwater Conditions

The soil test borings generally encountered very loose to loose sand with silt to silty sand [SP-SM/SM] to depths of 2.5 to 7 feet followed by very clayey sands to clay [SC/CH] to the maximum boring termination depths of 20 feet. The groundwater level was not encountered at the boring locations at the time of our exploration. Based upon our review of regional hydrogeology and the Alachua County Soil Survey, we estimate the normal seasonal high groundwater level will be deeper than 6 feet below the ground surface in the general area of the project site; however, stormwater can perch on top of the clayey sands when sandy soils are present at the surface. Isolated areas with a transient perched groundwater should be expected to occur. The perched groundwater will be a transient condition, directly related to rainfall, irrigation and site grading.

Geotechnical Considerations

Geotechnical considerations for the design and construction of the proposed structure area include the presence of potentially-expansive clayey soils in the subsurface soil profile, and very loose shallow sandy soils. Where encountered, shallow deposits of clay soils must be addressed through site grading, over-excavation and replacement, site drainage and stiffened foundation.

Foundation Design

Assuming any questionable/expansive soils are removed a minimum of 4 feet below the bottom of footings and floor slab, and positive drainage is established, a conventional shallow foundation system may be used for support of the proposed building construction on this project with the understanding that some aesthetic cracking and other minor architectural type nuisance issues may occur during the useful life of the structure. Following completion of the recommended geotechnical site preparation and building pad preparation activities, the proposed building may be supported on a shallow foundation system designed with a maximum average soil bearing pressure of 2,000 pounds per square foot (psf).

We recommend the Building Designers consider the use of grade beam foundations, for support of load bearing walls on this project. The deeper concrete section, and top and bottom steel configuration of a typical grade beam foundation, should help mitigate differential settlement concerns. A modulus of subgrade reaction of 100 pounds per cubic inch (pci) may be used for grade beam foundation design.

1.0 INTRODUCTION

1.1 GENERAL

In this report, we present the results of the subsurface exploration of the site for the proposed building, and associated parking and stormwater management areas located in Alachua, Alachua County, Florida. We have divided this report into the following sections:

- SCOPE OF SERVICES - Defines what we did
- FINDINGS - Describes what we encountered
- RECOMMENDATIONS - Describes what we encourage you to do
- LIMITATIONS - Describes the restrictions inherent in this report
- APPENDICES - Presents support materials referenced in this report

2.0 SCOPE OF SERVICES

2.1 PROJECT DESCRIPTION

The project parcel is located at the northwest corner of US Highway 441 and County Road 235A in Alachua, Alachua County, Florida. Current site development plans include the construction of new Chipotle restaurant, a new Dutch Bros Coffee drive-thru, and another Quick Service Restaurant (QSR) with associated pavement and stormwater management areas. Our office was provided with a copy of a Boring Location Plan Exhibit, prepared by Interplan, LLC.

Our office was not provided with Foundation Plans or any other construction-related information other than that discussed herein. Considering the limitations stated above and based on prior experience with structures of this type, we assumed the following structural loading conditions: ground floor slab loads not exceeding 100 psf, a maximum of 3 kips per linear feet (klf) on wall footings, and a maximum load of 30 kips on individual footings. We understand the building construction will require nominal fill (2 feet or less) placement for leveling of the proposed building footprint and building pad construction.

If our understandings and assumptions of project issues are incorrect our conclusions and recommendations will not be considered valid until we have had the opportunity to review all pertinent issues. The above constitutes all of the project information provided to our office at the time of this Report preparation.

We note that, our authorized scope of services and this Report do not address any other project elements, such as earth retaining walls, sidewalks, or slope stability issues that may be part of the overall project site plan. Since other site improvements could have detrimental effects on the performance of a foundation system at this site, UES, or other qualified geotechnical consultant, should be consulted to review the entire site development plan and conduct additional services as required to minimize any impact of associated improvements on foundation performance.

2.2 PURPOSE

The purposes of this exploration were:

- Perform a subsurface exploration within the suggested areas to gather information concerning the near-surface soil conditions,

- Conduct a laboratory soil testing program to aid in the classification of the prevailing site soils, and with the evaluation of relevant soil strength and engineering properties,
- Classify and stratify the various soil strata encountered in the soil test borings,
- Evaluate the groundwater level in the area of exploration and make appropriate recommendations,
- Recommend foundation design and construction parameters for the proposed building areas,
- To discuss technical suitability of subgrade soils for fill suitability, flexible pavement section support and provide parameters for pavement design,
- Recommend appropriate aquifer parameter values for the on-site stormwater management system.

This report presents an evaluation of site conditions on the basis of traditional geotechnical procedures for site characterization. The recovered samples were not examined, either visually or analytically, for chemical composition or environmental hazards. UES would be pleased to perform these services, if you desire.

Our exploration was confined to the zone of soil likely to be stressed by the proposed construction. Our work did not address the potential for surface expression of deep geological conditions such as sinkholes. This evaluation requires a more extensive range of field services than performed in this study. We will be pleased to conduct an investigation to evaluate the probable effect of the regional geology upon the proposed construction, if you desire.

2.3 FIELD EXPLORATION

The field geotechnical testing activities were started on March 4, 2025, and completed on March 6, 2025. Field tests for the geotechnical study included five (5) soil test borings to maximum depths of 20 feet below the ground surface within the limits of the proposed building areas, two (2) soil test borings to depths of 15 feet within the stormwater management areas, and three (3) soil test borings to depths of 10 feet below the ground surface within the limits of the pavement areas. The actual test locations shown are approximate and were staked in the field by UES personnel using existing landmarks and site features. All boreholes were backfilled upon field work completion. The soil test boring locations are shown in the attached Boring Location Plan drawing.

Representative portions of the subsurface soil samples recovered were transported to our Gainesville soils laboratory. The soil samples were visually classified by an experienced geotechnical engineer. It should be noted that soil conditions might vary between soil test boring locations, and between the subsurface soil strata interfaces which have been shown on the Boring Logs. The soil test boring data reflect information from the specific test locations only.

2.3.1 Standard Penetration Test (SPT) Borings

Penetration tests were performed in accordance with ASTM Procedure D-1586, Penetration Test and Split-Barrel Sampling of Soils. This test procedure generally involves driving a 1.4-inch I.D. split-tube sampler into the soil profile in six inch increments for a minimum distance of 18 inches using a 140-pound hammer free-falling 30 inches. The total number of blows required to

drive the sampler the second and third 6-inch increments is designated as the N-value, and provides an indication of in-place soil strength, density and consistency.

2.4 LABORATORY TESTING

2.4.1 Visual Classification

The soil samples recovered from the soil test borings were returned to our laboratory where an engineer visually reviewed the field descriptions in accordance with ASTM D-2488. We then selected representative soil samples for laboratory testing. Using the results of the laboratory tests, our visual examination, and our review of the field boring logs we classified the soil borings in accordance with the current Unified Soil Classification System (USCS).

2.4.2 Index Testing

Laboratory testing was performed on selected samples of the soils encountered in the field exploration to better define soil composition and properties. Testing was performed in accordance to ASTM procedures and included moisture content (ASTM D-2216), Percent Passing No. 200 Sieve (ASTM D-1140), Atterberg Limits (ASTM D-4318), and permeability tests (ASTM D-2434). The test results have been presented on the attached Boring Logs.

3.0 FINDINGS

3.1 REGIONAL GEOLOGY

The general geology of central Alachua County is characterized by a surface veneer of Pleistocene and Pliocene sands and sandy clays overlying the Miocene-age Hawthorn Group. The Hawthorn Group includes a highly variable mixture of interbedded quartz sands, clays, carbonates, pebbles and grains occurring with thicknesses of up to 150 feet.

The general hydrogeology of Alachua County consists of three aquifer systems; a surficial aquifer, an intermediate aquifer, and the Floridan aquifer system. The surficial aquifer exists as an unconfined water table situated over the impermeable Hawthorn Group and is usually a subdued reflection of surface topography. The intermediate aquifer system includes all materials that collectively retard the exchange of water between the overlying surficial aquifer system and the underlying Floridan aquifer system. Water in this system is contained under confined conditions. The Floridan aquifer system is a thick, carbonate sequence that functions regionally as a water-yielding hydraulic unit. Water exists under confined conditions. The potentiometric surface map of the upper Floridan aquifer suggests groundwater elevations, outside perched zones, on the order of +30 to +40 feet, NGVD in the general site area.

3.2 KARST TOPOGRAPHY

About 10% of the earths land (and 15% of the United States) crust is composed of, or underlain by, soluble limestone. When limestone interacts with underground water, over time, the water dissolves the limestone to form karst topography, a mix of caves, underground channels, and rough and undulating ground surfaces. The underground water of karst topography carves channels and caves that become susceptible to collapse from the surface. When enough limestone is eroded from underground, a sinkhole may develop. Sinkholes can range in size and depth from a few feet to over 300 feet. The topography of North Central Florida is characteristic of karst terrain, with sinkholes caused by natural climatic variability, as well as, man-made activities, such as, the drop in groundwater levels from well pumping.

Per contract scope of services, our exploration was confined to the zone of soil likely to be stressed by the proposed construction. Our work did not address the potential for surface expression of deep geological conditions, such as sinkhole development related to karst activity. This evaluation requires a more extensive range of field services than performed in this study.

3.3 GENERAL AREA SOIL INFORMATION

The United States Department of Agriculture (USDA) *Soil Survey of Alachua County*, *Florida* describes the near-surface soil profiles in the project parcel as Arredondo, Arredondo-Urban Land complex, and Fort Meade soils. The relevant soil strength and engineering properties for these soils are presented in Tables 1 and 2. Urban Land soil classification indicates that 85 percent of the area is covered with shopping centers, parking lots, buildings, streets, sidewalks and other facilities. Many of these open areas have been altered by cutting and shaping or by having fill material spread on the surfaces.

Arredondo soil is nearly level to gently sloping and well drained, with a water table at a depth of more than 72 inches. Relevant engineering index properties for Arredondo soils have been summarized below in Table 1.

Table 1 – Relevant Engineering Index Properties of Arredondo Soils

Depth, Inches	Texture	Classification	% Passing #200 Sieve	Plasticity Index	Shrink-swell Potential	Permeability
0 – 49	Fine sand	SP-SM, SM	5 – 15	NP	Low	6.0 – 20 in/hr
49 – 54	Loamy sand, loamy fine sand, sandy loam	SM, SM-SC	13 – 25	NP – 7	Low	2.0 – 6.0 in/hr
54 – 86	Sandy loam, fine sandy loam, sandy clay loam	SM-SC, SC	20 – 40	NP – 20	Low	0.2 – 2.0 in/hr

Fort Meade sand is nearly level to gently sloping, well drained with a water table that is at a depth of more than 72 inches. Engineering properties for Fort Meade soil are summarized below in Table 2.

Table 2 – Relevant Engineering Index Properties of Fort Meade Soil

Depth, Inches	Texture	Classification	% Passing #200 Sieve	Plasticity Index	Shrink-swell Potential	Permeability
0 – 14	Fine sand	SM	13 – 25	NP	Low	6.0-20 in/hr
14 – 85	Loamy sand, loamy fine sand, fine sand	SM	13 – 25	NP	Low	6.0-20 in/hr

3.4 SURFACE CONDITIONS

UES personnel visited the project site prior to and during the performance of the field portion of this geotechnical study. The site of the proposed development was predominantly undeveloped and clear. Our on-site observations have been summarized as follows. Exposed surface soils were observed to be sandy and dry. Surface organic soils, surface debris, unusual ground depressions, or rock outcroppings were not observed on the project site. An existing church

building and unpaved parking were present adjacent to the southwest corner of the subject property.

3.5 SUBSURFACE CONDITIONS

The soil test borings performed beneath the proposed structures were reviewed to evaluate the subsurface soil strata lateral continuity and uniformity, both parameters that would have an impact in foundation system selection and performance. Soil classifications and descriptions for this geotechnical study are based both on the results of the laboratory soil testing programs and on visual examinations of soil specimens by the Geotechnical Engineer. The subsurface soil conditions encountered in the soil test borings have been summarized in the attached Boring Logs and described below.

The soil test borings generally encountered very loose to loose sand with silt to silty sand [SP-SM/SM] to depths of 2.5 to 7 feet followed by very clayey sands to clay [SC/CH] to the maximum boring termination depths of 20 feet.

3.6 GROUNDWATER DEPTH

The groundwater level was not encountered at the boring locations at the time of our exploration. Fluctuations of groundwater level conditions on this project parcel should be expected to occur seasonally as a result of rainfall, surface runoff, and nearby construction activities.

3.7 LABORATORY TESTING

The soil samples recovered from the field exploration program were placed in containers and returned to our soils laboratory, where the Geotechnical Engineer visually examined and classified the samples. Laboratory soil tests are performed to aid in the classification of the soils, and to help in the evaluation of engineering characteristics of the soils. Representative soil samples were selected for moisture content, permeability, Atterberg Limits, and percent fines determination. The test results have been presented on the attached Boring Logs and summarized in Table 3.

3.7.1 Percent Passing No. 200 Sieve

Certain recovered soil samples were selected to determine the percentage of fines. In these tests the soil sample was dried and washed over a U.S. No. 200 mesh sieve. The percent of soil by weight passing the sieve was the percentage of fines or portion of the sample in the silt and clay size range. This test was conducted in accordance with ASTM Procedure D-1140, *Standard Test Methods for Amount of Material in Soils Finer than the No. 200 Sieve.*

3.7.2 Moisture Content

Certain recovered soil samples were selected to determine the moisture content. These tests were conducted in accordance with ASTM Procedure D-2216. The soil moisture content was the ratio of the weight of water in the soil mass to the dry weight of the soil mass. Moisture content was measured by drying the moist material to a constant mass in a drying oven controlled at 105 degrees Celsius and to use this value as the mass of water in the test specimen. The moisture content was expressed as a percent of the oven dried soil mass.

3.7.3 Atterberg Limits

Certain recovered soil samples were selected for Atterberg Limits testing to evaluate the soil plasticity characteristics. The soil's Plasticity Index (PI) is the range of moisture content over which the soil deforms as a plastic material. It is bracketed by the Liquid Limit (LL) and the Plastic Limit (PL). The LL is the moisture content at which the soil will flow as a heavy viscous fluid. The PL is the lowest moisture content at which the soil is sufficiently plastic so as to be manually rolled into a 1/8-inch diameter thread. The test was conducted in accordance with ASTM Procedure D-4318, Standard Test Methods for LL, PL and Plasticity Index of Soils.

3.7.4 Permeability Testing

Representative soil samples were selected to determine the permeability rate of the soils. Constant head permeability test was performed on a representative sample of the near surface soils from the proposed stormwater management area. This test was conducted following the concepts outlined in ASTM D-2434, *Standard Test Method for Permeability of Granular Soil*s (Constant Head).

Table 3 – Laboratory Soil Test Results

Soil Boring	Sample Depth	Type of Test	Results	Soil Description
B-1	6 feet	% Finer #200	35 %	Very Clayey Sand
		Moisture Content	21 %	
		Atterberg Limits	LL = 41 , PI = 21	
B-1	9 feet	% Finer #200	78 %	Clay
		Moisture Content	47 %	
		Atterberg Limits	LL = 65 , PI = 37	
B-3	9 feet	% Finer #200	51%	Sandy Clay
		Moisture Content	23%	
B-5	8 feet	% Finer #200	39 %	Very Clayey Sand
		Moisture Content	26 %	
		Atterberg Limits	LL = 37 , PI = 15	
B-9	4 feet	% Finer #200	10 %	Sand with Silt
		Moisture Content	9 %	
		Permeability	7 Feet/day	
B-9	6 feet	% Finer #200	25 %	Clayey Sand
		Moisture Content	12 %	
		Permeability	< 0.1 Feet/day	
B-10	2.5 feet	% Finer #200	9 %	Sand with Silt
		Moisture Content	12 %	
		Permeability	6 Feet/day	
B-10	6 feet	% Finer #200	90 %	Clay
		Moisture Content	37 %	
		Permeability	< 0.01 Feet/day	

4.0 RECOMMENDATIONS

4.1 GENERAL

The following recommendations are made based upon a review of the attached soil test data, our understanding of the *client's willingness to accept nuisance and aesthetic movements of the structure*, and experience with similar projects and subsurface conditions. If plans change from those discussed previously, we request the opportunity to review and possibly amend our recommendations with respect to those changes.

Additionally, if subsurface conditions are encountered during construction, which were not encountered in the borings, report those conditions immediately to us for observation and recommendations. In this section of the report, we present our detailed recommendations for groundwater control, building foundations, site preparation, and construction related services.

4.2 GEOTECHNICAL CONSIDERATIONS

Recommendations for foundation design are dependent, among other factors, on the amount of total settlement and more importantly differential settlement between various structural elements that can be safely tolerated by the structure. If the anticipated total and differential settlements estimated herein exceed the tolerable limits as set forth by the Structural Engineer, we should be so advised so that we may consider other foundation system alternatives.

It should further be noted that the estimated magnitudes of total and differential settlements are dependent on foundation loading conditions among other factors, and that we have made certain assumptions regarding those loading conditions in this Report. If unusually heavy foundation loading conditions are expected for some of the proposed project elements, or if our estimates vary significantly from actual anticipated conditions, we should be so advised so that we may revisit our engineering evaluations and foundation settlement estimates.

Geotechnical considerations for the design and construction of the proposed structure include the presence of potentially-expansive clayey soils in the subsurface soil profile, and very loose shallow sandy soils. Subsurface sandy soils will undergo immediate settlements upon application of surface loads, and this could be a result of both fill placement for building pad construction and building construction. In light of the above, it becomes important to compact the subgrade soils as much as possible prior to both building pad fill placement and foundation construction.

The clayey sand soils may require stringent moisture control during compaction, particularly during rainy periods. Footings that are excavated through the upper layer of compacted sand fill soils into the native clayey sands, should be visually inspected and tested to verify the in-place density and condition of the subgrade bearing soils.

Care should be exercised in performing the site preparation procedures due to the presence of clayey soils near the existing ground surface. The use of heavy-vibratory equipment is not recommended due to the potential for disturbance and pumping of the near surface clayey soils. To avoid pumping of the underlying clayey soils, we recommend self propelled vibrating equipment remain a minimum of two feet above the clayey soils. The sandy soils could be compacted with a vibratory roller operating in static mode or with a track-mounted dozer to avoid disturbance of the clayey soils prior to operation. We recommend a minimum of 2 feet of sand be present over the clayey soils prior to operation of construction equipment. Excessive disturbance of the clayey soils will degrade the strength characteristics of the soil and may

result in an unsuitable soil which will require over-excavation and subsequent backfilling with selected material.

Our local experience has found that clay layers are often laterally discontinuous, which makes it more difficult to ascertain their presence and extent on a given project parcel with a few soil test borings. We recommend that the bottom of all footings and building pad areas be probed to confirm the suitability of the bearing soils. Expansive clays should be removed to a minimum of 4 feet below the bottom of the footings/floor slabs. The recommended separation can be achieved either by undercutting the material or filling the site.

Due to the presence of near surface clayey soil it is important that the foundation design incorporate factors to minimize water seepage around the proposed foundation. The design factors should include undercutting around the perimeter of the structure, positive drainage such that water flows away from the structure, use of low permeability fill, gutters tied into the drainage system, use of drought tolerant landscaping, and limiting irrigating around the structure.

The over-excavated areas should be backfilled with a compacted, low permeability, non-plastic engineered fill material. The low permeability backfill should continue to an elevation consistent with the top of the adjacent clay layers to minimize the potential for surface water to become trapped in the previously excavated areas. Low permeability, engineered fill material shall consist of poorly draining, silty sand or clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15, and be free of organics. A crushed limerock base material could be used as the low permeability material. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 10- to 12-inches or less are recommended. Should the Contractor experience difficulty in achieving the appropriate level of compaction, a thinner lift should be utilized.

We recommend that we be provided the opportunity to review the project plans and specifications to confirm that our recommendations have been properly interpreted and implemented. If the structural loadings or the building locations change significantly from those discussed previously, we request the opportunity to review and possibly amend our recommendations with respect to those changes. The discovery of any subsurface conditions during construction which deviate from those encountered in the borings should be reported to us immediately for observation, evaluation, and recommendations.

4.3 GROUNDWATER CONSIDERATIONS

The groundwater level will fluctuate seasonally depending upon local rainfall. The rainy seasons in North Central Florida are normally between June and September and December and February. Based upon our review of regional hydrogeology and the Alachua County Soil Survey, we estimate the normal seasonal high groundwater level will be deeper than 6 feet below the ground surface in the general area of the project site; however, stormwater can perch on the clayey sands when sandy soils are present at the surface. Isolated areas with a transient perched groundwater should be expected to occur. The perched groundwater will be a transient condition, directly related to rainfall, irrigation and site grading.

It should be noted that the normal estimated seasonal high water levels do not provide any assurance that groundwater levels will not exceed these estimated levels during any given year in the future. Should the impediments to surface water drainage be present, or should rainfall intensity and duration, or total rainfall quantities, exceed the normally anticipated rainfall

quantities, groundwater levels might once again exceed our seasonal high estimates. One potential case includes a perched water table above clayey sand or sandy clay layers. We recommend positive drainage be established and maintained on the site during construction. We further recommend permanent measures be constructed to maintain positive drainage from the site throughout the life of the project.

4.4 BUILDING FOUNDATION

Based on the results of our exploration, we consider the subsurface conditions at the site adaptable for support of the proposed building when constructed on a properly designed conventional shallow foundation system.

Assuming any questionable/expansive soils are removed a minimum of 4 feet below the bottom of footings and floor slab, and positive drainage is established, a conventional shallow foundation system may be used for support of the proposed building construction on this project with the understanding that some aesthetic cracking and other minor architectural type nuisance issues may occur during the useful life of the structure.

Our recommendations provide for prudent geotechnical site preparation and foundation construction methods in light of the above conditions. Provided the site preparation and earthwork construction recommendations outlined in Section 4.5 of this report are performed, the following parameters may be used for foundation design.

4.4.1 Bearing Pressure

The net maximum allowable soil bearing pressure for use in shallow foundation design should not exceed 2,000 psf. Net bearing pressure is defined as the soil bearing pressure at the foundation bearing level in excess of the natural overburden pressure at that level. The foundations should be designed based on the maximum load which could be imposed by all loading conditions.

We recommend the Building Designers consider the use of grade beam foundations, for support of load bearing walls on this project. The deeper concrete section, and top and bottom steel configuration of a typical grade beam foundation, should help mitigate differential settlement concerns. A modulus of subgrade reaction of 100 pounds per cubic inch (pci) may be used for grade beam foundation design.

4.4.2 Foundation Size

The minimum widths recommended for any isolated column footings and continuous wall footings are 24 inches and 18 inches, respectively. Even though the maximum allowable soil bearing pressure may not be achieved, these width recommendations should control the minimum size of the foundations. For monolithic slabs, the thickened sections should have minimum width of 12 inches and be embedded a minimum of 12 inches.

4.4.3 Bearing Depth

The exterior foundations should bear at a depth of at least 18 inches below the finished exterior grades and the interior foundations should bear at a depth of at least 12 inches below the finish floor elevation to provide confinement to the bearing level soils. It is recommended that stormwater be diverted away from the building exteriors to reduce the possibility of erosion

beneath the exterior footings. The thickened section of a monolithic slab/foundation system should be embedded a minimum of 12 inches.

4.4.4 Bearing Material

The foundations may bear in either the compacted suitable native soils or compacted structural fill. The bearing level soils, after compaction, should exhibit densities equivalent to at least 95 percent of the modified Proctor maximum dry density (ASTM D 1557) to a depth of at least **two feet** below the bearing levels. We recommend that all footing excavations be probed to confirm the suitability of the bearing soils.

4.4.5 Settlement Estimates

Post-construction settlement of the structure will be influenced by several interrelated factors, such as (1) subsurface stratification and strength/compressibility characteristics; (2) footing size, bearing level, applied loads, and resulting bearing pressures beneath the foundations; and (3) site preparation and earthwork construction techniques used by the Contractor. Our settlement estimates for the structure are based on the use of site preparation/earthwork construction techniques as recommended in Section 4.5 of this report. Any deviation from these recommendations could result in an increase in the estimated post-construction settlement of the structure.

We expect the majority of settlement to occur in an elastic manner and fairly rapidly during construction. Using the recommended maximum bearing pressure, the assumed maximum structural loads and the field data which we have correlated to geotechnical strength and compressibility characteristics of the subsurface soils, we estimate that total settlements of the structures could be on the order of 1 inch or less. Differential settlement results from differences in applied bearing pressures and variations in the compressibility characteristics of the subsurface soils. Because of the general uniformity of the subsurface conditions and the recommended site preparation and earthwork construction techniques outlined in Section 4.5, we anticipate that differential settlement of the structure should be within tolerable magnitudes (½ inch or less).

4.4.6 Ground Floor Slab

The floor slab can be constructed as a slab-on-grade provided the subgrade and subsequent lifts of structural backfill are compacted and tested in accordance with the recommendations included in this report. Conventional floor slabs may be supported upon the compacted fill and should be structurally isolated from other foundation elements or adequately reinforced to prevent distress due to differential movements. The floor slab can be designed using a modulus of subgrade reaction (K) of 100 pounds per cubic inch (pci). It is recommended the floor slab bearing soils be covered with an impervious membrane to reduce moisture entry and floor dampness. A 10-mil thick plastic membrane is commonly used for this purpose. Care should be exercised not to tear large sections of the membrane during placement of reinforcing steel and concrete. We recommend auger borings be performed to a minimum depth of 4 feet in the proposed building slab areas to check for the presence of potentially expansive clay.

4.5 SITE PREPARATION

We recommend normal, good practice site preparation procedures. These procedures include: stripping the site of existing vegetation and topsoil, compacting the subgrade and placing necessary fill or backfill to grade with engineered fill. We recommend auger borings be

performed in the proposed footing excavations and building pad areas to determine if undercutting of the clayey material is needed. Expansive clays should be removed to a minimum depth of 4 feet below the bottom of the footings/slab. A more detailed synopsis of this work is as follows:

1. Prior to construction, the location of any existing underground utility lines within the construction area should be established. Provisions should then be made to relocate interfering utilities to appropriate locations. It should be noted that if underground pipes are not properly removed or plugged, they may serve as conduits for subsurface erosion which may subsequently lead to excessive settlement of the overlying structure.

2. The site should be graded to direct surface water runoff away from the construction areas. Positive drainage of improved areas should be maintained during construction and throughout the design life of the project. If required, perform remedial dewatering prior to any earthwork operations. Dewatering operations scheduled immediately adjacent to existing structure footings should be carefully evaluated for possible impacts to the existing foundation systems. Dewatering systems should not be decommissioned until the excavation is backfilled two feet above the groundwater level at the time of construction. Further, the site should always be graded to prohibit ponding of stormwater runoff.

3. Strip/demolish the proposed construction limits of all grass, roots, topsoil, concrete and other deleterious materials within 5 feet beyond the perimeter of the proposed construction areas. Expect typical stripping at this site to depths of 6 to 12 inches. Some isolated areas may require more than a foot of stripping or undercutting to remove the root systems of underbrush or tree. Demolition should include compete removal of all above and below grade foundations and other (previous) improvements. Deeper removal of debris should be anticipated to remove footings and utilities from the demolition of the existing structure. All debris and deleterious material should be removed and replaced with suitable structural fill. Fill material should be placed and compacted in accordance with the site preparation procedures. Excavated areas should be set back to a stable configuration or shored, in either case in accordance with OSHA requirements. Adequate bracing should be provided if necessary to prevent side slope failures.

4. Following site clearing, grubbing and rough grading, the same project areas should be proof-rolled using a large, fully loaded rubber-tired vehicle (dump truck) or similar equipment. Proof-rolling will help locate any surficial zones of especially loose or soft or unsuitable soils not encountered in the soil test borings, and should help provide more uniformity in the sandy subsurface soil profile. Unusual or unanticipated conditions identified during this process must be immediately brought to the attention of the UES Geotechnical Engineer. Field density testing is not required during proof-rolling operations.

5. Excavate the site to the proposed grades. Stockpile the surficial sandy soils for later use as fill. Perform hand auger borings in the building areas that will be constructed near the existing grade to investigate for clayey soils.

6. The over-excavated areas should be backfilled with a compacted, low permeability, non-plastic engineered fill material. The low permeability backfill should continue to an elevation consistent with the top of the adjacent clay layers to minimize the potential for surface water to become trapped in the previously excavated areas. Fill material should

consist of poorly draining, silty sand or clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15, and be free of organics. Special compaction equipment (i.e. Sheepsfoot Roller) and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 10- to 12-inches or less are recommended. Should the Contractor experience difficulty in achieving the appropriate level of compaction, a thinner lift should be utilized. Crushed limerock base material may be used as low permeability fill material.

7. Weak subgrade soils identified during proof-rolling operations should be excavated and removed from the site, and replaced with granular fill soils. We recommend that the bottom of all footings be probed as to confirm the suitability of the bearing soils. Granular soils used for this purpose should meet the material and placement specifications outlined below.

8. Proof-rolling operations should be followed by subgrade/backfill compaction operations. Compaction operations should be implemented with a compactor of appropriate size and should be performed until an in-place soil density of 95 percent of the modified Proctor maximum dry density (ASTM D-1557) is achieved to a depth of 2 feet below the final subgrade, or foundation bearing elevations, whichever is greater. If necessary to achieve the recommended soil compaction at depth, the entire project area may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation. The subgrade beneath slabs should be compacted to a depth of 1 foot below the beginning grade prior to placing fill.

9. Compaction operations should be implemented with a compactor of appropriate size. Compaction of the existing, near-surface sandy soils will provide for uniformity of foundation/slab settlements and improve the soils' bearing capacity conditions. Typically, the soils should exhibit moisture contents within ± 2 percent of the modified Proctor optimum moisture content during compaction. A minimum of eight (8) complete coverages (in perpendicular directions) should be made in the building area with the roller to improve the uniformity and increase the density of the underlying sandy soils. It should be anticipated that moisture will need to be added to the subgrade in order to achieve the required compaction.

10. Should the bearing level soils experience pumping and soil strength loss during the compaction operations, compaction work should be immediately terminated and (1) the disturbed soils removed and backfilled with dry structural fill soils which are then compacted, or (2) the excess pore pressures within the disturbed soils allowed to dissipate before recompacting.

11. Care should be exercised to avoid damaging any nearby structures while the compaction operation is underway. Prior to commencing compaction, occupants of adjacent structures should be notified and the existing conditions of the structures be documented with photographs and survey (if deemed necessary). Compaction should cease if deemed detrimental to adjacent structures. UES can provide vibration monitoring services to help document and evaluate the effects of the surface compaction operation on existing structures. In the absence of vibration monitoring, it is recommended the vibratory roller remain a minimum of 100 feet from existing structures. Within this zone, use of a vibratory roller operating in the static mode is recommended.

12. Place fill material, as required. Offsite fill material (import) should contain less than 10 percent passing the No. 200 sieve, except for required low permeability engineered backfill material. Place backfill and fill in uniform 10- to 12-inch loose lifts and compact each lift to a minimum density of 95 percent of the modified Proctor maximum dry density. Each lift should be compacted and have density test results that verify the level of compaction is satisfactory before the next lift is placed.

13. Perform compliance tests within the fill/backfill at a frequency of not less than one test per 2,500 square feet per lift in the building areas, whichever is greater. Additionally, we recommend that you test every column footing, and one test per every 50 linear feet of wall footing. Footings should be visually inspected and probed with a static cone penetrometer to verify stability.

4.6 PAVEMENTS

4.6.1 General

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-effective combination of available construction materials. Concrete pavement has the advantage of the ability to “bridge” over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. Disadvantages of rigid pavement include a higher initial cost and more difficult patching of distressed areas than occurs with flexible pavement.

We assume that a combination of flexible asphaltic and rigid concrete pavement sections will be used for the new pavement areas on this project. Our recommendations for both pavement types are listed in the following sections. The following recommendations are based on the pavement areas being prepared as recommended in this report.

At the time of this exploration, specific traffic loading information was not provided to us. We have assumed the following conditions for our recommended minimum pavement design.

- the subgrade soils are prepared as described in this report
- a twenty (20) year design life
- terminal serviceability index (P_t) of 2.5
- reliability of 85 percent
- total equivalent 18 kip single axle loads (E_{18}SAL) up to 50,000 for light duty pavements – primarily car and pickup truck traffic (parking stalls)
- total equivalent 18 kip single axle loads (E_{18}SAL) up to 100,000 for heavy duty pavements – occasional heavy truck traffic (entrance drives, services lanes, etc.)

The available subsurface data suggests that the subgrade soils in these areas generally consist of sand with silt to silty sand type soils overlying clayey sands. Silty sandy soils tend to readily hold moisture and may require more stringent compactive efforts than clean sands. If encountered, we recommend undercutting the clayey sands to a depth of 24 inches below the bottom of the base, in accordance with FDOT Standard Plans Index 120-002. We recommend proof-rolling of the exposed subgrade to help determine areas that may need to be undercut. Positive drainage must be established to prevent irrigation and stormwater from migrating into the pavement area. If needed, underdrains should be installed to prevent water from seeping beneath the pavements areas.

We recommend using a flexible pavement section on this project. Flexible pavements combine the strength and durability of several layer components to produce an appropriate and cost-effective combination of available materials.

4.6.2 Asphalt (Flexible) Pavements

Based on the results of our soil borings, the assumed traffic loading information and review of the current FDOT Flexible Pavement Design Manual, our minimum recommended pavement component thicknesses for new construction are presented in Table 4.

Table 4 – Minimum Asphaltic Pavement Component Thickness

Service Level	Maximum Traffic Loading	Layer Component		Estimated Structural Number *
		Surface Course (inches)	Base Course (inches)	
Light Duty	up to 50,000 E_{18}SAL	1½	6	2.7
Heavy Duty	up to 100,000 E_{18}SAL	2	8	3.3

* Estimated structural number is based on 12 inches of stabilized subgrade below the base course.

4.6.2.1 Stabilized Subgrade

We recommend that subgrade materials be compacted in place according to the requirements in the “Site Preparation for the New Pavement Areas” section of this report. Further, beneath the limerock base course, stabilize the subgrade materials to a minimum Limerock Bearing Ratio (LBR) of 40, as specified by Florida Department of Transportation (FDOT) “Standard Specifications for Roadway and Bridge Construction” (SSRBC) requirements for Type B Stabilized Subgrade. The subgrade material should be compacted to at least 98 percent of the modified Proctor maximum dry density (AASHTO T-180).

The stabilized subgrade can be a blend of existing soil and imported material such as limerock. If a blend is proposed, we recommend that the Contractor perform a mix design to find the optimum mix proportions.

The primary function of stabilized subgrade beneath the base course is to provide a stable and firm subgrade so that the limerock can be properly and uniformly placed and compacted. Depending upon the soil type, the subgrade material may have sufficient stability to provide the needed support without additional stabilizing material. Generally, sands with silt or clay should have sufficient stability and may not require additional stabilizing material. Conversely, relatively “clean” sand will not provide sufficient stability to adequately construct the limerock base course. UES should observe the soils exposed on the finish grades to evaluate whether or not additional stabilization will be required beneath the base course.

4.6.2.2 Base Course

We recommend the base course consist of limerock. The limerock base course should have a minimum Limerock Bearing Ratio (LBR) of 100 and should be compacted to 98 percent of the modified Proctor maximum dry density (AASHTO T-180).

As an alternative base course, crushed concrete could be used. An advantage to using crushed concrete is a lower sensitivity to water than what occurs with limerock. The main disadvantage is that crushed concrete may not be available at the time of construction.

Crushed concrete should be supplied by an FDOT approved plant with appropriate quality control procedures. The crushed concrete stockpile should be free of sandy pockets, foreign materials, or uncrushed particles. We recommend the following specifications be enforced.

1. Crushed concrete shall not contain extremely hard pieces, lumps, balls or pockets of sand or clay sized material in sufficient quantity as to be detrimental to the proper binding, finishing or strength of the crushed concrete base.

2. Samples of base course materials shall be supplied to the Engineer prior to use in the work. Additional samples shall be furnished during construction, as necessary.

3. At least 97 percent (by weight) of the material shall pass a 3-1/2 inch sieve and the material shall be graded uniformly down to dust. The fine material shall consist entirely of dust or fracture. All crushing or breaking-up which might be necessary in order to meet such size requirements shall be done before the material is placed within the area to be paved.

4. The base shall be bladed and shaped to conform to the typical sections shown on the plans. Then the base shall be compacted by rolling with a combination of steel wheel and rubber tired rollers until a minimum density of at least 98 percent of the maximum density obtainable under AASHTO T-180 is reached. The base shall have an average LBR of not less than 100. The LBR value of material produced at a particular source shall be determined in accordance with an approved quality control procedure.

5. Testing shall be performed at the following frequencies:

    - Perform in-place density on crushed concrete base at a frequency of 1 test per 300 linear foot of roadway or 5,000 square feet of pavement.

    - Perform Limerock Bearing Ratio tests at a frequency of 1 test per visual change in material and a minimum of 1 test per 15,000 square feet of pavement.

    - Engineer should perform a final visual base inspection prior to placement of prime or tack coat and paving.

Regardless of the base type selected, where encountered, a minimum of 2 feet separation should be maintained between the bottom of the base course and clayey soils. If necessary, the minimum separation can be obtained by undercutting clays or filling the site.

4.6.2.3 Wearing Surface

For the new pavement areas, we recommend that the surfacing consist of FDOT SuperPave (SP) asphaltic concrete. The surface course should consist of FDOT SP-9.5 fine mix for light-duty areas and FDOT SP-12.5 and/or SP-9.5 fine mix for heavy duty areas. Specific requirements for the SuperPave asphaltic concrete structural course are outlined in the latest edition of FDOT, Standard Specifications for Road and Bridge Construction.

After placement and field compaction, the surfacing should be cored to evaluate material thickness and density. Cores should be obtained at frequencies of at least one (1) core per 5,000 square feet of placed pavement or a minimum of two (2) cores per day's production.

4.6.3 Effects of Groundwater

One of the most critical factors influencing pavement performance in North Central Florida is the relationship between the pavement subgrade and the normal seasonal high groundwater level. Many roadways and parking areas have been damaged as a result of deterioration of the base conditions and/or the base/surface course bond. We recommend that the normal seasonal high groundwater level and the bottom of the flexible pavement limerock base course be separated by at least 24 inches. We recommend a separation of at least 18 inches below the bottom of a flexible pavement with a crushed concrete base. If this separation cannot be establish and maintained by grading and surface drainage improvements, permanent groundwater control measures (underdrains) will be required.

4.6.4 Curbing

Typical curbing is extruded and placed atop the asphaltic concrete surface. This type of curbing does not act as a horizontal cutoff for lateral migration of storm and irrigation water into the base material and as a result of this it is not uncommon for base and subgrade materials adjacent to these areas to become saturated, promoting subsequent localized pavement deterioration. Consequently, we recommend that most pavements abutting irrigated landscape areas be equipped with an underdrain system that penetrates a minimum depth equivalent to the bottom of the stabilized subgrade to intercept trapped shallow water and discharge it into a closed system or other acceptable discharge point.

Alternatively, curbing around landscaped sections adjacent to the parking lots and driveways could be constructed with full-depth curb sections to reduce horizontal water migration. However, underdrains may still be recommended dependent upon the soil type and spatial relationships. UES should review final grading plans to evaluate the need and placement of pavement and landscape underdrains.

4.6.5 Landscape Areas

In the event that landscape areas adjacent to the pavements include large mounds (>1 foot) of poorly draining organic topsoils or silty/clayey sands, or the pavement is constructed below surrounding grade, we recommend that landscape drains be provided to protect the roadway against adverse effects from over-irrigation and excess rainfall. Poorly draining organic, silty, and clayey material causes the irrigation and rainwater to perch and migrate laterally into the pavement components, which eventually compromises the integrity of the pavement section.

4.6.6 Concrete (Rigid) Pavement

Concrete pavement is a rigid pavement that is strong, durable and handles the heavy loads more effectively than asphalt pavement. Concrete pavement is recommended under dumpster areas, and 10 feet in front of trash enclosures, at a minimum.

We recommend using the existing surficial sands or approved structural fill densified to at least 95 percent of Modified Proctor test maximum dry density (ASTM D 1557) without additional stabilization under concrete pavement, with the following stipulations:

1. Prior to placement of concrete, the subgrade soils should be densified as recommended in Section 4.6.8 of this report.

2. The surface of the subgrade soils must be smooth, and any disturbances or wheel rutting corrected prior to placement of concrete.

3. The subgrade soils must be moistened prior to placement of concrete.

4. Concrete pavement thickness should be uniform throughout, with exception to the thickened edges (curb or footing).

5. The bottom of the pavement should be separated from the seasonal high groundwater level by at least 12 Inches.

6. We do not recommend the use of a limerock base course directly below the concrete pavement area.

Based on review of the FDOT Rigid Pavement Design Manual and provided that the site is prepared as recommended in this report, we recommend using the minimum design shown in Table 5 for concrete pavements.

Table 5 – Minimum Concrete Pavement Thickness

Maximum Traffic Loading	Minimum Pavement Thickness	Maximum Control Joint Spacing	Recommended Saw Cut Depth
up to 100,000 E_{18}SAL	6 inches	12 feet x 12 feet	2 inches

For loading conditions greater than those presented in Table 5, we recommend that you have a complete pavement design performed based on projected traffic data.

We recommend using concrete with a minimum 28-day compressive strength of at least 4,000 pounds per square inch. Layout of the saw cut control joints should form square panels, and the depth of Saw cut joints should be made to a depth of ⅓ of the concrete slab thickness. We recommend allowing UES to review and comment on the final concrete pavement design, including section and joint details (type of joints, joint spacing, etc.), prior to the start of construction.

For further details on concrete pavement construction, please reference the "Guide to Jointing of Non-Reinforced Concrete Pavements" published by the Florida Concrete and Products Association, Inc., and "Building Quality Concrete Parking Areas", published by the Portland Cement Association.

Specimens should be obtained to verify the compressive strength of the pavement concrete at least every 50 cubic yards, or at least once for each day's placement, whichever is greater.

4.6.7 Construction Traffic

Light duty roadways and incomplete pavement sections will not perform satisfactorily under construction traffic loadings. We recommend that construction traffic (construction equipment, concrete trucks, sod trucks, garbage trucks, dump trucks, etc.) be re-routed away from these roadways or that the pavement section is designed for these loadings.

4.6.8 Site Preparation for the New Pavement Areas

Following is a list of our recommended site preparation procedures to prepare the new pavement areas for the proposed construction.

1. Strip the pavement areas of any roots, vegetation, debris, organics, etc. Stripping should be performed at least 3 feet beyond pavement edges. We recommend that the stripped surface be observed and probed by representatives of UES.

2. Following site clearing, grubbing and rough grading, the pavement areas should be proof-rolled using a large, fully loaded rubber-tired vehicle (dump truck) or similar equipment. Proof-rolling will help locate any surficial zones of especially loose or soft or unsuitable soils not encountered in the soil test borings, and should help provide more uniformity in the sandy subsurface soil profile. Unusual or unanticipated conditions identified during this process must be immediately brought to the attention of the UES Geotechnical Engineer. Field density testing is not required during proof-rolling operations.

3. If encountered, we recommend undercutting clayey soils to a depth of 24 inches below the bottom of the base course in accordance with FDOT Standard Plans Index 120-002. Within the pavement areas, compact the exposed soils to at least 95 percent of the Modified Proctor test maximum dry density (ASTM D 1557) to a depth of at least 1 foot below the stripped surface and full depth of fill, or at least 2 feet below the bottom of base course (or concrete pavement) level, whichever is greater.

   Please note that the surficial soils within the new parking areas may contain varying quantities of silt and clay. These silty/clayey soils tend to readily hold moisture and may require more stringent compactive efforts than clean fine sands.

4. Soil density testing to verify the uniformity of compactive efforts should be performed at a frequency of at least one (1) test for every 5,000 square feet per foot of compacted increment, or at a minimum of two test locations, whichever is greater.

5. Prior to the placement of the base course within the asphaltic pavement areas, stabilize the subgrade to a depth of 12 inches by “pounding” limerock into the soils to provide a stable and firm surface so that the base course can be properly and uniformly placed. The subgrade should be compacted to at least 98 percent of the Modified Proctor maximum dry density (ASTM D 1557). Compliance testing should be performed at a frequency of one test per 10,000 square feet, or at a minimum of three test locations, whichever is greater.

Vibrations produced during vibratory compaction operations at the site may be significantly noticeable within 100 feet and may cause distress to adjacent structures if not properly regulated. Provisions should be made to monitor these vibrations so that any necessary modifications in the compaction operations can be made in the field before potential damages occur.

4.7 STORMWATER MANAGEMENT SYSTEM

The laboratory test data indicates that the surficial sand with silt soils in the proposed stormwater management area for this project generally have permeability rates of approximately 6 to 7 feet per day at the boring locations. The clayey soils encountered directly underneath the

surficial clean sands have a permeability rate of less than 0.1 feet per day and would behave as a confining (restrictive) layer in the stormwater management areas. Based upon the above findings, we recommend that you consider the soil parameters presented in Table 6 for design of the stormwater management system on the subject project site. It should be noted that the above referenced values are measured values and do not incorporate a factor of safety.

Table 6 – Stormwater Management System Soil Design Parameters	
Corresponding Soil Boring Test Locations	B-9/B-10
Average Estimated Ground Surface Elevation, feet	135
Average Depth to Confining Layer, feet	3 ¼
Estimated Average Effective Aquifer Elevation, feet	131.75
Unsaturated Vertical Infiltration rate, feet per day	5
Estimated Weighted Horizontal Hydraulic Conductivity, feet per day	8
Estimated Fillable Porosity, percentage	20
Estimated Average Seasonal High Water Table Elevation, feet[1]	132.25
Average Estimated Depth of Seasonal High Water Table, feet	2 ¾

[1]Normal seasonal high water table (SHWT) will be the result of perched conditions.

4.8 STORMWATER MANAGEMENT SYSTEM FILL SUITABILITY

The recovered soil samples were classified using visual and textural means, and limited laboratory testing. We offer below ***preliminary guidelines*** for the use of on-site soils, such as those excavated from the proposed retention ponds, as fill material for the project.

Soil materials excavated and classified as fine sands to sand with silt and sand with clay (SP, SP-SM, SP-SC), with typically 12% fines or less (silt/clay fraction), may be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, provided the materials are properly dried, placed, and compacted.

Soil materials excavated and classified as silty fine sands [SM], with typically 12% to 25% fines, may also be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, after significant drying and some mixing with the fine sand material described above. Proper placement, proof rolling and compaction must also be performed.

Soil materials excavated and classified as clayey sand, silt or clay (SC, ML, MH, CL, and CH) and any organic-laden soils (5% or greater organics by weight) should not be reused as fill beneath building or pavement sections. These materials could be used in green areas, if applicable and in non-structural applications where excessive ground subsidence will not create functional or aesthetic problems. It should be noted that silt and clay materials will retain water and if used near the final grade may become saturated and soft for a significant period of time following a rain event.

Soil borings for a typical geotechnical report are widely spaced and generally not sufficient for reliably detecting the presence of isolated, anomalous surface or subsurface conditions, or reliably estimating unsuitable or suitable material quantities. Accordingly, UES does not recommend relying on our boring information to negate presence of anomalous materials or for

estimation of material quantities unless our contracted services ***specifically*** include sufficient exploration for such purpose(s) and within the report we so state that the level of exploration provided should be sufficient to detect such anomalous conditions or estimate such quantities. Therefore, UES will not be responsible for any extrapolation or use of our data by others beyond the purpose(s) for which it is applicable or intended.

4.9 DEWATERING AND EXCAVATION CONSIDERATIONS

Based on the water level conditions encountered, control of the groundwater may not be required to achieve the necessary excavation, construction, backfilling and compaction requirements presented in the preceding sections. If dewatering becomes necessary, we suggest drawing down the water level at least 2 feet below the bottom of the excavations. The actual method(s) of dewatering should be determined by the contractor.

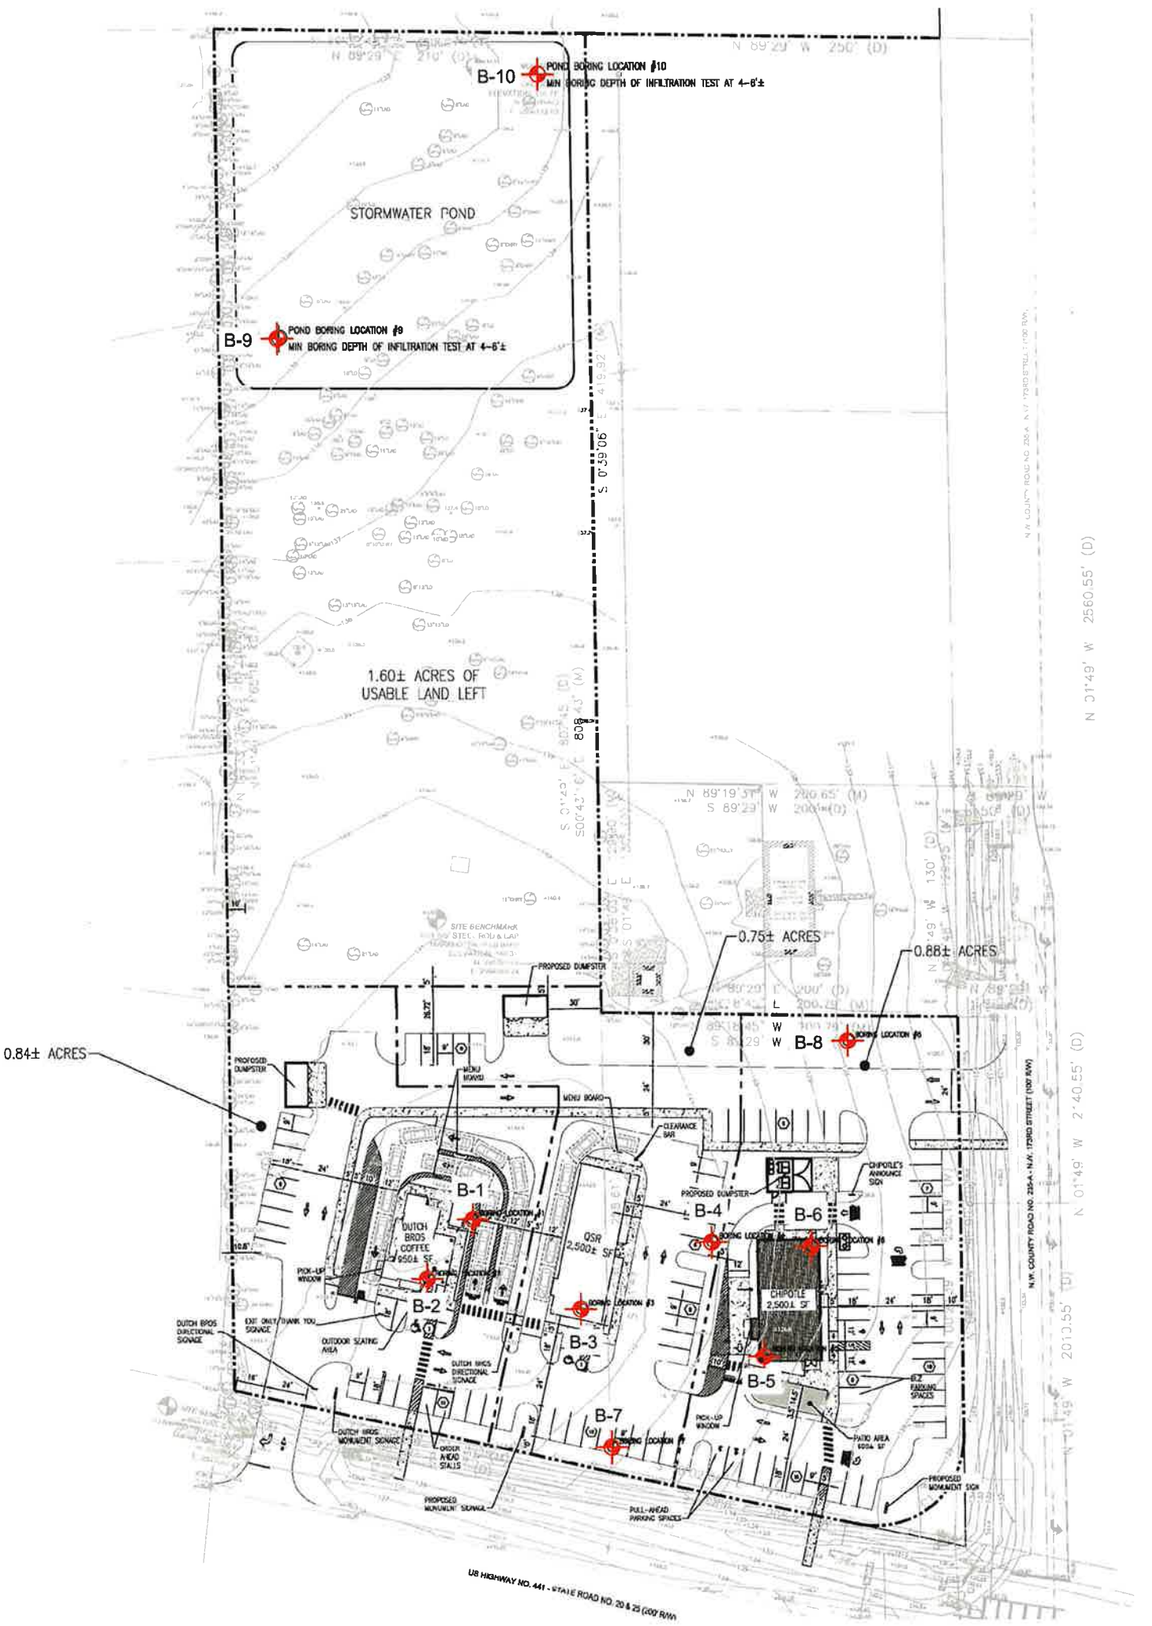
Excavations should be sloped as necessary to prevent slope failure and to allow backfilling. As a minimum, temporary excavations below 4-foot depth should be sloped in accordance with OSHA regulations. Where lateral confinement will not permit slopes to be laid back, the excavation should be shored in accordance with OSHA requirements. During excavation, excavated material should not be stockpiled at the top of the slope within a horizontal distance equal to the excavation depth. Provisions for maintaining workman safety within excavations is the sole responsibility of the contractor.

4.10 CONSTRUCTION RELATED SERVICES

We recommend the Owner retain UES to perform construction materials tests and observations on this project. Field tests and observations include verification of foundation subgrade by performing quality assurance tests on the placement of compacted structural fill and pavement courses. We can also provide concrete testing, pavement section testing, and general construction observations services.

The geotechnical engineering design does not end with the advertisement of the construction documents. The design is an on-going process throughout construction. Because of our familiarity with the site conditions and the intent of the engineering design, we are most qualified to address problems that might arise during construction in a timely and cost-effective manner.

5.0 REPORT LIMITATIONS



This Report has been prepared for the exclusive use of the Alachua Outparcel, LLC c/o Alakai Capital, and other members of the Design/Construction Team for the specific project discussed in this Report. This Report has been prepared in accordance with generally accepted local geotechnical engineering practices; no other warranty is expressed or implied. During the early stages of most construction projects, geotechnical issues not addressed in this report may arise. Because of the natural limitations inherent in working with the subsurface, it is not possible for a geotechnical engineer to predict and address all possible problems. A GBA publication, "Important Information About Your Geotechnical Engineering Report" appears in Appendix B, and will help explain the nature of geotechnical issues. Further, we present documents in Appendix B: Constraints and Restrictions, to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

Hard	>30	>24

UNIFIED CLASSIFICATION SYSTEM

MAJOR DIVISIONS			GROUP SYMBOLS	TYPICAL NAMES
COARSE-GRAINED SOILS More than 50% retained on No. 200 sieve*	GRAVELS 50% or more of coarse fraction retained on No. 200 sieve	CLEAN GRAVELS	GW	Well–graded gravels and gravel–sand mixtures, little or no fines
			GP	Poorly graded gravels and gravel–sand mixtures, little or no fines
		GRAVELS WITH FINES	GM	Silty gravels, gravel–sand–silt mixtures
			GC	Clayey gravels, gravel–sand–clay mixtures
	SANDS More than 50% of coarse fraction passes No. 4 sieve	CLEAN SANDS	SW	Well–graded sands and gravelly sands, little or no fines
			SP	Poorly graded sands and gravelly sands, little or no fines
		SANDS WITH FINES	SM	Silty sands, sand–silt mixtures
			SC	Clayey sands, sand–clay mixtures
FINE-GRAINED SOILS 50% or more passes No. 200 sieve*	SILTS AND CLAYS Liquid limit 50% or less		ML	Inorganic silts, very fine sands, rock flour, silty or clayey fine sands
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays silty clays, lean clays
			OL	Organic silts and organic silty clays of low plasticity
	SILTS AND CLAYS Liquid limit greater than 50%		MH	Inorganic silts, micaceous or diatomacaceous fine sands or silts, elastic silts
			CH	Inorganic clays or high plasticity, fat clays
			OH	Organic clays of medium to high plasticity
Highly organic Soils			PT	Peat, muck and other highly organic soils

* Based on the material passing the 3–in. (75mm) sieve.

APPENDIX B

Important Information About Your Geotechnical Engineering Report Constraint and Restrictions

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled*. No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be*, and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed*. The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only*. To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely*. Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures*. If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

CONSTRAINTS & RESTRICTIONS

The intent of this document is to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

WARRANTY

Universal Engineering Sciences has prepared this report for our client for his exclusive use, in accordance with generally accepted soil and foundation engineering practices, and makes no other warranty either expressed or implied as to the professional advice provided in the report.

UNANTICIPATED SOIL CONDITIONS

The analysis and recommendations submitted in this report are based upon the data obtained from soil borings performed at the locations indicated on the Boring Location Plan. This report does not reflect any variations which may occur between these borings.

The nature and extent of variations between borings may not become known until excavation begins. If variations appear, we may have to re-evaluate our recommendations after performing on-site observations and noting the characteristics of any variations.

CHANGED CONDITIONS

We recommend that the specifications for the project require that the contractor immediately notify Universal Engineering Sciences, as well as the owner, when subsurface conditions are encountered that are different from those present in this report.

No claim by the contractor for any conditions differing from those anticipated in the plans, specifications, and those found in this report, should be allowed unless the contractor notifies the owner and Universal Engineering Sciences of such changed conditions. Further, we recommend that all foundation work and site improvements be observed by a representative of Universal Engineering Sciences to monitor field conditions and changes, to verify design assumptions and to evaluate and recommend any appropriate modifications to this report.

MISINTERPRETATION OF SOIL ENGINEERING REPORT

Universal Engineering Sciences is responsible for the conclusions and opinions contained within this report based upon the data relating only to the specific project and location discussed herein. If the conclusions or recommendations based upon the data presented are made by others, those conclusions or recommendations are not the responsibility of Universal Engineering Sciences.

CHANGED STRUCTURE OR LOCATION

This report was prepared in order to aid in the evaluation of this project and to assist the architect or engineer in the design of this project. If any changes in the design or location of the structure as outlined in this report are planned, or if any structures are included or added that are not discussed in the report, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed and the conclusions modified or approved by Universal Engineering Sciences.

USE OF REPORT BY BIDDERS

Bidders who are examining the report prior to submission of a bid are cautioned that this report was prepared as an aid to the designers of the project and it may affect actual construction operations.

Bidders are urged to make their own soil borings, test pits, test caissons or other investigations to determine those conditions that may affect construction operations. Universal Engineering Sciences cannot be responsible for any interpretations made from this report or the attached boring logs with regard to their adequacy in reflecting subsurface conditions which will affect construction operations.

STRATA CHANGES

Strata changes are indicated by a definite line on the boring logs which accompany this report. However, the actual change in the ground may be more gradual. Where changes occur between soil samples, the location of the change must necessarily be estimated using all available information and may not be shown at the exact depth.

OBSERVATIONS DURING DRILLING

Attempts are made to detect and/or identify occurrences during drilling and sampling, such as: water level, boulders, zones of lost circulation, relative ease or resistance to drilling progress, unusual sample recovery, variation of driving resistance, obstructions, etc.; however, lack of mention does not preclude their presence.

WATER LEVELS

Water level readings have been made in the drill holes during drilling and they indicate normally occurring conditions. Water levels may not have been stabilized at the last reading. This data has been reviewed and interpretations made in this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, tides, and other factors not evident at the time measurements were made and reported. Since the probability of such variations is anticipated, design drawings and specifications should accommodate such possibilities and construction planning should be based upon such assumptions of variations.

LOCATION OF BURIED OBJECTS

All users of this report are cautioned that there was no requirement for Universal Engineering Sciences to attempt to locate any man-made buried objects during the course of this exploration and that no attempt was made by Universal Engineering Sciences to locate any such buried objects. Universal Engineering Sciences cannot be responsible for any buried man-made objects which are subsequently encountered during construction that are not discussed within the text of this report.

TIME

This report reflects the soil conditions at the time of exploration. If the report is not used in a reasonable amount of time, significant changes to the site may occur and additional reviews may be required.

UES Professional Solutions, LLC
GENERAL CONDITIONS

SECTION 1: RESPONSIBILITIES 1.1 *UES Professional Solutions, LLC*, and its affiliated companies ("UES"), is responsible for providing the services described under the Scope of Services. The term "UES" as used herein includes all of UES's agents, employees, professional staff, and subcontractors. **1.2** The Client or a duly authorized representative is responsible for providing UES with a clear understanding of the project nature and scope. The Client shall supply UES with sufficient and adequate information, including, but not limited to, maps, site plans, reports, surveys, plans and specifications, and designs, to allow UES to properly complete the specified services. The Client shall also communicate changes in the nature and scope of the project as soon as possible during performance of the work so that the changes can be incorporated into the work product. **1.3** The Client acknowledges that UES's responsibilities in providing the services described under the Scope of Services section is limited to those services described therein, and the Client hereby assumes any collateral or affiliated duties necessitated by or for those services. Such duties may include, but are not limited to, reporting requirements imposed by any third party such as federal, state, or local entities, the provision of any required notices to any third party, or the securing of necessary permits or permissions from any third parties required for UES's provision of the services so described, unless otherwise agreed upon by both parties in writing.

SECTION 2: STANDARD OF CARE 2.1 Services performed by UES under this Agreement will be conducted in a manner consistent with the level of care and skill ordinarily exercised by members of UES's profession practicing contemporaneously under similar conditions in the locality of the project. No other warranty, express or implied, is made. **2.2** Execution of this document by UES is not a representation that UES has visited the site, become generally familiar with local conditions under which the work is to be performed, or correlated personal observations with the requirements of the Scope of Services. It is the Client's responsibility to provide UES with all information necessary for UES to provide the services described under the Scope of Services, and the Client assumes all liability for information not provided to UES that may affect the quality or sufficiency of the services so described.

SECTION 3: SITE ACCESS AND SITE CONDITIONS 3.1 Client will grant or obtain free access to the site for all equipment and personnel necessary for UES to perform the work set forth in this Agreement. The Client will notify any possessors of the project site that Client has granted UES free access to the site. UES will take reasonable precautions to minimize damage to the site, but it is understood by Client that, in the normal course of work, some damage may occur, and the correction of such damage is not part of this Agreement unless so specified in the Scope of Services. **3.2** The Client is responsible for the accuracy of locations for all subterranean structures and utilities. UES will take reasonable precautions to avoid known subterranean structures, and the Client waives any claim against UES, and agrees to defend, indemnify, and hold UES harmless from any claim or liability for injury or loss, including costs of defense, arising from damage done to subterranean structures and utilities not identified or accurately located. In addition, Client agrees to compensate UES for any time spent or expenses incurred by UES in defense of any such claim with compensation to be based upon UES's prevailing fee schedule and expense reimbursement policy.

SECTION 4: BILLING AND PAYMENT 4.1 UES will submit invoices to Client monthly or upon completion of services. Invoices will show charges for different personnel and expense classifications. **4.2** Payment is due 30 days after presentation of invoice and is past due 31 days from invoice date. Client agrees to pay a finance charge of one and one-half percent (1 ½ %) per month, or the maximum rate allowed by law, on past due accounts. **4.3** If UES incurs any expenses to collect overdue billings on invoices, the sums paid by UES for reasonable attorneys' fees, court costs, UES's time, UES's expenses, and interest will be due and owing by the Client.

SECTION 5: OWNERSHIP AND USE OF DOCUMENTS 5.1 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by UES, as instruments of service, shall remain the property of UES. Neither Client nor any other entity shall change or modify UES's instruments of service. **5.2** Client agrees that all reports and other work furnished to the Client or his agents, which are not paid for, will be returned upon demand and will not be used by the Client for any purpose. **5.3** UES will retain all pertinent records relating to the services performed for a period of five years following submission of the report or completion of the Scope of Services, during which period the records will be made available to the Client in a reasonable time and manner. **5.4** All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by UES, are prepared for the sole and exclusive use of Client, and may not be given to any other entity, or used or relied upon by any other entity, without the express written consent of UES. Client is the only entity to which UES owes any duty or duties, in contract or tort, pursuant to or under this Agreement.

SECTION 6: DISCOVERY OF UNANTICIPATED HAZARDOUS MATERIALS 6.1 Client represents that a reasonable effort has been made to inform UES of known or suspected hazardous materials on or near the project site. **6.2** Under this agreement, the term hazardous materials include hazardous materials, hazardous wastes, hazardous substances (40 CFR 261.31, 261.32, 261.33), petroleum products, polychlorinated biphenyls, asbestos, and any other material defined by the U.S. EPA as a hazardous material. **6.3** Hazardous materials may exist at a site where there is no reason to believe they are present. The discovery of unanticipated hazardous materials constitutes a changed condition mandating a renegotiation of the scope of work. The discovery of unanticipated hazardous materials may make it necessary for UES to take immediate measures to protect health and safety. Client agrees to compensate UES for any equipment decontamination or other costs incident to the discovery of unanticipated hazardous materials. **6.4** UES will notify Client when unanticipated hazardous materials or suspected hazardous materials are encountered. Client will make any disclosures required by law to the appropriate governing agencies. Client will hold UES harmless for all consequences of disclosures made by UES which are required by governing law. In the event the project site is not owned by Client, Client it is the Client's responsibility to inform the property owner of the discovery of unanticipated hazardous materials or suspected hazardous materials. **6.5** Notwithstanding any other provision of the Agreement, Client waives any claim against UES, and to the maximum extent permitted by law, agrees to defend, indemnify, and save UES harmless from any claim, liability, and/or defense costs for injury or loss arising from UES's discovery of unanticipated hazardous materials or suspected hazardous materials including any costs created by delay of the project and any cost associated with possible reduction of the property's value. Client will be responsible for ultimate disposal of any samples secured by UES which are found to be contaminated.

SECTION 7: RISK ALLOCATION 7.1 Client agrees that UES's liability for any damage on account of any breach of contract, error, omission, or professional negligence will be limited to a sum not to exceed $50,000 or UES's fee, whichever is greater. If Client prefers to have higher limits on contractual or professional liability, UES agrees to increase the limits up to a maximum of $1,000,000.00 upon Client's written request at the time of accepting UES's proposal provided that Client agrees to pay an additional consideration of four percent of the total fee, or $1,200.00, whichever is greater. If Client prefers a $2,000,000.00 limit on contractual or professional liability, UES agrees to increase the limits up to a maximum of $2,000,000.00 upon Client's written request at the time of accepting UES's proposal provided that Client agrees to pay an additional consideration of four percent of the total fee, or $2,000.00, whichever is greater. The additional charge for the higher liability limits is because of the greater risk assumed and is not strictly a charge for additional professional liability insurance. **7.2** Client shall not be liable to UES and UES shall not be liable to Client for any incidental, special, or consequential damages (including lost profits, loss of use, and lost savings) incurred by either party due to the fault of the other, regardless of the nature of the fault, or whether it was committed by Client or UES, their employees, agents, or subcontractors; or whether such liability arises in breach of contract or warranty, tort (including negligence), statutory, or any other cause of action. **7.3** As used in this Agreement, the terms "claim" or "claims" mean any claim in contract, tort, or statute alleging negligence, errors, omissions, strict liability, statutory liability, breach of contract, breach of warranty, negligent misrepresentation, or any other act giving rise to liability.

SECTION 8: INSURANCE 8.1 UES represents it and its agents, staff and consultants employed by UES, is and are protected by worker's compensation insurance and that UES has such coverage under public liability and property damage insurance policies which UES deems to be adequate. Certificates for all such policies of insurance shall be provided to Client upon request in writing. Within the limits and conditions of such insurance, UES agrees to indemnify and save Client harmless from and against loss, damage, or liability arising from negligent acts by UES, its agents, staff, and consultants employed by it. UES shall not be responsible for any loss, damage or liability beyond the amounts, limits, and conditions of such insurance or the limits described in Section 7, whichever is less. The Client agrees to defend, indemnify, and save UES harmless for loss, damage or liability arising from acts by Client, Client's agents, staff, and others employed by Client. **8.2** Under no circumstances will UES indemnify Client from or for Client's own actions, negligence, or breaches of contract. **8.3**

To the extent damages are covered by property insurance, Client and UES waive all rights against each other and against the contractors, consultants, agents, and employees of the other for damages, except such rights as they may have to the proceeds of such insurance.

SECTION 9: DISPUTE RESOLUTION **9.1** All claims, disputes, and other matters in controversy between UES and Client arising out of or in any way related to this Agreement will be submitted to mediation or non-binding arbitration, before and as a condition precedent to other remedies provided by law. **9.2** If a dispute arises and that dispute is not resolved by mediation or non-binding arbitration, then: (a) the claim will be brought in the state or federal courts having jurisdiction where the UES office which provided the service is located; and (b) the prevailing party will be entitled to recovery of all reasonable costs incurred, including staff time, court costs, attorneys' fees, expert witness fees, and other claim related expenses.

SECTION 10: TERMINATION **10.1** This agreement may be terminated by either party upon seven (7) days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof, or in the case of a force majeure event such as terrorism, act of war, public health or other emergency. Such termination shall not be effective if such substantial failure or force majeure has been remedied before expiration of the period specified in the written notice. In the event of termination, UES shall be paid for services performed to the termination notice date plus reasonable termination expenses. **10.2** In the event of termination, or suspension for more than three (3) months, prior to completion of all reports contemplated by the Agreement, UES may complete such analyses and records as are necessary to complete its files and may also complete a report on the services performed to the date of notice of termination or suspension. The expense of termination or suspension shall include all direct costs of UES in completing such analyses, records, and reports.

SECTION 11: REVIEWS, INSPECTIONS, TESTING, AND OBSERVATIONS **11.1** Plan review, private provider inspections, and building inspections are performed for the purpose of observing compliance with applicable building codes. Threshold inspections are performed for the purpose of observing compliance with an approved threshold inspection plan. Construction materials testing ("CMT") is performed to document compliance of certain materials or components with applicable testing standards. UES's performance of plan reviews, private provider inspections, building inspections, threshold inspections, or CMT, or UES's presence on the site of Client's project while performing any of the foregoing activities, is not a representation or warranty by UES that Client's project is free of errors in either design or construction. **11.2** If UES is retained to provide construction monitoring or observation, UES will report to Client any observed work which, in UES's opinion, does not conform to the plans and specifications provided to UES. UES shall have no authority to reject or terminate the work of any agent or contractor of Client. No action, statements, or communications of UES, or UES's site representative, can be construed as modifying any agreement between Client and others. UES's performance of construction monitoring or observation is not a representation or warranty by UES that Client's project is free of errors in either design or construction. **11.3** Neither the activities of UES pursuant to this Agreement, nor the presence of UES or its employees, representatives, or subcontractors on the project site, shall be construed to impose upon UES any responsibility for means or methods of work performance, superintendence, sequencing of construction, or safety conditions at the project site. Client acknowledges that Client or its contractor is solely responsible for project jobsite safety. **11.4** Client is responsible for scheduling all inspections and CMT activities of UES. All testing and inspection services will be performed on a will-call basis. UES will not be responsible for tests and inspections that are not performed due to Client's failure to schedule UES's services on the project, or for any claims or damages arising from tests and inspections that are not scheduled or performed.

SECTION 12: ENVIRONMENTAL ASSESSMENTS Client acknowledges that an Environmental Site Assessment ("ESA") is conducted solely to permit UES to render a professional opinion about the likelihood or extent of regulated contaminants being present on, in, or beneath the site in question at the time services were conducted. No matter how thorough an ESA study may be, findings derived from the study are limited and UES cannot know or state for a fact that a site is unaffected by reportable quantities of regulated contaminants as a result of conducting the ESA study. Even if UES states that reportable quantities of regulated contaminants are not present, Client still bears the risk that such contaminants may be present or may migrate to the site after the ESA study is complete.

SECTION 13: SUBSURFACE EXPLORATIONS **13.1** Client acknowledges that subsurface conditions may vary from those observed at locations where borings, surveys, samples, or other explorations are made, and that site conditions may change with time. Data, interpretations, and recommendations by UES will be based solely on information available to UES at the time of service. UES is responsible for those data, interpretations, and recommendations, but will not be responsible for other parties' interpretations or use of the information developed or provided by UES. **13.2** Subsurface explorations may result in unavoidable cross-contamination of certain subsurface areas, as when a probe or boring device moves through a contaminated zone and links it to an aquifer, underground stream, or other hydrous body not previously contaminated. UES is unable to eliminate totally cross-contamination risk despite use of due care. Since subsurface explorations may be an essential element of UES's services indicated herein, Client shall, to the fullest extent permitted by law, waive any claim against UES, and indemnify, defend, and hold UES harmless from any claim or liability for injury or loss arising from cross-contamination allegedly caused by UES's subsurface explorations. In addition, Client agrees to compensate UES for any time spent or expenses incurred by UES in defense of any such claim with compensation to be based upon UES's prevailing fee schedule and expense reimbursement policy.

SECTION 14: SOLICITATION OF EMPLOYEES Client agrees not to hire UES's employees except through UES. In the event Client hires a UES employee within one year following any project through which Client had contact with said employee, Client shall pay UES an amount equal to one-half of the employee's annualized salary, as liquidated damages, without UES waiving other remedies it may have.

SECTION 15: ASSIGNS Neither Client nor UES may delegate, assign, sublet, or transfer its duties or interest in this Agreement without the written consent of the other party.

SECTION 16: GOVERNING LAW AND SURVIVAL **16.1** This Agreement shall be governed by and construed in accordance with the laws of the jurisdiction in which the UES office performing the services hereunder is located. **16.2** In any of the provisions of this Agreement are held illegal, invalid, or unenforceable, the enforceability of the remaining provisions will not be impaired and will survive. Limitations of liability and indemnities will survive termination of this agreement for any cause.

SECTION 17: INTEGRATION CLAUSE **17.1** This Agreement represents and contains the entire and only agreement and understanding among the parties with respect to the subject matter of this Agreement and supersedes any and all prior and contemporaneous oral and written agreements, understandings, representations, inducements, promises, warranties, and conditions among the parties. No agreement, understanding, representation, inducement, promise, warranty, or condition of any kind with respect to the subject matter of this Agreement shall be relied upon by the parties unless expressly incorporated herein. **17.2** This Agreement may not be amended or modified except by an agreement in writing signed by the party against whom the enforcement of any modification or amendment is sought.

SECTION 18: WAIVER OF JURY TRIAL Both Client and UES waive trial by jury in any action arising out of or related to this Agreement.

SECTION 19: INDIVIDUAL LIABILTY PURSUANT TO FLORIDA STAT. 558.0035, AN INDIVIDUAL EMPLOYEE OR AGENT OF UES MAY NOT BE HELD INDIVIDUALLY LIABLE FOR NEGLIGENCE.

LEGAL DESCRIPTION

(PARENT PARCEL)
DESCRIPTION: (AS FURNISHED VIA FIDELITY NATIONAL TITLE INSURANCE COMPANY, COMMITMENT NUMBER: 12091163, COMMITMENT DATE: NOVEMBER 04, 2024)(TAX PARCEL #03044-001-002)("PARCEL B")
A TRACT OF LAND LOCATED IN THE SOUTHEAST 1/4 OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:
FOR A POINT OF REFERENCE, COMMENCE AT THE SOUTHEAST CORNER OF SAID SECTION 8: THENCE RUN NORTH 01 DEG. 49 MIN. WEST, ALONG THE EAST LINE OF SAID SECTION 8 A DISTANCE OF 2010.55 FEET; THENCE RUN SOUTH 89 DEG. 29 MIN. WEST, 50 FEET TO THE WESTERLY RIGHT-OF-WAY OF STATE ROAD S-235A BEING THE POINT OF BEGINNING; THENCE FROM SAID POINT OF BEGINNING CONTINUE SOUTH 89 DEG. 29 MIN. WEST, A DISTANCE OF 200 FEET; THENCE RUN SOUTH 01 DEG. 49 MIN. EAST, A DISTANCE OF 257.75 FEET TO THE NORTHERLY RIGHT-OF-WAY LINE OF STATE HIGHWAY NO. 20; THENCE RUN SOUTH 79 DEG. 06 MIN. EAST, ALONG SAID NORTHERLY RIGHT-OF-WAY LINE A DISTANCE OF 205.2 FEET TO THE SAID WESTERLY RIGHT-OF-WAY LINE OF STATE ROAD NO. S235A; THENCE RUN NORTH 01 DEG. 49 MIN. WEST, ALONG SAID WESTERLY RIGHT-OF-WAY LINE, A DISTANCE OF 298.4 FEET TO CLOSE ON SAID POINT OF BEGINNING.
LESS ANY AND EXCEPT THAT PORTION DESCRIBED AND RECORDED IN OFFICIAL RECORDS BOOK 107, PAGE 609 OF SAID PUBLIC RECORDS.

(LOT 1)
A TRACT OF LAND BEING A PORTION OF THE LANDS DESCRIBED IN OFFICIAL RECORDS BOOK 5248, PAGE 2042 OF PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA AND BEING LOCATED IN THE SOUTHEAST 1/4 OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS: COMMENCE AT THE SOUTHEAST CORNER OF SAID SECTION 8: THENCE NORTH 01°49'00" WEST, ALONG THE EAST LINE OF SAID SECTION 8 A DISTANCE OF 2010.55 FEET; THENCE SOUTH 89°29'00" WEST, 50.00 FEET TO THE NORTHEAST CORNER OF SAID LANDS, SAID CORNER LYING ON THE WESTERLY RIGHT-OF-WAY OF COUNTY ROAD S235-A (A 100 FOOT RIGHT OF WAY), AND TO THE POINT OF BEGINNING; THENCE SOUTH 00°29'39" EAST, ALONG SAID WESTERLY RIGHT OF WAY, A DISTANCE OF 236.18 FEET TO THE BEGINNING OF A CURVE CONCAVE TO THE NORTHWEST, HAVING A RADIUS OF 50.00 FEET AND BEING SUBTENDED BY A CHORD HAVING A BEARING AND DISTANCE OF SOUTH 50°44'07" WEST, 77.97 FEET; THENCE SOUTHWESTERLY, ALONG SAID WESTERLY RIGHT OF WAY LINE AND ALONG THE ARC OF SAID CURVE, THROUGH A CENTRAL ANGLE OF 102°27'34", AN ARC LENGTH OF 89.41 FEET TO THE NORTHERLY RIGHT OF WAY LINE OF US HIGHWAY 441 / STATE ROAD NUMBER 20 & 25 (200 FOOT RIGHT OF WAY); THENCE NORTH 78°01'41" WEST, ALONG SAID NORTHERLY RIGHT OF WAY LINE, A DISTANCE OF 106.10 FEET; THENCE NORTH 11°34'44" EAST, A DISTANCE OF 196.63 FEET; THENCE NORTH 00°41'15" EAST, A DISTANCE OF 72.36 FEET TO THE NORTH LINE OF SAID LANDS; THENCE SOUTH 89°18'45" EAST, ALONG SAID NORTH LINE, A DISTANCE OF 121.79 FEET TO THE POINT OF BEGINNING. SAID TRACT OF LAND CONTAINING 0.88 ACRES, MORE OR LESS.

EROSION CONTROL NOTES

ALL EROSION CONTROL MEASURES SHALL REMAIN IN PLACE UNTIL COMPLETION OF CONSTRUCTION.

1. ALL EROSION AND SEDIMENT CONTROL WORK SHALL CONFORM WITH LOCAL CITY/COUNTY AND WATER MANAGEMENT DISTRICT SPECIFICATIONS, SUBJECT TO AUTHORIZED AND APPROVED VARIANCES, WAIVERS AND/OR CONDITIONAL CHANGES.

2. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE PLACED PRIOR TO OR AS THE FIRST STEP IN, CONSTRUCTION. SEDIMENT CONTROL PRACTICES WILL BE APPLIED AS A PERIMETER DEFENSE AGAINST ANY TRANSPORTATION OF SILT OFF THE SITE.

3. ALL AREAS AFFECTED BY THIS WORK SHALL BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING CONDITION, UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. THE COST FOR SUCH RESTORATION SHALL BE INCIDENTAL TO OTHER CONSTRUCTION AND NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

4. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES BETWEEN THESE PLANS AND FIELD CONDITIONS PRIOR TO CONSTRUCTION.

5. PRIOR TO CONSTRUCTION THE CONTRACTOR SHALL PROVIDE TREE PROTECTION BARRIERS TO MEET THE REQUIREMENTS OF LOCAL SPECIFICATIONS.

6. THE CONTRACTOR SHALL SELECTIVELY CLEAR ONLY THE AREAS REQUIRED FOR CONSTRUCTION AND STABILIZE ANY POTENTIAL EROSION AREAS IMMEDIATELY FOLLOWING COMPLETION OF CONSTRUCTION.

7. CONTRACTOR SHALL KEEP ANY AND ALL SAND, SILT OR OTHER DEBRIS FROM MOVING OFF-SITE. USE AND MAINTAIN SILT FENCE JUST INSIDE OF PROPERTY LINE.

8. CONTRACTOR SHALL BLOCK INTRUSION OF SAND, SILT OR OTHER DEBRIS INTO ANY DRAINAGE OR SANITARY SEWER STRUCTURE OR PIPING ON OR ADJACENT TO SITE.

9. ALL CLEARED AREAS FOR IMPROVEMENT AND/OR CONSTRUCTION SHALL BE WATERED TO PREVENT WIND EROSION.

10. FOR ADDITIONAL INFORMATION AND DETAILS, **SEE F.D.O.T. INDEX NO. 102**.

11. UNLESS SPECIFIED, SILT FENCES MAY BE USED IN LIEU OF HAY BARRIERS.

12. ADDITIONAL POSTS AND RAILS MAY BE NECESSARY TO SECURE AND SUPPORT BARRIERS.

13. ADDITIONAL BARRIER LENGTHS MAY BE REQUIRED BY THE COUNTY ENGINEER OR BY REGULATORY AGENCIES.

14. FILTER FABRIC MUST BE INSTALLED UNDER ALL INLET GRATES, AT ALL TIMES WHEN INLETS ARE NOT PROTECTED BY SILT FENCE OR HAY BALES, UNTIL THE LIMEROCK BASE IS FINISHED AND PRIMED.

15. THE CONTRACTOR IS REQUIRED TO HAVE THE EROSION CONTROL PLAN POSTED IN A VISIBLE LOCATION ON THE CONSTRUCTION SITE AT ALL TIMES.

16. NON STORMWATER DISCHARGES SUCH AS FIRE HYDRANT FLUSHING, ETC SHALL BE DISCHARGED TO EXISTING UNDERGROUND STORMWATER FACILITY.

17. ANY POTENTIALLY HAZARDOUS CHEMICALS BROUGHT ONTO THE JOB SITE WILL BE LIMITED AND KEPT IN ORIGINAL CONTAINER WITH MSDS LABEL.

18. NO SILT SHALL BE TRACKED ONTO PUBLIC ROADWAYS. ANY SILT DEPOSITED ON PUBLIC ROADWAYS SHALL BE REMOVED BY THE END OF THE WORK DAY.

GC NOTE:

A COPY OF THIS SHEET C0.1 SHALL BE PROVIDED TO ALL BIDDERS AND SUB-CONTRACTORS.

DEMOLITION NOTES

1. PRIOR TO COMMENCEMENT OF DEMOLITION THE CONTRACTOR WILL COORDINATE HIS ACTIVITIES WITH ALL THE UTILITY COMPANIES SERVING THIS AREA. CONTRACTOR IS TO COORDINATE FULLY WITH UTILITY COMPANIES ON EXACT LOCATION OF UNDERGROUND UTILITIES PRIOR TO EXCAVATION.

2. THE CONTRACTOR IS TO COMPLETELY REMOVE AND DISPOSE OF ALL STRUCTURES AND BUILDINGS THAT IS SO INDICATED INCLUDING FOUNDATIONS, TIMBER AND BRUSH, EXCEPT AS OTHERWISE INDICATED; STUMPS AND ROOTS; EXISTING PAVEMENT; OTHER STRUCTURES AS SHOWN OR REASONABLY IMPLIED IN THE DRAWINGS.

3. EXCEPT IN AREAS WHERE EXISTING TREES SHALL BE PRESERVED, A MINIMUM DEPTH OF REMOVAL SHALL BE (2) FOOT BELOW SUBGRADE IN ROADWAY AREAS AND TO ORIGINAL SOILS ELSEWHERE. WHERE EXISTING BUILDINGS ARE TO BE DEMOLISHED, ALL TRACES OF FOUNDATIONS AND UNDERGROUND UTILITIES ARE TO BE REMOVED (UNLESS OTHERWISE NOTED ON PLANS). THE CONTRACTOR IS RESPONSIBLE FOR PROPER DISPOSAL OF ALL WASTE MATERIAL.

4. WHERE PAVING OR STRUCTURES ARE TO BE REMOVED WHICH ABUT OR ARE A PART OF CONNECTED FACILITIES (THAT ARE OFF-SITE), RESTORATION OF ANY DAMAGE THAT MIGHT RESULT FROM DEMOLITION IS TO BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. THE COST FOR SUCH RESTORATION SHALL BE INCIDENTAL TO OTHER CONSTRUCTION AND NO EXTRA COMPENSATION WILL BE ALLOWED.

5. THE LOCATION OF ALL EXISTING UTILITIES, STORM DRAINAGE AND TREES SHOWN ON THE PLANS HAVE BEEN DETERMINED FROM AVAILABLE INFORMATION AND IS GIVEN FOR THE CONVENIENCE OF THE CONTRACTOR. THE OWNER OR ENGINEER ASSUMES NO RESPONSIBILITY FOR ACCURACY. PRIOR TO THE START OF DEMOLITION THE CONTRACTOR SHALL VISIT THE SITE AND DETERMINE THE EXISTANCE & LOCATION OF ALL STRUCTURES, UTILITIES & TREES SHOWN OR NOT ON THE PLANS, WHICH WOULD NEED TO BE REMOVED OR PRESERVED.

6. THE CONTRACTOR IS TO COORDINATE THE RELOCATION OR REMOVAL OF ALL OVERHEAD/UNDERGROUND UTILITIES, UTILITY POLES, LIGHTS AND LINES IN THE RIGHT-OF-WAY AND ON THE PROPERTY WITH THE APPROPRIATE SERVICE PROVIDER.

7. THE CONTRACTOR SHALL REFERENCE AND RESTORE PROPERTY CORNERS AND LAND MARKERS DISTURBED DURING CONSTRUCTION. (UNDER THE DIRECTION OF A **FLORIDA** REGISTERED LAND SURVEYOR).

UTILITY SEPARATION NOTES

(1) HORIZONTAL SEPARATION BETWEEN UNDERGROUND WATER MAINS AND SANITARY OR STORM SEWERS, WASTEWATER OR STORM WATER FORCE MAINS, RECLAIMED WATER PIPELINES, AND ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEMS.

(A) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST THREE FEET BETWEEN THE OUTSIDE OF THE WATER MAIN AND THE OUTSIDE OF ANY EXISTING OR PROPOSED STORM SEWER, STORM WATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.

(B) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST THREE FEET, AND PREFERABLY TEN FEET, BETWEEN THE OUTSIDE OF THE WATER MAIN AND THE OUTSIDE OF ANY EXISTING OR PROPOSED VACUUM-TYPE SANITARY SEWER.

(C) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST SIX FEET, AND PREFERABLY TEN FEET, BETWEEN THE OUTSIDE OF THE WATER MAIN AND THE OUTSIDE OF ANY EXISTING OR PROPOSED GRAVITY- OR PRESSURE-TYPE SANITARY SEWER, WASTEWATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER NOT REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C. THE MINIMUM HORIZONTAL SEPARATION DISTANCE BETWEEN WATER MAINS AND GRAVITY-TYPE SANITARY SEWERS SHALL BE REDUCED TO THREE FEET WHERE THE BOTTOM OF THE WATER MAIN IS LAID AT LEAST SIX INCHES ABOVE THE TOP OF THE SEWER.

(D) NEW OR RELOCATED, UNDERGROUND WATER MAINS SHALL BE LAID TO PROVIDE A HORIZONTAL DISTANCE OF AT LEAST TEN FEET BETWEEN THE OUTSIDE OF THE WATER MAIN AND ALL PARTS OF ANY EXISTING OR PROPOSED "ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEM" AS DEFINED IN SECTION 381.0065(2), F.S., AND RULE 64E-6.002, F.A.C.

(2) VERTICAL SEPARATION BETWEEN UNDERGROUND WATER MAINS AND SANITARY OR STORM SEWERS, WASTEWATER OR STORM WATER FORCE MAINS, AND RECLAIMED WATER PIPELINES:

(A) NEW OR RELOCATED, UNDERGROUND WATER MAINS CROSSING ANY EXISTING OR PROPOSED GRAVITY- OR VACUUM-TYPE SANITARY SEWER OR STORM SEWER SHALL BE LAID SO THE OUTSIDE OF THE WATER MAIN IS AT LEAST SIX INCHES, AND PREFERABLY 12 INCHES, ABOVE OR AT LEAST 12 INCHES BELOW THE OUTSIDE OF THE OTHER PIPELINE. HOWEVER, IT IS PREFERABLE TO LAY THE WATER MAIN ABOVE THE OTHER PIPELINE.

(B) NEW OR RELOCATED, UNDERGROUND WATER MAINS CROSSING ANY EXISTING OR PROPOSED PRESSURE-TYPE SANITARY SEWER, WASTEWATER OR STORM WATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER SHALL BE LAID SO THE OUTSIDE OF THE WATER MAIN IS AT LEAST 12 INCHES ABOVE OR BELOW THE OUTSIDE OF THE OTHER PIPELINE. HOWEVER, IT IS PREFERABLE TO LAY THE WATER MAIN ABOVE THE OTHER PIPELINE.

(C) AT THE UTILITY CROSSINGS DESCRIBED IN PARAGRAPHS (A) AND (B) ABOVE, ONE FULL LENGTH OF WATER MAIN PIPE SHALL BE CENTERED ABOVE OR BELOW THE OTHER PIPELINE SO THE WATER MAIN JOINTS WILL BE AS FAR AS POSSIBLE FROM THE OTHER PIPELINE. ALTERNATIVELY, AT SUCH CROSSINGS, THE PIPES SHALL BE ARRANGED SO THAT ALL WATER MAIN JOINTS ARE AT LEAST THREE FEET FROM ALL JOINTS IN VACUUM-TYPE SANITARY SEWERS, STORM SEWERS, STORM WATER FORCE MAINS, OR PIPELINES CONVEYING RECLAIMED WATER REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C., AND AT LEAST SIX FEET FROM ALL JOINTS IN GRAVITY- OR PRESSURE-TYPE SANITARY SEWERS, WASTEWATER FORCE MAINS, OR PIPELINES CONVEYING RECLAIMED WATER NOT REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.

(3) SEPARATION BETWEEN WATER MAINS AND SANITARY OR STORM SEWER MANHOLES.

(A) NO WATER MAIN SHALL PASS THROUGH, OR COME INTO CONTACT WITH, ANY PART OF A SANITARY SEWER MANHOLE.

(B) EFFECTIVE AUGUST 28, 2003, WATER MAINS SHALL NOT BE CONSTRUCTED OR ALTERED TO PASS THROUGH, OR COME INTO CONTACT WITH, ANY PART OF A STORM SEWER MANHOLE OR INLET STRUCTURE.

(4) SEPARATION BETWEEN FIRE HYDRANT DRAINS AND SANITARY OR STORM SEWERS, WASTEWATER OR STORM WATER FORCE MAINS, RECLAIMED WATER PIPELINES, AND ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEMS.
NEW OR RELOCATED FIRE HYDRANTS WITH UNDERGROUND DRAINS SHALL BE LOCATED SO THAT THE DRAINS ARE AT LEAST THREE FEET FROM ANY EXISTING OR PROPOSED STORM SEWER, STORM WATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.; AT LEAST THREE FEET, AND PREFERABLY TEN FEET, FROM ANY EXISTING OR PROPOSED VACUUM-TYPE SANITARY SEWER; AT LEAST SIX FEET, AND PREFERABLY TEN FEET, FROM ANY EXISTING OR PROPOSED GRAVITY- OR PRESSURE-TYPE SANITARY SEWER, WASTEWATER FORCE MAIN, OR PIPELINE CONVEYING RECLAIMED WATER NOT REGULATED UNDER PART III OF CHAPTER 62-610, F.A.C.; AND AT LEAST TEN FEET FROM ANY EXISTING OR PROPOSED "ON-SITE SEWAGE TREATMENT AND DISPOSAL SYSTEM" AS DEFINED IN SECTION 381.0065(2), F.S., AND RULE 64E-6.002, F.A.C.

UTILITY NOTES ⚠1

PRIOR TO COMMENCING ANY CONSTRUCTION, THE CONTRACTOR SHALL FIELD VERIFY ALL EXISTING UTILITIES, INCLUDING WITHOUT LIMITATION POTABLE WATER, RECLAIMED WATER, SANITARY SEWER, AND SERVICE UTILITIES, AT POINTS OF CONNECTION, POINTS OF CROSSING, AND/OR POTENTIAL CONFLICT. NOTIFY ENGINEER OF ANY DISCREPANCIES BETWEEN THE PLANS AND FIELD CONDITIONS.

A. GENERAL

1. THE LOCATIONS OF EXISTING UTILITIES, SUCH AS WATER MAINS, SEWERS, GAS LINES, ETC., SHOWN ON THE PLANS ARE BASED ON THE BEST AVAILABLE INFORMATION AND ARE SHOWN FOR THE CONVENIENCE OF THE CONTRACTOR. THE ENGINEER AND OWNER ASSUME NO LIABILITY FOR ACCURACY AND COMPLETENESS. IT IS THE CONTRACTOR'S RESPONSIBILITY TO CONTACT ALL UTILITY COMPANIES 48 HOURS PRIOR TO COMMENCEMENT OF CONSTRUCTION AND TO HAVE THEIR FACILITIES LOCATED IN THE FIELD PRIOR TO ANY WORK.

2. DUE TO GRAPHIC LIMITATIONS OF THE DRAWING SCALE, ALL STORM SEWER, DRAINAGE, WATER AND SANITARY SEWER MAINS, SERVICES, LATERALS, CONNECTIONS, AND APPURTENANCES DEPICTED HEREIN – UNLESS OTHERWISE LOCATED BY DIMENSIONS – REFLECT SCHEMATIC LOCATIONS ONLY. THE CONTRACTOR SHALL BE RESPONSIBLE FOR THE FINAL LOCATIONS IN ACTUAL CONSTRUCTION AND INSTALLATION OF THE PROPOSED IMPROVEMENTS, INCLUDING ANY REQUISITE COORDINATION WITH THE RESPECTIVE GOVERNING AGENCY/UTILITY PROVIDER.

3. ALL WATER AND SEWER CONSTRUCTION SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS OF THE **CITY OF ALACHUA**, AND WILL BE SUBJECT TO THEIR INSPECTION AND ACCEPTANCE. WATER AND WASTEWATER SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH "CITY OF ALACHUA, PUBLIC SERVICES, DESIGN AND CONSTRUCTION MANUAL, LATEST EDITION."

4. CONTRACTOR SHALL INSPECT PIPING AND MATERIALS BEFORE INSTALLATION TO DETECT APPARENT DEFECTS. MARK DEFECTIVE MATERIALS WITH WHITE PAINT AND PROMPTLY REMOVE FROM SITE.

5. LAY SEWER PIPING BEGINNING AT LOW POINT OF SYSTEM (CONNECTION TO OFF SITE SYSTEM OR PUMP STATION), TRUE TO GRADES AND ALIGNMENT INDICATED WITH UNBROKEN CONTINUITY OF INVERTS. PLACE BELL ENDS OR GROOVE ENDS OF PIPING FACING UPSTREAM.

6. CLEAR INTERIOR OF PIPE OF DIRT AND OTHER SUPERFLUOUS MATERIAL AS WORK PROGRESSES. MAINTAIN SWAB OR DRAG IN LINE AND PULL PAST EACH JOINT AS IT IS COMPLETED. PLACE PLUGS IN ENDS OF UNCOMPLETED CONDUIT WHENEVER WORK STOPS.

7. MAINTAIN **36"** COVER OVER MAINS, AND **30"** OVER SERVICES/LATERALS.

8. WHEN PROPOSED CONSTRUCTION OCCURS AT EXISTING MANHOLES, INLETS, VAULTS, AND OTHER STRUCTURES, THE CONTRACTOR SHALL MODIFY THE STRUCTURES, FRAMES, AND GRATES TO MEET THE PROPOSED GRADES UNLESS OTHERWISE DIRECTED.

9. INSTALL CONTINUOUS LOCATOR TAPE/WIRE, LOCATED DIRECTLY OVER POTABLE WATER MAINS AND SANITARY SEWER MAINS AT 6" TO 8" ABOVE PIPE.

10. WHERE APPLICABLE, UTILITY TRENCHES CROSSING PAVEMENT AREAS SHALL BE BACK FILLED WITH COMPACTED GRANULAR MATERIAL IN ACCORDANCE WITH A.A.S.H.T.O.-T-99.

11. CONTRACTOR SHALL PROVIDE SLEEVES FOR IRRIGATION LINES UNDER PAVEMENT. COORDINATE WITH GENERAL CONTRACTOR.

12. ALL TRENCHES EXCAVATED FOR THE PURPOSES OF UTILITY/STORM INSTALLATION SHALL BE KEPT DRY FOR THE DURATION OF UTILITY/STORM CONSTRUCTION. DEWATERING OF UTILITY/STORM TRENCHES MAY BE REQUIRED TO PREVENT FLOTATION OF UTILITY/STORM PIPES DURING INSTALLATION.

13. THE CONTRACTOR SHALL NOTIFY THE ENGINEER WHEN CONSTRUCTION IS COMPLETE FOR WATER, WASTEWATER AND STORMWATER SYSTEMS SO TIMELY CERTIFICATIONS MAY BE INITIATED. SATISFACTORY BACTERIOLOGICAL TEST RESULTS, PRESSURE TEST RESULTS, AND AN AS BUILT SURVEY SHALL BE SUBMITTED TO ENGINEER PRIOR TO FINAL CERTIFICATION.

14. SUITABLE COUPLINGS COMPLYING WITH ASTM SPECIFICATIONS ARE REQUIRED FOR JOINING DISSIMILAR MATERIALS.

15. DEFLECTION TESTS ARE REQUIRED FOR ALL FLEXIBLE PIPE. TESTING REQUIREMENTS: 1) NO PIPE SHALL EXCEED A DEFLECTION OF 5%; 2) USING A RIGID BALL OR MANDREL FOR THE DEFLECTION TEST WITH A DIAMETER NOT LESS THEN 95% OF THE BASE INSIDE DIAMETER OR AVERAGE INSIDE DIAMETER OF THE PIPE; 3) PERFORMING THE TEST WITHOUT MECHANICAL PULLING DEVICES.

B. MATERIALS (WATER)

1. SERVICE PIPE DOWNSTREAM EACH BACKFLOW PREVENTER SHALL BE POLYETHYLENE (PE) DR-9.

2. WATER MAINS SHALL BE PVC ASTM C900, DR 18 WITH INTEGRAL BELLS AND ELASTOMERIC JOINTS PER ASTM C3139 AND GASKETS PER ASTM F477.

3. DUCTILE IRON PIPE (D.I.P.), IF REQUIRED, SHALL CONFORM TO ANSI/AWWA A21.51/C151, CLASS 50 (MIN.) PIPE FOR ALL SIZES.

4. CORPORATION STOPS SHALL BE 1 1/2" BRASS, EQUIPPED WITH CONNECTIONS COMPATIBLE WITH SERVICE PIPE AND THREADED IN ACCORDANCE WITH SPECIFICATIONS IN AWWA C800. CURB STOPS SHALL BE SIZED TO MATCH THE METER SIZE AND CONFORM WITH AWWA C800 AND AWWA C901.

5. FITTINGS SHALL BE BRASS, CAST AND MACHINED IN ACCORDANCE WITH AWWA C800 AND AWWA C901, WITH COMPATIBLE PIPE CONNECTIONS.

6. SERVICE SADDLES SHALL BE USED FOR ALL SERVICE LINE TAPS. SERVICE SADDLES SHALL BE DOUBLE STRAP, ANCHORED BY A MINIMUM FOUR (4) BOLT PATTERN ON A DUCTILE IRON SADDLE BODY. FOR PVC PIPE, DOUBLE STRAPS SHALL BE CORROSION RESISTANT ALLOY STEEL, SIZED EXACTLY TO THE PIPE OUTSIDE DIAMETER. SEALING GASKETS SHALL BE BUNA-N RUBBER.

7. ALL PIPE AND PIPE FITTINGS INSTALLED UNDER THIS PROJECT WILL BE COLOR CODED USING BLUE AS A PREDOMINANT COLOR.

8. SERVICE WATER PIPING UPSTREAM THE WATER METER SHALL BE PVC, TYPE AS SHOWN ON THE DETAILS.

9. SERVICE WATER PIPING BETWEEN THE WATER AND THE BACKFLOW PREVENTER SHALL BE OF THE SIZE AND TYPE AS SHOWN IN THE DETAIL.

10. WATER METER APPURTENANCES SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR. THE WATER METER ITSELF WILL BE FURNISHED AND INSTALLED BY THE CITY.

11. FOR EACH BACKFLOW PREVENTER, PROVIDE AN ENCLOSURE AS PER THE DETAIL.

12. WET TAP(S) TO PRESSURIZED MAINS SHALL BE DONE BY A SUBCONTRACTOR PRE-APPROVED BY THE CITY OF ALACHUA.

13. PROVIDE TRACER WIRE SYSTEM FOR WATER PIPING AS SHOWN ON THE DETAILS AND AS PER THE COA DCM.

14. TRACER WIRE SYSTEM SHALL COMMENCE AT THE TIE-IN(S) AT EXISTING WATER MAIN(S) AND TERMINATE AT EACH COA END OF MAINTENANCE POINT.

C. MATERIALS (SEWER)

1. ALL GRAVITY SEWER PIPE AND FITTINGS SHALL BE NON-PRESSURE POLYVINYL CHLORIDE PIPE (PVC) CONFORMING TO ASTM D 3034, SDR 26, WITH PUSH-ON RUBBER GASKET JOINTS.

2. ALL FITTINGS AND ACCESSORIES SHALL BE MANUFACTURED OR SUPPLIED BY THE PIPE MANUFACTURER OR PRIOR-APPROVED EQUAL.

3. BEDDING AND INITIAL BACK FILL OVER SEWER MAINS AND SERVICES SHALL BE SAND WITH NO ROCK LARGER THAN 1" IN DIAMETER.

D. MATERIALS (STORM)

1. REINFORCED CONCRETE PIPE (RCP): O-RING PIPE SHALL CONFORM TO ASTM C 76 (CLASS III, UNLESS OTHERWISE SPECIFIED) AND AASHTO M 170 STANDARD SPECIFICATIONS, AND ASTM C 443 STANDARD SPECIFICATION FOR JOINTS FOR RCP USING RUBBER GASKETS.

2. ELLIPTICAL RCP SHALL CONFORM TO ASTM C 507 (CLASS III) AND AASHTO M 207 STANDARD SPECIFICATIONS.

3. HDPE PIPE AND FITTINGS SHALL MEET THE REQUIREMENTS OF AASHTO M-25 (3"-10"), M-294 (12" AND LARGER), TYPE S (CORRUGATED OUTSIDE – SMOOTH INSIDE, 4"-60"), AND MP7 (60" TYPE S).

A. BELL/SPIGOT GASKET FOR HDPE PIPE SHALL BE SOIL/SILT TIGHT PER AASHTO SECTION 26 WITH RUBBER GASKET MEETING ASTM F-477.

4. PVC STORM SEWER PIPE (12" OR LESS) AND FITTINGS SHALL BE NON-PRESSURE POLYVINYL CHLORIDE PIPE (PVC) CONFORMING TO ASTM D 3034, SDR 26, WITH PUSH-ON RUBBER GASKET JOINTS.

5. UNLESS AN ALTERNATE IS APPROVED BY COA, GROUT BOTTOM OF ALL STORMWATER DRAINAGE STRUCTURE INVERTS AS PER FDOT INDEX 425-001 AND AS PER COA STANDARD DETAIL 210.

GENERAL NOTES

A. GENERAL

1. ALL INFRASTRUCTURE AND IMPROVEMENTS SHALL CONFORM TO THE STANDARDS AND SPECIFICATIONS OF THE LOCAL JURISDICTION AND WILL BE SUBJECT TO THEIR INSPECTION AND ACCEPTANCE.

2. SITE LOCATION: **N.W.C. OF US-441 & NW 173RD STREET, ALACHUA, FL 32615**.

3. THIS SITE LIES IN FLOOD ZONE **X**, F.I.R.M. PANEL **12001C0120D**, DATED **JUNE 16, 2006**.

4. BOUNDARY, TOPOGRAPHIC, AND TREE SURVEY BY **ACCURIGHT SURVEYS OF ORLANDO INC., 2012 EAST ROBINSON, ORLANDO, FLORIDA, 32803**.

5. BENCHMARK – REFER TO TOPOGRAPHIC SURVEY BY **ACCURIGHT SURVEYS OF ORLANDO INC.**.

6. LEGAL DESCRIPTION SHOWN HEREIN IS FURNISHED BY SURVEYOR, AND IS INCLUDED FOR PERMITTING AND APPROVAL PURPOSES, AND AS A COURTESY FOR THE CONTRACTOR. INTERPLAN LLC. ASSUMES NO LIABILITY FOR ITS ACCURACY OR COMPLETENESS.

7. SITE GEOTECHNICAL INVESTIGATION PERFORMED BY **UES** ENGINEERING. INTERPLAN LLC. ASSUMES NO RESPONSIBILITY FOR THE CORRECTNESS, ACCURACY AND COMPLETENESS OF THEIR WORK. **THE CONTRACTOR SHALL OBTAIN A COPY OF THE GEOTECHNICAL ENGINEER'S REPORT FOR THIS SITE AND COMPLY WITH RECOMMENDATIONS CONTAINED THEREIN.** IF ADDITIONAL SERVICES ARE REQUIRED, THE CONTRACTOR SHALL MAKE A REQUEST TO THE OWNER.

8. CONTRACTOR SHALL PROVIDE AND INSTALL EROSION CONTROL DEVICES (SILT FENCE OR OTHER METHODS) AT LIMITS OF CONSTRUCTION AND AROUND EACH STORM INLET PRIOR TO CONSTRUCTION, AND SHALL MAINTAIN SAID EROSION CONTROL DEVICES DURING CONSTRUCTION, ALL IN CONFORMANCE WITH CURRENT LOCAL, COUNTY AND STATE CRITERIA.

9. THE SITE SHALL BE CLEARED AS MAY BE NOTED ON THE PLANS, OF ALL OBSTRUCTIONS AND DELETERIOUS MATERIAL SUCH AS FENCES, WALLS, FOUNDATIONS, LOGS, SHRUBS, BRUSH, WEEDS, OTHER VEGETATION, AND ACCUMULATION OF RUBBISH OF WHATEVER NATURE. OFF-SITE DISPOSAL, INCLUDING ANY HAZARDOUS MATERIAL ENCOUNTERED, SHALL BE IN ACCORDANCE WITH APPLICABLE LOCAL, STATE, AND FEDERAL RULES AND REGULATIONS.

10. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY INTERPLAN LLC. OF ANY DISCREPANCIES BETWEEN THE PLANS AND FIELD CONDITIONS PRIOR TO START OF CONSTRUCTION.

11. THE CONTRACTOR SHALL REMAIN SOLELY RESPONSIBLE FOR ANY DESIGN CHANGES WHICH HE MAY INCORPORATE INTO THE PLANS WITHOUT PRIOR WRITTEN CONSENT AND/OR APPROVAL FROM THE OWNER AND THE ENGINEER.

12. THE CONTRACTOR SHALL COORDINATE ALL WORK WITHIN EACH EXISTING RIGHT OF WAY WITH THE CITY OF **ALACHUA** AND THE FLORIDA DEPARTMENT OF TRANSPORTATION.

13. SCS SOILS: **-ARREDONDO FINE SAND, 0 TO 5 PERCENT SLOPES**
-ARREDONDO-URBAN LAND COMPLEX, 0 TO 5 PERCENT SLOPES
-FORT MEADE FINE SAND, 0 TO 5 PERCENT SLOPES

14. STORMWATER MANAGEMENT IS PROVIDED BY **STORMWATER RETENTION POND**.

15. THE CONTRACTOR SHALL RESTORE OFF-SITE AREAS TO A CONDITION EQUAL TO OR BETTER THAN THE CONDITION EXISTING PRIOR TO COMMENCEMENT OF CONSTRUCTION.

16. ALL DISTURBED AREAS SHALL BE SODDED.

17. AT LEAST 30 DAYS PRIOR TO ANTICIPATED COMPLETION OF SITE CONSTRUCTION, THE FINAL CERTIFICATION PROCESS WILL BEGIN. THE CONTRACTOR SHALL PROVIDE DOCUMENTS AND INFORMATION, IN A TIMELY MANNER, TO ENGINEER, INCLUDING, WITHOUT LIMITATION:
- **a. SURVEYED "AS-BUILTS" PER AS-BUILT SURVEY SCOPE IN SPEC MANUAL.**
- **b. COMPACTION AND DENSITY TEST REPORTS, AND**
- **c. PRESSURE TESTING AND BACTERIOLOGICAL TESTING RESULTS, AS REQUIRED, FOR WATER DISTRIBUTION AND/OR WASTEWATER COLLECTION/TRANSMISSION SYSTEMS.**

THE CONTRACTOR SHALL HAVE TWO (2) SETS OF AS-BUILT PLANS, SIGNED AND SEALED BY SURVEYOR OF RECORD, ON SITE THE DAY OF THE CIVIL ENGINEERING FINAL PUNCH LIST INSPECTION. THE GENERAL CONTRACTOR IS TO GIVE THE TWO AS-BUILT PLANS TO THE REPRESENTATIVE FROM INTERPLAN COMPLETING THE INSPECTION. IF ANY DEFICIENCIES ARE NOTED, ONE SET OF RED-LINED AS-BUILT PLANS WILL BE GIVEN TO THE GC FOR REVISIONS TO BE MADE. REVISED AS-BUILTS WILL NEED TO BE FORWARDED TO INTERPLAN BEFORE ANY CERTIFICATIONS CAN BE INITIATED.

18. ALL TRAFFIC CONTROL DEVICES, EQUIPMENT AND INSTALLATION SHALL MEET THE REQUIREMENTS OF THE LOCAL JURISDICTION AND/OR FLORIDA DEPARTMENT OF TRANSPORTATION.

19. PARKING STALLS SHALL CONFORM WITH LOCAL CODE. ACCESSIBLE PARKING SPACES AND ACCESS ROUTES SHALL FURTHER CONFORM WITH CURRENT ADA REQUIREMENTS.

20. HANDICAP PAVEMENT MARKINGS AND SIGNAGE SHALL CONFORM WITH CURRENT ADA REQUIREMENTS AND LOCAL ORDINANCE.

21. LANDSCAPE SHALL BE TRIMMED TO ENSURE SIGHT VISIBILITY OF TRAFFIC CONTROL DEVICES.

22. ALL PAVEMENT IS DIMENSIONED TO FACE OF CURB.

23. ALL BUILDING DIMENSIONS AND TIES ARE TO OUTSIDE FACE. SEE ARCHITECTURAL PLANS.

24. ALL CURB RETURN RADII ARE 5' UNLESS NOTED.

25. BUILDING AND SITE IMPROVEMENTS ARE PARALLEL AND PERPENDICULAR TO **EAST** PROPERTY LINE.

DEMOLITION NOTES

1. PRIOR TO COMMENCEMENT OF DEMOLITION THE CONTRACTOR WILL COORDINATE HIS ACTIVITIES WITH ALL THE UTILITY COMPANIES SERVING THIS AREA. CONTRACTOR IS TO COORDINATE FULLY WITH UTILITY COMPANIES ON EXACT LOCATION OF UNDERGROUND UTILITIES PRIOR TO EXCAVATION.

2. THE CONTRACTOR IS TO COMPLETELY REMOVE AND DISPOSE OF ALL STRUCTURES AND BUILDINGS THAT IS SO INDICATED INCLUDING FOUNDATIONS, TIMBER AND BRUSH, EXCEPT AS OTHERWISE INDICATED; STUMPS AND ROOTS; EXISTING PAVEMENT; OTHER STRUCTURES AS SHOWN OR REASONABLY IMPLIED IN THE DRAWINGS.

3. EXCEPT IN AREAS WHERE EXISTING TREES SHALL BE PRESERVED, A MINIMUM DEPTH OF REMOVAL SHALL BE (2) FOOT BELOW SUBGRADE IN ROADWAY AREAS AND TO ORIGINAL SOILS ELSEWHERE. WHERE EXISTING BUILDINGS ARE TO BE DEMOLISHED, ALL TRACES OF FOUNDATIONS AND UNDERGROUND UTILITIES ARE TO BE REMOVED (UNLESS OTHERWISE NOTED ON PLANS). THE CONTRACTOR IS RESPONSIBLE FOR PROPER DISPOSAL OF ALL WASTE MATERIAL.

4. WHERE PAVING OR STRUCTURES ARE TO BE REMOVED WHICH ABUT OR ARE A PART OF CONNECTED FACILITIES (THAT ARE OFF-SITE), RESTORATION OF ANY DAMAGE THAT MIGHT RESULT FROM DEMOLITION IS TO BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. THE COST FOR SUCH RESTORATION SHALL BE INCIDENTAL TO OTHER CONSTRUCTION AND NO EXTRA COMPENSATION WILL BE ALLOWED.

5. THE LOCATION OF ALL EXISTING UTILITIES, STORM DRAINAGE AND TREES SHOWN ON THE PLANS HAVE BEEN DETERMINED FROM AVAILABLE INFORMATION AND IS GIVEN FOR THE CONVENIENCE OF THE CONTRACTOR. THE OWNER OR ENGINEER ASSUMES NO RESPONSIBILITY FOR ACCURACY. PRIOR TO THE START OF DEMOLITION THE CONTRACTOR SHALL VISIT THE SITE AND DETERMINE THE EXISTANCE & LOCATION OF ALL STRUCTURES, UTILITIES & TREES SHOWN OR NOT ON THE PLANS, WHICH WOULD NEED TO BE REMOVED OR PRESERVED.

6. THE CONTRACTOR IS TO COORDINATE THE RELOCATION OR REMOVAL OF ALL OVERHEAD/UNDERGROUND UTILITIES, UTILITY POLES, LIGHTS AND LINES IN THE RIGHT-OF-WAY AND ON THE PROPERTY WITH THE APPROPRIATE SERVICE PROVIDER.

7. THE CONTRACTOR SHALL REFERENCE AND RESTORE PROPERTY CORNERS AND LAND MARKERS DISTURBED DURING CONSTRUCTION. (UNDER THE DIRECTION OF A FLORIDA REGISTERED LAND SURVEYOR).

DOWNSPOUTS PIPE INFORMATION

NOTE:
CONTRACTOR SHALL FIELD VERIFY LOCATION, INVERT ELEVATION, MATERIALS AND PIPE SIZE BEFORE CONSTRUCTION BEGINS.

CONTRACTOR SHALL BEGIN STORMWATER PIPING CONSTRUCTION AT THE POINT OF CONNECTION OF EXISTING STORMWATER SYSTEM.

ALL RCP PIPE JOINTS SHALL BE WRAPPED IN FILTER FABRIC WRAP.

6" BELOW BASE MINIMUM PIPE COVER.

WHEN ANY ROOTS OR EXISTING TREE ARE ENCOUNTERED DURING LAND CLEARING AND/OR GRADING OF THE SITE, THE ROOTS MUST BE CUT OFF EVENLY WITH CLEAN SHARP PRUNING TOOLS. THE CONTRACTOR/DEVELOPER SHALL MINIMIZE THE DAMAGE TO EXISTING TREE ROOT SYSTEMS.

REFER TO SHEET C0.1 FOR GENERAL NOTES, SPECIFICATIONS, AND LEGENDS, IN ADDITION TO SITE-SPECIFIC NOTES AND REQUIREMENTS.

BURIED UTILITIES NOTE

BURIED UTILITIES ARE SHOWN AT THEIR APPROXIMATE LOCATION BASED UPON INFORMATION OBTAINED FROM UTILITY COMPANIES AND FIELD EVIDENCE. OTHER BURIED UTILITIES MIGHT EXIST ON THE SUBJECT SITE WHICH ARE NOT SHOWN ON THIS DRAWING. USE EXTREME CAUTION DURING EXCAVATION PROCEDURES AND CONTACT SUNSHINE STATEONE. @ 1-800-432-4770 FOR EXACT LOCATION OF BURIED FACILITIES PRIOR TO EXCAVATION OPERATIONS.

Sunshine811

Call 811 or www.sunshine811.com two full business days before digging to have utilities located and marked.

Check positive response codes before you dig!

POLLUTION CONTROL NOTES

ALL EROSION CONTROL MEASURES SHALL REMAIN IN PLACE UNTIL COMPLETION OF CONSTRUCTION.

1. ALL EROSION AND SEDIMENT CONTROL WORK SHALL CONFORM WITH LOCAL CITY/COUNTY AND WATER MANAGEMENT DISTRICT SPECIFICATIONS, SUBJECT TO AUTHORIZED AND APPROVED VARIANCES, WAIVERS AND/OR CONDITIONS OF SITE PERMITS.

2. EROSION AND SEDIMENT CONTROL MEASURES SHALL BE PLACED PRIOR TO OR AS THE FIRST STEP IN, CONSTRUCTION. SEDIMENT CONTROL PRACTICES WILL BE APPLIED AS A PERIMETER DEFENSE AGAINST ANY TRANSPORTATION OF SILT OFF THE SITE.

3. ALL AREAS AFFECTED BY THIS WORK SHALL BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING CONDITION, UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. THE COST FOR SUCH RESTORATION SHALL BE INCIDENTAL TO OTHER CONSTRUCTION AND NO ADDITIONAL COMPENSATION SHALL BE ALLOWED.

4. THE CONTRACTOR SHALL IMMEDIATELY NOTIFY THE ENGINEER OF ANY DISCREPANCIES BETWEEN THESE PLANS AND FIELD CONDITIONS PRIOR TO CONSTRUCTION.

5. PRIOR TO CONSTRUCTION THE CONTRACTOR SHALL PROVIDE TREE PROTECTION BARRIERS TO MEET THE REQUIREMENTS OF LOCAL SPECIFICATIONS.

6. THE CONTRACTOR SHALL SELECTIVELY CLEAR ONLY THE AREAS REQUIRED FOR CONSTRUCTION AND STABILIZE ANY POTENTIAL EROSION AREAS IMMEDIATELY FOLLOWING COMPLETION OF CONSTRUCTION.

7. CONTRACTOR SHALL KEEP ANY AND ALL SAND, SILT OR OTHER DEBRIS FROM MOVING OFF-SITE. USE AND MAINTAIN SILT FENCE JUST INSIDE OF PROPERTY LINE.

8. CONTRACTOR SHALL BLOCK INTRUSION OF SAND, SILT OR OTHER DEBRIS INTO ANY DRAINAGE OR SANITARY SEWER STRUCTURE OR PIPING ON OR ADJACENT TO SITE.

9. ALL CLEARED AREAS FOR IMPROVEMENT AND/OR CONSTRUCTION SHALL BE WATERED TO PREVENT WIND EROSION.

10. FOR ADDITIONAL INFORMATION AND DETAILS, SEE F.D.O.T. INDEX NO. 102.

11. UNLESS SPECIFIED, SILT FENCES MAY BE USED IN LIEU OF SYNTHETIC BARRIERS.

12. ADDITIONAL POSTS AND RAILS MAY BE NECESSARY TO SECURE AND SUPPORT BARRIERS.

13. ADDITIONAL BARRIER LENGTHS MAY BE REQUIRED BY THE COUNTY ENGINEER OR BY REGULATORY AGENCIES.

14. FILTER FABRIC MUST BE INSTALLED UNDER ALL INLET GRATES, AT ALL TIMES WHEN INLETS ARE NOT PROTECTED BY SILT FENCE OR SYNTHETIC BALES, UNTIL THE LIMEROCK BASE IS FINISHED AND PRIMED.

15. THE CONTRACTOR IS REQUIRED TO HAVE THIS PLAN ALONG WITH A COPY OF THE NPDES NOTICE OF INTENT POSTED IN A VISIBLE LOCATION ON THE CONSTRUCTION SITE AT ALL TIMES.

16. "CONTRACTOR IS REQUIRED BY NPDES TO KEEP A LOG ON SITE FOR THE SOIL EROSION AND SEDIMENT CONTROL MEASURES INDICATED ON THE PLAN. THE LOG SHALL CONTAIN DATES FOR: INSTALLATION OF CONTROL MEASURES, MAJOR SITE CONSTRUCTION ACTIVITIES, INSPECTION ON AT LEAST A WEEKLY BASIS AND INSPECTION AFTER ANY RAINFALL EVENT THAT IS 1/2" OR GREATER".

17. THE CONTRACTOR IS REQUIRED TO SUBMIT A COPY OF THIS LOG ALONG WITH A NOTICE OF TERMINATION TO THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION UPON THE COMPLETION OF CONSTRUCTION.

PLANT QUANTITY — 00 / XX — PLANT SYMBOL

NOTE:
WHERE GALLON REFERENCES MAY CONFLICT WITH HEIGHT/SPREAD AND CALIPER MEASUREMENTS, THE HEIGHT/SPREAD AND CALIPER MEASUREMENTS SHALL GOVERN.

TREE PROTECTION NOTES

1. DURING CONSTRUCTION, PROTECTIVE BARRIERS SHALL BE PLACED BY SITE CONTRACTOR AT THE DRIPLINE OF ALL TREES TO BE PRESERVED AS SHOWN ON PLANS. BARRIERS SHALL BE ERECTED PRIOR TO CONSTRUCTION OF ANY KIND ON THE SITE.
2. BARRIERS SHALL CONSIST OF PROTECTIVE WOODEN POSTS TWO (2) INCHES BY TWO (2) INCHES OR LARGER PLANTED TO SUFFICIENT DEPTH TO BE STABLE WITH AT LEAST FOUR (4) FEET OF POST VISIBLE ABOVE THE GROUND. POSTS SHALL BE PLACED NO CLOSER THAN FIVE (5) FEET TO THE TRUNK UNLESS PROPOSED PAVING CONSTRUCTION WILL NOT PERMIT. POSTS SHALL BE NO FURTHER THAN SIX (6) FEET APART. REFER TO TREE PROTECTION DETAIL.
3. PROPOSED SHADES AROUND TREES TO REMAIN SHALL BE MAINTAINED TO WITHIN FOUR (4) INCHES OF THE EXISTING GRADE.
4. THE CONTRACTOR SHALL FOLLOW TREE REMOVAL, TREE PROTECTION AND GENERAL PLANTING RESTS, AS DEFINED BY LOCAL JURISDICTION.
5. BARRIERS SHALL REMAIN IN PLACE AND INTACT UNTIL SUCH TIME AS CONSTRUCTION IS COMPLETE AND ALL USE OF THE AREA FROM SITE.
6. NO BUILDING MATERIALS SUCH AS MASONRY, OR TEMPORARY SOIL DEPOSITS SHALL BE PLACED WITHIN THE PROTECTIVE BARRIER ZONES.
7. BARRIERS SHALL BE PLACED AT THE TREE CANOPY LINE EXCEPT ADJACENT TO THE PROPOSTY CONSTRUCTION AREA WHERE IT MAY BE AT ONE HALF OF THE CANOPY DISTANCE ON ONE SIDE ONLY.

GENERAL LANDSCAPE NOTES

1. ALL PLANTS TO BE FLORIDA NO. 1 OR BETTER AS OUTLINED UNDER 'GRADES AND STANDARDS FOR NURSERY PLANTS, PART II, 1963 AND PART III STATE OF FLORIDA DEPARTMENT OF AGRICULTURE, TALLAHASSEE, FLORIDA, AND ANY AMENDMENTS OR REVISIONS THERETO.
2. ALL TREES AND PLANT MATERIAL SHALL BE PLANTED IN ACCORDANCE WITH THE SPECIFICATIONS DESCRIBED IN THE STATE DEPARTMENT OF AGRICULTURE AND CONSUMER SERVICES, DIVISION OF FORESTRY, "TREE PROTECTION MANUAL FOR BUILDERS AND humbers" AND ANY AMENDMENTS THERETO.
3. THE LANDSCAPE CONTRACTOR (CONTRACTED BY OWNER, N.L.C.) SHALL BE RESPONSIBLE FOR ALL MATERIALS AND ALL WORK AS CALLED FOR ON THE LANDSCAPE PLANS. THE LIST OF PLANT QUANTITIES ACCOMPANYING THE PLANS SHALL BE USED AS A GUIDE ONLY. IF A VARIATION OCCURS BETWEEN THE PLANS AND THE PLANT LIST, THE PLANS SHALL CONTROL.
4. ALL TREES, SHRUBS AND GROUND COVERS SHALL BE PLANTED USING A SOIL MIXTURE CONSISTING OF 50% TOPSOIL AND 50% PEAT HUMUS.
5. THE LANDSCAPE CONTRACTOR SHALL BORE UNDER STATE VERTICAL DRAINAGE IN ALL PLANT BEDS AND PLANTERS. VERTICAL DRILLING THROUGH ANY COMPACTED FILL TO NATIVE SOIL SHALL BE ACCOMPLISHED TO AID DRAINAGE.
6. ALL PLANT BEDS AND TREE WATERING BASINS SHALL BE TOP DRESSED WITH THREE INCHES (3") OF SHREDDED ORGANIC (NON-CYPRESS) BROWN MULCH.
7. NO TREES SHALL BE PLANTED CLOSER THAN 3 FEET (3') FROM THE EDGE OF PAVEMENT TO ALLOW ADEQUATE TREE TRUNK PROTECTION.
8. LANDSCAPE CONTRACTOR SHALL BE WHOLLY RESPONSIBLE FOR STABILITY AND PLUMB CONDITION OF ALL TREES AND SHALL BE LEGALLY LIABLE FOR ANY DAMAGE CAUSED BY THE INSTABILITY OF ANY PLANT MATERIAL.
9. ALL LAWN AREAS TO RECEIVE SOD SHALL BE DISKED FOURLY TO SIXSIX INCHES AND ROLLED TO ESTABLISH A LEVEL FINISH GRADE. ALL DEBRIS TO BE REMOVED FROM THE SITE.
10. SOD SHALL BE FREE OF WEEDS AND PESTS. IT SHALL BE LAID EVENLY AND ROLLED WITH TIGHT FITTING JOINTS. THE SOD SHALL CONTAIN MOIST SOIL WHICH DOES NOT FALL APART OR TEAR WHEN LIFTED. ALL AREAS NOT PAVED OR OTHERWISE LANDSCAPED SHALL BE SODDED. SOD SHALL BE ARGENTINE BAHIA OR EQUAL.
11. ALL LANDSCAPE AREAS TO BE IRRIGATED WITH AN AUTOMATIC UNDERGROUND SYSTEM, WITH 100% COVERAGE, BACKFLOW PREVENTOR, & RAIN SENSOR DEVICE.
12. THE TREE DIAMETER OF ALL CANOPY TREES SPECIFIED ON THE PLANT LIST SHALL BE MEASURED AT A HEIGHT OF FOUR AND ONE HALF FEET (4.5').
13. LANDSCAPE CONTRACTOR SHALL BE RESPONSIBLE FOR ANY DAMAGE OCCURRING ON SITE OR ADJACENT AREAS, INCLUDING BUT NOT LIMITED TO BUILDINGS, PAVING, UTILITIES, ETC. WHICH IS CAUSED BY PREPARING OR INSTALLING ANY AND ALL PLANT MATERIAL.

NOTE: ALL DISTURBED AREAS TO BE SODDED AND RESTORED TO A CONDITION EQUAL TO OR BETTER THAN PRE-CONSTRUCTION CONDITION.

NOTE: LANDSCAPE PLAN CONFORMS TO FLORIDA FRIENDLY STANDARDS.

Landscaping Requirement Calculations for Chipotle at Westside Commons

Site Landscaping 6.2.2(D)(1)(c)

	Requirement	Calculation (33% reduction for sites less than an acre)	Required Plantings	Optional Reduction (33%)**	Plantings Provided
South (Primary)	3 Canopy per acre	3 canopy * 0.88-acres * 0.67	2	2 @ 2" = 4" or 1 Tree @ 4"	1 @ 4" n.w.prop.line
	6 Understory per acre (50%)	6 Understory * 0.88-acres * 0.67 *0.5	2	2 @ 1.5" = 3" or 1 tree @ 3"	2 @ 1.5" by Pond
North (Rear)	2 Canopy per acre	2 canopy * 0.88-acres * 0.67	1	N/A	1 @ 2" north area
East	2 Canopy per acre	2 canopy * 0.88-acres * 0.67	1	N/A	1 @ 2" north area
	6 Understory per acre (25%)	6 Understory * 0.88-acres * 0.67 *0.25	1	N/A	1 @ 1.5" north area
West	2 Canopy per acre	2 canopy * 0.88-acres * 0.67	1	N/A	1 @ 2" north area
	6 Understory per acre (25%)	6 Understory * 0.88-acres * 0.67 *0.25	1	N/A	1 @ 1.5" north area
Façade Landscaping					
South (Primary)	4 Canopy / 100 LF	4 Canopy / 100 LF * 34 LF * 0.67	1	N/A	1 @ 2" by Transf.
North (Rear)	4 Canopy / 100 LF	4 Canopy / 100 LF * 34 LF * 0.67	1	N/A	1 @ 2" by Pond
East	4 Canopy / 100 LF	4 Canopy / 100 LF * 67 LF * 0.67	2	2 @ 2" = 4" or 1 Tree @ 4"	1 @ 4" by Pond
West	4 Canopy / 100 LF	4 Canopy / 100 LF * 67 LF * 0.67	2	2 @ 2" = 4" or 1 Tree @ 4"	1 @ 4" by Pond
Continuous shrub row along all façades					
** Up to a 33 percent reduction in the total number of required trees provided that the cumulative caliper size of all trees to be planted meets or exceeds the total caliper inches that would have been provided otherwise.					

Parking Lot Landscaping 6.2.2(D)(2)

	Requirement	Calculation	Required Plantings	Optional Reduction (33%)**	Plantings Provided
Interior	1 Canopy or Understory / 1,800 SF or portion thereof, total parking lot area	1 Tree / 1,800 SF * 18,419 SF	11	11 @ 1.5" = 16.5" or 7 Trees totaling 16.5"	6 @ 1.5"+2 @ 4"=17"
	10 Shrubs / 1 Landscape Island	10 * 6 Islands	60	N/A	within 30' 100
Exterior*	Minimum 5 feet in width; average 7 feet in width along the perimiter of the parking lot				
	4 Canopy / 100 LF	4 Canopy / 100 LF * 160 LF	6	6 @ 2" = 12" or 3 trees totaling 12"	3 @ 4" = 12"
	2 Understory / 100 LF	2 Understory / 100 LF * 160 LF	3	3 @ 1.5" = 4.5"	3 @ 1.5" = 4.5"
	Continuous shrub row				within 30' 100
*Other landscaping materials provided to meet any other requirement of this section may be considered a part of and count toward the requirement parking lot buffer, if such materials are located within 30 feet of the parking lot area.					
** Up to a 33 percent reduction in the total number of required trees provided that the cumulative caliper size of all trees to be planted meets or exceeds the total caliper inches that would have been provided otherwise.					

Perimeter Buffer 6.2.2(D)(3)

	Requirement	Calculation	Required Plantings	Optional Reduction (33%)**	Plantings Provided
South (Primary) N/A					
North (Rear)	1 Canopy / 25 LF	1 Canopy / 25 LF * 122 LF	5	5 @ 2" = 10" or 4 trees totaling 10"	5 Existing Live Oaks
25' Type-D	1 Understory / 40 LF	1 Understory / 40 LF * 122 LF	3	3 @ 1.5" = 4.5" or 2 trees totaling 4.5"	3 @ 1.5" = 4.5"
Option 1	Continuous evergreen hedge				Provided
East N/A					
West*	1 Canopy / 30 LF	1 Canopy / 30 LF * 240 LF *0.5	4	4 @ 2" = 8" or 3 trees totaling 8"	2 @ 2" + 1 @ 4" = 8"
7.5' Type-C					
Option 1	Continuous evergreen hedge				Provided
*Where a developing parcel is adjacent to a vacant parcel, the developing parcel may provide one-half of the perimeter buffer required adjacent to the vacant land in accordance with Table 6.2-2, Buffer Class Application. Determination of the required buffer width and type shall be based upon the highest use classification available for the vacant property based upon its current zoning.					
** Up to a 33 percent reduction in the total number of required trees provided that the cumulative caliper size of all trees to be planted meets or exceeds the total caliper inches that would have been provided otherwise.					

Arterial Screening 6.2.3(E)

	Requirement	Calculation	Required Plantings	Plantings Provided
US 441*	1 Canopy / 25 LF	1 Canopy / 25 LF * 129 LF	5	OHW 2:1 10 @ 1.5"
	3 Understory / 100 LF	3 Understory / 100 LF	4	OHW 4 @ 1.5"
	Continuous row of shrubs			where applicable - utility
No reductions can apply to arterial screening standards *Due to overhead wires canopy trees replaced with understory trees @ 2:1*				

Arterial Screening 6.2.3(E)

	Requirement	Calculation	Required Plantings	Plantings Provided
CR 235A*	1 Canopy / 25 LF	1 Canopy / 25 LF * 238 LF	10	OHW 2:1 20 @ 1.5"
	3 Understory / 100 LF	3 Understory / 100 LF	7	OHW 7 @ 1.5"
	Continuous row of shrubs			Provided
No reductions can apply to arterial screening standards *Due to overhead wires canopy trees replaced with understory trees @ 2:1*

CITY OF ALACHUA CODE OF ORDINANCES.
ARTICLE 6, SECTION 6.8 DESIGN REQUIREMENTS:

DESIGN STANDARD FOR SINGLE USE RETAIL <20,000 S.F.

MATERIAL DESIGN:

- **A MINIMUM OF 25 PERCENT OF THE MATERIALS UTILIZED FOR EACH SIDE FACADE AND THE REAR FAÇADE SHALL BE THE SAME AS THE MATERIALS UTILIZED FOR THE FRONT OR STREET-FACING FAÇADE(S)**
  1. EIFS IS THE PRIMARY MATERIAL UTILIZED ON ALL 4 SIDES.

GLAZING:

- **TWENTY PERCENT OF THE GROUND FLOOR FAÇADE AREA WHEN IT FACES A STREET OR A PUBLICLY-ACCESSIBLE PARKING AREA WHICH IS A PART OF THE DEVELOPMENT AND CONSISTS OF 15 PERCENT OR MORE OF THE DEVELOPMENT'S MINIMUM OFF-STREET PARKING REQUIREMENT**
  1. SOUTH (FRONT) FACADE
     - A. 723.97 SF TOTAL FACADE
       - a. 723.97 X 0.2 = 144.8 SF REQUIRED
       - b. 211.08 SF PROVIDED
  2. EAST (SIDE) FACADE
     - A. 1,384 SF TOTAL FACADE
       - a. 1,384 X 0.2 = 276.8 SF REQUIRED
       - b. 277.34 SF PROVIDED
  3. NORTH FACADE FACES EXISTING RESIDENTIAL USE. FIFTEEN PERCENT OF THE GROUND FLOOR FAÇADE AREA WHEN IT FACES ANY VACANT LAND CLASSIFIED AS CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 OR RMF-15, OR LANDS CONTAINING EXISTING RESIDENTIAL USES.
     - A. 707.18 SF TOTAL FACADE
       - a. 707.18 X 0.2 = 106.08 SF REQUIRED
       - b. 108.33 SF PROVIDED
  4. WEST FACADE FACES THE ADJACENT BUILDING AND NONE OF THE PARKING FOR CHIPOTLE NOR A STREET. THEREFORE PER SECTION 6.8.2.A.2.a.i.a 20% GLAZING IS NOT REQUIRED ON THIS FACADE.

FACDE MASSING

- **OFFSET REQUIRED. FRONT FACADES AND STREET-FACING FACADES SHALL INCORPORATE WALL OFFSETS OF AT LEAST TWO FEET IN DEPTH (PROJECTIONS OR RECESSES) A MINIMUM OF EVERY 30 FEET. EACH REQUIRED OFFSET SHALL HAVE A MINIMUM WIDTH OF TEN FEET.**
  1. 2'-0" DEEP OFFSETS HAVE BEEN PROVIDED <30'-0" INTERVALS AND AT LEAST 10'-0" IN WIDTH ON ALL FACADES.

ROOF SCREENING

- **SCREENING OF MECHANICAL EQUIPMENT. MECHANICAL EQUIPMENT SHALL BE FULLY CONCEALED FROM VISIBILITY FROM A STREET, LANDS CLASSIFIED AS CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 OR RMF-15, OR LANDS CONTAINING EXISTING RESIDENTIAL USES.**
  1. PARAPET WALLS WERE RAISED FROM THE CHIPOTLE PROTOTYPE BY 1'-0" TO COVER THE TOPS OF THE TALLEST RTU FROM STREET VIEW. THE TALLEST UNIT TYPICALLY RISES ABOUT 6" ABOVE THE PROTOTYPE PARAPET HEIGHTS.

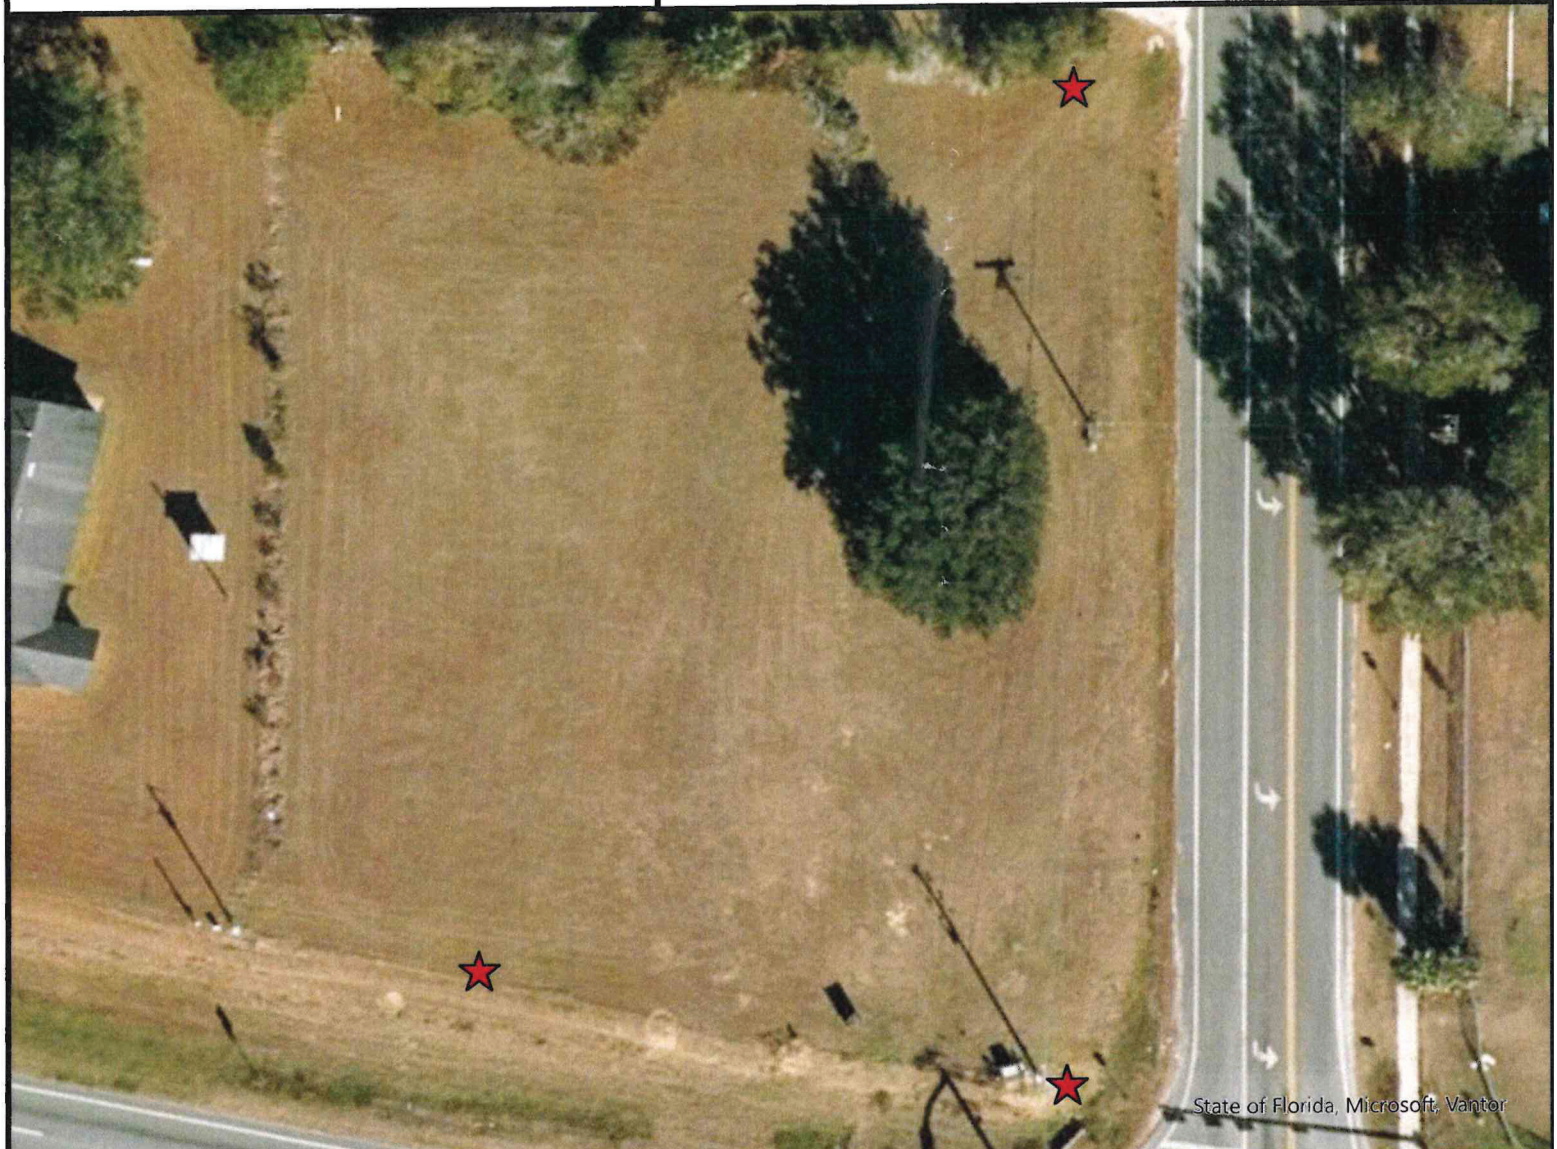
Posted Notice Location Map
PSP25-0009 | Chipotle

Pursuant to Section 2.2.9(D) of the City's Land Development Regulations, posted notice signs must be placed on the land that is the subject of the application, along each street which is adjacent to or runs through the land in a manner that makes them clearly visible. Signs shall be posted at regular intervals of not more than 400 feet when the land subject to the application has less than 1,500 feet of road frontage. When the land subject to the application has 1,500 feet or more of road frontage, signs shall be posted at intervals of not more than 1,320 feet.

Signs shall be inspected by the City subsequent to their posting. The applicant shall be responsible for ensuring that the posted notice is maintained on the land subject to the application until the completion of the final public hearing on the application.



SIGNS MUST BE REMOVED BY THE APPLICANT WITHIN TEN DAYS AFTER THE FINAL DECISION ON THE APPLICATION

Board Agenda Item

MEETING DATE: April 21, 2026

SUBJECT: PSP25-0015 | Westside Commons – Dutch Bros Site Plan Permit. A request by Alakai Acquisitions, LLC (Applicant/Agent) on behalf of Santa Fe Hills Church of Christ, Inc. (Property Owner) for a site plan proposing the construction of a ± 1,035 square foot restaurant with drive-through service with associated site improvements on a ± 0.90-acre subject property located at 16313 NW US Highway 441 (Tax parcel 03044-002-000 (portion thereof)). FLU: Commercial; Zoning: CC. (Quasi-judicial hearing)

PREPARED BY: Bryan Thomas

RECOMMENDED ACTION:

Staff recommends that the Planning & Zoning Board find the site plan application for Alachua Outparcel, LLC, to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approve the site plan subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report. Recommended Motion: *I move that, based upon the competent substantial evidence, the presentation before this Board, and Staff's recommendation, this Board finds the site plan application for Alachua Outparcel, LLC to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approves the site plan, subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report.*

Summary

This application is a request by Alakai Acquisitions (applicant/agent), on behalf of Alachua Outparcel LLC (property owner), for a site plan which proposes the construction of a ± 1,035 square foot coffee shop with drive-through service with associated site improvements on a ± 0.90-acre subject property.

The ± 0.90-acre subject property (Tax Parcel 03876-001-002) is generally located at the northwest corner of US Highway 441 and NW 173rd Street. The site plan proposes to provide two points of ingress/egress via shared driveways, with the southern driveway accessing US Highway 441 and the northern driveway accessing NW 173rd Street. Stormwater is proposed to be directed to an onsite facility that is part of the Westside Commons Infrastructure Plan approved on December 8, 2025.

FINANCIAL IMPACT

None.

PROJECT PLANNER:	Bryan S. Thomas, AICP
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board find the site plan application for Alachua Outparcel, LLC, to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approve the site plan subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report.
RECOMMENDED MOTION:	*I move that, based upon the competent substantial evidence, the presentation before this Board, and Staff's recommendation, this Board finds the site plan application for Alachua Outparcel, LLC to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City of Alachua Land Development Regulations and approves the site plan, subject to the five conditions found in exhibit "A" and located on page 25 of the April 21, 2026, staff report.*

SUMMARY

This application is a request by Alakai Acquisitions (applicant/agent), on behalf of Alachua Outparcel LLC (property owner), for a site plan which proposes the construction of a ± 1,035 square foot coffee shop with drive-through service with associated site improvements on a ± 0.90-acre subject property.

The ± 0.90-acre subject property (Tax Parcel _03876-001-002) is generally located at the northwest corner of US Highway 441 and NW 173rd Street. The site plan proposes to provide two points of ingress/egress via shared driveways, with the southern driveway accessing US Highway 441 and the northern driveway accessing NW 173rd Street. Stormwater is proposed to be directed to an on-site facility that is part of the Westside Commons Infrastructure Plan approved on December 8, 2025.

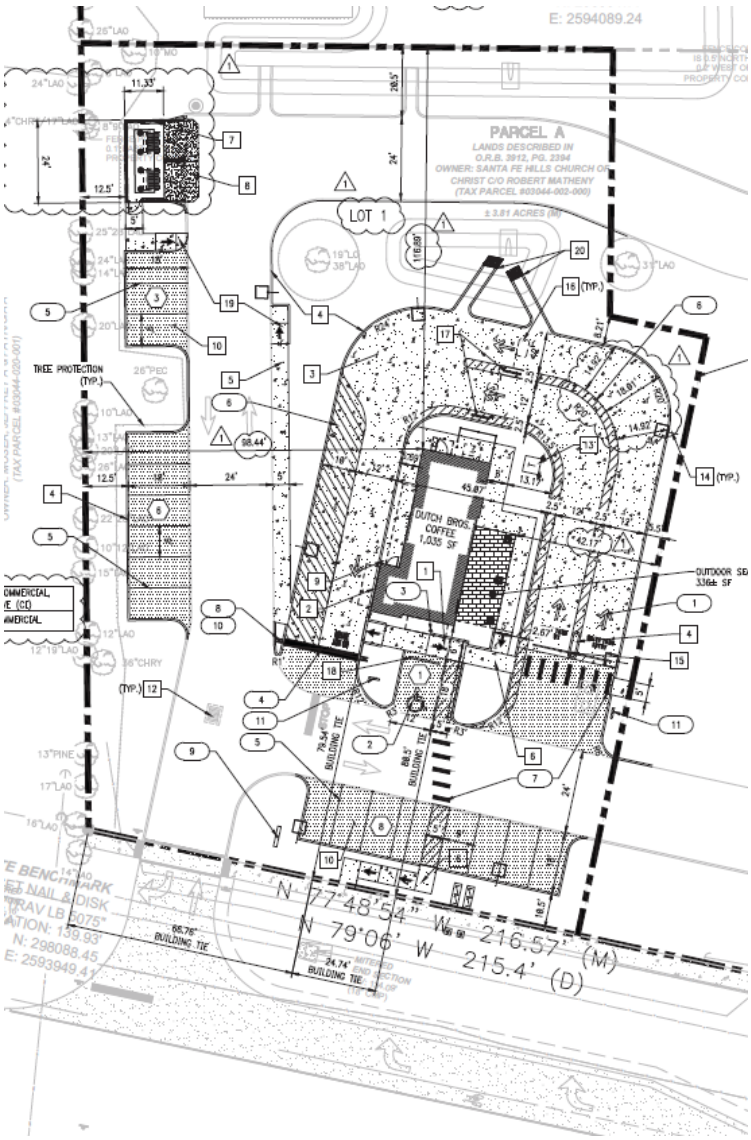

Figure 1. Proposed Site Plan Overview

EXISTING USES

The subject property is currently undeveloped and mostly cleared.

SURROUNDING USES

The existing uses, Future Land Use Map (FLUM) designations, and zoning districts of the surrounding area are identified in Table 1. Figure 2. provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. The information below is not intended to be all-inclusive, and may not identify all existing uses, FLUM designations, and/or zoning districts surrounding the subject property.)

Table 1. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Residential	Agriculture	Agricultural
South	Tire Store	Commercial	Commercial Intensive
East	Vacant Commercial	Commercial	Community Commercial
West	Office	Commercial	Commercial Intensive

Figure 2. Vicinity Map

NEIGHBORHOOD MEETING

The purpose of a neighborhood meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. Neighborhood meetings are required for site plan applications.

A neighborhood meeting was held on June 2, 2025 at the Legacy Park Multipurpose Center, Meeting Room #2. As required by Section 2.2.4 of the City's Land Development Regulations, all property owners within 400 feet of the subject property were notified and notice of the meeting was published in a newspaper of general circulation. The applicant was available to answer questions. Materials submitted by the applicant indicate that the meeting was attended by 3 members of the public.

COMPREHENSIVE PLAN CONSISTENCY ANALYSIS

The goals, objectives, and policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

Future Land Use Element

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.3: *Commercial & Mixed-Use*

The City shall establish three commercial and mixed-use land use categories: Community Commercial, Commercial, and Central Business District. These land use categories shall provide a broad range of commercial uses, including retail sales and services, personal services, offices, and tourist-oriented uses, and the potential for mixed-use developments in order to provide for the availability of goods and services, both to the citizens and visitors of Alachua and to the citizens of the North Central Florida region while diversifying the housing stock.

Policy 1.3.b: *Commercial*: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses may locate. The following uses are allowed within the Commercial land use category:

1. Retail sales and services;
2. Personal services;
3. Financial institutions;
4. Recreation and entertainment;

5. Tourist-related uses;
6. Visitor accommodations;
7. Commercial shopping centers;
8. Auto-oriented uses;
9. Traditional Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/business parks;
13. Limited industrial services;
14. Eating establishments;
15. Single family attached units;
16. Apartments and townhomes;
17. Duplexes and quadplexes;
18. Single-family and multi-family residential above first floor commercial uses;
19. Convention centers; and,
20. Supporting community services such as schools, houses of worship, parks, and community centers.

Development in the Commercial land use category may occur as mixed-use or non-mixed-use.

Evaluation & Findings: The subject property's future land use category is Commercial. The proposed use of a coffee shop with drive-through service falls under eating establishments, which is an allowed use in the Commercial future land use category. The use supports the objective of the commercial and mixed-use future land use categories by providing goods to citizens and visitors of the Alachua and North Central Florida region.

Policy 1.3.d: *Design and performance standards*: The following criteria shall apply when evaluating commercial development proposals in the commercial & mixed-use future land use categories:

21. Integration of vehicular and non-vehicular access into the site and access management features of site in terms of driveway cuts and cross access between adjacent sites, including use of frontage and/or shared access;

Evaluation & Findings: The proposed site plan includes an interior shared driveway with two vehicular ingress/egress points from NW 173rd Street and US Highway 441 to provide for safe and efficient vehicular movements. One pedestrian connection to the sidewalk adjacent to US Highway 441 is proposed to provide for safe pedestrian access.

22. Buffering from adjacent existing/potential uses;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the required buffer standards as established in Section 6.2.2 and Section 6.2.3 of the City's Land Development Regulations.

23. Open space provisions and balance of proportion between gross floor area and site size;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the minimum required open space standards as established in Section 6.7 of the City's Land Development Regulations.

24. Adequacy of pervious surface are in terms of drainage requirements;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the maximum allowable impervious area standard as established in Table 5.1-3. Of the City's Land Development Regulations. Additionally, all stormwater will be conveyed to an offsite stormwater management facility that is part of the Westside Commons Infrastructure Plan approved on December 8, 2025.

25. Placement of signage;

Evaluation & Findings: Commercial signage is to be permitted separately from the proposed site plan and the applicant has been notified of such requirement under Section 2.4.11. All incidental signage and signage required for traffic control has been reviewed and the site plan demonstrates that the placement of signage will not interfere with visibility, landscaping, utilities, or site circulation.

26. Adequacy of site lighting and potential impacts of lighting upon surrounding area. Lighting should be designed to minimize impacts to preserve the ambiance and quality of the nighttime sky by reducing light trespass and light pollution in adjacent properties by utilizing lighting at appropriate intensities, directions and times to ensure light is not overused or impacting areas where it is not intended;

Evaluation & Findings: The proposed site plan included a photometric plan and has demonstrated compliance with the outdoor lighting standards as established in Section 6.4 of the City's Land Development Regulations.

27. Safety of on-site circulation patterns (patron, employee, and delivery vehicles), including parking layout, drive aisles, and points of conflict;

Evaluation & Findings: The proposed site plan has demonstrated a safe on-site circulation pattern, including an exhibit demonstrating access and maneuverability of a typical Alachua County Fire Rescue vehicle (40 feet in length, 8.17 feet in width). Two turn-around spaces are provided at the entrance of the drive-through lanes. A loading space is not required for the proposed site plan by Section 6.1 of the City's Land Development Regulations; however, the applicant has stated that deliveries are to occur during non-peak or non-business hours only.

28. Landscaping, as it relates to the requirements and goals of the Comprehensive Plan and Land Development Regulations;

Evaluation & Findings: The proposed site plan has demonstrated compliance with the tree protection and landscaping standards as established in Section 6.2 of the City's Land Development Regulations.

29. Unique features and resources which may constrain site development such as soils, existing vegetation and historic significance; and,

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. The soils present are well drained soils in hydrologic group A, with only slight limitations for development. There is no existing vegetation on the site other than grass/sod cover as it was cleared as part of the Westside Commons Infrastructure Plan approved on December 8, 2025. No historically significant structures are present on the site.

30. Performance based zoning requirements, which may serve as a substitute for or accompany land development regulations in attaining acceptable site design.

Evaluation & Findings: No performance based zoning requirements are being applied to the development.

Policy 1.3.e: *Density and intensity standards*.

1. *Non-mixed-uses*. The following density and intensity standards shall apply to non-mixed-use development proposals in the commercial & mixed-use future land use categories:
    a. *Density*. Residential uses are limited to a density of 10 dwelling units per acre in the Community Commercial land use category and 15 dwelling units per acre in the Commercial and Central Business District land use categories.
    b. *Intensity*. Non-residential uses are limited to an intensity of less than or equal to 0.5 floor area ratio for parcels 5 acres or greater, 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less.

Evaluation & Findings: The proposed site plan is a non-residential development consisting of ± 1,035 square feet of floor area on a ± 0.90-acre subject property. As such the permitted floor area ratio is 1.0 and the floor area ratio of the proposed site plan is ± 0.02 and is therefore acceptable.

Objective 5.1: *Natural Features*

The City shall coordinate land use categories with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.a: *Topography*: The City shall protect the natural topography of the City. Including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Policy 5.1.b: *Soils*: The City shall ensure soil protection and intervention measures are included in the development process.

Policy 5.1.c: *Flood prone areas*: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permits when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d: *Wetlands*: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and Suwannee River Water Management District.

Policy 5.1.e: *Habitat*: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory may be established in the City's Land Development Regulations.

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. There are no concerns related to environmental features, topography, soils, flood prone areas, wetlands, or habitat on the subject property.

Objective 9.1: *Connections to Water and Wastewater Systems*

The City will require new development and significant redevelopment projects to connect to the City's potable water and wastewater systems when such connections can be made to such systems.

Policy 9.1.a: Any new development or redevelopment within a Commercial or Industrial land use category within the corporate limits, where potable water and wastewater service are available, as defined in Policy 1.2.a and Policy 4.2.b of the Community Facilities Element of the City's Comprehensive Plan, shall connect to the City's potable water and wastewater system.

Evaluation & Findings: The proposed site plan is located with the City's potable water and wastewater service areas and will connect to these City services as required.

Transportation Element

Objective 1.1: *Level of Service*

The City shall establish a safe, convenient, and efficient level of service standard for all motorized and non-motorized transportation systems.

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of any affected roadway segment.

Policy 1.4.d: The City shall require pedestrian paths within subdivision and within new developments to be connected to paths outside the development.

Evaluation & Findings: The proposed site plan shows a sidewalk connection from the internal pedestrian network to the sidewalk running along to NW US Highway 441, adjacent to the proposed development.

Policy 1.5.c: The City shall require new development and redevelopment which is compatible with an adjacent existing development(s) to interconnect with existing development (s) through one or more of the following methods:

1. Through the extension of a public or private street from the new development to the adjacent existing development or adjacent lands; and/or,
2. Through joint use of driveways and cross access agreements among adjoining properties to allow circulation between sites. Cross access between new development and existing development shall be configured to provide safe and convenient interconnectivity between the new development and all other existing development located along the cross access corridor.

Evaluation & Findings: The proposed site plan shows access to shared use driveways to the north and south, with connections to US Highway 441 and NW 173rd Street to provide for safe and efficient vehicular movements.

Community Facilities Element

Policy 1.1.d: The City hereby establishes the following level of service standards for sanitary sewer facilities:

a) *Quality*: Compliance with all applicable standards of the U.S. Environmental Protection Agency (EPA) and the Florida Department of Environmental Protection (FDEP).

b) *Quantity*: System-wide wastewater collection and treatment will be sufficient to provide a minimum of 250 gallons per day per equivalent residential unit (ERU) on an average annual basis. Plant expansion shall be planned in accordance with Rule 62-600.405, Florida Administrative Code, or subsequent provision.

c) *System capacity*: If the existing demand and reserved capacity of the committed use of the City's wastewater facility reaches 85% of the permitted capacity design, no further development orders for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement.

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of the City's wastewater facilities.

Policy 2.1.a: The City hereby establishes the following level of service standards for solid waste disposal facilities for residential uses:

Facility Type	Level of Service Standard
Solid Waste Landfill	0.73 tons per capita per year

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of the City's solid waste facilities.

Policy 4.1.c: The City establishes the following level of service standards for potable water:

3. *Quality*: Compliance with all applicable standards of the U.S. Environmental Protection Agency (EPA) and the Florida Department of Environmental Protection.

4. *Quantity*: System-wide potable water distribution and treatment will be sufficient to provide a minimum 275 gallons per day per equivalent residential unit (ERU) on an average annual basis.

5. *Capacity*: Plant expansion shall be planned in accordance with Florida Administrative Code. Additionally, if the existing demand and reserved capacity f the City's potable water facility reaches 85% of the permitted design capacity, no further development orders or permits for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement.

Evaluation & Findings: Staff has prepared, and included within this report, a public facilities impact analysis. The proposed site plan is not anticipated to degrade the level of service of the City's potable water facilities.

Conservation and Open Space Element

Policy 1.3.d: The City shall require prior to development approval, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The inventory shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. De minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. There are no concerns related to listed species or their habitat on the subject property. As such. A listed species inventory is not required prior to development approval.

Objective 1.10: *Wetlands*

The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrological disturbances.

Evaluation & Findings: Staff has prepared, and included within this report, an environmental conditions analysis. There are no concerns related to wetlands on the subject property.

ENVIRONMENTAL CONDITIONS ANALYSIS

Wetlands

Wetlands are areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal conditions do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

Evaluation & Findings: There are no delineated wetlands on the subject property. Should wetlands be discovered, the development will be required to conform with the applicable policies and regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Strategic Ecosystems

Strategic Ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1987 and updated in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation & Findings: The subject property is not located within or adjacent to a strategic ecosystem; therefore, the development will have no impact upon any strategic ecosystems identified within the ecological inventory report.

Regulated Plant & Animal Species

The Florida Natural Areas Inventory (FNAI) has identified areas throughout the State of Florida which may contain good quality natural communities. This data layer is known as the Potential Natural Areas (PNA) data layer, and identifies privately owned lands that are not managed or listed for conservation purposes. These areas were delineated by FNAI scientific staff through interpretation of natural vegetation from 1988-1993 FDOT aerial photographs and from input received during Regional Ecological Workshops held for each regional planning council. These workshops were attended by experts familiar with natural areas in the region.

Potential Natural Areas were assigned ranks of Priority 1 through Priority 5 based on size, perceived quality, and type of natural community present. The areas included in Priority 5 are exceptions to the above criteria. These areas were identified through the same process of aerial photographic interpretation and regional workshops as the PNA 1 through 4 ranked sites, but do not meet the standard criteria.

Evaluation & Findings: No species identified as endangered, threatened, or of special concern are known to exist on the subject property. No areas of the subject property have been prioritized as part of the Florida Natural Areas Inventory. If a regulated plant or animal species is discovered, the development will be required to conform with the applicable policies and regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Soil Survey

The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff.) There are four hydrologic groups: A, B, C, and D. "Group A" soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. "Group D" soils have a lower infiltration rate and therefore a higher runoff potential.

There is one soil type found within the subject property, shown in Table 2.

Table 2. Soil Types

Soil Type	Hydrologic Group	Drainage Class	Limitations		% of Subject Property (may not total to 100% due to rounding)
			Dwellings Without Basements	Small Commercial Buildings	
Arredondo-Urban Land Complex; 0-5% Slopes	A	Well Drained	Slight	Slight	100%

Evaluation & Findings: The soil types present on the subject property do not pose any significant limitations for development.

Flood Potential

Panel 12001C0120D of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated June 16, 2006 indicates that the development area is in Flood Zone X (areas determined to be outside of the 500-year floodplain).

Evaluation & Findings: Since the subject property is located in Flood Zone X, there are no issues related to flood potential.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations.

Evaluation & Findings: The subject property is located within a Karst sensitive area. No potential sink holes are known to exist on the site. Stormwater is being conveyed to an onsite management facility approved as part of the Westside Commons Infrastructure Plan and no new stormwater management facilities are proposed.

Wellfield Protection Zones

Policy 7.2.1 of the Future Land Use Element of the City's Comprehensive Plan establishes a 500-foot radius area around each city-owned potable water well.

Evaluation & Findings: The subject property is not located within a City of Alachua wellfield protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the City's Comprehensive Plan, therefore, there are no issues related to wellfield protection.

Historic Structures/Markers and Historic Features

The State of Florida and the Alachua County Historic Resources Inventory identify historic structures in addition to the City's Historic Overlay District, as established by Section 3.7 of the City's Land Development Regulations.

Evaluation & Findings: The subject property is not within the City's Historic Overlay District and the State of Florida and Alachua County Historic Resources Inventory note no historic structures or markers on the subject property.

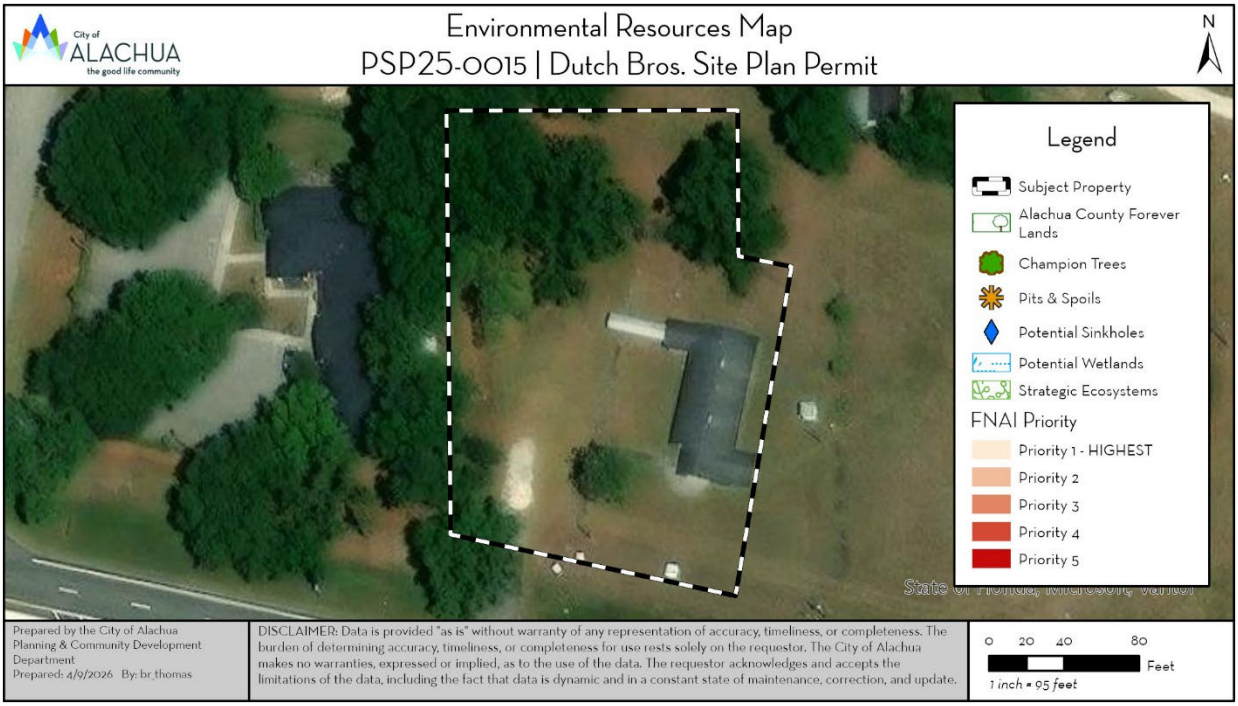

Figure 3. Environmental Resources Map

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

Site Plan Standards

Section 2.4.9(E)(1) of the City's Land Development Regulations (LDRs) establishes the standards with which all site plans must be found compliant. The application has been reviewed for compliance with the standards of Section 2.4.9(E)(1). An evaluation of the findings of the applicant's compliance with the standards of Section 2.4.9(E)(1) is provided below.

(1) *Minor site plan and site plan standards*. A minor site plan or site plan shall be approved only upon a finding the applicant demonstrates all the following requirements are met:

(a) *Consistency with the Comprehensive Plan*. The development and uses proposed by the minor site plan or site plan comply with the goals, objectives and policies of the Comprehensive Plan.

Evaluation & Findings: An evaluation of the application's consistency with the Comprehensive Plan has been included within this report. Staff has found the application to be consistent with the City of Alachua Comprehensive Plan.

(b) *Use allowed in zone district*. The use is allowed in the zone district in accordance with Article 4, Use Regulations.

Evaluation & Findings: The use type of coffee shop with drive-through or drive-in service is a permitted use in the Community Commercial (CC) zone district.

(c) *Zone district use specific standards*. The development and uses proposed by the minor site plan or site plan comply with Section 4.3, Use specific standards.

Evaluation & Findings: Use specific standards for coffee shops with drive-through or drive-in service are established in Section 4.3.4(A)(2) of the City's Land Development Regulations. The application has been reviewed against, and found to comply with, the use specific standards.

(d) *Development and design standards*. The development proposed by the minor site plan or site plan and its general layout and design comply with all applicable standards in Article 6, Development Standards.

Evaluation & Findings: The application has been reviewed for compliance with all relevant standards of Article 6, including Section 6.1, *Off-street parking and loading standards*, Section 6.2, *Tree protection and landscaping standards*, Section 6.3, *Fencing standards*, Section 6.4, *Exterior lighting standards*, Section 6..6, *Infill standards*, Section 6.7, *Open space standards*, Section 6.8, *Design standards for business uses*, and Section 6.9, *Environmental protection standards*.

(e) *Subdivision standards*. In cases where a subdivision has been approved or is pending, the development proposed by the minor site plan or site plan and its general layout and design comply with all applicable standards in Article 7, Subdivision Standards.

Evaluation & Findings: No subdivision of land is proposed as part of this application; therefore, this standard is not applicable.

(f) *Complies with all other relevant City laws, ordinances, regulations, requirements, and State and Federal laws and regulations*. The proposed development and use complies with all other relevant City laws, ordinances, regulations, requirements, and with all State and Federal laws and regulations.

Evaluation & Findings: The application complies with all other relevant City laws, ordinances, regulations, requirements, and State and Federal laws and regulations.

Design Standards for Business Uses

Section 6.8.2 of the City's Land Development Regulations (LDRs) establishes the standards with which all business uses, unless exempted by Section 6.8.1, must be found compliant. The application has been reviewed for compliance with the standards of Section 6.8.2. An evaluation of the findings of the applicant's compliance with the standards of Section 6.8.2 is provided below.

(A) *Façade and material design*.

(1) *Generally*. All façades facing a street, lands containing existing residential uses, or vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8, or RMF-15, shall be subject to the standards set forth in Subsection 6.8.2(A)(2).

(2) *Standards*.

(a) *Glazing*.

(i) Glazing of the front facade in the following amounts:

a. Twenty percent of the ground floor façade area when it faces a street or a publicly-accessible parking area which is a part of the development and consists of 15 percent or more of the development's minimum off-street parking requirement pursuant to Section 6.1.4(B);

b. Fifteen percent of the ground floor façade area when it faces any vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.

(ii) For the purposes of this section, the ground floor façade area of single-story buildings shall be calculated by measuring the applicable building wall between the finished grade and the underside of the roof of the facade. When a building wall includes a parapet, the ground floor façade area shall be calculated by measuring to the top of the parapet. For buildings with more than one story, the ground floor façade area shall be calculated by measuring the applicable building wall between the finished grade and the underside of the floor above the ground level floor.

(iii) Windows shall not use reflective or heavily tinted glass that obstructs views into the building.

(iv) Spandrel glass may be used only when an architectural floorplan demonstrates that windows cannot be provided due to a limitation presented by the interior layout or functional purpose of such interior space.

Evaluation & Findings: One of the four façade faces substantially face a street, publicly accessible parking area which consists of 15 percent or more of the development's minimum off-street parking requirement, and/or vacant lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8, or RMF-15 or lands containing existing residential uses. The south elevation consists of a minimum 20% glazing.

(b) *Façade massing*.

(i) *Offset required*. Front facades and street-facing facades shall incorporate wall offsets of at least two feet in depth (projections or recesses) a minimum of every 30 feet. Each required offset shall have a minimum width of ten feet.

(ii) *Offset alternatives*. The following alternatives can be used in place of the required front façade offsets:

a. Façade color changes following the same dimensional standards as the offset requirements;

b. Pilasters having a minimum depth of one foot, a minimum width of one foot, and a minimum height of 80 percent of the façade's height; and/or

c. Roofline changes when coupled with correspondingly aligned façade material changes.

Evaluation & Findings: One of the four façade faces substantially face a street. The south façade is approximately 25 feet in width and incorporates one wall offset at least two feet in depth to ensure no expanse exceeds 30 feet.

(c) *Material design*.

(i) A minimum of 25 percent of the materials utilized for each side facade and the rear façade shall be the same as the materials utilized for the front or street-facing façade(s).

Evaluation & Findings: All four façade faces use an approximately similar ratio of the same three materials and glazing.

(d) *Prohibited materials*. The following materials shall be prohibited:

(i) Metal siding in more than 50 percent of any façade when visible from a street, lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses;

(ii) Exposed smooth finished concrete block when visible from a street, lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses; and,

(iii) Exposed split face concrete block in more than 60 percent of any façade.

Evaluation & Findings: The façade is comprised of two brick materials of different color, minimal anodized aluminum finished metal for accents on each façade face and the parapet wall, comprising under 5% of the building materials, and five different wall and accent colors.

(3) *Screening of mechanical equipment*. Mechanical equipment shall be fully concealed from visibility from a street, lands classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.

Evaluation & Findings: The applicant has submitted an exhibit demonstrating that all rooftop mechanical equipment will be screened from view of the adjacent streets by use of parapet wall and other mechanical equipment will be screened from view with landscaping.

(B) *Connections to sidewalk system*.

(1) When a sidewalk system exists within a right-of-way which is contiguous to the development, a minimum of one pedestrian connection to the sidewalk system shall be provided. On-site pedestrian circulation patterns shall be configured to provide safe and convenient access from the off-site sidewalk system to the main entrance(s) of the building(s). Sidewalks shall be constructed in accordance with Subsection 7.3.2(B), Configuration.

Evaluation & Findings: A sidewalk system is present along U.S. Highway 441 and NW 173rd Street. One sidewalk connection is proposed from the south side of the proposed building to the sidewalk running along US Highway 441.

(C) *Interconnectivity with adjacent business uses*.

(1) All uses subject to this section shall provide interconnection with adjacent existing compatible developments through one or more of the following methods:

(a) Through extension of a public or private street from the new development to the adjacent existing development or adjacent lands; and/or

(b) Through joint use of driveways and cross access agreements among adjoining properties to allow circulation between sites. Cross access between new development and existing development shall be configured to provide safe and convenient interconnectivity between the new development and all other existing development located along the cross-access corridor.

Evaluation & Findings: The proposed site plan shows connection to the internal driveway system on both the north and south sides of the development to provide for safe and efficient vehicular movements.

PUBLIC FACILITIES IMPACT ANALYSIS

Section 2.4.14 of the City's Land Development Regulations (LDRs) establishes the standards for a Certificate of Concurrency Compliance which applies to all development orders unless exempted by Section 2.4.14(C). The application has been reviewed for impacts to roads, sanitary sewer, solid waste, stormwater management, potable water, and recreation facilities to ensure the application's potential impacts do not negatively impact the level of service (LOS) for those public facilities.

Traffic Impact

The following impacts are expected on the roadway segments identified in Table 3-1.

Table 3-1. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2]	Segment Description	Lanes	Functional Classification	Area Type	LOS
6	U.S. Hwy 441 From I-75 to CR 235A	4/D	Principle Arterial	Urban	D
7	U.S. Hwy 441 From CR235A to NW 188th Street	4/D	Principal Arterial	Urban	D
16	CR 235A From U.S. Hwy 441 to North City Limit	2/U	Major Collector	Comm	D
17	CR 235A From U.S. Hwy 441 to CR 235	2/U	Major Collector	Comm	D

1 City of Alachua Comprehensive Plan, Transportation Element.
2 For developments generating less than 1,000 trips, affected roadway segments are identified as all those wholly or partially located within 1/2 mile of the development's ingress/egress, or to the nearest intersecting major street, whichever is greater [Section 2.4.14(H)(2)(a)of the LDRs].

Table 3-2. Projected Impact on Affected Comprehensive Plan Roadway Segment

Traffic System Category	Segment 6 US 441		Segment 7 US 441		Segment 16 CR 235A		Segment 17 CR235A	
	AADT	Peak Hour	AADT	Peak Hour	AADT	Peak Hour	AADT	Peak Hour
Maximum Service Volume[1]	39,000	3,510	43,000	3,870	15,120	1,359	15,120	1,359
Existing Traffic[2]	32,500	2,782	24,000	2,093	2,524	227	7,200	647
Reserved Trips[3]	2,138	207	1,658	150	1,174	117	4,772	448
Available Capacity[3]	4,362	521	17,342	1,627	11,422	1,015	3,148	264
Increase/Decrease in Trips Generated by Development[4]	97	8	54	5	11	1	18	2
Residual Capacity	4,265	513	17,288	1,622	11,411	1,014	3,130	262
Residual Percentage of Permitted Design Capacity Utilized	89.06%	85.38%	59.80%	58.10%	24.53%	25.39%	79.30%	80.72%

1 AADT & Peak Hour MSVs calculated using LOSPLAN 2012. County Facilities reflect a 10 percent reduction in the MSV calculated within LOSPLAN 2012 as set forth in the Generalized Tables for AADT / Peak Hour Volumes, FDOT 2018 Q/LOS Handbook.
2 Florida Department of Transportation. (2025). *2024 Count Data*. Accessed via Florida Traffic Online April 2025.
3 Source: City of Alachua April 2026 Development Monitoring Report.
4 Trip Generation Formula: ITE Trip Generation 11th edition, ITE Code 934; Trip Distribution: Segment 6 – 54%; Segment 7 – 30%; Segment 16 – 6%; Segment 17 – 10%.

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of the affected roadway segments; therefore, the impacts are acceptable. Note that impacts of the proposed site plan may negatively impact the capacity of roadway segment 6 for average annual daily trips (AADT); however, level of service standards are maintained and monitored for PM peak hour trips per Policy 1.1.a of the Transportation Element of the City of Alachua Comprehensive Plan. A site plan is a final development order, and if approved, concurrency will be reserved.

Potable Water Impacts

Table 4. Potable Water Impacts

System Category	Gallons Per Day
Current Permitted Capacity[1]	3,000,000
Less Actual Potable Water Flows[1]	1,447,333
Reserved Capacity[2]	350,100
Available Capacity	1,202,567
Increase/Decrease in Potable Water Demand from Application[3]	578
Residual Capacity	1,201,989
Residual Percentage of Permitted Design Capacity Utilized	59.93%

1 City of Alachua Public Services Department, April 2026
2 City of Alachua April 2026 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 4.1.c(2): 275 GPD / Unit

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of the City's potable water facilities; therefore, the impacts are acceptable. Note that Policy 4.1.c(3) of the Community Facilities Element of the City of Alachua Comprehensive Plan states if the existing demand and reserved capacity of the City's potable water facility reaches 85% of the permitted design capacity, no further development orders or permits for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement. Funds have been allocated in the Fiscal Year 2025 – 2029 Capital Improvements Program to address capacity of potable water facilities; therefore, there are no issues related to exceeding the 85% design capacity. A site plan is a final development order, and if approved, concurrency will be reserved.

Sanitary Sewer Impacts

Table 5. Sanitary Sewer Impacts

System Category	Gallons Per Day
Treatment Plant Permitted Capacity[1]	1,500,000
Less Actual Treatment Plant Flows[1]	756,000
Reserved Capacity[2]	325,846
Available Capacity	418,154
Increase/Decrease in Sanitary Sewer Demand from Application[3]	578
Residual Capacity	417,576
Residual Percentage of Permitted Design Capacity Utilized	72.16%

1 City of Alachua Public Services Department, April 2026
2 City of Alachua April 2026 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 1.1.d(b): 250 GPD / Unit

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of the City's wastewater facilities; therefore, the impacts are acceptable. A site plan is a final development order, and if approved, concurrency will be reserved.

Solid Waste Impacts

Table 6. Solid Waste Impacts

System Category	Pounds Per Day	Tons Per Year
Existing Demand[1]	45,412.00	8,287.69
Reserved Capacity[2]	43,496.82	7,938.17
Increase/Decrease in Demand Generated by Application[3]	137	25
New River Solid Waste Facility Anticipated Capacity[4]	30+ Years	

1 Bureau of Economic & Business Research, University of Florida, Estimates of Population by County and City in Florida (2025); Policy 2.1.a, Community Facilities Element. Formula: 11,015 Persons x 0.73 tons per year.
2 City of Alachua April 2026 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 2.1.a: 0.73 tons / year per capita
4 New River Solid Waste Association, April 2026

Evaluation & Findings: The proposed site plan application is not anticipated to adversely impact the level of service of solid waste facilities; therefore, the impacts are acceptable. A site plan is a final development order, and if approved, concurrency will be reserved.

Recreation Facilities

The proposed development is a nonresidential development; therefore, there are no impacts to recreation facilities. The development will have no impact to the Level of Service (LOS) of recreation facilities.

Public School Facilities

The proposed development is a nonresidential development; therefore, there are no impacts to public school facilities. The development will have no impact to the Level of Service (LOS) of public school facilities.

Stormwater Management Facilities

The proposed site plan application is part of the Westside Commons Infrastructure Plan approved on December 8, 2025, and will convey stormwater to off-site stormwater management facilities as part of the Westside Commons Infrastructure Plan. A stormwater management report was submitted by the applicant as part of the application materials and demonstrates compliance with the level of service standard for stormwater management facilities. No City maintained facilities are to be impacted by the site plan. The proposed site plan application is not anticipated to impact the level of service of stormwater management facilities; therefore, the impacts are acceptable. A site plan is a final development order, and if approved, concurrency will be reserved.

CHIPOTLE SITE PLAN
STAFF REPORT

CONDITIONS

1. The applicant acknowledges and agrees that deliveries of supplies and materials to the site made by any vehicle with more than two axels must occur during non-business hours or during non-peak hours whenever practicable to ensure a safe and efficient vehicular and pedestrian circulation pattern. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
2. The applicant acknowledges and agrees that any proposed tree planting (canopy and understory) shown on the landscape plans that is located within 5' of a public utility line will be relocated to be a minimum distance of 5', and a preferred distance of 10', from a public utility line and a revised landscape plan sheet will be submitted demonstrating compliance with this condition. The applicant further agrees that administrative approval of the revision must be obtained prior to the issuance of a building permit for any building activity associated with this development order. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
3. The applicant acknowledges and agrees that it shall obtain all other applicable local, state, and federal permits before the commencement of site plan work. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
4. The applicant acknowledges and agrees that to ensure the continued compliance with the City of Alachua Comprehensive Plan and Land Development Regulations, the development order authorizing this site plan shall be recorded in the public records of Alachua County, Florida, and shall run with the land. The applicant shall be responsible for all costs associated with recording the development order in the public records of Alachua County, Florida. This condition shall be the obligation of any subsequent party with interest in the property subject to this development order.
5. The applicant acknowledges and agrees that Conditions 1 – 4 as stated above do not inordinately burden the land and shall be binding upon the property owner, including any subsequent property owners, successors, or assigns, and that the site plan shall comply with Conditions 1 -5 as stated herein.

RE: **Notice of Hearing to be Scheduled for Westside Commons-Dutch Bros. Site Plan Application**

Dear Zach Pinel,

On January 15, 2026, the City of Alachua received your revised site plan application for the Westside Commons-Dutch Bros. project submitted on behalf of Alachua Outparcel LLC. Based on review of the materials submitted, the City has determined that this application can now be scheduled for a hearing before the Planning & Zoning Board.

The application has been tentatively scheduled for the **April 21, 2026** Planning & Zoning Board meeting, pending resubmittal of final landscaping plans that meet City of Alachua landscaping requirements as set forth in Sec. 6.2. of the City's Land Development Regulations.

You must provide two *double sided, three-hole punched, color sets* of each **complete** application package, seven full size sets of site plans, and a digital copy of all materials in PDF format on a CD or by emailing a Cloud/FTP link to download the materials to planning@cityofalachua.org *no later than 10 business days prior to the Planning & Zoning Board meeting at which your application is scheduled to be heard*; therefore, the above referenced materials must be submitted to the City no later than ***Thursday, April 9, 2026***. Materials may be submitted earlier than this date.

Additionally, Section 2.2.9(D) of the Land Development Regulations requires the applicant to place posted notice signs on the subject property at least 14 days prior to the public hearing; therefore, posted notice signs must be placed on the property no later than ***Tuesday, April 7, 2026***. These signs will be ready for pickup after 12:00 PM on Thursday, April 2, 2026. You will be notified again when the signs are available.

If you plan to utilize a PowerPoint presentation or would like other materials to be available for reference during the public hearing, please submit the presentation or materials no later than 12:00 PM on the last business day prior to the Planning & Zoning Board meeting; therefore, the presentation or materials must be submitted no later than 12:00 PM on ***Monday, April 20, 2026***. Any presentation or materials may be submitted electronically by emailing them to planning@cityofalachua.org.

If you have any questions regarding the information above, please contact me at (386) 418-6122 or at br_thomas@cityofalachua.com.

Sincerely,

Bryan S. Thomas

RE: Project Assistance Team (PAT) Comments for Westside Commons~Dutch Bros. Site Plan Application

Dear Zach Pinel,

On January 20, 2025, the Planning & Community Development Department received your revised site plan application for the Westside Commons~Dutch Bros. project, which proposes the construction of a ± 1,371 square foot building with associated site improvements on a ± 0.90-acre subject property (tax parcel 03044-002-000).

The revised application has been reviewed by the City's Planning Assistance Team (PAT). Upon review of the application materials, the following insufficiencies must be addressed. A meeting to review these comments may be scheduled by request.

Please address all insufficiencies in writing and provide an indication as to how they have been addressed by 5:00 PM on Monday, March 30, 2026. A total of four copies of the application package, plans, and a digital copy of all materials in PDF format on a CD or sent by emailing a Cloud/FTP link must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the Planning & Zoning Board. If all comments are addressed by the resubmission date above, the application may be scheduled for the **April 21, 2026, Planning & Zoning Board (PZB) Meeting.**

Please address the following insufficiencies:

Deficiencies to be Addressed

***Unless otherwise noted, references to the code sections are to the City of Alachua Land Development Regulations. ***

1. Dutch Bros. – Westside Commons, Plan Set, Sheet Co.1, General Notes
    a. Please revise the Landscape Buffer, Side (West) Required buffer to read, "7.5 FT." It currently reads 5 FT.
    b. Please revise the Landscape Buffer, Rear (North) Required buffer to read, "7.5 FT." It currently reads 20 FT.
2. Dutch Bros. – Westside Commons, Plan Set, Sheet L1, Landscape Plan
    a. Please provide a revised landscape plan sheet that demonstrates compliance with the various components of Section 6.2, including landscape calculations, as outlined in my email to you dated March 9, 2026.

If you have any questions regarding the information above, please contact me at (386) 418-6126 or via email at br_thomas@cityofalachua.com.

Sincerely,

Bryan S. Thomas

FROM: **Tom Ridgik, P.E.**
Engineering Supervisor

TR 3/1/2026

RE: **Dutch Bros Site Plan**

Public Services has reviewed the subject project (Feb 2026 Submittal Documents) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
1	**Comment on Nov Submittal** **Fire Flow** As per submitted documents, needed fire flow is 1500 gpm, with an available fire flow of 1800 gpm. The Engineer thus concludes that available fire flow is sufficient. The City does not necessarily share this conclusion for the following reasons: (1) The test and residual fire hydrants have not been physically identified. Please **submit** a sketch calling out these fire hydrants, preferable the piping as well. Using a GIS map as the base sheet is suggested. Upon request, the City can provide this base map. (2) The fire flow test was conducted at the SE corner of intersection at 441 & 173rd St, yet the Dutch Bros site is located at the NW corner. This adds uncertainty to the fire flow tests. Due to the fact that NW corner is higher than the SE corner, as well as piping configuration, the fire flow available at the NW corner may be less than at the SE corner. (3) While the hydrant sketch is being resubmitted, the City will model the available fire

NO.	COMMENTS
	flow at the NW site. This issue is unresolved. **Comment on Feb Submittal** **Approved**
2	**Comment on Nov Submittal** **Sheet C0.0** After "DUTCH BROS", add "SITE PLANS" to be consistent with COA practices. Please **Revise & Resubmit** this sheet. **Comment on Feb Submittal** **Approved**
3.	**Comment on Nov Submittal** **Sheet C0.1** **Utility Notes A. General** Note 3: Keep existing text, but add the following: " WATER AND WASTEWATER SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH "CITY OF ALACHUA, PUBLIC SERVICES, DESIGN AND CONSTRUCTION MANUAL, LATEST EDITION". **Utility Notes B. Materials (Water)** Modify Note 1 as follows: "1. SERVICE PIPE **DOWNSTREAM EACH BACKFLOW PREVENTER** SHALL BE POLYETHYLENE (PE), DR9". Add the following notes: "8. SERVICE WATER PIPING UPSTREAM THE WATER METER SHALL BE PVC, TYPE AS SHOWN ON THE DETAILS. 9.SERVICE WATER PIPING BETWEEN THE WATER AND THE BACKFLOW PREVENTER SHALL BE OF THE SIZE AND TYPE AS SHOWN ON THE DETAILS 10. WATER METER APPURTENANCES SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR. THE WATER METER ITSELF WILL BE FURNISHED AND INSTALLED BY THE CITY. 11. FOR EACH BACKFLOW PREVENTER, PROVIDE AN ENCLOSURE AS PER

NO.	COMMENTS
	THE DETAILS. 12. WET TAP(S) TO PRESSURIZED WATER MAINS SHALL BE DONE BY A SUB-CONTRACTOR PRE-APPROVED BY THE CITY OF ALACHUA. 13. PROVIDE TRACER WIRE SYSTEM FOR WATER PIPING AS SHOWN ON THE DETAILS AND AS PER THE COA DCM. 14. TRACER WIRE SYSTEM SHALL COMMENCE AT THE TIE-IN(S) AT EXISTING WATER MAIN(S) AND TERMINATE AT EACH COA END OF MAINTENANCE POINT." **Utility Notes D. Materials (Storm)** **Add the following note:** "5. "UNLESS AN ALTERNATE IS APPROVED BY COA, GROUT BOTTOM OF ALL STORMWATER DRAINAGE STRUCTURE INVERTS AS PER FDOT INDEX 425-001 AND AS PER COA STANDARD DETAIL 210." Please **Revise & Resubmit** this sheet. **Comment on Feb Submittal** **Approved**
4.	**Comment on Nov Submittal** **Sheet C2.0** See attached markup. Call-out the pipe downstream the gate valve (keynote 20) as "2-INCH SCH 40 PVC – NSF 61" Site Utility Note 1: Add the following: "(1) INSTALL ELECTRONIC MARKER TWO-FEET BELOW GRADE AND ONE FOOT FROM CLEANOUT. MARKER SHALL BE TEMPO OMNI MARKER II; SANITARY GREEN; MODEL OM-6; PART 52085009 (2) CITY OF ALACHUA END OF MAINTENANCE" Site Utility Note 21: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE". Site Utility Note 23: Change tee size to 2 X 2 X 2

NO.	COMMENTS
	Site Utility Note 24: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE" Please **Revise & Resubmit** this sheet. **Comment on Feb Submittal** **Approved**
5.	**Comment on Nov Submittal** **Sheet C2.0** **Domestic Water Meter Sizing Calculations** Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Building Design Flow (gpm) Proposed Water Meter Size (size using building design flow with meter flow ranges identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email Also, on either the cover sheet or the utility plan, call-out the: Building Design Flow Water Meter Size **Submit** the supporting calculations The meter sizing method used must be acceptable to COA. Although the City may consider other methods, the City will accept the Florida plumbing code method that calculates facility water supply design flow coupled with flow meter ranges as set forth by City ordinances. **Resubmit** affected sheets **Comment on Feb Submittal** **Approved**

NO.	COMMENTS
6.	**Comment on Nov Submittal** **Sheet C2.0** **Irrigation Water Meter Sizing Calculations** Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Irrigation System Design Flow (gpm) Proposed Water Meter Size (size using irrigation system design flow with meter flow ranges identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email Also, on either the cover sheet, the utility plan or the landscaping plan, call-out the: Irrigation System Design Flow Water Meter Size **Resubmit** affected sheets **Comment on Feb Submittal** **Approved**

RE: Project Assistance Team (PAT) Comments for West Side Commons~Dutch Bros Site Plan Application

Dear Zach Pinel,

On September 15, 2025, the Planning & Community Development Department received your revised site plan application for the West Side Commons~Dutch Bros project, which proposes the construction of a ± 1,371 square foot building with associated site improvements on a ± 0.90-acre subject property (tax parcel 03044-002-000).

The application has been reviewed by the City's Planning Assistance Team (PAT). Upon review of the application materials, the following insufficiencies must be addressed. A meeting to review these comments may be scheduled by request.

Please address all insufficiencies in writing and provide an indication as to how they have been addressed by **5:00 PM on Monday, December 29, 2025**. A total of four copies of the application package, plans, and a digital copy of all materials in PDF format on a CD or sent by emailing a Cloud/FTP link must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the Planning & Zoning Board. If all comments are addressed by the resubmission date above, the application may be scheduled for the **March 10, 2026, Planning & Zoning Board (PZB) Meeting.**

Please address the following insufficiencies:

Deficiencies to be Addressed

***Unless otherwise noted, references to the code sections are to the City of Alachua Land Development Regulations. ***

1. **Site Plan Application, Project**
   a. The subject parcel identification number (PID) shown on the application is 03044-002-000. Whereas on Sheets C1.0, Site Dimension Plan; C2.0, Site Utility Plan; C3.0, Site Grading & Drainage Plan; and SL1, Site Lighting Plan, the parcel identification number (PIN) shows"03044-???-000" in a readable form. When depicting a parcel identification number throughout the site plan sets, please ensure all numbers are in a verifiable form.

   b. The acreage of the subject property is shown as 0.90 AC on the application, whereas the Property Appraiser's site shows the parcel for the stated address measuring at 3.79 AC. **Per the Response to Comments Letter dated September 10, 2025, this correction was acknowledged. Although this response has been corrected, the other components of the overall application still need addressing. At this time, in review of the new submittal, the acreage of the subject property is now shown as 3.08 AC on the application, whereas the Property Appraiser's site shows the parcel for the stated address measuring at 3.79 AC. Additionally, when reviewing the submitted plan set(s), notice the lot size discrepancies. Specifically, Sheet Nos. 1 of 4, 2 of 4, and 3 of 4, titled ALTA/NSPS Land Title Survey, show a total acreage of 3.81. When comparing Sheets C0.1, General Notes, and Site Data, it reads, "0.90 AC (39,229 SF)"; C0.2, Site Demolition Plan, C1.0, Site Dimension Plan, C2.0, Site Utility Plan, C3.0, Site Grading & Drainage Plan, C3.1, Stormwater Pollution Prevention Plan, and SL1, Site Lighting Plan, read "± 3.81 Acres"; and L2.0, Irrigation Plan. For accuracy of the site acreage, all drawings in the plan set(s) shall reflect the property survey, as it serves as the foundational data for design.**

   c. The acreage of the proposed building is not shown on the Site Plan Application; this information must be corrected.

2. **Site Plan Application, Applicant**
   a. The name of the applicant and agent for the application is Zach Pinel of Alakai Acquisitions. This authorization was confirmed on May 08, 2025, which differs from Sheet 5 of 5 of the application, which was signed by Ashley Rosado as the agent and dated June 17, 2025. **Per the Response to Comments Letter dated September 10, 2025, it states, "A Letter of Authorization was provided from the applicant, Zach Pinel, for Interplan LLC-Ashley Rosado to act as an agent for submittals." Although this statement was made, the only Letter of Authorization received was for Interplan, LLC, without a stated name. Please present an authorization specifying Ashley Rosado because currently the paperwork received does not provide such confirmation.**

3. **Site Plan Application, Attachment #1.e, Topographic Survey**
   a. Provide required attachments demonstrating each contour line to represent the variations in elevation that could potentially affect how construction will occur on the property. **Per the Response to Comments Letter dated September 10, 2025, it states, "The plan set included in this submittal now shows a complete survey that has**

detailed topographic information." In future submittals, please specify the title of the reference plan sheet.

4. Site Plan Application, Attachment #3, Fire Department Access and Water Supply Plan
   a. Provide the necessary attachments that demonstrate the availability of proper fire flow to meet the demands of the proposed project at the subject property. **Per the Response to Comments Letter dated September 10, 2025, it states, "Test results of a fire flow test for the project site are now provided in this submittal. As well as a fire flow analysis in our included concurrency/consistency with the comprehensive plan report."** In the future submittals, please specify the title of the reference plan sheet.

5. Site Plan Application, Attachment #6, Site Plans for Buildings Less than 80,000 Square Feet in Area.
   a. Provide the required one (1) set of mailing labels for all property owners within 400 feet of the subject property, and all registered individuals listed on the city's website must be provided on a set of address labels, not just a list. Provide required labels. The city can provide mailing labels for you by request ($35 fee per Resolution 24-05). **Per the Response to Comments Letter dated September 10, 2025, it states, "We would request that the City provide these labels; the additional $35 fee has been added to the site plan payment of $1500." The only record of fees for PSP25-0008, Dutch Bros, is the Standard Site Plan Fee for a total of $2,700. Due to the lack of evidence regarding the alleged $1,500 fee, please explain the purpose and provide proof of payment. Moreover, PSP25-0008, Dutch Bros, will not be scheduled for the Planning & Zoning Board hearing until the $35 fee is paid.**

6. Site Plan Application, Attachment #8, Legal Description
   a. Provide required attachments demonstrating the subject property's legal description on an 8.5" x 11" paper and an electronic file in Word format. **Per the Response to Comments Letter dated September 10, 2025, it states, "A Word document as well as an 8.5" x 11" pdf of the legal description for the project site is provided in this submittal." The legal description provided refers to Parcel A (Tax Identification Number: 03044-002-000) and Parcel B (Tax Identification Number: 03044-001-002). Please correct the required legal description to only reference the subject property for the proposed Dutch Bros.**

7. Site Plan Application, Attachment #9, Proof of Ownership
   a. Provide required attachments demonstrating ownership of the subject property. **Per the Response to Comments Letter dated September 10, 2025, it states, "Deeds of the two subject parcels are provided with this submittal." The subject property is based on Sheet C0.2, Site Demolition Plan of the plan set with the title "DUTCH BROS – WESTSIDE COMMONS." There is only one (1) parcel involved. Therefore, based on the application submitted, the subject parcel number 03044-002-000 applies. The Warranty Deed for parcel 03044-001-002 is not related. Please correct this response by acknowledging the correct parcel.**

8. Site Plan Application, Attachment #10, Proof of Payment of Taxes
   a. Provide required attachments demonstrating property taxes are paid and up to date. **Per the Response to Comments Letter dated September 10, 2025, it states, "Proof of payment of taxes for the two subject parcels is provided with this submittal." The subject property based on the application for Dutch Bros provides reference to one (1) parcel number, which is 03044-002-000, not two parcels. Please correct.**

9. Comprehensive Plan Consistency Analysis

   a. Policy 1.3.e, Density and Intensity Standards
      i. **This Policy is not correctly referenced; the policy text shown is Policy 1.3.f, in accordance with the City of Alachua's Comprehensive Plan.** Please correct.

      ii. The Policy 1.3.e, as previously mentioned, is referenced incorrectly. Therefore, upon correcting the referenced Policy 1.3.f.3 correctly, which reads, "Setbacks and landscaped or other appropriate buffers shall be established to mitigate the visual impacts of commercial development upon surrounding land uses." **Per the Response to Policy 1.3.f.3, it partially reads, "The proposed Dutch Bros coffee shop is compatible with adjacent properties along US 441, and large landscape buffers are provided from adjacent agriculturally zoned property (currently uses as single family residential)."** All required landscaping and buffering must be contained within the boundaries of the subject property being developed. The proposed buffer must be established and maintained on land that is permanently dedicated for this purpose and under the control of the property owner. If there is interest in incorporating features from an adjacent parcel, that area must be formally made part of the subject property, and a perpetual landscape buffer easement or similar recorded mechanism must be established and recorded in the public records, ensuring the buffer exists indefinitely and is legally enforceable for the benefit of the adjacent properties and the City. Please revise this response.

   b. Policy 1.3.f is currently misrepresented. **The language shown in the application packet actually is the language for Policy 1.3.g.** Please correct.

   c. Policy 2.7.a, response reads, **"This project will not promote the use of land far from existing urban areas for low density, single use developments, nor will they create a need for the costly extension of services. All public roads and utilities are available adjacent to or close to the development, and the property is surrounded by existing development on all sides."** Please correct the language in this response, because it suggests this application includes more than one proposed use. Though this property is part of multiple lots, the Dutch Bros is the only use being reviewed via this application.

   d. Policy 5.1.c, Flood-prone areas response reads, **"The subject property is not within any documented FEMA Flood Zone areas."** In accordance with FEMA's National Flood Hazard Layer (NFHL) Viewer, the subject property is in Flood Zone X, which is an area of minimal flood hazard (outside the 0.2% annual chance floodplain/500-year flood event area), as depicted. Please correct this response.

e. Objective 5.2: Availability of facilities and services response reads, **"Section 2 of this report demonstrates the impacts that the proposed development will have on public facilities and services. Sufficient capacity appears to exists for this development."** This comment will need to be properly addressed. Comments or data from other pages or criteria that are similar must be provided for each applicable section; referencing is not sufficient. Correct the response.

f. Objective 5.2.a, response reads, **"Section 2 demonstrates how the proposed plan for the project site will impact City of Alachua facilities and adopted level of service. It is not anticipated that the proposed plan for the project site will exceed the adopted LOS standards."** This comment will need to be properly addressed. Comments or data from other pages or criteria that are similar must be provided for each applicable section; referencing is not sufficient. Correct the response.

g. Policy 5.2.b, response reads, "**Acknowledged."** Specify what is being acknowledged.

10. Concurrency Impact Analysis

    a. Concurrently Analysis narrative partially reads, **"Infrastructure such as driveways and stormwater treatment are proposed to be constructed by a previously submitted master infrastructure plan."** Referencing a plan requires its inclusion with the submitted set. Any referenced materials must be included, and if it's a plan, it must be part of the set to ensure consistency.

11. Dutch Bros – West Commons, Plan Set

    a. Sheet C0.0, Cover Sheet, the submitted plan set lacks a completed title identifying the specific type of permit being sought (e.g., Site Plan Review, Conditional Use Permit, Minor Subdivision, etc.). Please resubmit with a clearly labeled plan type to ensure review under the correct code standards.

    b. The Sheet Index shown on SHT No. C0.0, sheet numbers, and titles are not matching; see the mismatch information below that requires correction.

        i. SHT No. C0.1 on the Sheet Index is titled, "Civil Data Sheet." On the specific sheet, the title reads, "General Notes."

        ii. The Sheet Index references SHT NO. C2.0, Site Utility Plan, but this plan is missing from the submitted set.

        iii. The Sheet Index references SHT No. C3.0, Grading & Drainage Plan, but this plan is not shown in the submitted set.

        iv. The Sheet Index references SHT No. C3.1, Stormwater Pollution Prevention Plan, but this plan is not showing in the submitted set.

        v. SHT No. C4.0, on the Sheet Index, is titled "Details Sheet." On the specific sheet, the title reads, "Civil Details."

        vi. SHT No. SL1, on the Sheet Index, is titled "Site Lighting Plan," but this sheet is not shown in the submitted set.

vii. SHT No. L1, on the Sheet Index, is titled "Landscape Plan," but this sheet is not shown in the submitted set.

viii. SHT No. L2, on the Sheet Index, is titled "Irrigation Plan," but this sheet is not shown in the submitted set.

ix. SHT No. L3, on the Sheet Index, is titled, "Tree Preservation Plan," but this sheet is not shown in the submitted set.

x. SHT No. -, on the Sheet Index, is titled "Survey," but this sheet is not showing an assigned sheet number. The sheets included with the title, ALTA/NSPS LAND TITLE SURVEY, included Sheet Nos. 1 of 4, 2 of 4, 3 of 4, and 4 of 4. This will need to be titled and numbered for both the Sheet Index and Sheets to match exactly.

xi. SHT No. -, on the Sheet Index, is titled "Building Elevation," but this sheet is not showing an assigned sheet number. The sheet titled, "Building Elevation – Color," A6.1, needs to be properly represented in the plan set.

12. **Dutch Bros – West Commons, Plan Set, Sheet C0.1, General Notes (Site Data Table)**

a. The site area is shown as 39,229 SF (0.90 AC) on Plan Set, Sheet C0.1, General Notes (Site Data Table), which differs from the 3.08 acres indicated on Page 1 of 5 of the Site Plan Application.

b. The Site Data Table does not give full property details. A note indicating the current zoning is required. See sample below.

SITE DATA TABLE:		
SITE ADDRESS (or PARCEL NO.):		
SITE SIZE:		
FUTURE LAND USE:		
ZONING:		
EXISTING USE:		
PROPOSED USE:		
SETBACKS:	REQUIRED:	PROPOSED:
Front:	25'	35'
Side:	10'	15'
Rear:	15'	20'
BUILDING HEIGHT:	60'	60'
LOT COVERAGE:	50%	32%
*Per Ordinance No. O-03-09, Turkey Creek Planned Unit Development, Exhibit A		

SAMPLE

Please review Article 5 of the LDRs to ensure all details are provided at the time of resubmittal.

c. The Site Data Table indicates that the property has one (1) front yard and three (3) side yards, which is incorrect. Please update the plan to properly represent the northern property line as the rear yard. The rear yard setback in the CC zoning district is 15-feet.

d. The site layout direction shown for both building setbacks will need to be corrected. Currently, the Site Data table reads,

   i. Front (East): The front of the subject property faces US Hwy 441, not NW 173rd Street; therefore, the front is south, not east.

   ii. Side (North): With the rear of the subject property facing the Santa Fe Hills subdivision, this is the rear of the subject property.

   iii. Side (South): When the southern portion of the property is facing US Hwy 441, this is the property's frontage, as noted above.

   Correct the direction of the above-referenced.

e. The Site Data Table is referencing Landscape Buffer for the side (north), and the northern portion of the site is the rear. Therefore, the rear is abutting residential, which, in accordance with Table 6.2-2, Business Uses, Drive-through eating establishment, requires a 30-foot buffer or Type "D" buffer, not 0-feet.

f. The Site Data Table is referencing Landscape Buffer for the side (south), which is the front of the southern portion of the site. Therefore, the front is abutting Arterial Roadway, which requires a 10-foot buffer (Type "C" buffer), not a 5-foot buffer.

g. The Site Data Table is referencing Landscape Buffer for the side (west), which is the western portion of the site. Therefore, this is a commercial use abutting a commercial use, which requires a 5-foot buffer (Type "A" buffer), which is showing as a 12-foot buffer.

   Correct the direction of the above-referenced.

h. The Site Data Table references Landscape Buffer, but we cannot review it because the Landscape Plan was not included in the received plan set. Please correct.

i. The Site Data Table is referencing parking calculations for a "1,371 SF" building; this square footage differs from Sheet C1.0, Site Dimensional Plan, which reads, "1,035 SF" building.

j. Per Table 6.1-1, minimum off-street parking standards, a restaurant with drive-through or drive-in service requires a total of 10 vehicular spaces. This is based on the 1,035 SF measurement that is mentioned in various places. Please confirm to ensure the parking calculation is correct.

13. **Dutch Bros – West Commons, Plan Set, Sheet C0.2, Site Demolition Plan**

    a. The submitted demolition plan lacks sufficient information regarding the existing structures on the subject site. Please revise the plans to include a comprehensive description and graphic representation of all existing buildings/structures. This information is necessary for a complete review and to ensure compliance with relevant regulations.

       Please provide the following:

       i. Clear identification and labeling of all existing buildings/structures on the subject property.

       ii. The dimensions and total square footage of each floor of every existing building.

       iii. A statement concerning the specific use(s) of every existing building.

       iv. Current photographs of all exterior elevations of the buildings/structures to be demolished.

       v. A site plan clearly indicating the location of every existing building to be removed, including distances from property lines and adjacent buildings.

14. **Dutch Bros – West Commons, Plan Set, Sheet C1.0, Site Dimension Plan**

    a. The Site Dimension Plan depicts several features that are not identified by a label or described in the accompanying site notes. Please revise the plan set to include a complete and consistent mapping symbols legend, or add identifying labels/callouts directly on the plan sheet to clarify the nature, use, and dimensions of all depicted items.

    b. The front building setbacks are not shown; please update the plans.

    c. All figures '6' and '9' on the site plan must be clearly distinguishable to prevent misinterpretation and potential miscalculation. Recommend underlining both figures. (e.g., 6 and 9). Please revise all plan sheets to ensure that numbers 6 and 9 are oriented correctly and clearly discernible from one another.

    d. The southeast corner of the drive-thru lines the curve, which needs to be defined in both plan view (horizontal) and profile (vertical), showing how it changes direction and elevation.

    e. Specifying radii is needed to demonstrate safe turning, preventing vehicles from needing to slow excessively or drift. This is to ensure vehicles can navigate the curve without hitting curbs, other vehicles, or pedestrians, and that drivers can see ahead. Please provide a detailed drive-thru curve design (radii, transitions) demonstrating safe vehicle movement and sight lines for the proposed speed.

15. Miscellaneous

a. There is a discrepancy with the lot size on the different documents submitted for review, which are and read as follows:

   i. **The Concurrency Analysis and the Needed Fire Flow Analysis indicates a 1,035 SF building**

   ii. **Sheet C0.1, contains the General Notes for the Dutch Bros – Westside Commons unnamed plan type.**

b. Note, Resolution 24-05, Schedule of Fees, requires a resubmittal fee if an additional completeness review is required. Any resubmittal in response to this letter shall be accompanied by a $270 fee. The payment of this fee is required in accordance with the earlier resolution prior to further review of the application.

c. Please be advised that the current review is limited due to the lack of a complete set of all applicable plans. Upon receipt of all applicable plans, the full review will be able to provide additional and comprehensive comments.

If you have any questions regarding the information above, please contact me at (386) 418-6126 or via email at Be_Fisher@CityofAlachua.org.

Sincerely,

Bernadette Fisher

Ref: Site plans for Dutch Bros – Westside Commons

Dear Mr. Crockett:

The following are our latest comments for the site plan revisions for Dutch Bros – Westside Commons

General Comments:

1) Despite having a 10-2 Certification, we will need to review the Stormwater Report of the Master System this project connects to and confirm compliance with the overall design. Please provide it in the next submittal.

Sheet C.0.0

1) Parcel Zoning and Future Land Use is not shown. Please include.
2) Adjacent Parcel Zoning and Future Land Use is not shown. Please include.

Sheet C.1.0

1) Concrete Dumpster Pad sticks out into Drive Aisle. This should be pushed back to not interfere with traffic.
2) Dimensions must be shown on the Dumpster Pad. Please include.
3) Drive-Thru Aisle expands around first corner. Please add additional dimensions.

Sheet C.2.0

1) Bends in the water main should be included in the fixture list.
2) Proposed Downspout line crosses Proposed Light Pole. Please relocate either the Pole or the Downspout Line.
3) Please provide a construction detail of how the Downspout Line connects to the Proposed Flume. A Mitered End Section will still be needed at the end of the line. Seems like this would be better off connecting to the proposed basin in a different location.
4) Show Utility Clearances around all proposed utilities.

5) The proposed Water Main seems to be very close to the proposed tree in Landscape Island just after the 90° bend. Please show clearance to confirm compliance.
6) Connection point for the Sanitary and Grease Lines should have a Cleanout with the invert and top elevations called out.
7) Top Elevations of Sanitary and Storm Cleanouts should be included in your fixture table.

Sheet C.3.0

1) Please add additional spots along the dumpster pad to confirm it will connect with the proposed grading.
2) Will the dumpster pad be a step-up pad or a flush pad? Please add a construction detail to confirm.
3) The existing 31" Live Oak may be too close to survive the proposed grading of the basin.
4) A cross section of the proposed basin should be included in your plans to confirm constructability.
5) Top Elevations of Sanitary and Storm Cleanouts should be included in your fixture table.

Sheet C.3.1

1) The existing 31" Live Oak may be too close to survive the proposed grading of the basin.
2) Confirm if the existing Live Oak Trees are Heritage Trees or not. If they are, they will need additional protection.

Sheet C.4.0

1) Please confirm that all provided details comply with the City of Alachua.

Landscape

1) Proposed Building Area is different from the Civil Plans. Please update for consistency.

Please do not hesitate to contact us if you have any questions/comments.

Sincerely,

Claudia Vega, P.E.

INTER-OFFICE COMMUNICATION

DATE: **Nov 24, 2025**

TO: **Bernadette Fisher**
Planning & Community Development Department

FROM: **Tom Ridgik, P.E.**
Engineering Supervisor

RE: **Dutch Bros Site Plan** TR 12/11/2025

Public Services has reviewed the subject project (Nov 2025 Submittal Documents) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
1	**Comment on Nov Submittal** **Fire Flow** As per submitted documents, needed fire flow is 1500 gpm, with an available fire flow of 1800 gpm. The Engineer thus concludes that available fire flow is sufficient. The City does not necessarily share this conclusion for the following reasons: (1) The test and residual fire hydrants have not been physically identified. Please **submit** a sketch calling out these fire hydrants, preferable the piping as well. Using a GIS map as the base sheet is suggested. Upon request, the City can provide this base map. (2) The fire flow test was conducted at the SE corner of intersection at 441 & 173rd St, yet the Dutch Bros site is located at the NW corner. This adds uncertainty to the fire flow tests. Due to the fact that NW corner is higher than the SE corner, as well as piping configuration, the fire flow available at the NW corner may be less than at the SE corner. (3) While the hydrant sketch is being resubmitted, the City will model the available fire

NO.	COMMENTS
	flow at the NW site. This issue is unresolved.
2	**Comment on Nov Submittal** **Sheet C0.0** After "DUTCH BROS", add "SITE PLANS" to be consistent with COA practices. Please **Revise & Resubmit** this sheet.
3.	**Comment on Nov Submittal** **Sheet C0.1** **Utility Notes A. General** Note 3: Keep existing text, but add the following: " WATER AND WASTEWATER SYSTEMS SHALL BE CONSTRUCTED IN ACCORDANCE WITH "CITY OF ALACHUA, PUBLIC SERVICES, DESIGN AND CONSTRUCTION MANUAL, LATEST EDITION". **Utility Notes B. Materials (Water)** Modify Note 1 as follows: "1. SERVICE PIPE **DOWNSTREAM EACH BACKFLOW PREVENTER** SHALL BE POLYETHYLENE (PE), DR9". Add the following notes: "8. SERVICE WATER PIPING UPSTREAM THE WATER METER SHALL BE PVC, TYPE AS SHOWN ON THE DETAILS. 9.SERVICE WATER PIPING BETWEEN THE WATER AND THE BACKFLOW PREVENTER SHALL BE OF THE SIZE AND TYPE AS SHOWN ON THE DETAILS 10. WATER METER APPURTENANCES SHALL BE FURNISHED AND INSTALLED BY THE CONTRACTOR. THE WATER METER ITSELF WILL BE FURNISHED AND INSTALLED BY THE CITY. 11. FOR EACH BACKFLOW PREVENTER, PROVIDE AN ENCLOSURE AS PER THE DETAILS. 12. WET TAP(S) TO PRESSURIZED WATER MAINS SHALL BE DONE BY A SUB-CONTRACTOR PRE-APPROVED BY THE CITY OF ALACHUA. 13. PROVIDE TRACER WIRE SYSTEM FOR WATER PIPING AS SHOWN ON THE

NO.	COMMENTS
	DETAILS AND AS PER THE COA DCM. 14. TRACER WIRE SYSTEM SHALL COMMENCE AT THE TIE-IN(S) AT EXISTING WATER MAIN(S) AND TERMINATE AT EACH COA END OF MAINTENANCE POINT." **Utility Notes D. Materials (Storm)** **Add the following note:** "5. "UNLESS AN ALTERNATE IS APPROVED BY COA, GROUT BOTTOM OF ALL STORMWATER DRAINAGE STRUCTURE INVERTS AS PER FDOT INDEX 425-001 AND AS PER COA STANDARD DETAIL 210." Please **Revise & Resubmit** this sheet.
4.	**Comment on Nov Submittal** **Sheet C2.0** See attached markup. Call-out the pipe downstream the gate valve (keynote 20) as "2-INCH SCH 40 PVC – NSF 61" Site Utility Note 1: Add the following: "(1) INSTALL ELECTRONIC MARKER TWO-FEET BELOW GRADE AND ONE FOOT FROM CLEANOUT. MARKER SHALL BE TEMPO OMNI MARKER II; SANITARY GREEN; MODEL OM-6; PART 52085009 (2) CITY OF ALACHUA END OF MAINTENANCE" Site Utility Note 21: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE". Site Utility Note 23: Change tee size to 2 X 2 X 2 Site Utility Note 24: Add text "(1) INSTALL METER SO ITS EDGE IS TWO FEET FROM EDGE OF SIDEWALK (2) CITY OF ALACHUA END OF MAINTENANCE" Please **Revise & Resubmit** this sheet.
5.	**Comment on Nov Submittal** **Sheet C2.0**

NO.	COMMENTS
	Domestic Water Meter Sizing Calculations Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Building Design Flow (gpm) Proposed Water Meter Size (size using building design flow with meter flow ranges identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email Also, on either the cover sheet or the utility plan, call-out the: Building Design Flow Water Meter Size **Submit** the supporting calculations The meter sizing method used must be acceptable to COA. Although the City may consider other methods, the City will accept the Florida plumbing code method that calculates facility water supply design flow coupled with flow meter ranges as set forth by City ordinances. **Resubmit** affected sheets
6.	**Comment on Nov Submittal** **Sheet C2.0** **Irrigation Water Meter Sizing Calculations** Please **submit** a letter that includes the following: Official letterhead of the Engineer of Record, or equivalent credentialed professional Addressee: Tom Ridgik, Public Services Engineering Supervisor, City of Alachua Signed and sealed by Engineer of Record, or equivalent credentialed professional Irrigation System Design Flow (gpm) Proposed Water Meter Size (size using irrigation system design flow with meter flow ranges identified in City Ordinances) PDF version of the letter is acceptable; letter can be forwarded by email

NO.	COMMENTS
	Also, on either the cover sheet, the utility plan or the landscaping plan, call-out the: Irrigation System Design Flow Water Meter Size **Resubmit** affected sheets
7	**Comment on Nov Submittal** **Sheet C4.0** **Detail 11 Drop Cleanout** Add the following text: "NOTE: PROVIDE VALVE COVER AS PER DETAIL 127" Please **resubmit** this sheet.
8	**Comment on Nov Submittal** **Sheet C4.0** **Detail 17 Grease Interceptor** The proposed grease interceptor is REJECTED. Replace with a 1000-gallon size unit similar that shown in Details 227 & 230. Please **resubmit** this sheet.
8	**Comment on Nov Submittal** **Sheet C4.1** Replace Detail 115 Add the following details: 127 130 210 227 230 307 318

NO.	COMMENTS
	321A 321B COA will forward these details. If not forwarded, please contact COA. Please **resubmit** applicable sheets.
9	**Comment on Nov Submittal** **Sheet L1** See markup. Remove shrubs/tress so there is at least 10 feet horizontal clearance with backflow preventer. Please **resubmit** this sheet.

B. APPLICANT

1. Applicant's Status ☐ Owner (title holder) ☑ Agent
2. Name of Applicant(s) or Contact Person(s): Zach Pinel Title: Buyer Representative
   Company (if applicable): Alakai Acquisitions
   Mailing address: 33 East Robinson, Suite 210
   City: Orlando State: FL ZIP: 32801
   Telephone: 407.575.5935 FAX: None e-mail: zpinel@alakai-capital.com
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): Santa Fe Hills Church of Christ / Browning and Browning Trustees & Morris
   Mailing Address: 1026 NW 125th Drive / 627 SW 83rd Terrace
   City: Newberry / Gainesville State: FL / FL ZIP: 32669 / 32607
   ** Must provide an executed Authorized Agent Affidavit or other acceptable documentation (as deemed acceptable by the City in its sole discretion) authorizing the agent to act on behalf of the property owner.*

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☑ Yes ☐ No
   If yes, list names of all parties involved: Robert Matheny / Jeannette L. Browning, D. Holton Browning, Janice L. Morris
2. Has the applicant discussed possible utility/infrastructure fees with the Public Services Department?

If no, contact the Public Services Department at 386-418-6140. ☑ Yes ☐ No

D. ATTACHMENTS

1. Site Plan. Sheet size shall be 24" X 36" with a 3" left margin and ½" top, bottom, and right margin.

Site Plan shall include:

a. Name and location of project.
b. Name and contact information (address, telephone, and email address) of property owner, developer (if applicable), and all professional consultants (i.e., landscape architect, photometric, electrical engineer, architect, etc.) for the project.
c. Zoning of the subject property.
d. Vicinity map - indicating general location of the site and major adjacent streets and all adjacent properties.
e. Boundary and topographic survey. Survey shall be signed and sealed by the surveyor, and shall be no older than two (2) years.
f. Complete legal description of the subject property.
g. Statement of proposed uses.
h. Location of the subject property in relation to adjacent properties.
i. Date, north arrow, and graphic scale (not to exceed one (1) inch equal to 50 feet.)
j. Area and dimensions of the subject property.
k. Structures and major features – fully dimensioned – including setbacks from property lines and right-of-ways, distances between structures (if structures are within 25 feet of one another), floor area of each building, floor area ratio, and property lines.
l. Location of all property lines, existing and proposed adjacent right-of-ways, sidewalks, curbs, and gutters.
m. Distance between ingress and egress connections for the project and the ingress / egress connections for all contiguous properties and for properties on the opposite side of the road, measured from the interior radius of all ingress/egress connections.
n. Location of all existing and proposed utilities (electric, potable water, sanitary sewer, gas, etc.) on the subject property, and on adjacent properties if located within 50 feet of the subject property, and within adjacent rights-of-way.
o. Location of all existing and proposed fire hydrants.
p. Location of all existing easements on the property and on adjacent properties if located within 50 feet of the subject property, and recording information for such easements.
q. Location of all proposed easements (legal descriptions and sketches of all proposed easements shall be provided by the applicant following a review of proposed utility locations by Public Services).
r. Location and dimensions of all existing and proposed vehicular parking spaces, dimensions of all drive aisles, and the angle of parking spaces.
s. Location of all bicycle parking areas and specifications of bicycle racks.
t. Location, dimensions, and vertical clearance of all off-street loading spaces, if required by Section 6.1 of the LDRs.
u. Location and dimensions of all vehicle stacking spaces, if required by Section 6.1 of the LDRs.
v. Vehicular parking calculations, indicating the minimum and maximum number of required spaces and the number of parking spaces provided (regular and accessible spaces) in accordance with Section 6.1 of the LDRs.
w. Bicycle parking calculations, if required by Section 6.1 of the LDRs.
x. Striping and signage for all traffic control devices.
y. Landscape Plan, indicating the location, size, and design of required and proposed landscaped areas. Landscape Plans shall identify the following with sufficient detail and calculations to demonstrate compliance with Section 6.2.2 of the LDRs:
    i. Location, identification of the species, and size of all existing trees.
    ii. Required perimeter buffer areas.
    iii. Parking lot perimeter landscaping.
    iv. Parking lot interior landscaping.
    v. Building façade landscaping.
    vi. Calculation of landscaped areas (see Policy 2.4.a of the Comprehensive Plan Future Land Use Element).
    vii. Calculation of open space provided (see Section 6.7 of the LDRs).
    viii. Calculation of tree credits, if applicable. Calculations shall be as set forth in Sections 6.2.1(D)(4) and 6.2.2(D)(6) of the LDRs and shall be shown on the plan in tabular format (if tree credits are utilized, the Landscape Plan must identify in the landscape calculations where credit is applied).
    ix. Tree protection detail in accordance with Section 6.2.1(D)(2) of the LDRs.
    x. If tree removal is proposed, a tree survey, showing:
        (a) Each tree proposed for removal;
        (b) Each tree proposed for retention;
        (c) The size and species (both common and scientific names) of all trees proposed for removal/retention;

(d) Location, size, and species of all new trees proposed to meet mitigation requirements. Mitigation trees must be shown on the plans and a list of all mitigation trees and calculation of required mitigation must be provided on the plan in tabular format.

z. Location of waste receptacles and detail of waste receptacle screening, demonstrating compliance with Section 6.2.3(B) and, if within the Gateway Overlay District, with Section 3.7.2(C)(5)(c)(ii).

aa. Photometric Plan, demonstrating compliance with the applicable provisions of Section 6.4 of the LDRs.

bb. Location and size of any lakes, ponds, canals, or other waters and waterways, and required setbacks dimensioned on the plans from such waterways.

cc. For development consisting of a nonresidential use, except for single tenant retail sales and services uses greater than or equal to 20,000 square feet in area and except for use types within the industrial services, manufacturing and production, warehouse freight and movement, waste-related services, and wholesale sales use categories ***not*** located within 500 feet of the right-of-way of US Highway 441: Architectural plans demonstrating compliance with the design standards for business uses as provided in Section 6.8.2 of the LDRs. Architectural plans shall include:
   i. Calculation of glazing of:
      (a) the front façade;
      (b) any facade facing a street;
      (c) any façade facing a publicly-accessible parking area which is a part of the development and consisting of 15 percent or more of the minimum off-street parking required by Section 6.1.4(B) of the LDRs; and,
      (d) any façade facing vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.
   ii. Calculation of the area of all façades subject to glazing.
   iii. Detail on the architectural plans depicting façade massing or a massing alternative as defined in Section 6.8.2(A)(2)(b).
   iv. Identification of each material utilized in each façade and the percentage of the total area of the façade for each material used.

dd. For development consisting of a nonresidential use where a single retail services tenant is greater than or equal to 20,000 square feet in area: Architectural plans demonstrating compliance with the design standards for single tenant retail sales and service uses greater than or equal to 20,000 square feet in area as provided in Section 6.8.3 of the LDRs. Architectural plans shall include:
   i. Color plans depicting the color of all materials used in the façade.
   ii. Identification of each material utilized in each façade and the percentage of the total area of the façade for each material used.
   iii. Calculation of glazing of:
      (a) the front façade;
      (b) any facade facing a street;
      (c) any façade facing a publicly-accessible parking area which is a part of the development and consisting of 15 percent or more of the minimum off-street parking required by Section 6.1.4(B) of the LDRs; and,
      (d) any façade facing vacant land classified as CSV, A, RSF-1, RSF-3, RSF-4, RSF-6, RMH-5, RMH-P, RMF-8 or RMF-15, or lands containing existing residential uses.
   iv. Calculation of the area of all façades subject to glazing.
   v. If a glazing alternative as defined in Section 6.8.3(A)(2)(a)(iv) is used, calculation of area of alternative materials used or identification of other architectural features meeting the requirements of Section 6.8.3 of the LDRs.
   vi. Detail on the architectural plans depicting façade massing or a massing alternative as defined in Section 6.8.2(A)(2)(b) of the LDRs.

ee. For development consisting multi-family residential uses and/or a mobile home park:
   i. Gross acreage.
   ii. Number of dwelling units proposed.
   iii. Density.
   iv. Location and percentage of total open space and recreation areas.
   v. Floor area of each dwelling unit.
   vi. Number of proposed parking spaces.
   vii. Street layout, if applicable.
   viii. Layout of mobile home stands (for mobile home parks only).
   ix. City of Alachua Public School Student Generation Form.

2. Stormwater management plan - including the following:
   a. Plans showing existing contours at one (1) foot intervals based on U.S. Coastal and Geodetic Datum.
   b. Proposed finished floor elevation of all buildings.
   c. Existing and proposed stormwater management facilities with size and grades.
   d. Proposed orderly disposal of surface water runoff.
   e. Drainage calculations.

3. Fire Department Access and Water Supply Plan. All fire protection plans are subject to review and approval by the Alachua County Fire Marshal and City of Alachua Public Services Department. Fire Department Access and Water Supply Plan shall include:
   a. Plans prepared by a professional engineer licensed in the State of Florida.
   b. Fire flow calculations for each newly constructed building. Calculations shall be performed in accordance with Chapter 18, Section 18.4 of the Florida Fire Prevention Code.
   c. Documentation from the water purveyor stating the available flow to the subject property.

4. Concurrency Impact Analysis showing the impact on public facilities, including potable water, sanitary sewer, transportation, solid waste, recreation, stormwater, and public schools (if applicable) in accordance with Section 2.4.14 of the LDRs.

5. Analysis of Consistency with the City of Alachua Comprehensive Plan (analysis must identify specific Goals, Objectives, and Policies and describe in detail how the application complies with the noted Goal, Objective, or Policy).

   For commercial/corporate park/industrial projects: In addition to submitting specific written information regarding the development's compliance with the relevant Goals, Objectives, and Policies of the City of Alachua Comprehensive Plan, a response to the design and performance standards as provided in Policy 1.3.d (for commercial projects), Policy 1.4.f (for corporate park projects), or Policy 1.5.d (for industrial projects) of the Future Land Use Element:

   The following criteria shall apply when evaluating commercial/corporate park/industrial development proposals:

   1. Integration of vehicular and non-vehicular access into the site and access management features of site in terms of driveway cuts and cross access between adjacent sites, including use of frontage roads and/or shared access;
   2. Buffering from adjacent existing/potential uses;
   3. Open space provisions and balance of proportion between gross floor area and site size;
   4. Adequacy of pervious surface area in terms of drainage requirements;
   5. Placement of signage;
   6. Adequacy of site lighting and intrusiveness of lighting upon the surrounding area;
   7. Safety of on-site circulation patterns (patron, employee and delivery vehicles), including parking layout and drive aisles, and points of conflict;
   8. Landscaping, as it relates to the requirements of the Comprehensive Plan and Land Development Regulations;
   9. Unique features and resources which may constrain site development, such as soils, existing vegetation and historic significance; and
   10. Performance based zoning requirements, which may serve as a substitute for or accompany land development regulations in attaining acceptable site design.
   11. Commercial/Corporate Park/Industrial uses shall be limited to an intensity of less than or equal to 0.50 floor area ratio for parcels 10 acres or greater, 0.50 floor area ratio for parcels less than 10 acres but 5 acres or greater, a 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio to parcels 1 acre or less.
   12. Complementary residential uses (corporate park only).

6. *For Site Plans for Buildings Less than 80,000 Square Feet in Area:* One (1) set of mailing labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits (obtain from the Alachua County Property Appraiser's web site) – and all persons/organizations registered to receive notice of development applications (current list may be obtained from the Planning & Community Development Department).
   For Site Plans for Buildings Greater than or Equal to 80,000 Square Feet in Area: Two (2) sets of mailing labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits (obtain from the Alachua County Property Appraiser's web site) – and all persons/organizations registered to receive notice of development applications (current list may be obtained from the Planning & Community Development Department).

7. Neighborhood Meeting Materials, including:
   i. Copy of the required published notice (advertisement) – must be published a newspaper of general circulation, as defined in Article 10 of the City's LDRs;
   ii. Copy of written notice (letter) sent to all property owners within 400 feet and to all persons/organizations registered with the City to receive notice, and a copy of the mailing labels or a list of those who received written notice; and,
   iii. Written summary of meeting – must include (1) those in attendance; (2) a summary of the issues related to the development proposal discussed; (3) comments by those in attendance about the development proposal; and, (4) any other information deemed appropriate.

8. Legal description: (1) on 8.5" x 11" paper; and (2) electronic file in Word format.

9. Proof of ownership (i.e., copy of deed.)

10. Proof of payment of taxes.

11. Traffic Impact Analysis or Statement, as deemed applicable to the project by the City of Alachua in its sole discretion.

12. Environmental Assessment or Study, as deemed applicable to the project by the City of Alachua in its sole discretion.

13. Environmental Resource Permit (or Letter of Exemption) from the Suwannee River Water Management District (SRWMD) or Self-Certification for a Stormwater Management System in Uplands Serving Less than 10 Acres of Total Project Area and Less than 2 Acres of Impervious Surfaces from the Florida Department of Environmental Protection (FDEP) pursuant to Section 403.814(12), Florida Statutes (or documentation which shows a permit application/exemption/self-certification has been submitted to SRWMD or FDEP).

14. If access is from a County Road, access management permit from Alachua County Public Works (or documentation which shows a permit application has been submitted).

15. If access is from a State Road, access management permit from Florida Department of Transportation (or documentation which shows a permit application has been submitted).

16. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any costs associated with outside professional consulting services deemed necessary by the City in its sole discretion will be billed to the applicant at the rate of the consultant. The invoice for such services shall be paid in full prior to any public hearing(s) on the application.

All applicable attachments are required for a complete application. A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

Under penalty of perjury, I/we certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

WARRANTY DEED

THIS WARRANTY DEED, Executed this 5th day of October, 2009, by:

Draper C. Underwood, first party Trustee and Grantor
Hilltop Church of Christ
P.O. Box 993
High Springs, Florida 32655-0993,

Gary A Hart, second party Trustee, and Grantor
Hilltop Church of Christ
340 SW Logston Court
Fort White, Florida 32038

to: The trustees of Santa Fe Hills Church of Christ and their successors in office, third, fourth, and fifth parties, and Grantees, to wit:

Bobby Sheffied and his successors in office, third party Trustee, and Grantee
Santa Fe Hills Church of Christ
26928 NW 130th Street
High Springs, Florida 32643

Ed Ceppa and his successors in office, fourth party Trustee, and Grantee
Santa Fe Hills Church of Christ
2515 NW 77th Blvd. Apt. T-408

WARRANTY DEED

Gainesville, Florida 32606

Paul Prentice, and his successors in office, fifth party
Trustee, and Grantee
Santa Fe Hills Church of Christ
18613 NW 262 Ave
Alachua, Florida 32615

(Wherever used herein, the terms "first party," "second party" "third party," "fourth party" and "fifth party" shall include singular and plural, heirs, legal representatives, and assigns of individuals, and the successor and assigns of corporations wherever the context so admits or requires.)

WITNESSETH, that the said first and second parties, for and in consideration of the sum of **Ten Dollars ($10)**, in hand paid by the said third, fourth and fifth parties, the receipt whereof is hereby acknowledged, does hereby remise, release, and warrant unto the said third, fourth and fifth party forever, all the right, title, interest, claim, and demand which the said first and second parties have in and to the following described lot, piece or parcel of land, situation, lying and being in the County of Alachua, State of Florida, to-wit:

From a point of beginning obtained as follows:
COMMENCE AT THE SOUTHEAST CORNER OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, THENCE RUN NORTH 1 DEGREE 49 MINUTES, WEST ALONG THE EAST LINE OF SAID SECTION 2560.55 FEET, THENCE RUN SOUTH 89 DEGREES 29 MINUTES WEST 250 FEET TO THE POINT OF BEGINNING, THENCE RUN SOUTH 1 DEGREE 49 MINUTES, EAST 807.75 FEET TO THE NORTH OF RIGHT OF WAY OF STATE ROAD NO. 20, THENCE RUN NORTH 79 DEGREES 06 MINUTES WEST ALONG SAID RIGHT OF WAY 215.4 FEET, THENCE RUN NORTH 1 DEGREE, 49 MINUTES WEST 765.11 FEET, THENCE RUN NORTH 89 DEGREES 29 MINUTES EAST 210 FEET TO THE POINT OF BEGINNING. ALL BEING AND LYING IN THE SOUTHEAST QUARTER (SE) OF SECTION 8, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA.

WARRANTY DEED

TO HAVE AND TO HOLD the same together with all and singular the appurtenances thereunto belonging or in anywise appertaining, and all the estate, right, title, interest, lien, equity and claim whatsoever of the said first and second parties, either in law or equity, to the only proper use, benefit and behoof of the said third party forever.

The above described property thus conveyed from the Grantors/Trustees of the Hilltop Church of Christ to the Grantee/Trustee of the Santa Fe Hills Church of Christ and their successors in office shall hereby restore to Santa Fe Hills Church of Christ Trustees and their successors full power to sell, mortgage, or otherwise dispose of or convey any part of all of said property without notice and upon such terms and conditions as said Trustees shall in their sole discretion deem advisable, as long as this discretion is not in conflict with the Santa Fe Hills Church of Christ Constitution and Bylaws. This provision is solely for the benefit of the Grantees, and the Grantors reserve no right or interest in said premises, and said Grantor does hereby fully warrant the title to the land, and will defend the same against the lawful claims of all persons and other entities whatsoever.

IN WITNESS WHEREOF, the said first party has signed and sealed these presents the day and year first above written.

TABLE OF CONTENTS

1. Project Narrative and Concurrency Analysis
2. Consistency with City of Alachua Comprehensive Plan Analysis
3. Needed Fire Flow Analysis

1. Project Narrative and Concurrency Analysis

This site plan application requests to construct a new 1,035 square foot Dutch Bros. Coffee shop on an approximately 0.90 acre parcel referred to as 'Lot 1' located at the Westside Crossing commercial development. Shown below is an analysis of the proposed development's concurrency demands and the existing infrastructure available to serve the project.

Roadways/Transportation

Projected Trip Generation:

Land Use	ITE LU Code	Variable Type	Variable Quantity	Trip Rate	Daily	AM Peak	PM Peak
Proposed							
Coffee Shop w/ Drive-Thru & No indoor seating	938	Drive-Thru Lane	1	Daily = 179 AM Peak = 39.31 PM Peak = 15.08	179 Trips	40 Trips	15 Trips

Conclusion: Approval of this application results in an additional 179 daily and 40 AM peak hour trips on the public road network. This does not include the effect of pass-by trips which the traffic study estimates to be approximately 162 trips.

Per the traffic study conducted by Traffic Planning and Design, Inc., the comprehensive plan roadway segment analysis showed that all of the segments currently operate at acceptable levels of service. At project build out, all of the roadway segments will continue to operate within their capacity similar to existing conditions.

Additionally, the intersection analysis conducted by TPD indicated that the intersection currently operates at an acceptable Level of Service, and will continue to operate at an acceptable LOS after project build-out.

Potable Water / Sanitary Sewer / Solid Waste

	Demand	Max Total Demand	Current Potable Water Residual Capacity	Residual Capacity After Proposed Project
Potable Water	(50 GPD / 100 SF) + (15 GPD/ employee (8-hr shift)) (Carry out only)	578 GPD (4 employees)	138,980 GPD	138,402 GPD

Conclusion: The project site will be served by the City of Alachua potable water infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for potable water.

	Demand	Max Total Demand	Current Potable Water Residual Capacity	Residual Capacity After Proposed Project
Sanitary Sewer	(50 GPD / 100 SF) + (15 GPD/ employee (8-hr shift)) (Carry out only)	578 GPD (4 employees)	168,166 GPD	167,588 GPD

Conclusion: The project site will be served by the City of Alachua wastewater infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for sanitary sewer.

	Max Total Demand	Existing Demand	Demand After Proposed Project
Solid Waste	Total Waste Per Year: 25 Tons per year or 137 lbs. per day	10,184 Tons per year	10,209 Tons per year

Conclusion: Solid waste facility capacity exists to adequately serve development of the proposed project. The New River Solid Waste Facility is anticipated to be able to have enough capacity for the next 50+ years. The maximum potential impact from approval of this application will not negatively or exceed the City's adopted LOS for the solid waste facility system.

The total estimated impact on public facilities for both proposed and existing development is as follows:

Water – 578 GPD
Sewer – 578 GPD
Solid Waste – 25 Tons per year or 137 lbs. per day
Transportation – 179 Max Daily Trips

Based on the fact that the public facilities involved have sufficient capacity to serve the proposed development and the adjacent streets have sufficient capacity, it appears that sufficient capacity exists for all public facilities.

4. CONSISTENCY WITH CITY OF ALACHUA COMPREHENSIVE PLAN

This section identifies specific City of Alachua Comprehensive Plan Goals, Objectives, and Policies and explains how this application is consistent with each.

Policy 1.3.b: Commercial: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses may locate. The following uses are allowed within the Commercial land use category:

1. Retail sales and services;
2. Personal services;
3. Financial institutions;
4. Recreation and entertainment;
5. Tourist-related uses;
6. Visitor accommodations;
7. Commercial shopping centers;
8. Auto-orientated uses;
9. Traditional Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/businesses parks;
13. Limited industrial services;
14. Eating establishments;
15. Single family attached units;
16. Apartments and townhomes;
17. Duplexes and quadplexes;
18. Single-family and multi-family residential above first floor commercial uses;
19. Convention centers; and,
20. Supporting community services such as schools, houses of worship, parks, and community centers.

Development in the Commercial land use category may occur as mixed-use or non-mixed-use.

The proposed Dutch Bros coffee shop development is allowed in the property's current land use and zoning classification. This project is proposed to provide quality drinks to the adjacent residential development and school.

Policy 1.3.d: Design and performance standards: The following criteria shall apply

when evaluating commercial development proposals:
1. Integration of vehicular and non-vehicular access into the site and access management features of site in terms of driveway cuts and cross access between adjacent sites, including use of frontage roads and/or shared access;
2. Buffering from adjacent existing/potential uses;
3. Open space provisions and balance of proportion between gross floor area and site size;
4. Adequacy of pervious surface area in terms of drainage requirements;
5. Placement of signage;
6. Adequacy of site lighting and potential impacts of lighting upon the surrounding area. Lighting should be designed to minimize impacts to preserve the ambiance and quality of the nighttime sky by reducing light trespass and light pollution on adjacent properties by utilizing lighting at appropriate intensities, directions and times to ensure light is not overused or impacting areas where it is not intended;
7. Safety of on-site circulation patterns (patron, employee, and delivery vehicles), including parking layout, drive aisles, and points of conflict;
8. Landscaping, as it relates to the requirements and goals of the Comprehensive Plan and Land Development Regulations;
9. Unique features and resources which may constrain site development such as soils, existing vegetation and historic significance;
10. Performance based zoning requirements, which may serve as a substitute for or accompany land development regulations in attaining acceptable site design; and,
11. Commercial uses shall be limited to an intensity of less than or equal to 0.50 floor area ratio for parcels 5 acres or greater, 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less.

The site plans for the subject property conform to the above requirements. The proposed density is well below the maximum allowable density.

Policy 1.3.e: Density and intensity standards.
1. Non-mixed-uses. The following density and intensity standards shall apply to non-mixed-use development proposals in the commercial & mixed-use land use categories:
a. Density. Residential uses are limited to a density of 10 dwelling units per acre in the Community Commercial land use category and 15 dwelling units per acre in the Commercial and Central Business District land use categories.

b. Intensity. Non-residential uses are limited to an intensity of less than or equal to 0.5 floor area ratio for parcels 5 acres or greater, 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less.
2. Mixed-uses. The following density and intensity standards shall apply to mixed-use development proposals in the commercial & mixed-use land use categories:
a. Density. Residential uses are limited to a density of 15 dwelling units per acre in the Community Commercial and Commercial future land use categories and 20 dwelling units per acre in the Central Business District land use category.
b. Intensity. Non-residential uses are limited to an intensity of 0.6 floor area ratio for parcels 5 acres or greater, 0.85 for parcels less than 5 acres but greater than 1 acre, and 1.25 floor area ratio for parcels less than 1 acre.

The site plans for the subject property conform to the above requirements for non-mixed use developments. The proposed density is well below the maximum allowable density.

Policy 1.3.f**:** The creation/promotion of strip pattern commercial development shall be discouraged. Infill within established commercial areas is preferred over extension of a strip commercial pattern. Extension of a commercial land use designation may be considered in circumstances where the extension is compatible with the existing land uses surrounding the land or the land use categories of surrounding lands. Extensions of a commercial land use category shall not encroach into a residential area. The following criteria shall be applied to limit the impacts of commercial development upon surrounding areas:
1. Impacts upon traffic circulation should be anticipated and mitigated through the reservation of right-of-way for road widening and marginal access streets when appropriate.
2. Access points for commercial development shall minimize points of conflict by utilizing frontage roads, providing cross access between parcels, or installing shared use ingress and egress access driveways connections to roadways.
3. Setbacks and landscaped or other appropriate buffers shall be established to mitigate the visual impacts of commercial development upon surrounding land uses.
4. A sidewalk or bicycle path shall be required where appropriate, to provide convenient access to the development from surrounding areas and to reduce traffic volumes on the roadways.

The subject property is located on a busy intersection on a state highway, is part

of the City's Corporate Corridor Activity Center and is surrounded by other commercially zoned and developed property along US 441, making this 'infill' development. Access points are limited to 1 each per public road, with appropriate signage and traffic channelizing to limit traffic movements. The proposed Dutch Bros coffee shop is compatible with adjacent properties along US 441 and appropriate landscaped buffers are provided, on the subject property, from adjacent properties. Public sidewalks, including a wider mixed-use path along NW 173rd, are proposed.
No additional right of way for public roads is required.

Policy 1.3.g: The City shall pursue the establishment of activity centers and similar criteria to guide the placement and design of commercial and business areas.
1. The City shall establish and maintain a Gateway Activity Center at the interchange of US 441 and Interstate 75. The boundaries of the Gateway Activity Center shall be based on the Generalized US 441/I-75 Activity Center Map provided in the Future Land Use Map Series. The intent of this activity center is to welcome existing and future residents and visitors to the City, and to promote Alachua as an attractive, vibrant, and economically prosperous community.
2. The City shall establish and maintain the US 441 corridor as a Corporate Corridor Activity Center. The intent of establishing this activity center is to implement economic development objectives and to promote a coordinated development plan to maximize existing and future land use patterns and preserve the function of the US 441 corridor.

The subject property is located in the US 441 Corporate Corridor Activity Center. The proposed site plan is being designed as part of a coordinated development plan and contributes to the goal of welcoming residents to the City with food and drink options and additional economic development opportunities.

Policy 2.7.a.: The City shall discourage the proliferation of urban sprawl. Applications for an amendment to the land use category of a property shall include an analysis of the application's discouragement of the proliferation of urban sprawl. Such analysis shall consider the primary indicators or the urban form criteria as set forth in Chapter 163.317(6)(a)9.a. and b., Florida Statutes, respectively.

This project will not promote the use of land far from existing urban areas for low density, nor will it create a need for the costly extension of services. All public roads and utilities are available adjacent to or close to the development, and the property is located on a busy intersection and surrounded by existing development on all sides.

Policy 5.1.a: Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Changes to the existing topography will be limited, and there are no know seepage slopes on site. Existing vegetation, including several large trees, will be preserved where possible.

Policy 5.1.b: Soils: The City shall ensure soil protection and intervention measures are included in the development review process.

There are currently three (3) types of soils located onsite:

- **Arredondo Fine Sand, 0 to 5 Percent Slopes (Hydro. Group A)**
- **Arredondo-Urban Land Complex, 0 to 5 Percent Slopes (Hydro. Group A)**
- **Fort Meade Fine Sand, 0 to 5 Percent Slopes (Hydro. Group A)**

Appropriate development techniques and design considerations have been applied to the various soil types on this site. All soils are well drained and non-hydric

Policy 5.1.c: Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

The subject property is not within any FEMA Special Flood Hazard Zone area, it is in Zone X, an area of minimal flood hazard.

Policy 5.1.d: Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

There are no documented wetlands on the project site. All soils are well drained and non-hydric.

Policy 5.1.e: Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

There are no documented listed wildlife or plant species or their habitat onsite. As the proposed Dutch Bros coffee shop is proposed on an existing developed lot that is regularly mowed, there appears to be no need to investigate further as the area does not appear to be inviting to listed species.

Objective 5.2: Availability of facilities and services: The City shall utilize a concurrency management system to ensure that the adopted level of service standards are maintained.

Section 2 of this report demonstrates the impacts that the proposed development will have on public facilities and services. Sufficient capacity appears to exist for this development. Below we have repeated the information provided in section 2 for immediate reference:

Roadways/Transportation

Projected Trip Generation:

Land Use	ITE LU Code	Variable Type	Variable Quantity	Trip Rate	Daily	AM Peak	PM Peak
Proposed							
Coffee Shop w/ Drive-Thru & No indoor seating	938	Drive-Thru Lane	1	Daily = 179 AM Peak = 39.31 PM Peak = 15.08	179 Trips	40 Trips	15 Trips

Conclusion: Approval of this application results in an additional 179 daily and 40 AM peak hour trips on the public road network. This does not include the effect of pass-by trips which the traffic study estimates to be approximately 162 trips.

Per the traffic study conducted by Traffic Planning and Design, Inc., the

comprehensive plan roadway segment analysis showed that all of the segments currently operate at acceptable levels of service. At project build out, all of the roadway segments will continue to operate within their capacity similar to existing conditions.

Additionally, the intersection analysis conducted by TPD indicated that the intersection currently operates at an acceptable Level of Service, and will continue to operate at an acceptable LOS after project build-out.

Potable Water / Sanitary Sewer / Solid Waste

	Demand	Max Total Demand	Current Potable Water Residual Capacity	Residual Capacity After Proposed Project
Potable Water	(50 GPD / 100 SF) + (15 GPD/ employee (8-hr shift)) (Carry out only)	578 GPD (4 employees)	138,980 GPD	138,402 GPD

Conclusion: The project site will be served by the City of Alachua potable water infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for potable water.

	Demand	Max Total Demand	Current Potable Water Residual Capacity	Residual Capacity After Proposed Project
Sanitary Sewer	(50 GPD / 100 SF) + (15 GPD/ employee (8-hr shift)) (Carry out only)	578 GPD (4 employees)	168,166 GPD	167,588 GPD

Conclusion: The project site will be served by the City of Alachua wastewater infrastructure. The maximum possible allowable impacts from approval of this application will not exceed capacity of the City's adopted LOS for sanitary sewer.

	Max Total Demand	Existing Demand	Demand After Proposed Project
Solid Waste	Total Waste Per Year: 25 Tons per year or 137 lbs. per day	10,184 Tons per year	10,209 Tons per year

Conclusion: Solid waste facility capacity exists to adequately serve development of the proposed project. The New River Solid Waste Facility is anticipated to be able to have enough capacity for the next 50+ years. The maximum potential impact from approval of this application will not negatively or exceed the City's adopted LOS for the solid waste facility system.

The total estimated impact on public facilities for both proposed and existing development is as follows:
Water – 578 GPD
Sewer – 578 GPD
Solid Waste – 25 Tons per year or 137 lbs. per day
Transportation – 179 Max Daily Trips

Based on the fact that the public facilities involved have sufficient capacity to serve the proposed development and the adjacent streets have sufficient capacity, it appears that sufficient capacity exists for all public facilities.

Policy 5.2.a: All new development shall meet level of service requirements for roadways, potable water and sanitary sewer, stormwater, solid waste, public schools, and improved recreation in accordance with LOS standards adopted in the elements addressing these facilities.

Section 2 (and the above) demonstrates how the proposed plan for the project site will impact City of Alachua facilities and adopted level of service. It is not anticipated that the proposed plan for the project site will exceed the adopted LOS standards.

Policy 5.2.b: The concurrency management system shall specify the period for which certification of level of service compliance shall be valid until actual development pursuant to a final development order or Ch. 163, Florida Statutes, development agreement has commenced.

Acknowledged, once certification is obtained the development and construction shall commence while said certification is valid.

CONSERVATION AND OPEN SPACE ELEMENT

Objective 1.5: Soils. The City shall protect soil resources through erosion and sedimentation control, by requiring proper design criteria on specific soils.

None of the onsite soils are particularly susceptible to erosion issues. Standard erosion control measures are specified to be installed and used during construction and until final stabilization.

Objective 1.10: Wetlands. The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.

The National Wetlands Inventory database does not indicate any wetlands or hydric soils onsite. If any wetlands are found onsite, they will be adequately protected in development of the project site.

Needed Fire Flow Analysis

Per NFPA for a 1,035 SF building with type of construction V-B, the required fire flow is 1500 GPM for 2 hours. Per the fire flow test done on-site the hydrant is capable of flowing 1807.02 gpm at 20 psi.

SELF-CERTIFICATION FOR A STORMWATER MANAGEMENT SYSTEM IN UPLANDS SERVING LESS THAN 10 ACRES OF TOTAL PROJECT AREA AND LESS THAN 2 ACRES OF IMPERVIOUS SURFACES

Owner(s)/Permittee(s):	Ashley Rosado, Nicholas Jones
File No:	0463846001EG
File Name:	WESTSIDE COMMONS - ALACHUA, FL
Site Address:	16313 NW US Highway 441 Alachua FL - 32615 8670
County:	Alachua
Latitude:	29° 48' 17.986"
Longitude:	-82° 31' 37.1064"
Total Project Area:	5.05
Total Impervious Surface Area:	.09
Approximate Date of Commencement of Construction:	
Registered Florida Professional:	STUART ANDERSON
License No.:	60848
Company:	

Date: August 19, 2025

Ashley Rosado certified through the Department's Enterprise Self-Service Application portal that the project described above was designed by the above-named Florida registered professional to meet the following requirements:

(a)The total project area involves less than 10 acres and less than 2 acres of impervious surface;
(b)Activities will not impact wetlands or other surface waters;
(c)Activities are not conducted in, on, or over wetlands or other surface waters;
(d)Drainage facilities will not include pipes having diameters greater than 24 inches, or the hydraulic equivalent, and will not use pumps in any manner;
(e)The project is not part of a larger common plan, development, or sale; and
(f)The project does not:

1.Cause adverse water quantity or flooding impacts to receiving water and adjacent lands;
2.Cause adverse impacts to existing surface water storage and conveyance capabilities;
3.Cause a violation of state water quality standards; or
4.Cause an adverse impact to the maintenance of surface or ground water levels or surface water flows established pursuant to s. 373.042 or a work of the district established pursuant to s. 373.086, F.S.

This certification was submitted before initiation of construction of the above project. The system is designed, and will be operated and maintained in accordance with applicable rules adopted pursuant to part IV of chapter 373, F.S. There is a rebuttable presumption that the discharge from such system will comply with state water quality standards.Therefore, construction, alteration, and maintenance of the stormwater management system serving this project is authorized in accordance with s.403.814(12), F.S.

In accordance with s. 373.416(2), F.S., if ownership of the property or the stormwater management system is sold or transferred to another party, continued operation of the system is authorized only if notice is provided to the Department within 30 days of the sale or transfer.This notice can be submitted to:

FDEP Northeast District
8800 Baymeadows Way West
Jacksonville, FL32256

This certification was submitted along with the following electronic documents:

File Description
Civil Plans
LOA
Stormwater Report
Survey

If you have submitted this certification as a Florida Registered Professional, you may wish to sign and seal this certification, and return a copy to the Department, in accordance with your professional practice act requirements under Florida Statutes.

I, STUART ANDERSON, License No. 60848, do hereby certify that the above information is true and accurate, based upon my knowledge, information and belief. In the space below, affix signature, date, seal, company name, address and certificate of authorization (if applicable).

This sealed certification may be submitted to the Department, either electronically (as an attachment in Adobe PDF or other secure, digital format) at DEP_NED@FloridaDEP.gov, or as a hardcopy, at the postal address below:

Reference: **Irrigation Water Meter Sizing Calculation**
IP # 2025.0363
Dutch Bros – Westside Commons, Alachua, FL

Dear Reviewer,

Please find this letter as the irrigation water meter sizing calculations for the Dutch Bros project located in the north-west corner of the intersection between US-441 and CR-235A. Per the landscape architect's calculations, the irrigation system design flow will be at a maximum 30 GPM. As per AWWA M22 meter standards, table 6-1, the proposed water meter for the irrigation system is a 1" meter. Please see the attached table.

Sincerely,
INTERPLAN LLC

Stuart Anderson, PE

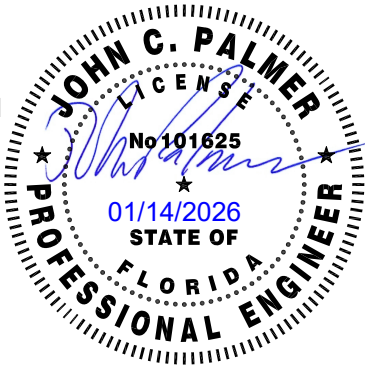
RE: DUTCH BROS WATER METER SIZING CALCULATIONS FOR ALACHUA

Dear Tom,



This letter contains the water meter sizing calculations for a Dutch Bros in Alachua, FL. The meter was sized using the International Plumbing Code (IPC) Appendix E, Table E104.1. With a pressure of 60 psi, a max development length of 100 ft, and a water supply fixture unit value of 35.5 (per plumbing plans on sheet P1.1), the meter is sized to be 1".

TABLE E104.1 MINIMUM SIZE OF WATER METERS, MAINS AND DISTRIBUTION PIPING BASED ON WATER SUPPLY FIXTURE UNIT VALUES (w.s.f.u.)

METER AND SERVICE PIPE (inches)	DISTRIBUTION PIPE (inches)	MAXIMUM DEVELOPMENT LENGTH (feet)									
Pressure Range 50 to 60 psi		40	60	80	100	150	200	250	300	400	500
3/4	1/2[a]	3	3	2.5	2	1.5	1	1	1	0.5	0.5
3/4	3/4	9.5	9.5	9.5	8.5	6.5	5	4.5	4	3	2.5
3/4	1	32	32	32	32	25	18.5	14.5	12	9.5	8

PART 5: SPECIAL PROVISIONS

NON-CONFORMING CONNECTIONS: ☐ YES ☐ NO

If this is a non-conforming connection permit, as defined in Rule Chapters 14-96 and 14-97, then the following shall be a part of this permit.

1. The non-conforming connection(s) described in this permit is (are) not permitted for traffic volumes exceeding the Permit Category on page 1 of this permit, or as specified in "Other Special Provisions" below.

2. All non-conforming connections will be subject to closure or relocation when reasonable access becomes available in the future.

OTHER SPECIAL PROVISIONS:

1.This permit only applies to work being done within FDOT right of way. 2. Contact FDOT Inspector Dale Hunter 48 hours in advance 352-575-3713 for a preconstruction meeting and before any work is performed within FDOT right of way. 3 Have all utilities located before the preconstruction meeting. 9.The Contractor must have a copy of the approved FDOT Permit on site during construction.

PART 6: APPEAL PROCEDURES

You may petition for an administrative hearing pursuant to sections 120.569 and 120.57, Florida Statutes. If you dispute the facts stated in the foregoing Notice of Intended Department Action (hereinafter Notice), you may petition for a formal administrative hearing pursuant to section 120.57 (1), Florida Statutes. If you agree with the facts stated in the Notice, you may petition for an informal administrative hearing pursuant to section 120.57(2), Florida Statutes. You must file the petition with:

Clerk of Agency Proceedings
Department of Transportation
Haydon Burns Building
605 Suwannee Street, M.S. 58
Tallahassee, Florida 32399-0458

The petition for an administrative hearing must conform to the requirements of Rule 28-106.201(2) or Rule 28-106.301(2), Florida Administrative Code, and be filed with the Clerk of Agency Proceedings by 5:00 p.m. no later than 21 days after you received the Notice. The petition must include a copy of the Notice, be legible, on 8 1/2 by 11 inch white paper, and contain:

1. Your name, address, telephone number, any Department of Transportation identifying number on the Notice, if known, the name and identification number of each agency affected, if known, and the name, address, and telephone number of your representative, if any, which shall be the address for service purposes during the course of the proceeding.
2. An explanation of how your substantial interests will be affected by the action described in the Notice;
3. A statement of when and how you received the Notice;
4. A statement of all disputed issues of material fact. If there are none, you must so indicate;
5. A concise statement of the ultimate facts alleged, including the specific facts you contend warrant reversal or modification of the agency's proposed action, as well as an explanation of how the alleged facts relate to the specific rules and statutes you contend require reversal or modification of the agency's proposed action;
6. A statement of the relief sought, stating precisely the desired action you wish the agency to take in respect to the agency's proposed action.

If there are disputed issues of material fact a formal hearing will be held, where you may present evidence and argument on all issues involved and conduct cross-examination. If there are no disputed issues of material fact an informal hearing will be held, where you may present evidence or a written statement for consideration by the Department.

Mediation, pursuant to section 120.573, Florida Statutes, may be available if agreed to by all parties, and on such terms as may be agreed upon by all parties. The right to an adminstrative hearing is not affected when mediation does not result in a settlement.

Your petition for an administrative hearing shall be dismissed if it is not in substantial compliance with the above requirements of Rule 28-106.201(2) or Rule 28-106.301(2), Florida Administrative Code. If you fail to timely file your petition in accordance with the above requirements, you will have waived your right to have the intended action reviewed pursuant to chapter 120, Florida Statutes, and the action set forth in the Notice shall be conclusive and final.

Time in: 0730
We arrived on site, and got everything ready for the flow test. Unfortunately we received a text message from the fire marshal saying that he believes that he's came down with the flu, so he will not be able to make the flow test. Emory with alachua county is on site and witnessed the flow test. Report will be sent to all parties involved.
Time out: 1000

Thank You

Wiginton thanks you for allowing us to assist you with your maintenance needs. We hope we have provided you with the prompt and high quality service that you deserve. We hope you will sincerely consider Wiginton first for any future maintenance demands.

Summary of Neighborhood Meeting for Proposed Site Plan
IP # 2024.0332
Westside Commons - Chipotle and Dutch Bros– Alachua, FL

A neighborhood meeting was held by Interplan LLC at 6:00 PM on Monday, June 2nd 2025 at the Legacy Park Multipurpose Center, Meeting Room #2. Notices advertising the meeting were sent to property owners within 400 feet (list attached) of the Subject Parcels and an advertisement was posted in the Gainesville Sun 10 business days prior to the meeting as required by the City of Alachua. Prior to the meeting we received two e-mails from interested parties, a person with Rockford Realty Group confirming the location of the proposed site and an e-mail from an interested resident who later attended the meeting.

The meeting itself was held from 6:00 pm until 6:45 PM at the Legacy Park Multipurpose Center, and Chris Blurton w/Interplan LLC attended on behalf of the applicant to discuss both proposed site plans with any interested parties. A full size plan (i.e. 24"x36" 'D' size) showing both proposed site plans for the Chipotle restaurant and the Dutch Bros coffee shop was provided for review. A total of three people attended the meeting, their names and contact information are provided on the attached sign in sheet. I provided a quick summary of the process and the proposed site plans with the attendees and answered their questions.

Several questions and/or concerns were raised by attendees. One question was raised asking if the Chipotle would have a drive through-I explained that it would but only for pick up orders and there was no speaker box proposed. The driveway onto NW 173rd/CR 235-A was raised as a concern due to traffic from the school, and I noted that the driveway was to be signed and marked as a right-in/right-out only similar to the driveway on US 441. I stated that we would discuss the possibility of additional restrictions on the driveway with the developer and that Alachua County would ultimately dictate any required improvements for that driveway. Drainage was discussed and I noted that the retention pond was proposed for the rear of the development and was designed to discharge to US 441 first with an emergency overflow to the north that would discharge to the unimproved right-of-way north of the project site. Development, specifically residential or multistory development, on the rear of the site was discussed and I let the attendees know that no development was currently planned for that area and that it was largely being used for stormwater retention. Signage was also discussed and I noted that each site was proposed to have their own stand alone monument sign located along US 441. At approximately 6:45 PM there were no further questions or comments so the meeting was adjourned.

A copy of the newspaper advertisement, mailed notice, list of recipients and sign in sheet is attached.

INTRODUCTION

This traffic analysis was performed to assess the impact of a proposed Westside Commons development, located in the northwest quadrant of the intersection of US 441 and NW 173rd Street, in the City of Alachua, Florida. The proposed development will consist of a Coffee Shop with drive through window and no indoor seating and two, 2,500 square foot fast food restaurants with drive through windows. The site is accessed via two driveways, a right in / right out driveway on US 441, and a full access driveway on NW 173rd Street. The project is anticipated to be built by the end of 2026. **Figure 1** depicts the location of the project site, and the surrounding roadway network. **Figure 2** provides the preliminary site plan which shows the access connections.

Methodology

This analysis was conducted in accordance with the traffic study methodology submitted to and approved by the City of Alachua and meets their Guidelines. The methodology coordination and correspondence are provided in **Appendix A.** Data utilized in the analysis consisted of a preliminary site plan provided by Project Engineers, traffic volume data and Level of Service standards obtained from the City of Alachua and intersection turning movement counts obtained by TPD Inc.

Study Area

The guidelines require that all 17 roadway segments contained in the Comprehensive Plan be evaluated along with the intersections within one-quarter mile (1/4). The roadway segments are shown in **Figure 3**. The following intersections were included in the analysis:

*(FDOT Road Segment #, COA Comprehensive Plan #).	

EXISTING CONDITIONS ANALYSIS

An existing conditions analysis was conducted for the Comprehensive Plan roadway segments and study intersection utilizing existing traffic volumes and roadway geometry to establish their current operating conditions.

Roadway Segment Analysis

The existing Comprehensive Plan roadway segments are summarized in **Table 1**. As shown, the existing peak hour conditions analysis reveals that the roadway segments currently operate within their adopted Maximum Service Volumes (MSV). Relevant information from the City of Alachua February 2025 Development Monitoring Report is included in **Appendix B.**

Intersection Analysis

The study intersection was analyzed in accordance with the procedures of the *Highway Capacity Manual (HCM)* using the latest version of the *Highway Capacity Software (HCS)*. The capacity analysis at the intersections was performed using the existing intersection geometry and traffic volumes during the A.M. and P.M. peak hours. **Figure 3** depicts the existing A.M. and P.M. peak hour traffic volumes. The traffic counts were taken on March 25, 2025, when FDOT's seasonal factor was 0.98 and therefore were not adjusted. The intersection counts are included in **Appendix C** along with the FDOT's seasonal factor report. The intersection capacity analysis results are summarized in **Table 2,** which shows that the study intersection operates within the adopted Levels of Service standard during A.M. and P.M. peak hours. Detailed capacity analysis *w*orksheets are included in **Appendix D**.

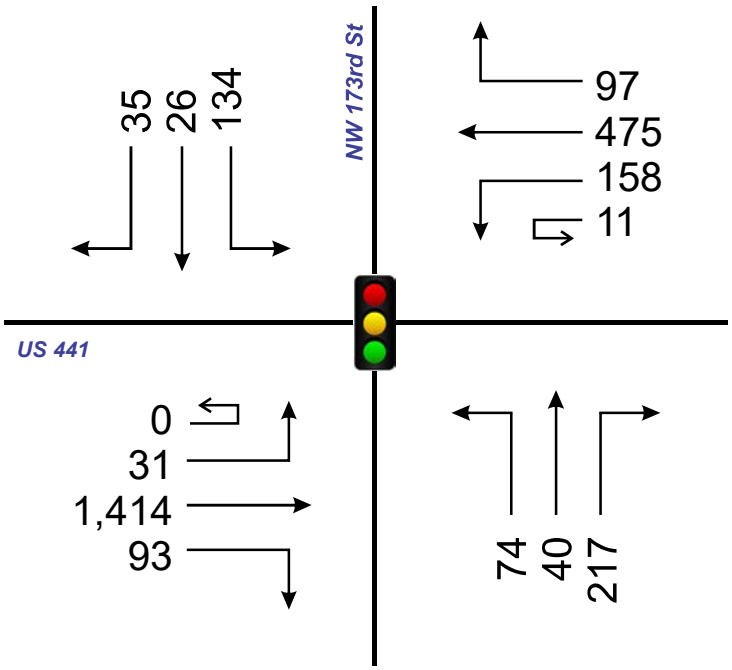

Table 2
Existing P.M. Intersection Capacity Analysis

Intersection	Control	Time Period	EB		WB		NB		SB		Overall	
			Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS	Delay	LOS

A.M. Peak Hour

P.M. Peak Hour

PROPOSED DEVELOPMENT AND TRIP GENERATION

The proposed development consists of a Coffee Shop with a drive-through window and no indoor seating and two, 2,500 square foot fast food restaurants with drive through windows. To determine the impact of this development, an analysis of its trip generation characteristics was conducted. This included the determination of the trips to be generated as well as their distribution and assignment to the area roadways.

Trip Generation

Trip generation data was obtained from the 11th Edition of the Institute of Transportation Engineers (ITE) *Trip Generation Manual*. **Table 3** provides a summary of the trip generation for the proposed development. As indicated, the proposed development is projected to generate 1,127 net new daily trips, of which 116 and 70 will occur in the A.M. and P.M. peak hours, respectively. Copies of the ITE trip generation sheets are included in the study methodology in Appendix A.

Table 3
Trip Generation Summary

ITE Code	Land Use	Variable[1]	Daily Trips		A.M. Peak Hour Generation				P.M. Peak Hour Generation			
			Rate	Trips	Rate	Enter	Exit	Total	Rate	Enter	Exit	Total

[1] KSF = 1,000 Square Feet, DTL = Drive Thru Lane [2]From ITE 11th Edition Pass-by Appendix

The Guidelines state that pass-by traffic shall not exceed 10% of the adjacent street traffic. **Table 4** presents an analysis of the pass-by trip reduction from US 441 and if it will exceed 10% of the respective A.M. and P.M. peak volumes, per the values from FDOT on-line count database. As can be seen, the background volumes on US 441 are greater than the pass-by trips generated by the development during the A.M. and P.M. peak hours, so no adjustments were made.

Table 4
Peak Hour Pass-By Traffic Consumption Verification – US 441

Trip Distribution/Trip Assignment

A trip distribution pattern was estimated using the currently adopted Gainesville MPO Model. A Select Zone Analysis (SZA) was conducted by modifying the network to include a Traffic Analysis Zone (TAZ) representing the proposed project and the model's socio-economic data updated to reflect the proposed project buildout. The distribution pattern is illustrated in **Figure 5** and the model plot outputs are provided in Appendix A. Utilizing this distribution, the development project trips were assigned to the area roadways.

Page 10

Project Trip Distribution

N
NTS

PROJECTED TRAFFIC CONDITIONS

Projected traffic conditions were assessed in order to evaluate the impact of the proposed development within its area of influence. The projected conditions were estimated by combining the P.M. peak hour project trips with background traffic volumes.

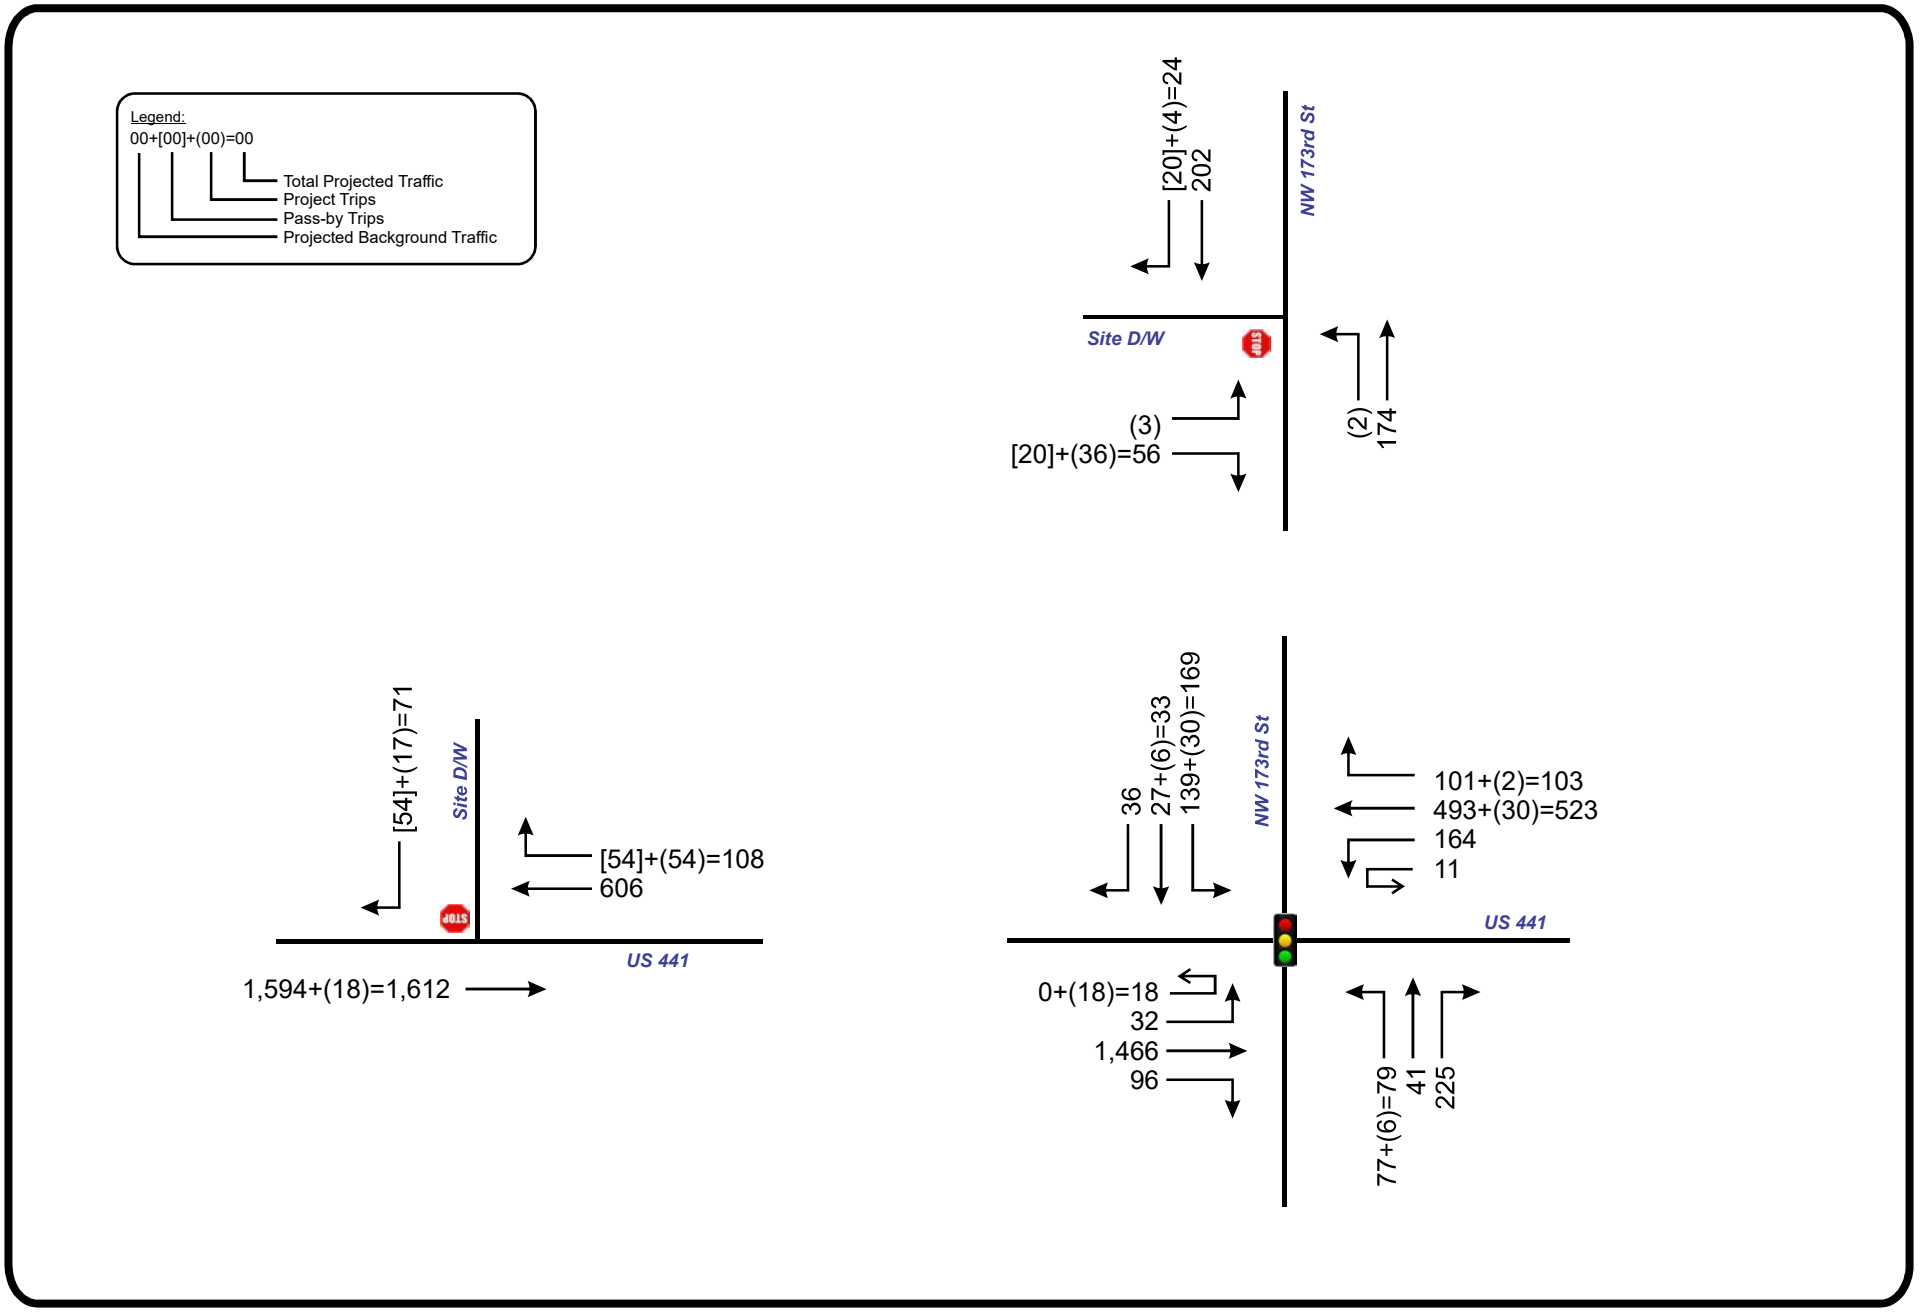
Background Traffic Projections

Background traffic volumes are determined by expanding existing peak hour traffic volumes to the buildout year using an annual growth rate. A historical trend analysis was conducted using the Annual Average Daily Traffic (AADT) data obtained from FDOT on-line Traffic database for the area roadways. As provided in the Study Methodology in Appendix A, the historical trend analysis for US 441 averaged 3.70% per year. This growth rate was applied to the existing traffic volumes as appropriate in order to determine the projected background volumes in the project buildout year of 2026.

Roadway Segment Analysis

The projected Comprehensive Plan roadway segment analysis was performed by comparing the total projected peak hour traffic volume of each segment with the respective capacity. The peak hour analysis, as summarized in **Table 5,** revealed that all the study roadway segments will operate within the adopted LOS standards similar to existing conditions upon buildout of the development.

Intersection Analysis



To assess the projected operating conditions at the study intersections, intersection capacity analyses were conducted using the *Highway Capacity Software (HCS)*. Total A.M. and P.M. peak hour traffic volumes were determined by combining background traffic and project trips. **Figures 6 and 7** show the projected A.M. and P.M. peak hour intersection turning movements, respectively, for the study intersections and site access driveways. The projected Levels of Service are summarized in **Table 6.** Detailed HCS analysis worksheets are included in **Appendix E**. The analysis indicates that the study intersections and site access driveway will operate at overall satisfactory Levels of Service, similar to existing conditions upon build out of the development.

		P.M.	9.3	A	--	--	7.7	A	--	--	--	--

Turn Warrant Analysis

Access to the site is proposed via two driveways, a right in / right out driveway on US 441 and a full access driveway NW 173rd Street. To determine the need for separate left or right turn lanes, a turn lane analysis was conducted at the proposed site access driveways using the guidelines of *NCHRP Report 457 – Evaluating Intersection Improvements: An Engineering Study Guide*. Based upon these guidelines, a separate westbound right turn lane is warranted for the US 441 driveway connection. The NW 173rd driveway connection does not warrant a separate left or right turn lane. The turn lane warrant charts are included in **Appendix F.**

To determine the length of the westbound right turn lane at the site driveway and US 441, the intersection analysis was utilized as follows:

Right turn lane length (TL) = Deceleration Distance (DD) + Queue Length (QL)

DD = 185 feet for posted speed of 45 mph (As per FDOT FDM 212)

QL = 0.7 * 25.0 = 17.5 feet (Use 25 feet for 1 vehicle, from HCS P.M. Analysis)

TL = 185 + 25 = 210 feet

The westbound right turn lane length should be a minimum of 210 feet in order to serve the site upon completion.

STUDY CONCLUSIONS

This traffic analysis was performed to assess the impact of the proposed Westside Commons development, located in the northwest quadrant of the intersection of US 441 and NW 173rd Street, in the City of Alachua, Florida. The proposed development will consist of a Coffee Shop with drive through window and no indoor seating and two, 2,500 square foot fast food restaurants with drive through windows. The site is accessed via two driveways, a right in / right out driveway on US 441, and a full access driveway on NW 173rd Street. The project is anticipated to be built by the end of 2026. The results of the study as documented herein are summarized below:

- The proposed development is projected to generate 1,127 net new daily trips, of which 116 and 70 trips will occur in the A.M. and P.M. peak hours, respectively.

- The Comprehensive Plan roadway segment analysis indicated that all of the segments currently operate at acceptable Levels of Service. At project build out, all of the roadway segments will continue to operate within their capacity similar to existing conditions.

- The intersection analysis indicated that the study intersection currently operates at acceptable Levels of Service. The study intersection and project driveways will continue to operate satisfactorily upon the addition of background and project trips.

- Access to the site will be provided via two driveways, a right in / right out driveway on US 441 and a full access driveway on NW 173rd Street. The site access driveways are projected to operate satisfactorily at project buildout. Based upon NCHRP 457, a westbound right turn lane is warranted for the US 441 driveway. The length should be a minimum of 210 feet, which includes a 50-foot taper. The NW 173rd Street driveway does not warrant a separate left or right turn lane.

Good morning,

Thanks for taking my call this morning and clarifying that the study methodology is approved.

We will schedule data collection and move forward with the analysis.

Thanks again and have a great day.

Good morning Carson,

Thanks for speaking with me last week concerning the City of Alachua Traffic Impact Analysis (TIA) study requirements.

Please find attached the Alachua Retail Center TIA Methodology. The site is located in the northwest quadrant of the intersection of US 441 and NW 173rd Street.

Please review and let me know if you have any questions.
Also, please send me your latest version of the City of Alachua Concurreny Database and segment map.

RE: Traffic Impact Analysis Methodology
City of Alachua, City of Alachua
TPD No. 6064

The following is an outline of the proposed methodology for the Traffic Impact Study for the Alachua Retail Center in the City of Alachua, Florida. The project site is located in the northwest quadrant of the intersection of US 441 and NW 173rd Street. **Figure 1** depicts the site location and the area roadways.

1. Proposed Development

The proposed development is for a Coffee Shop with drive through window and no indoor seating and two (2) fast-food restaurants with drive through windows. Access to the site is proposed via two driveways, a right in / right out access on US 441 and a full access driveway on NW 173rd Street. **Figure 2** depicts the conceptual site plan and its access configuration.

2. Trip Generation

Trip generation data from the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition* will be used for the trip generation estimation of the development. **Table 1** provides a summary of the trip generation for the proposed development calculated with the ITE data.

The project is expected to generate a total of 1,127 net new daily trips, of which 116 will occur during the A.M. peak hour and 70 will occur during P.M. peak hour. The ITE trip generation worksheets are included in **Attachment A**.

[1] KSF = 1,000 Square Feet [2] VFP = Vehicle Fueling Position

The pass-by trips were evaluated to verify that they do not exceed 10% of the adjacent street traffic. The traffic count volume was obtained from FDOT on-line AADT Traffic Report, excerpts provided in **Attachment B**. **Table 2** presents an analysis of the pass-by trip reduction from US 441 if it exceeds 10% of the respective A.M. and P.M. peak volumes. The project pass-by trips on US 441 utilized the existing count distribution. As can be seen, 10% of the background volume on US 441 is greater than the pass-by trips generated by the development during the A.M. and P.M. peak hours, so no adjustments were made.

Table 2
P.M. Peak Hour Pass-By Traffic Consumption Verification

A.M.	WB	1,140	114	74	74	Yes
P.M.	EB	1,187	118	0	0	Yes
P.M.	WB	1,140	114	56	55	Yes

[1]From FDOT on-line County Station 260245, 2023 count.

3. Trip Distribution

The trip distribution pattern for the proposed project was estimated utilizing the currently adopted Gainesville MPO Model. A Select Zone Analysis (SZA) was conducted by modifying the model network to include a Traffic Analysis Zone (TAZ) representing the proposed project and the model's socio-economic data updated to reflect the proposed project buildout. The trip distribution is shown in **Figure 3.** The model distribution plot is included in **Attachment C**.

4. Impact Area

As per City of Alachua Guidelines, the study area includes all the concurrency roadway segments within ½ mile (0.50) and any roadway that the project exceeds 5% of its level of service capacity along with the significant intersections within one-quarter (0.25) mile of the development. The following roadway segments and intersections are proposed to be included in the analysis:

The roadway segments will be included in the analysis:

- US 441, East of NW 173rd Street
- US 441, West of NW 173rd Street
- NW 173rd Street, North of US 441
- NW 173rd Street, South of US 441

The intersections to be included in the area analysis are:

- US 441 & NW 173rd Street
- Project Site Driveways

Note: Additional roadway segments and intersections will be added depending upon a significant analysis of the City of Alachua Concurrency Database.

Alachua Retail Center

Project Trip Distribution

N
NTS

5. Traffic Impact Assessment

a) Roadway

- Obtain existing traffic volumes for the study roadway segment from the turning movement counts at the study intersections for use in the traffic analysis.
- Background traffic will be determined with the use of an annual growth rate obtained from historical AADT in the vicinity of the project. From FDOT on-line, US 441 and NW 173rd Street have an average growth rate of 3.70% per year, which will be applied. Trend analysis worksheets are provided in **Attachment D**.
- Combine project traffic with background traffic to obtain total traffic volumes.
- Perform P.M. peak hour/peak direction roadway analyses utilizing Alachua County LOS standards.

b) Intersections

- Conduct intersection counts during the A.M. and P.M. peak period at the study intersections.
- Determine background traffic with the use of an annual growth rate. As developed for the roadway segment analysis, 3.70 % per year will be utilized.
- Turn lane analysis, access analysis and multi-modal assessment will be evaluated.
- Combine project traffic with background traffic to obtain total traffic.
- Perform intersection capacity analysis utilizing the HCM/HCS operational analysis procedures for the A.M. and P.M. peak hour.

6. Traffic Report

Prepare traffic report summarizing study procedures, analyses and recommendations.
If you have any questions or concerns, please contact us at (407) 628-9955.

APPENDIX B

City of Alachua February 2025 Monitoring Report

City of Alachua

MIKE DAROZA
CITY MANAGER

PLANNING & COMMUNITY DEVELOPMENT
DIRECTOR KATHY WINBURN

Date: February 26, 2025

To: Development Monitoring Report Recipients

From: Carson J. Crockett, AICP Candidate
Planner

RE: City of Alachua February 2025 Development Monitoring Report

Section 2.4.14(M)(1) of the City's Land Development Regulations requires monthly permit activity and available public infrastructure capacity needed to support development to be monitored in a development monitoring report to be published at least quarterly. This report assesses the impacts of development on the City's adopted level of service standards, including development that has been issued a certificate of level of service standard (preliminary development order) or a certificate of concurrency compliance (final development order).

The February 2025 Development Monitoring Report contains the following information:

- Table 1. Certificates of Level of Service Standard (Preliminary Development Orders) and Certificates of Concurrency Compliance (Final Development Orders
- Table 2. Traffic Impacts
- Table 3. Potable Water Impacts
- Table 4. Sanitary Sewer Impacts
- Table 5. Solid Waste Impacts
- Table 6. Recreation Impacts
- Table 7. Projects with Valid Public School Capacity Reservations
- Table 8. Traffic Impacts by Segment

While no deficiencies presently exist, the impacts of new developments upon public facilities will continue to be closely monitored to ensure that imminent deficiencies are identified and appropriately addressed. Note that level of service is monitored for certificates of concurrency compliance only and that certificates of level of service standard are monitored for informational purposes only.

Sincerely,

Carson J. Crockett, AICP Candidate
Planner

1.0 EXECUTIVE SUMMARY

The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida. One parcel is addressed at 16313 NW US Highway 441 while the other is not addressed, and the parcels are identified by the Alachua County Property Appraiser as Parcel Identification Nos. 03044-002-000 and 03044-001-002, respectively. Property ownership of the first parcel was identified as Browning & Browning Trustees & Morris, while the second parcel is owned by Santa Fe Hils Church of Christ.

The property appears to have been developed with a church sometime between 1961 and 1964, which was observed on the day of the site reconnaissance. No other uses were documented.

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.

The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition. Based on the observed use of the onsite structure, documented resources, and interviews with the property owner and church members, this limiting condition was not considered to affect the ability of the environmental professional to assess the property for environmental concerns.

Adjoining properties have been developed with single-family residences, a high school, retail and office uses, and (recently) a gas station.

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1,

Appendix A.

A standard environmental records search of available federal and state (and tribal) environmental record databases was obtained from Environmental Data Resources, Inc. (EDR).

No federal environmental records of concern were reported within the ASTM – E 1527-21 minimum search distances. Please refer to the EDR search report in Appendix C for federal environmental record sources reviewed.

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

Based on the lack of violations or releases documented at the property, this facility does not represent a Recognized Environmental Condition to the subject property.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was “In Compliance”. No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

Based on the lack of violations or releases documented at the property, the distance of the facility from the subject property, and the regulatory compliance, this facility does not represent a Recognized Environmental Condition to the subject property.

No other state and/or tribal environmental records were determined to represent an

environmental concern to the subject property, based on their distance, regulatory compliance status, and/or location cross- or down-gradient with respect to groundwater flow direction. Please refer to the EDR search report in Appendix C for state/tribal environmental record sources reviewed.

No additional environmental records of concern were reported for the property. Please refer to the EDR search report in Appendix C for additional environmental record sources reviewed.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

Based on the application of Tier 1 of the VES, it is concluded that a Vapor Encroachment Condition (VEC) does not exist.

Except for any limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM – E 1527-21.

Thomson Environmental Consulting, LLC, has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM – E 1527-21 of the property identified as the Alachua Property. Any exceptions to, or deletions from, this practice are described in Section 11 of this report.

The results of this assessment have revealed **no** recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** controlled recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** significant data gaps associated with the property:

No additional assessment is recommended as a result of this assessment.

2.0 INTRODUCTION

Alachua Outparcel, LLC engaged Thomson Environmental Consulting, LLC (THOMSON) to conduct a Phase I Environmental Site Assessment (ESA) of the property identified as the Alachua Property in Alachua, Florida, subsequently referred to in this report as "the subject property". The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida.

This assessment was prepared using the standard of care articulated in the American Society of Testing and Materials (ASTM) Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process (ASTM – E 1527-21) and the U.S. Environmental Protection Agency's (USEPA) Standards and Practices for All Appropriate Inquiries (AAI) contained in Protection of the Environment, Title 40, Chapter 1, Part 312, Congressional Federal Record (40 CFR Part 312).

2.1 Purpose

The purpose of the Phase I ESA is to identify, to the extent feasible pursuant to the standard of care articulated in ASTM – E 1527-21, *recognized environmental conditions* (RECs) in connection with the property. A REC is defined as:

> The presence or likely presence of hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or material threat of a release of any hazardous substance or petroleum products into structures on the property or into the ground, groundwater, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include *de minimis* conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies.

ASTM – E 1527-21 constitutes AAI for the purpose of Landowner Liability Protection (LLP), under the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This report was prepared to qualify the User for a LLP to CERCLA liability.

2.2 Scope of Services

The scope of work for this assessment utilizes the standard of care articulated in ASTM – E 1527-21 and the USEPA's Standards and Practices for AAI contained in 40 CFR Part 312. These methodologies are described as representing good commercial and customary practice for conducting an ESA of a property for the purpose of identifying RECs.

The scope of ASTM – E 1527-21 is not intended to provide a universal analysis of potential environmental risks and hazards. This assessment included no analysis of non-standard scope environmental risks and hazards unless otherwise listed above and/or detailed in Section 12.0. Analysis of other non-standard scope issues by THOMSON would require additional contractual arrangements.

2.3 Significant Assumptions

THOMSON has made certain assumptions in preparing the scope of this Phase I ESA:

- Data gathered from public information sources (e.g., libraries or public regulatory agencies) are accurate and reliable.
- Site operations reflect site conditions relative to potential releases and no intentional concealment of environmental conditions or releases has occurred.
- Interview information is directly reported as gathered by the assessor and is limited by the accuracy of the interviewee's recollection and experience.
- Published geologic information and site observations made by the environmental professional are used to estimate likely contaminant migration pathways in the subsurface. These estimates by the environmental professional are limited in accuracy and are generally cross-referenced with existing information about similar sites and environmental releases in the area.
- Regulatory information is often limited to sites identified after the late-1980s because reliable records were not kept by regulatory agencies prior to that time frame.

While this report provides an overview of potential environmental concerns, both past and present, the environmental assessment is limited by the availability of information at the time of the assessment. Note, however, that virtually no scope of work, no matter how exhaustive, can identify all [potential] contaminants or all conditions above and below ground.

2.4 Limitations and Exceptions

The report has been prepared utilizing the standard of care articulated in ASTM – E 1527-21 and the USEPA's Standards and Practices for AAI contained in 40 CFR Part 312 and contains all of the limitations inherent in these methodologies. No other warranties, expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report.

The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. Should such an event occur, Thomson Environmental Consulting, LLC, must be notified in order that we may determine if modifications to our conclusions are necessary (within 180 days of report production).

The services performed and outlined in this report were based, in part, upon visual observations of the site and attendant structures. The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition.

The objective of this report was to assess environmental conditions at the site, within the context of our contract and existing environmental regulations within the applicable jurisdiction. Evaluating compliance of past owners with applicable local, state, and federal government laws and regulations was not included in our contract for services.

Our observations relating to the condition of environmental media at the site are described in this report. It should be noted that compounds or materials other than those described could be present in the site environment.

2.5 Special Terms and Conditions

There were no special terms or contractual conditions for this assessment.

2.6 User Reliance

This report may be distributed and relied upon by Alachua Outparcel, LLC, or successors and assigns of the aforementioned. THOMSON is not responsible for the conclusions, opinions, or recommendations of others. Reliance on the information and conclusions in this report by any other person or entity is not authorized without the express written consent of Thomson Environmental Consulting, LLC. Use and reliance of this report more than 180 days after the production date (as detailed in ASTM – E 1527-21, Sections 4.6 and 4.8) would require certain items to be updated to be considered valid. This ESA is not a statement of suitability of the property for any specific use or purpose.

3.0 SITE DESCRIPTION

3.1 Location and Legal Description

The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida. One parcel is addressed at 16313 NW US Highway 441 while the other is not addressed, and the parcels are identified by the Alachua County Property Appraiser as Parcel Identification Nos. 03044-002-000 and 03044-001-002, respectively. Property ownership of the first parcel was identified as Browning & Browning Trustees & Morris, while the second parcel is owned by Santa Fe Hils Church of Christ.

Property record cards (obtained electronically from the Alachua County Property Appraiser's website) including full legal descriptions of the subject property parcels are provided in Appendix D.

3.2 Site and Vicinity General Characteristics

The property is in a moderately developed area of commercial and institutional development just west of the I-75 corridor.

3.3 Current Use of the Property

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.

3.4 Structures, Roads, Other Improvements on the Property

On the day of the site visit, the western parcel of the property was developed with a single-story church that according to property appraiser records was originally constructed circa 1978 (but was visible on the property in aerials prior to that time). The structure measured 2,511 square feet and was constructed of concrete block. A 98 square foot canopy was attached to the main structure that was constructed circa 1995. The church was serviced by a potable water well (contained within a small wellhouse) and septic tank.

3.5 Current Uses of Adjoining Properties

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the

intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

4.0 USER PROVIDED INFORMATION

A "User" is defined by ASTM – E 1527-21 as the party seeking to use the results of a Phase I ESA and may include a potential purchaser of land in the project area, a potential tenant of the project area, an owner of land in the project area, a lender, or a project area manager. A User Questionnaire was completed by Mr. Zach Pinel of Alachua Outparcel, LLC and returned to Thomson dated March 4, 2025.

4.1 Title Records and Environmental Liens or Activity and Use Limitations

Reasonably ascertainable recorded land title records and lien records that are filed under federal, tribal, state, or local law were to be reviewed by the User to identify Environmental Liens or Activity and Use Limitations (AULs), if any, that are currently recorded against the property. Environmental Liens and AULs that are imposed by judicial authorities may be recorded or filed in judicial records, and, where applicable, such records should be reviewed. Any Environmental Liens or AULs so identified were to be reported to the Environmental Professional (EP). Unless added by a change in the scope of work, this practice does not impose on the EP the responsibility to undertake a review of recorded land title records and judicial records for Environmental Liens or AULs. The user was to either (1) engage a title company or title professional to undertake a review of reasonably ascertainable recorded land title records and lien records for Environmental Liens or AULs currently recorded against or relating to the property, or (2) negotiate such an engagement of a title company or title professional as an addition to the scope of work to be performed by the EP.

The User responded that they had obtained a title search, but did not provide THOMSON with the results.

4.2 Specialized User Knowledge

If the User was aware of any specialized knowledge or experience that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate any information based on such specialized knowledge or experience to the EP.

The User indicated he had no specialized knowledge or experience related to the property or nearby properties.

4.3 Commonly Known or Reasonably Ascertainable Information

If the User was aware of any commonly known or reasonably ascertainable information within the local community about the property that is material to recognized environmental conditions in connection with the property, it is the User's responsibility to communicate such information to the EP.

The User indicated that the past uses of the property included one vacant parcel and one occupied by a church.

4.4 Valuation Reduction for Environmental Issues

In a transaction involving the purchase of a parcel of commercial real estate, the User was to consider the relationship of the purchase price of the property to the fair market value of the property if the property was not affected by hazardous substances or petroleum products. The User was to try to identify an explanation for a lower price which does not reasonably reflect fair market value if the property were not contaminated and make a written record of such explanation. This does not require that a real estate appraisal be obtained in order to ascertain fair market value of the property.

The User indicated that the purchase price being paid for this property reasonably reflects the fair market value of the property or whether they are aware of any reduction in value that has occurred for potential environmental reasons.

4.5 Owner, Property Manager and Occupant Information

The User did not indicate the current owner, property manager, or occupant information.

4.6 Reason for Performing Phase I ESA

ASTM – E 1527-21 states that the User shall make known to the EP the reason why the User is requesting the Phase I ESA. If the User does not identify the purpose of the Phase I ESA, the EP is to assume the purpose is to qualify for a Landowner Liability Protection (LLP) to CERCLA liability and state this in the report (see Section 2.1).

By not indicating another reason, it is assumed that the Phase 1 ESA was requested to qualify for a LLP to CERCLA liability and to satisfy the conditions of the lending institution.

4.7 Other

The User did not provide any other information that was utilized during the course of this assessment.

5.0 RECORDS REVIEW

The purpose of the records review was to obtain and review records that will help identify recognized environmental concerns in connection with the property.

Some records reviewed pertain not only to the property, but also to properties within an additional approximate minimum search distance in order to help assess the potential of environmental conditions resulting from migrating hazardous substances or petroleum products. Unless stated otherwise the approximate minimum search distances used below were as specified in the ASTM – E 1527-21.

5.1 Standard Environmental Records

A standard environmental record (SER) search of available federal and state environmental record databases was obtained from Environmental Data Resources, Inc. (EDR). A copy of this search is provided as Appendix C.

ASTM – E 1527-21 defines the approximate minimum search distances from the property to a facility located in a standard environmental record source (i.e. database) as follows:

Standard Environmental Record Sources	Approximate Minimum Search Distance (miles)
Federal	
NPL Site List	1.0
Delisted NPL Site List	0.5
CERCLIS List	0.5

Due to discrepancies in the location of some facilities in the databases arising from incorrect or incomplete addresses, it is possible that some facilities may be listed as “orphan sites”, which are unmapped. No unmapped facilities were observed to be within the ASTM – E 1527-21 minimum search distance of the property.

A review of the regulatory information from this database search for possible recognized environmental conditions (RECs) within the ASTM – E 1527-21 approximate minimum search distance is provided in the Federal and State sections below. Note that the review of the regulatory records contained in the standard environmental records search takes into account the following factors:

- Not all facilities reported within the relevant EDR minimum search radii fall within the relevant ASTM – E 1527-21 minimum search distances.
- Facilities are evaluated for their potential impact on the property, and therefore documented soil and groundwater contamination at facilities that are down-gradient of the property (with respect to groundwater flow) are usually not considered RECs. Only if a contaminated facility is near the property or there is indeterminate local groundwater flow direction would a facility require more detailed inspection.
- With regard to off-site, documented contaminated facilities, the following criteria are primary considerations in determining the potential for impact to the property: facility status (active vs. closed); the identification of a Responsible Party (RP); inclusion of the facility in a government-funded cleanup program; results of onsite analytical sampling, and/or completion of remedial activities and/or monitoring sufficient to receive a No Further Action (NFA) or Site Rehabilitation Completion Order (SRCO), or equivalent, from the regulating agency.
- While the distance of a contaminated facility from the property is a consideration in evaluating its potential for being a REC, distance alone is not sufficient to determine whether or not it constitutes a REC.

5.1.1 Federal Environmental Records

No federal environmental records of concern were reported within the ASTM – E 1527-21 minimum search distances. Please refer to the EDR search report in Appendix C for federal environmental record sources reviewed.

5.1.2 State (and Tribal) Environmental Records

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was "In Compliance". No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

No other state and/or tribal environmental records were determined to represent an environmental concern to the subject property, based on their distance, regulatory compliance status, and/or location cross- or down-gradient with respect to groundwater flow direction. Please refer to the EDR search report in Appendix C for state/tribal environmental record sources reviewed.

5.2 Additional Environmental Records

Additional Environmental Records included those records that are proprietary to EDR. These included Historical Auto Stations and Cleaners. These records are based on the names of the business at specific addresses and are not based on the known presence or documented discharge of any specific constituent. These records are used by THOMSON as indicators to cross-reference actual regulatory database records during the assessment.

No additional environmental records of concern were reported for the property. Please refer to the EDR search report in Appendix C for additional environmental record sources reviewed.

5.3 Physical Setting Source(s)

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1, Appendix A.

5.4 Historical Use Information on the Property

The objective of consulting historical sources is to develop a history of the previous uses of the

property in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property.

5.4.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were prepared historically for many urban areas in the past and detail locations of potential environmental concerns, particularly as they related to potential fire-fighting concerns (such as fuel storage tanks). Sanborn Fire Insurance Maps were typically not produced for locations outside of urban areas.

A Certified Sanborn Map Report was obtained from Environmental Data Resources dated March 4, 2025. The report documented that there were no available Sanborn Map Reports for the area of the property.

A copy of the "Unmapped Property" Certified Sanborn Map Report is included in Appendix D.

5.4.2 Aerial Photography

Aerial photography is used to roughly determine the presence or absence of structures and discernible uses of the property over time. Aerial photographs from the following years were obtained from various sources and reviewed for this assessment: 1937, 1961, 1964, 1971, 1982, 1994, 2004, 2008, 2014, and 2023.

In the 1937 aerial photograph, the subject property is visible as undeveloped with no structures or discernible visible use.

In the 1961 aerial photograph, no significant changes are visible to the subject property, though perimeter vegetation growth may indicate perimeter fencelines.

In the 1964 aerial photograph, the western parcel of the property is visible with a structure on the southern portion of the property. The eastern parcel has no significant changes are visible.

In the 1971 through 1994 aerial photographs, no significant changes are visible to the subject property.

In the 2004 aerial photograph, a small canopy is visible added on to the northwest corner of the structure.

In the 2008 and 2014 aerial photographs, no significant changes are visible to the subject property.

In the 2023 aerial photograph, there is a small structure (shed) visible in the central portion of the western parcel.

Copies of the historical aerials reviewed for this assessment are included in Appendix D.

5.4.3 Other Historical Sources

City Directories contain the names of the occupants of properties, by address, over the years. A search of City Directories (The EDR-City Directory Abstract) was obtained from Environmental Data Resources dated March 4, 2025. City Directories were searched from 1992 through 2020.

The abstract identified the following listings for the subject property parcel addressed at 16313 NW US Highway 441:

2017 – Church of Christ Santa Fe Hills
2014 – Church of Christ Santa Fe Hills
2010 – Church of Christ Santa Fe Hills

No listings at the property address indicated the potential for an environmental concern (e.g., gas stations, automotive repair shops).

Historical topographic maps were reviewed on the internet at NETRonline's website (www.historicaerials.com) for the following years: 1963, 1976, 1991, 1993, 2012, 2015, 2018, and 2021.

In the 1963 topographic map, the subject property is not depicted with any structures.

In the 1976 and 1991 topographic maps, no significant changes are depicted to the subject property.

In the 1993 topographic map, the subject property is visible with a structure.

In the 2012 topographic map, the property is depicted in an area where individual building footprints are not depicted.

In the 2015 through 2021 topographic maps, no significant changes are depicted to the subject property.

The Alachua County Property Appraiser's website was used to obtain the property record cards. Property record cards (obtained electronically from the Alachua County Property Appraiser's website) including full legal descriptions of the subject property parcels are provided in Appendix D.

No other historical sources were utilized in determining historical use information on the subject property and were not deemed necessary to evaluate the impact of uses with regard to recognized environmental conditions for the property.

5.5 Historical Use Information on Adjoining Properties

The objective of consulting historical sources is to develop a history of the previous uses of the surrounding properties in order to help identify the likelihood of past uses having led to recognized environmental conditions in connection with the property.

5.5.1 Sanborn Fire Insurance Maps

Sanborn Fire Insurance Maps were prepared historically for many urban areas in the past and detail locations of potential environmental concerns, particularly as they related to potential fire-fighting concerns (such as fuel storage tanks). Sanborn Fire Insurance Maps were typically not produced for locations outside of urban areas.

A Certified Sanborn Map Report was obtained from Environmental Data Resources dated March 4, 2025. The report documented that there were no available Sanborn Map Reports for the adjoining properties.

A copy of the "Unmapped Property" Certified Sanborn Map Report is included in Appendix D.

5.5.2 Aerial Photography

Aerial photography is used to roughly determine the presence or absence of structures and discernible uses of the adjoining properties over time. Aerial photographs from the following years were obtained from various sources and reviewed for this assessment: 1937, 1961, 1964, 1971, 1982, 1994, 2004, 2008, 2014, and 2023.

In the 1937 aerial photograph, all adjoining properties are visible as undeveloped. County Road 235A is visible to the east.

In the 1961 aerial photograph, an east adjoining property is visible as developed with a residential structure, and the west adjoining property is visible as cleared for potential agriculture or grazing land. No significant changes are visible to the remaining adjoining properties.

In the 1964 aerial photograph, no significant changes are visible to the adjoining properties.

In the 1971 aerial photograph, the north adjoining properties are visible as developed with single-family residences. No significant changes are visible to the remaining adjoining properties.

In the 1982 aerial photograph, two additional single-family residences are visible on east adjoining properties, and the high school athletic field is visible on the other east adjoining property. The west adjoining property appears prepped for row crops. NW US Highway 441 is visible as improved.

In the 1994 aerial photograph, no significant changes are visible to the adjoining properties.

In the 2004 aerial photograph, a west adjoining property is visible as developed with a commercial structure. No significant changes are visible to the remaining adjoining properties.

In the 2008 through 2023 aerial photographs, no significant changes are visible to the adjoining properties.

Copies of the historical aerials reviewed for this assessment are included in Appendix D.

5.5.3 Other Historical Sources

City Directories contain the names of the occupants of properties, by address, over the years. A search of City Directories (The EDR-City Directory Abstract) was obtained from Environmental Data Resources dated March 4, 2025. City Directories were searched from 1992 through 2020.

The abstract identified the following listings for adjoining properties:

West Adjoining Property (16407 NW 174th Drive)
2020 – Alachua Title Service, Flowers Surveying-Mapping, Haskins Demolition LLC, Horizon Realty Intl Inc., Horizon Realty of Alachua Inc., Suwannee River Area Health Ed, Tanner Construction Group
2017 – Alachua Title Services, FL Citrus Business & Industries Fund, Horizon Realty of Alachua Inc., Quality Vision International, Surveying & Mapping Inc Flowers
2014 – Alachua Title Services, FL Citrus Business & Industries Fund, Horizon Realty of Alachua Inc., Sol Valley Farms
2010 – Alachua Title Svc, Hallmark Mortgage Svc, Horizon Realty, Suwannee River Area Health Ed
2005 – Alachua Title Services, Horizon Realty of Alachua Inc., Turner Stockton, Stockton T. Wolfe

East Adjoining Property (16213 NW US Highway 441)
2010 – Santa Fe High School
2005 – School Board Alachua County FL
2000 – Alachua County of Schools Public, Santa Fe High School

No listings at the adjoining property addresses indicated the potential for environmental concern (e.g., gas stations, automotive repair shops, dry cleaners).

Historical topographic maps were reviewed on the internet at NETRonline's website (www.historicaerials.com) for the following years: 1963, 1976, 1991, 1993, 2012, 2015, 2018,

and 2021.

In the 1963 topographic map, a south adjoining property is depicted with a structure. No other adjoining properties are depicted as developed with structures.

In the 1976 and 1991 topographic maps, no significant changes are depicted to the adjoining properties.

In the 1993 topographic map, the east adjoining properties and north adjoining properties are visible as developed with structures.

In the 2012 topographic map, the adjoining properties are depicted in an area where individual building footprints are not depicted.

In the 2015 through 2021 topographic maps, no significant changes are depicted to the adjoining properties.

No other historical sources were utilized in determining historical use information on adjoining properties and were not deemed necessary to evaluate the impact of adjoining uses with regard to recognized environmental conditions for the property.

6.0 SITE RECONNAISSANCE

The purpose of the site reconnaissance is to obtain information indicating the likelihood of identifying recognized environmental conditions in connection with the property.

6.1 Methodology and Limiting Conditions

The site reconnaissance was performed by Joel Thomson of Thomson Environmental Consulting, LLC, on March 11, 2025. The weather during the site visits was clear to partly cloudy and approximately 75 degrees Fahrenheit.

During the site reconnaissance, pedestrian transects through the accessible portions of the entire exterior of the site were performed. The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition. The entire property, as well as adjoining properties, was visually evaluated for any recognized environmental conditions (RECs).

6.2 General Site Setting

6.2.1 Current Use of the Property

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.

6.2.2 Past Use(s) of the Property

The property appears to have been developed with a church sometime between 1961 and 1964, which was observed on the day of the site reconnaissance. No other uses were documented.

6.2.3 Current Use(s) of Adjoining Properties

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

6.2.4 Past Use(s) of Adjoining Properties

Adjoining properties have been developed with single-family residences, a high school, retail and office uses, and (recently) a gas station.

6.2.5 Current or Past Uses in the Surrounding Area

The surrounding area has been developed with primarily residential and institutional uses since before the 1980s, with retail and commercial uses since the 2000s.

6.2.6 Geologic, Hydrogeologic, Hydrologic, and Topographic Conditions

The regional geology of northeast Florida includes units of Eocene age and younger limestone and dolomite. These units are, in ascending order: the Oldsmar Limestone; the Lake City Limestone; the Avon Park Limestone; and the Ocala Group. The Ocala Group is comprised of the Inglis, Williston, and Crystal River Formations. Collectively, the Oldsmar, Lake City, and Avon Park Limestones with the Ocala Group comprise the geology of the Floridian Aquifer.

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1, Appendix A.

6.2.7 General Description of Structures

On the day of the site visit, the western parcel of the property was developed with a single-story church that according to property appraiser records was originally constructed circa 1978 (but was visible on the property in aerials prior to that time). The structure measured 2,511 square feet and was constructed of concrete block. A 98 square foot canopy was attached to the main structure that was constructed circa 1995. The church was serviced by a potable water well (contained within a small wellhouse) and septic tank.

6.2.8 Roads

No named roads were located on the property.

6.2.9 Potable Water Supply

Potable water was supplied to the property by an onsite groundwater well.

6.2.10 Sewage Disposal System

The property was serviced by an onsite sewage treatment and disposal system (OSTDS)

consisting of a septic tank and associated drainfield.

6.3 Interior and Exterior Observations

6.3.1 Hazardous Substances and Petroleum Products in Connection with Identified Uses

No hazardous substances or petroleum products in connection with identified uses were observed or documented on the property.

6.3.2 Storage Tanks

Determining the presence of Aboveground Storage Tanks (ASTs) and Underground Storage Tanks (USTs) is considered essential in assessing potential contamination sources. Visual inspection and the review of tank registration records are used to determine the possible existence of past and present storage tanks in the area of the property. It must be noted, however, that the absence of certain site conditions or lack of records may restrict or prevent the determination of the number and contents of storage tanks on the property.

No aboveground or underground storage tanks were documented, indicated, or observed on the property.

6.3.3 Odors

No strong, pungent, or noxious odors were observed.

6.3.4 Pools of Liquid

No standing pools of liquid were observed on the property.

6.3.5 Drums

No drums of materials were observed.

6.3.6 Hazardous Substances and Petroleum Products Containers

No hazardous substances or petroleum products containers were observed.

6.3.7 Unidentified Substance Containers

No open or damaged containers containing unidentified substances suspected of being hazardous substances or petroleum products were observed on the property.

6.3.8 PCBs

The past use of PCBs in electrical equipment such as transformers, fluorescent lamp ballasts, and capacitors was common. PCBs in electrical equipment are controlled by United States EPA

regulation 40 CFR, Part 761. According to this regulation there are three categories for classifying electrical equipment; less than 50 ppm of PCBs is considered “Non-PCB”; between 50 and 500 ppm is considered “PCB-Contaminated”; and greater than 500 ppm is considered “PCB”.

A pole-mounted electrical transformer was observed on the southeast property corner, in the right-of-way of the adjoining roadway corridors. It appeared to be in good working condition with no visible signs of leaking or staining.

No other suspect-containing PCB equipment, such as hydraulic lifts, were observed.

6.4 Interior Observations

6.4.1 Heating/Cooling

As observed from the exterior of the structure, heating/cooling was provided by a split-system, with interior air handler and exterior condensing unit, powered by electricity, as well as a window-mounted air conditioning unit powered by electricity.

6.4.2 Stains or Corrosion

The interior of the structure was not visibly observed during the site reconnaissance.

6.4.3 Drains and Sumps

The interior of the structure was not visibly observed during the site reconnaissance.

6.5 Exterior Observations

6.5.1 Pits, Ponds, or Lagoons

No pits, ponds, or lagoons were observed on the property.

6.5.2 Stained Soil or Pavement

No stained soil or pavement was observed on the property.

6.5.3 Stressed Vegetation

No stressed vegetation was observed on the property.

6.5.4 Solid Waste

Solid waste was not currently generated at the property or observed on the day of the site reconnaissance.

6.5.5 Waste Water

There was no waste water or other liquids generated or being discharged into a drain, ditch, underground injection system, or stream on or adjacent to the property.

6.5.6 Wells

A groundwater wells for potable water was observed on the property.

6.5.7 Septic Systems

The property was serviced by an onsite sewage treatment and disposal system (OSTDS) consisting of a septic tank and associated drainfield.

7.0 INTERVIEWS

7.1 Interviews with Past and Present Owners, Occupants, and/or Key Site Manager

An interview questionnaire was completed by the current property owner of the western parcel, Mr. Robert M. Matheny, President of Santa Fe Hills Church of Christ, was completed and returned to Thomson dated March 20, 2025.

Mr. Matheny noted that the onsite business was a "Church Building" and that the past uses were known and were "Always used as a place of worship". He did not know of any specific chemicals that are present or once were present at the property. He did not know of any spills or other chemical releases that have taken place at the property. He did not know of any environmental cleanups that have taken place at the property. He did not have any other knowledge or experience with the property that may be pertinent to the environmental professional.

Additionally, Ms. Gia Arvin of Matchmaker Realty responded by email on March 23, 2025, that a "church contact" noted that there has never been an onsite heating oil tank, and that there has never been a buried propane tank. She noted that there is a septic tank.

The interview questionnaire and email correspondence are included in Appendix D.

7.2 Interviews with State and/or Local Government Officials

THOMSON interviewed administration at the Florida Department of Environmental Protection's (FDEP) Central District. Thomson was directed to the FDEP's online document system (OCULUS) for information on the subject property and documented facilities in the relevant vicinity.

THOMSON requested information from Alachua Fire and Rescue regarding potential responses to the property (or immediate vicinity) related to hazardous substances or petroleum products. As of the date of publication, no response had been received from the Alachua Fire Rescue. If a response is received at a later date that has a material effect on the conclusions of this report, an addendum will be issued.

THOMSON searched the City of Alachua's permitting website (https://www6.citizenserve.com/Portal/PortalController) for existing permits for the property. There were four entries for both parcels, generally related to roofing, and none of the permits documented by the City of Alachua were indicative of a potential environmental concern.

A permit summary as obtained from the City of Alachua's permitting website is contained in Appendix D.

8.0 VAPOR ENCROACHMENT SCREENING

A Vapor Encroachment Screening (VES) was performed for the property in general accordance with ASTM E2600-22.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

9.0 FINDINGS

The subject property comprises two legal parcels generally located on the in the northwest corner of the intersection of Matin Luther King Boulevard (NW US Highway 441) and NW 173rd Street in Alachua, Florida. One parcel is addressed at 16313 NW US Highway 441 while the other is not addressed, and the parcels are identified by the Alachua County Property Appraiser as Parcel Identification Nos. 03044-002-000 and 03044-001-002, respectively. Property ownership of the first parcel was identified as Browning & Browning Trustees & Morris, while the second parcel is owned by Santa Fe Hils Church of Christ.

The property appears to have been developed with a church sometime between 1961 and 1964, which was observed on the day of the site reconnaissance. No other uses were documented.

On the day of the site visit, the western parcel of the property was developed with Santa Fe Hills Church of Christ and the eastern parcel was undeveloped.
The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition.

Adjoining properties have been developed with single-family residences, a high school, retail and office uses, and (recently) a gas station.

On the day of the site visit, the east adjoining properties were three single-family residences (16412, 16508, and 16520 NW County Road 235A) and (east of NW County Road 235A) Santa Fe High School (16213 NW US Highway 441); the north adjoining properties were two single-family residences (16618 NW 173rd Terrace and 16607 NW 174th Terrace); the west adjoining properties were four vacant commercial parcels (not addressed) and Horizon Realty/Alachua Title Services (16407 NW 174th Drive); the southeast adjoining property (across the intersection of NW US Highway 441 and NW County road 235A) was Elliano's Coffee (16286 NW US Highway 441); and the south adjoining properties (south of NW US Highway 441) are commercial under construction (16308 NW US Highway 441) and Wawa Gas Station (16304 NW US Highway 441).

A current U.S. Geologic Service (USGS) 7.5-minute series topographic quadrangle map (*High Springs, Florida*) was reviewed to determine the physical setting of the property. The property is situated approximately 139 feet above mean sea level. Based on surface topography as depicted on the USGS map, groundwater flow direction is estimated to be generally to the west-northwest. A copy of the USGS topographic quadrangle map is provided as Figure 1, Appendix A.

A standard environmental records search of available federal and state (and tribal) environmental record databases was obtained from Environmental Data Resources, Inc. (EDR).

No federal environmental records of concern were reported within the ASTM – E 1527-21 minimum search distances. Please refer to the EDR search report in Appendix C for federal environmental record sources reviewed.

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was “In Compliance”. No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

No other state and/or tribal environmental records were determined to represent an environmental concern to the subject property, based on their distance, regulatory compliance status, and/or location cross- or down-gradient with respect to groundwater flow direction. Please refer to the EDR search report in Appendix C for state/tribal environmental record sources reviewed.

No additional environmental records of concern were reported for the property. Please refer to the EDR search report in Appendix C for additional environmental record sources reviewed.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

Except for any limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM – E 1527-21.

10.0 OPINION

The following state and/or tribal environmental records of concern were located (but not reported in the EDR radius report) within the ASTM – E 1527-21 minimum search distances:

- **Wawa #5438** (Facility ID 9819988), located at 16304 NW US Highway 441, a south adjoining property, was identified as a registered Underground Storage Tank (UST) facility.

  This facility registered two (2) 22,000-gallon USTs and two (2) 20,000-gallon USTs in May 2024. No violations or discharges have been documented for this facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

OPINION – Based on the lack of violations or releases documented at the property, this facility does not represent a Recognized Environmental Condition to the subject property.

- **Alachua County School Board – Santa Fe High** (Facility ID 8518896), located at 16805 NW County Road 235A, a portion of an east adjoining property across NW County Road 235A, was identified as a registered Underground Storage Tank (UST) facility.

  The school facility had a 3,000 diesel UST installed in 1985 to service its bus fleet. In December 2009, a Dispenser and Piping Closure Report prepared by Stillwater Technologies, Inc. documented the replacement of a dispenser and product piping, and analytical sampling documented no contamination was present. A December 15, 2009, letter from Alachua County Environmental Protection Department accepted the results of the Closure Report. The most recent Storage Tank Facility Routine Compliance Site Inspection Report, conducted in January 2024, documented that the facility was “In Compliance”. No discharges or violations have been documented at the facility.

  Copies and/or excerpts of relevant documents are included in Appendix D.

OPINION – Based on the lack of violations or releases documented at the property, the distance of the facility from the subject property, and the regulatory compliance, this facility does not represent a Recognized Environmental Condition to the subject property.

Utilizing the default Area of Concern (AOC), as defined by the approximate minimum search distances defined in ASTM E2600-22, Section 8.1.3, it has been determined (through the course of the Phase I ESA) that no known or suspected contaminated properties with Chemicals of Concern (COC) exist.

OPINION – Based on the application of Tier 1 of the VES, it is concluded that a Vapor Encroachment Condition (VEC) does not exist.

The interior of the church structure on the property was not able to be accessed on the day of the site reconnaissance, which was considered a limiting condition.

OPINION – Based on the observed use of the onsite structure, documented resources, and interviews with the property owner and church members, this limiting condition was not considered to affect the ability of the environmental professional to assess the property for environmental concerns.

11.0 CONCLUSION

Thomson Environmental Consulting, LLC, has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM – E 1527-21 of the property identified as the Alachua Property. Any exceptions to, or deletions from, this practice are described in Section 11 of this report.

The results of this assessment have revealed **no** recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** controlled recognized environmental conditions (RECs) associated with the property.

The results of this assessment have revealed **no** significant data gaps associated with the property:

No additional assessment is recommended as a result of this assessment.

12.0 DEVIATIONS

Except for any limitations and exceptions discussed in Section 2.4, this Phase I ESA complies with ASTM – E 1527-21 and the EPA's Standards and Practices for All Appropriate Inquiries (AAI) contained in 40 CFR Part 312.

14.0 SIGNATURE OF ENVIRONMENTAL PROFESSIONAL

I declare that, to the best of my professional knowledge and belief, I meet the definition of Environmental Professional as defined in §312.10 of 40 CFR 312. I have the specific qualifications based on education, training, and experience to assess a property of the nature, history, and setting of the property. I have developed and performed the all appropriate inquiries in conformance with the standards and practices set forth in 40 CFR Part 312.

Joel A. Thomson
Environmental Professional / President of Thomson Environmental Consulting, LLC

15.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONAL

The qualifications of the Environmental Professional conducting this assessment are provided in Appendix F.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E1527 - 21), the ASTM Standard Practice for Environmental Site Assessments for Forestland or Rural Property (E2247 - 16), the ASTM Standard Practice for Limited Environmental Due Diligence: Transaction Screen Process (E1528 - 22) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

EXECUTIVE SUMMARY

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:
