Response: The proposed rezoning to the commercial (PD-COMM) and residential map (PD-R) designations is in a geographic area with all necessary urban services available to serve urban development on the property (centralized water & sewer utilities, electric, telecommunications, police/fire protection, etc.) along a State arterial highway (US 441) and proximity to Interstate 75. In addition, future development shall comply with the applicable regulations regarding protection of natural resources.

(II) Promotes the efficient and cost-effective provision or extension of public infrastructure and services.

Response: The subject property is currently served by a State arterial roadway for full access (US Highway 441). Existing public utilities are also available to serve the site and connections to such utilities will be provided by the developer. According to the City Public Services Department, utilities are available to service future development on the parcel.

(III) Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that will support a range of housing choices and a multimodal transportation system, including pedestrian, bicycle, and transit, if available.

Response: The proposed future land use map amendment will include a mix of residential and non-residential land uses that will provide the appropriate designations to support a proposed companion mixed use Planned Development (PD-R / PD-COMM) zoning, which will include a master plan to interconnect the residential and non-residential uses and will include urban design standards to promote walkability.

(IV) Promotes conservation of water and energy.

Response: The proposed future land use map amendment will promote a mix of residential and non-residential uses in an area in which the City has adequate public infrastructure to support growth. Development in urbanized/urbanizing areas with appropriate water and sewer services available help promote overall conservation of water and energy.

(V) Preserves agricultural areas and activities, including silviculture, and dormant, unique, and prime farmlands and soils.

Response: Currently, there are agricultural and silviculture operations upon the subject property. However, the property owner plans to relocate and preserve (not eliminate) their

existing agricultural operation to another property in the region. In addition, many of the nearby lands abutting US Highway 441 are either developed or have significant land use entitlements which indicate that it is not the City's Comprehensive Plan long term vision for agricultural activities to occur in this area.

(VI) Preserves open space and natural lands and provides for public open space and recreation needs.

Response: The proposed zoning map amendment will promote the provision of open space and recreation areas. Currently, the subject property does not include any dedicated public open spaces or recreation areas. The future development of the property with a residential development will be required by City regulations to provide these types of amenities.

(VII) Creates a balance of land uses based upon demands of the residential population for the nonresidential needs of an area.

Response: The proposed zoning map amendment for the commercial and residential map designations provides an additional mix of residential and non-residential land uses that complement each other along US Highway 441 in an area with centralized services available.

(VIII) Provides uses, densities, and intensities of use and urban form that would remediate an existing or planned development pattern in the vicinity that constitutes sprawl or if it provides for an innovative development pattern such as transit-oriented developments or new towns as defined in s. 163.3164.

Response: The proposed zoning map amendment will include a mix of residential and non-residential land uses at urban densities and intensities to create a development pattern that will discourage sprawl due to the locational characteristics of the subject property, including adjacency to a state arterial highway, availability of centralized public facilities, etc.

The primary indicators that a plan amendment promotes or does not promote urban sprawl are listed below. Perhaps the most common indicators of urban sprawl include leapfrog development, ribbon or strip development and large expanses of low density, single dimensional development.

Included with each of these listed indicators is a site-specific response that demonstrates the proposed comprehensive plan amendment will not result in urban sprawl:

1. *Promotes, allows or designates significant amounts of the jurisdiction to develop as low-intensity, low-density, or single-use development or uses.*

Response: The proposed zoning map amendment creates a mix of commercial and residential land use designations in an area of the City of Alachua suited for development due to its geographic location and availability of centralized water & sewer utilities, electric, telecommunications, police/fire protection, etc. Existing public utilities are available to serve the site and connections to such utilities will be provided by the developer. According to the City Public Services Department, utilities are available to service future development on the parcel. This will involve connection to potable water and wastewater lines.

2. *Promotes, allows or designates significant amounts of urban development to occur in rural areas at substantial distances from existing urban areas while not using undeveloped lands that are available and suitable for development.*

Response: The subject property is located in an urban area along US Highway 441 with significant urban development near the US 441 / I-75 interchange. To the east and west of the subject property (along US Highway 441) are properties with commercial land use & zoning designations. In addition, multiple developed properties with complimentary commercial and residential future land use designations are in the vicinity. Existing, centralized public utilities are available to serve the site and connections to such utilities will be provided by the developer. According to the City Public Services Department, utilities are available to service future development on the parcel. This will involve connection of centralized water & sewer utilities, electric, telecommunications, etc.

3. *Promotes, allows or designates urban development in radial, strip, isolated or ribbon patterns generally emanating from existing urban developments.*

Response: No radial, strip, isolated or ribbon patterns will be created by this zoning map change. The proposed development upon the subject property is mixed-use and internally connected, thus not promoting strip development. This development form promotes consistency with the Comprehensive Plans overall goals for the land use pattern along the US 441 corridor and throughout the City of Alachua.

4. *Fails to adequately protect and conserve natural resources, such as wetlands, floodplains, native vegetation, environmentally sensitive areas, natural groundwater aquifer recharge areas, lakes, rivers, shorelines, beaches, bays, estuarine systems, and other significant natural systems.*

Response: On site environmental resources will be protected during development plan permitting in accordance with the City of Alachua Comprehensive Plan and Land Development Regulations.

5. *Fails to adequately protect adjacent agricultural areas and activities, including silviculture, active agricultural and silvicultural activities, passive agricultural activities and dormant, unique and prime farmland and soils.*

Response: Currently, there are agricultural or silviculture operations upon the subject property. However, the property owner plans to relocate, not eliminate, their existing agricultural operation to another property in the region. In addition, many of the nearby lands abutting US Highway 441 are either developed or have significant land use entitlements which indicate that it is not the City's Comprehensive Plan long term vision for agricultural activities to occur in this area.

6. *Fails to maximize use of existing public facilities and services.*

Response: Upon approval of the site's zoning map change and development plan permits, all existing utilities provided by the City of Alachua shall be utilized. A State arterial roadway (US 441) provides full access to the property. Centralized water & sewer utilities, electric,

telecommunications are currently available to serve the subject property. Connections to such utilities will be provided by the developer. According to the City Public Services Department, utilities are available to service the parcel's future development.

7. Fails to maximize use of future public facilities and services.

Response: As stated above, future development will be required to maximize the use of future public facilities and services available to serve the site. Connections to such utilities will be provided by the developer. According to the City Public Services Department, utilities are available to service the parcel's future proposed uses. This will involve connection to future public facilities and services.

8. Allows for land use patterns or timing which disproportionately increase the cost in time, money and energy of providing and maintaining facilities and services, including roads, potable water, sanitary sewer, stormwater management, law enforcement, educational, health care, fire and emergency response, and general government.

Response: The subject property is located in the urban part of the City of Alachua abutting an existing State arterial roadway and a secondary paved road. Potable water and sanitary sewer, law enforcement, educational, health care, fire and emergency response, and general government facilities and services are available within the City of Alachua. According to the City Public Services Department, utilities are available to service the parcel's future development. Adequate vehicular capacity is currently available on the local road network to serve future development on site. Due to the immediate proximity of the site to these public facilities, the development of this site will not result in a disproportionate burden on public facilities and services.

9. Fails to provide a clear separation between rural and urban uses.

Response: The subject property is within the City of Alachua's urbanized area and located directly on US Highway 441, with availability of centralized utilities and consistent with the area's land use pattern. The transitional density gradient created by the requested zoning amendment creates a clear separation between rural and urban uses to the south and southwest of the site.

10. Discourages or inhibits infill development or redevelopment of existing neighborhoods and communities.

Response: The proposed amendment does not discourage or inhibit infill development or redevelopment of existing neighborhoods and communities. The site's proposed development as a mix of commercial and residential uses along the US 441 corridor with public services available (water, sewer, police, fire, etc.) in an area that is urbanizing in nature based on the existing local development pattern and urban land use and zoning designations along US 441 adjacent to the subject property.

11. Fails to encourage an attractive and functional mix of uses.

Response: The proposed zoning change proposes an attractive and functional mix of uses in the immediate area, which includes commercial and residential uses.

12. Results in poor accessibility among linked and related land uses.

Response: The proposed amendment will not result in poor accessibility among linked and related uses. The proposed PD Master Plan documents includes provisions for interconnectivity between uses for vehicular, pedestrian, and bicycle modes.

13. Results in loss of significant amounts of functional open space.

Response: The proposed amendment will not result in loss of significant amounts of functional open space. Currently, the property does not provide any functional open space to the area. In addition, the development of the site shall provide at least 10% functional open space as part of any future development, per City of Alachua LDR requirements.

(i) Spot Zoning

Consistency: The subject property is located abutting other commercially zoned properties to the west, north and east and other residential uses that are consistent and/or compatible with the proposed commercial and residential zoning designations.

(j) Public Facilities

Consistency: The site can be served by electric, potable water, and wastewater services. As demonstrated in the "Public Facilities Analysis" section of this report, adequate facilities exist to serve the site and any future development of the parcels will not create a negative impact on these facilities. Water and sewer public facilities are currently available to serve the subject property. Connections to such utilities will be provided by the private developer. According to the City Public Services Department, utilities can be made available to service future development on the parcel.

(k) No Adverse Effect on the Environment

Consistency: As demonstrated in the "Environmental Analysis" section of this report (see below), this proposed rezoning will not have adverse effects on the environment because there are no regulated natural resources on the property.

3.6.1 General Provisions

(A) General Purpose. The planned development (PD) districts are established for the purpose of encouraging innovative land planning and site design concepts that conform to community quality of life benchmarks and that achieve a high quality of development, environmental sensitivity, energy efficiency, and other City goals by:

(3) Greater freedom to provide mix of uses and housing types. Allowing greater freedom in providing a mix of land uses in the same development, including a mix of housing types, lot sizes, and densities;

Consistency: The proposed PD-R zoning (amended) includes a maximum of 203 single family residential units, a net reduction of 72 dwelling units from existing zoning designation. The proposed PD-R zoning is necessary to establish flexibility in minimum lot sizes, lot widths, setbacks, etc. beyond what is permissible in traditional residential zoning districts. This will result in a more innovative, creative project to serve the residents of the City.

(B) Types of PD districts. There are four types of PD options. They are subject to the development review procedures of Section 2.4.3, Planned development, the general standards of Subsection 3.6.2 of this section, General standards for all PD districts, and the specific standards for the individual PD options in Subsection 3.6.3 of this section, Additional standards for PD districts. The four PD options are described more specifically as follows:

(1) Planned Development-Residential District (PD-R). The purpose of the Planned Development-Residential (PD-R) District is to provide a mix of residential uses using innovative and creative design elements, while at the same time providing an efficient use of open space. Commercial uses may be allowed in the PD-R district primarily to serve the needs of the residents in the development.

(4) Planned Development-Commercial District (PD-COMM). The purpose and intent of the Planned Development-Commercial (PD-COMM) District is to provide mixed-use retail and office development, with limited moderate and higher density residential uses integrated into the development above street levels and as separate stand-alone uses.

Consistency: The intent of this rezoning application is to include PD-COMM and PD-R components to establish a mixed-use master plan, including design standards to ensure quality development, interconnectivity and flexibility in residential lot sizes, lot widths, setbacks, etc. beyond what is permissible in traditional residential zoning districts in order to more efficiently utilize the land beyond traditional zoning allowances and to ensure that the project can achieve the residential units permitted by the site's underlying Moderate & Low Density Residential FLU designations.

3.6.2. General Standards for all PD districts.

(A) Development parameters. Prior to the approval of a PD zone district designation, the City Commission shall find the application for the PD zoning district designation and the required PD Master Plan documents complies with the following standards:

(1) Master Plan. The PD Master Plan documents:

(a) Identifies the general location of land uses within individual development areas or development pods and the mix of land uses;

Consistency: As shown on the PD-COMM / PD-R Master Plan, the mixed-use master planned subject property contains an interconnected mix of uses that will include development conditions to increase the quality of development. In addition, the PD-R includes single family detached units with a range of sizes along with an interconnected street network and provision of usable open spaces across the holistic site.

(b) Calculates the number, type, and mix of land uses, including the total *number of residential units, residential densities, and nonresidential intensities within each development area or development pods and the total number, type, and mix of land uses for the entire PD Master Plan documents;*

Consistency: The PD-COMM area includes a specific list of permitted uses, intensities, and overall development configuration. PD-R Master Plan illustrates that up to 203 dwelling units are being requested for the project at a maximum density of approximately 1.66 DUA, which is consistent with the site's underlying Moderate and Low Density Residential FLU.

(c) Identifies the general location of open space;

Consistency: Onsite open spaces shall be comprised active and passive recreation uses, as indicated and labeled on the PD-COMM/PD-R Zoning Master Plan across the holistic site.

(d) Identifies the location of environmentally sensitive lands, wildlife habitat, and stream corridors;

Consistency: As discussed in earlier sections of this report, no regulated natural resources are known to be present on the site and if any are found in the future, the project will comply with all applicable regulations.

(e) Identifies the on-site transportation circulation system including arterial and collector roads, existing or projected transit corridors, and pedestrian and bicycle pathways;

Consistency: The PD-COMM / PD-R Master Plan shows proposed main internal roadways and a typical residential street cross-section. The residential site design includes pedestrian-friendly block sizes and sidewalk infrastructure internal to the development. Blocks that exceed 600' in length (if any) shall include a 10' easement for a pedestrian way consistent with that described in LDR Sec. 7.2.3(B)(4).

(f) Identifies on-site potable water and wastewater facilities; and

Consistency: The PD Utility Plan shows all proposed internal potable water and sanitary sewer mains.

(g) Identifies the general location of all public facility sites serving the development, including transportation, potable water, wastewater, parks, fire, police, EMS, stormwater, solid waste and schools.

Consistency: As shown on the PD-COMM / PD-R Master Plan, the site is currently serviced by City of Alachua potable water and sanitary sewer via existing infrastructure within the US Highway 441 right of way.

(2) Consistency with the Comprehensive Plan. The PD zone district designation and the PD Master Plan documents is consistent with the Comprehensive Plan.

Consistency: As demonstrated in this report, this application's intent is compatible with all appropriate goals, objectives, and policies found within the City of Alachua Comprehensive Plan. In addition, the proposed Rezoning to the PD-COMM and PD-R district is compatible with the site's existing Commercial, Community Commercial, Moderate and Low Density Residential FLU designations.

(3) Compatibility with surrounding residential areas. Development along the perimeter of a PD district is compatible with adjacent existing or proposed future development. In cases where there are issues of compatibility, the PD Master Plan documents shall provide for transition areas at the edges of the PD district that provide for appropriate buffering and/or ensure a complimentary character of uses. Complimentary character shall be identified based on densities/intensities; lot size and dimensions; building height; building mass and scale; hours of operation; exterior lighting; and siting of service areas.

Consistency: The proposed residential development is located immediately adjacent to only three residential developments, located near the southwestern portion of the project. The PD Master Plan documents proposes that where the project abuts these properties, a compatibility buffer is provided or a landscaped stormwater basin is provided. Other nearby residential properties not abutting the property are located west of NW 188th Street and in that case, a landscaped stormwater basin is provided between the PD edge and internal proposed lots. Because of these design considerations, the PD is compatible with the existing pattern of development.

(4) Development phasing plan. If there are phases of development proposed for the PD, a development phasing plan shall be provided for the PD Master Plan documents that identifies the general sequence or phases in which the land is proposed to be developed, including how residential and nonresidential development will be timed, how infrastructure and open space will be provided and timed, and how development will be coordinated with the City's capital improvements program. The phasing plan shall be established at the time of approval of the PD Master Plan documents. It is permissible for a development phasing plan to include only one phase.

Consistency: This Planned Development proposes that the project may be developed in up to 5 phases.

(5) Conversion schedule. The PD Master Plan documents may include a conversion schedule that identifies the range of conversion that may occur between different types of residential uses and between different types of nonresidential uses (i.e., residential to residential, or nonresidential to nonresidential) within the PD Master Plan documents. These conversions may occur within development areas and between development areas, as long as they occur

within the same scheduled phase of development in the development phasing plan, and are consistent with established ranges of conversion set down in the conversion schedule.

Consistency: A conversion schedule is not proposed as part of this submittal.

(6) Public facilities.

(a) The PD Master Plan documents shall include a transportation component that demonstrates there is or will be adequate capacity concurrent with impacts of development on the City's road system to accommodate the development proposed in the PD Master Plan documents.

Consistency: As indicated in this report, adequate capacity exists for the intended development along the applicable roadway segments.

(b) The PD Master Plan documents shall include a potable water and wastewater component that demonstrates adequate capacity for potable water and wastewater is available or will be available concurrent with impacts of development at the time development occurs to accommodate the development proposed in the PD Master Plan documents.

Consistency: As shown on the PD-COMM / PD-R Utility Plan, the site will be serviced by City of Alachua potable water and sanitary sewer systems and onsite uses shall not negatively impact potable water and wastewater LOS.

(c) The PD Master Plan documents shall include a parks component that demonstrates that adequate parks and recreation facilities are available or will be available concurrent with impacts of development to accommodate the development proposed in the PD Master Plan documents.

Consistency: According to information provided by the City of Alachua, the City currently possesses excess acreage for local recreation activities in relation to LOS standards. In addition, the proposed PD-R Master Plan illustrates that the project will have onsite recreational amenity areas. As such, the intended residential development is expected to have a minimal impact on the City's current recreational infrastructure.

(d) The PD Master Plan documents shall include a solid waste component that demonstrates that adequate capacity for solid waste is available or will be available concurrent with impacts of development to accommodate the development proposed in the PD Master Plan documents.

Consistency: As calculated in this report, local solid waste capacity exists to adequately facilitate the intended residential and commercial development's estimated solid waste demands. Approval of this rezoning application will not negatively impact the City's adopted LOS.

(e) The PD Master Plan documents shall include a stormwater component that demonstrates that adequate capacity for treatment of stormwater runoff is available or will be available

concurrent with impacts of development to accommodate the development proposed in the PD Master Plan documents.

Consistency: As identified on the PD Master Plan documents and in this report, the proposed PD intent is to provide on-site stormwater drainage facilities in accordance with all applicable design standards, regulations and permitting with the City and Water Management District.

(7) Planned development agreement. Concurrent with the approval of the adopting ordinance for the PD zone district designation and the PD Master Plan documents, a PD agreement shall be established binding the PD to any conditions placed in the adopting ordinance and PD Plan. The PD agreement shall include, but not be limited to:

(a) The PD Master Plan documents, including any PD standards.
(b) Conditions related to the approval of the PD Master Plan documents.
(c) Conditions related to the form and design of development in the PD.
(d) Provisions addressing how transportation, potable water, wastewater, stormwater management, park, and other public facilities will be provided to accommodate the development proposed for the PD Master Plan, and if phased, how public facilities will be phased accordingly.
(e) Provisions related to environmental protection and monitoring.
(f) Provisions addressing concurrency compliance requirements.
(g) Any other provisions the City Commission determines is relevant and necessary to implement the terms and conditions of the PD Master Plan documents and any PD terms and conditions statements.

Consistency: The applicant shall comply with this section of the LDR by accepting the terms and conditions of the planned development agreement at the appropriate stage of the development review process.

3.6.3 Additional Standards for PD districts

(A) PD-R, Planned Development-Residential District

(1) Minimum area. A PD-R district shall be a minimum of ten acres in area. The City Commission may waive the minimum size requirement based on a finding that creative site planning through zoning to a PD-R district is necessary to address a physical development constraint, protect sensitive natural areas, or promote a community goal when more conventional development or subdivision would be difficult or undesirable given the constraints on development.

Consistency: The proposed PD-R project site is approximately 122.03 acres which far exceeds the ten-acre minimum identified in 3.6.3(A)(1) of the City LDR.

(2) Uses. The uses allowed in the PD-R district are identified in Table 4.1-1, Table of Allowed Uses. Allowed uses are subject to any use regulations applicable to the PD-R district.

Consistency: Table 4.1-1 of the LDR shows that the intended use of single-family detached dwelling units is permitted within the proposed PD-R district and is also consistent with the uses permitted within the site's underlying Moderate and Low Density Residential FLU designations.

(3) Densities/intensities. The densities for residential development and the intensities for nonresidential development for the PD Master Plan documents and PD-R district designation shall be established in the PD Master Plan documents, and shall be consistent with the Comprehensive Plan. Densities and intensities may exceed that allowed in the base zone districts being replaced by the PD-R district.

Consistency: This rezoning application requests to reduce the overall size of the PD-R zoning area from 155.3 to 122.03 (+/-) acres and reduce the permitted density maximum from 275 units to 203, which is consistent with the subject parcels' underlying Moderate and Low Density Residential FLU.

(4) Dimensional standards. The dimensional standards of the underlying base zone district being replaced by the PD-R district shall be incorporated into the PD Master Plan documents and apply to each development area of the PD-R district unless they are modified in ways that are consistent with the general intent and goals for development of the PDR district and the scale and character of development in the City. Dimensional standards shall include the following:

(a) Minimum dimensional requirements. The minimum lot area, minimum lot width, minimum setback, maximum lot coverage, and maximum height for development.

(b) Setbacks from adjoining residential uses. Minimum setbacks or buffers from adjoining residential development or zone districts.

Consistency: As shown on the PD-R Master Plan submitted with this report, the proposed development will include a maximum of 203 single-family residential units. The proposed PD-R zoning and PD-Comm are necessary to allow for more flexibility in residential lot sizes and types and site design beyond what's allowed in traditional zoning district standards, resulting in a better project. All proposed dimensional requirements, such as minimum setback, maximum lot coverage, and maximum building height are identified on the PD Master Plan documents or Justification Report, which will be incorporated by Ordinance into the site's official zoning.

(5) Development standards. Unless otherwise specifically modified by a PD Master Plan documents, development in a PD-R district shall comply with the applicable standards Article 6, Development Standards, and Article 7, Subdivision Standards. All modifications to a development standard in Article 6 or Article 7 shall be consistent with this section, and shall be included as a part of the PD Master Plan documents.

Consistency: Unless otherwise noted on the PD Master Plan documents, in this Justification Report, or in the final PD conditions, the subject property shall be designed consistent with applicable development standards discussed in City of Alachua LDRs.

(a) General development standards. The following Table 3.6-1, Development Standards Applicable in the PD-R District, specifies the development standards applicable to development in the PD-R district, and the procedure for modifying a development standard.

Consistency: The development standards referenced in Table 3.6-1. shall be adhered to the maximum extent practicable throughout the site's design process. If modification to these standards are necessary for optimal site development, then the appropriate procedures for modifications included in the previously mentioned table will be adhered to.

(b) Public facilities standards. The PD Master Plan documents shall ensure that impacts from the development are addressed for the following public facilities:

(i) Potable water. The PD Master Plan documents shall establish the general location of on-site potable water facilities and how they will connect to the City's potable water system consistent with City laws, and how dedication of land, easements, and/or on-site construction of all potable water facilities/improvements will occur in a manner that complies with City laws.

(ii) Wastewater. The PD Master Plan documents shall establish the general location of on-site wastewater facilities and how they will connect to the City's or other wastewater lines and mains and sewer interceptor lines consistent with City laws, and how dedication of land, easements, and/or on-site construction of all wastewater facilities/improvements will occur in a manner that complies with City laws.

Consistency: The PD Utility Plan submitted with this report illustrates the approximate location of existing and proposed potable water and sanitary lines within the project site. In addition, this report illustrates that the site's projected potable water and wastewater demand will not cause City infrastructure to drop below its adopted LOS standards.

(iii) Streets. The PD Master Plan documents District shall establish the design of public streets within the PD-R in ways that comply with all applicable City standards, except that right-of-way, pavement widths, street widths, required materials, turning radii, and other design standards may be modified or reduced by the City Commission where it is found that:

a. The reduction or modification is necessary as a traffic-calming measure;
b. The PD Master Plan documents provides for separation of vehicular, pedestrian, and bicycle traffic;
c. Access for emergency service vehicles is not substantially impaired;

d. Adequate off-street parking is provided for the uses proposed; and
e. Adequate space for public utilities is provided within the right-of-way.

<u>Consistency</u>: The PD-R Master Plan submitted concurrently with this report shows the proposed design of the roadway and pedestrian infrastructure for the portion of the project that will be a platted subdivision. Roadways shall have a typical cross-section, as illustrated on the PD Master Plan documents, and supplemental development design sheets, that are consistent with or aligned with LDR standards.

The PD Master Plan documents is designed to provide block faces that do not exceed 600 feet. However, if at Preliminary Plat review stage it is determined that any block face exceeds 600 feet, the PD design proposes that flexibility be granted by the City Commission by allowing block faces to exceed 600 feet in such cases where pedestrian ways or crosswalks, not less than 10 feet wide, are provided through the block to create an enhanced pedestrian-focused design.

Design measures that will be incorporated under these circumstances for this project will include the provision of a 10' (min.) easement for a pedestrian way (consistent with LDR Sec. 7.2.3(B)(4)) that will be improved with concrete, brick, pavers, or similar hard surface) with the intent to provide pedestrian corridors separate from vehicles. The intersection of the typical roadways and the crossings of these pedestrian ways will be utilized for traffic calming, including striped crosswalks and appropriate safety signage. All proposed internal roadways shall have sufficient right-of-way and interconnection to meet emergency service vehicles, off-street parking, and public utility needs. Specifically, the subdivision will have at least two functional external access points and stub-outs to all adjacent undeveloped properties.

This request is consistent with the applicable criteria indicated in 3.6.3(A)(5)(b)(iii)(a)-(e) above. Specifically, the provision of additional crosswalks (at mid-blocks) will serve as a traffic calming measure, separation of vehicular and pedestrian traffic will be accomplished (via pedestrian paths away from streets), access for emergency vehicles will not be impaired, adequate street parking will not be limited (spaces will be provided on street and on individual lots (driveways and garages), and adequate space for public utilities is provided in proposed right-of-way (as no changes to required ROW cross-sections is proposed).

(iv) Stormwater. The PD Master Plan documents District shall establish the design of a stormwater management system within the PD-R in ways that comply with all applicable City standards.

<u>Consistency</u>: As identified on the PD-R Master Plan and in this report, the proposed PD intent is to provide on-site stormwater drainage facilities in accordance with all applicable design standards, regulations, and permitting with the City and Water Management District.

(v) Other. The PD Master Plan documents shall establish the responsibility of the landowner/developer for providing right-of-way and easements and for constructing on-site facilities for all other infrastructure located on the site of the proposed PD-R district, including but not limited to, electrical utility lines, telephone lines, cable TV lines, or the underground conduit

for such features. The PD Master Plan documents shall also establish the responsibility of the landowner/developer to make any other improvements as required by City ordinances, to guarantee construction of all required improvements, and, if requested by the City, to dedicate these improvements to the City in a form that complies with City laws. The PD Master Plan documents shall also specify the ownership, operation, and maintenance provisions for all on-site facilities not dedicated to the City.

Consistency: The applicant understands these responsibilities and will provide all necessary right-of-way and easements necessary to facilitate the site's intended development.

(D) PD-COMM, Planned Development-Commercial District.

(1) Minimum area. A PD-COMM district shall be a minimum of ten acres in area. The City Commission may waive the minimum size requirement based on a finding that creative site planning through zoning to a PD-COMM district is necessary to address a physical development constraint, protect sensitive natural areas, or promote a community goal when more conventional development or subdivision would be difficult or undesirable given the constraints on development.

Consistency: The proposed PD-COMM zoning area is approximately 60.76 +/- acres in size.

(2) Uses. The uses allowed in the PD-COMM district are identified in Table 4.1-1, Table of Allowed Uses. Allowed uses are subject to any use regulations applicable to the PD-COMM district. A mix of retail and office with moderate and higher density residential uses above street levels is encouraged.

Consistency: The PD-COMM district will include retail sales and services, personal services, financial institutions, commercial shopping centers, auto-oriented uses, and eating establishments.

(3) Densities/intensities. The densities for residential development and the intensities for nonresidential development for the PD Master Plan documents and PD-COMM district designation shall be established in the PD Master Plan documents, and shall be consistent with the Comprehensive Plan. Densities and intensities may exceed that allowed in the previously-existing base zoning district being replaced by the PD designation.

Consistency: The PD-COMM zoning area will have a 0.17 floor area ratio (FAR) as determined across the site's entirety.

(4) Dimensional standards. The dimensional standards of the underlying base zone district being replaced by the PD-COMM district shall be incorporated into the PD Master Plan documents and apply to each development area of the PD-COMM district unless they are modified in ways that are consistent with the general intent and goals for development of the PD-COMM district and the scale and character of development in the City. Dimensional standards shall include the following:

(a) Minimum dimensional requirements. The minimum lot area, minimum lot width, minimum and maximum setbacks, maximum lot coverage, maximum height for development, and maximum individual building size.

(b) Setbacks from adjoining residential uses. Minimum setbacks from adjacent residential development or zone districts.

<u>Consistency</u>: The PD-COMM areas shall function and be regulated utilizing the base Commercial Intensive (CI) requirements, excepting as noted on the PD Masterplan and supplemental development design sheets. All proposed dimensional requirements, such as minimum setback, maximum lot coverage, and maximum building height are identified on the PD Master Plan documents or Justification Report, which will be incorporated by Ordinance into the site's official zoning.

(5) Development standards. Unless otherwise specifically modified by a PD Master Plan documents, development in a PD-COMM district shall comply with the applicable standards Article 6, Development Standards. All modifications to a development standard in Article 6 shall be consistent with this section, and shall be included as a part of the PD Master Plan documents.

(a) General development standards. The following Table 3.6-3, Development Standards Applicable in the PD-COMM District, specifies the development standards applicable to development in the PD-COMM district, and the procedure for modifying a development standard:

Table 3.6-3. Development Standards Applicable in the PD-COMM District

Development Standard	*Procedure for Modification [1]*
Off-street parking and loading (Section 6.1)	*Inclusion in a master parking plan*
Landscape/tree protection (Section 6.2)	*Inclusion in an alternative landscaping plan*
Exterior lighting (Section 6.4)	*Inclusion in a master lighting plan*
Signage (Section 6.5)	*Inclusion in a master sign plan*
Open space (Section 6.7)	*Modifications prohibited*
Environmental protection (Section 6.9)	
Concurrency management (Section 2.4.14)	
[1] Development standards shall only be modified in ways that are consistent with the general intent and purpose for the PD-COMM district.	

<u>Consistency</u>: All proposed dimensional requirements, such as minimum setback, maximum lot coverage, and maximum building height are identified on the PD Master Plan documents or Justification Report, which will be incorporated by Ordinance into the site's official zoning.

(b) Public facilities standards. The PD Master Plan documents shall ensure that impacts from the development are addressed for the following public facilities:

(i) Potable water. The PD Master Plan documents shall establish the general location of on-site potable water facilities and how they will connect to the City's potable water system consistent with City laws, and how dedication of land, easements, and/or on-site construction of all potable water facilities/improvements will occur in a manner that complies with City laws.

Consistency: The site shall be served by municipal potable water, provided by the City.

(ii) Wastewater. The PD Master Plan documents shall establish the general location of on-site wastewater facilities and how they will connect to the City's or other wastewater lines and mains and sewer interceptor lines consistent with City laws, and how dedication of land, easements, and/or on-site construction of all wastewater facilities/ improvements will occur in a manner that complies with City laws.

Consistency: The site shall be served by municipal wastewater, provided by the City.

(iii) Streets. The PD Master Plan documents District shall establish the design of public streets within the PD-COMM in ways that comply with all applicable City standards, except that right-of-way, pavement widths, street widths, required materials, turning radii, and other design standards may be modified or reduced by the City Commission where it is found that:

- *a. The reduction or modification is necessary as a traffic-calming measure;*
- *b. The PD Master Plan documents provides for separation of vehicular, pedestrian, and bicycle traffic;*
- *c. Access for emergency service vehicles is not substantially impaired;*
- *d. Adequate off-street parking is provided for the uses proposed; and*
- *e. Adequate space for public utilities is provided within the right-of-way.*

(iv) Stormwater. The PD Master Plan documents District shall establish the design of a stormwater management system within the PD-COMM in ways that comply with all applicable City standards.

Consistency: Items (iii and iv) above shall occur, consistent with City requirements, as noted on the PD Masterplan and supplemental development design sheets.

(v) Other. The PD Master Plan documents shall establish the responsibility of the landowner/developer for providing right-of-way and easements and for constructing on-site facilities for all other infrastructure located on the site of the proposed PD-COMM district, including, but not limited to, electrical utility lines, telephone lines, cable TV lines, or the underground conduit for such features. The PD Master Plan documents shall also establish the responsibility of the landowner/developer to make any other improvements as required by City ordinances, to guarantee construction of all required improvements, and, if requested by the City, to dedicate these improvements to the City in a form that complies with City laws. The PD Master Plan documents shall also specify the ownership, operation, and maintenance provisions for all on-site facilities not dedicated to the City.

Consistency: Item (v) above shall occur, consistent with City requirements, as noted on the PD Masterplan and supplemental development design sheets.

Below, please find design specific performance standards proposed in the PD-Comm District.

PD COMM specific performance standards.

Sec. 6.5. Signage.

6.5.1 *Findings and Purpose.*

(A) *Findings.* As a basis for updating and readopting other parts of this sign ordinance in 2017, the City Commission finds that:

(2) For all businesses, and for small businesses especially, signs provide an important tool for attracting customers;

(3) Signs are essential way-finding tools that help drivers and pedestrians find the businesses, houses of worship, residences or other locations that they may be seeking; as way-finding tools, signs limit the necessity of driving unnecessary extra miles and reduce the risk of accidents involving lost or confused drivers;

(4) In business districts, signs often contribute to the ambience, adding color and night-lighting to areas;

(6) Signs of excessive size or in excessive numbers can create clutter and detract from the character of any area of the city, including business districts;

(9) Signs in excessive numbers and of excessive sizes can contribute to reductions or stagnation in property values, particularly in or near residential areas;

Consistent with City of Alachua Land Development Regulations (LDRs) Section 6.5.1 Findings and Purpose (A) Findings, Subsections (2), (3), (4), (6), and (9) the applicant is requesting a nominal modification to Section 6.5.4 (C)(3)(c), which references maximum sign area provisions established in Section 6.5.4(C)(3)(b). Within the proposed PD-Comm area, the requested modification will promote signs that:

- *are an important tool for attracting customers;*
- *are essential way-finding tools that help drivers and pedestrians find businesses and limit the necessity of driving unnecessary extra miles and reduce the risk of accidents involving lost or confused drivers; and*
- *contribute to the ambience, adding color and night-lighting to areas;*
- *are not of an excessive size or excessive numbers creating clutter and detracting from the character of any area of the city, including business districts; and*
- *are modestly sized, relative to the building facades and internal to the shopping center so as to not contribute to reductions or stagnation in property values, particularly in or near residential areas*

(B) *Purpose.* This section establishes standards for the area, location, and character of signs that are permitted as principal or accessory uses. No signs shall be permitted in any location except in conformity with this section and these LDRs. The purpose of this section is to achieve a balance among the following goals:

(1) Communication. To encourage the effective use of signs as a means of communication for businesses, organizations, and individuals in the City of Alachua;
(2) Way-finding. To provide a means of way-finding in the City, thus reducing traffic confusion and congestion;
(3) Business identification and advertising. To provide for adequate business identification and advertising;
(4) Protect economic and social well-being. To prohibit signs of excessive size and number that they obscure one another to the detriment of the economic and social well-being of the City;
(5) Protect public safety and welfare. To protect the safety and welfare of the public by minimizing the hazards to pedestrian and vehicular traffic;
(6) Preserve property values. To preserve property values by preventing unsightly and chaotic development that has a blighting influence upon the City;
(10) Consistency with the Comprehensive Plan. To implement the following specific goals of the Comprehensive Plan:
(a) To maintain a high quality of life for all of its present and future citizens.
(b) To utilize innovative design standards to provide an attractive built environment; and
(c) To manage future growth and development.

Consistent with City of Alachua Land Development Regulations (LDRs) Section 6.5.1 Findings and Purpose (B) Purpose, Subsections (1), (2), (3), (4), (5), (6), and (10) the applicant is requesting a nominal modification to Section 6.5.4 (C)(3)(c), which references maximum sign area provisions established in Section 6.5.4(C)(3)(b). Within the proposed PD-Comm area, the proposed signs will, in a manner consistent with local, state, and national practices:

- *encourage the effective use of signs as a means of communication for businesses in the City of Alachua;*
- *provide a means of way-finding in the City, thus reducing traffic confusion and congestion;*
- *provide for adequate business identification and advertising, consistent with scale and visibility;*
- *protect economic and social well-being by prohibiting signs of excessive size and number that obscure one another to the detriment of the economic and social well-being of the City;*
- *protect the safety and welfare of the public by minimizing the hazards to pedestrian and vehicular traffic through enhanced wayfinding and brand identification;*

- *preserve property values by preventing unsightly and chaotic development that has a blighting influence upon the City, by locating within the commercial shopping area and focused on the US 441 corridor; and*

- *maintain consistency with the Comprehensive Plan, by implementing the following specific goals of:*

  (a) maintaining a high quality of life for all of its present and future citizens though the provision of enhanced commerce and expanded job creation for existing and future residents and their guests;

  (b) utilizing innovative design standards to provide an attractive built environment throughout the PD-Comm area within a master planned community; and

  (c) manage future growth and development by adequately promoting goods and service businesses, to which customers and patrons readily identify.

6.5.4 *Permanent signs allowed.* The following permanent signs are allowed:
(C) *In business districts.*
(3) *Wall signs*. Wall signs are permitted, subject to the following standards:
(a) Each wall sign shall be attached to the building and supported throughout its entire length by the facade of the building.
(b) The sign area of wall signs placed on the front elevation of the building shall not be greater than ten percent of the square footage of the front elevation upon which the sign is placed. The sign area of wall signs placed on the side or rear elevations of the building shall not be greater than five percent of the square footage of the elevation upon which the sign is placed. The total sign area of all wall signage shall not exceed 350 square feet.
(c) In the case of multi-tenant buildings, each occupant of the multi-tenant building shall be permitted wall signage for the portion of the building elevation which is included as part of the occupant's premises. ~~Such signage shall be subject to the maximum sign area provisions established in Section 6.5.4(C)(3)(b).~~
(d) Wall signs shall not be erected above the roofline of the building, except that, where there is a parapet, a wall sign may extend to the top of the parapet. Such sign shall not be considered a roof sign.

The requested PD condition is necessary for several reasons. Those reasons span from the viability of the actual signs' effective visual area to guiding first responders to businesses should emergency services be required. As referenced in Robert J. Gibbs, ALSA, CNU-A, renowned text book *Principles of Urban Retail Planning and Development* © 2012 Wiley Publications, states the following:

> *"Good commercial signage can reinforce the unique nature of a shopping district and generate the impression that its businesses offer true value as well as quality goods and services." [page 115]*

Here, within a master planned community, both residents and clientele driving along the US Highway 441 corridor are served by the clarity offered by adequately-sized visual signage. Robert Gibbs goes on to state:

> *"Commercial signage along major road corridors should be double the area of signage in pedestrian-oriented urban areas, which is 2 square feet of sign area for each linear foot of storefront." [page 115]*

While Gibbs presents a definitive number of double the area in pedestrian-oriented area, understanding the context area is important. In the proposed PD-Comm, the multitenant building varies from approximately ±550 feet to ±710 feet from the closest travel lanes on US-Highway 441, the principal arterial roadway in the City of Alachua where the project is located.

Of note, Alachua County's Unified Land Development Code (ULDC) Sec. 407.31 – Signs in nonresidential developments allows the following:

> *"For buildings with a front elevation of five thousand (5,000) square feet or less, individual signs shall not exceed three hundred (300) square feet in size. For buildings with a front elevation greater than five thousand (5,000) square feet, individual signs shall not exceed six hundred (600) square feet."*

Therefore, within the context area and host County, significantly larger signs are allowed along the US Highway 441 corridor. There is a necessity for uniform signage and advertising requirements within the overall US Highway 411 corridor. The necessity of uniform signage serves the public interest and contributes to safety through clearly defined visible wayfinding and orienting oneself, whether visiting the PD-Comm area as a patron, service personnel, or first responders.

Necessity also exists because the multitenant building has several other buildings along the US Highway 441 corridor and significant landscaping around those buildings and in parking areas between its façade and US Highway 441 travel lanes, which is approximately 1/8 mile away on average. Removal of the 350 square foot cumulative limitation, in Section 6.5.4.(C)(3)(b), will allow tenants to adequately and equitably advertise their presence to their clientele as well as to essential support services. The reasons are, such as but not limited to, delivery vehicles, service providers, and first responders' ability to clearly identify and access the multiple tenants within the overall PD-Comm area.

1 Introduction

The Farmlands Mixed Use site is anticipated to include the following land uses under the buildout condition:

- 203 Single Family Detached Homes
- 423,400 SF Shopping Center
  - Main Shopping Center – 345,000 SF
  - Future Retail, Northwest Corner of Site – 78,400 SF
- 3 Sit Down Restaurants +/- 5,500 SF
- 3 Fast-food Restaurants with Drive-through +/- 2,500 SF
- 1 Coffee Shop with Drive-through +/- 2,000 SF
- Gasoline/Service Station with 16 fueling positions
- 1 Auto Service Center +/- 4,000 SF

A preliminary concept plan is provided in **Attachment A**.

Access to the site will be provided via multiple connections along US HWY 441 which will be coordinated with FDOT, City of Alachua and adjacent development requirements. The current access plan is provided below, however, it is understood modifications may occur to the access types and locations as coordination efforts continue with FDOT, the City of Alachua and the Briarwood Town Center developer to the north:

- Access A - Directional median opening with left outs prohibited, located approximately 1,100 FT east of NW 188th Street
- Access B - Full median opening site access, located approximately 1,915 FT east of NW 188th Street
- Access C - Right-in/right-out access centered between Access B and Access D
- Access D - Full median opening site access, located approximately 760 FT west of the intersection of NW 164th Lane

1.1 Analysis Timeframe

The site will be built out in phases with the full site buildout anticipated in 2032. **Table 1** provides the estimated buildout schedule of the development.

Table 1 - Buildout Schedule

Land Uses	Buildout Year
Main Shopping Center and Outparcels	2028
Future Retail, Northwest Corner of Site	2030
Residential	2032

1.2 Traffic Study

The traffic study for this proposed development will be provided in two parts:

Part 1 - Roadway Segment Level-of-Service Analysis – This report provides the part 1 traffic study which includes the trip generation, trip distribution, and roadway segment level of service analysis. The part 1 traffic study accompanies the future land use and zoning change applications and will be used to determine the study area for the part 2 traffic study.

Part 2 - Operational Analysis – The part 2 traffic study will provide the operational analysis at all access intersections and offsite intersections. It is anticipated that a traffic signal warrant analysis and Intersection Control Evaluation (ICE) will be required as part of the part 2 traffic study. The part 2 study will be provided with the FDOT access permit application and the site plan submittal.

1.3 Analysis Period

The City of Alachua Development Monitoring Report tables provide both AADT and peak hour capacity volumes. The weekday daily, AM peak hour and PM peak hour project trips have been generated and applied to the roadway network as part of this traffic study. The weekday and PM peak hour project trips will be used to analyze the roadway segment level-of-service. The AM peak hour trips were forecasted with this study; however, these project trips will only be analyzed in the Part 2 - Operational Analysis.

1.4 Methodology

A methodology letter dated September 24, 2025 was submitted to FDOT and the City of Alachua. The methodology letter is provided in **Appendix B**. The following analyses/evaluations are included in this traffic study, as required by the methodology:

- Roadway Segment Level-of-Service Analysis
- Access Management Evaluation

The Study Area consists of all roadway segments identified in the Transportation Element of the City of Alachua's Comprehensive Plan. The results from this study will be used to determine the Study Area intersections of the Part 2 – Operational Analysis.

2 Trip Generation

The trip generation was estimated using the Institute of Transportation Engineers (ITE) trip generation manual, 12th Edition.

2.1 Trip Generation – Future Land Use Map and Zoning Map Changes

Project trip generations were calculated based on the net change of the proposed verse the existing Future Land Use (FLU) Map changes and the Zoning Map changes. The trip generation is based on the non-residential and residential changes provided in **Table 2 and 3**.

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
Community Commercial	7.0	0.5 FAR (Per Ac.)(1)	152,460 SF
Moderate Density Residential	19.36	4 UPA	77 Units
Low Density Residential	20.32	1 UPA	20 Units
Total	**46.68**		**152,460 SF / 97 Units**

Table 2.a. Existing FLU Map

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
Commercial and Community Commercial	40.31	0.17 FAR (Per Ac.)(2)	298,503 SF
Moderate Density Residential	6.37	4 UPA	25 Units
Total	**46.68**		**298,503 SF / 25 Units**

(1) *FAR per Comprehensive Plan*
(2) *FAR per proposed PD-COMM zoning for Site*

Table 2.b. Proposed FLU Map

Net Change

Non-Residential	**+146,043 SF**
Residential	**-72 Units**

Table 2.c. Net Change

Existing Zoning Map

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
CC & CI	27.45	0.5 FAR(1) 15 DUA (2)	597,861 SF 411 Units
PD-R	155.34	1.77 UPA	275 Units
Total	**182.79**		**597,861 SF / 686 Units**

Table 3.a. Existing Zoning Map

Proposed Zoning Map

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
Planned Development-Commercial (PD-COMM)	60.76	0.17 FAR(3)	450,000 SF
Planned Development-Residential (PD-R)	122.03	1.66 UPA	203 Units
Total	**182.79**		**450,000 SF / 203 Units**

(1) *FAR per Comprehensive Plan*
(2) DUA allowed per LDR Table 5.1-4
(3) *FAR per proposed PD-COMM zoning for Site*

Table 3.b. Proposed Zoning Map

Net Change

Non-Residential	**-147,861 SF**
Residential	**-483 Units**

Table 3.c. Net Change

Table 3 – Proposed verse Existing Zoning Map Changes

Table 4 provides the potential trip generations based on entitlements of the proposed verse existing Future Land Use Map changes. **Table 5** provides the potential trip generations based on entitlements of the proposed verse existing Zoning Map changes. As indicated in **Table 5** the Zoning Map change causes a net reduction of potential trips during the daily, AM peak hour, and PM peak hour. Internal capture and pass-by trip reduction are not applied to the trip generation volumes in **Table 4** and **Table 5**.

2.2 Trip Generation – Total Trips Under the Buildout Condition

Table 6 provides the estimated trip generation of the buildout condition of the development. The traffic volumes from this table are used in the Roadway Segment Level-of Service Analysis and will be used for the operational analysis.

The mixture of residential, retail, and restaurants being proposed will cause many of the trips to be captured internally. These trips, known as internal capture trips, are removed from the gross project trip volumes. The internal capture trips are capped at 30% of the gross trips.

The gas station, retail, and restaurant land uses will capture trips that are already traveling along US HWY 441, known as pass-by trips. The pass-by trips are removed from the project trips for all external intersections and all roadway segments, however, the pass-by trips are included at the site access points. The pass-by trips were capped at 10% of the US HWY 441 traffic volumes.

The trip generation documentation is provided in **Appendix C**.

Table 6 – Trip Generation - Farmlands Mixed Use										
Land Use	Land Use Code	Variable Type	Variable Size	Daily Trips	AM Peak Trips			PM Peak Trips

Gasoline/Service Station Net New Trips				1,273	77	39	38	114	57	57
Total Internal Capture Trips				**4,042**	**136**	**69**	**67**	**453**	**229**	**224**
Total Pass-by Trips				**5,886**	**416**	**208**	**208**	**454**	**227**	**227**
Total Gross Trips				**26,404**	**1,289**	**671**	**618**	**2,255**	**1,158**	**1,097**
Total Gross Trips Minus Internal Capture Trips				**22,362**	**1,153**	**602**	**551**	**1,802**	**929**	**873**
Total Net New Trips (Non-pass-by Trips)				**16,476**	**737**	**394**	**343**	**1348**	**702**	**646**

1 - Internal capture capped at 30%.

2 - The ITE Trip Generation Manual 12th Edition does not provide pass-by rates for Shopping Centers under the AM peak and daily conditions. Therefore, the PM peak pass-by rate of 19% is used for all conditions.

3 - Pass-by volumes are reduced such that the AM inbound volumes equal the AM outbound volumes and the PM inbound volumes equal the PM outbound volumes. This allows the pass-by volumes to balance out from intersection to intersection.

4 - The ITE Trip Generation Manual 12th Edition does not provide pass-by rates for High-Turnover (Sit-Down) Restaurant under the AM peak or daily conditions. Therefore, the PM peak rate is used for the AM peak and daily condition.

5 - The ITE Trip Generation Manual 12th Edition does not provide pass-by rates for Fast-food with Drive-Thru under the daily conditions. Therefore, the average of the AM peak and PM peak rates is used for the daily condition.

6 - The ITE Trip Generation Manual 12th Edition does not provide pass-by rates for Coffee/Donut Shop with Indoor Seating. Therefore, the pass-by rates for Coffee/Donut Shop and No Indoor Seating are used.

7 - The ITE Trip Generation Manual 12th Edition does not provide pass-by rates for Gasoline/Service Stations under the daily conditions. Therefore, the average of the AM peak and PM peak rates is used for the daily condition.

8 - Pass-by volumes reduced to not exceed 10% of the adjacent US HWY 441 traffic.

3 Trip Distribution and Assignment

3.1 Trip Distribution

Pass-by Trip Distribution

The pass-by project trip distribution along US HWY 441 is based on the prevailing directional distribution of traffic along US HWY 441. The pass-by-trip distribution, based on FDOT count data, is provided below:

- AM Peak Hour
  - US HWY 441 Eastbound = 71%
  - US HWY 441 Westbound = 29%

- PM Peak Hour
  - US HWY 441 Eastbound = 34%
  - US HWY 441 Westbound = 66%

Net New Trip Distribution

The North Central Florida Regional Planning Model (NCFRPM) will be used to estimate the net new (non-pass-by) project trip distribution. The net new trip distribution throughout the Study Area is provided in **Figure 1**.

The net new trip distribution on US HWY 441 at the project site is provided below:

- US HWY 441 to/from the west = 33%
- US HWY 441 to/from the east = 67%

The documentation for both the pass-by and the net new trip distribution is provided in **Appendix D**.

3.2 Trip Assignment

The pass-by and net new project trips provided in **Table 6** were assigned to the road network and site access intersections based on the distribution percentages. Assumptions were made to determine which access would be used for each land use type. The assumptions are based on the currently planned access intersections provided in Section 1.3. The intersection types and locations may change during the project planning, therefore, the traffic volumes in and out at each access point will be adjusted with the updates. The project trip assignment at the access points is provided in **Figure 4**. The project trip assignment and assumptions are documented in **Appendix E.**

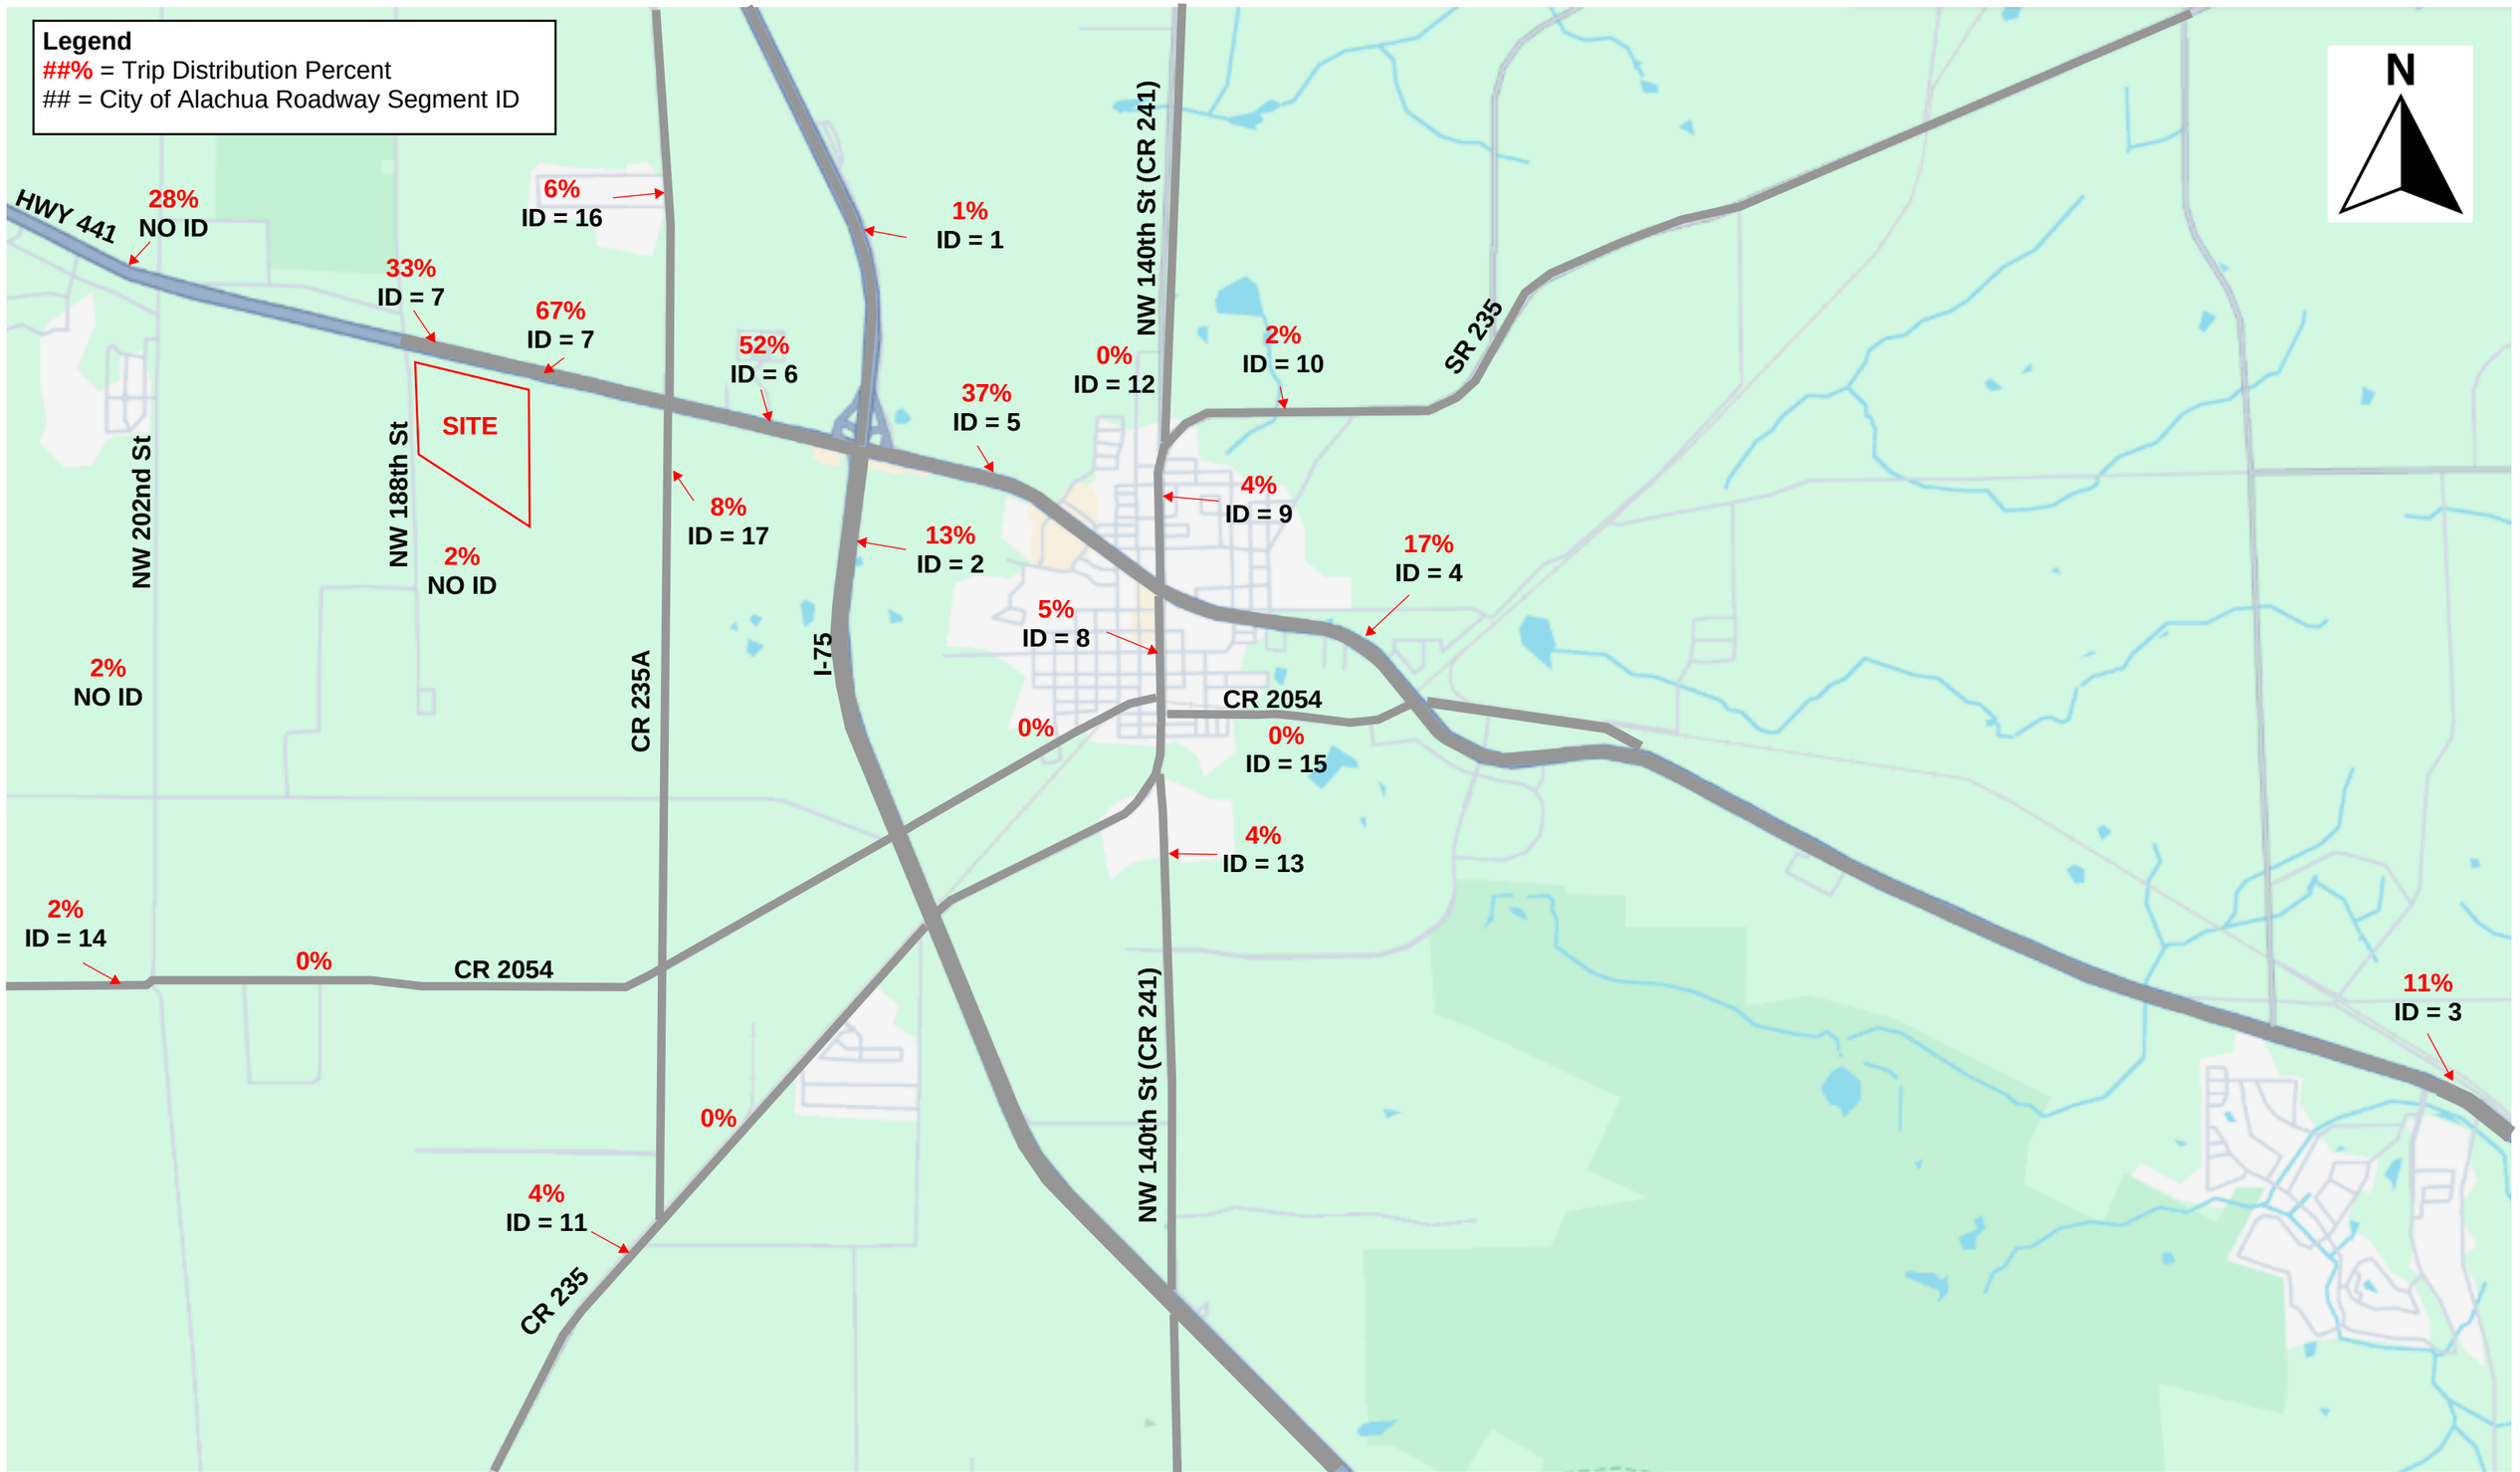

Figure 1: Trip Distribution

4 Traffic Analysis/Evaluation

4.1 Roadway Segment Level of Service Analysis

The daily and PM peak hour net new project trips from the Farmlands Mixed Use site were added to the existing and reserved trips provided in Table 2-a Traffic Impacts – Final Development Orders of the City of Alachua Development Monitoring Report. The roadway segment level-of-service analysis with the Farmlands Mixed Use development project trips are provided in **Table 7**. **Table 8** provides the net change project trips based on the proposed FLU and Zoning Map changes for all of the roadway segments. The development monitoring data documentation is provided in **Appendix F**.

Roadway Segment	Segment Description	AADT/Peak Hour	Comp Plan MSV	Existing Demand	Reserved Capacity[1]	Available Capacity	Percentage of Capacity Utilized	Farmlands Commercial and Residential Trips	Available Capacity with Farmlands Trips	Percentage of Capacity Utilized with Farmlands Trips
Interstate - Minimum Level of Service: C										
I-75 (32, 1)	From North City Limit to US 441	AADT	91,600	47,000	87	44,513	51.41%	165	44,348	51.59%
		Peak Hour	8,250	3,898	13	4,339	47.41%	13	4,326	47.56%

Table 8 – Roadway Segment Project Trips based on the FLU and Zoning Map Changes

Figure 2 illustrates the roadway segment capacity utilization under the buildout condition.

The City of Alachua has seen historical traffic volume increases, with only limited segments functioning at, or near, current adopted levels-of-service standards, as illustrated in **Figure 2** and **Table 7**. Strategic Planning, Transportation Demand Management (TDM), and/or Transportation System Management (TSM) techniques and transportation techniques may be utilized to ensure the City's quality of life elements are maintained as growth occurs throughout north central Florida.

As indicated in this report, there are a number of potential transportation improvements that can be implemented as part of the site future development to improve transportation conditions and all the approved construction plans to demonstrate compliance with adopted level-of-service standards.

In addition, this report includes data indicating the property's proposed rezoning and associated entitlements (pre-post) will result in a net reduction in trip generation and potential traffic impacts.

It is important to note that net new project trips are conservatively high. A portion of the project trips from areas to the west such as High Springs, will be trips that are currently traveling past this site to retail and restaurant destinations in the City of Alachua and Gainesville, and will instead travel to this new destination and not travel east of this site. For this reason, the impact of the Farmlands Mixed Use site is not expected to be as significant as illustrated in **Table 7**. It is difficult to forecast the portion of trips that will be removed from the segment (4107, 6), however, this can be determined by collecting counts after a portion of the commercial property is developed. This data collection may be recommended in the follow-up intersection analysis, to assess the actual impacts of the development. Additionally, the majority of the project trips generated by this development will be associated with the retail and restaurants. Unlike residential land uses that add trips to the roadway network, these commercial uses capture trips. This results in reduced driving time for the local traveling public.

Furthermore, the maximum service volumes established by the City of Alachua are based on the FDOT Quality/Level of Service Handbook. The latest edition of this handbook states multiple limitations of using Generalized Service Volume Tables (GSVTs) such as the limitation noted below from Section 4.4 of the handbook:

"The GSVTs cannot be relied upon when approaching LOS E and LOS F thresholds, because of operational fluctuations at these thresholds. In these situations, analysts should perform more detailed analysis."

Because the buildout volumes exceed the adopted level-of-service on US HWY 441 segment (4107, 6), it is recommended that a more detailed analysis is provided along this segment. Intersection analysis at the signalized intersections along this corridor will provide the level-of-service of the US HWY 441 through movements at each

intersection which is needed to determine the appropriate modifications to maintain an acceptable level-of-service. It is recommended that this detailed intersection analysis is included in the follow-up Operational Analysis.

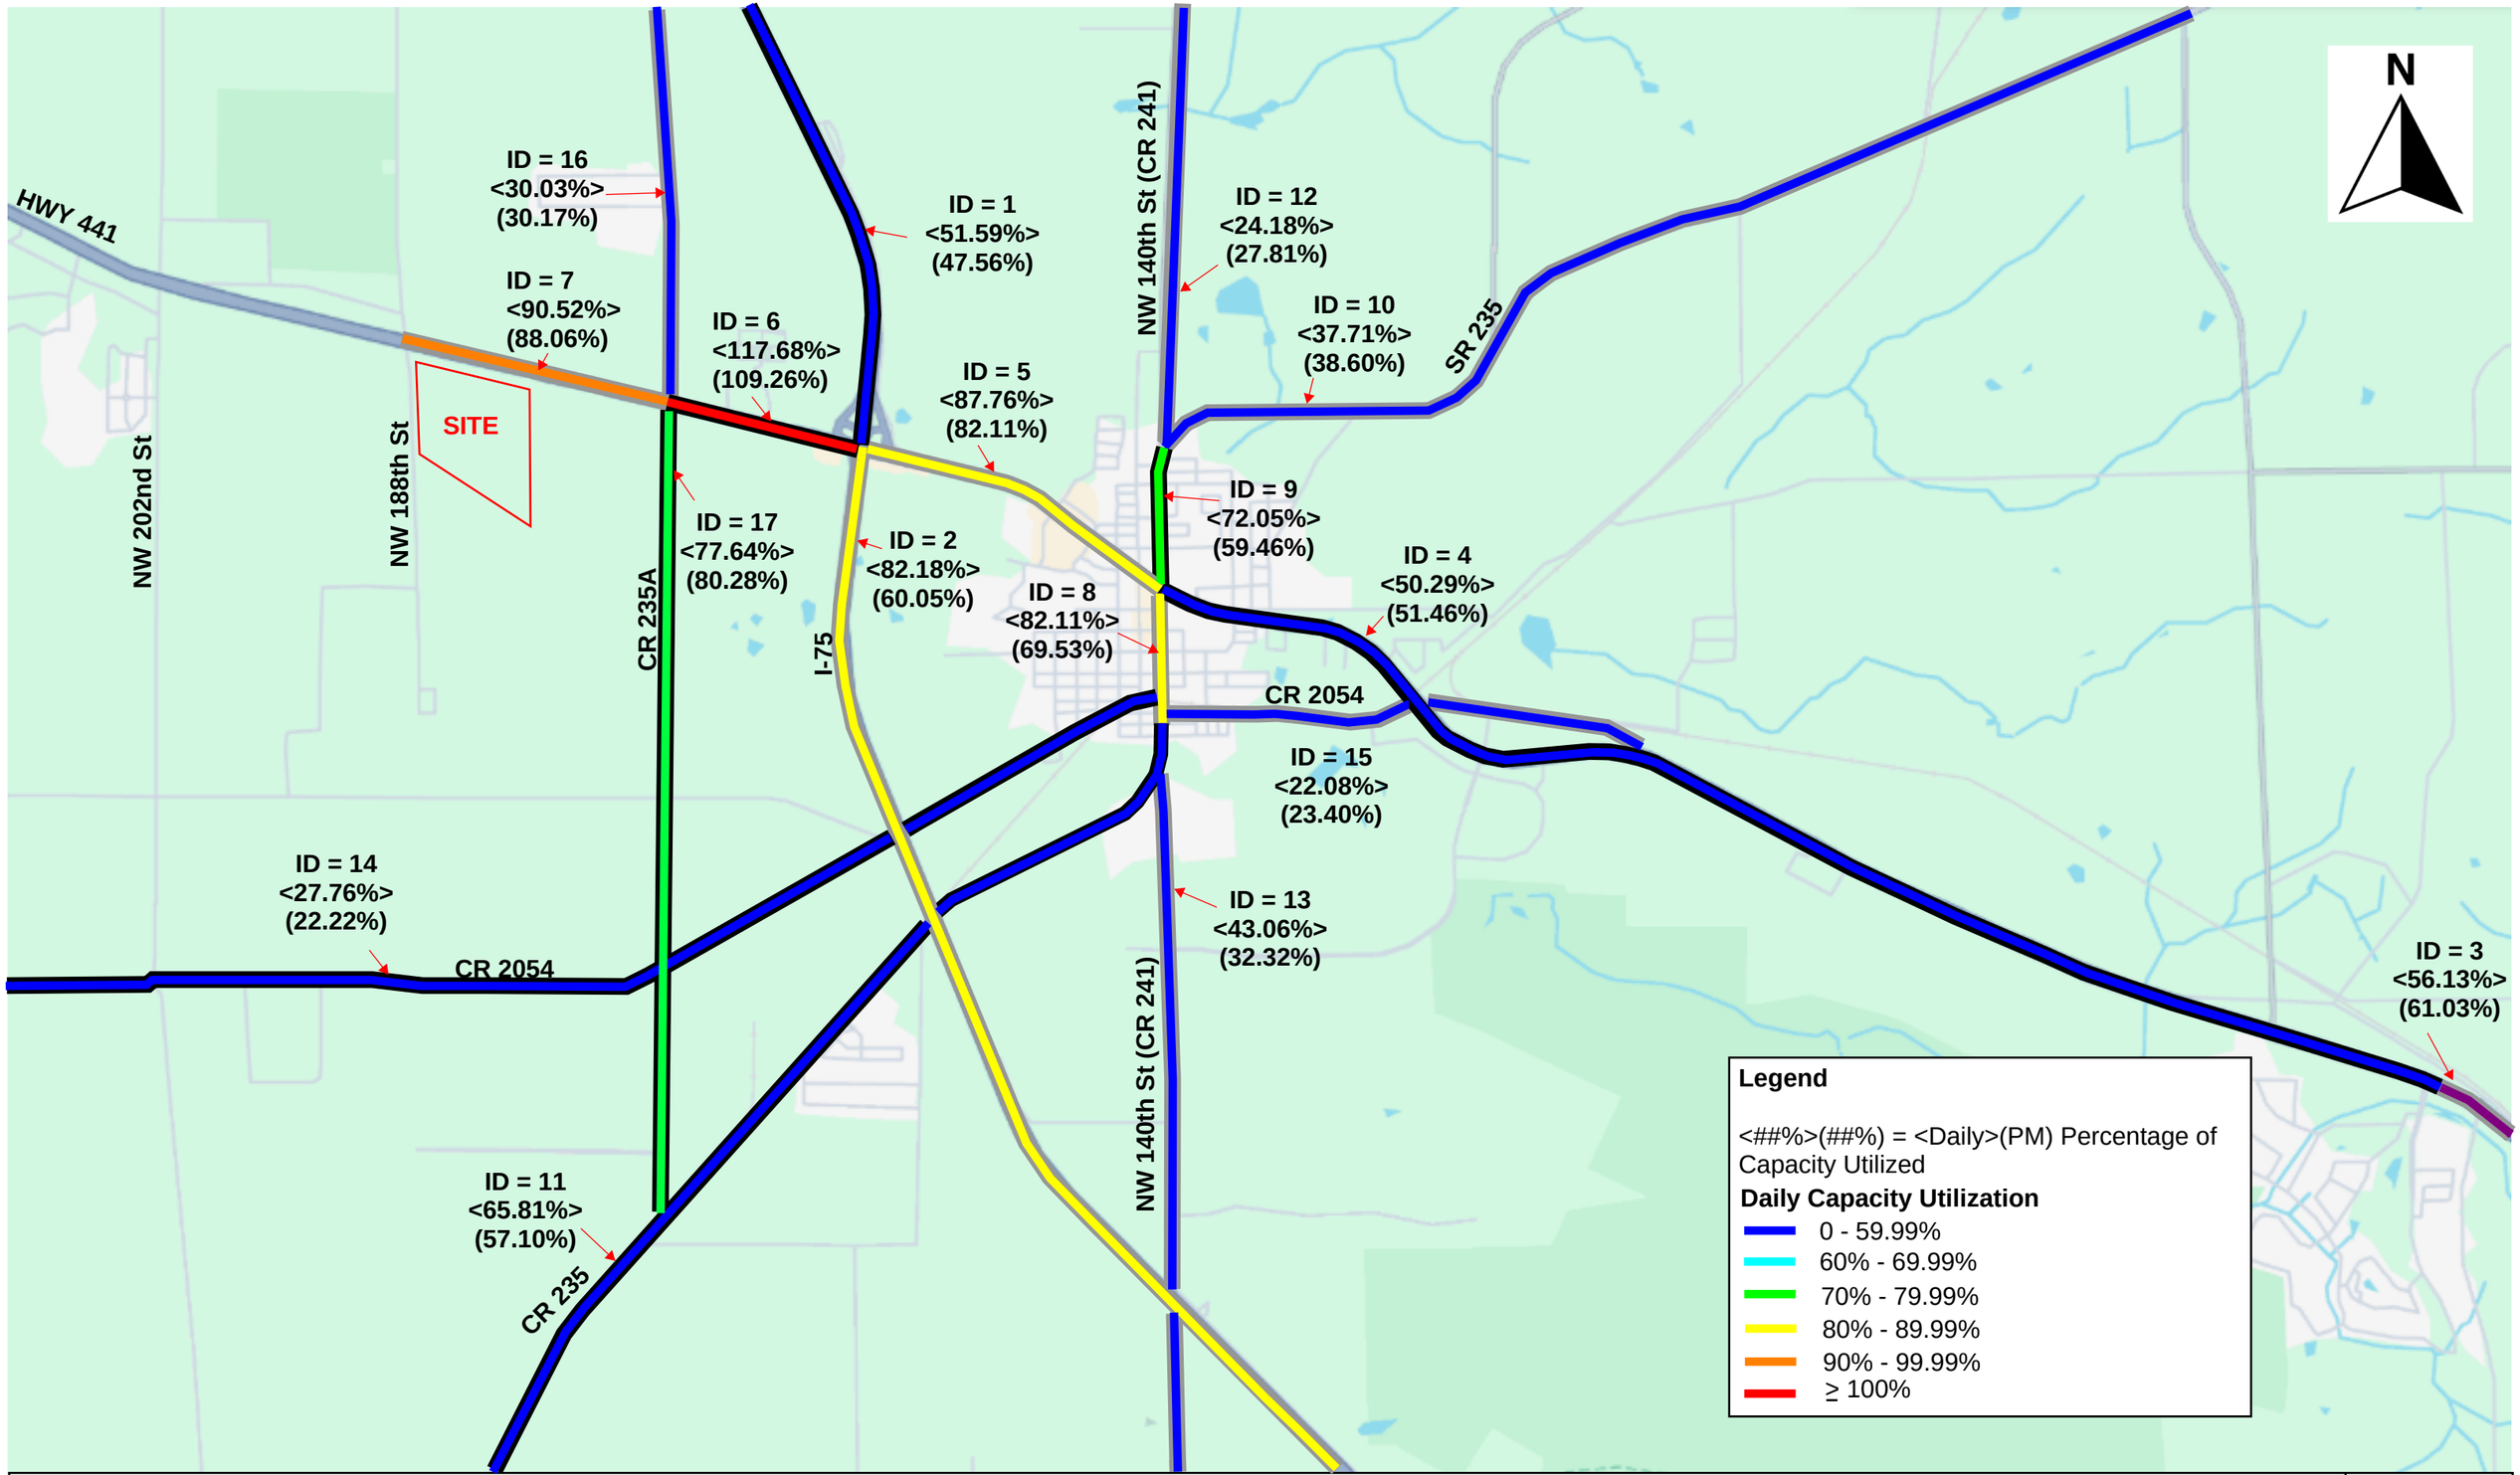

Figure 2: Percentage of Capacity Utilization Map

4.2 Access Management Evaluation

The preliminary site plan in **Appendix A** provides the preliminary access locations and access types. As the site planning continues to develop, and coordination continues with FDOT, City of Alachua and adjacent developers, the access management plan may be adjusted. The access management plan will be guided based on FDOT access management standards provided in the FDOT Access Management Guidebook as well as the approved access plans of Briarwood Town Center located on the north side of US HWY 441. The FDOT access spacing standard for the US HWY 441 roadway segment is provided in **Table 9**.

Roadway Access Class	FDOT Context Classification	Movement Type	Multimodal Mix	Network Density	Median Type	Connection/Driveway Spacing (feet)		Median Opening Spacing (feet)		Minimum Signal Spacing (feet)***
						≤45mph Posted	>45mph Posted	Directional	Full	
Limited Access (LA) Right of Way Facilities						Refer to Right of Way (ROW) Maps				
2	C1 Natural, C2 Rural	Regional	Low	Low	Restrictive w/Service Roads	660	1320	1,320	2,640	2,640
3	C1 Natural, C2 Rural, C2T Rural Town, C3R Suburban Residential, C3C Suburban Commercial	Regional	Low	Low	Restrictive	440	660	1,320	2,640	2,640

Table 9 – FDOT Access Spacing Standards

Figure 3 provides the preliminary site access plan and access spacing dimensions. The three proposed access points to the site are labeled A, B, and D from west to east. Access C has been removed due to spacing constraints. The proposed Briarwood Town Center is located directly north of this site on US HWY 441. Access requirements are documented in the Briarwood Town Center developer's agreement; therefore, these access requirements are considered in the access management evaluation. The access locations and types are currently being coordinated with FDOT, the developer of Briarwood Town Center to the north, and the City of Alachua.

Access A is a proposed directional access where left outs are prohibited. The access is located on US HWY 441 approximately 1,112 FT east of NW 188th Street. This access type and location was approved with the Briarwood Town Center project on the north side of US HWY 441.

Access B is a proposed signalized through cut, located approximately 727 FT east of Access A. FDOT recently approved a signalized through-cut with left-ins permitted at this location.

Access D is a proposed directional access intersection located approximately 951 FT west of NW 164th Lane. The median opening on US HWY 441 at NW 164th Lane, east of access D, is proposed to be modified to a directional median opening with the Briarwood Town Center development, at the time that the development connects to NW 164th Lane.

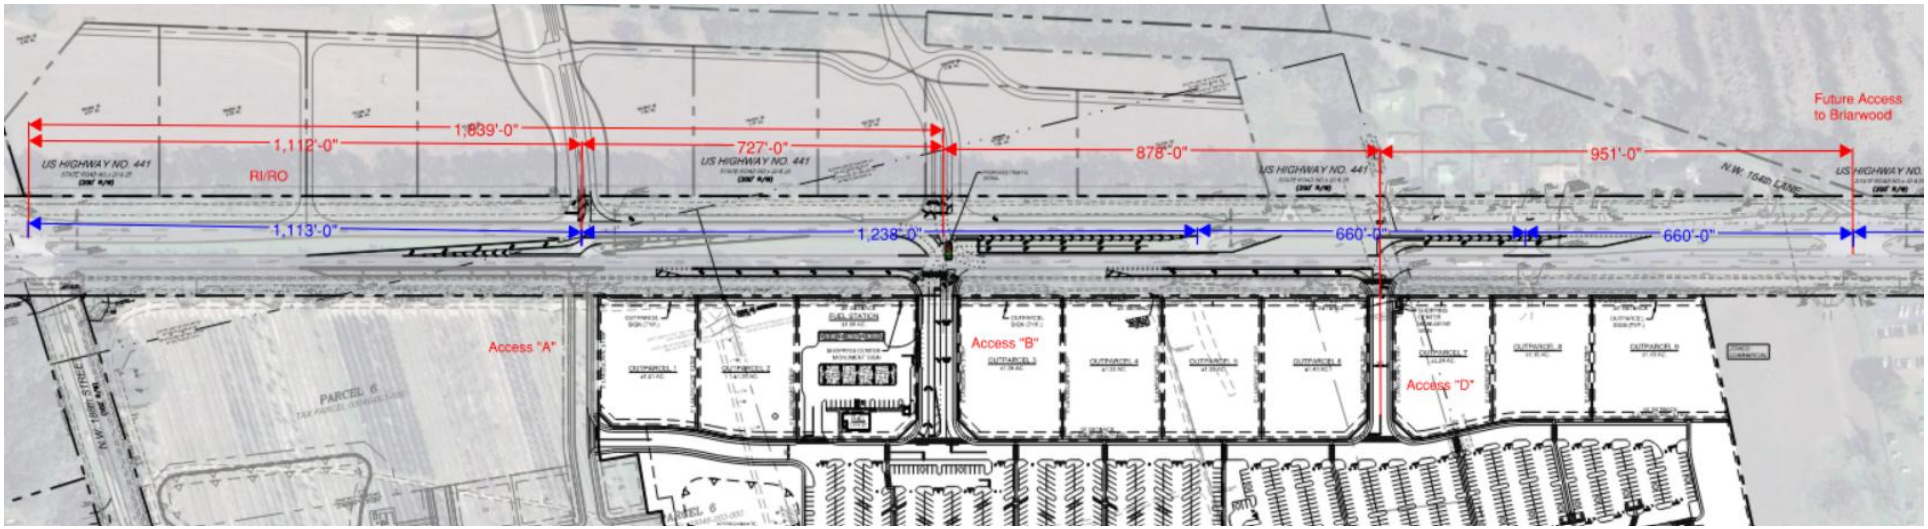

Figure 3 – Preliminary Access Management Plan

5 Traffic Calming on US HWY 441

The US HWY 441 road segment from NW 164th Lane to NW 218th Terrace is posted at 65 MPH. Within the urban portions of the City of Alachua and the City of High Springs, the posted speed limit is 45 MPH. The land adjacent to US HWY 441 from I-75 to High Springs is developing rapidly, causing the landscape to change from rural to urban.

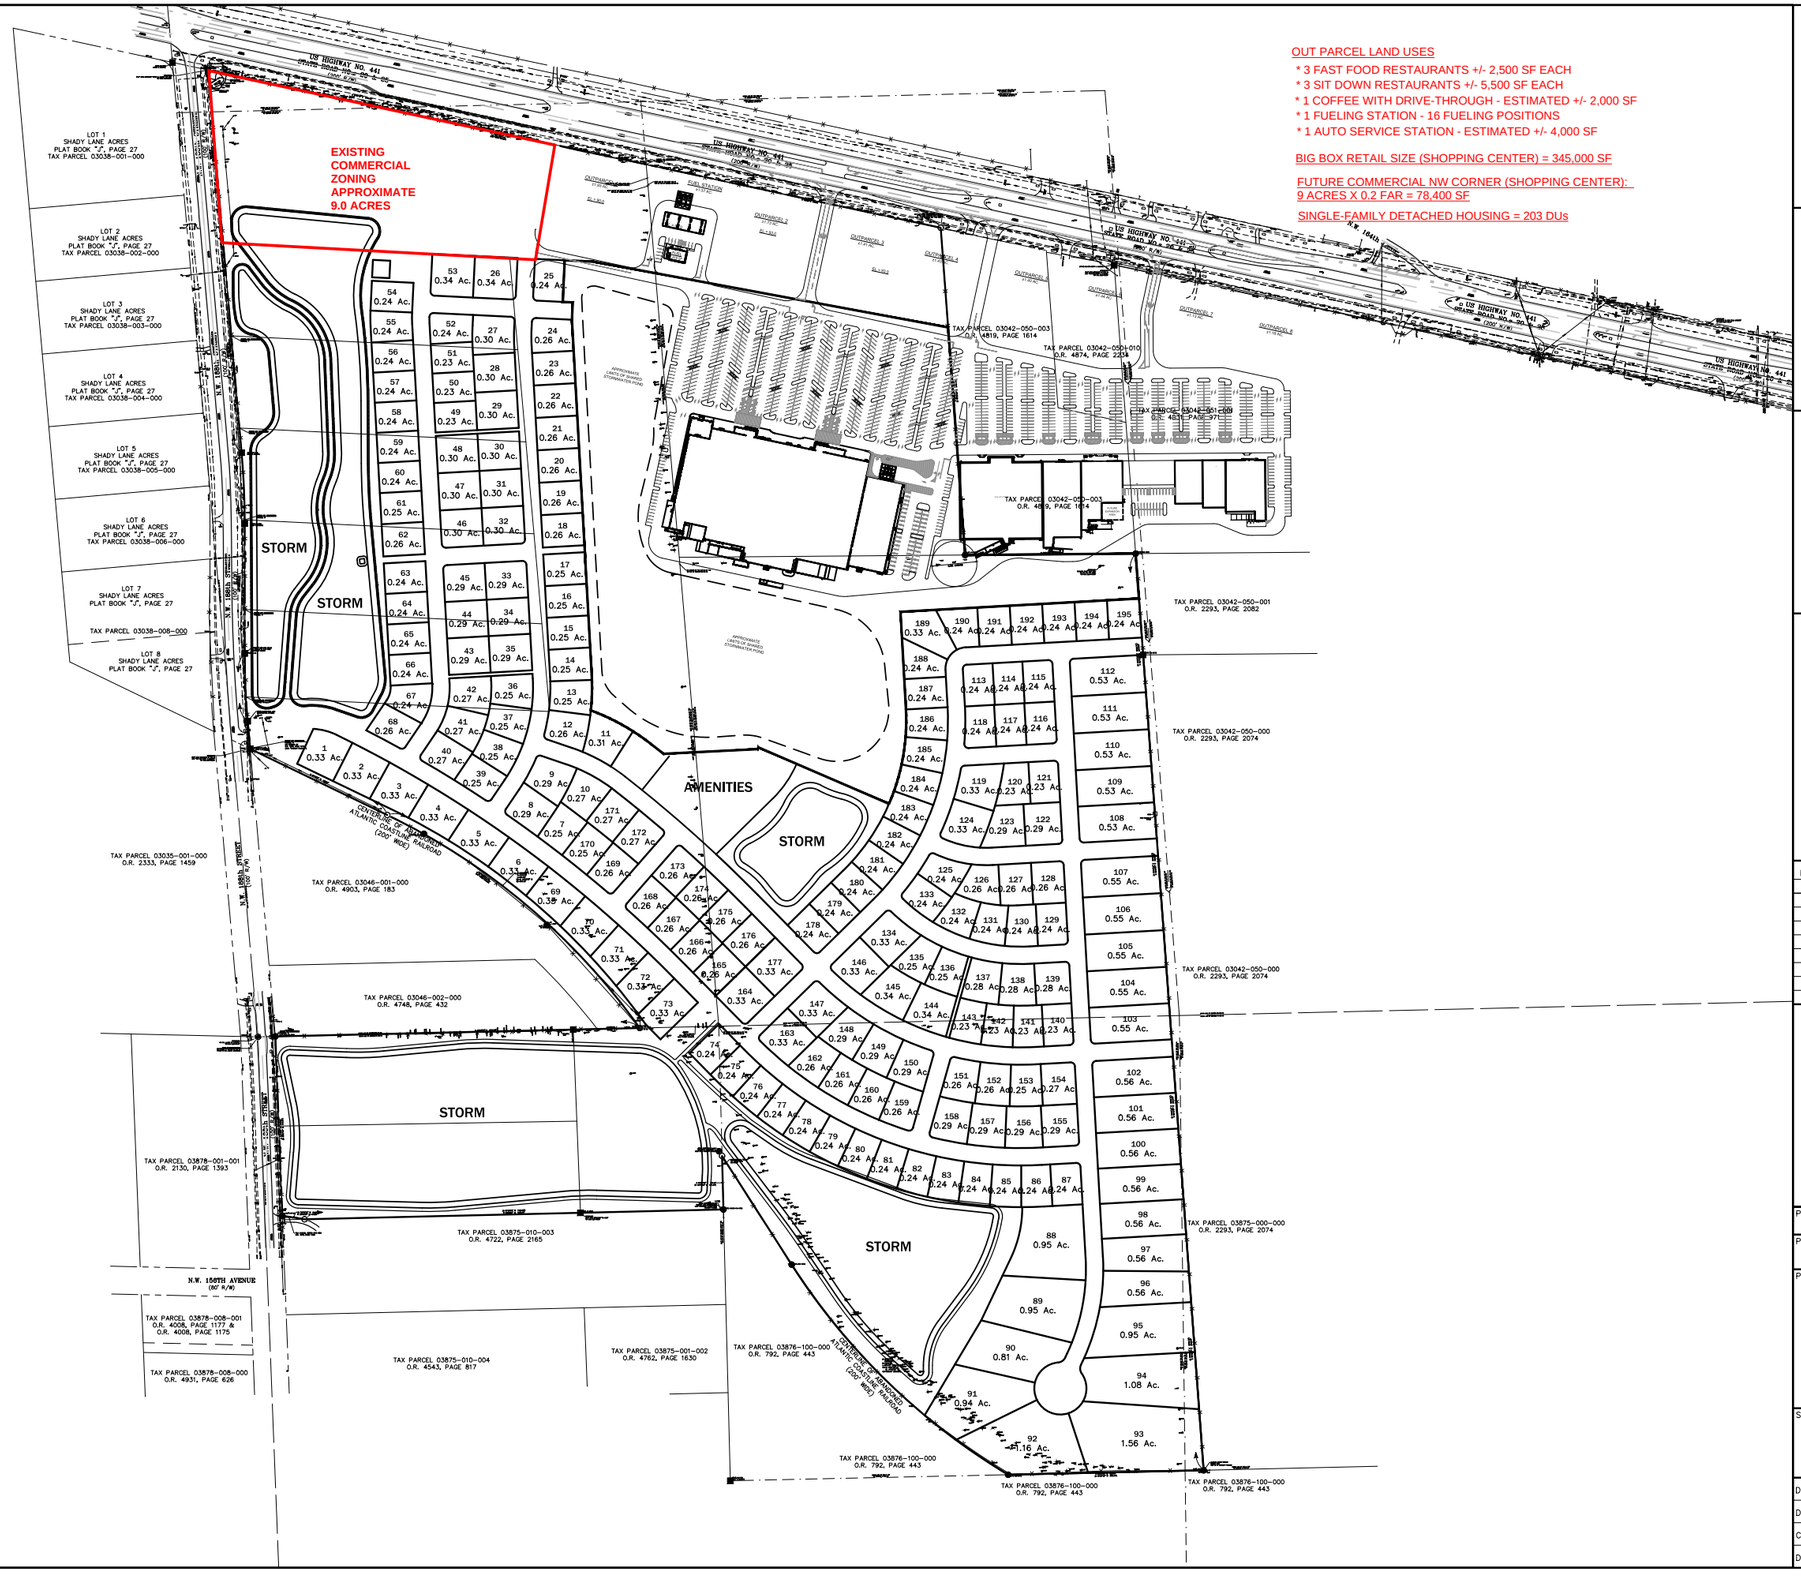
Traffic signalization is anticipated with this development and is planned with the development across the street. It is expected that as this area becomes more urbanized, travel speeds will reduce. It is important for the posted speed limit to also be reduced while the development occurs. OTS along with the Farmlands Mixed Use development team will coordinate with FDOT on methods to reduce vehicle speeds and the posted speed limits.

Potential methods being considered to reduce the posted speed are to conduct a speed study and/or re-classification of this US HWY 441 roadway segment. Additional Traffic Management Techniques will be reviewed during the development plan approval process.

6 Conclusion and Recommendations

This traffic study included the following analysis and evaluation as agreed upon in the approved methodology letter:

- Roadway Segment Level of Service Analysis
- Access Management Evaluation



Based on the results from this study the following recommendations are made to support the project traffic:

- As stated in the 2023 FDOT Multimodal Quality/Level of Service Handbook, it is recommended that a detailed analysis is provided along the US HWY 441 corridor in follow-up Operational Analysis. Intersection analysis at the signalized intersections along this corridor will demonstrate the level-of-service of the US HWY 441 corridor through movements at each of the intersections. Potential transportation improvements will be evaluated to maintain an acceptable level-of-service, including TDM and/or TSM improvements/changes, reclassification of the roadway segment(s), corridor signal retiming, and intersection modifications.

- The access management plan has and will continue to be coordinated with FDOT, the developer of Briarwood Town Center to the north, and the City of Alachua. FDOT has provided approval for the signalized through-cut at Access B with left-ins permitted and provided verbal approval of the access types and locations of Access A and D during access management meetings. The turn lane configurations and lengths will be evaluated with the Operational Analysis.

- The US HWY 441 road segment from NW 164th Lane to NW 218th Terrace is posted at 65 MPH. It is recommended to continue coordination with FDOT to reduce vehicle speeds and posted speed limits along this road segment where the adjacent land uses are changing from rural to urban. Potential methods being considered to reduce the posted speed are to conduct a speed study and/or re-classification of the US HWY 441 roadway segment currently posted at 65 MPH.

RE: Farmlands Commercial and Residential Development – Roadway Segment Level-of-Service Analysis (LOS) - Methodology

Dear Bryan, Carlos,

Optimus Traffic Solutions (OTS) is preparing a traffic study for the proposed Farmlands Commercial and Residential Development that will be located at the southeast corner of HWY 441 and NW 188th Street in Alachua, Florida.

The traffic study for this proposed development will be provided in two parts:

Part 1 - Roadway Segment LOS Analysis – The part 1 traffic study will include the trip generation, trip distribution, and roadway segment level of service analysis.

The part 1 traffic study will accompany the proposed land use and zoning changes and will be used to determine the study area for the part 2 traffic study.

Part 2 - Operational Analysis – The part 2 traffic study will provide the operational analysis at all access intersections and offsite intersections. It is anticipated that a traffic signal warrant analysis and Intersection Control Evaluation (ICE) will be required as part of the part 2 traffic study.

The part 2 study will accompany the FDOT access permit application and the site plan submittal.

This methodology provides the guidelines for the Part 1 - Roadway Segment LOS Analysis.

Description of the Proposed Development – The Farmlands Commercial and Residential Development is a mixed-use site estimated to include the following land uses under the buildout condition:

- 203 Single Family Detached Homes
- 423,400 KSF Shopping Center
- 3 Sit Down Restaurants +/- 5,500 SF
- 3 Fast-food Restaurants with Drive-through +/- 2,500 SF
- 1 Coffee Shop with Drive-through +/- 2,000 SF
- Gasoline/Service Station with 16 fueling positions
- 1 Auto Service Center +/- 4,000 SF

Access to the site will be via multiple connections along HWY 441 which will be coordinated with FDOT. A preliminary concept plan is provided in **Attachment A**.

Analysis Timeframe – The site will be built out in phases with the full buildout anticipated in 2032.

Analysis Period – The City of Alachua Development Data Tables provide both AADT and peak hour capacity volumes. The weekday daily, AM peak hour and PM peak hour project trips will be generated and applied to the roadway network as part of this traffic study. The weekday and PM peak hour will be used to analyze the roadway segment level of service. The AM peak hour trips will be forecasted with this study; however, these project trips are only expected to be analyzed in the Part 2 - Operational Analysis.

Trip Generation – The ITE Trip Generation Manual, 11th Edition is used to estimate the trip generation for the mixed-use site, as shown in **Table 1**. The trip generation documentation is provided in **Attachment B**.

Farmlands Commercial and Residential Trip Generation										
Land Use	Land Use Code	Variable Type	Variable Size	Daily Trips	AM Peak Trips			PM Peak Trips		
					Total	In	Out	Total	In	Out
Single-Family Detached Housing (I.C. RESIDENTIAL)	210	DUs	203.0	**1936**	**142**	**36**	**106**	**193**	**122**	**71**

1 - Internal capture capped at 30%.

2 - The ITE Trip Generation Manual 11th Edition does not provide pass-by rates for Shopping Centers under the AM Pk and daily conditions. Therefore, the PM Pk pass-by rate of 19% is used for all conditions.

3 - Pass-by volumes are reduced such that the AM inbound volumes equal the AM outbound volumes and the PM inbound volumes equal the PM outbound volumes. This allows the pass-by volumes to balance out from intersection to intersection.

4 - The ITE Trip Generation Manual 11th Edition does not provide pass-by rates for High-Turnover (Sit-Down) Restaurant under the AM or daily conditions. Therefore, the PM Pk rate is used for the AM and daily condition.

5 - The ITE Trip Generation Manual 11th Edition does not provide pass-by rates for Fast-food with Drive-Thru under the daily conditions. Therefore, the average of the AM Pk and PM Pk rates is used for the daily condition.

6 - The ITE Trip Generation Manual 11th Edition does not provide pass-by rates for Coffee/Donut Shop with Indoor Seating. Therefore, the pass-by rates for Coffee/Donut Shop and No Indoor Seating is used.

7 - The ITE Trip Generation Manual 11th Edition does not provide pass-by rates for Gasoline/Service Stations under the daily conditions. Therefore, the average of the AM Pk and PM Pk rates is used for the daily condition.

8 - Pass-by volumes are expected to be reduced so that they do not exceed 10% of the adjacent HWY 441 street traffic. This reduction to 10% of the adjacent roadway traffic will be applied in the traffic study.

In addition to the trip generation provided in **Table 1**, a separate trip generation comparison table will be prepared to compare the existing land use and zoning to the proposed land use and zoning.

Trip Distribution

The pass-by project trip distribution along HWY 441 will be based on the prevailing directional distribution of traffic along HWY 441. The directional distribution will be determined from hourly volumes provided by counts in the FDOT Traffic Online.

The North Central Florida Regional Planning Model (NCFRPM) will be used to estimate the project non-pass-by project trip distribution.

Data Collection

No traffic counts are proposed with the Part 1 – Traffic Study.

Count data from FDOT Traffic Online and from the City of Alachua Concurrency Management will be used for the roadway segment analysis.

Study Area

The roadway segment level of service analysis will include all roadway segments identified in the Transportation Element of the City of Alachua's Comprehensive Plan. The results from this study will be used to determine the Study Area intersections of the Part 2 – Operational Analysis.

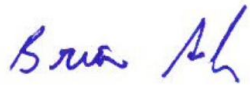
Background Traffic and Buildout Traffic

The site is anticipated to be built out in 2032. Growth rates will be derived from the FDOT historical ADT volumes. If the growth rates are calculated as less than 1.0% a minimum 1.0% growth rate will be applied. If data is not available to calculate growth rates, a 2% minimum growth rate value will be applied. Project trips will be combined with background volumes and reserved trips to derive the 2032 buildout volumes.

Reserved Trips

There are multiple planned developments planned within the City of Alachua. OTS will coordinate with the City of Alachua to obtain the reserved trips from approved traffic studies. The reserved trips will be applied to the roadway network and included with the background traffic, where applicable.

Analysis and Evaluations



- Roadway Segment LOS analysis – A roadway segment LOS analysis will be provided for all roadway segments listed in the Study Area section of this letter. The roadway segment analysis will be based on hourly directional volumes during the AM and PM peak hour of roadway traffic.
- Access Management Evaluation – The proposed site access will be evaluated in accordance with FDOT Access Management Standards. The proposed Briarwood Town Center is located directly north of this site on HWY 441. Access requirements are documented in the Briarwood Town Center developer's agreement; therefore, these access requirements will be included in the access management evaluation. Though the access evaluation will start with the Part 1 study, it is expected that the specific access intersection types and potentially the locations will not be approved until the Part 2 Operational Analysis is completed.

Recommendations and Conclusions

Recommendations will be provided to mitigate deficiencies caused by project traffic.

OTS will submit a draft TIA report to the City of Alachua and FDOT staff. A final signed and sealed study will be submitted to all reviewing agencies after comments have been resolved.

Sincerely,

Brian Snyder, PE

Principal

Optimus Traffic Solutions, LLC

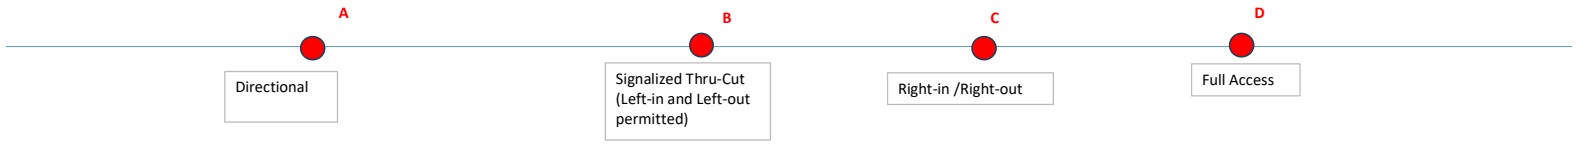
Appendix E
Trip Assignment



Access Assumptions used for Trip Assignment

Shopping Center (NW corner of property) and all Residential
* 100% eastbound inbound and outbound trips use access A
* 100% westbound inbound trips use Access A
* 50% westbound outbound exit at Access A followed by eastbound U-turn at Access B
* 50% westbound outbound exit at Access B

Gas Station
* 100% eastbound inbound trips use Access A
* 100% eastbound outbound trips use Access B
* 100% westbound inbound and outbound trips use Access B

Shopping Center (Main),
* 50% eastbound inbound trips use Access B, 25% use Access C, 25% use Access D
* 1/3 eastbound outbound trips use Access B, 1/3 use Access C, 1/3 use Access D
* 50% westbound inbound trips use Access B, 50% use Access D
* 75% westbound outbound trips use Access B, 25% use Access D

All Restaurants, and Coffee Shop
* 1/3 eastbound inbound trips use Access B, 1/3 use Access C, 1/3 use Access D
* 1/3 eastbound outbound trips use Access B, 1/3 use Access C, 1/3 use Access D
* 50% westbound inbound trips use Access B, 50% use Access D
* 1/3 westbound outbound trips use Access B, 1/3 exit at Access C followed by U-turn at D, 1/3 exit at Access D

Review of Geotechnical Information
Farmlands Commercial PD Rezoning
Alachua, Alachua County, Florida
GSE Project No. 17335

GSE Engineering & Consulting, Inc. (GSE) has performed a review of geotechnical information/reports that was submitted as part of the rezoning application for the Farmlands Commercial PD located in Alachua, Florida. The remainder of this report summarizes our review.

Background Information

The site is located on the south side of U.S. Highway 441 approximately 0.5 miles west of the NW CR 235A intersection in Alachua, Florida. The site includes portions or all of Tax Parcels 03046-003-002, 03042-050-004, 03042-050-005, 03042-050-003, 03042-050-010 and 03042-051-001.

The site is proposed for commercial and residential development. You provided two geotechnical site exploration reports prepared by UES Professional Solutions (UES) that were included as part of the project application. You requested we review the reports to determine if the evaluations demonstrate the sites are suitable for single-story commercial buildings and single-family residential development, or if additional evaluation is appropriate/necessary.

Data Review

We were provided the following geotechnical engineering reports prepared by UES:

1. Preliminary Geotechnical Exploration Services, Proposed Alachua Commercial Center, US Hwy 441, Alachua, Alachua County, Florida. UES Project No. A25140.00683.005, Report No. 2160889 dated December 18, 2025 (Report 1).
2. Preliminary Geotechnical Exploration Services, Tax Parcels 03042-005/003 – US 441, Alachua, Alachua County, Florida. UES Project No. A25140.00683.005, Report No. 2162758 dated March 6, 2026 (Report 2).

GSE Engineering & Consulting, Inc.
5590 SW 64th Street, Suite B
Gainesville, Florida 32608
352-377-3233 Phone ◆ 352-377-0335 Fax
www.gseengineering.com

The reports included soil borings and laboratory testing of soil samples considering typical commercial development. Report 1 included twenty-nine (29) Standard Penetration Test (SPT) soil borings advanced to depths ranging from 10 to 40 feet below existing land surface (bls) and accompanying laboratory testing that included sieve analysis, wash 200 tests, Atterberg Limits tests, hydraulic conductivity (permeability) tests, and Limerock Bearing Ratio tests. Report 2 included twenty-five (25) SPT borings advanced to depths of 20 to 25 feet bls along with accompanying laboratory testing that included sieve analysis, wash 200 tests, Atterberg Limits tests, organic content tests, hydraulic conductivity (permeability) tests, corrosion series tests, and Limerock Bearing Ratio tests. Test were also performed on topsoil type materials to evaluate their suitability for reuse and determine fertilizer recommendations.

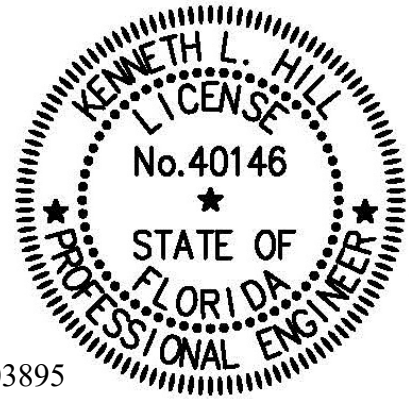
Both geotechnical explorations encountered sandy soil overlying clayey sand, sandy clay, and clay to the explored depths. Laboratory testing on representative soils indicates that some of the clays have a high risk for expansive characteristics. Limestone was encountered in one soil boring at a depth of 39.5 feet bls. Groundwater was generally not encountered within the depths explored or not determined due to the mud rotary method of advancing the boreholes.

Technical Analysis

The geotechnical explorations performed for this project indicate that generally soil conditions are suitable for the development of commercial and residential projects. The soil borings encountered expansive clays in some areas, but this is common in this area of Alachua County and the geotechnical engineer discusses methods for considering and mitigating the effects of the expansive soils on development and building elements.

The geotechnical engineer qualifies both reports as "*preliminary*" and states "***Due to the preliminary design stage of this project, building locations, structural loads, and grading information were unavailable. Therefore, it may be necessary to perform additional geotechnical services including additional test borings once the structure locations, stormwater management system, proposed grades, and structural loadings are available"***. Preliminary geotechnical explorations are generally intended to screen the site for suitability of the proposed development. Preliminary geotechnical explorations are not intended to be used for final design. The number of soil borings performed for the projects are not adequate for final design and additional soil borings should be performed.

The preliminary explorations did not include geophysical screening of the site for karst geological conditions. Sinkhole risk in Alachua County is mostly related to site elevation. Lower elevation sites in the Gulf Coastal Lowlands and Cody Scarp geological regions have a higher risk for sinkhole development than high elevation sites in the Northern Highlands geological region, and this is due to the separation between land surface and the limestone formation. Sinkholes most commonly develop in stormwater management facilities due to stormwater infiltration eroding soil into fractures and cavities in the limestone formation. Sinkhole risk is reduced in impervious areas, due to the absence of stormwater infiltration.



The site is located near the transition of the Cody Scarp to the Gulf Coastal Lowlands geology. The surface of the limestone formation in this area of Alachua is typically on the order of elevation 60 feet. The ground surface at the location of the stormwater management basin for these projects varies from about elevations 90 to 100 feet. If the basin is excavated 10 feet deep, the separation between the bottom of the basin and the limestone formation is expected to be on the order of 20 feet. We have observed multiple sinkholes develop in stormwater management facilities where the separation between the basin bottom and the limestone formation is on the order of 20 feet.

The City of Alachua has policies that allow for the requirement of geophysical screening in its sole discretion and has required this screening on some projects. GSE considers it prudent to conduct geophysical screening and additional geotechnical evaluation at the location of stormwater facilities as part of final design. The intent is to evaluate, determine, and consider the actual sinkhole potential risk in these areas. This information would then be considered and incorporated into the final design.

Closure

GSE appreciates this opportunity to provide these engineering services to you on this important matter. If you have any questions, or if we can provide any additional information, please contact us.

Sincerely,
GSE Engineering & Consulting, Inc.

CLAY SWEGER, AICP, LEED AP

Director of Planning

Mr. Sweger is AICP-certified, LEED green building accredited, and holds a FDOT qualification to provide urban planning services. His educational training, professional certifications, and prior experience as a planner for the Alachua County Department of Growth Management give him a broad range of abilities in the field of urban planning. Mr. Sweger manages all planning projects at eda. For our private sector clients he liaises with Planning and Zoning departments across the state to bring our clients projects to fruition in the best interest of these public agencies. On the public sector side, he is the Project Manager for continuing services planning contracts with several municipal clients.

SELECTED PROJECT EXPERIENCE:

◊ **Town of White Springs Comprehensive Plan Update**
Role: Planning Consultant | Client: Town of White Springs, FL | Year: 2026-2026

Provided professional planning services related to the latest update to the Town of White Springs Comprehensive Plan. Services in this scope of work included preparation of a Data and Analysis Report, Water Supply Plan, Comprehensive Plan amendment language for multiple Elements, and an update to the Future Land Use Map.

◊ **City of Waldo Economic Redevelopment Planning Initiatives**
Role: Planning Consultant | Client: City of Waldo, FL | Year: 2026-2026

Provided professional planning services related to recent economic development initiatives for the City, including preparation of an Economic Development Plan, Strategic Implementation Plan, and amendments to the Comprehensive Plan and Land Development Plan related to the initiative.

◊ **Courthouse Complex Planned Development (PD) Zoning Amendment**
Role: Project Manager, Planner | Client: Alachua County | Year: 2023

Managed amendments to the 2001 Planned Development ordinance for the downtown Gainesville courthouse complex, spanning three city blocks. Updated approvals removed outdated conditions, addressed current site conditions, aligned with the City's Land Development Code, and accommodated future County improvements.

◊ **Columbia County Bell Road Corridor Large Scale Comp Plan Amendment**
Role: Planning Consultant | Client: Columbia County, FL | Year: 2023

Prepared planning analysis and a justification report for submittal to the Florida Department of Economic Opportunity supporting expansion of the County's Designated Urban Development Area (DUDA) and Future Land Use Map amendment for approximately 4,000 acres near the I-10/SR 41 interchange. Coordinated with economic development staff to document planned projects, funding, and market support for this strategic industrial growth initiative.

50 years
eda consultants

SERGIO REYES, P.E.

President / Principal-in-Charge

Mr. Reyes has been a crucial member of eda's team of engineers for over three decades. He serves as the client liaison for all of eda's public and private sector clients to ensure delivery of sound engineering solutions to their varied project needs, such as design of stormwater systems, roadways, and utility infrastructure. Mr. Reyes serves as the Project Manager for annual contracts with City of Gainesville, Gainesville Regional Utilities, City of Newberry, Alachua County, City of Alachua, and other local government agencies, providing on their behalf civil design services, project management and review of projects submitted by others.

PROJECT EXPERIENCE

◊ **Cuscowilla Fire Station**

Client: Alachua County | Year: 2023

Mr. Reyes served as the project manager for the construction of a new fire station to serve the Town of Micanopy and surrounding areas. Plans were prepared to redevelop the existing mobile home on site into a temporary fire station facility with the required site improvements (access, stormwater, other infrastructure). A later project phase was the construction of a permanent fire station building and additional site improvements required for a full fire station facility (parking, fire systems, access points, etc.) . Mr. Reyes coordinated closely with Alachua County Facilities Management, Alachua County Fire Rescue, and Alachua County Growth Management to obtain county approval and permit the project with FDOT and St. Johns River Water Management District.

◊ **Gainesville Regional Airport Terminal Expansion**

Client: Gainesville-Alachua County Regional Airport Authority | Year: 2020

Mr. Reyes provided utility design in support of a 15,200 SF terminal expansion to the Gainesville Regional Airport. He prepared full utility plans and permitted modifications through Gainesville Regional Utilities in order to improve existing service for the expansion, including design of a water main, lift station, and force main. He also facilitated permitting with the City of Gainesville, Gainesville Regional Utilities (GRU) and St. Johns River Water Management District (SJRWMD) for the overall project.

◊ **San Felasco Tech City**

Client: The Emory Group Companies | Year: Ongoing

Mr. Reyes designed, permitted, and provides ongoing construction administration for this mixed-use development on 82 acres along State Road 441 comprising 270,000 commercial square feet and 252 residential units, built and permitted in 4 phases.

KELLY WAGONER PE

Senior Project Manager
kwagoner@fg-inc.net | Peachtree Corners, GA

FORESITE group

BACKGROUND

Kelly is a registered professional civil engineer and Senior Project Manager with over 28 years of experience managing a wide range of development projects across the Southeast and Midwest. His expertise spans proposals and contracts, project and subconsultant management, feasibility studies, concept planning, design, permitting, and construction administration, along with client coordination throughout all project phases. He is highly skilled in site layout and planning, hydrology studies, utility design, water quality and erosion control BMPs, SWPPP preparation, and cost estimating, and is responsible for full construction plan development including grading, utilities, specifications, bidding, and construction oversight. His portfolio includes industrial, warehouse, retail, transportation, and multifamily projects ranging from 1 acre to over 100 acres, including both ground-up and redevelopment work.

MATHEW B. ROOT

AIA, CRX, MBA, OAA

CEO

PROFESSIONAL BACKGROUND

Mathew first joined the firm in 1998, giving him over thirty years of experience as a Project Manager. He currently serves as the President and CEO for MJM Architects. In this role, he manages and directs the firm's various project teams on the design, production, and construction administration of both national rollout programs and the firm's more unique and specialized projects. He also acts as Architect of Record on multiple projects throughout the United States.

As the principal-in-charge of several project teams, he has built long-term relationships with many nationally recognized market leaders in their industries, who continue to rely on MJM as a partner to their ongoing success.

EDUCATION

Bachelor of Architecture, University of Tennessee
Master of Business Administration, University of Tennessee

CERTIFICATIONS & REGISTRATIONS

Registered and Practicing Architect in Many US States
NCARB Certified
LEED AP
(CRX) Certified Retail Property Executive

PROFESSIONAL AFFILIATIONS

Green Building Certification Institute
International Council of Shopping Centers
American Institute of Architects
Ontario Association of Architects

EXPERIENCE

CANTON TOWN CENTER, CANTON, GA

Role: Principal-in-Charge, Project Lead

Mathew was the principal-in-charge and the project lead for an 840,000-sf multiple-tenant shopping center in Canton, GA. Taking over this project from another firm during the schematic design phase, the project was on an accelerated schedule to complete the design and construction document phases to meet the previously established delivery deadlines for the major retailers in the center. Working within a jurisdiction with design requirements at odds with the tenants' desires, MJM worked closely with the Owner to develop a comprehensive design that was acceptable to all stakeholders and could be delivered on time and within budget. Construction administration services were provided throughout the project's construction phase, and all buildings were delivered to the tenants on time, avoiding delay penalties.

OKATIE CROSSINGS, OKATIE, SC

Role: Principal-in-Charge, Project Lead

Mathew served as the principal-in-charge and the project lead to create a master planning package and basis-of-design pattern book for a proposed 1,000,000 sf multi-tenant mixed-use development in Okatie, SC. MJM provided overall master planning, signage guidelines, and wayfinding and created a pattern book for the Owner that was approved by the jurisdiction to use as a guideline for all future development within the Project.

BEST BUY - VARIOUS LOCATIONS

Role: Principal-in-Charge

Mathew started his career in 1998 at MJM as a Project Manager for one of the firm's new clients, Best Buy. In the 25 years since, he has served as a Project Manager, Senior Project Manager, and Principal-in-Chargefor what remains one of the firm's largest clients. MJM provides design, construction documentation, and construction administration for Best Buy for its stores, distribution centers, call centers (Great Call), and service centers (Geek Squad) across the United States. MJM has provided services for new stores, remodels, and expansions, touching nearly half of Best Buy's stores in the United States, and Prototype design services for the various store formats over the years.

LOWE'S HOME IMPROVEMENT & BLAIN'S FARM & FLEET

Role: Principal-in-Charge

Mathew has provided services as the principal-in-charge for both the Lowe's Home Improvement team and the Blain's Farm and Fleet team through their expansion efforts, having completed more than 50 stores totaling 100,000 of each over the last 20 years.

FED-EX GROUND - VARIOUS LOCATIONS

Role: Principal-in-Charge

Mathew has served as principal-in-charge for several of the firm's Fed-Ex Ground projects. As principal-in-charge, he assists the team in the due diligence process, including code analysis and entitlements, provides quality control, and serves as Architect of Record.

KEITH L BUTTS, PE

352-258-2710
klbpe1@gmail.com

Gainesville, Florida

Professional Summary

A highly experienced Civil Engineer with more than 30 years of expertise spanning multiple disciplines, including geotechnical engineering, construction materials testing and inspections. Adept at managing complex projects, ensuring quality control, and conducting thorough testing to ensure structural integrity. Proven track record of delivering successful projects within scope, time, and budget while adhering to industry standards and safety regulations. Strong analytical snd problem-solving skills, with a deep understanding of soil mechanics, foundation design, and material behavior. Committed to innovative solutions and continuous professional development, with a reputation for fostering collaborative relationships with clients, contractors, and stakeholders.

Experience

Regional Manager, Branch Manager, UES Professional Solutions. Gainesville, FL — 2006-Present

- Responsible for the operation and oversight of multiple offices
- Creates and manages up to $6 million budgets, financial statements, and office accounts receivable and payable.
- Interviews, hires and manages employees, conducts staff reviews, and ensures effective performance management for 50 plus professional, technical and office staff.
- Oversees licensed professionals, performs engineering analysis, prepares reports and conducts quality assurance reviews of engineering reports to ensure they meet company standards and client expectations with a focus on engineering standard of care.
- Mentors young engineers and managers across four offices, providing guidance, support, and professional development to foster leadership skills and technical expertise. Creates a collaborative learning environment, helping emerging leaders navigate complex challenges, and ensuring the growth of high-performing teams. Uses effective mentorship and management strategies to develop future leaders, fostering career progression and success.
- Develops and maintains strong relationships with both public and private sector clients, while also directing and coordinating sales and business development staff to drive growth.
- Project administration and oversight including management of geotechnical explorations, construction materials testing and inspections, and environmental assessments, ensuring all projects are executed efficiently, on time, and within budget.

Regional Manager, Giles Engineering Associates, Inc., Sanford, FL — 2002-2006

- Established and grew Orlando office into a successful, multi-disciplined operation offering geotechnical, environmental, and construction testing services.
- Created and managed office budget
- Oversaw a diverse team of staff professionals, office and field personnel, ensuring efficient project execution and adherence to high-quality standards.
- Provided mentorship and guidance to young engineers, helping them develop leadership skills and advance in management roles across two additional offices.
- Played a pivotal role in fostering a collaborative, growth-focused environment while driving operational excellence and ensuring the successful delivery of services to clients.

District Manager, Branch Manager, Staff Engineer, Professional Service Industries, Inc. (PSI), Tampa, FL and Sarasota, FL — 1994-2002

- Managed Construction Services Department in Tampa
- Oversaw three additional offices providing multiple service lines, ensuring the smooth operation of all departmental functions across locations.
- Managed office and department budgets
- Reviewed and wrote engineering reports across various disciplines, ensuring technical accuracy and adherence to industry standards.
- Provided strong leadership and mentorship to staff professionals, supporting their career development and fostering a culture of excellence.
- Collaborated closely with the business development team to attract new clients, maintain strong relationships with existing clients, and drive business growth.

PROFESSIONAL SUMMARY

Professional Engineer with 19 years of experience in traffic operations, traffic signal design, and transportation planning across public and private-sector roles. Former manager of Marion County's award-winning Traffic Management Center and experienced project manager for traffic impact studies, ICE reports, long-range planning, and permitting. Principal Engineer and Founder of Optimus Traffic Solutions, providing traffic engineering throughout Florida.

WORK HISTORY

Principal - Optimus Traffic Solutions, LLC **January 2025 – Current**

- Prepared Traffic Impact Analyses for private development projects, including trip generation, distribution, and operational analysis.
- Managed quality control of city-wide traffic count program.
- Intersection planning along corridor design.

Project Manager – CHW an NV5 Company **October 2016 – December 2024**

- Prepared traffic studies including; traffic impact analyses, speed studies, Intersection Control Evaluations (ICE)
- Designed roadway improvements
- Designed traffic signals
- Prepared Long Range Transportation Plan for local government

Project Manager II – Marion County Office of the County Engineer **April 2007 – October 2016**

- Implemented and managed Marion County's award winning, $1.5M Traffic Management Center, improving corridor coordination and real-time operations
- Coordinated traffic signals along corridors
- Reviewed and approves all developer's Traffic Impact Studies and Site Plans
- Voting member of the Transportation Advisory Committee of the Transportation Planning Organization
- Designed and provides specifications for traffic signals and traffic signal modifications
- Taught Intermediate Level Maintenance of Traffic class for County Employees
- Supervised staff as Interim County Traffic Engineer
- Worked in the Stormwater Division, Asset Management Division, and Engineering Services Division as an Engineer Trainee

EDUCATION

University of Florida – Gainesville, FL 12/2006
Bachelor of Science: Civil Engineering

LICENSES

Professional Engineer (PE) – FI No. 74607, 2012

SKILLS

Proficient with Synchro/SimTraffic, HCS, Bluebeam, FDOT ICE, FDOT standards, MUTCD, ATMS/TMC operations, Traffic Signal Design and Timing, and MS Office

PROFESSIONAL AFFILIATIONS

Institute of Transportation Engineers (ITE)

Randy K Wacha

Project Manager

Expertise Environmental Due Diligence for Real Estate Transactions

Academic Background A.A. Degree, General Education, Santa Fe Community College, Gainesville, 1999

Registrations N/A

Certifications EPA Accredited Asbestos Building Inspector

Experience Mr. Wacha has over 23 years of experience in the environmental, geotechnical, and construction materials testing fields. Mr. Wacha's primary responsibilities are managing and performing Phase I and Phase II Environmental Site Assessments (ESAs), asbestos demolition and renovation surveys, contamination assessments, remediations, hydrogeologic investigations, geotechnical drilling, developing and maintaining direct client contact, and/or environmental/geotechnical aspects of other activities as a project coordinator. He is currently coordinating environmental due diligence as well as work on other commercial, institutional and municipal projects. Mr. Wacha has also successfully completed the Troxler Nuclear Density Gauge Safety Training class, the American Concrete Institute (ACI) Concrete Field Testing Technical – Grade I class, the Florida Department of Transportation (FDOT) Earthwork Construction Inspection – Level I class, the Environmental Protection Agency (EPA) Asbestos Inspector Class (and yearly refresher classes), and the Occupational Safety and Health Administration (OSHA) 10-Hour Construction class and 40-Hour Hazwoper class.

Related Projects

- **Wal-Mart Site Assessments, Alachua County, FL.** Mr. Wacha served as Environmental Scientist for Wal-Mart site assessments. Duties included performing Phase I Environmental Site Assessments and monitoring well sampling activities.
- **Lowe's Site Assessment, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this Lowes Retail facility. Duties included on-site Organic Vapor Analyzer (OVA) monitoring and monitoring well development.
- **All Pro Imports, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this commercial development project. Duties included performing a Phase I ESA and Phase II activities (OVA monitoring, soil sampling, monitoring well sampling).
- **University Corners, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this commercial/residential development project located in downtown Gainesville. Duties included monitoring well sampling, monitoring well injections and a demolition/renovation asbestos survey.
- **Hatchet Creek Country Club, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this residential development project. Duties included performing a Phase I and Phase II activities (soil sampling, monitoring well sampling). Groundwater and surface water elevation monitoring activities were also performed as part of this assessment.

- **Dollar General Store, Summerfield, FL.** Mr. Wacha served as Environmental Scientist for this commercial development project. Duties included performing a Phase I ESA.
- **Enterprise Processing Center Assessments, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this commercial development project. Duties included performing Phase I ESA's.
- **Trenton Dry Cleaners, Trenton, FL.** Mr. Wacha served as Environmental Scientist for this commercial project. Duties included performing Emflux passive soil gas sampling.

Small-Scale Comprehensive Plan Amendment (SsCPA)

(Application #: PSSC26-0002)

Handout: Best Available Data & Analysis Summary

City of Alachua
City Commission
June 22nd, 2026

NV5 + eda

PN: 25-0677

Small-scale Comprehensive Plan Amendment (SsCPA)

*Commission's decision **must be based on the best Data and Analysis, prepared and also presented during the meeting,** by City Staff, its Advisory Board (PZB), and Subject Matter Experts consistent with relevant Goals, Objectives, and Policies, the LDC, and Florida Statutes.*

Application Facts

FROM:

- Community Commercial;
- Moderate Density Residential; and
- Low Density Residential

TO:

- Community Commercial
- Commercial; and
- Moderate Density Residential;

The WHY:

Redesignate, or exchange, 33.31 acres of existing urban Land Uses ***to allow a master planned site; to create, design, & promote a mixed-use community and greater consistency with City's overall adopted Comprehensive Plan.***

NV5 Beyond Engineering

CITY OF ALACHUA STAFF REPORT:

FINDINGS AND RECOMMENDATION

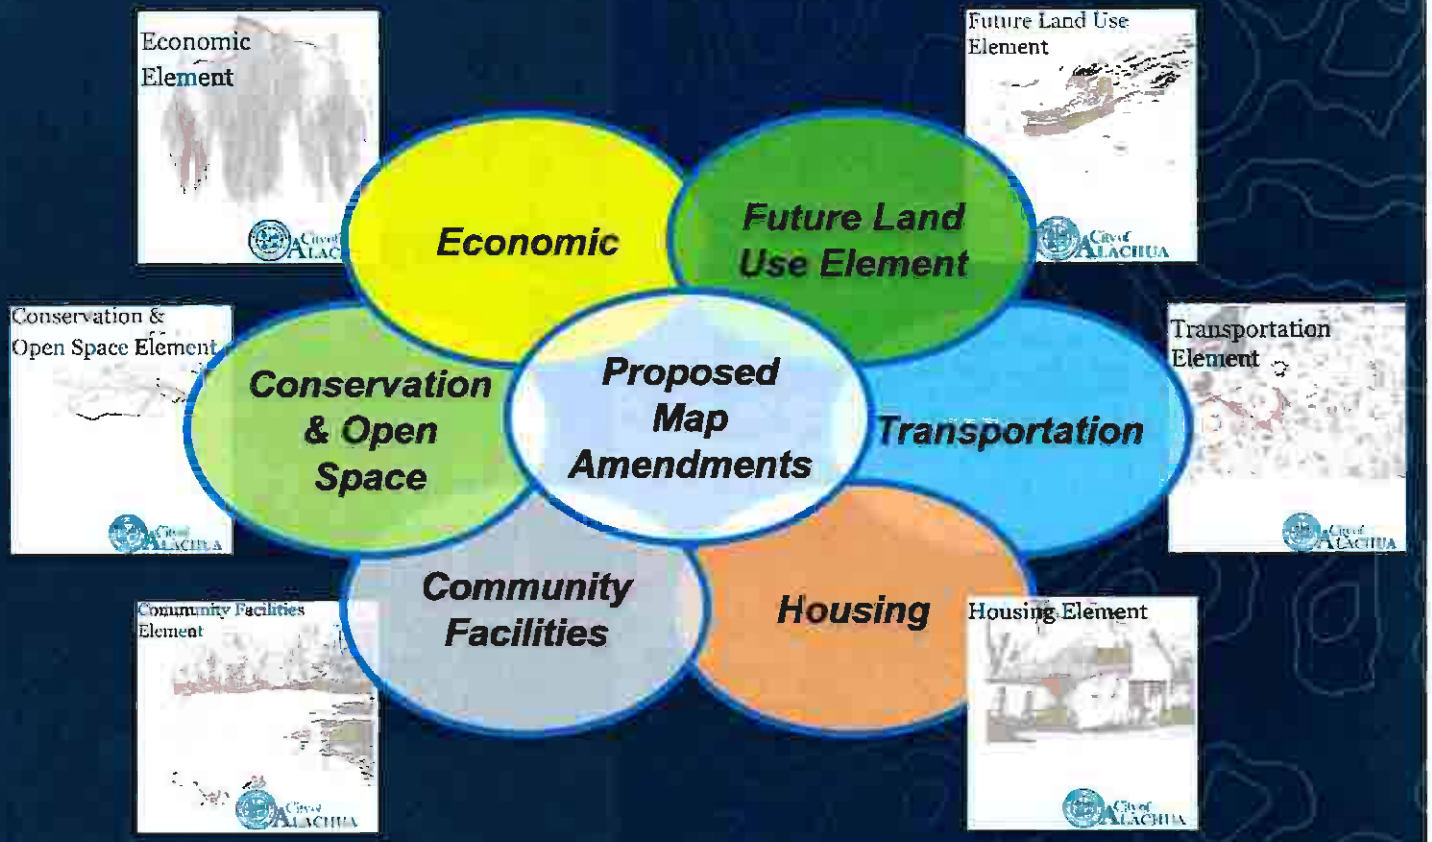
Small-Scale Comprehensive Plan *Map Amendment, 28 consistency points*

RECOMMENDATION:	Staff recommends that the Planning & Zoning Board find the small-scale Comprehensive Plan amendment for JTFA LLC to be consistent with the City of Alachua Comprehensive Plan and transmit such finding to the City Commission with a recommendation to approve.
RECOMMENDED MOTION:	*I move that, based upon the presentation before this Board and Staff's recommendation, this Board finds the application for a small-scale Comprehensive Plan amendment for JTFA LLC to be consistent with the City of Alachua Comprehensive Plan and transmit such finding to the City Commission with a recommendation to approve.*

City professional staff and the City's of Alachua's Planning & Zoning Board both find the application consistent with the Comprehensive Plan and both recommend Commission approval of the applicant's requested Small-scale amendment.

NV5 Beyond Engineering

City of Alachua
Planning & Community Development Department
Staff Report



Planning & Zoning Board Hearing Date: April 21, 2026
Legislative Hearing **Application #:** PSSC26-0001

SUBJECT:	A request to amend the City of Alachua Comprehensive Plan Future Land Use Map designation from Low Density Residential (± 20.32-acres), Moderate Density Residential (± 19.36-acres), and Community Commercial (± 7.00-acres) to Moderate Density Residential (± 6.37-acres), Community Commercial (± 10.20-acres), and Commercial (± 30.11-acres) on the subject property.
APPLICANT/AGENT:	eda consultants, inc. NV5, Inc.
PROPERTY OWNER:	JTFA LLC
LOCATION:	Generally located at 16650 NW US Highway 441.
PARCEL ID NUMBER:	03042-050-004; 03042-050-005 (portion thereof); 03046-003-000 (portion thereof)
FLUM DESIGNATION:	Low Density Residential; Moderate Density Residential; Community Commercial
ZONING:	Planned Development – Residential (PD-R); Community Commercial (CC)
OVERLAY:	N/A
ACREAGE:	± 46.68
PROJECT PLANNER:	Carson J. Crockett, AICP
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board find the small-scale Comprehensive Plan amendment for JTFA LLC to be consistent with the City of Alachua Comprehensive Plan and transmit such finding to the City Commission with a recommendation to approve.
RECOMMENDED MOTION:	*I move that, based upon the presentation before this Board and Staff's recommendation, this Board finds the application for a small-scale Comprehensive Plan amendment for JTFA LLC to be consistent with the City of Alachua Comprehensive Plan and transmit such finding to the City Commission with a recommendation to approve.*

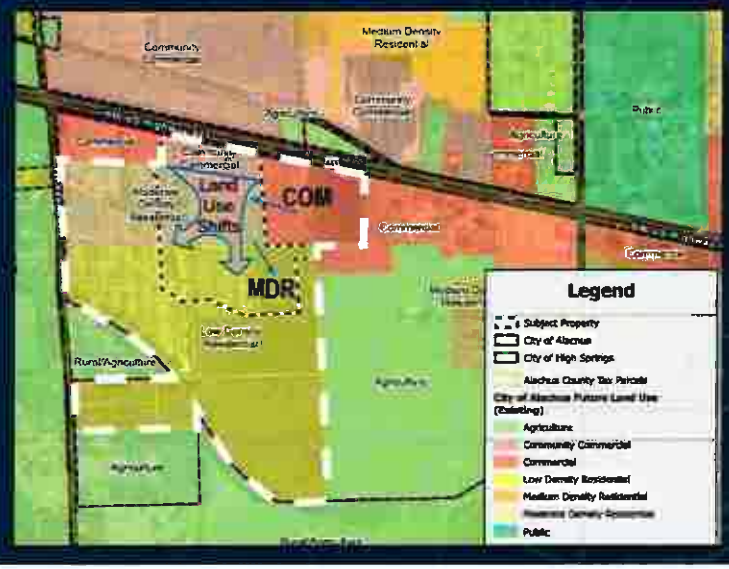
What Data & Analysis Supports Approval...

Staff Report identifies 28 consistency points

Future Land Use Element:

Goal 1: Guide development in sustainable manner, ensure economic prosperity and stability while maintaining high quality of life for all present and future citizens, businesses, and visitors.

POLICY 1.2.b: Moderate Density Residential, step down density



POLICIES 1.3.a & 1.3.b: Community Commercial / Commercial scale

POLICIES 1.3.f & 1.3.g: Development Pattern / Activity Centers

POLICY 2.7.a: Discourage the proliferation of urban sprawl

POLICIES 5.1.a, 5.1.b, 5.1.c, 5.1.d, & 5.1.e: Protection of Topography, Soils, Flood Prone Areas, Wetlands, & Habitat

- *The land has existing urban land use designations: Community Commercial, Moderate Density Residential, and Low Density Residential Classifications.*
- *The site currently is operated as a commercial nursery / tree farm.*
- *The Small-scale Comprehensive Plan Amendment, of 33.31 acres, represents less than one percent (0.1425%) of the entire City of Alachua area.*
- *Urban land use areas are exchanged, or redistributed, to create greater consistency with Comprehensive Plan's Goals, Objectives, and Policies.*
- *A logical nexus exists, as the land use area is surrounded on both sides by the same land use classification requested.*
- *The Small-scale request concentrates the requested Commercial land centrally and creates a mixed-use community, consistent with multiple Comprehensive Plan Goals, Objectives, and Policies.*
- *The request discourages linear sprawl development patterns and is consistent with Florida Statutes Chapter 163.3177 on all eight (8) urban form criteria*

FUTURE LAND USE MAP COMPARISON

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
Community Commercial	7.0	0.6 FAR (Per Ac.)[1] 15 UPA[2]	182,952 SF 105 Units
Moderate Density Residential	19.36	4 UPA	77 Units
Low Density Residential	20.32	1 UPA	20 Units
Total	**46.68**		**182,952 SF / 202 Units**

Table 2.a. Existing FLU Map

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
Commercial and Community Commercial	40.31	0.17 FAR (Per Ac.)[3] 0 UPA	298,503 SF 0 Units
Moderate Density Residential	6.37	4 UPA	25 Units
Total	**46.68**		**298,503 SF / 25 Units**

[1] FAR per Comprehensive Plan FLUE Policy 1.3.e
[2] UPA per Comprehensive Plan FLUE Policy 1.3.e
[3] FAR per proposed PD-COMM zoning for Site

Table 2.b. Proposed FLU Map

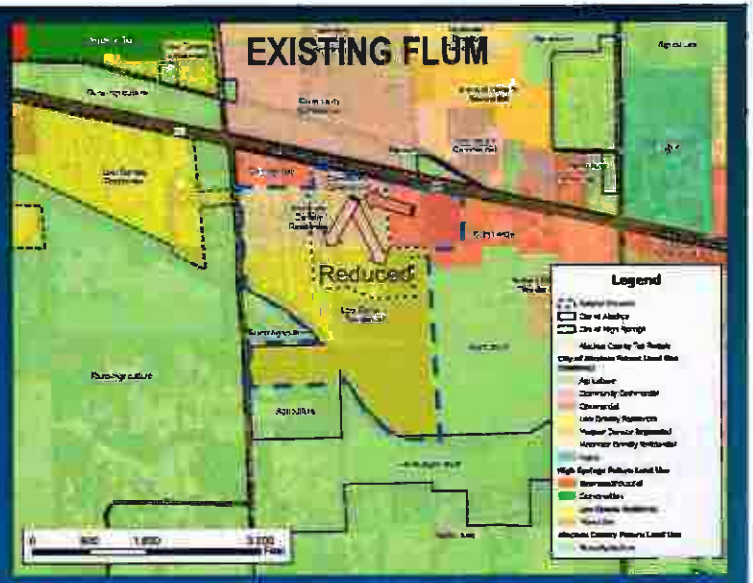
Net Change	
Non-Residential	+115,551 SF
Residential	-177 Units

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
CC & CI	27.45	0.6 FAR[1] 15 UPA[2]	717,433 SF 411 Units
PD-R	155.34	1.77 UPA[3]	275 Units
Total	**182.79**		**717,433 SF / 686 Units**

[1] FAR per Comp Plan FLUE Policy 1.3.e & LDR Table 3.1-1
[2] UPA allowed per Comp Plan FLUE Policy 1.3.e and LDR Tables 5.1-4 & Table 3.1-1
[3] UPA allowed per existing PD-R zoning

Table 3.a. Existing Zoning Map

Designation	Acreage (+/-)	Density/Intensity	Development Scenario
Planned Development-Commercial (PD-COMM)	60.76	0.17 FAR[1]	450,000 SF
Planned Development-Residential (PD-R)	122.03	1.66 UPA	203 Units
Total	**182.79**		**450,000 SF / 203 Units**



[1] FAR per proposed PD-COMM zoning for Site

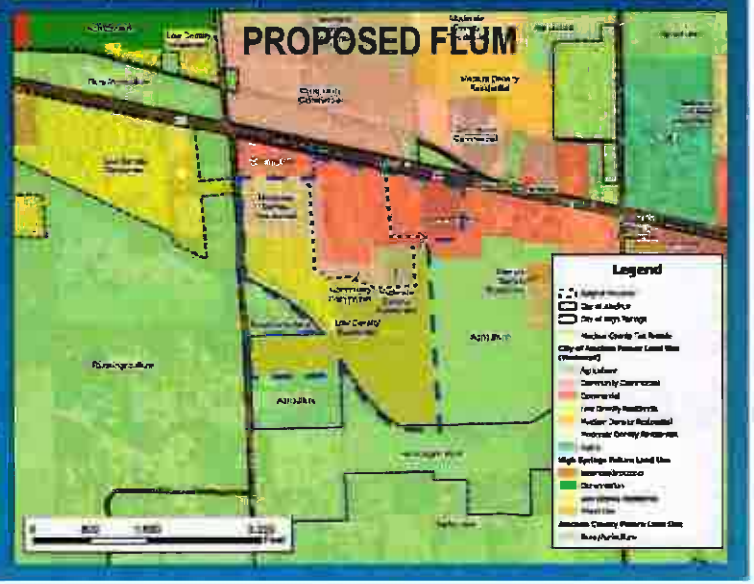


Table 3.b. Proposed Zoning Map

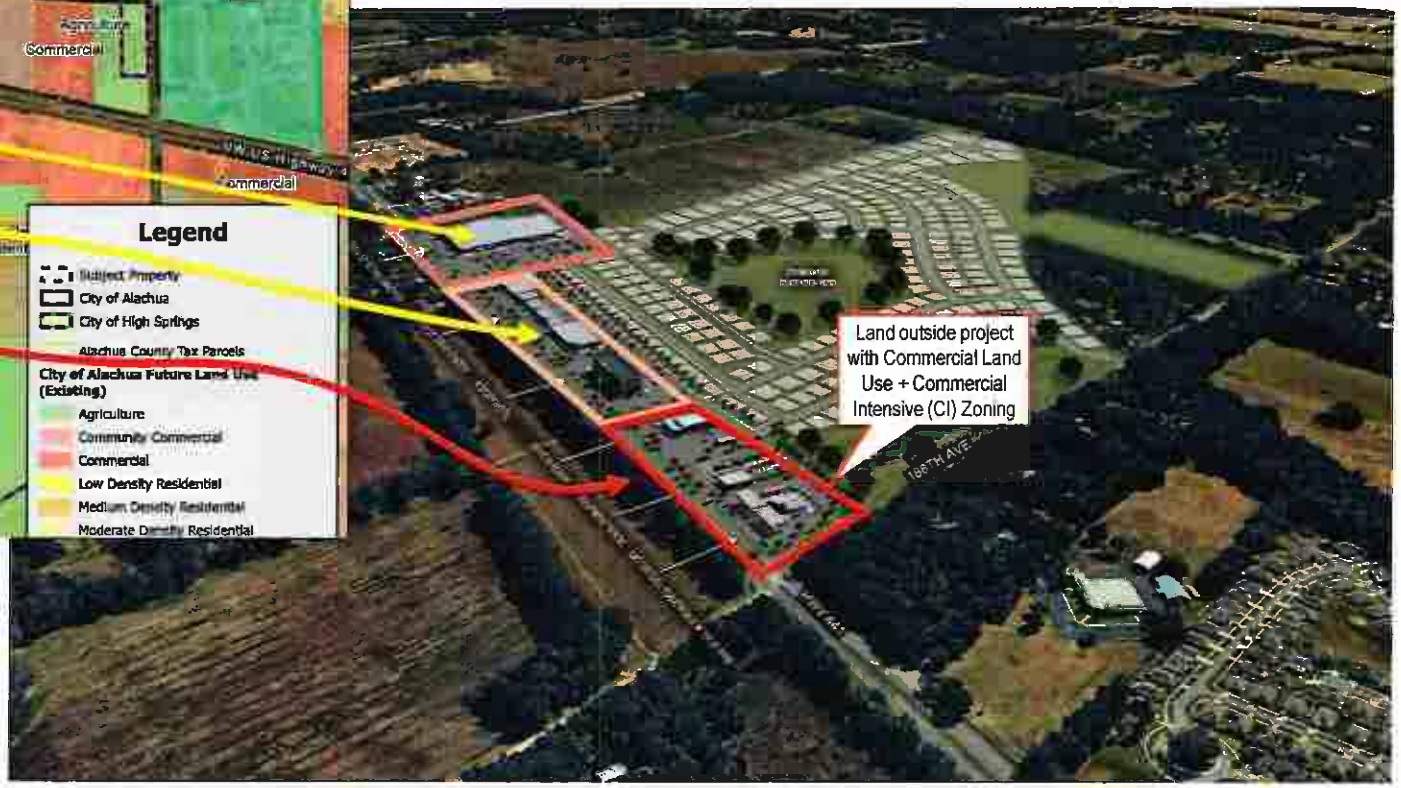
Net Change	
Non-Residential	⇒267,433 SF
Residential	⇒ -483 Units

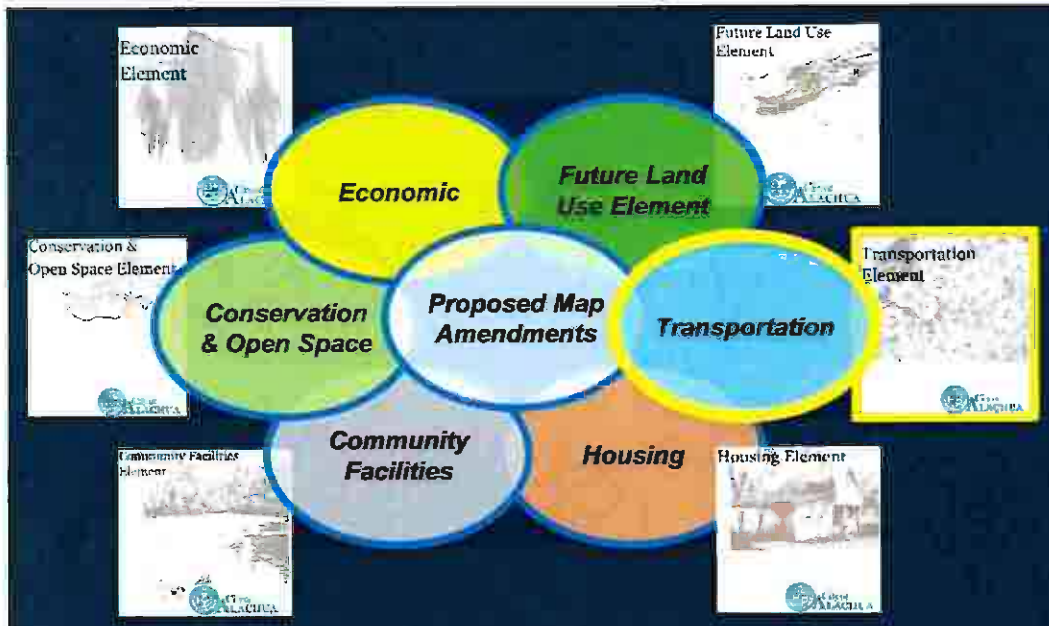
Even though Community Commercial and Commercial Future Land Use Map land areas are slightly increasing within the project area, as the two residential areas are reduced & relocated within the site and City, ***the companion PD Rezoning applications cap allowed residential dwellings and non-residential square footage below the by right Future Land Use Map classifications allowances for density / intensity.***

This underscores the fact that piecemeal development has far greater impact than a mixed-use master planned project, as supported in City's Compressive Plan.



NV5 Beyond Engineering

What By-Right Development would look like.



The existing Future Land Use Map contains more intensity than the proposed project seeks, but in a linear strip pattern along US Highway 441 corridor.

The small-scale request concentrates land use areas, creates transitional density buffering, and has greater consistency with the City's adopted Comprehensive Plan by creating a mixed-use community.

RISE PARTNERS

Transportation Element:

OBJECTIVES 1.1 & 1.2: Safe, Convenient, & Efficient / Access Management.

POLICIES 1.4.b & 1.4.e: Sidewalks / Multi-modal land use mix

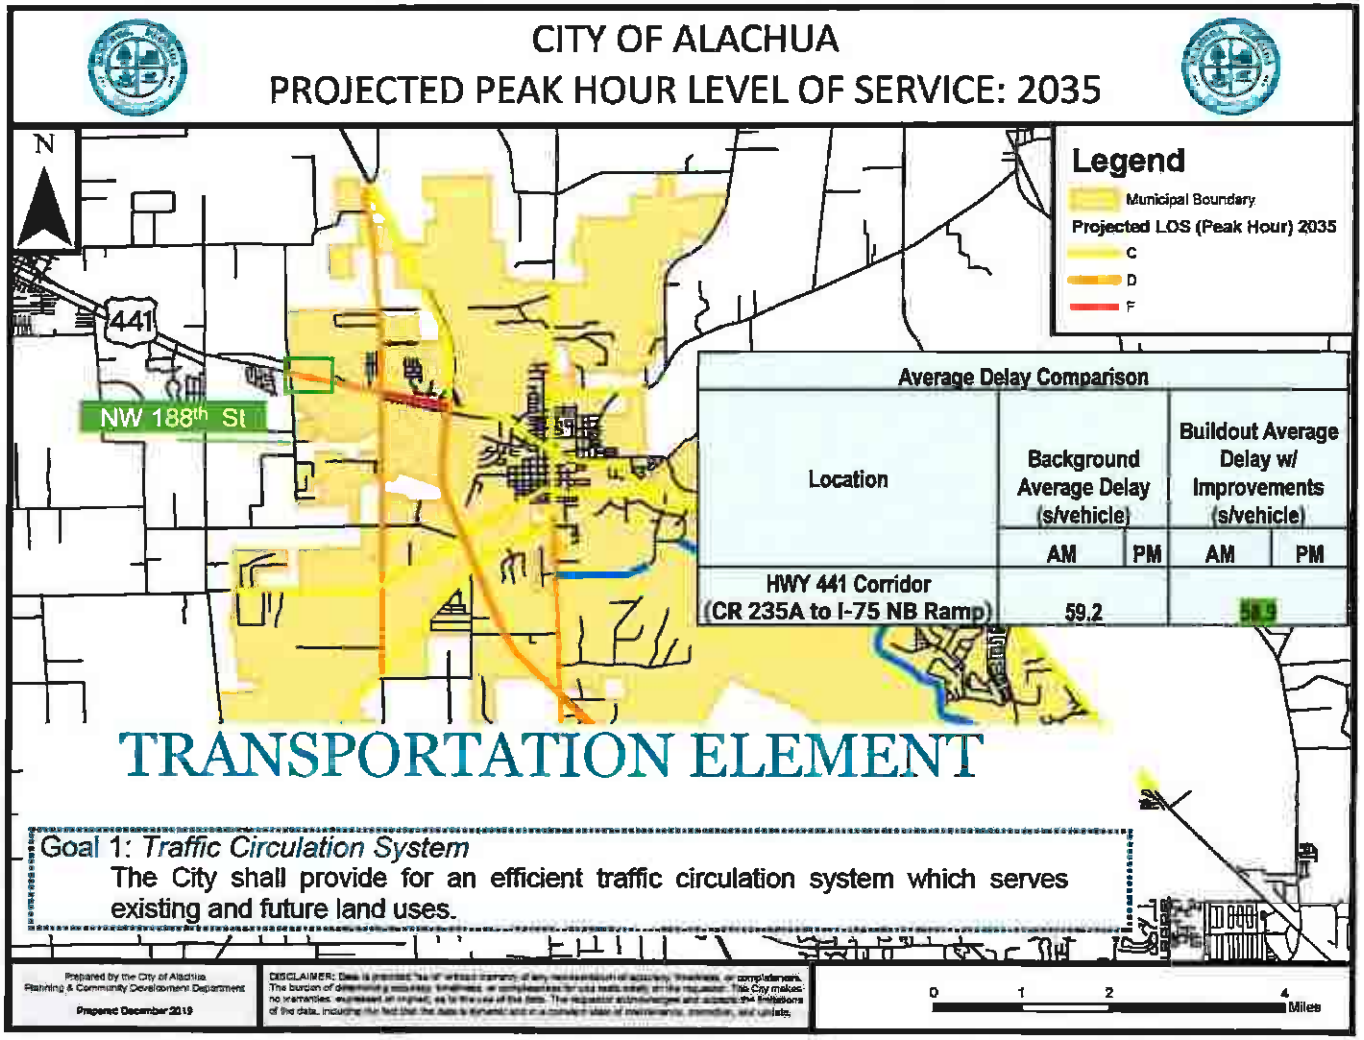
Master Planning Benefits

- *Retains commitment* to keep NW 188th Street emergence access only.
- *Creates dedicated interconnectivity* for non-non-motorized to rear residential via multi modal paths.
- *Implements FDOT coordination* (traffic signal that by-right development doesn't yield, accel/decel lanes, commitment to improve traffic signal timing – all things on state roads that the City nor Commission can do today).

DATA & ANALYSIS SUPPORTING APPROVAL

Proposed Project is Master Planned Mixed-Use development, with substantial improvements to overall transportation network will be privately funded:

- *Definitive transportation enhancements to US 441 corridor;*
- *Transportation System Management projects benefiting City / County;*
- *Internal sidewalk system, with connection to abutting parcels;*
- *Initial link in Rail / Trail creation along former rail line;*
- *Extends Level of Service, improves timing on specific segments; and*
- *All improvements are provided by project, not City or State funds.*



CITY OF ALACHUA FUTURE TRAFFIC CIRCULATION MAP: 2035. Adopted December 9, 2024

The Traffic Circulation Map identifies one (1) Segment operating at LOS F by year 2035, with no State nor local plans nor projects proposed to address projected road deficiency.

Although Segment 6 reaches Level of Service F, the proposed Small-scale FLUM amendment contains numerous mobility projects on the US 441 corridor. Those projects are:

- *New signalization at project entrance;*
- *Comprehensive US 441 signal study,*
- *Onsite & offsite turn, accel, decel lanes;*
- *Sidewalks inside/outside project; and*
- *City's first rail/trail link.*

NV5 Beyond Engineering

Housing Element:

POLICIES 1.1.a & 1.1.i: Encourage variety of housing and mixed-use sites

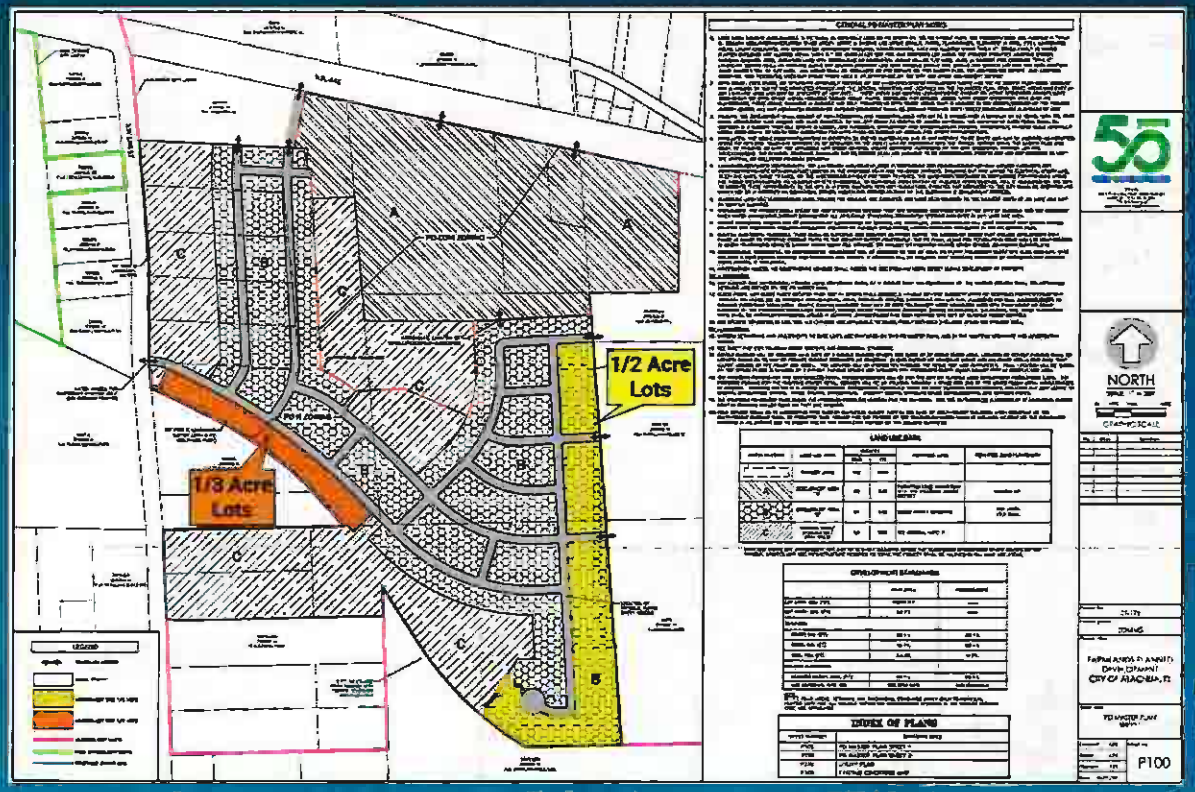
Existing project has preliminary plat and Phase 1 plans are moving forward.

DATA & ANALYSIS SUPPORTING APPROVAL

Proposed Project is Master Planned Mixed-Use development, with:

- *Variety of residential lot sizes, encouraging housing options;*
- *Interconnected sidewalks and trails, both internally & externally;*
- *Interconnected streets, both internally & externally; and*
- *Neighborhood-scaled amenities for residents and their guests.*

United States Census Bureau



BEBR Bureau of Economic and Business Research

Zillow

FLORIDA HOUSING COALITION

Best Available Data & Analysis utilized to document housing need and community growth

Housing Element Information

Beyond Engineering

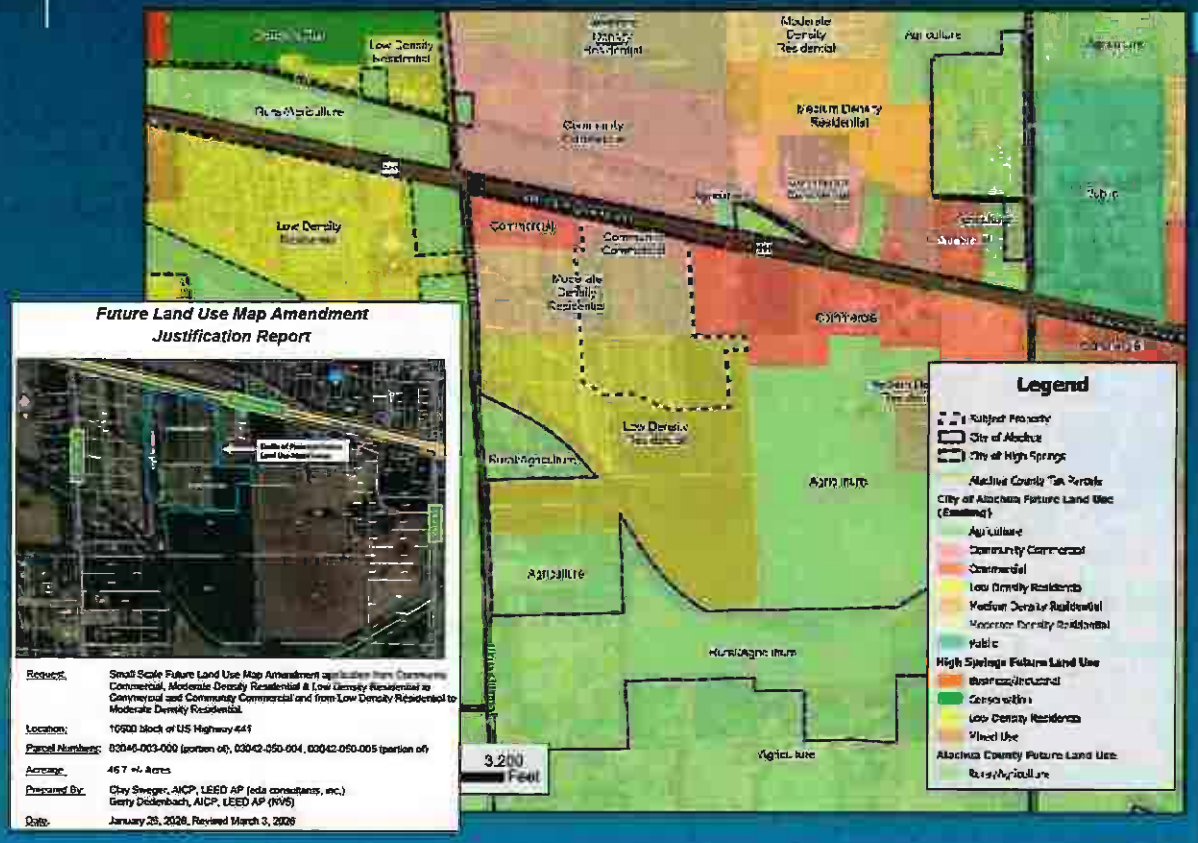
Summary Points

- ***Project retains all commitment to original PD*** *zoning master plan promises.*
- ***Proposed residential pattern is consistent with and typical*** *for this area of Alachua, and abutting existing approved and occupied developments within the City and High Springs.*
- ***Project adds need housing stock,*** *with lot sizes larger than seen in many other City projects.*
- ***Both Land Use and Planned Development Zoning creates a density gradient transition*** *from commercial to abutting and adjacent residential properties. Perfect balance of adding needed housing and doing it sensitive to surrounding context.*

DATA & ANALYSIS SUPPORTING APPROVAL

Proposed Master Planned Mixed-Use development, :

- *The City has adequate Potable Water & Sanitary Sewer capacity to fully serve project;*
- *Project will be permitted and regulated through:*
  - *City of Alachua;*
  - *Suwannee River Water Management District;*
  - *Florida Department of Transpiration; and*
  - *Florida Department of Environmental Protection.*



Community Facilities Element:

POLICIES 1.2.a, 4.1.b & 5.1.a: Public Utility & High Aquifer Recharge

Project results in a net reduction in both potential residential units and non-residential sq. ft. upon the property.

In addition, the project will introduce a signalized intersection and include Transportation System Management (TSM) projects/strategies along the US Highway 441 Corridor in coordination with the Florida Department of Transportation

Community Facilities Element

NV5 Beyond Engineering

Summary Points

- *Land within project site already has urban map designations.*
- *Potable Water & Sanitary Sewer utilities available* ***to serve the property.***
- ***Existing water main on NW 188th St, which underscores fact*** *project is not urban sprawl.*
- *Project will result in higher environmental / stormwater regulations and monitoring* ***than commercial agriculture operation.***
- ***Scientist reviewed site and proposed project*** *does not create concern with former landfill site.*
- *Master planned project can coexist and be compliment Alachua's Main Street downtown* ***by contrasting offerings and local options for specialty retail and service offerings.***

Conservation & Open Space Element:

OBJECTIVE 1.3: No Listed Species

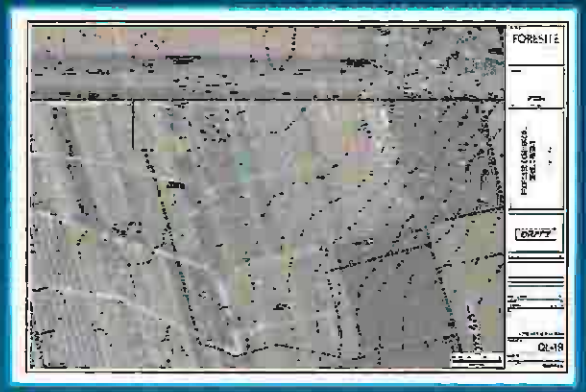
POLICIES 1.3.b, 1.3.d, & 1.3.e: Identify and protect species, Inventory

POLICIES 1.4.f, Promote mixed-use development

OBJECTIVE 1.7: Identify, protect, and conserve significant geological resources and natural function

OBJECTIVE 1.10 Wetlands

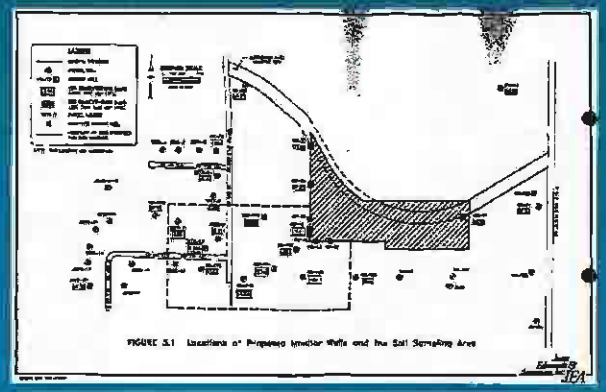
DATA & ANALYSIS SUPPORTING APPROVAL



Proposed Project is Master Planned Mixed-Use development, with:

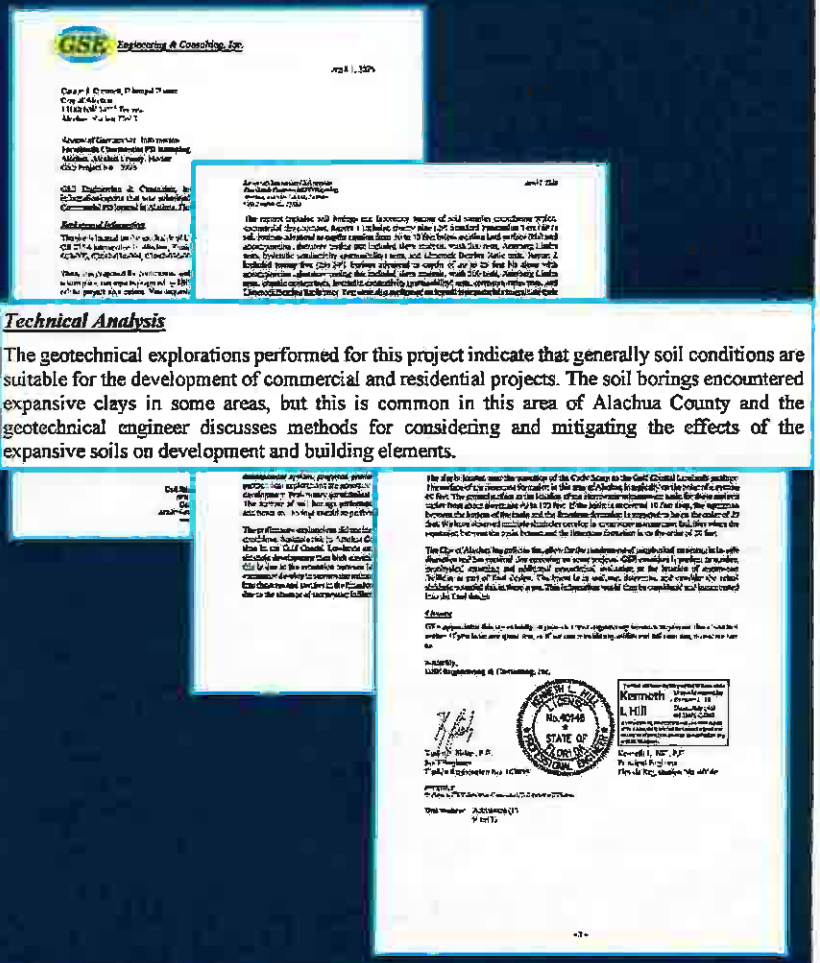
- *Geotech data that supports urban development form & pattern;*
- *No evidence of floodplain, sinkholes, ecological, environmental hazards;*
- *Water consumption lower than commercial agricultural uses.*
- *Stormwater Management Facilities permitted by Water Management District, Best Management Practices (BMPs) ensure aquifer recharge;*
- *No Superfund Site present in City of Alachua (1 in Gainesville); and*
- *No evidence of former Alachua County Landfill affecting property;*

Master Planning Benefits



- *Provides unified stormwater, with tighter controls* ***through Water Management District.***
- *Creates dedicated interconnectivity* ***for non-non-motorized to rear residential via multi modal paths.***

Applicant conducted Geotech analysis, additional review will occur during site plan process. No offsite contamination.



- *60 soil borings at depths of up to 40' have been conducted.*
- *Site deemed suitable for Urban Development, comparable with other developed land in immediate context area (Santa Fe Ford, Impact Family Church)*

- *Only one superfund site exists in Alachua County, in Gainesville.*
- *No evidence of contamination exists on property nor reason to believe site would affect former landfill and proximate properties.*

City's expert affirms soils suitable for proposed uses in City of Alachua

GSE Engineering & Consulting, Inc.

Technical Analysis

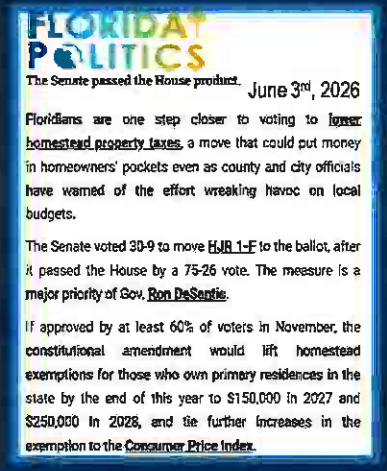
The geotechnical explorations performed for this project indicate that generally soil conditions are suitable for the development of commercial and residential projects. The soil borings encountered expansive clays in some areas, but this is common in this area of Alachua County and the geotechnical engineer discusses methods for considering and mitigating the effects of the expansive soils on development and building elements.

Kenneth L. Hill No. 40746 STATE OF FLORIDA

NV5 Beyond Engineering

Economic Element:

Objective 1.6: *Mixed Use, Workforce Housing*



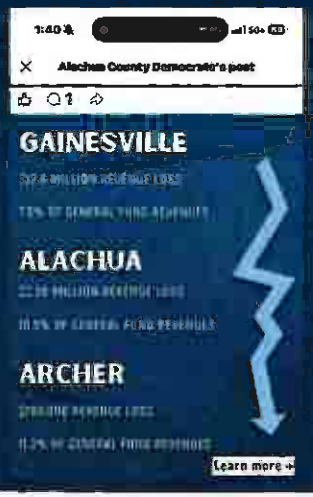
The City shall encourage the development of quality workforce housing, proximate to employment locations, at affordable prices to create opportunities for corporate investment in the City of Alachua. In order to accomplish this goal, the City of Alachua may, by way of illustration, but not by way of limitation:

Policy 1.6.a: Create inventory of parcels [illegible] and multi-family [illegible]

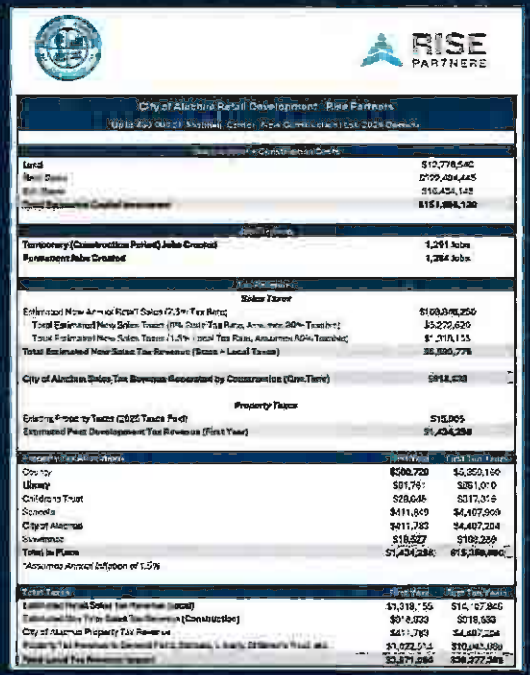
Policy 1.6.b: Consider a mix of owner-occupied and rental housing for employees that will maintain the neighborhood character and community fabric.

Policy 1.6.c: Allow single-family and multi-family residential housing in close proximity to employment centers within appropriate land use categories and zoning districts.

Policy 1.6.d: Encourage planned neighborhoods that have amenities such as sidewalks and other recreational opportunities that achieve walkable communities in close proximity to employers.



FLORIDA POLITICS



The Senate passed the House product. June 3rd, 2026

Floridians are one step closer to voting to lower homestead property taxes, a move that could put money in homeowners' pockets even as county and city officials have warned of the effort wreaking havoc on local budgets.

The Senate voted 30-9 to move HJR 1-F to the ballot, after it passed the House by a 75-26 vote. The measure is a major priority of Gov. Ron DeSantis.

If approved by at least 60% of voters in November, the constitutional amendment would lift homestead exemptions for those who own primary residences in the state by the end of this year to $150,000 in 2027 and $250,000 in 2028, and tie further increases in the exemption to the Consumer Price Index.

Ad Valorem Increase

Economic Development Consideration

Total number of homesteaded properties in City of Alachua	3,152
Total Assessed Value of those properties in City	$616,694,929
Total number of homesteaded properties in City with assessed values greater than $250,000	827
Total Assessed Value of those properties	$279,996,367
Proposed Homestead Exemption impact (827 x $250,000)	$206,750,000
Total Remaining Assessed Value	$73,246,367
Reduction in Assessed Value of Homestead properties	-$543,448,562
City of Alachua Millage Rate (2025-2026)	6.25
Ad valorem revenue reduction	-$3,396,554

Before I cast my vote tonight, I want to speak directly to the residents of Alachua and to the developer.
I have heard the concerns from our community loud and clear. I understand the worries about traffic, infrastructure, and the possibility of attracting a business that may not align with the character and values that make Alachua special. These concerns are real, and they deserve to be taken seriously.
I also believe growth is inevitable. The question before us is not whether Alachua will grow, but whether we will help shape that growth in a way that reflects our values and prepares our city for the future. My responsibility as a City Commissioner is to consider the long-term interests of our community, respect the rights of property owners, and make decisions that I believe will benefit Alachua for years to come.
Tonight, I intend to vote in favor of this development proposal. That vote is not an endorsement of any specific retailer, nor is it a dismissal of the concerns I have heard from residents. It is a belief that responsible development and community values can coexist.
To the developer, I ask this: please do not view Alachua as simply another market opportunity. Take the time to understand who we are. Listen to our residents. Study our traffic patterns, support our local businesses, and consider the vision we have for our city. If you ultimately bring a retailer to this site, choose one that complements our community and serves the people who call Alachua home.
I know there are people who will disagree with my vote tonight, and I respect that. But I did not run for office to make only easy decisions or to vote based solely on what might help me win another election. I ran because I love Alachua.
For years, I have poured my heart into this community. I show up at events, walk neighborhoods, volunteer my time, coach our kids, and continuously educate myself so I can make informed decisions on behalf of our city. I hope ~~you~~ some will judge me not by a single vote, but by my years of service, my commitment to this city, and the integrity with which I make every decision.
Growth should not happen to Alachua it should happen with Alachua. I love this community enough to make difficult choices, and I will continue showing up for Alachua tomorrow just as I did yesterday.

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use

This will turn Alachua's interstate crossing of S.R. 441 to be as bad as Newberry rd.

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

CHRISTOPHER CLINE

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use

Alachua shouldn't become urban sprawl

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use

We live in this area and chose to live off-grid here for a reason. It seems you are trying to build this city up, but in doing so you are simply duplicating things that already exist elsewhere. This is a small, old, vintage town. Why not support and preserve that identity instead of bringing in huge corporate stores? Make it a more quaint and unique town. It appears that much of this development is focused around the expressway, giving travelers more reasons to exit there. But that is not needed. There are already plenty of Walmarts and big-box stores off the expressway. Many people enjoy stopping in small towns, especially when they offer charming specialty shops, mom-and-pop businesses, local restaurants, and ice cream shops. If travelers knew they could find those kinds of unique experiences within five or ten minutes of the exit, they would still come. A Walmart in Alachua is not serving those of us who live here. None of us want it. High Springs does not want stores like that in its community either.

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

Steven Schell

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use

it matters

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use

I have watched the town of Alachua change for the worse as more and more big box development and mass housing has been introduced to the area. Please don't make it any worse.

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur.
Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

From where will the water come to support more sprawl?Recently our area has been in a significant rainfall deficit - and with climate change less rainfall may well become the norm.
It never ceases to amaze me that municipalities continue to approve more development, more sprawl but I never hear anything about the associated increased water demand.
I'm 72 years old and have been in Alachua County since 1979. Personally, I do NOT need more people, more vehicles, more restaurants and stores, more concrete and pavement, to enhance my quality of life.
Alachua County and its municipalites seem hell-bent on turning our area into another Orlando, FL.
STOP IT - STOP IT NOW!

Dear Mayor, Commissioners, and City Staff,

Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur.
Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use

I don't live in Alachua, but this affects the county and the state!

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur.
Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.

July 24, 2026

Ms. Michele Lieberman, ICMA-CM, CPM
County Manager
Alachua County
12 SE 1st Street
Gainesville, FL 32601

Re: The Farmlands – Response to County Affected Party Correspondence

Dear Ms. Lieberman:

As agents representing the applicant for The Farmlands Planned Development (PD) application, we appreciate and acknowledge Alachua County's review of the proposed project and your interest in ensuring the continued protection of the County's adjacent property and consideration for environmental resources.

The applicant has reviewed the County's July 22, 2026 correspondence requesting that a condition of PD zoning approval be added requiring:

"submittal of an appropriate engineering and environmental study demonstrating that the proposed development activities, including the proposed stormwater management facilities, will not adversely affect the integrity of the adjacent landfill or the extent, movement, or management of the existing groundwater contamination plume."

The applicant is agreeable to the inclusion of the County's recommended condition of approval as part of the project's PD zoning approval. The scope and timing of the study will be coordinated between the developer and County staff as part of the subsequent development review process.

We appreciate the County's thoughtful comments and look forward to continuing to work cooperatively with both Alachua County staff and the City of Alachua throughout the development review process to ensure the project is designed and constructed in a manner that protects surrounding properties and environmental resources.

Thank you again for your review of the application and continued interest in the project.

Sincerely,

Clay Sweger, AICP, LEED AP
eda

Gerry Dedenbach, AICP, LEED AP

Subject: Postpone Farmlands Rezoning—Investigate the Risks Before Approving Irreversible Development

Dear Mayor Welch and Commissioners:

On behalf of the Sierra Club Suwannee–St. Johns Group, we respectfully request that the City Commission postpone consideration of the Farmlands rezoning and conduct a properly noticed second reading of the associated Future Land Use Map amendment before taking any further action on the Planned Development.

The FLUM amendment and rezoning are inseparably connected. The rezoning depends upon the expanded commercial land-use designation approved by a narrow 3–2 vote on June 22. Before considering a rezoning that could authorize up to 454,000 square feet of commercial development and 203 residences, the Commission should ensure that the underlying land-use amendment has completed every required procedural step and received the fullest possible public examination.

The applicant should also be required to explain what material circumstances have changed since the property's earlier modification from Agricultural to Community Commercial. The applicant recently obtained that commercial designation but did not develop the property under the approved modification. Instead, it returned seeking a far larger commercial entitlement with substantially greater impacts.

Before this increased request is even considered, the applicant should demonstrate why the existing commercial designation is inadequate, what new need or changed condition justifies this escalation, and why the previously approved development opportunity was not pursued. Without such an explanation, this sequence creates the appearance that the earlier modification served merely as a foothold for obtaining a much larger and more consequential commercial entitlement.

This is not a minor procedural matter. The FLUM amendment fundamentally changes the intensity and character of development permitted along this portion of U.S. 441. A second reading would allow the Commission to consider the significant information and unresolved concerns that have emerged since the June 22 vote.

Sierra Club remains opposed to the Farmlands proposal for the following reasons:

The increased commercial entitlement has not been justified. The applicant did not act upon the property's recent modification from Agricultural to Community Commercial before seeking a substantially larger commercial designation. The record should explain what has materially changed, why the existing entitlement is insufficient, and what demonstrated community need justifies this escalation. Incremental approvals should not be used to establish a foothold and then leverage it into a development of far greater scale and impact.

The site investigation was preliminary, limited, and incomplete. Based on information presented in the record, the entire property does not appear to have been comprehensively evaluated. The test borings, wells, excavations, or other methods used to characterize site conditions also appear to have been limited in number, location, and depth. If testimony indicated that some investigations extended only approximately 20 feet, the applicant should be required to clarify exactly which investigations reached that depth and distinguish those test depths from the separate estimate of approximately 20 feet between the proposed stormwater-basin bottom and limestone. Limited sampling cannot reliably characterize conditions across a property of this size or

rule out deeper karst features, buried sinkholes, landfill materials, groundwater concerns, or contaminant pathways.

Karst and sinkhole risks remain unresolved. The applicant's investigation was preliminary, groundwater conditions were largely undetermined, and no geophysical survey was conducted to identify buried karst features. The City's engineering reviewer warned that excavation of a proposed stormwater basin could leave only about 20 feet above limestone and noted that sinkholes have developed beneath other stormwater facilities with similar separation. The absence of an identified sinkhole is not evidence that none exists when the investigation capable of detecting buried karst has not been performed.

Material site conditions were not adequately disclosed or analyzed. The nearby decommissioned landfill, EDB contamination history, groundwater-monitoring wells, reported sinkhole features, plume information, and other environmental constraints were not meaningfully addressed in the applicant's materials or staff report. These are not peripheral details. They bear directly on whether the proposed development pattern, excavation, and concentrated stormwater infiltration are safe.

The City appears to have relied substantially on the applicant's information without adequate independent verification. The applicant has a direct financial interest in obtaining approval, yet the record does not demonstrate that the applicant's environmental conclusions, site characterization, utility projections, or omissions were subjected to a comprehensive, property-wide, independent technical review. Where the submitted information is incomplete, unverified, or contradicted by other records, it cannot reasonably support definitive findings that the site is suitable and significant adverse effects are unlikely.

The proposal lacks adequate groundwater and stormwater analysis. No site-specific seasonal-high groundwater level, groundwater-flow direction, baseline water-quality assessment, complete stormwater-capacity analysis, or contaminant-transport evaluation has been provided. The record also lacks runoff calculations, required storage volumes, water-quality treatment analysis, emergency-overflow routes, and a karst-collapse contingency. Critical investigations have been deferred until after the land-use and rezoning decisions.

Wastewater capacity has not been demonstrated for the full range of permitted uses. Staff's estimated 96,150 gallons per day relies on a generic commercial-flow assumption that does not account for potentially intensive uses such as restaurants, hotels, assisted-living facilities, schools, or medical uses. The analysis also does not demonstrate downstream lift-station, force-main, collection-system, peak-flow, or treatment capacity.

The commercial development authorized is not sufficiently limited. Descriptions of a particular retailer or conceptual site plan are not binding protections. Once approved, the PD could allow a much larger or substantially different combination of commercial uses than residents have been led to expect.

Traffic impacts have not been credibly resolved. The proposal relies on questionable internal-capture assumptions and characterizes U.S. 441, a major state highway, as susceptible to "traffic calming." Residents who regularly travel this corridor understand that development of this scale could substantially worsen congestion and safety conditions.

The proposal is incompatible with the community's character and long-term vision. Expanding approximately seven acres of commercial future land use to roughly 40 acres would encourage highway-oriented sprawl and establish a damaging precedent for this largely rural gateway between Alachua and High Springs.

The burden belongs to the applicant to establish—before approval—that the substantially increased commercial intensity is justified, safe, serviceable, and consistent with the Comprehensive Plan. Promises to investigate the decisive questions later do not constitute competent, substantial evidence that the land can support the development now being authorized.

We therefore respectfully request that the Commission:

- Postpone the Farmlands rezoning hearing;
- Direct the City Attorney to explain publicly whether all required readings, notices, transmittals, and adoption procedures for the FLUM amendment have been completed;
- Schedule a properly noticed second reading of the FLUM amendment before considering the dependent rezoning;
- Allow the public to submit evidence and comment on the complete land-use record;
- Require the applicant to identify precisely which portions of the property were investigated, the number and location of all borings, wells, excavations, and other test sites, the methods used, the depths reached, and the basis for concluding that this limited investigation adequately characterizes the entire property;
- Require comprehensive, property-wide karst and hydrogeologic evaluation, including mandatory geophysical screening of proposed stormwater facilities, targeted investigation of identified anomalies, and seasonal-high groundwater measurements;
- Require independent review of the decommissioned landfill, EDB contamination, monitoring-well records, groundwater-plume information, groundwater-flow direction, and potential contaminant-migration pathways;
- Require a complete stormwater-capacity and water-quality analysis and a use-specific, maximum-demand wastewater analysis, including verification of lift-station, force-main, collection-system, treatment, and peak-flow capacity;
- Require substantive independent technical review by qualified professionals retained by or answerable to the City, rather than relying primarily upon the applicant's representations;
- Require the applicant to provide a documented explanation of what has materially changed since the earlier Agricultural-to-Community Commercial modification, why that approved opportunity was not pursued, and what demonstrated public need justifies the increased commercial acreage and intensity now requested; and
- Deny, or substantially reduce, the proposed commercial intensity unless the applicant establishes through competent, substantial evidence that the increased entitlement is justified, compatible with the surrounding community, within the City's water, wastewater, stormwater, and transportation capacity, and protective of groundwater and public safety.

What competent, independently verified evidence permits the City to approve this rezoning when the entire property has not been comprehensively investigated, the testing appears limited in scope and depth, material site conditions were not fully disclosed, no geophysical karst survey was performed, and essential environmental and utility studies remain unfinished?

A decision of this consequence deserves the most thorough examination possible. Once the expanded land-use entitlement and rezoning are granted, the City may have limited ability to correct mistakes revealed by later investigations. Alachua's residents, water resources, infrastructure, and rural character deserve careful planning—not unanswered questions followed by irreversible approvals.

The Commission should not allow a recently granted commercial modification to become merely a foot in the door for a much larger entitlement that was neither contemplated nor justified when the property first transitioned away from agricultural use. Nor should it approve the development intensity first and investigate whether the property can safely support it later.

Respectfully,

Sierra Club Suwannee–St. Johns Group
Executive Committee

Carson J. Crockett

Subject: URGENT—Affected Party Registration for July 27 Farmlands Hearing.
Attachments: plume.jpg

Good morning,
I would like to apply for affected party status for this Monday July 27th hearing at noon. My name is Celine A. Benedict. My address and tax parcel numbers are provided below. I own and reside on 15 acres on NW 188th Street near the proposed development, including 10 acres purchased for agricultural use.

I request Affected Party status because this application may directly and adversely affect my property interests, including my access, groundwater, agricultural use, expenses, health and safety.

NW 188th Street provides my regular access to U.S. 441. I use this route to travel to and from my home, agricultural property, work, my child's school and other daily destinations. The additional traffic and the proposed traffic signals and project access points described in the application would directly affect my ingress and egress. Because of my property's location and reliance on this particular access route, these impacts are more direct and particularized than traffic impacts experienced by the public generally.

In addition, the contaminated-groundwater plume map attached shows that part of my property lies within the documented plume area. I rely on groundwater and use the property for agricultural purposes. Any development-related effects on groundwater movement or contamination could therefore directly affect my water supply, agricultural work and income, and my expenses—including the potential cost of obtaining City water for agricultural use.

I am therefore not affected merely as a member of the general public. I possess specific property interests that may suffer particularized traffic, environmental, agricultural, financial, health and safety impacts from this application. I respectfully request Affected Party status so that I may present evidence and testimony, cross-examine the applicant and City staff, and offer rebuttal as permitted by the City's quasi-judicial procedures.

Please confirm receipt of this registration and its supporting materials and advise me immediately if anything further is required.

Legal name: Celine S. Assouline Benedict
Address: 14828 nw 188th st, we also own the 10 acres next to us.

Tax parcel numbers: 03883-010-003, 03883-004-000, and 03883-001-000
Contact: Realtorbenedict@gmail.com, 305-394-4772
Applying for: Affected party status for the Farmlands Commercial/Rise rezoning application.

Thank you so much,
Mrs Benedict

Sayed Moukhtara
Tara Forest LLC
7717 NW 20th Lane
Gainesville, FL 32605

Application #: PSE22-0002

RE: Geophysical Evaluation

Dear Mr. Moukhtara,

Staff is forwarding to you the attached signed and sealed recommendations of the City of Alachua's expert geologist, Michael Alfieri, P.G. of Apex Companies, LLC for the purpose of informing you that staff is in accord with these recommendations and will require completion of this recommended work prior to scheduling hearings on the pending applications for Tara April Infrastructure Plan, Tara Phoenicia Infrastructure Plan, and Tara Forrest West Phase 1 Construction Plans. The City requires this information to determine whether the proposed infrastructure plans and construction plan comply with Section 6.9 of the Land Development Code and Policy 5.1.a of the Community Facilities Element of the Comprehensive Plan.

The work consists of geophysical evaluation, geologic testing, and preparation of a Technical Memorandum. The City will require that the work be performed, signed and sealed by a Professional Geologist competent in geophysics and geologic testing, as those tasks are outlined in the attached Apex Companies, LLC recommendations. The City is willing to recommend a qualified geophysical firm and geologic drilling company should you need that assistance.

At this time, the Special Exception for Tara April is scheduled for hearing by the City of Alachua Planning & Zoning Board on January 13, 2026, commencing at 6:00 p.m. The nature of the hearing will be quasi-judicial. Please be advised that the Special Exception, if granted, will be subject to Conditions that (1) require completion of the work outlined in the Apex recommendations before the special exception development order takes effect, and (2) require potential re-engineering of the stormwater management facilities on Tara April should the results of the geophysical evaluation and geologic testing necessitate it, in the interest of public health, safety and welfare.

If you have any questions regarding the information above, please contact me at (386) 418-6122 or at br_thomas@cityofalachua.com.

Sincerely,

Bryan S. Thomas

RE: Geologic File Review for City of Alachua
Tara April, Tara Phoenicia, and Tara West Properties

Dear Ms. Boyes,

The following outlines the essential work tasks required to develop a professional geologic opinion regarding the proposed stormwater management systems and development on the Tara April, Tara Phoenicia, and Tara West properties, with specific consideration of their interaction with the karst system and compliance with City of Alachua Land Development Codes, relevant provisions of the City of Alachua Comprehensive Plan as well as regulatory standards established by the Suwannee River Water Management District.

Work Task 1. Data Compilation and Review

Project data has been provided by Holtzman Vogel. In addition to incorporating the data provided by Holtzman Vogel, Apex will undertake a comprehensive compilation and evaluation of readily available karst, hydrogeologic, and hydrologic datasets from authoritative sources, including the U.S. Geological Survey, Florida Geological Survey, Suwannee River Water Management District, Alachua County, and relevant peer-reviewed literature. This effort will include a systematic review of all files specifically associated with the proposed stormwater system project to ensure completeness and accuracy. Where existing datasets lack spatial referencing, Apex will georeference the information to enable integration into a robust Geographic Information System (GIS) platform. This GIS will serve as a foundational tool for spatial analysis, data visualization, and informed decision-making throughout the assessment process.

> ***NOTE**: As of December 19, 2025, all data provided by Holtzman Vogel has been reviewed and a GIS has been constructed. While Apex concurs with the methodology for shallow stormwater ponds as emphasized in Alachua County Land Development Codes (i.e. stormwater management) for properties situated in the unincorporated County and the Suwannee River Water Management District's Environmental Resource Permit (ERP) approved design for the subject sites, significant hydrogeologic information limitations must be resolved to provide a sound professional geologic opinion. Specifically, there is insufficient geologic data for the project area to render a defensible professional geologic opinion regarding:*
>
> - *Potential interaction between the proposed stormwater systems, development, and underlying karst geology or adjacent karst features;*
> - *The risk of contamination to the underlying aquifer, the upper Floridan aquifer, which serves as a potable water source for the region—representing a potential critical health, welfare, and safety concern; and*
> - *The long-term stability of the stormwater systems from a geotechnical perspective, including potential risks that could compromise health, welfare, and safety during maintenance activities.*

To address these uncertainties and safeguard public health and environmental integrity, Apex recommends comprehensive geophysical and geologic testing within the Tara April, Tara West, and Tara Phoenicia property boundaries. This additional investigation is essential to complete the geologic review, ensure regulatory compliance, protect groundwater resources, and mitigate potential hazards associated with the underlying karst terrain.

Work Task 2. Photolinear Evaluation

Apex will acquire and analyze historical aerial photography from the Florida Department of Transportation (FDOT), spanning multiple decades, to conduct a comprehensive photolinear interpretation. This process involves systematically examining aerial imagery to identify linear features, such as alignments in vegetation, soil tone variations, drainage patterns, and subtle topographic expressions, that may indicate underlying geologic structural controls, fractures, or zones of enhanced karst development. These photolineaments often serve as proxies for subsurface discontinuities, fault traces, or preferential groundwater flow paths, which are critical for understanding the interaction between the stormwater systems and the underlying karst system. All identified photolineaments will be digitized, compiled into a geospatial shapefile, and integrated into the project's GIS for advanced spatial analysis, correlation with hydrogeologic data, and subsequent interpretation to inform engineering and regulatory considerations.

***NOTE**: This work task will be completed by Apex before January 1, 2026.*

Work Task 3. Site Visit

Apex will conduct an on-site visit to thoroughly photodocument the project area and assess surface conditions at the proposed stormwater system site. This field reconnaissance is a critical component of karst evaluations, as it provides direct observation of site-specific features that cannot be fully captured through remote sensing or desktop analysis. The visit will allow Apex to identify indicators of karst activity, such as sinkholes, depressions, irregular drainage patterns, exposed solution features, and variations in soil and vegetation, that may influence the proposed stormwater system's performance and underlying structural stability. Additionally, the site visit enables verification of mapped data, assessment of land use impacts, and identification of potential areas of concern that warrant further investigation. Photographic documentation will support the GIS database and serve as a visual reference for subsequent interpretation and regulatory review.

***NOTE**: This work task could be completed the first week of January 2026, pending access to the applicant's property.*

Work Task 4. Geophysical Evaluation

Apex will review all available geophysical data for the project site to identify potential subsurface anomalies indicative of karst activity. Ground penetrating radar (GPR) surveys should be conducted over a precisely established, georeferenced grid to ensure spatial accuracy and comprehensive coverage. The primary objective of GPR testing is to delineate the upper surface of clay-rich sediments overlying the limestone, as these sediments often influence infiltration and structural stability at stormwater systems. It is important to note that GPR signal penetration is significantly attenuated in clay-rich zones, which can obscure deeper features; therefore, interpretation will focus on identifying depressional patterns, discontinuities, or void signatures within the radar profiles. To complement GPR, electrical resistivity imaging (ERI) should be employed in targeted areas where anomalies or depressional features are detected. ERI provides a deeper and more detailed characterization of subsurface conditions, enabling identification of zones of low resistivity that may correspond to solution cavities, conduits, or saturated voids within the limestone. This integrated geophysical approach enhances confidence in detecting potential karst hazards that could impact stormwater retention performance.
Estimate Apex Review Cost Range: $6,000.00 to $7,500.00

***NOTE**: This work task should be completed by others and reports and associated AutoCAD or shapefiles provided to Apex for review.*

Work Task 5. Geologic Testing

Apex recommends a focused, strategic approach to subsurface investigation rather than a uniform grid-based testing method. This targeted methodology prioritizes areas most likely to exhibit karst-related features, ensuring efficiency and accuracy. At a minimum, all depressional features and geophysical anomalies identified through GPR and/or ERI will be validated using invasive testing techniques such as Standard Penetration Tests (SPT) and Cone Penetrometer Tests (CPT). SPT provides critical blow-count data that correlates with relative soil density and bearing capacity, while CPT offers continuous measurements of tip resistance, sleeve friction, and pore pressure, delivering precise characterization of weak zones and anomalous subsurface conditions. These confirmatory tests are indispensable because they yield direct, high-resolution data on relative soil strength, stratigraphy, and the presence of voids or solution cavities within the limestone matrix. This level of detail is essential for identifying areas vulnerable to collapse or subsidence, which could compromise stormwater infrastructure and overall site stability. By integrating invasive testing with prior geophysical interpretations, Apex ensures that conclusions are based on empirical evidence rather than inference alone. This multi-tiered approach (i.e., combining remote sensing, electrical imaging, and physical verification) provides a robust, defensible framework for assessing karst risk, informing engineering design, and achieving regulatory compliance. **Estimate Apex Review Cost Range: $6,000.00 to $10,500.00**

> ***NOTE**: This work task should be completed by others and reports provided to Apex for review; however, Apex is able to recommend appropriate professionals to complete this work.*

Work Task 6. Technical Memorandum

At the completion of aforementioned work tasks, Apex will provide a signed and sealed technical memorandum of findings, which will include a professional geologic opinion pertaining to the proposed stormwater system. **Estimate Apex Review Cost Range: $7,500.00 to $10,000.00**

> ***NOTE**: To be completed following the completion of geophysical and geological testing.*

We appreciate the opportunity to assist with this important evaluation and remain committed to delivering a thorough, defensible geologic review that safeguards public health, environmental integrity, and regulatory compliance. Please let us know if you have any questions or require additional clarification regarding the recommended work tasks. We look forward to collaborating with the City to ensure the successful completion of this evaluation.

Sincerely,

Apex Companies, LLC

Review of Geotechnical Information
Farmlands Commercial PD Rezoning
Alachua, Alachua County, Florida
GSE Project No. 17335

GSE Engineering & Consulting, Inc. (GSE) has performed a review of geotechnical information/reports that was submitted as part of the rezoning application for the Farmlands Commercial PD located in Alachua, Florida. The remainder of this report summarizes our review.

Background Information

The site is located on the south side of U.S. Highway 441 approximately 0.5 miles west of the NW CR 235A intersection in Alachua, Florida. The site includes portions or all of Tax Parcels 03046-003-002, 03042-050-004, 03042-050-005, 03042-050-003, 03042-050-010 and 03042-051-001.

The site is proposed for commercial and residential development. You provided two geotechnical site exploration reports prepared by UES Professional Solutions (UES) that were included as part of the project application. You requested we review the reports to determine if the evaluations demonstrate the sites are suitable for single-story commercial buildings and single-family residential development, or if additional evaluation is appropriate/necessary.

Data Review

We were provided the following geotechnical engineering reports prepared by UES:

1. Preliminary Geotechnical Exploration Services, Proposed Alachua Commercial Center, US Hwy 441, Alachua, Alachua County, Florida. UES Project No. A25140.00683.005, Report No. 2160889 dated December 18, 2025 (Report 1).
2. Preliminary Geotechnical Exploration Services, Tax Parcels 03042-005/003 – US 441, Alachua, Alachua County, Florida. UES Project No. A25140.00683.005, Report No. 2162758 dated March 6, 2026 (Report 2).

GSE Engineering & Consulting, Inc.
5590 SW 64th Street, Suite B
Gainesville, Florida 32608
352-377-3233 Phone ♦ 352-377-0335 Fax
www.gseengineering.com

The reports included soil borings and laboratory testing of soil samples considering typical commercial development. Report 1 included twenty-nine (29) Standard Penetration Test (SPT) soil borings advanced to depths ranging from 10 to 40 feet below existing land surface (bls) and accompanying laboratory testing that included sieve analysis, wash 200 tests, Atterberg Limits tests, hydraulic conductivity (permeability) tests, and Limerock Bearing Ratio tests. Report 2 included twenty-five (25) SPT borings advanced to depths of 20 to 25 feet bls along with accompanying laboratory testing that included sieve analysis, wash 200 tests, Atterberg Limits tests, organic content tests, hydraulic conductivity (permeability) tests, corrosion series tests, and Limerock Bearing Ratio tests. Test were also performed on topsoil type materials to evaluate their suitability for reuse and determine fertilizer recommendations.

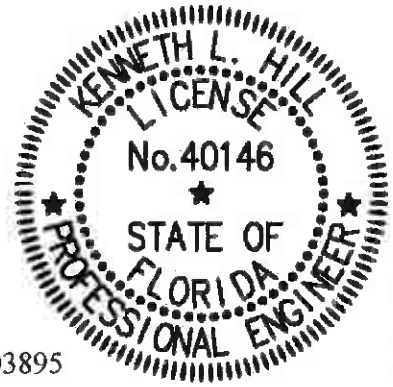
Both geotechnical explorations encountered sandy soil overlying clayey sand, sandy clay, and clay to the explored depths. Laboratory testing on representative soils indicates that some of the clays have a high risk for expansive characteristics. Limestone was encountered in one soil boring at a depth of 39.5 feet bls. Groundwater was generally not encountered within the depths explored or not determined due to the mud rotary method of advancing the boreholes.

Technical Analysis

The geotechnical explorations performed for this project indicate that generally soil conditions are suitable for the development of commercial and residential projects. The soil borings encountered expansive clays in some areas, but this is common in this area of Alachua County and the geotechnical engineer discusses methods for considering and mitigating the effects of the expansive soils on development and building elements.

The geotechnical engineer qualifies both reports as "*preliminary*" and states "***Due to the preliminary design stage of this project, building locations, structural loads, and grading information were unavailable. Therefore, it may be necessary to perform additional geotechnical services including additional test borings once the structure locations, stormwater management system, proposed grades, and structural loadings are available***". Preliminary geotechnical explorations are generally intended to screen the site for suitability of the proposed development. Preliminary geotechnical explorations are not intended to be used for final design. The number of soil borings performed for the projects are not adequate for final design and additional soil borings should be performed.

The preliminary explorations did not include geophysical screening of the site for karst geological conditions. Sinkhole risk in Alachua County is mostly related to site elevation. Lower elevation sites in the Gulf Coastal Lowlands and Cody Scarp geological regions have a higher risk for sinkhole development than high elevation sites in the Northern Highlands geological region, and this is due to the separation between land surface and the limestone formation. Sinkholes most commonly develop in stormwater management facilities due to stormwater infiltration eroding soil into fractures and cavities in the limestone formation. Sinkhole risk is reduced in impervious areas, due to the absence of stormwater infiltration.



The site is located near the transition of the Cody Scarp to the Gulf Coastal Lowlands geology. The surface of the limestone formation in this area of Alachua is typically on the order of elevation 60 feet. The ground surface at the location of the stormwater management basin for these projects varies from about elevations 90 to 100 feet. If the basin is excavated 10 feet deep, the separation between the bottom of the basin and the limestone formation is expected to be on the order of 20 feet. We have observed multiple sinkholes develop in stormwater management facilities where the separation between the basin bottom and the limestone formation is on the order of 20 feet.

The City of Alachua has policies that allow for the requirement of geophysical screening in its sole discretion and has required this screening on some projects. GSE considers it prudent to conduct geophysical screening and additional geotechnical evaluation at the location of stormwater facilities as part of final design. The intent is to evaluate, determine, and consider the actual sinkhole potential risk in these areas. This information would then be considered and incorporated into the final design.

Closure

GSE appreciates this opportunity to provide these engineering services to you on this important matter. If you have any questions, or if we can provide any additional information, please contact us.

Sincerely,
GSE Engineering & Consulting, Inc.

MERITAS® LAW FIRMS WORLDWIDE

July 17, 2026

The Honorable Walter Welch, Mayor
City of Alachua
15100 NW 142nd Terrace
Alachua, FL 32615

Re: Request for Reasonable Hearing Procedures for Pending Land Use and Zoning Applications

Dear Mayor Welch:

Our firm is assisting the applicant team in connection with PR26-0002, the Farmlands Commercial Land Use and Rezoning applications, concerning the property generally located at 16650 NW US Highway 441. We write respectfully to request that, in your role as Mayor and presiding officer, you impose reasonable time parameters for presentations during City Commission public hearings, including affected-party presentations in quasi-judicial proceedings.

At the most recent hearing for this Project, the affected-party presentation lasted approximately 1 hour and 45 minutes, nearly four times the applicant. We recognize the City's interest in providing affected parties with more speaking time than is allowed during public comment. However, allowing an affected-party *unlimited* speaking time risks doing so at the expense of the public, the applicant, and the City. Reasonable time parameters help preserve the purpose of a public hearing: to create a fair, orderly, and meaningful opportunity for the decision-maker to receive relevant information from all participants, rather than allowing the process to be overtaken by any single speaker or presentation.

The City Charter supports your authority, as Mayor and presiding officer, to impose such hearing-management measures. Section 3.05 provides that the Mayor "shall preside at meetings of the City Commission," and Section 3.08 provides that the City Commission determines its own rules and order of business. Read together, those provisions authorize the Mayor, as presiding officer, to manage the conduct of meetings, maintain order, and establish reasonable procedural limits, provided those limits are content-neutral and applied evenhandedly.

Accordingly, we respectfully request that you impose reasonable time limits for affected-party presentations. We believe a limit in the range of 10 to 15 minutes maximum would be reasonable in

most circumstances, subject to your discretion to allow additional time where necessary to preserve a meaningful opportunity to be heard.

We appreciate your attention to this issue and your efforts to ensure that City Commission hearings are conducted in a fair, orderly, and effective manner for the benefit of all participants and attendees.

Sincerely,

McGregor T. Love
Senior Associate

Alachua, FL 32615

via email: ro-valladares@cityofalachua.org

Re: Affected Party Status at the City's July 27, 2026, City Commission Public Meeting for an application known as The Hammock

Dear Manager Valladares,

The Alachua County Board of County Commissioners appreciates the City of Alachua's continued dedication to sound planning and protection of our community's shared water resources. In furtherance of these shared interests, and pursuant to Section 2.3.1 of the City's Land Development Regulations, the County hereby requests affected party status and the opportunity to present testimony and evidence for the Public Hearing to consider Ordinance 26-10, the Amendment to the Zoning Atlas and Planned Development and Preliminary Plat application for properties located at 16650 NW US 441, on the City Commission's July 27, 2026, meeting agenda. The project is also known as The Hammock.

The County is a substantially affected party due to our ownership of our adjacent property, parcel number 03876-100-000, also known as the Northwest County Landfill. This property is directly south of the proposed project. Given the proximity of the proposed development to the County landfill and associated groundwater contamination plume, the County requests that a condition be added that requires submittal of an appropriate engineering and environmental study demonstrating that the proposed development activities, specifically the proposed stormwater management facilities, will not adversely affect the integrity of the landfill or the extent, movement, or management of the existing contamination plume.

Please advise on any submittal timelines or requirements regarding affected parties for submitting proposed evidence or additional information needed prior to the hearing on Ordinance 26-10, a Zoning and Planned Development application.

If you have any questions, please contact me or Gus Olmos, County Solid Waste & Resource Recovery Department Director.

Sincerely,

Michele Lieberman,
County Manager

Terrell K. Arline's Resume.

Work Experience:

Terrell K. Arline, Attorney at Law. Statewide focus on local government, land use, administrative, and environmental law. Of counsel with Ansbacher, Law.

Theriaque & Spain. Tallahassee, Florida. Focus on land use, administrative, and environmental law. 2016-2018.

Bay County Attorney. Panama City, Florida. Represent the Bay County Board of County Commissioners in all aspects of local government law. Supervised 2 attorneys and staff. 2006-2016.

Mediator. Concentration in local government, land use, utilities, environmental, and administrative law. 2013-present.

Terrell K. Arline, Attorney at Law. Tallahassee, Florida. Operated a statewide solo practice with concentration in land use, environmental, and administrative law. Represented private and governmental clients. Appeared before all trial and appellate courts, various state and local agencies, the Division of Administrative Hearings, and local governments. 2000-2006.

1000 Friends of Florida, Inc. Tallahassee, Florida. General Counsel. Represented 1000 Friends of Florida on land use, environmental, and administrative law matters before state trial and appellate courts and the Division of Administrative Hearings. Assisted local governments and private clients on a variety of land use and environmental issues. Occasional lobbying. 1996-2000.

Department of Community Affairs. Tallahassee, Florida. Represented the Department of Community Affairs and the Administration Commission on issues regarding planning, developments of regional impact and the areas of critical state concern program. 1992-1996.

Terrell K. Arline, P.A. Palm Beach County, Florida. Represented private clients on a variety of matters, including environmental permitting, land use, zoning, professional regulation, elections, consumer, real property, construction defects, mechanics' lien, contracts and general commercial practice. 1983-1992.

Adjunct Professor. Florida State University, Urban & Regional Planning Department. Taught graduate level courses on property rights, environmental law, private property rights, and land use law. 1996 -2006. Guest lecturer, University of Florida, Urban and Regional Planning Department, and Center for Governmental Responsibility.

Education:

Legal Education: University of Florida, Holland Law Center, Gainesville, Florida. Juris Doctor. 6/80. Dean's list, Environmental Law Society, First Graduate of the Joint Degree Program in Law and Urban and Regional Planning.

Graduate Education: University of Florida, Department of Urban and Regional Planning, Gainesville, Florida. Masters of Arts in Urban and Regional Planning. 12/80. Dean's list.

Undergraduate Education. University of Georgia, Athens, Georgia (72-76). Florida Atlantic University, Boca Raton, Florida. Bachelors of Arts in History. 6/76. Dean's list, Member Historical Society

Bar Membership:

Major Reported Cases Appearing as Council of Record

Comprehensive Planning:

Martin County v. Yusem, 690 So. 2d 1288 (Fla. 1997). Core issues: denial of a comprehensive plan amendment was legislative action subject to the fairly debatable standard of review.

Minnaugh v. Broward County, 783 So. 2d 1054 (Fla. 2001). Core issues: denial of a small scale plan amendment was legislative action subject to fairly debatable standard of review.

Pinecrest Lakes, Inc. v. Shidel, 795 So. 2d 191 (Fla. 4th DCA 2001). Core issues: injunction properly issued where development order found to be inconsistent with comprehensive plan. Affirmed by Florida Supreme Court

Buck Lake Alliance v. Leon County, 765 So. 2d 124 (Fla. 1st DCA 2000). Core issues: comprehensive plan controlled over land development regulations.

Putnam County Environmental Council v. Putnam County, 757 So. 2d 590 (Fla. 5th DCA 2000). Core issues: group had standing to challenge development order for school.

Martin County v. Department of Community Affairs, 771 So. 2d 1268 (Fla. 4th DCA 2000). Core issues: annexation, data and analysis lacking for Future Area Annexation Map.

Polous v. Martin County, 700 So. 2d 163 (Fla. 4th DCA 1997). Core issues: citizens challenging development order were entitled to de novo review.

Imhof v. Walton County, 328 So. 3d 32 (Fla. 1st DCA 2022). Core issues: Development orders must be consistent with all portions of the comprehensive plan, expressing conflict with Heine v. Lee County, 221 So. 3d 1254 (Fla. 2d DCA 2017). Chapter 163 liberalizes standing requirements for actions under it and establishes a broad legislative grant of standing which the courts are not at liberty to reject.

1000 Friends of Florida, Inc. v. Department of Community Affairs, et al., DOAH Case No. 00-3041GM, January 11, 2001, Recommended Order. Core issues: annexation, intergovernmental coordination.

Department of Community Affairs, et al., v. Hamilton County, DOAH CASE NO. 91-6038GM, April 21, 1995, Recommended Order. Core issues: bio-medical waste incineration.

Environmental Permitting:

Florida Bay Initiative Inc., et al., v. Department of Transportation, et al., DOAH CASE NO: 95-5525; April 11, 1997, Recommended Order. Core issues: wetlands, secondary impacts.

Barringer, et al., v. E. Speer and Associates, Inc. et al., DOAH CASE NO. 91-2900, July 27, 1992, Agency Final Order. Core issues: marina, manatees, dredging, water quality.

Florida Wildlife Federation et al., v. Department of Environmental Regulation, et al., DOAH CASE NO. 82-1602; February 11, 1983, Agency Final Order. Core issues: dredge and fill, hydrology, estuaries.

Developments of Regional Impact:

Grand Dunes, Ltd. v. Walton County, 714 So. 2d 473 (Fla. 1st DCA 1998). Core issue: whether homeowners association had standing to object to DRI development order.

Resolution Trust Corp. v. South Miami, 633 So. 2d 1119 (Fla. 1st DCA 1994). Core issues: build-out dates, notice of proposed change, substantial deviation.

Areas of Critical State Concern:

Abbott et al., v. Administration Commission, et al., DOAH CASE NO. 96-2027RGM, final order May 21, 1997. Core issues: Florida Keys, surface water, secondary and cumulative impacts, endangered species.

Department of Community Affairs, v. Crowder, DOAH CASE NO. 92-2959DRI, March 10, 1993, Recommended Order. Core issues: Green Swamp development order and flood protection.

Power Plant Siting:

In Re: Palm Beach County Resource Recovery Project, etc., DOAH CASE NO. 85-2032; April 25, 1986, Agency Final Order. Core issues: resource recovery system, land use, power plant, air pollution.

City of Riviera Beach, et al., v. Department of Environmental Regulation, 502 So. 2d 1337 (Fla. 1st DCA 1987). Core issues: proposed resource recovery facility was a utility and not inconsistent with County's comprehensive plan.

Takings Issue:

Advisory Opinion to the Attorney General, 699 So. 2d 1304 (Fla. 1997). Core issues: Initiatives requiring that compensation for restricting real property use rejected for violating the single-subject requirement.

Palm Beach County v. Wright, 641 So. 2d 50 (Fla. 1994). Core issues: future traffic planning map was not a taking.

Martin County v. Section 28 Partnership, 772 So. 2d 616 (Fla. 4th DCA 2000). Core issues: denial of plan amendment to contain urban sprawl was not a taking.

Teitelbaum v. South Florida Water Management District, 40 Fla. L. Weekly D 1484 (June 24, 2015). Core issue: condemnation blight is not actionable under the takings clause.

Administrative Proceedings:

Royal Palm Beach Colony, L.P, v. South Florida Water Management District, et al., DOAH Case No. 98-4163RX, March 9, 1999, Agency Final Order. Core issues: secondary impacts rule was valid.

St. Johns River Water Management District v. Consolidated Tomoka Co. 717 So. 2d 72 (Fla. 1st DCA 1998). Core issues: whether rule was valid exercise of legislative authority.

City of Sarasota et al., v. Department of Transportation, 783 So. 2d 1186 (Fla. 1st DCA 2001). Core issues: PDE decision for fixed span bridge was agency action. City had standing.

Palm Beach et al., v. Department of Natural Resources, et al., 577 So. 2d 1383 (Fla. 4th DCA 1991). Core issues: agency decision that activity was exempt from permitting was agency action under Chapter 120.

Okaloosa County v. Department of Juvenile Justice, 131 So. 3d 818 (1st DCA 2014). Core issue: agency rules are invalid.

Declaratory Statements:

1000 Friends of Florida, et al., v. Department of Community Affairs, et al., 760 So. 2d 154 (Fla. 1st DCA 2000). Core issues: petitioners entitled to seek declaratory statement from agency on issue of whether water and sewer facilities need to be addressed in comprehensive plan.

Tampa Electric Company v. Department of Community Affairs, 654 So. 2d 998 (Fla. 1st DCA 1995). Core issues: whether local government could regulate location of power lines, declaratory statement not available to test this issue.

Local Government:

Bay County v. Cedar Grove, Parker v. Bay County, 992 So. 2d 171 (Fla. 2008). Core issues: issue before the Supreme Court of Florida: whether tax increment financing was constitutional.

July 24, 2026

Ms. Michele Lieberman, ICMA-CM, CPM
County Manager
Alachua County
12 SE 1st Street
Gainesville, FL 32601

Re: The Farmlands – Response to County Affected Party Correspondence

Dear Ms. Lieberman:

As agents representing the applicant for The Farmlands Planned Development (PD) application, we appreciate and acknowledge Alachua County's review of the proposed project and your interest in ensuring the continued protection of the County's adjacent property and consideration for environmental resources.

The applicant has reviewed the County's July 22, 2026 correspondence requesting that a condition of PD zoning approval be added requiring:

"submittal of an appropriate engineering and environmental study demonstrating that the proposed development activities, including the proposed stormwater management facilities, will not adversely affect the integrity of the adjacent landfill or the extent, movement, or management of the existing groundwater contamination plume."

The applicant is agreeable to the inclusion of the County's recommended condition of approval as part of the project's PD zoning approval. The scope and timing of the study will be coordinated between the developer and County staff as part of the subsequent development review process.

We appreciate the County's thoughtful comments and look forward to continuing to work cooperatively with both Alachua County staff and the City of Alachua throughout the development review process to ensure the project is designed and constructed in a manner that protects surrounding properties and environmental resources.

Thank you again for your review of the application and continued interest in the project.

Sincerely,

Clay Sweger, AICP, LEED AP

Subject: Postpone Farmlands Rezoning—Investigate the Risks Before Approving Irreversible Development

Dear Mayor Welch and Commissioners:

On behalf of the Sierra Club Suwannee–St. Johns Group, we respectfully request that the City Commission postpone consideration of the Farmlands rezoning and conduct a properly noticed second reading of the associated Future Land Use Map amendment before taking any further action on the Planned Development.

The FLUM amendment and rezoning are inseparably connected. The rezoning depends upon the expanded commercial land-use designation approved by a narrow 3–2 vote on June 22. Before considering a rezoning that could authorize up to 454,000 square feet of commercial development and 203 residences, the Commission should ensure that the underlying land-use amendment has completed every required procedural step and received the fullest possible public examination.

The applicant should also be required to explain what material circumstances have changed since the property's earlier modification from Agricultural to Community Commercial. The applicant recently obtained that commercial designation but did not develop the property under the approved modification. Instead, it returned seeking a far larger commercial entitlement with substantially greater impacts.

Before this increased request is even considered, the applicant should demonstrate why the existing commercial designation is inadequate, what new need or changed condition justifies this escalation, and why the previously approved development opportunity was not pursued. Without such an explanation, this sequence creates the appearance that the earlier modification served merely as a foothold for obtaining a much larger and more consequential commercial entitlement.

This is not a minor procedural matter. The FLUM amendment fundamentally changes the intensity and character of development permitted along this portion of U.S. 441. A second reading would allow the Commission to consider the significant information and unresolved concerns that have emerged since the June 22 vote.

Sierra Club remains opposed to the Farmlands proposal for the following reasons:

The increased commercial entitlement has not been justified. The applicant did not act upon the property's recent modification from Agricultural to Community Commercial before seeking a substantially larger commercial designation. The record should explain what has materially changed, why the existing entitlement is insufficient, and what demonstrated community need justifies this escalation. Incremental approvals should not be used to establish a foothold and then leverage it into a development of far greater scale and impact.

The site investigation was preliminary, limited, and incomplete. Based on information presented in the record, the entire property does not appear to have been comprehensively evaluated. The test borings, wells, excavations, or other methods used to characterize site conditions also appear to have been limited in number, location, and depth. If testimony indicated that some investigations extended only approximately 20 feet, the applicant should be required to clarify exactly which investigations reached that depth and distinguish those test depths from the separate estimate of approximately 20 feet between the proposed stormwater-basin bottom and limestone. Limited sampling cannot reliably characterize conditions across a property of this size or

rule out deeper karst features, buried sinkholes, landfill materials, groundwater concerns, or contaminant pathways.

Karst and sinkhole risks remain unresolved. The applicant's investigation was preliminary, groundwater conditions were largely undetermined, and no geophysical survey was conducted to identify buried karst features. The City's engineering reviewer warned that excavation of a proposed stormwater basin could leave only about 20 feet above limestone and noted that sinkholes have developed beneath other stormwater facilities with similar separation. The absence of an identified sinkhole is not evidence that none exists when the investigation capable of detecting buried karst has not been performed.

Material site conditions were not adequately disclosed or analyzed. The nearby decommissioned landfill, EDB contamination history, groundwater-monitoring wells, reported sinkhole features, plume information, and other environmental constraints were not meaningfully addressed in the applicant's materials or staff report. These are not peripheral details. They bear directly on whether the proposed development pattern, excavation, and concentrated stormwater infiltration are safe.

The City appears to have relied substantially on the applicant's information without adequate independent verification. The applicant has a direct financial interest in obtaining approval, yet the record does not demonstrate that the applicant's environmental conclusions, site characterization, utility projections, or omissions were subjected to a comprehensive, property-wide, independent technical review. Where the submitted information is incomplete, unverified, or contradicted by other records, it cannot reasonably support definitive findings that the site is suitable and significant adverse effects are unlikely.

The proposal lacks adequate groundwater and stormwater analysis. No site-specific seasonal-high groundwater level, groundwater-flow direction, baseline water-quality assessment, complete stormwater-capacity analysis, or contaminant-transport evaluation has been provided. The record also lacks runoff calculations, required storage volumes, water-quality treatment analysis, emergency-overflow routes, and a karst-collapse contingency. Critical investigations have been deferred until after the land-use and rezoning decisions.

Wastewater capacity has not been demonstrated for the full range of permitted uses. Staff's estimated 96,150 gallons per day relies on a generic commercial-flow assumption that does not account for potentially intensive uses such as restaurants, hotels, assisted-living facilities, schools, or medical uses. The analysis also does not demonstrate downstream lift-station, force-main, collection-system, peak-flow, or treatment capacity.

The commercial development authorized is not sufficiently limited. Descriptions of a particular retailer or conceptual site plan are not binding protections. Once approved, the PD could allow a much larger or substantially different combination of commercial uses than residents have been led to expect.

Traffic impacts have not been credibly resolved. The proposal relies on questionable internal-capture assumptions and characterizes U.S. 441, a major state highway, as susceptible to "traffic calming." Residents who regularly travel this corridor understand that development of this scale could substantially worsen congestion and safety conditions.

The proposal is incompatible with the community's character and long-term vision. Expanding approximately seven acres of commercial future land use to roughly 40 acres would encourage highway-oriented sprawl and establish a damaging precedent for this largely rural gateway between Alachua and High Springs.

The burden belongs to the applicant to establish—before approval—that the substantially increased commercial intensity is justified, safe, serviceable, and consistent with the Comprehensive Plan. Promises to investigate the decisive questions later do not constitute competent, substantial evidence that the land can support the development now being authorized.

We therefore respectfully request that the Commission:

- Postpone the Farmlands rezoning hearing;
- Direct the City Attorney to explain publicly whether all required readings, notices, transmittals, and adoption procedures for the FLUM amendment have been completed;
- Schedule a properly noticed second reading of the FLUM amendment before considering the dependent rezoning;
- Allow the public to submit evidence and comment on the complete land-use record;
- Require the applicant to identify precisely which portions of the property were investigated, the number and location of all borings, wells, excavations, and other test sites, the methods used, the depths reached, and the basis for concluding that this limited investigation adequately characterizes the entire property;
- Require comprehensive, property-wide karst and hydrogeologic evaluation, including mandatory geophysical screening of proposed stormwater facilities, targeted investigation of identified anomalies, and seasonal-high groundwater measurements;
- Require independent review of the decommissioned landfill, EDB contamination, monitoring-well records, groundwater-plume information, groundwater-flow direction, and potential contaminant-migration pathways;
- Require a complete stormwater-capacity and water-quality analysis and a use-specific, maximum-demand wastewater analysis, including verification of lift-station, force-main, collection-system, treatment, and peak-flow capacity;
- Require substantive independent technical review by qualified professionals retained by or answerable to the City, rather than relying primarily upon the applicant's representations;
- Require the applicant to provide a documented explanation of what has materially changed since the earlier Agricultural-to-Community Commercial modification, why that approved opportunity was not pursued, and what demonstrated public need justifies the increased commercial acreage and intensity now requested; and
- Deny, or substantially reduce, the proposed commercial intensity unless the applicant establishes through competent, substantial evidence that the increased entitlement is justified, compatible with the surrounding community, within the City's water, wastewater, stormwater, and transportation capacity, and protective of groundwater and public safety.

What competent, independently verified evidence permits the City to approve this rezoning when the entire property has not been comprehensively investigated, the testing appears limited in scope and depth, material site conditions were not fully disclosed, no geophysical karst survey was performed, and essential environmental and utility studies remain unfinished?

A decision of this consequence deserves the most thorough examination possible. Once the expanded land-use entitlement and rezoning are granted, the City may have limited ability to correct mistakes revealed by later investigations. Alachua's residents, water resources, infrastructure, and rural character deserve careful planning—not unanswered questions followed by irreversible approvals.

The Commission should not allow a recently granted commercial modification to become merely a foot in the door for a much larger entitlement that was neither contemplated nor justified when the property first transitioned away from agricultural use. Nor should it approve the development intensity first and investigate whether the property can safely support it later.

Respectfully,

Sierra Club Suwannee–St. Johns Group
Executive Committee

Carson J. Crockett

Subject: URGENT—Affected Party Registration for July 27 Farmlands Hearing.
Attachments: plume.jpg

Good morning,
I would like to apply for affected party status for this Monday July 27th hearing at noon. My name is Celine A. Benedict. My address and tax parcel numbers are provided below. I own and reside on 15 acres on NW 188th Street near the proposed development, including 10 acres purchased for agricultural use.

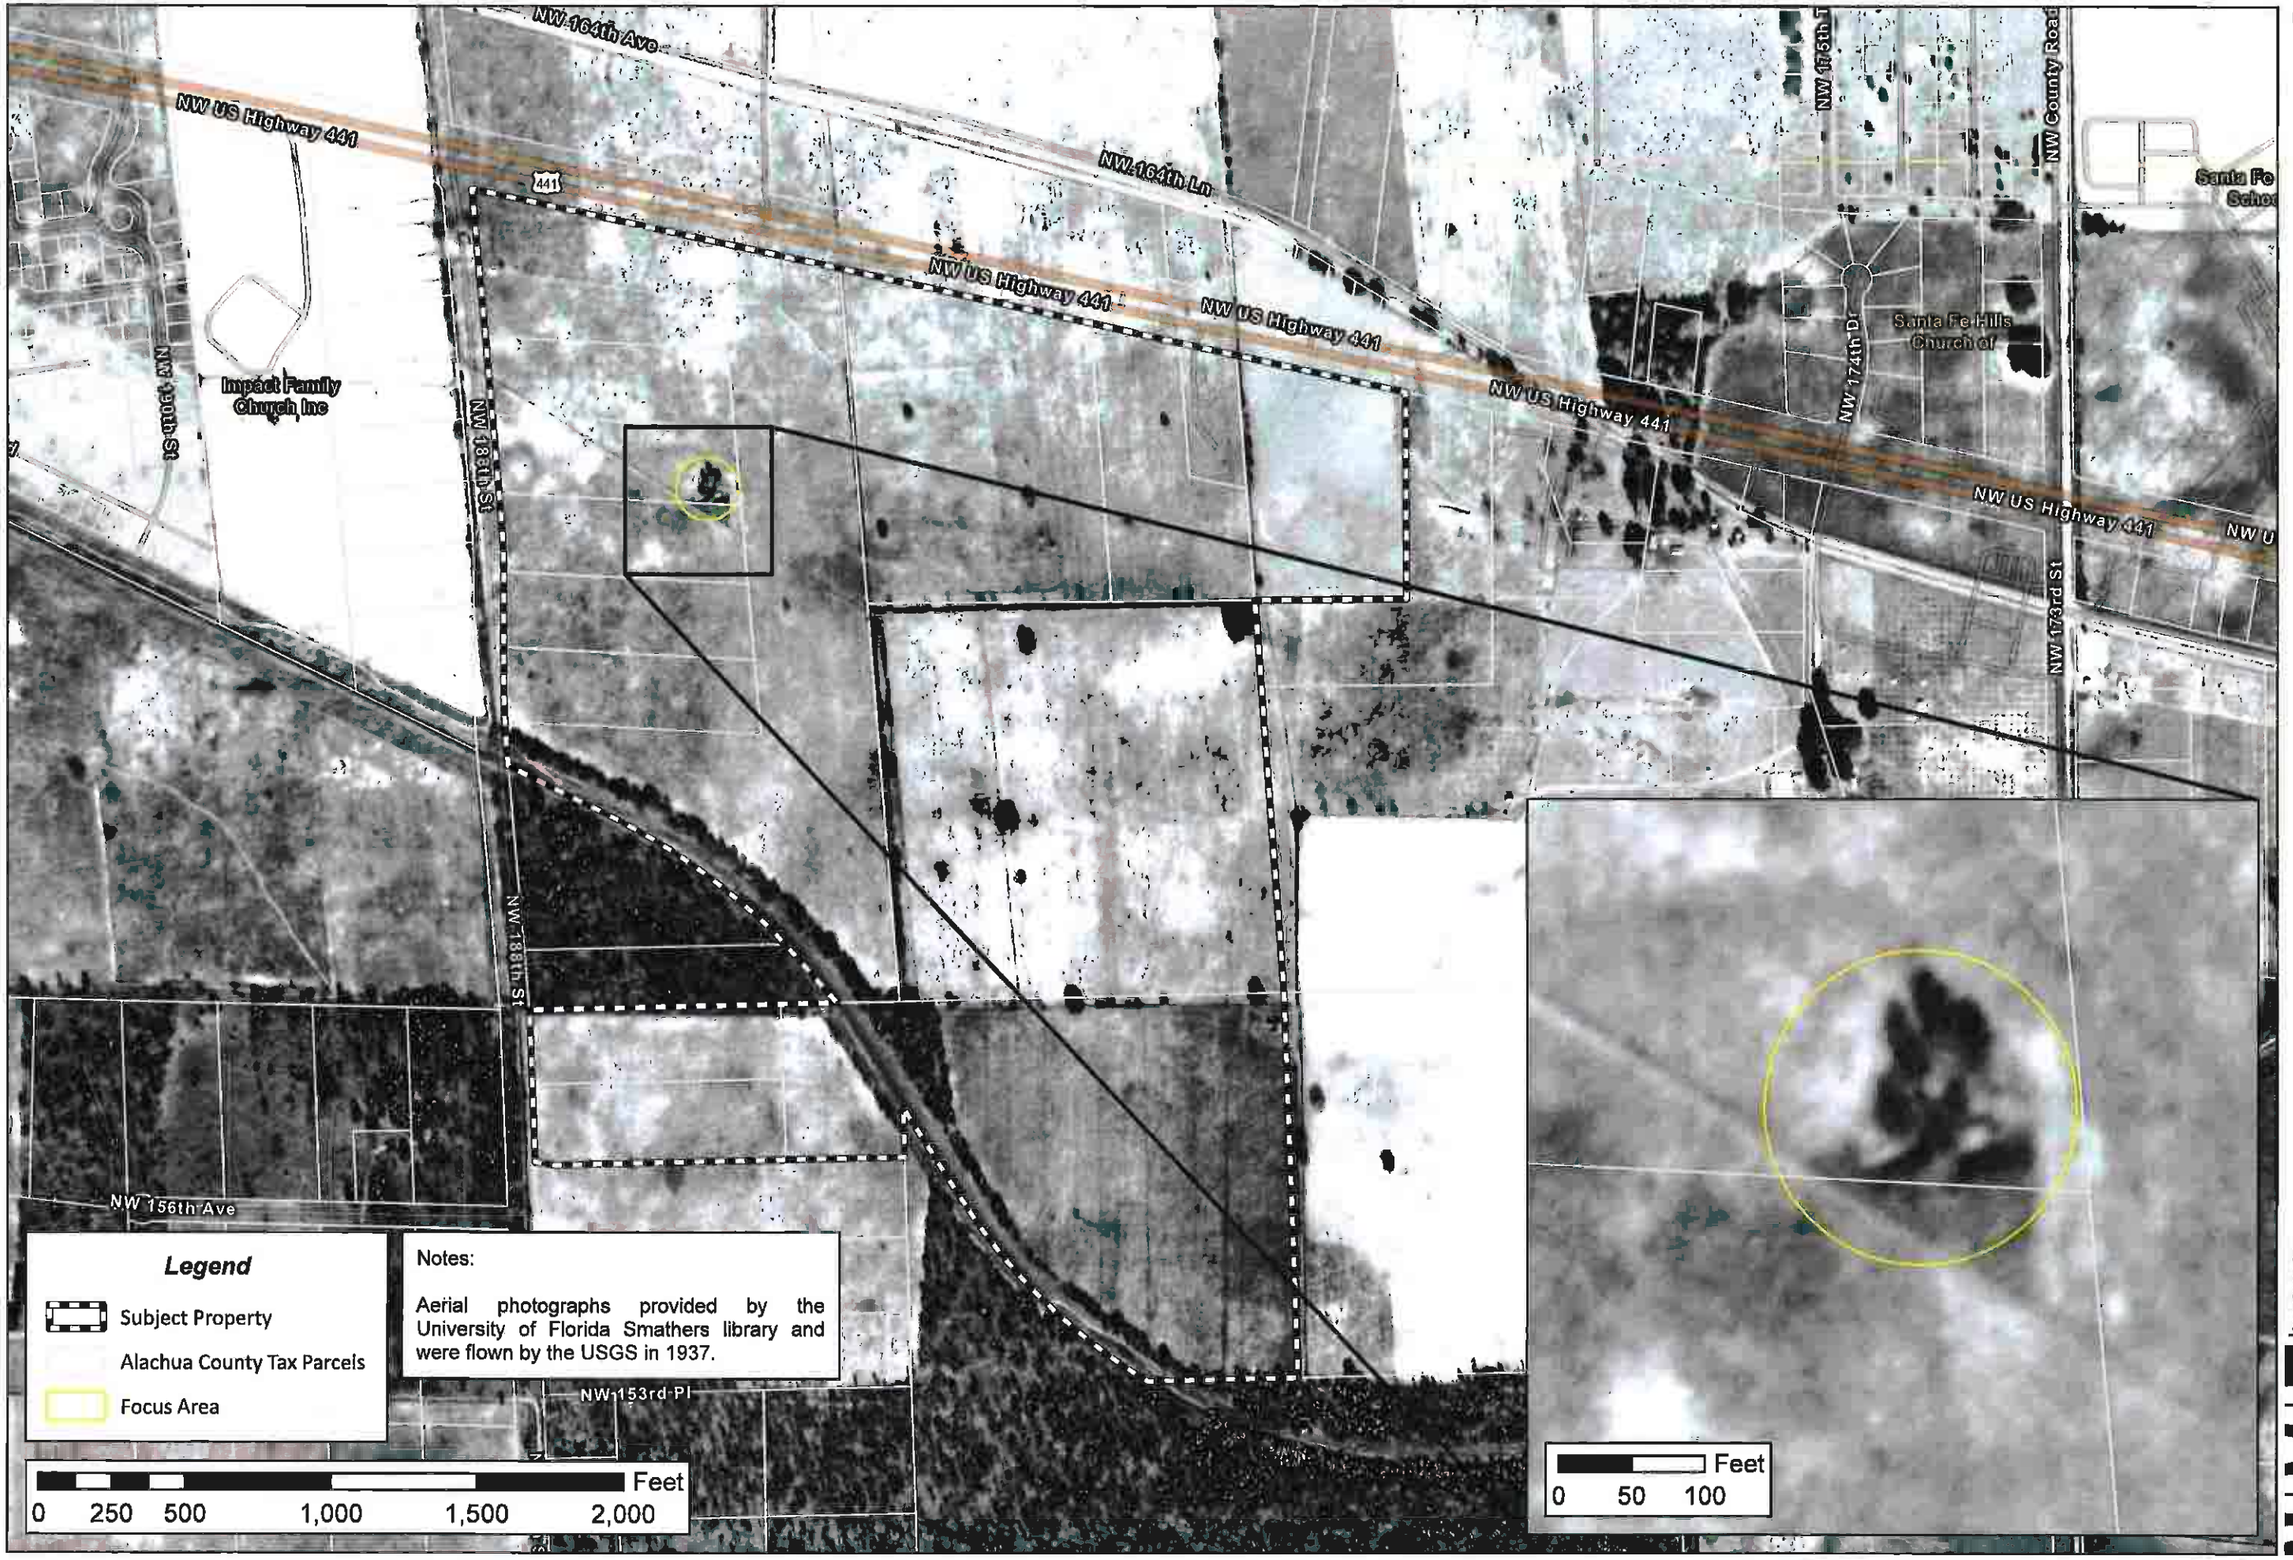
I request Affected Party status because this application may directly and adversely affect my property interests, including my access, groundwater, agricultural use, expenses, health and safety.

NW 188th Street provides my regular access to U.S. 441. I use this route to travel to and from my home, agricultural property, work, my child's school and other daily destinations. The additional traffic and the proposed traffic signals and project access points described in the application would directly affect my ingress and egress. Because of my property's location and reliance on this particular access route, these impacts are more direct and particularized than traffic impacts experienced by the public generally.

In addition, the contaminated-groundwater plume map attached shows that part of my property lies within the documented plume area. I rely on groundwater and use the property for agricultural purposes. Any development-related effects on groundwater movement or contamination could therefore directly affect my water supply, agricultural work and income, and my expenses—including the potential cost of obtaining City water for agricultural use.

I am therefore not affected merely as a member of the general public. I possess specific property interests that may suffer particularized traffic, environmental, agricultural, financial, health and safety impacts from this application. I respectfully request Affected Party status so that I may present evidence and testimony, cross-examine the applicant and City staff, and offer rebuttal as permitted by the City's quasi-judicial procedures.

Please confirm receipt of this registration and its supporting materials and advise me immediately if anything further is required.



Legal name: Celine S. Assouline Benedict
Address: 14828 nw 188th st, we also own the 10 acres next to us.

Tax parcel numbers: 03883-010-003, 03883-004-000, and 03883-001-000
Contact: Realtorbenedict@gmail.com, 305-394-4772
Applying for: Affected party status for the Farmlands Commercial/Rise rezoning application.

Thank you so much,
Mrs Benedict

Academic Background A.A. Degree, General Education, Santa Fe Community College, Gainesville, 1999

Registrations N/A

Certifications EPA Accredited Asbestos Building Inspector

Experience Mr. Wacha has over 23 years of experience in the environmental, geotechnical, and construction materials testing fields. Mr. Wacha's primary responsibilities are managing and performing Phase I and Phase II Environmental Site Assessments (ESAs), asbestos demolition and renovation surveys, contamination assessments, remediations, hydrogeologic investigations, geotechnical drilling, developing and maintaining direct client contact, and/or environmental/geotechnical aspects of other activities as a project coordinator. He is currently coordinating environmental due diligence as well as work on other commercial, institutional and municipal projects. Mr. Wacha has also successfully completed the Troxler Nuclear Density Gauge Safety Training class, the American Concrete Institute (ACI) Concrete Field Testing Technical – Grade I class, the Florida Department of Transportation (FDOT) Earthwork Construction Inspection – Level I class, the Environmental Protection Agency (EPA) Asbestos Inspector Class (and yearly refresher classes), and the Occupational Safety and Health Administration (OSHA) 10-Hour Construction class and 40-Hour Hazwoper class.

Related Projects

- **Wal-Mart Site Assessments, Alachua County, FL.** Mr. Wacha served as Environmental Scientist for Wal-Mart site assessments. Duties included performing Phase I Environmental Site Assessments and monitoring well sampling activities.
- **Lowe's Site Assessment, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this Lowes Retail facility. Duties included on-site Organic Vapor Analyzer (OVA) monitoring and monitoring well development.
- **All Pro Imports, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this commercial development project. Duties included performing a Phase I ESA and Phase II activities (OVA monitoring, soil sampling, monitoring well sampling).
- **University Corners, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this commercial/residential development project located in downtown Gainesville. Duties included monitoring well sampling, monitoring well injections and a demolition/renovation asbestos survey.
- **Hatchet Creek Country Club, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this residential development project. Duties included performing a Phase I and Phase II activities (soil sampling, monitoring well sampling). Groundwater and surface water elevation monitoring activities were also performed as part of this assessment.

- **Dollar General Store, Summerfield, FL.** Mr. Wacha served as Environmental Scientist for this commercial development project. Duties included performing a Phase I ESA.
- **Enterprise Processing Center Assessments, Gainesville, FL.** Mr. Wacha served as Environmental Scientist for this commercial development project. Duties included performing Phase I ESA's.
- **Trenton Dry Cleaners, Trenton, FL.** Mr. Wacha served as Environmental Scientist for this commercial project. Duties included performing Emflux passive soil gas sampling.

RE: Alachua County Northwest Landfill
Compliance Monitoring Report – First Semiannual 2026
FDEP Permit No. 64602-010-SO
Jones Edmunds Project No.: 01560-179-01

Dear Ms. McClure:

This report presents data from the First Semiannual 2026 sampling event at the Alachua County Northwest Landfill, conducted on January 6, 7, 8, 19, and 20 and February 5, 2026. Groundwater elevation data used to prepare the groundwater contour map were recorded on January 6, 2026. Provided in Attachment 1 are the Groundwater Elevation Data Table, Groundwater Contour Map, and Well Inspection Report.

The on-site groundwater monitoring wells were sampled and analyzed for the parameters listed in Appendix 3.4(a) of Permit No. 64602-010-SO. Off-site assessment monitoring wells were sampled and analyzed for the parameters listed in Appendix 3.4(b). The private wells were sampled and analyzed for the parameters listed in Appendix 3.4(c). Data from additional private wells not required by the permit but sampled at the County's discretion are also included in this report.

Parameters reported at or outside groundwater standards include pH, TDS, Iron, Manganese, 1,2-Dibromoethene, 1,2-Dichloropropane, Trichloroethene, and Vinyl Chloride. A summary table of these parameters is provided in Attachment 2 of this report.

Attachment 3 is a summary table of all groundwater parameters reported at or above the laboratory detection limit for this sampling event. Quality Assurance/Quality Control samples were collected and are discussed in Attachment 4. Parameter Monitoring Report forms (PMRs) are provided in Attachment 5. The original Laboratory Data including Chain-of-Custody forms and Field Data Sheets are included in Attachments 6 and 7, respectively. Attachment 8 is a historical data summary. Attachment 9 provides long-term trend graphs for selected parameters during this sampling event.

A comparison of current groundwater data to long-term concentration trends can be observed by reviewing the graphs in Attachment 9. A review of groundwater data from this sampling event and long-term trends shows that the current parameter values are generally consistent with historical ranges and trends.

Water-Quality Results

Analytical results of note from the First Semiannual 2026 sampling event include the following:

- NW-1D (Background well)
  - Manganese (92 µg/L) and Iron (8500 µg/L) were reported above their respective groundwater standards in NW-1D during this sampling event. Elevated Turbidity has been noted in this well during 6 of the last 8 sampling events (>25 NTU). The elevated Metals concentrations reported in NW-1D are likely related to the high Turbidity values.
- NW-7D
  - Manganese (62 µg/L) and Iron (5100 µg/L) were reported above their respective groundwater standards in NW-7D during this sampling event. The elevated Iron and Manganese are likely related to elevated Turbidity (206 NTU) in this well during this sampling event. Elevated Turbidity (304 NTU) and elevated Metals were also reported during the First Semiannual 2025 sampling event.
- NW-9D
  - TDS and pH were slightly outside of SDWS during this sampling event.
  - 1,2 Dibromoethane was reported just above PDWS of 0.02 µg/L at 0.035 µg/L. The value is within recent historical concentrations for the well.
- NW-10D
  - Conductivity, Chloride, and Total Dissolved Solids have increased historically in MW-10D and continued to increase during this sampling event.
  - Cis-1,2-Dichloroethene has increased historically, but appears to be stabilizing at concentrations around 40 µg/L, below the PDWS of 70 µg/L.
  - 1,2-Dichloropropane concentrations remain above the PDWS of 5 µg/L but appear to have stabilized at around 6 µg/L.
  - Trichloroethene remains above the PDWS of 3 µg/L but appears to be stabilizing at concentrations around 5 µg/L.
  - Vinyl Chloride concentrations are generally increasing, with concentrations consistently above the PDWS of 1 µg/L since 2017. The concentration during this sampling event was 3.4 µg/L.
- NW-11D
  - Manganese was reported above the SDWS of 50 µg/L in NW-11D, at a concentration of 78 µg/L during this sampling event. Manganese concentrations have been slowly increasing since 2017; however, the current value is within the historical range for this well.

ADaPT files

Final ADaPT EDD files were received from the laboratory on April 24, 2026, generating a 60-day reporting deadline of June 23, 2026. The ADaPT files were processed by Jones Edmunds and are provided as a separate .zip file with this report as required by Rule 62-701.730(8)(a), F.A.C. and the landfill permit.

Conclusions and Recommendations

Due to continuing elevated Turbidities in wells NW-1D and NW-7D, Jones Edmunds will evaluate and redevelop these wells (if necessary) prior to the Second Semiannual 2026 sampling event.

Continued semiannual monitoring according to Permit No. 64602-010-SO is recommended. If you have any questions regarding this report, please contact me at (352) 377-5821.

Sincerely,

Elizabeth D Kennelley
Department Manager

WATER QUALITY MONITORING CERTIFICATION

PART I GENERAL INFORMATION

(1) Facility Name Alachua County Northwest Landfill

Address 3.2 miles west of Alachua, FL on CR 235A

City Alachua, FL Zip _____ County Alachua

Telephone Number (352) 374-5213 (David Wood)

(2) WACS Facility ID 29653

(3) DEP Permit Number 64602-009-SO

(4) Authorized Representative's Name Elizabeth D Kennelley - Jones Edmunds Title Department Manager

Address 13545 Progress Boulevard, Suite 100

City Alachua, FL Zip 32615 County Alachua

Telephone Number (352) 377-5821

Email address (if available) ekennelley@jonesedmunds.com

CERTIFICATION

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submission of false information including the possibility of fine and imprisonment.

June 17, 2026 Elizabeth Kennelley

Alachua, Alachua County, Florida
UES Project No. A25140.00683.005 UES Report No. 2160889

Dear Mr. Berry:

UES Professional Solutions, LLC has completed a preliminary subsurface exploration at the above referenced site in Alachua, Alachua County, Florida. This preliminary Geotechnical Report is submitted in satisfaction of the contracted scope of services as summarized in UES Proposal No. 2156477v3, dated November 11, 2025. This exploration was performed in accordance with generally accepted soil and foundation engineering practices.

This Report presents the results of our field subsurface exploration and laboratory soil testing programs, and preliminary recommendations for geotechnical site preparation and foundation design and construction. These recommendations have been provided on the limited information available at the time, and once specific structure, pavement areas, grading, and other miscellaneous structure areas are known, additional geotechnical evaluation will be required.

We appreciate the opportunity to have worked with you on this project and look forward to a continued association. Please contact us if you have any questions, or if we may further assist you as your plans proceed.

Sincerely,
UES PROFESSIONAL SOLUTIONS, LLC

Alachua Commercial Center
UES Project No. A25140.00683.005
Date: December 18, 2025

EXECUTIVE SUMMARY

We have prepared this executive summary as a general overview. Please refer to, and rely on, the full report for information about findings, recommendations, and other considerations.

Project Location and Description

The first phase of proposed commercial center will contain five anchor stores ranging in base floor area between 9,042 to 55,000 square feet along with attached shops, eight outparcels, associated drives and parking areas, and stormwater management system. The project site will be located along US Highway 441 in Alachua, Alachua County, Florida. Currently, the site is mostly undeveloped and moderately wooded. We anticipate, within the building areas, a significant amount of cut (more than 10 feet) at the southeast corner of the project site at Anchor 5), and nominal fill (up to 3 feet) at the northwest corner of the project site at Outparcel 1), will be required to achieve the proposed finish floor elevation(s). Existing elevations within the project site range from approximately +88 feet to +134 feet.

Soil and Groundwater Conditions

The groundwater level was not encountered below existing grades in the soil borings at the time of the field exploration program. Fluctuations in groundwater levels should be anticipated throughout the year, primarily due to seasonal variations in rainfall, surface runoff, construction activity, and other site specific factors that may vary from the time the borings were conducted. Based on the completed soil borings, the generalized subsurface soil profile consists of very loose to medium dense sands with varying silt and clay content, underlain by medium dense clayey sands to stiff clays to the boring termination depths.

Groundwater Considerations

Groundwater levels and seasonal high groundwater levels may be affected by the proposed construction which will modify the surface and subsurface hydrology. It may be necessary to provide a permanent subsurface drainage system for some improvements to maintain the recommended separation between the perched water table and various structural elements in the building, pavement, and truck well areas. Based upon the review of U.S.G.S. data, NRCS Soils Survey, and site boring data, we estimate that the normal seasonal high groundwater level will be deeper than 6 feet below the existing land surface (bls); however, stormwater can perch on clayey sands when sandy soils are present at the surface. Perched groundwater from seasonal rainfall and irrigation may affect the proposed improvements unless positive surface gradients and avoidance of trapped water conditions are incorporated into the site design.

Site Preparation

Site preparation for the project site will consist of stripping of surficial topsoil, and clearing of trees/vegetation and their associated root systems greater than ½ inch in diameter, followed by cut and fill sections necessitating cut slopes (more than 10 feet in height). In addition selective undercut of the native in-situ expansive clays to provide a minimum of 4 feet of separation from the base of foundation footings and slab and selectively to 2 feet below the bottom of the

stabilized subgrade component of the pavement section will be required. Normal proof-rolling and compaction of exposed subgrade, and filling to grade with compacted structural fill is also expected.

Foundation Design

Retail/Anchor Stores

After successful completion of the building site preparation, we recommend a shallow foundation system for support of the proposed building. The shallow spread foundations should be designed with a maximum allowable net soil bearing pressure of 2,500 pounds per square foot (psf) provided the building pad preparation recommendations presented in Section 9.3 of this report are followed.

Outparcels

After successful completion of the building site preparation, we recommend a shallow foundation system for support of the proposed building(s). The shallow spread foundations should be designed with a maximum allowable net soil bearing pressure of 2,500 pounds per square foot (psf) provided the building pad preparation recommendations presented in Section 9.3 of this report are followed.

Pavement Design

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-effective combination of available construction materials and is less susceptible to movement from the under laying clays. Concrete pavement has the advantage of the ability to "bridge" over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. However, concrete pavement can allow water intrusion which can aggravate the expansive soils. Recommendations for both rigid and flexible pavements are presented in Section 9.5 of this report. Typically, the most prevalent flexible pavement base material in Alachua County is limerock because of its local availability. Alternative base materials may be considered.

On-site Borrow and Excavation Considerations

Excess topsoil and organic soil may be used in landscaped areas. Clay material, undercut from the building footprint and/or pavement and drive areas, will need to be hauled off site or disposed of in non-structural areas.

With the exception of topsoil, debris, undiscovered organic soils and any potentially expansive clay, some of the near surface on-site soils may be reused as structural fill, but they will require careful moisture control. Soils classified as SP, SP-SM and SP-SC which are excavated from the proposed improvement areas may be used for structural fill provided the organic content is less than 5 percent. Soils classified as SM and SC with less than 25 percent fines and less than 5 percent organic content are generally suitable for use as structural fill with the understanding that greater than normal moisture control will be required for compaction. SM and SC soils with more than 25 percent fines and Plasticity Index of 15 or less are generally not suitable for structural fill but may be used deeper than 5 feet below finished grades in pavement area fills and will require significant moisture conditioning and working to effect the recommended compaction. It should be expected that most site soils reused as fill material will require greater handling on the part of the earthwork contractor to dry and work the soils.

Potential Geotechnical Constraints to site Development

Our interpretation of the site soil and groundwater conditions is based on our general knowledge of the area, subsurface borings performed and laboratory analysis conducted. UES did identify geotechnical considerations that may impact the planned development of the site, as we currently understand it, using conventional construction practices. The identified considerations are:

1. The presence of a very loose sand layers from 0 to 10 feet below land surface in most of the borings throughout the project site that will necessitate compaction.

2. Deposits of Clayey Sands [SC] and Sandy Clays [CH] that may not be re-usable as fill in utility excavations.

3. The subgrade after deeper excavation, in some areas may include very clayey sands, which will be difficult to compact. The clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods.

4. Steep slopes will have an impact on the construction process. Measures should be taken to prevent erosion of the slope, during construction and during the life of the project. Grading shall be designed to ensure that drainage flows away from all structures, especially structures that are cut into hillsides.

5. Due to the presence of near surface clays it is important that the construction design incorporate factors to minimize water seepage around the proposed structures. Design factors may include underdrain/drainage intercepting water runoff from the slopes, and positive drainage around structures.

6. Potentially expansive clay soils. Where present, the potentially detrimental effect of the expansive clays can be remediated through site grading, over-excavation and replacement, site drainage and stiffened foundation.

1.0 INTRODUCTION

UES Professional Solutions, LLC (UES) has completed the subsurface exploration for the proposed commercial center, which will be located along US Highway 441 in Alachua, Alachua County, Florida. Our exploration was authorized by Rise Partners, and was conducted as outlined in our Proposal Number 2156477v3, dated November 11, 2025. This exploration was performed in accordance with generally accepted soil and foundation engineering practices.

2.0 PROJECT CONSIDERATIONS

The first phase of proposed commercial center will contain five anchor stores ranging in base floor area between 9,042 to 55,000 square feet along with attached shops, eight outparcels, associated drives and parking areas, and stormwater management system. The project site will be located along US Highway 441 in Alachua, Alachua County, Florida. Currently, the site is mostly undeveloped and moderately wooded.

Our office was not provided with Foundation Plans or any other construction-related information other than that discussed herein. Considering the limitations stated above and based on prior experience with structures of this type, we assumed the following structural loading conditions: ground floor slab loads not exceeding 200 psf, a maximum of 5 kips per linear feet (klf) on wall footings, and a maximum loads of 50 kips (Outparcels) to 150 kips (Retails/Anchors Stores) on individual footings.

Across the project site, the site grades range from a high of about +134 feet at Anchor 5, to a low of about +88 feet at Outparcel 1, sloping from the southeast to the northwest. We anticipate, within the structural areas, a significant amount of cut (more than 10 feet) at the northeast corner of the project site at Anchor 5), and nominal fill (up to 3 feet) at the southwest corner of the project site at Outparcel 1), will be required to achieve the proposed finish floor elevation(s).

If any of the above information is incorrect or changes prior to construction, please contact UES immediately so that revisions to the recommendations contained in this report can be made, as necessary. In order to verify that these recommendations are properly interpreted and implemented, UES must be allowed to review the final design and specifications prior to the start of construction and understands that this is part of the overall geotechnical contract.

3.0 SITE DESCRIPTION

3.1 General

The subject site is a proposed Retail Store and five outparcels located within Section 8, Township 8 South, Range 18 East in Alachua County, Florida. The approximate parcel location is presented in Appendix B.

3.2 Soil Survey

Based on the 1985 Soil Survey for Alachua County, Florida, as prepared by the US Department of Agriculture, Natural Resources Conservation Service (NCRS), the predominant soil types at the site are identified as Arredondo fine sand, 0 to 5 percent slopes (3B), Fort Meade fine sand, 0 to 5 percent slopes (5B), Gainesville sand, 5 to 8 percent slopes (35C), and Kendrick fine sand, 5 to 8 percent slopes (30C). The published general description of these soils with depth, their published range of permeability characteristics and their published range of seasonal high groundwater levels, is presented in Table 1 below.

TABLE 1
Summary of NRCS Soil Survey Information

Soil Type	Constituents	Hydrologic Group	Natural Drainage	Soil Permeability (Inches/Hr)	Seasonal High Water Table
Arredondo fine sand, 0 to 5 percent slopes (3)	0-49" Fine sand 49-54" Loamy sand, loamy fine sand, sandy loam 54-86" Sandy loam, fine sandy loam, sandy clay loam	A	Well Drained	0-49" 6.0 – 20 49-54" 2.0 – 6.0 54-86" 0.2 – 2.0	Greater than 6 feet below ground surface
Fort Meade fine sand, 0 to 5 percent slopes (5B)	0-14" Fine sand 14-85" Loamy sand, loamy fine sand, fine sand	A	Well Drained	0-14" 6.0 – 20 14-85" 6.0 – 20	Greater than 6 feet below ground surface
Gainesville sand, 5 to 8 percent slopes (35C)	0-80" Sand, fine sand, loamy sand, loamy fine sand	A	Well Drained	0-80" 6.0 – 20	Greater than 6 feet below ground surface
Kendrick fine sand, 5 to 8 percent slopes (30C)	0-24" Sand 24-29" Sandy clay loam, fine sandy loam, sandy loam 29-76" Sandy clay loam, sandy clay	A	Well Drained	0-24" 6.0 – 20 24-29" 0.6 – 6.0 29-76" 0.06 – 2.0	Greater than 6 feet below ground surface

3.3 Topography

Based on elevations obtained from the Alachua County Property Appraiser Interactive GIS Map, site grades from a high of approximately +134 feet to a low of approximately +88 feet, generally sloping from the southeast to the northwest. A reproduction of a portion of the Interactive Map for the site area is included in Appendix B.

3.4 Geology

The general geology of central Alachua County is characterized by a surface veneer of Pleistocene and Pliocene sands and sandy clays overlying the Miocene-age Hawthorn Group. The Hawthorn Group includes a highly variable mixture of interbedded quartz sands, clays, carbonates, pebbles and grains occurring with thicknesses of up to 150 feet. Underlying the Hawthorn Group is the upper Eocene age Ocala Formation, occurring as a uniform limestone, which is approximately 200 feet thick and overlies the Eocene age Avon Park Formation, which can be up to 500 feet this. Both the Ocala and Hawthorn Formations dip to the northeast by approximately one degree.

The general hydrogeology of Alachua County consists of three aquifer systems; a surficial aquifer, an intermediate aquifer, and the Floridan aquifer system. The surficial aquifer exists as an unconfined water table situated over the impermeable Hawthorn Group and is usually a subdued reflection of surface topography. The intermediate aquifer system includes all rocks that collectively retard the exchange of water between the overlying surficial aquifer system and the underlying Floridan aquifer system. Water in this system is contained under confined conditions.

The Floridan aquifer system is a thick, carbonate sequence that functions regionally as a water-yielding hydraulic unit. The direction of shallow groundwater flow is generally toward surface water bodies. The potentiometric surface map of the upper Floridan Aquifer suggests groundwater elevations, outside perched zones, on the order of +30 to +40 feet, NGVD in the general site area.

4.0 PURPOSE AND SCOPE OF SERVICES

4.1 Purpose

The purposes of this exploration were:

- to explore and evaluate the subsurface conditions at the site and note potential geotechnical considerations that may affect the proposed design, construction, or serviceability of the proposed improvements,
- to provide preliminary geotechnical engineering recommendations for site preparation, pavement and foundation design parameters, and stormwater soil design parameters.

4.2 Scope of Service

A compilation of the services conducted by UES to date for the subsurface exploration program are as follows:

- Advancing twenty-nine (29) Standard Penetration Test (SPT) borings in the proposed building, parking and stormwater management areas to depths of 10 to 40 feet below existing land surface (bls).
- Analyzed previous soil boring data from six (6) SPT borings to depths of 15 feet, in the design of the stormwater pond. Boring data from a previous geotechnical exploration was provided in RFP documents,
- Performed two (2) Double-Ring Infiltrometer (DRI) tests within the proposed stormwater management area.
- Securing samples of representative soils found in the soil borings for laboratory analysis and classification by a member of our geotechnical staff.
- Measuring the existing site groundwater levels at the boring locations and providing an estimate of the typical wet season groundwater level.
- Conducting laboratory tests on selected soil samples obtained in the field to evaluate their engineering properties.
- Assessing the existing soil conditions with respect to the proposed construction.
- Preparing a report which documents the results of our subsurface exploration and analysis with geotechnical engineering recommendations.

4.3 Limitations

This report has been prepared for the exclusive use of Rise Partners to aid the Architect/Engineer in the design of the proposed site. The scope is limited to the specific project and locations described herein. Our description of the project's design parameters represents our understanding of the significant aspects relevant to soil and foundation characteristics. In the event that any changes in the design or location of the structures or improvements as outlined in this report are planned, we should be informed so the changes can be reviewed and the conclusions of this report modified, if required, and approved in writing by UES.

The recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated on the Boring Location Plan and from other information as referenced. This report does not reflect any variations which may occur between the boring locations. The nature and extent of such variations may not become evident until the course of construction. If variations become evident, it will then be necessary for a re-evaluation of the recommendations of this report after performing on-site observations during the construction period and noting the characteristics of the variations.

All users of this report are cautioned that there was no requirement for UES to attempt to locate any man-made buried objects or identify any other potentially hazardous conditions that may exist at the site during the course of this exploration. Therefore, no attempt was made by UES to locate or identify such concerns. UES cannot be responsible for any buried man-made objects or subsurface hazards which may be subsequently encountered during construction that are not discussed within the text of this report. We can provide this service if requested.

For a further description of the scope and limitations of this report please review the document attached within Appendix D, "Important Information About Your Geotechnical Engineering Report" prepared by GBA.

5.0 FIELD EXPLORATION

5.1 General

The soil borings were performed with a drill rig mounted on a rubber-tired truck. The boring locations were staked in the field by UES. The approximate locations of the borings are shown on the Boring Location Plan presented in Appendix A.

5.2 Standard Penetration Test Borings

As previously described in Section 4.2 and as indicated on the Boring Location Plan and General Description of Boring Locations in Appendix A, six (6) SPT borings were drilled to depths of 20 to 40 feet in the proposed building areas, eight (8) SPT borings were drilled to depths of 15 to 20 feet in the proposed outparcels, five (5) soil test borings to depths of 15 to 25 feet within the proposed stormwater management area, and ten (10) SPT borings to depths of 10 to 25 feet within the proposed pavement areas. The SPT borings were performed in general accordance with the procedures of ASTM D 1586 (Standard Method for Penetration Test and Split-Barrel Sampling of Soils). SPT data from previous UES field testing was analyzed for six (6) soil test borings to depths of 15 feet in the proposed stormwater management area. In addition, continuous sampling was performed within the upper 10 feet. The SPT drilling technique involves driving a standard split-barrel sampler into the soil by a 140-pound hammer, free falling 30 inches. The number of blows required to drive the sampler 1 foot, after an initial seating of 6 inches, is designated the penetration resistance, or N-value, an index to soil strength and consistency.

5.3 Double-Ring Infiltrometer (DRI) Tests

Two (2) Double-Ring Infiltrometer (DRI) tests were performed in accordance with the procedures of ASTM D-3385-88 *Standard Test Method for Infiltration Rate of Soils in Field Using Double-Ring Infiltrometer*. This test consisted of driving two open cylinders, one inside the other, into the ground partially filling the rings with water, and then maintaining the liquid at a constant level. The drop in water level in the inner ring was recorded on the measuring rod for

timed intervals. The tests were performed until the drop in water level was the same over the same time interval. The volume infiltrated during timed intervals was converted to an incremental infiltration velocity, expressed in inches/hour, and plotted versus elapsed time. The infiltration rate was the maximum steady state of average incremental infiltration velocity. The basic infiltration rate was obtained once the values of infiltration rates were constant. In-situ infiltration rates of soil results have been presented in **Appendix C**.

6.0 LABORATORY TESTING

The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). Representative soil samples were then selected from the retained soils and tested in our laboratory. The following is a summary of the laboratory tests performed in all studies, including prior geotechnical studies, for this site to date:

- Twenty-nine (29) Wash #200 fines content determinations – ASTM D-1140 (Standard Method for Particle Size Analysis of Soils).
- Two (2) Grain Sieve Analysis tests – ASTM D-422
- Six (6) Atterberg Limits Tests – ASTM D 4318-05
- Thirty-one (31) moisture content tests - ASTM D-2216
- Nine (9) Laboratory Permeability Tests – ASTM D-2434
- Two (2) Limerock Bearing Ratio (LBR) tests in lieu of the California Bearing Ratio (CBR) tests – Florida Department of Transportation FM-515 (Limerock Bearing Ratio).

These tests were performed to aid in classifying the recovered samples and to help in evaluating the general engineering characteristics of the site soils. The laboratory classification data is presented on the Boring Logs at the approximate depth sampled in Appendix A. All laboratory data is summarized and report sheets included in Appendix C. In addition, the detailed laboratory test procedures are enclosed in Appendix C.

The quantity and type of laboratory tests performed for the geotechnical exploration were selected by UES based on the soil conditions found and our experience and knowledge concerning the local soil conditions. We note that since most shallow sands in Florida are poorly graded fine sand it is customary to perform percent fines content testing only for classification purposes.

7.0 SOIL STRATIGRAPHY

7.1 Generalized Soil Profile

The results of our field exploration and laboratory analysis, together with pertinent information obtained from the SPT soil test borings, such as soil profiles, penetration resistance and stabilized groundwater levels are shown on the boring logs included in Appendix A. The Key to Boring Logs is also included in Appendix A.

The soil profiles were prepared from field logs after the recovered soil samples were visually classified by a member of our geotechnical staff. The stratification lines shown on the boring logs represent the approximate boundaries between soil types, and may not depict exact subsurface soil conditions. The actual soil boundaries may be more transitional than depicted. A composite generalized profile of the soils found at our boring locations is presented below in Table 2. For soil profiles at individual boring locations, please refer to the soil boring logs, Appendix A.

TABLE 2
GENERAL SOIL PROFILE

Typical depth (ft.)		Soil Descriptions
From	To	
0	1 to 18.5	Very loose to medium dense, orange SAND with silt to dark brown silty SAND [SP-SM, SM]
1 to 18.5	40*	Loose to medium dense, brown and orange clayey SAND [SC] to stiff to very stiff, gray and orange sandy CLAY [CH]

* Termination of Deepest Boring
[ ] Indicates Unified Soil Classification

Notable features within the general soil profile were: 1) The presence of a very loose sand layers from 0 to 10 feet below land surface in some of the borings throughout the project site, 2) The presence of clayey sands that may not be re-usable as fill in utility excavations, 3) The subgrade after deeper excavations in some areas may include clayey sands, which will be difficult to compact. The clayey sand soils may require stringent moisture control during compaction, particularly during rainy periods, 4) Potentially expansive clay soils, where present, the potentially detrimental effect of the expansive clays can be remediated through site grading, over-excavation and replacement, site drainage and stiffened foundation.

8.0 GROUNDWATER CONSIDERATIONS

8.1 Existing Groundwater Level

The groundwater level was not encountered below existing grades in the soil borings at the time of the field exploration program. Fluctuations in groundwater levels should be anticipated throughout the year, primarily due to seasonal variations in rainfall, surface runoff, construction activity, and other site specific factors that may vary from the time the borings were conducted.

8.2 Typical Wet Season Groundwater Level

The typical wet season groundwater level is defined as the highest groundwater level sustained for a period of 2 to 4 weeks during the "wet" season of the year, for existing site conditions, in a year with average normal rainfall amounts. Based on historical data and the Climatic Atlas of the United States, the rainy season in Alachua County, Florida typically occurs between June and September. To estimate the wet season water level at the boring locations, many factors may be considered.

Based upon the review of U.S.G.S. data, NRCS Soils Survey, and site boring data, a reasonable estimate for the normal seasonal high groundwater table will be at a depth of more

than 6 feet below the land surface (bls); however, stormwater can perch on top of clayey sands when sandy soils are present at the surface.

Please note, however, that peak stage elevations immediately following various intense storm events, may perch temporarily on the low permeability (clayey) soils. Further, it should be understood that changes in the surface hydrology and subsurface drainage from on-site and/or off-site improvements could have significant effects on the normal and seasonal high groundwater levels. Potential for water to perch will be directly related to grading and rainfall/irrigation amounts. Isolated areas with a transient perched groundwater should be expected to occur. The potential for transient perched groundwater levels shall be considered during the design of the site grades and during construction.

We recommend positive drainage be established and maintained on the site during construction. We further recommend permanent measures be constructed to maintain positive drainage from the site throughout the life of the project.

9.0 ANALYSIS AND PRELIMINARY RECOMMENDATIONS

9.1 General

In this section of the report, we present our preliminary recommendations for groundwater control, building foundations, site preparation, and construction related services. The following recommendations have been based upon a review of the attached soil test data, our limited understanding of the proposed construction, and experience with similar projects and subsurface conditions. **Due to the preliminary design stage of this project, building locations, structural loads, and grading information were unavailable. Therefore, it may be necessary to perform additional geotechnical services including additional test borings once the structure locations, stormwater management system, proposed grades, and structural loadings are available.**

9.2 Geotechnical Considerations

Our geotechnical engineering evaluation and recommendations for building pad and pavement area preparation and foundation design are based on (1) our site observations, (2) the collected field and laboratory data, and (3) our understanding of the project and structural information presented in this report.

Based on our exploration, the primary geotechnical considerations for the design and construction of the proposed building are the presence of potentially-expansive clays in the shallow subsurface profile, near-surface loose sandy layers that will necessitate compaction, and the extent and magnitude of the cut slopes that will be required as part of the grading plans. Subsurface sandy soils will undergo immediate settlements upon application of surface loads, and this could be a result of both fill placement for building pad construction and building construction. In light of the above, it becomes important to compact the subgrade soils as much as possible prior to both building pad fill placement and foundation construction.

Very loose sands were encountered in the building soil borings; the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas shall be proof-rolled to detect soft or loose soils. Proof-rolling operations should be followed by subgrade/backfill compaction operation. If necessary to achieve the recommended soil compaction at depth, the loose areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

Steep slopes will have an impact on the construction process, further detailed slope stability analysis shall be performed once proposed slopes and/or retaining walls plans are available. Seepage toward the face of the slope could cause erosion to the slope face and lead to a reduced stability of the slope. Therefore, measures should be taken to prevent erosion of the slope, during construction and during the life of the project. Grading shall be designed to ensure that drainage flows away from all structures, especially structures that are cut into hillsides. Erosion control methods shall be used during construction to protect water quality, control drainage, and reduce soil erosion.

The clayey sand soils may require stringent moisture control during compaction, particularly during rainy periods. Footings that are excavated through the upper layer of compacted sand fill soils into the native clayey sands, should be visually inspected and tested to verify the in-place density and condition of the subgrade bearing soils.

Care should be exercised in performing the site preparation procedures due to the presence of clayey soils near the existing ground surface. The use of heavy-vibratory equipment is not recommended due to the potential for disturbance and pumping of the near surface clayey soils. To avoid pumping of the underlying clayey soils, we recommend self-propelled vibrating equipment remain a minimum of two feet above the clayey soils. The sandy soils could be compacted with a vibratory roller operating in static mode or with a track-mounted dozer to avoid disturbance of the clayey soils prior to operation. We recommend a minimum of 2 feet of sand be present over the clayey soils prior to operation of construction equipment. Excessive disturbance of the clayey soils will degrade the strength characteristics of the soil and may result in an unsuitable soil which will require over-excavation and subsequent backfilling with selected material.

Due to the presence of near surface clayey soil, it is important that the foundation design incorporate factors to minimize water seepage around the proposed foundation. The design factors should include undercutting around the perimeter of the structure, positive drainage such that water flows away from the structure, use of low permeability fill, gutters tied into the drainage system, use of drought tolerant landscaping, and limiting irrigating around the structure.

Within some of the proposed building envelope at this site, we found somewhat shallow deposits of potentially expansive soils (CH). Therefore, where present on site, these shallow deposits of expansive soils must be addressed through site grading, over-excavation and replacement, site drainage and stiffened foundation. We recommend auger borings be performed in the proposed footing excavation and building pad areas to determine the extent of the undercutting of the potentially expansive material that will be needed.

The over-excavated areas should be backfilled with a compacted, low permeability, non-plastic engineered fill material. The low permeability backfill should continue to an elevation consistent with the top of the adjacent clay layers to minimize the potential for surface water to become trapped in the previously excavated areas. Low permeability, engineered fill material shall consist of poorly draining, silty sand or clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15, and be free of organics. A crushed limerock base material could be used as the low permeability material. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8-inches or less are recommended. Should the Contractor experience difficulty in achieving the appropriate level of compaction, a thinner lift should be utilized.

In pavement cut areas, we recommend undercutting clayey soils to a minimum depth of 2 feet below the proposed bottom of roadway base course elevation, in accordance with FDOT Standards.

If the structural conditions or other project information are incorrect, please contact us so that we can review our recommendations. Also, the discovery of any site or subsurface conditions during construction which deviate from the data obtained during this geotechnical exploration should also be reported to us for further evaluation.

If it is determined that structures and or pavement will be constructed in areas with potential expansive clay soils, additional geotechnical exploration, laboratory testing and engineering analysis will be required to provide site specific requirements to mitigate the potential damage associated with the shrink/swell activity of these soils.

As described in Florida Building Code (FBC), Building and Structures on or adjacent to slopes shall comply with section 1808.7. Wall and floors retaining earth and enclosing spaces below finished ground level, shall be waterproofed and/or damp proofed in accordance with Florida Building Code Section 1814.

We consider the recommendations presented in the subsequent sections of this report appropriate for the planned construction. As part of the overall geotechnical contract, we recommend that UES be provided the opportunity to review the foundation plans and earthwork specifications to verify that our recommendations have been properly interpreted and incorporated into the design documents.

9.3 Preliminary Foundation Design Recommendations

Based on the results of our exploration, it is our opinion that the subsurface conditions at the project site are adaptable for support of the proposed structure on a properly designed and constructed shallow foundation system, provided the site preparation and earthwork construction recommendations outlined in Section 9.3 of this report are performed. Provided the improvements and specific site preparation procedures are carefully followed, the parameters outlined below may be used for foundation design.

9.3.1 Bearing Pressure

Retail/Anchor Stores

The maximum allowable net soil bearing pressure for use in shallow foundation design should not exceed 2,500 pounds per square foot (psf). Net bearing pressure is defined as the soil bearing pressure at the base of the foundation in excess of the natural overburden pressure. The foundations should be designed based upon the maximum load that could be imposed by all loading conditions. The allowable bearing pressure may be increased by 25 percent to account for short duration loadings such as wind or seismic.

If the proposed building frame can not tolerate the estimated magnitudes of differential settlements over a lateral distance of 20 feet, and/or the Owner desires to provide additional reduction of the potential effects of clays on the structure, we recommend the Building Designers consider the use of grade beam foundations, for support of load bearing walls on this project. The deeper concrete section, and top and bottom steel configuration of a typical grade

beam foundation, should help mitigate differential settlement concerns. A modulus of subgrade reaction of 100 pounds per cubic inch (pci) may be used for grade beam foundation design.

Outparcels

The maximum allowable net soil bearing pressure for use in shallow foundation design should not exceed 2,500 pounds per square foot (psf). Net bearing pressure is defined as the soil bearing pressure at the base of the foundation in excess of the natural overburden pressure. The foundations should be designed based upon the maximum load that could be imposed by all loading conditions. The allowable bearing pressure may be increased by 25 percent to account for short duration loadings such as wind or seismic.

9.3.2 Foundation Size

Retail/Anchor Stores

The minimum width recommended for any isolated column or continuous wall footings are 30 and 18 inches, respectively. Even though the maximum allowable soil bearing pressure may not be fully achieved, this width recommendation should control the minimum size of the foundations.

Outparcels

The minimum widths recommended for any isolated column or continuous wall footings are 24 inches and 18 inches, respectively. Even though the maximum allowable soil bearing pressure may not be fully achieved, this width recommendation should control the minimum size of the foundations. For monolithic slabs, the thickened sections should have minimum width of 12 inches and be embedded a minimum of 12 inches.

9.3.3 Bearing Depth

Retail/Anchor Stores

The exterior foundations should bear at a depth of at least 18 inches below the finished exterior grades and the interior foundations should bear at a depth of at least 18 inches below the finish floor elevation to provide confinement of the bearing level soils. It is recommended that stormwater be diverted away from the building area both during and permanently following construction.

Outparcels

The exterior foundations should bear at a depth of at least 18 inches below the finished exterior grades and the interior foundations should bear at a depth of at least 12 inches below the finish floor elevation to provide confinement to the bearing level soils. It is recommended that stormwater be diverted away from the building exteriors to reduce the possibility of erosion beneath the exterior footings. The thickened section of a monolithic slab/foundation system should be embedded a minimum of 12 inches.

9.3.4 Bearing Material

The foundations and floor slabs may bear in/on either the compacted native soils or structural fill. The bearing level soils should be densified to at least 95 percent of the Modified Proctor maximum dry density (ASTM D 1557) to a depth of at least **four feet** below the bearing levels.

The structural borings indicated that clay was present to depths of less than 10 feet below existing grades beneath some of the building footprint areas. We recommend that the bottom of all footings and building pad areas be probed to confirm the suitability of the bearing soils.

9.3.5 Settlement Estimates

Post-construction settlements of the structure will be influenced by several interrelated factors, such as (1) subsurface stratification and strength/compressibility characteristics; (2) footing size, bearing level, applied loads, and resulting bearing pressures beneath the foundations; and (3) site preparation and earthwork construction techniques used by the contractor. Our settlement estimates for the structure are based on the site preparation/earthwork construction recommendations in Section 9.3 of this report. Any non-conformance with these recommendations could result in an increase in the estimated post-construction settlements of the structure.

Using the recommended maximum bearing pressure, the provided maximum structural loads, the anticipated fill loading and the field data which we have correlated to geotechnical strength and compressibility characteristics of the subsurface soils using N-value data, we estimate that total settlements of the structure should be less than 1 inch if the site preparation recommendations in Section 9.3 are followed. Without appropriate site preparation procedures, total settlements could exceed 1 inch.

Differential settlements result from differences in applied bearing pressures and variations in the compressibility characteristics of the subsurface soils. We anticipate that differential settlements should be within tolerable limits of ½ inch or less in 20 linear feet.

9.3.6 Floor Slab

The floor slab can be designed using a modulus of subgrade reaction (K) of 100 pci for slabs founded on minimum 4 inch sub-base material and well compacted subgrade. The 4-inch thick sub-base material may consist of a compacted structural fill, as described in Preliminary Building Site Preparation section of this report.

Should floor slab be designed using a subgrade reaction of 150 pci, the floor slab can be founded on a minimum 4-inch thick compacted aggregate base and well compacted subgrade. The base material may consist of a crushed limerock material with at least 97% (by weight) passing a 3.5 inch sieve and the material shall be graded uniformly down to dust.

Conventional floor slabs may be supported upon the compacted fill and should be structurally isolated from other foundation elements or adequately reinforced to prevent distress due to differential movements.

It is recommended the floor slab bearing soils be covered with an impervious membrane to reduce moisture entry and floor dampness. A 15-mil thick plastic membrane is commonly used for this purpose. Care should be exercised not to tear large sections of the membrane during placement of reinforcing steel and concrete.

9.3.7 Site Walls

Earth pressures on retaining walls are influenced by structural design of walls, conditions of wall restraint, construction methods, and the strength of the materials being restrained. The most common conditions assumed for earth retaining wall design are the active and at-rest conditions.

Active conditions apply to relatively flexible earth retention structures, such as free-standing walls, where some movement and rotation may occur to mobilize shear strength. Walls which are rigidly restrained, such as loading dock or service pits walls, should be designed for the at-rest condition. However, if the walls will be backfilled before they are braced by the floor slabs, they should also be designed to withstand active earth pressures as self-supporting cantilever walls. Development of the full active earth pressure case requires a magnitude of horizontal wall movement that often cannot be tolerated or cannot occur due to the rigidity of the wall and other design restrictions such as the impact on adjacent structures. In such cases, walls are often designed for either the at-rest condition or a condition intermediate of the active and at-rest conditions, depending on the amount of permissible wall movement. Passive earth pressure represents the maximum possible pressure when a structure is pushed against the soil, and is used in wall foundation design to help resist active or at-rest pressures. Because significant wall movements are required to develop the passive pressure, the total calculated passive pressure is usually reduced by one-half for design purposes.

We recommend that any proprietary retaining walls be backfilled with materials deemed suitable by the retaining wall designer. For all other walls, typically sandy soils [SP, SP-SM, SP-SC] should be used as backfill. We recommend that the soils selected for use as backfill be tested as specified by either the proprietary retaining wall designer or UES prior to commencement of wall construction. Recommended soil parameters for design of low retaining walls for loading docks and landscape features using SP, SP-SM or SP-SC soils found on site are shown in Table 3.

TABLE 3
Lateral Earth Pressure Design Parameters (Level Backfill)*

Design Parameter	Recommended Value
At-rest Earth Pressure Coefficient, K_o	0.5
Active Earth Pressure Coefficient, K_a	0.33
Passive Earth Pressure Coefficient, K_p	3.0
Wet Unit Soil Weight (pounds per cubic foot - pcf)	125
Submerged Unit Weight of Soil (pcf)	62
Coefficient of Friction (sliding)	0.4
Angle of Internal Friction, φ	30 degrees

* For sloping backfill or backfill with clayey sands the table values must be adjusted.
**Hydrostatic pressure should be accounted for based on seasonal high water table estimates and other site drainage considerations

The recommended lateral earth pressure coefficients and equivalent fluid pressures do not consider the development of hydrostatic pressure behind the earth retaining wall structures. As such, positive wall drainage must be provided for all earth retaining structures. These drainage systems can be constructed of open-graded washed stone isolated from the soil backfill with a

geosynthetic filter fabric and drained by perforated pipe, or with one of several wall drainage products made specifically for this application.

Our recommendations assume that the ground surface above the wall is level and that native or imported soils consisting of sands and sands with silt or clays will be used for wall backfill. Lateral earth pressures arising from surcharge loading should be added to the above earth pressures to determine the total lateral pressure. Additional consideration must also be given for sloped backfill at the top of the wall. In each circumstance the earth pressure coefficients for active and at-rest conditions will increase based upon the amount of surcharge and angle above horizontal of the sloped backfill.

9.4 Preliminary Building Site Preparation

9.4.1 General

We recommend normal, good practice dry weather site preparation procedures for the building and pavement areas. These procedures include: stripping/demolition of the site to remove: vegetation, surficial organics, trees and root systems greater than ½ inch in diameter and other debris. Following stripping/demolition, the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas should be proof-rolled to detect soft or loose soils. A more detailed description of this work is as follows:

1. Prior to construction, existing underground utility lines within the construction area should be located. Provisions should be made to relocate interfering utilities to appropriate locations. It should be noted that if underground pipes are not properly removed or plugged, they may serve as conduits for subsurface erosion which may lead to excessive settlement of overlying structures.

2. Strip/demolish the proposed construction limits of topsoil, asphalt, existing above and below grade structures, and other deleterious materials within and 5 feet beyond the perimeter of the proposed building areas. Expect typical stripping at this site to depths of 6 to 12 inches. Deeper clearing and grubbing depths may be encountered in heavily vegetated areas. Demolition in areas with existing structures should include complete removal of all above and below grade foundations and other improvements. Also, all utilities, foundations and other below grade structures (foundations, utility pipes, etc.) should be removed and the excavation backfilled as described below.

   Deeper removal of debris should be anticipated to remove footings and utilities from the demolition of the existing structure(s). All debris and deleterious material should be removed and replaced with suitable structural fill. Fill material should be placed and compacted in accordance with the site preparation procedures. Excavated areas should be set back to a stable configuration or shored, in either case in accordance with OSHA requirements. Adequate bracing should be provided if necessary to prevent side slope failures.

3. The site should be graded to direct surface water runoff away from the construction areas. Positive drainage of improved areas should be maintained during construction and throughout the design life of the project. If required, perform remedial dewatering prior to any earthwork operations. Dewatering operations scheduled should be carefully evaluated for possible impacts to the existing foundation systems. Dewatering systems should not be decommissioned until the excavation is backfilled two feet above the groundwater level at the time of construction. Further, the site should always be graded

to prohibit ponding of stormwater runoff.

4. After clearing and stripping of the site is completed, the prepared subgrade soils within the building area should be observed and probed by a qualified agent of the testing agency to locate any surficial deposits of vegetation, excessive roots or debris. If identified, undercut the vegetation, organics, muck, or deleterious material until clean natural soils are encountered and backfill the resulting excavations according to the fill placement procedures provided later in this section.

5. The building pad areas, including 5 feet beyond the perimeter where possible, should be proof-rolled and tested for compliance to compaction requirements, to a depth of four (4) feet below stripped subgrade, prior to any fill placement.

6. Weak subgrade soils identified during proof-rolling operations should be excavated and removed from the site, and replaced with selected (low permeability) fill material. We recommend that the bottom of all footings be probed to confirm the suitability of the bearing soils. We recommend 4-foot static cone penetrometer probe and/or auger borings be performed in the proposed footing excavations to investigate for clayey soils. We recommend you probe every column footing, probe every 50 lineal feet of wall footing. If encountered, fat clays (CH) shall be removed to a minimum of 4 feet below the bottom of the footing/floor slab. UES should be contacted to develop appropriate site specific remediation recommendations. The over-excavated areas shall be backfilled with a compacted, low permeability, engineered fill material. Fill material shall consist of poorly draining, silty-clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8 inches or less are recommended.

7. In the areas to receive fill or at subgrade cut elevation, the subgrade should be compacted using a smooth drum vibratory roller having a minimum static, at-drum weight on the order of 10 tons and a drum diameter on the order of 3 to 4 feet making a minimum of eight overlapping passes with the second set of 4 passes perpendicular to the first set of 4 passes. If wet conditions are prevalent anywhere on site, at the discretion of a qualified representative of the testing agency, a bridge lift of "dry" sand may be placed to raise the compaction surface above the water table sufficiently to enable effective compaction. Typically, the material should exhibit moisture contents within +/- 2 percent of the Modified Proctor optimum moisture content (ASTM D-1557) during the compaction operations. Compaction should continue until densities of at least 95 percent of the Modified Proctor maximum dry density (ASTM D-1557) have been uniformly achieved within the upper 48 inches of the compacted subgrade surface. If necessary to achieve the recommended soil compaction at depth, the loose/soft areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

8. Place fill material, as required. Offsite fill should consist of sand with less than 10 percent soil fines, unless a low permeability engineered fill material is required. Place fill in uniform 10- to 12-inch lifts and compact each lift to a minimum density of at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557). Verification testing should be performed prior to the next lift being placed.

9. Test the subgrade and each lift of backfill in over-excavated and fill areas for compaction at a frequency of not less than one test per 2,500 square feet in the building areas and one test per 10,000 square feet in paved areas.

10. In the building areas, test all footing cuts for compaction to a depth of 4 feet. We recommend you test every column footing, and conduct one test for every 100 lineal feet of wall footing.

11. If difficult compaction conditions are encountered during the site work operations, the compaction efforts should stop and a qualified representative of the testing agency should be consulted for recommendations. The qualified representative of the testing agency should observe proof-rolling of the exposed subgrade to determine if additional compaction is warranted or if any soil material needs to be over-excavated and replaced.

12. If site preparation work is performed during the rainy season (June through September, reference historic data and Climatic Atlas of the United States), special care should be taken to maintain positive drainage from the building pad and paved areas to drains or ditches around the site. Unexpected wet periods can also occur in Florida during the "dry" season. Such events can raise water tables to levels above seasonal highs without the associated high temperatures to evaporate ponded water. Therefore, the contractor should practice wet weather means and methods for earthwork during the "dry" season as well. Groundwater and surface water control, use of granular fill material and aeration are the normal means to accommodate wet weather construction. All fill materials that are excavated from below the water table should be stockpiled for a sufficiently long period to allow drainage.

9.5 Preliminary Pavement Recommendations

9.5.1 General

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-effective combination of available construction materials and is less susceptible to movement from the under laying clays. Concrete pavement has the advantage of the ability to "bridge" over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. However, concrete pavement can allow water intrusion which can aggravate the expansive soils. Disadvantages of rigid pavement may also include an initial higher cost and more difficult patching of distressed areas than occurs with flexible pavement.

If encountered, we recommend undercutting the clayey sands and clays to a depth of 24 inches below the bottom of the base course, or concrete pavement level, in accordance with FDOT Standard Plans Index 120-002. We recommend proof-rolling of the exposed subgrade to help determine areas that will need to be undercut. Positive drainage around the roadway area should be established to prevent irrigation and stormwater from migrating into the pavement area.

9.5.2 Asphalt (Flexible) Pavement

Tables 4 and 5 contain our recommendations for standard and heavy duty pavement sections design. Based on projects of similar experience we estimate total equivalent 18 kips single axle loads (E_{18}SAL) of 110,000 and 300,000, for standard and heavy duty pavements, respectively.

TABLE 4 STANDARD DUTY FLEXIBLE PAVEMENT DESIGN		
Pavement Layer	**Thickness**	**Minimum Requirements**
Asphalt Surface (FDOT SP-9.5) Asphalt Binder (FDOT SP-9.5)	1 Inch Minimum 1 Inch Minimum	93% (tolerance ±2%) Laboratory Maximum Density (G_{mm})
Limerock or Crushed Concrete Base	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

TABLE 5 HEAVY DUTY FLEXIBLE PAVEMENT DESIGN		
Pavement Layer	**Thickness**	**Minimum Requirements**
Asphalt Surface (FDOT SP-9.5) Asphalt Binder (FDOT SP-12.5)	1 Inch Minimum 2 Inch Minimum	93% (tolerance ±2%) Laboratory Maximum Density (G_{mm})l.
Limerock or Crushed Concrete Base	8 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of at least 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

9.5.2.1 Stabilized Subgrade

We recommend that subgrade materials be compacted to at least 98 percent of the Modified Proctor maximum dry density (ASTM D 1557/ AASHTO T-180) value. Further, beneath the base course, stabilize the subgrade materials to a minimum Limerock Bearing Ratio (LBR) of 40 as specified by the current version of the Florida Department of Transportation (FDOT) "Standard Specifications for Roadway and Bridge Construction" (SSRBC) requirements for Type B Stabilized Subgrade, Section 160 and Section 914. For crushed concrete base, the subgrade material should be "free-draining" ($k > 1 \times 10^{-3}$ cm/sec) and therefore on-site clayey sands, clays, or other impermeable stabilization material shall not be used for mixing with in-place sands.

The primary function of stabilized subgrade beneath the base course is to provide a stable and firm subgrade so that the base can be properly and uniformly placed. Depending upon the soil type, fill material from an off-site source may have sufficient stability to provide the needed support without additional stabilizing material. Generally sands with shell or rock should have sufficient stability and may not require additional stabilizing material. Prior to compaction of the subgrade, the representative samples of soils exposed at rough subgrade from both on and off-site fill sources should be tested for Limerock Bearing Ratio (LBR) value on a frequency of one test per 20,000 square feet to evaluate whether or not additional stabilization will be required beneath the base course.

9.5.2.2 Base Course

We recommend the base course consist of locally available limerock complying with the requirements of the current version of the FDOT SSRBC, Section 200, and Section 911. The limerock should have a minimum LBR of 100 percent and should be mined or supplied from an FDOT approved source. Place the limerock in maximum 6 inch thick loose lifts and compact each lift to a minimum density of 98 percent of the Modified Proctor maximum dry density (ASTM D1557/AASHTO T-180).

Alternatively, we believe locally available crushed concrete base of equal thickness could be substituted for the limerock. Crushed concrete should be supplied by an F.D.O.T. approved plant with quality control procedures and should have an average LBR value of not less than 100. The gradation for crushed concrete should meet the current requirements for graded aggregate base per Section 204, FDOT SSRBC.

A prime and sand coat should be applied to the base to provide for a smooth, uniform surface for asphalt placement. Perform compliance testing for limerock or crushed concrete for full depth of the base at a frequency of one test per 10,000 square feet. Compliance testing should consist of performing in-place density tests and thickness measurements at the recommended frequency.

9.5.2.3 Surface and Binder Course

The wearing surface should consist of Florida Department of Transportation (FDOT) Type SP asphaltic concrete. Specific requirements for Type SP asphaltic concrete, Traffic Level C/D wearing surface are outlined in the Florida Department of Transportation (FDOT), *Standard Specifications for Road and Bridge Construction, current Edition.*

The surface course should consist of FDOT SP-9.5 fine mix for light-duty areas and FDOT SP-12.5 and/or SP-9.5 fine mix for heavy duty areas. Specific requirements for the SuperPave asphaltic concrete structural course are outlined in the latest edition of FDOT, Standard Specifications for Road and Bridge Construction.

After placement and field compaction, the wearing surface should be cored to evaluate material thickness and to perform laboratory densities. Cores should be obtained at frequencies of at least one core per 10,000 square feet of placed pavement, or a minimum of two cores per day's production.

9.5.2.4 Curbing

Typical curbing is extruded and placed atop the asphaltic concrete surface. This type of curbing does not act as a horizontal cutoff for lateral migration of storm and irrigation water into the base material and as a result of this it is not uncommon for base and subgrade materials adjacent to these areas to become saturated, promoting subsequent localized pavement deterioration. Consequently, we recommend that most pavements abutting irrigated landscape areas be equipped with an underdrain system that penetrates a minimum depth equivalent to the bottom of the stabilized subgrade to intercept trapped shallow water and discharge it into a closed system or other acceptable discharge point.

Alternatively, curbing around landscaped sections adjacent to the parking lots and driveways could be constructed with full-depth curb sections to reduce horizontal water migration. However, underdrains may still be recommended dependent upon the soil type and spatial relationships. UES should review final grading plans to evaluate the need and placement of pavement and landscape underdrains.

9.5.3 Concrete (Rigid) Pavements

Concrete pavement is a rigid pavement that transfers reduced wheel pressures to the underlying subgrade soils when compared to a flexible pavement section. We recommend that the concrete pavement be supported on a stabilized subgrade. Our recommendations for the rigid pavement system are presented below:

1. The stabilized subgrade shall be at least 12 inches thick, "free-draining" (k≥ 5 feet/day) and have a positive seepage discharge point.

2. The stabilized subgrade and base materials should be densified to at least 98 percent of Modified Proctor test maximum dry density (ASTM D1557/AASHTO T-180).

3. The surface of the subgrade soils must be level, and any disturbances or wheel rutting corrected prior to placement of concrete.

4. Concrete pavement thickness should be uniform throughout, with exception to thickened edges (curb or footing).

5. The bottom of the pavement should be separated from the estimated typical wet season groundwater level by at least 12 inches.

6. We do not recommend the use of a limerock base course directly below the concrete pavement area

For a standard and heavy duty pavement we recommend using the design shown in Table 6.

TABLE 6
(UNREINFORCED) CONCRETE PAVEMENT

Minimum Pavement Thickness	Maximum Control Joint Spacing	Recommended Sawcut Depth
Standard Duty – 5 Inches	10 Feet x 10 Feet	1 ¼ Inches
Heavy Duty – 6 Inches	12 Feet x 12 Feet	1 ½ Inches

We recommend using concrete with a minimum 28-day compressive strength of 4,000 psi and minimum 28-day flexural strength (modulus of rupture) of at least 600 pounds per square inch, based on 3rd point loading of concrete beam test samples. Layout of the sawcut control joints should form square panels, and the depth of sawcut joints should be ¼ of the concrete slab thickness. The control joints should be sawed within 6 hours of concrete placement or as soon as the concrete has sufficient strength to support workers and equipment. We recommend allowing UES to review and comment on the final concrete pavement design, including section and joint details (type of joints, joint spacing, etc.), prior to the start of construction.

For further details on concrete pavement construction, please reference the "Guide to Jointing of Non-Reinforced Concrete Pavements" published by the Florida Concrete and Products Association, Inc., and "Building Quality Concrete Parking Areas", published by the Portland Cement Association.

9.5.4 Groundwater Considerations

One of the most critical influences on pavement performance is the relationship between the pavement subgrade and the seasonal high groundwater level. It has been our experience that roadways and parking areas may be damaged as a result of deterioration of the base and the base/surface course bond from saturation of the subgrade and/or base materials. We recommend that the seasonal high groundwater and the bottom of the base course be separated by at least 24 inches. For concrete pavement the minimum separation may be reduced to 18 inches provided the compacted base and subgrade is "free-draining" material.

Provided the native in-situ clays are selectively undercut a minimum of 2 feet below the bottom of the base of the pavement section, the recommended separation should be provided. The separation should be confirmed by reviewing the final site grading and paving plan. If the separation is not provided by grading and/or permanent surface drainage improvements, underdrains may be required.

9.5.5 Construction Traffic

Light duty roadways and incomplete pavement sections may not perform satisfactorily under construction traffic loadings. We recommend that construction traffic (construction equipment, concrete trucks, sod trucks, garbage trucks, dump trucks, etc.) be re-routed away from these roadways or that the pavement section design account for these loadings.

9.5.6 Site Preparation for New pavement Areas

Following is a list of our recommended site preparation procedures to prepare the new pavement areas for the proposed construction.

1. Strip the pavement areas of any roots, vegetation, debris, organics, etc. Stripping should be performed at least 3 feet beyond pavement edges. We recommend that the stripped surface be observed and probed by representatives of UES.

2. Following site clearing, grubbing and rough grading, the pavement areas should be proof-rolled using a large, fully loaded rubber-tired vehicle (dump truck) or similar equipment. Proof-rolling will help locate any surficial zones of especially loose or soft or unsuitable soils not encountered in the soil test borings, and should help provide more uniformity in the sandy subsurface soil profile. Unusual or unanticipated conditions identified during this process must be immediately brought to the attention of the UES Geotechnical Engineer. Field density testing is not required during proof-rolling operations.

3. If encountered within 24 inches below the bottom of the base course, we recommend undercutting clayey sands to clays in accordance with FDOT Standard Plans Index 120-002. Within the pavement areas, compact the exposed soils to at least 95 percent of the Modified Proctor test maximum dry density (ASTM D 1557) to a depth of at least 1 foot below the stripped surface and full depth of fill, or at least 2 feet below the bottom of base course (or concrete pavement) level, whichever is greater. Please note that the surficial soils within the new pavement areas may contain varying quantities of silt and clay. These silty/clayey soils tend to readily hold moisture and may require more stringent compactive efforts than clean fine sands.

4. Soil density testing to verify the uniformity of compactive efforts should be performed at a frequency of at least one (1) test for every 5,000 square feet per foot of compacted increment, or at a minimum of four test locations, whichever is greater.

5. Prior to the placement of the base course within the new asphalt pavement areas, the upper 12 inches of subgrade should be stabilized by pounding or mixing limerock into the subgrade in order to provide a stable and firm surface, so that the base course can be properly and uniformly placed and compacted to at least 98 percent of the Modified Proctor maximum dry density (ASTM D 1557). Compliance testing should be performed at a frequency of one test per 10,000 square feet, or at a minimum of three test locations, whichever is greater.

9.6 Suitability of Over excavated Site Materials

The recovered soil samples were classified using visual and textural means, and limited laboratory testing. We offer below ***preliminary guidelines*** for the use of on-site soils, such as those excavated in cut sections and the proposed stormwater management basin, as fill material for the project.

Soil materials excavated and classified as fine sands to sand with silt and sand with clay (SP, SP-SM, SP-SC), with typically 12% fines or less (silt/clay fraction), may be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, provided the materials are properly dried, placed, and compacted.

Soil materials excavated and classified as silty fine sands [SM], with typically 12% to 25% fines, may also be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, after significant drying and some mixing with the fine sand material described above. Proper placement, proof rolling and compaction must also be performed.

Soil materials excavated and classified as clayey sand, silt or clay (SC, ML, MH, CL, and CH) and any organic-laden soils (5% or greater organics by weight) should not be reused as fill beneath building or pavement sections. These materials could be used in green areas, if applicable and in non-structural applications where excessive ground subsidence will not create functional or aesthetic problems. It should be noted that silt and clay materials will retain water and if used near the final grade may become saturated and soft for a significant period of time following a rain event.

Soil borings for a typical geotechnical report are widely spaced and generally not sufficient for reliably detecting the presence of isolated, anomalous surface or subsurface conditions, or reliably estimating unsuitable or suitable material quantities. Accordingly, UES does not recommend relying on our boring information to negate presence of anomalous materials or for estimation of material quantities unless our contracted services ***specifically*** include sufficient exploration for such purpose(s) and within the report we so state that the level of exploration provided should be sufficient to detect such anomalous conditions or estimate such quantities. Therefore, UES will not be responsible for any extrapolation or use of our data by others beyond the purpose(s) for which it is applicable or intended.

9.7 Sewer and Utility Lines

9.7.1 General Recommendations

We assume that proposed sewer and other deep utility lines at the site may have invert elevations several feet below existing grades. In general, the soils at this approximate level may be sands to silty sands [SP/SM]; clayey sands and or clay [SC, CL, CH] may be encountered at deeper depths. The fine sand type soils, when excavated from below the water table, may require spreading and drying prior to reuse to achieve a moisture content sufficient to obtain the recommended degree of compaction. Silty sands may be reused as backfill material, but will require stringent moisture control to achieve compaction. The clayey soils [SC, CL, CH] should not be used as backfill material beside or above the utilities.

9.7.2 Trench Excavation and Backfill Recommendations

The following recommendations should be followed while installing the proposed utility lines.

- Where required, the soils in the areas of excavations for the installation of the proposed gravity/force main lines should be dewatered prior to the start of excavation. The groundwater level should be maintained at least 24 inches below the base of the trench and compaction surface during construction and backfill activities.

- After proper dewatering, excavate the trench as per the design configuration. Excavated trenches should be set back to a stable configuration or shored, in either case in accordance with OSHA requirements. Adequate bracing should be provided if necessary to prevent side slope failures.

- Compact the trench bottom a minimum density of 95 percent of the Modified Proctor maximum dry density to a depth of 1-foot below the bottom of the pipe or place the pipe in gravel bedding as described by FDOT Design Standards. Remove rock, boulders or other hard lumpy or unyielding material to depth of 12 inches below the bottom of the pipe elevation. The subgrade after excavation in some areas may include silty-clayey sands [SM-SC/SC] [A-2-4]/[A-2-6], which will be difficult to compact. If these soils are soft in nature, they should be over-excavated and removed under the direction of the testing agency representative. Alternatively, approximately 6 to 12 inches of #57 stone (gravel) may be placed at the bottom and compacted to stabilize the subgrade. When utilizing graded stone material, sufficient amount of sand should be added to fill all voids created by the use of 57 stone. The undercut areas should be covered with geotextile (separation fabric). Some areas may also include very clayey sands or sandy clay [SC/CH][A-6]/[A-7]; these soils should be over-excavated and removed under the direction of the testing agency representative.

- Fill materials above the spring-line of the pipe should be compacted to a minimum of 95 percent of the Modified Proctor maximum dry density (AASHTO T-180/ASTM D-1557). Native soils consisting of clean sands with less than 12 percent fines may be used as backfill material provided they are inorganic, have moisture contents below the optimum level and are properly placed. As possible, we recommend you avoid using silty and clayey sands as backfill material for this project.

- If imported materials are used as trench backfill material, the imported fill should contain less than 5 percent soil fines passing a number 200 sieve. You may also use imported fill material containing 5 to 12 percent soil fines; however, strict moisture control measures will be required, particularly for placement of these materials in excavations extending below the groundwater level.

- Backfill placed around the pipe and extending up to a level of 12 inches above the top of the pipe should be placed in loose, 6-inch lifts and compacted with light-weight equipment such as a small plate compactor. The remaining backfill may be placed in loose, 12-inch lifts across the full trench width and compacted. All backfill lifts should be compacted to a minimum density of 95 percent of the Modified Proctor maximum dry density prior to the placement of additional backfill. Compaction within the backfill trench should be performed using light-weight compaction equipment until the backfill has attained a level of at least 4 feet above the crown of the pipe. Beneath pavement areas, the top 12 inches of backfill should be compacted to at least 98 percent.

- Compliance test for densities should be performed as recommended by FDOT standards. Additionally, local jurisdictional compaction requirements should be followed when stricter than the recommendations herein.

9.8 Excavations

Excavations should be sloped as necessary to prevent slope failure and to allow backfilling. Temporary excavations below a depth of 4 feet should be sloped in accordance with OSHA regulations (29 CFR Part 1926) dated October 31, 1989. Where lateral confinement will not permit slopes to be laid back, the excavation should be shored in accordance with OSHA requirements. During excavation, excavated material should not be stockpiled at the top of the slope within a horizontal distance equal to the excavation depth. Provisions for maintaining workman safety within excavations is the sole responsibility of the contractor.

9.9 Stormwater Management System

The field and laboratory test data indicates that the near-surface sands with silt to silty sands generally have permeability rates of 0.5 to 21 feet per day, and the underlying clayey sand to sandy clay soils within the proposed stormwater management area for this project generally have permeability rates of less than 0.1 foot per day at the boring locations. Based upon the above findings, we recommend that you consider the soil parameters presented in Table 7 for design of the stormwater management system on the subject project site. It should be noted that the above referenced values are measured values and do not incorporate factor of safety.

TABLE 7 – STORMWATER MANAGEMENT SYSTEM SOIL DESIGN PARAMETERS

Corresponding Soil Boring Test Locations	B25/B26/B34/B35	B27/B28/B29	B30/B31/B32/B33
Average Depth to Confining Layer, feet	7	8	5
Estimated Average Unsaturated Vertical Infiltration rate, feet per day	7.5	1.5	2
Estimated Average Horizontal Hydraulic Conductivity, feet per day	12.5	2.5	3
Estimated Average Fillable Porosity, percentage	20	15	15
Estimated Seasonal High Water Table Depth, feet[1]	6.5	7.5	4.5

[1]The seasonal high water table will be a result of perched conditions.

10.0 POTENTIAL GEOTECHNICAL CONSTRAINTS TO SITE DEVELOPMENT

Our interpretation of the site soil and groundwater conditions is based on our general knowledge of the area, subsurface borings performed and laboratory analysis conducted. UES did identify geotechnical considerations that may impact the planned development of the site, as we currently understand it, using conventional construction practices. The identified considerations are:

1. The presence of a very loose sand layers from 0 to 10 feet below land surface in most of the borings throughout the project site that will necessitate compaction.

2. Deposits of Clayey Sands [SC] and Sandy Clays [CH] that may not be re-usable as fill in utility excavations.

3. The subgrade after deeper excavation, in some areas may include very clayey sands, which will be difficult to compact. The clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods.

4. Steep slopes will have an impact on the construction process. Measures should be taken to prevent erosion of the slope, during construction and during the life of the project. Grading shall be designed to ensure that drainage flows away from all structures, especially structures that are cut into hillsides.

5. Due to the presence of near surface clays it is important that the construction design incorporate factors to minimize water seepage around the proposed structures. Design factors may include underdrain/drainage intercepting water runoff from the slopes, and positive drainage around structures.

6. Potentially expansive clay soils. Where present, the potentially detrimental effect of the expansive clays can be remediated through site grading, over-excavation and replacement, site drainage and stiffened foundation.

11.0 REPORT LIMITATIONS

This Report has been prepared for the exclusive use of Rise Partners, and other members of the Design/Construction Team for the specific project discussed in this Report. This Report has been prepared in accordance with generally accepted local geotechnical engineering practices; no other warranty is expressed or implied.

The scope is limited to the specific project and locations described herein. Our description of the project's design parameters represents our understanding of the significant aspects relevant to soil and foundation characteristics. In the event that any changes in the design or location of the structures as outlined in this report are planned, we should be informed so the changes can be reviewed and the conclusions of this report modified, if required, and approved in writing by UES.

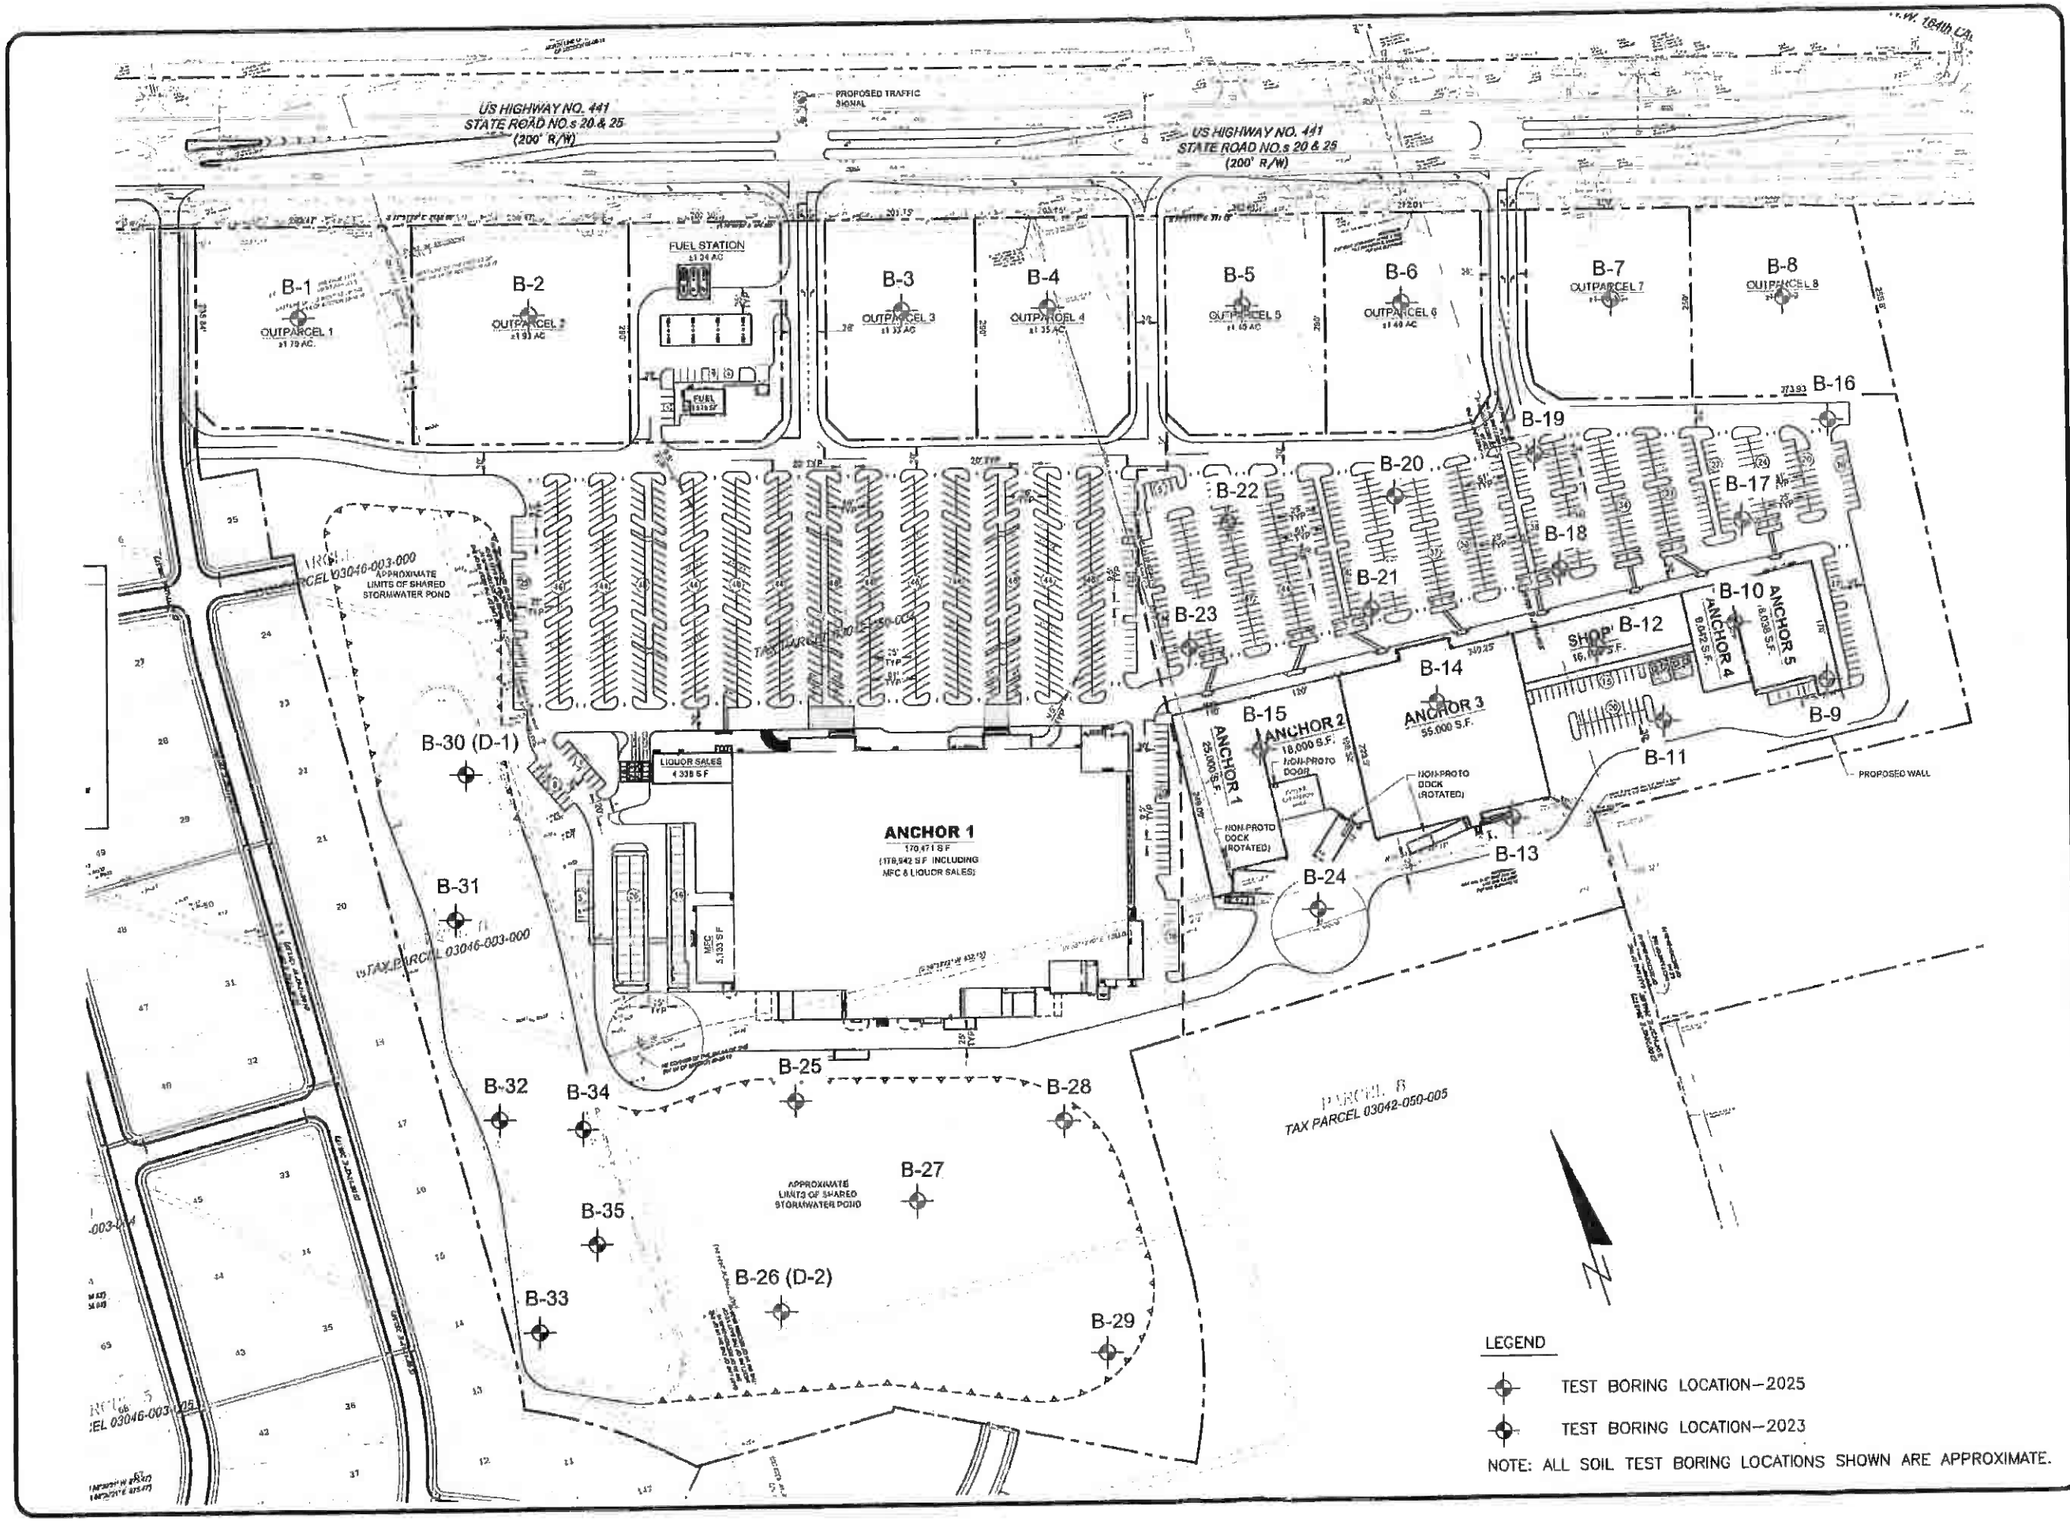
The recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated on the Boring Location Plan and from other information as referenced. This report does not reflect any variations that may occur between the boring locations. The nature and extent of such variations may not become evident until the course of construction. If variations become evident, it will then be necessary for a re-evaluation of the recommendations of this report after performing on-site observations and/or additional testing during the construction period and noting the characteristics of the variations.

Please note that this exploration was preliminary in nature, and was designed to help determine the presence of any near surface constraints which would significantly impact the intended development of the subject site, as well as affect the cost of construction. The information obtained from this exploration is not sufficient for final design of foundation systems, building and pavement grades, and stormwater ponds.

We strongly recommended that the information obtained from this preliminary exploration be supplemented with a more comprehensive subsurface exploration once the site plan have been finalized. Deeper soil borings are also required if you wish to evaluate the presence of deeper deposits of unsuitable soils on site. The foundations for the building and the pavement grades

should be designed based on the information obtained from a comprehensive geotechnical exploration program.

This report has not been prepared to meet the full needs of design professionals, contractors, or any other parties. Any use of this report without the guidance of the geotechnical engineer who prepared it constitutes improper usage which could lead to erroneous assumptions, faulty conclusions, and other problems.



During the early stages of most construction projects, geotechnical issues not addressed in this report may arise. Because of the natural limitations inherent in working with the subsurface, it is not possible for a geotechnical engineer to predict and address all possible problems. A GBA publication, "Important Information About Your Geotechnical Engineering Report" appears in Appendix C, and will help explain the nature of geotechnical issues. Further, we present documents in Appendix C: Constraints and Restrictions, to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

APPENDIX C

DESCRIPTION OF LABORATORY TESTING PROCEDURES

UNIFIED SOIL CLASSIFICATION - ASTM D-2487

This practice describes a system for classifying mineral and organo-mineral soils for engineering purposes based on laboratory determination of particle size characteristics, liquid limit, and plasticity index.

WASH 200 TEST - ASTM D-1140

The Wash 200 test is performed by passing a representative soil sample over a No. 200 sieve and rinsing with water. The percentage of the soil grains passing this sieve is then calculated.

FULL SIEVE GRADATION TEST – ASTM D-422

On occasion it is helpful to evaluate the overall compositional characteristics of a soil and the #200 sieve analysis is supplemented with a full grain size distribution. A set of sieves with varying mesh sizes is used to determine the gradation of the soil particle sizes.

MOISTURE CONTENT DETERMINATION - ASTM D-2216

Moisture content is the ratio of the weight of water to the dry weight of soil. Moisture content is measured by drying a sample at 105 degrees Celsius. The moisture content is expressed as a percent of the oven dried soil mass.

ATTERBERG LIMITS – ASTM D-4318

The Atterberg limits are the upper and lower limits of the range of water content over which a soil exhibits plastic behavior, and are defined as the liquid limit and plastic limit, respectively.

The liquid limit is estimated as follows: The soil is mixed with distilled water to form a thick paste, which is then placed in a brass cup mounted on an edge pivot and rests initially on a rubber base. The base is then leveled off horizontally and divided by cutting a groove with a standard tool. The two halves of the soil gradually flow together as the cup is repeatedly dropped onto its base at a specified rate. The liquid limit is defined as the water content at which 25 blows are required to close the groove over a distance of 1/2 inch.

The plastic limit is estimated as follows: The soil is mixed with distilled water until it can be molded. A ball of soil is then rolled into a thread 1/8 inch in diameter between the hand and a glass plate. The soil is molded together again and the process repeated until the thread cracks when its diameter is 1/8 inch. The water content of the soil at this state is determined and defined as the plastic limit.

ORGANIC CONTENT - ASTM D-2974

Ash content of a peat or organic soil sample is determined by igniting the oven dried sample from the moisture content determination in a muffle furnace at 440 degrees Celsius. The substance remaining after the ignition is the ash. The ash content is expressed as a percentage of the oven dried sample. Organic material is determined by subtracting the percent ash from 100.

PERMEABILITY OF GRANULAR SOILS (CONSTANT HEAD) - ASTM D-2434

In summary, this test method covers the determination of the coefficient of permeability by a constant-head method for the laminar flow of water through granular soils. The procedure is to establish representative values of the coefficient of permeability of granular soils that may occur in natural deposits. The constant head laboratory permeability test is performed by placing the soil sample in a tube (permeameter) and seating the sample on both ends with a porous disk. The tube and soil sample are then sealed and the soil sample is saturated. Once the soil sample has been saturated, a constant head water supply is run through the sample. A pair of manometer tubes is used to measure the pressure head change through the soil. Once the manometer tubes indicate steady state flow, test measurements of pressure head difference, quantity of flow, and time of flow are made. The data recovered from this test are then used to calculate Darcy's Coefficient of Permeability (k) of the soil.

SPECIFIC GRAVITY OF SOIL ASTM D-854

This test method determines the ratio of the mass of a unit volume of soil solids to the mass of the same volume of gas free distilled water at 20 degrees Celsius. Soil is placed into a calibrated pycnometer, water is added, and then the soil and water are de-aired. The specific gravity of the soil specimen is determined through the mass of the pycnometer and water, the calibrated mass of the dry pycnometer, the calibrated volume of the pycnometer, the density of the water at the test temperature, the mass of the oven dried soils, and the mass of the pycnometer water and soil solids at the test temperature.

UES

APPENDIX C

DESCRIPTION OF FIELD TESTING PROCEDURES

DOUBLE RING INFILTROMETER - ASTM D-3385

The Double-Ring Infiltrometer test is performed in general accordance with the procedures outlined in the latest revision of ASTM D3385, "Infiltration Rate of Soils using Double Ring Infiltrometers". The out ring, approximately 24 inches in diameter, was driven to a depth of 6 inches below the test depth. The inner ring, approximately, 12 inches in diameter, was inserted inside the outer ring, centered, and driven to a depth of approximately 2 to 4 inches below the test depth. The 2 rings were filled simultaneously with 4 inches of water.

The water level was maintained throughout the test period, with the required amount of water added to maintain this level in both rings recorded at time intervals of 15 minutes. After reaching a stabilized inflow volume of water, the test was continued for approximately 120 minutes.

STANDARD PENETRATION TESTING – ASTM D-1586

Penetration tests were performed in accordance with ASTM Procedure D-1586, Penetration Test and Split-Barrel Sampling of Soils. This test procedure generally involves driving a 1.4-inch I.D. split-tube sampler into the soil profile in six inch increments for a minimum distance of 18 inches using a 140-pound hammer free-falling 30 inches. The total number of blows required to drive the sampler the second and third 6-inch increments is designated as the N-value, and provides an indication of in-place soil strength, density and consistency.

APPENDIX D

Important Information About Your Geotechnical Engineering Report
Constraint and Restrictions

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled.* No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be,* and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed.* The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only.* To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures.* If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

CONSTRAINTS & RESTRICTIONS

The intent of this document is to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

WARRANTY

Universal Engineering Sciences has prepared this report for our client for his exclusive use, in accordance with generally accepted soil and foundation engineering practices, and makes no other warranty either expressed or implied as to the professional advice provided in the report.

UNANTICIPATED SOIL CONDITIONS

The analysis and recommendations submitted in this report are based upon the data obtained from soil borings performed at the locations indicated on the Boring Location Plan. This report does not reflect any variations which may occur between these borings.

The nature and extent of variations between borings may not become known until excavation begins. If variations appear, we may have to re-evaluate our recommendations after performing on-site observations and noting the characteristics of any variations.

CHANGED CONDITIONS

We recommend that the specifications for the project require that the contractor immediately notify Universal Engineering Sciences, as well as the owner, when subsurface conditions are encountered that are different from those present in this report.

No claim by the contractor for any conditions differing from those anticipated in the plans, specifications, and those found in this report, should be allowed unless the contractor notifies the owner and Universal Engineering Sciences of such changed conditions. Further, we recommend that all foundation work and site improvements be observed by a representative of Universal Engineering Sciences to monitor field conditions and changes, to verify design assumptions and to evaluate and recommend any appropriate modifications to this report.

MISINTERPRETATION OF SOIL ENGINEERING REPORT

Universal Engineering Sciences is responsible for the conclusions and opinions contained within this report based upon the data relating only to the specific project and location discussed herein. If the conclusions or recommendations based upon the data presented are made by others, those conclusions or recommendations are not the responsibility of Universal Engineering Sciences.

CHANGED STRUCTURE OR LOCATION

This report was prepared in order to aid in the evaluation of this project and to assist the architect or engineer in the design of this project. If any changes in the design or location of the structure as outlined in this report are planned, or if any structures are included or added that are not discussed in the report, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed and the conclusions modified or approved by Universal Engineering Sciences.

USE OF REPORT BY BIDDERS

Bidders who are examining the report prior to submission of a bid are cautioned that this report was prepared as an aid to the designers of the project and it may affect actual construction operations.

Bidders are urged to make their own soil borings, test pits, test caissons or other investigations to determine those conditions that may affect construction operations. Universal Engineering Sciences cannot be responsible for any interpretations made from this report or the attached boring logs with regard to their adequacy in reflecting subsurface conditions which will affect construction operations.

STRATA CHANGES

Strata changes are indicated by a definite line on the boring logs which accompany this report. However, the actual change in the ground may be more gradual. Where changes occur between soil samples, the location of the change must necessarily be estimated using all available information and may not be shown at the exact depth.

OBSERVATIONS DURING DRILLING

Attempts are made to detect and/or identify occurrences during drilling and sampling, such as: water level, boulders, zones of lost circulation, relative ease or resistance to drilling progress, unusual sample recovery, variation of driving resistance, obstructions, etc.; however, lack of mention does not preclude their presence.

WATER LEVELS

Water level readings have been made in the drill holes during drilling and they indicate normally occurring conditions. Water levels may not have been stabilized at the last reading. This data has been reviewed and interpretations made in this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, tides, and other factors not evident at the time measurements were made and reported. Since the probability of such variations is anticipated, design drawings and specifications should accommodate such possibilities and construction planning should be based upon such assumptions of variations.

LOCATION OF BURIED OBJECTS

All users of this report are cautioned that there was no requirement for Universal Engineering Sciences to attempt to locate any man-made buried objects during the course of this exploration and that no attempt was made by Universal Engineering Sciences to locate any such buried objects. Universal Engineering Sciences cannot be responsible for any buried man-made objects which are subsequently encountered during construction that are not discussed within the text of this report.

TIME

This report reflects the soil conditions at the time of exploration. If the report is not used in a reasonable amount of time, significant changes to the site may occur and additional reviews may be required.

UES™

GENERAL TERMS AND CONDITIONS

SECTION 1: BINDING AGREEMENT

1.1 By accepting the Proposal, Client accepts and agrees to be bound by all terms set forth in the Proposal and these General Terms and Conditions and any applicable addendum attached hereto. Client acknowledges and agrees that these General Terms and Conditions include certain state-specific terms and conditions that are applicable based on the location where the Services (as hereinafter defined) are to be performed. Attached hereto are State-Specific Addenda, each corresponding to a particular state or region.

1.2 If the Services are performed in Forida, Texas, California, Nevada, Oregon, Washington or Arizona, the State-Specific Addendum attached hereto is incorporated into and made a part of these General Terms and Conditions.

1.3 In the event of any conflict between these General Terms and Conditions and the terms of the applicable State-Specific Addendum, the terms of the State-Specific Addendum shall govern and control for Services performed in that state or region.

1.4 The Proposal and these General Terms and Conditions (collectively, the "Agreement") represent and contain the entire and only agreement and understanding among UES Professional Solutions, LLC, a Florida limited liability company and its affiliates (the "Company") and Client with respect to the subject matter of this Agreement and supersede any and all prior and contemporaneous oral and written agreements, understandings, representations, inducements, promises, warranties, and conditions among the parties.

SECTION 2: SERVICES

2.1 The Company is responsible for providing the services described under the Scope of Services ("Services") of the Proposal to which these General Terms and Conditions form a part. The term "the Company" as used herein includes all the Company's agents, employees, professional staff, and subcontractors.

2.2 The Company shall provide revised or additional services, including changes to the Services necessary due to changed or unforeseen conditions, only in accordance with a written addendum or change order (collectively, "Change Order") to the Agreement agreed to by the Company and Client, and only to the extent set forth in that Change Order.

2.3 The Company shall not be responsible for any delays, fees or costs associated with adverse or unusual weather conditions that prevent the Services from being safely conducted.

2.4 The Company shall provide the personnel, equipment, Level D personal protective equipment (as defined by the Occupational Safety and Health Administration ("OSHA"), and other materials necessary to provide the Services. The Company, at its sole discretion, may retain subcontractors or other third parties to assist it in the provision of the Services.

2.5 The terms "Project" and "Site" as used interchangeably in these General Terms and Conditions refer to the land and/or construction project on which or to which the Company is to provide Services under this Agreement.

2.6 The Company shall perform all Services hereunder as an independent contractor, and nothing contained herein shall be deemed to create any association, partnership, joint venture, or relationship of principal and agent or master and servant, or employer and employee between the parties hereto or any affiliates or subsidiaries thereof, or to provide either party with the right, power or authority, whether express or implied, to create any such duty or obligation on behalf of the other party.

SECTION 3: PROFESSIONAL STANDARD OF CARE

3.1 The Company will provide its Services under this Agreement in a manner consistent with the level of professional care and skill ordinarily exercised by similar professionals practicing contemporaneously under similar conditions in the locality of the Project. NO OTHER WARRANTY CONCERNING THE SERVICES THE COMPANY PROVIDES UNDER THE AGREEMENT OR ANY ADDENDUM OR CHANGE ORDER, EXPRESS OR IMPLIED, IS MADE, AND ALL OTHER WARRANTIES, INCLUDING THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY DISCLAIMED TO THE FULL EXTENT PERMITTED BY APPLICABLE LAW.

3.2 Client understands that subsurface investigations may involve drilling, boring, excavating or sampling through varied subsurface soil and water strata which, consistent with the prevailing standard of professional care, may result in the unavoidable or inadvertent cross-mingling of soil and water and any hazardous substances or constituents contained in them, and that this risk cannot be eliminated despite the exercise of professional care. IF SUBSURFACE INVESTIGATIONS ARE PART OF THE SERVICES, CLIENT WAIVES ANY CLAIM AGAINST THE COMPANY, AND SHALL INDEMNIFY, DEFEND, AND HOLD THE COMPANY HARMLESS FROM ANY CLAIM OR LIABILITY FOR INJURY OR LOSS ARISING FROM CROSS-CONTAMINATION RELATED TO SUCH SUBSURFACE EXPLORATIONS.

3.3 The Company will take reasonable precautions to minimize damage to the Site, but it is understood by Client that, in the normal course of the provision of the Services, including sampling or drilling, some damage to, or alteration of the Site is possible. The repair of such damage shall not be part of the Services unless explicitly specified in writing in the Agreement.

3.4 Execution and delivery of this Agreement by the Company is not a representation that the Company has visited the site, become generally familiar with local conditions under which the work is to be performed, or correlated personal observations with the requirements of the Scope of Services.

3.5 Client's payment in full of the amount owed for Services rendered shall be taken to mean that Client is satisfied with and has accepted the Company's Services.

SECTION 4: RESPONSIBILITIES

4.1 Client is responsible for providing the Company with a clear understanding of the project's nature and scope. Client shall supply the Company with sufficient and adequate information, including, but not limited to, maps, site plans, reports, surveys, plans and specifications, and designs, to allow the Company to properly complete the Services. Client assumes all liability for information not provided to the Company that may affect the quality or sufficiency of the Services.

4.2 Client acknowledges that the Company's responsibilities in providing the Services is limited to those services described in the Proposal, and the Client hereby assumes any collateral or affiliated duties necessitated by or for those Services. Such duties may include, but are not limited to, the provision of any required notices to any third party, or the securing of necessary permits or permissions from any third parties required for the Company's provision of the Services.

SECTION 5: SITE ACCESS AND SITE CONDITION

5.1 Client will grant or obtain at its expense lawful and safe access to the Site as needed for the Company to perform the Services and will notify all affected persons and entities in writing of the Company's presence. The access shall be adequate to allow the Company to conduct the Services, including bringing and storing equipment and tools on the Site and any necessary access to exterior and interior areas. The Company shall not be responsible for any delays, fees or costs caused by delayed or restricted access that prevents or slows the delivery of the Services. If the Site is not owned or operated by Client or the Client does not otherwise have the authority to grant the Company lawful access, Client shall be responsible for obtaining, at its own expense, an access agreement for the Site and any facilities located thereon and are necessary to perform the Services. The Company reserves the right to delay, without penalty, any Site visit and the provision of Services if a site access agreement, in the Company's reasonable judgment and discretion, would impose conditions, liabilities or risks on the Company in excess of those set forth in these General Terms and Conditions or the Agreement. IF THE SITE IS NOT OWNED BY CLIENT, CLIENT AGREES TO DEFEND, RELEASE, AND HOLD THE COMPANY, INCLUDING ITS OFFICERS, DIRECTORS, SHAREHOLDERS, EMPLOYEES, AGENTS, AFFILIATES AND SUCCESSORS (THE "COMPANY INDEMNITEES") HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ALLEGED BY THE SITE OWNER OR THE SITE OWNER'S EMPLOYEES, AGENTS, CONTRACTORS OR OTHER PERSONS OR ENTITIES ARISING FROM THE COMPANY'S PERFORMANCE OF SERVICES AT SUCH SITE.

5.2 Client shall be responsible for the safety of the Site where the Project is conducted and for providing a safe environment for the Company to provide the Services. The Company shall be responsible for the safe and compliant conduct of its personnel at the Site and shall also comply with the reasonable and lawful work rules for the Site. As required by applicable laws, the Company will prepare a site-specific Health and Safety Plan (HASP) applicable to its personnel for the Services provided at the Site. The Company shall not be responsible for the safety of other personnel at the Site, nor shall it be responsible for ensuring that the Site complies with environmental, health and safety laws, or reporting any unsafe conduct or non-compliance that it may observe. If the Company encounters conditions at the Site that are unsafe for its personnel, it reserves the right at its sole discretion to suspend or halt work until such conditions are cured. The Company shall not be responsible for any fees, costs or damages associated with any safety-related delays. Unless otherwise provided for in the Agreement, the Company shall not work in conditions that require personal protective equipment beyond that classified as Level D by OSHA, unless otherwise identified in the Proposal.

5.3 Client is responsible for accurately identifying to the Company in writing the existence and location of all subterranean structures and utilities on or affecting the Site and the Services. The Company will take reasonable precautions to avoid affecting subterranean structures and utilities disclosed to it in writing by Client. If included in the Agreement, Client may authorize the Company to conduct applicable private utility identification and clearance requirements on behalf of Client.

5.4 Unless otherwise stated in the Proposal, any soil or groundwater monitoring activities that are included in the Services are based on the assumption that soil borings and monitoring wells can be installed using standard truck-mounted drilling equipment, the locations are accessible to such equipment, and that surface conditions at each location consists of non-reinforced asphalt or concrete not exceeding six (6) inches in thickness and no concrete or asphalt cutting will be required. If the Company encounters materially different conditions at the Site, the Company shall inform Client, and a Change Order shall be agreed to that addresses any changes in schedule, fees or costs associated with the changed conditions.

SECTION 6: HAZARDOUS SUBSTANCES AND ENVIRONMENTAL CONDITIONS

6.1 Client represents it has informed the Company of all known or suspected Hazardous Substances on, under or near the Site of which it is aware, and that it has provided the Company with all studies, reports, investigations, or similar documents in its possession about the environmental conditions at the Site, including any documents and correspondence involving Federal, State or local environmental, health or safety regulatory notifications.

6.2 For purposes of the Agreement and these General Terms and Conditions, the term "Hazardous Substances" includes materials defined or regulated as hazardous substances, hazardous materials, hazardous wastes, hazardous constituents, solid wastes, pollutants, or toxic substances under any Federal, State or local environmental, health, safety or natural resources law, statute, regulation or ordinance, including but not limited to petroleum products, polychlorinated biphenyls, per- and polyfluoroalkyl substances, asbestos, and any other material or substance listed or identified by the United States Environmental Protection Agency or any similar State or local agency as presenting a potential danger to health, safety or the environment.

6.3 Except to the extent required by law, the Company shall not be responsible for making any disclosures to governmental agencies or the Site owner regarding the presence or release of Hazardous Substances on, under, from or around a Site.

6.4 **FOR ENVIRONMENTAL INVESTIGATION, GEOTECHNICAL AND REMEDIATION PROJECTS,** the discovery of Hazardous Substances or other environmental conditions on, under or near the Site not contemplated within the Services may constitute a changed condition, necessitating a Change Order. Although unlikely, Client acknowledges that such a discovery of Hazardous Substances may make it necessary for the Company to take immediate measures to protect the health and safety of its employees and other persons, or to arrange for others to do so, including and up to delaying or terminating work. Client agrees to compensate the Company for all expenses incurred or caused by the discovery of unanticipated Hazardous Substances or environmental conditions encountered at the Site, including but not limited to those related to worker protection and exposure, emergency response actions and equipment decontamination.

6.5 **FOR ENVIRONMENTAL INVESTIGATION AND REMEDIATION PROJECTS,** all substances on, in, or under Site, or obtained from Site as samples or as byproducts of the sampling process, shall be Client's property. The Company shall not be required to sign or certify a waste manifest, disposal ticket, or similar document relating to the transportation or disposal of wastes or Hazardous Substances. the Company may serve as Agent for Client if requested under a separate agreement and authorization. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances and shall not be so identified on any document.

FOR GEOTECHNICAL PROJECTS, all substances on, in, or under the Site, or obtained from the Site as samples or as byproducts of the sampling process, shall be Client's property. Unless otherwise expressly specified in the Agreement or the Services, the characterization, management and disposition of substances, including Hazardous Substances, generated during the Services (including, but not limited to, wastes, samples, produced soils or fluids, cuttings, or protective gear or equipment, etc.) is the sole responsibility of Client. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not and shall not be identified as a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances on any document. Unless specifically provided for in the Agreement, the Company shall not have any responsibilities with respect to the storage or preservation of samples, and Client agrees that the Company is not responsible or liable to Client for any loss of samples that are shipped to a testing facility or retained in storage.

6.6 The Company shall not have custody of any monitoring wells or permanent sampling locations installed as part of the Project, and shall not be responsible for proper maintenance, repair, or closure of such wells, unless otherwise provided for in the Agreement.

6.7 CLIENT AGREES TO DEFEND, INDEMNIFY, RELEASE, AND HOLD THE COMPANY INDEMNITEES HARMLESS FROM ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES (INCLUDING ATTORNEY'S FEES AND CONSULTANTS' FEES, COSTS OF DELAY OF THE SERVICES, AND ANY COSTS ASSOCIATED WITH POSSIBLE REDUCTION TO THE VALUE OF THE PROJECT OR THE SITE IN WHICH IT IS SITUATED) ARISING FROM (I) THE COMPANY'S DISCOVERY OF OR ITS EMPLOYEES' OR SUBCONTRACTORS' EXPOSURE TO HAZARDOUS SUBSTANCES OR SUSPECTED SUBSTANCES RELATED TO THE SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE ACTS, OMISSIONS OR WILLFUL MISCONDUCT; (II) ANY DISCLOSURES THE COMPANY IS REQUIRED TO MAKE BY LAW REGARDING HAZARDOUS SUBSTANCES OR ENVIRONMENTAL CONDITIONS AT A SITE; (III) ANY CLAIMS MADE ALLEGING THAT (A) THE COMPANY IS AN OWNER OR OPERATOR OF THE SITE AT WHICH THE SERVICES ARE RENDERED; (B) THE COMPANY IS THE GENERATOR, STORER OR TREATER OF HAZARDOUS SUBSTANCES AT SUCH SITE; OR (C) THAT THE COMPANY ARRANGED FOR THE TRANSPORTATION OR DISPOSAL OF ANY HAZARDOUS SUBSTANCES FROM THE SITE; (IV) ANY VIOLATION BY CLIENT OF ANY FEDERAL, STATE OR LOCAL LAW, REGULATION, ORDER, DECREE OR ORDINANCE RELATED TO HAZARDOUS SUBSTANCES; OR (V) ANY CLAIMS MADE BY THIRD-PARTIES WITH RESPECT TO ALLEGED EXPOSURES TO OR DAMAGES CAUSED BY HAZARDOUS SUBSTANCES AT OR FROM THE SITE OR DURING OR RELATED TO ANY PROJECT OR THE PROVISION OF SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE OR WILLFUL MISCONDUCT.

SECTION 7: REVIEWS, INSPECTIONS, TESTING, AND OBSERVATIONS

7.1 If the Services include oversight, monitoring or observation of work being conducted by third parties (other than the Company subcontractors), such Services shall be conducted solely to determine that the work being overseen, monitored, or observed is in general conformity to the contractual requirements between Client and such third parties. Client shall have sole responsibility and authority to reject, suspend or stop the work of such third parties, or modify or terminate any agreement between Client such third parties.

7.2 The Company shall not have the responsibility or authority to stop, suspend, or modify the work of such third parties, and does not guarantee that work it inspects conforms in all respects to the design, or to applicable laws, statutes, regulations, rules or codes, and it shall have no liability for design or construction defects, or the failure of Client's designers or contractors to comply with their contractual obligations.

7.3 Neither the activities of the Company pursuant to this Agreement, nor the presence of the Company or its employees, representatives, or subcontractors on the Project Site, shall be construed to impose upon the Company any responsibility for means or methods of work performance, superintendence, sequencing of construction, or safety or environmental conditions or compliance at the Project Site. Client acknowledges that Client or its contractor is solely responsible for Project jobsite safety and compliance with environmental, health and safety laws.

7.4 Client is responsible for scheduling all inspections and construction materials testing ("CMT") activities of the Company. The Company will not be responsible for tests and inspections that it does not perform due to Client's failure to timely schedule work. Client shall at the time of execution of the Agreement provide the Company with a proposed schedule for tests and inspections the Company shall perform. Client will give reasonable notice of all changes to that schedule. The Company shall not be required to conduct any tests or inspections on less than 72 hours written notice, nor after normal business hours or on weekends or holidays.

SECTION 8: BILLING AND PAYMENT

8.1 The Company will submit invoices to Client monthly or upon completion of Services. Invoices will show charges for different personnel and expense classifications. Partially completed items of work for which a fee has been specified may be billed based upon the percentage of completion as estimated by the Company. Reimbursable expenses, those outside of the scope of the proposed Services, will be charged to the Client at cost plus an applicable fee. Payment is due 30 days after presentation of invoice and is past due 31 days from invoice date. Client agrees to pay a finance charge of the lesser of one and one-half percent (1 ½ %) per month, or the maximum rate allowed by law, on past due accounts. If the Company incurs any expenses to collect overdue billings on invoices, the sums paid by the Company for reasonable attorneys' fees, court costs, the Company's time, the Company's expenses, and interest will be

due and owing by the Client. Client agrees that the Company may refuse to release to Client any reports, findings, data, and other work product until it has been paid in full for Services rendered.

SECTION 9: OWNERSHIP AND USE OF DOCUMENTS; INTELLECTUAL PROPERTY

9.1 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, as instruments of service, shall remain the property of the Company. Neither Client nor any other entity shall change or modify the Company's instruments of service. The Company disclaims any and all responsibility and liability for problems that may occur during implementation of the Company's plans, specifications, or recommendations when Company is not retained to observe such implementation. The Company will retain all pertinent records relating to the Services for a period of "five years or such longer period" of time required by applicable accrediting agency, unless specified in the Scope of Services following submission of the report or completion of the Services, during which period the records will be made available to the Client in a reasonable time and manner, subject to payment of a reasonable fee for the time of the Company's employees to assemble and transmit those documents.

9.2 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, are prepared for the sole and exclusive use of Client, and may not be given to any other entity, or used or relied upon by any other entity, without the express written consent of the Company. Such written consent may take the form of a "reliance letter" which must be agreed to by such other person or entity to whom the Services and instruments of service may be disclosed, and for which a separate fee will be charged. The Company shall be entitled to injunctive relief preventing/prohibiting any disclosure, reliance or attribution prohibited hereunder, and CLIENT SHALL RELEASE, INDEMNIFY, DEFEND, AND HOLD HARMLESS THE COMPANY FROM ANY LOSSES ARISING FROM OR RELATED TO SUCH UNAUTHORIZED DISCLOSURE, ATTRIBUTION OR RELIANCE. Client is the only entity to which the Company owes any duty or duties, in contract or tort, pursuant to or under this Agreement.

9.3 The Company shall retain sole and exclusive ownership of all ideas, concepts, theories, improvements, designs, original works of authorship, formulas, processes, models, software, algorithms, inventions, know-how, techniques, compositions of matter and any other information owned by the Company prior to the date of this Agreement or created or modified by the Company during the provision of the Services.

9.4 Each party may disclose to the other party certain information that it considers to be confidential ("Confidential Information") provided such information is disclosed in writing and clearly marked or, if orally disclosed, promptly thereafter reduced to writing and clearly marked "Confidential." In no event shall Confidential Information include information that: (a) is or becomes publicly available other than through a breach of the Agreement; (b) is known to the party receiving such information prior to disclosure or is independently developed by such party subsequent to such disclosure without reference to Confidential Information provided hereunder; or (c) is subsequently lawfully obtained by the party receiving such information from a third party without obligations of confidentiality. Each party agrees that it (a) will not disclose or divulge the other party's Confidential Information to any person, (b) will not use the other party's Confidential Information for its own benefit or the benefit of others, (c) will employ at least the same degree of care in protecting Confidential Information as it employs in protecting its own confidential information, and (d) will, upon termination of the Agreement, or at any time at the request of the other party, return to the other party or destroy all copies of the other party's Confidential Information. Notwithstanding the foregoing, each party may disclose the other party's Confidential Information to its employees, subcontractors and authorized agents who have a need to know such confidential information to fulfill its obligations under this Agreement. In the event a party receives a subpoena or other validly issued administrative or judicial process requesting the disclosure of the other party's Confidential Information, such party will promptly notify the other party and tender to it the defense of such demand and will cooperate (at the other party's expense) with the defense of such demand. Unless the demand shall have been timely quashed or extended, the party receiving the demand shall thereafter be entitled to comply with such demand when and to the extent required by law.

SECTION 10: RISK ALLOCATION AND INDEMNIFICATION

10.1 CLIENT AGREES THAT THE COMPANY'S LIABILITY FOR ANY DAMAGE ON ACCOUNT OF ANY BREACH OF CONTRACT, ERROR, OMISSION, OR PROFESSIONAL NEGLIGENCE WILL BE LIMITED TO A SUM NOT TO EXCEED THE GREATER OF $50,000 OR THE COMPANY'S FEE. If Client prefers to have higher limits on contractual or professional liability, the Company agrees to increase the limits up to a maximum of (i) $1,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of five percent of the total fee for Services or $1,000.00, or (ii) $2,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of ten percent of the total fee for Services or $2,000.00. The additional charge for the higher liability limits is because of the greater risk assumed and is not strictly a charge for additional contractual or professional liability insurance.

10.2 CLIENT SHALL NOT BE LIABLE TO THE COMPANY AND THE COMPANY SHALL NOT BE LIABLE TO CLIENT FOR ANY PUNITIVE, INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS, LOSS OF USE, AND LOST SAVINGS) INCURRED BY EITHER PARTY DUE TO THE FAULT OF THE OTHER, REGARDLESS OF THE NATURE OF THE FAULT, OR WHETHER IT WAS COMMITTED BY CLIENT OR THE COMPANY, THEIR EMPLOYEES, AGENTS, OR SUBCONTRACTORS; OR WHETHER SUCH LIABILITY ARISES IN BREACH OF CONTRACT OR WARRANTY, TORT (INCLUDING NEGLIGENCE), STATUTORY, OR ANY OTHER CAUSE OF ACTION.

10.3 As used in this Agreement, the terms "claim" or "claims" mean any claim in contract, tort, or statute alleging negligence, errors, omissions, strict liability, statutory liability, breach of contract, breach of warranty, negligent misrepresentation, or any other act giving rise to liability.

10.4 Subject to the provisions of the limitation of liability described in this Section, Client and the Company each agree to indemnify and hold harmless the other party and the other party's affiliated companies, officers, directors, partners, employees, and representatives, from and against losses, damages, and judgments, including reasonable attorneys' fees and expenses recoverable under applicable law, but only to the extent they are legally determined to be caused by a negligent act, error, or omission of the indemnifying party or any of the indemnifying party's officers, directors, members, partners, agents, employees, or subconsultants in the performance of Services. If claims, losses, damages, and judgments are legally determined to be caused by the joint or concurrent negligence of Client and the Company, they shall be borne by each party in proportion to its negligence.

10.5 Notwithstanding any other term or provision in this Agreement, in recognition of the relative risks, rewards and benefits of the work being performed by the Company to both the Client and the Company, the risks have been allocated such that the Client agrees and acknowledged that, to the fullest extent permitted by law, the total liability of the Company to the Client for any and all injuries, claims, losses, expenses, damages or claim expenses arising out of this Agreement from any cause or causes of action whatsoever, whether arising out of contract, negligence, strict liability in tort, or warranty, shall not exceed the amount specified in Section 10 of the General Terms and Conditions.

SECTION 11: INSURANCE

11.1 The Company represents it has Worker's Compensation insurance in force, that it has commercial general liability coverage in the amount of $1,000,000.00 per occurrence and has professional liability insurance in the amount of $1,000,000.00 per claim.

11.2 Client shall maintain such insurance as is necessary to fully underwrite Client's defense and indemnity obligations set forth herein, and shall, upon request by the Company, provide proof to the Company to verify such insurance.

SECTION 12: DISPUTE RESOLUTION

12.1 All claims, disputes, and other matters in controversy between the Company and Client arising out of or in any way related to this Agreement or any Addendum or Change Order shall be decided by binding arbitration in accordance with the Construction Industry Rules of the American Arbitration Association then obtaining, and judgment on the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof. Notwithstanding the foregoing, the Company shall not be required to arbitrate any legal and/or equitable claims (including statutory and equitable liens) for collection of monies due. The successful party in any such action will be entitled to recover its reasonable attorneys' fees, expert witness fees, and other claim-related expenses and court costs incurred, and also the time value at prevailing rates of its employees reasonably incurred in prosecuting or defending the claims, with any claims against the Company subject to the limitations in Section 10. For the purposes hereof, "successful party" shall mean a party who receives an award greater than fifty (50%) percent of its claimed amount.

12.2 The sole and exclusive venue for any dispute resolution proceeding shall be the location in which the Company office performing the Services is located. This Agreement shall be governed by and construed in accordance with the laws of the jurisdiction in which the Company office performing the Services is located.

12.3 Notwithstanding the foregoing, all claims, including for negligence or any other cause whatsoever that the Client has or claims to have against the Company, shall be deemed waived unless (i) Client notifies the Company of the claim or claims within thirty (30) days of discovery thereof, and (ii) if the Client contends that a claim exists against the Company for negligence

or another violation of a standard of care owed by the Company, Client has first provided the Company with a written certification executed by an independent design professional currently practicing in the same discipline as the Company. The certification shall: a) identify the name of the professional; b) specify each and every act or omission that the certifier contends is a violation of the standard of care identified in this Agreement; and c) state in complete detail the basis for the certifier's opinion that each such act or omission constitutes such a violation. This certificate shall be provided to the Company not less than thirty (30) calendar days prior to the institution of any arbitration or judicial proceeding.

12.4 NOTWITHSTANDING THE FOREGOING, THE COMPANY SHALL HAVE NO LIABILITY FOR ANY CLAIM DISCOVERED BY CLIENT MORE THAN ONE YEAR AFTER DELIVERY OF THE LAST ISSUED REPORT BY THE COMPANY FOR THE SERVICES. THE PARTIES AGREE THAT THIS PROVISION IS MATERIAL TO THE DECISION OF THE COMPANY TO ENTER INTO THIS AGREEMENT, THAT IT IS A REASONABLE MEASURE TO ALLOCATE AND INSURE AGAINST RISK, AND THAT IT DOES NOT VIOLATE PUBLIC POLICY.

SECTION 13: TERMINATION

13.1 This Agreement may be terminated by either party upon seven (7) days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof, or in the case of a force majeure event such as terrorism, act of war, public health or other emergency. Such termination shall not be effective if such substantial failure or force majeure has been remedied before expiration of the period specified in the written notice. In the event of termination, the Company shall be paid for services performed to the termination notice date plus reasonable out of pocket termination expenses incurred or paid by the Company in connection with such termination and the winding down of its operations.

13.2 In the event of termination, or suspension for more than three (3) months, prior to completion of all reports contemplated by this Agreement, the Company may complete such analyses and records as are necessary to complete its files and may also complete a report on the Services performed to the date of notice of termination or suspension. The expense of termination or suspension shall include all direct out of pocket costs incurred or paid by the Company in completing such analyses, records, and reports.

SECTION 14: SOLICITATION OF EMPLOYEES

14.1 Client agrees that during the term of the Agreement, and for a period of one (1) year after the last date on which the Company has provided Services, Client shall not, directly or indirectly, solicit or attempt to solicit for employment, or contract directly or indirectly with, any employee of the Company except as authorized in writing by the Company.

SECTION 15: ASSIGNS

15.1 Neither Client nor the Company may assign this Agreement or assign or delegate any of its rights or obligations without the prior written consent of the other party.

SECTION 16: SURVIVAL

If any of the provisions of this Agreement is held by a court of competent jurisdiction to be illegal, invalid, or unenforceable, the enforceability of the remaining provisions will not be impaired and will survive. Limitations of liability and indemnities will survive termination of this Agreement for the period of all applicable statutes of limitations to which they relate.

SECTION 17: MISCELLANEOUS

17.1 This Agreement may not be amended or modified except by an agreement in writing signed by the party against whom the enforcement of any modification or amendment is sought.

17.2 Failure by either party at any time to enforce any obligation by the other party, to claim a breach of any term of the Agreement or to exercise any power agreed to hereunder will not be construed as a waiver of any right, power or obligation under the Agreement, will not affect any subsequent breach, and will not prejudice either party as regards any subsequent action.

17.3 The headings in these General Terms and Conditions are for reference only and are not intended to form part of the Agreement between the Parties.

17.4 It is agreed that this Agreement is entered into by the parties for the sole benefit of the parties to the Agreement, and that nothing in the Agreement shall be construed to create a right or benefit for any third party.

17.5 To the extent that a statute of limitations for any cause of action against the Company arising from this Agreement can be modified contractually in accordance with law, and the relevant statute of limitations for any claim arising of or relating to this Agreement, or the Services provided by Company r, is greater than two (2) years, the relevant statute of limitations shall be two (2) years from the date Company last provided Services. The parties agree that this provision is material to the decision of Company to enter into this agreement, that it is a reasonable measure to allocate and insure against risk, and that it does not violate public policy. This section shall not be construed as an agreement to increase the statute of limitations for any causes of action that are otherwise barred by law.

17.6 All future services rendered by the Company at Client's request for the Project described in the Proposal (whether by Change Order, Addendum, or amendment to this Agreement) shall be conducted under the terms of this Agreement.

CLIENT APPROVAL

In the event the Client authorizes work without returning a signed copy of the Proposal, the Client agrees to be bound by the General Terms and Conditions as stated herein. The Proposal presented has been read, understood, and accepted by the Client effective as of the date that the executed Proposal is returned to the Company.

STATE-SPECIFIC ADDENDUM – FLORIDA

SECTION 1: ADDENDUM TO AGREEMENT

1.1 This Florida addendum (this "Addendum") is made and entered into by and between the Company and Client and is effective as of the date of execution of the Agreement if the Services are performed in the State of Florida, and this Addendum is incorporated into and made a part of the General Terms and Conditions solely with respect to the Services covered by this Addendum.

SECTION 2: INDEMNITY

2.1 IN **ADDITION TO AND NOTWITHSTANDING ANY OTHER PROVISION IN THIS AGREEMENT**, CLIENT AGREES, TO THE FULLEST EXTENT PROVIDED BY LAW, TO RELEASE, DEFEND (WITH COUNSEL REASONABLY ACCEPTABLE TO THE COMPANY), INDEMNIFY, AND HOLD THE COMPANY INDEMNITEES HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES FROM OR BY ANY PERSON OR ENTITY ARISING FROM (1) ACTS OR OMISSIONS BY CLIENT, CLIENT'S AGENTS, STAFF, AND OTHERS EMPLOYED BY OR CONTRACTED TO CLIENT, INCLUDING ARCHITECTS, ENGINEERS, CONTRACTORS, SUBCONTRACTORS, AND CONSULTANTS, WHETHER OR NOT THE COMPANY IS RESPONSIBLE IN PART FOR THE ACTS OR OMISSIONS FOR WHICH CLIENT IS INDEMNIFYING THE COMPANY AND (2) THE PROVISION OF THE SERVICES BY THE COMPANY EXCEPT TO THE EXTENT CAUSED BY THE COMPANY'S GROSS NEGLIGENCE OR WILLFUL MISCONDUCT, SUCH EXCEPTION SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.2 THE COMPANY AGREES TO INDEMNIFY, AND HOLD CLIENT HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ARISING TO THE EXTENT SOLELY FROM THE GROSS NEGLIGENCE OR WILLFUL MISCONDUCT BY THE COMPANY IN THE PROVISION OF THE SERVICES, SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.3 To the extent either party's damages are covered by available insurance, Client and the Company waive all rights of subrogation against each other and against the contractors, subcontractors, consultants, agents, and employees of the other, except such rights as they may have to the proceeds of such insurance.

SECTION 3: INDIVIDUAL LIABILITY (5 POINTS LARGER THAN ADJACENT TEXT)

3.1 **PURSUANT TO FLORIDA STAT. 558.0035, AN INDIVIDUAL EMPLOYEE OR AGENT OF THE COMPANY MAY NOT BE HELD INDIVIDUALLY LIABLE FOR NEGLIGENCE.**

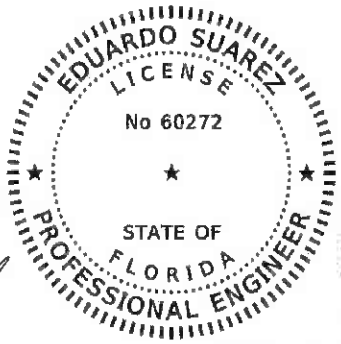
UES Project No. A25140.00683.005 UES Report No. 2162758



Dear Mr. Berry:

UES Professional Solutions, LLC has completed the subsurface exploration at the above referenced site in Alachua, Alachua County, Florida. The preliminary exploration was conducted in general accordance with authorized proposal 2162534, dated February 13, 2026. This preliminary exploration was performed in accordance with generally accepted soil and foundation engineering practices and "Geotechnical Investigation Specifications and Report Requirements" dated September 25, 2018.

The following report presents the results of our preliminary field exploration and a geotechnical engineering interpretation of those results with respect to the project characteristics provided to us. Included are: general recommendations for site preparation procedures, foundation design parameters, pavement design and subgrade preparation. This preliminary report is provided to assist your project feasibility schedule. The initial and final geotechnical report will formalize the subsurface findings and provide test borings, and recommendations. We appreciate the opportunity to have worked with you on this project and look forward to a continued association. Please contact us if you have any questions, or if we may further assist you as your plans proceed.

EXECUTIVE SUMMARY

We have prepared this executive summary as a general overview. Please refer to, and rely on, the full report for information about findings, recommendations, and other considerations.

Project Location and Description

The proposed will be a prototype C-171-SGR-QR and will be approximately 170,471 square feet, with truck well, associated drives and parking areas, and a gas station. The project site will be located adjacent to the southeast corner of US HWY 441 and NW 118th Street in Alachua, Alachua County, Florida. The site is currently undeveloped.

Finish floor elevation for the proposed will be set at 102 feet. We anticipate, within the building area, a significant amount of cut and fill (up to 3 feet of cut and 10 feet of fill) will be required to achieve the proposed finish floor elevation. Existing elevations within the proposed building footprint range from approximately 105 feet to 92 feet NAVD. Additionally, we anticipate significant amounts of cut and fill to achieve the proposed parking and drive grades,with up to 4 feet of cut or nine feet fill being expected in the surrounding pavement areas assuming existing grades between approximately 105 to 92 feet.

Soil and Groundwater Conditions

In general, the soil test borings encountered sand to sand with silt and sand with clay interbedded with lenses of silty sand [SP, SP-SC, SP-SM, SM] between the elevations of approximately +101 feet to at least +82 feet, NAVD. Below, the sand with silt to silty sands, the soil test borings generally encountered clayey sand to sandy clay layer [SC/CH] to maximum boring termination depths of 20 feet below ground surface.

Variations in depth, thickness and consistency of the soil strata depicted in the Generalized Soil Profile occurred at the individual boring locations. The amount of silt and clay fines present in the soil strata varied between boring locations. The clayey sand [SC], sandy clay [CL], and clay [CH], strata were found at all of the boring locations.

The subgrade after excavation, in some areas may include silty-clayey sands, which may be difficult to compact. The silty-clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods. Normal proof-rolling and compaction of exposed subgrade, and filling to grade with compacted selected structural fill is also expected.

Very loose sand with silt was encountered in some of the soil borings; the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas shall be proof-rolled to detect soft or loose soils. Proof-rolling operations should be followed by subgrade/backfill compaction operation. If necessary to achieve the recommended soil compaction at depth, the loose areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

Groundwater Considerations

Groundwater levels and seasonal high groundwater levels may be affected by the proposed construction which will modify the surface and subsurface hydrology. Based on the general grading information provided, it should not be necessary to provide a permanent subsurface drainage system for the building and pavement areas. To maintain the recommended separation between the water table and various structural elements in the truck well areas we recommend a permanent drainage system in the loading dock/truck well and TLE pit areas.

We found shallow deposits of silty-clayey sands [SM-SC, SC] across the site during our site exploration. Due to the poor permeability characteristics of these silty-clayey soils, these soils tend to act as an aquiclude (a sediment through which groundwater cannot pass) to the natural infiltration of the rainwater. Therefore, rainfall will most likely temporarily perch on top of these relatively impermeable soils causing isolated areas with temporary groundwater levels significantly higher during periods of heavy or extended rainfall or artificial irrigation.

Based on site-specific information and factors listed above, we estimate the following "pre-development", transient, perched seasonal high groundwater levels:

Building Pad:	Between elevations 101 to 88 feet NAVD or below
Driveway & Parking Lot Areas:	Between elevations 90 to 82 feet NAVD or below

It is important to note that the pre-development and post-development transient perched seasonal high groundwater levels will be a function of the elevation location of the top of the aquiclude (SM-SC, SC) and will generally occur approximately 1 foot above the top of the aquiclude, where present or where created by site grading.

Site Preparation

Site preparation for the site will consist of stripping of surficial organics and clearing of trees/vegetation and their associated root systems greater than ½ inch in diameter, followed by surface densification, proof-rolling and compaction of existing subgrade, and filling to construction grade with structural fill.

Foundation Design

After successful completion of the building site preparation, we recommend a shallow foundation system be used for support of the proposed building. The shallow spread foundations should be designed with a net allowable soil bearing pressure of 2,500 pounds per square foot (psf) provided the building pad preparation recommendations presented in Section 9 of this report are followed.

Pavement Design

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-

effective combination of available construction materials. Concrete pavement has the advantage of the ability to "bridge" over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. Recommendations for both rigid and flexible pavements are presented in Section 9.2 of this report.

Typically, the most prevalent flexible pavement base material in Alachua County is limerock because of its local availability. Alternative base materials may be considered as requested.

On-site Borrow and Excavation Considerations

With the exception of topsoil, debris and undiscovered organic soils, the on-site soils may be reused as structural fill, but they will require careful moisture control. Excess topsoil and organic soil may be used in landscaped areas.

Soils classified as SP, SP-SM and SP-SC may be used for structural fill provided the organic content is less than 5 percent. Soils classified as SM and SC with less than 25 percent fines and less than 5 percent organic content are generally suitable for use as structural fill with the understanding that greater than normal moisture control will be required for compaction. SM and SC soils with more than 25 percent fines and Plasticity Index of 15 or greater are generally not suitable for structural fill but may be used deeper than 5 feet below finished grades in pavement area fills and will require significant moisture conditioning and working to effect the recommended compaction. It shall be expected that most site soils reused as fill material will require greater handling on the part of the Earthwork Contractor to dry and work the soils.

1.0 INTRODUCTION

UES Professional Solutions, LLC (UES) has completed the preliminary subsurface exploration for the proposed , which will be located at the SWC of US 441 and NW 118th Street in Alachua, Alachua County, Florida. Our exploration was authorized by Sam Berry of Rise Partners and was conducted as outlined in our Proposal Number 2162534, dated February 13, 2026. This exploration was performed in accordance with generally accepted soil and foundation engineering practices and Geotechnical Investigation Specifications and Report Requirements", dated September 25, 2018. The quantity, location of the building and non-building area test borings have been adjusted by CPH for this preliminary report. This report is provided to assist your project feasibility schedule. The initial and final geotechnical report will formalize the subsurface findings and provide additional test borings, and recommendations.

2.0 PROJECT CONSIDERATIONS

The geotechnical exploration was planned and executed based on the Boring Exhibit, dated February 12, 2026, prepared by CPH, Consulting LLC (CPH). These plans were also used in developing the scope of the preliminary geotechnical subsurface exploration. The proposed will be a prototype C-171-SGR-QR and will be approximately 170,471 square feet, with truck well, associated drives and parking areas, and a gas station. The parking lot will occupy the western, eastern, and northern portion of the property. Stormwater management facilities will be located along the southern and western portions of the site.

The proposed will be single story, high bay commercial structure. The store building will be constructed of a combination of load-bearing concrete block walls and steel columns supporting roof loads by means of steel joist girders and steel joists. Typical bay spacing between columns is approximately 55 by 48 feet. Typical gravity loads for interior columns are 85 kips with a maximum total loading under severe live load conditions of 150 kips. Maximum column uplift force from wind is estimated at 30 kips. Typical gravity loads for exterior columns are 50 kips each. The concrete block wall gravity loads will range from 1.5 to 2.0 kips per lineal foot for non-load bearing walls and 4.0 to 6.0 kips per lineal foot for load bearing wall. The estimated maximum uniform floor slab live load is 125 pounds per square foot, and the estimated maximum concentrated floor slab load is 5 kips.

The proposed Gas Station will include fuel islands, canopy, small service building and underground storage tanks. Typical gravity axial loads for interior columns are 12 kips with a maximum total loading under severe live load conditions of 25 to 40 kips. Further, the foundation for the canopy structure may be sized and embedded at greater depths to resist uplift forces. Maximum column uplift forces from wind is estimated at 25 kips. Based on the information provided, we assume that the finished floor elevation for the fuel station to be +98 feet.

Two types of pavement sections will be required at the project; standard duty and heavy duty pavements. Per requirements the standard duty pavement will be designed for equivalent 18 kip single axle loads (E_{18}SAL) of 109,500 over a 20 year design life. The heavy duty pavement section will be designed for approximately 335,800 E_{18}SALs over a 20 year design life. Terminal serviceability, initial serviceability, and reliability for all pavement sections will be 2.0, 4.2, and 85%, respectively.

Across the proposed building, the site grades range from a high of about +105 feet to a low of about +92 feet. Based on the presumed finish floor elevation of 102.0 feet, we anticipate approximately 3 feet of cut and 10 feet of fill below the existing ground surface in the proposed building area to achieve subgrade elevation with up to 4 feet of cut or nine feet fill being expected in the surrounding pavement areas assuming existing grades between approximately 105 to 92 feet.

Current grading plans do not require cut and fill slopes equal to or greater than 3H:1V. Based on the site elevations and the conceptual site plan provided to UES, most of the site will not require cutting or filling over 10 feet high.

We assume the building will be constructed with an exposed concrete floor slab throughout the facility and founded on a minimum 4 inch thick compacted base material.

If any of the above information is incorrect or changes prior to construction, please contact UES immediately so that revisions to the recommendations contained in this report can be made, as necessary. In order to verify that these recommendations are properly interpreted and implemented, UES must be allowed to review the final design and specifications prior to the start of construction and understands that this is part of the overall geotechnical contract.

Deviations from the GISRR are listed below.

- Limerock Bearing Ratio (LBR) FM 5-515 was used to test the subgrade soils in lieu of California Bearing Ratio (CBR) tests since LBR is the standard test required by the Florida Department of Transportation (FDOT) to test the base and stabilized subgrade materials for pavements.

- Boring quantities for the proposed building, stormwater management areas, parking and access roads, and retaining walls deviated from the Geotechnical Investigation Specifications and Report Requirements.

- The site and planned construction are not located in a jurisdiction governed by International Building Code (IBC) and therefore the 100 feet deep test boring was not performed, however, in the absence of any governing standard for seismic matters in Florida, and based on our general geologic knowledge of the site and vicinity, we assigned an IBC site classification in order to meet report content specification.

3.0 SITE DESCRIPTION

3.1 General

The subject site is a proposed located within Section 8, Township 8 South, Range 18 East in Alachua County, Florida. More specifically, the property is located adjacent to the southeast corner of US HWY 441 and NW 118th Street in Alachua, Alachua County, Florida. The site is currently undeveloped.

3.2 Soil Survey

Based on the 1985 Soil Survey for Alachua County, Florida, as prepared by the US Department of Agriculture, Natural Resources Conservation Service (NCRS), the predominant soil types at the site are identified as Arredondo fine sand, 0 to 5 percent slopes (3B), Arredondo fine sand, 5 to 8 percent slopes (3C), and Fort Meade fine sand, 0 to 5 percent slopes (5B). The published general description of these soils with depth, their published range of permeability characteristics and their published range of seasonal high groundwater levels, is presented in Table 1 below.

TABLE 1
Summary of NRCS Soil Survey Information

Soil Type	Constituents		Hydrologic Group	Natural Drainage	Soil Permeability (Inches/Hr)		Seasonal High Water Table
Arredondo fine sand, 0 to 5 percent slopes (3B)	0-49" 49-54" 54-86"	Fine sand Loamy sand, loamy fine sand, sandy loam Sandy loam, fine sandy loam, sandy clay loam	A	Well Drained	0-49" 49-54" 54-86"	6.0 – 20 2.0 – 6.0 0.2 – 2.0	Greater than 6 feet below ground surface
Arredondo fine sand, 5 to 8 percent slopes (3C)	0-65" 65-88"	Fine sand Sandy loam, fine sandy loam, sandy clay loam	A	Well Drained	0-65" 65-88"	6.0 – 20 0.2 – 2.0	Greater than 6 feet below ground surface
Fort Meade fine sand, 0 to 5 percent slopes (5B)	0-14" 14-85"	Fine sand Loamy sand, loamy fine sand, fine sand	A	Well Drained	0-14" 14-85"	6.0 – 20 6.0 – 20	Greater than 6 feet below ground surface

3.3 Topography

According to information obtained from the Grading Plan prepared by Foresite Group for this site, the ground surface elevation across the site area ranges between approximately +105 feet to +85 feet. A copy of a portion of the USGS Map for the site area is included in Appendix A.

3.4 Geology

The general geology of central Alachua County is characterized by a surface veneer of Pleistocene and Pliocene sands and sandy clays overlying the Miocene-age Hawthorn Group. The Hawthorn Group includes a highly variable mixture of interbedded quartz sands, clays, carbonates, pebbles and grains occurring with thicknesses of up to 150 feet. Underlying the Hawthorn Group is the upper Eocene age Ocala Formation, occurring as a uniform limestone, which is approximately 200 feet thick and overlies the Eocene age Avon Park Formation, which can be up to 500 feet this. Both the Ocala and Hawthorn Formations dip to the northeast by approximately one degree.

The general hydrogeology of Alachua County consists of three aquifer systems; a surficial aquifer, an intermediate aquifer, and the Floridan aquifer system. The surficial aquifer exists as an unconfined water table situated over the impermeable Hawthorn Group and is usually a subdued reflection of surface topography. The intermediate aquifer system includes all rocks that collectively retard the exchange of water between the overlying surficial aquifer system and the underlying Floridan aquifer system. Water in this system is contained under confined conditions.

The Floridan aquifer system is a thick, carbonate sequence that functions regionally as a water-yielding hydraulic unit. The direction of shallow groundwater flow is generally toward surface water bodies. The potentiometric surface map of the upper Floridan Aquifer suggests groundwater elevations, outside perched zones, on the order of +30 to +40 feet, NGVD in the general site area.

4.0 PURPOSE AND SCOPE OF SERVICES

4.1 Purpose

The purposes of this exploration were:

- to explore and evaluate the subsurface conditions at the site and note potential geotechnical considerations that may affect the proposed design, construction, or serviceability of the proposed improvements,

- to provide preliminary geotechnical engineering recommendations for site preparation, pavement and foundation design parameters.

4.2 Scope of Service

A compilation of the services conducted by UES to date for the subsurface exploration program are as follows:

- Advanced five (5) Standard Penetration Test (SPT) borings in the proposed building and truck dock areas to depths of 25 feet below existing land surface (bls).

- Advanced three (3) Standard Penetration Test (SPT) borings in the proposed fueling station area to depths of 25 feet below existing land surface (bls).

- Advanced six (6) Standard Penetration Test (SPT) borings in the proposed stormwater management system area to depths of 20 feet below existing land surface (bls).

- Advanced eleven (11) Standard Penetration Test (SPT) borings in the proposed parking lot and driveway areas to depths of 20 feet below existing land surface (bls).

- Secured samples of representative soils found in the soil borings for laboratory analysis and classification by a member of our geotechnical staff. As required all samples not used for laboratory testing have been stored for at least six months.

- Recorded site groundwater levels at the boring locations and providing an estimate of the typical wet season groundwater level.

- Conducted laboratory tests on selected soil samples obtained in the field to evaluate their engineering properties.

- Assessed the existing soil conditions with respect to the proposed construction.

- Prepared a preliminary report which documents the results of our subsurface exploration and analysis with geotechnical engineering recommendations.

The site and planned construction are not located in a jurisdiction governed by International Building Code (IBC) and therefore the 100 foot deep test boring was not performed, however, in the absence of any governing standard for seismic matter in Florida, and based on our general geologic knowledge of the site and vicinity, we assigned an IBC site classification in order to meet ' report content specification. Since there are no planned cut or fill areas of 3 feet or more, no borings were required for these purposes.

The quantity, location of the building and non-building area test borings have been adjusted by CPH for this preliminary report. This report is provided to assist your project feasibility schedule. The initial and final geotechnical report will formalize the subsurface findings and provide additional test borings, and recommendations.

4.3 Limitations

This report has been prepared for the exclusive use of Rise Partners and other members of the Design/Construction Team for the specific project discussed in this Report to aid the Architect/Engineer in the evaluation of the proposed
This preliminary report is also hereby certified to , and its affiliates, successors, and assigns (hereinafter referred to collectively as "' Accordingly, has a right to rely on this preliminary report and all of the contents therein as though it were issued to ' directly. The scope is limited to the specific project and locations described herein. Our description of the project's design parameters represents our understanding of the significant aspects relevant to soil and foundation characteristics. In the event that any changes in the design or location of the structures or improvements as outlined in this report are planned, we should be informed so the changes can be reviewed and the conclusions of this report modified, if required, and approved in writing by UES.

The recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated on the Boring Location Plan and from other information as referenced. This report does not reflect any variations which may occur between the boring locations. The nature and extent of such variations may not become evident until the course of construction. If variations become evident, it will then be necessary for a re-evaluation of the recommendations of this report after performing on-site observations during the construction period and noting the characteristics of the variations.

All users of this report are cautioned that there was no requirement for UES to attempt to locate any man-made buried objects or identify any other potentially hazardous conditions that may exist at the site during the course of this exploration. Therefore, no attempt was made by UES to locate or identify such concerns. UES cannot be responsible for any buried man-made objects or subsurface hazards which may be subsequently encountered during construction that are not discussed within the text of this report. We can provide this service if requested.

For a further description of the scope and limitations of this report please review the document attached within Appendix F, "Important Information About Your Geotechnical Engineering Report" prepared by GBA.

5.0 FIELD EXPLORATION

5.1 General

The soil borings were performed with a drill rig mounted on a rubber-tired truck. The boring locations were staked by UES prior to our mobilization to the site. The approximate locations of the borings are shown on the Boring Location Plan presented in Appendix B. Estimated ground surface elevations are presented in tabular form, Boring Survey Control, in Appendix B and also presented on the boring logs. Existing groundwater levels were recorded at the time of our soil test borings.

5.2 Standard Penetration Test Borings

As previously described in Section 4.2 and as indicated on the Boring Location Plan in Appendix B, five (5) SPT borings were drilled to depths of 25 feet in the proposed t building and truck dock areas. Three (3) SPT borings were drilled to depths of 25 feet beneath the proposed fueling station site. Six (6) SPT borings were drilled to depths of 20 feet within the proposed stormwater management system. Eleven (11) SPT borings were drilled to depths of 20 feet within the proposed parking and driveway areas.

The SPT borings were performed in general accordance with the procedures of ASTM D 1586 (Standard Method for Penetration Test and Split-Barrel Sampling of Soils). In addition, continuous sampling was performed within the upper 10 feet. The SPT drilling technique involves driving a standard split-barrel sampler into the soil by a 140-pound hammer, free falling 30 inches. The number of blows required to drive the sampler 1 foot, after an initial seating of 6 inches, is designated the penetration resistance, or N-value, an index to soil strength and consistency.

The results of the classification and stratification have been shown on the attached Boring Logs. It should be noted that soil conditions might vary between soil test boring locations, and between the subsurface soil strata interfaces which have been shown on the Boring Logs. The soil test boring data reflect information from the specific test locations only. This report presents an evaluation of site conditions on the basis of traditional geotechnical procedures for site characterization. The recovered samples were not examined, either visually or analytically, for chemical composition or environmental hazards.

6.0 LABORATORY TESTING

The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). Representative soil samples were then selected from the retained soils and tested in our laboratory. The following is a summary of the laboratory tests performed in all studies for this site to date:

- Fourteen (14) Wash #200 fines content determinations - ASTM D 1140 (Standard Method for Particle Size Analysis of Soils)

- Four (4) Grain Sieve Analysis tests – ASTM D-422
- Eighteen (18) moisture content tests – ASTM D 2216
- Four (4) Atterberg Limits Tests – ASTM D 4318-05
- Two (2) organic content test – ASTM D 2974 (Standard Test Methods for Moisture, Ash, and Organic Matter of Peat and Other Organic Soils).
- Four (4) Permeability Test – ASTM D-2434
- One (1) Limerock Bearing Ratio (LBR) test - Florida Department of Transportation FM-515 (Limerock Bearing Ratio)
- Two (2) Corrosion Series (pH, sulfates, chlorides, and resistivity) from surficial soils
- One (1) Topsoil Series, per specifications
- One (1) Modified Proctor test ASTM D-1557

These tests were performed to aid in classifying the recovered samples and to help in evaluating the general engineering characteristics of the site soils. The laboratory classification data is presented on the Boring Logs at the approximate depth sampled in Appendix B. All laboratory data is summarized and report sheets included in Appendix C. In addition, the detailed laboratory test procedures are enclosed in Appendix C.

The surficial clayey soils found in the building footprint soil borings consisted of clayey sands [SC] with generally less than 35 percent fines passing the No. 200 sieve. Due to the low clay fraction and cohesion of these soils we did not perform any unconfined compression tests. BTEX Testing for fuel tank borings was not performed because the water table was not encountered in the soil borings during drilling operations. The quantity and type of laboratory tests performed for the geotechnical exploration were selected by UES based on the soil conditions found and our experience and knowledge concerning the local soil conditions. We note that since most shallow sands in Florida are poorly graded fine sand it is customary to perform percent fines content testing only for classification purposes.

7.0 SOIL STRATIGRAPHY

7.1 Generalized Soil Profile

The results of our field exploration and laboratory analysis, together with pertinent information obtained from the SPT borings, such as soil profiles, penetration resistance and stabilized groundwater levels are shown on the boring logs included in Appendix B. The Key to Boring Logs is also included in Appendix B. The soil profiles were prepared from field logs after the recovered soil samples were visually classified by a member of our geotechnical staff. The stratification lines shown on the boring logs represent the approximate boundaries between soil types, and may not depict exact subsurface soil conditions. The actual soil boundaries may be more transitional than depicted. A composite generalized profile of the soils found at our boring

locations is presented below in Table 2. For soil profiles at individual boring locations, please refer to the soil boring logs, Appendix B.

TABLE 2
GENERAL SOIL PROFILE

Typical Elevation (ft.)		Soil Descriptions	Range of SPT "N" Blow Count
From	To		
105/87	101/82	Very loose to loose brown and orange SAND to SAND with silt, and clay [SP, SP-SM, SP-SC]	1/12" to 30
101/82	80/67	Very loose to medium dense, orange and tan silty-clayey SAND to stiff green and orange sandy CLAY [SM, SM-SC, SC, CH]	2 to 29

* Termination of Deepest Boring
[ ] Indicates Unified Soil Classification

Significant variations in depth, thickness and consistency of the soil strata depicted in the General Soil Profile occurred at the individual boring locations. The amount of silt and clay fines present in the soil strata varied between boring locations. Very clayey sand [SC], and sandy clay [CL], and clay [CH] strata were found at all the boring locations.

7.2 Soil Corrosion Characteristics

UES routinely performs pH, resistivity, sulfates and chloride tests for evaluation of corrosion potential of soils. According to the guidelines of the Florida Department of Transportation (FDOT) "Florida-Concrete Design, Environmental Classification and Construction Criteria" (based on the three tier scale of slightly, moderately, and extremely aggressive) the results of the pH, sulfate, chloride, and resistivity tests indicate that the surficial soils in the building and parking area are "moderately aggressive" to steel and concrete. The controlling factor in the test results was the pH level (pH=6.34). Therefore we recommend use of Type II cement with fly ash for below grade concrete construction.

Further, adequate concrete cover should be provided for concrete substructures and protective galvanized coating is recommended for steel utility lines which extend below the seasonal high groundwater level. Accelerated corrosion conditions typically occur when below grade structures are in prolonged contact with groundwater, allowing the contact of corrosive compounds to the concrete and reinforcing steel. The results of these tests are listed on the Report of Corrosion Parameters sheet enclosed with the laboratory test results in Appendix C. Results of pH and resistivity tests with recommended measures are also presented on the "Geotechnical Investigation Fact Sheet".

7.3 Topsoil Analysis

Per : criteria, topsoil analysis were performed on composites of surface samples collected. The results are presented in tabular form in Appendix C.

8.0 GROUNDWATER CONSIDERATIONS

8.1 Existing Groundwater Level

We attempted to measure the water level in the boreholes upon completion of the soil borings. At the time our field exploration was conducted we did not encounter a stabilized groundwater level within a depth of 25 feet below existing grade in any of the borings performed. Based on available data, we estimate the permanent water table to be near elevation +30 to +40 feet NAVD. This equates to about 50 to 60 feet below grade depending on the ground surface elevations.

8.2 Typical Wet Season Groundwater Level

The typical wet season groundwater level is defined as the highest groundwater level sustained for a period of 2 to 4 weeks during the "wet" season of the year, for existing site conditions, in a year with average normal rainfall amounts. Based on historical data, the rainy season in Alachua County, Florida typically occurs between June and September. To estimate the wet season water level at the boring locations, many factors were considered, including the following:

As mentioned previously, we found shallow deposits of silty-clayey sands across the site during our site exploration. Due to the poor permeability characteristics of these silty-clayey soils, these soils tend to act as an aquiclude (a sediment through which groundwater can not pass) to the natural infiltration of the rainwater. Therefore, surface water will most likely temporarily perch on top of these relatively impermeable soils causing isolated areas with temporary groundwater levels significantly higher during periods of heavy rainfall or artificial irrigation.

Based on site-specific information and factors listed above, we estimate the following "pre-development", transient, perched seasonal high groundwater levels:

Building Pad:	Between elevations 101 to 88 feet NAVD or below
Driveway & Parking Lot Areas:	Between elevations 90 to 82 feet NAVD or below

It is important to note that the pre-development and post-development transient perched seasonal high groundwater levels will be a function of the elevation location of the top of the aquiclude (SM-SC, SC) and will generally occur approximately 1 foot above the top of the aquiclude, where present or where created by site grading.

Our estimated seasonal high groundwater levels are based on the existing site conditions and are presented on each of the boring logs shown in Appendix B. Please note, however, that peak stage elevations immediately following various intense storm events, may be somewhat higher than the estimated typical wet season levels. Further, it should be understood that changes in the surface hydrology and subsurface drainage from on-site or off-site improvements could have significant effects on the normal and seasonal high groundwater levels.

9.0 ANALYSIS AND RECOMMENDATIONS

Our geotechnical engineering evaluation and recommendations for building pad and pavement area preparation and foundation design are based on (1) our site observations, (2) the collected

field and laboratory data, and (3) our understanding of the project and structural information presented in this report.

Based on our exploration, the primary geotechnical considerations for the design and construction of the proposed structure are the presence of loose sandy soils in the near-surface profile. Subsurface sandy soils will undergo immediate settlements upon application of surface loads, and this could be a result of both fill placement for building pad construction and building construction. In light of the above, it becomes important to compact the subgrade soils as much as possible prior to both building pad fill placement and foundation construction.

Very loose sand with silt was encountered in some of the soil borings; the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas shall be proof-rolled to detect soft or loose soils. Proof-rolling operations should be followed by subgrade/backfill compaction operation. If necessary to achieve the recommended soil compaction at depth, the loose areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

Our local experience has found that fat clay layers [CH] are often laterally discontinuous, which makes it more difficult to ascertain their presence on a given project parcel. If at the time of construction the contractor encounters or suspects that clay soils may be near the grade slab or foundation bearing elevations, UES shall be contacted to prepare appropriate recommendations. **We recommend that the bottom of all footings be probed to confirm the suitability of the bearing soils. We recommend 4-foot static cone penetrometer probe and auger borings be performed in the proposed footings excavations to investigate for clayey soils.** If encountered, fat clays (CH) shall be removed to a minimum of 4 feet fellow the bottom of the footing/floor slab. The over-excavated areas shall be backfilled with a compacted, low permeability, engineered fill material. Fill material shall consist of poorly draining, silty sand or clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8 inches or less are recommended.

The subgrade after excavation, in some areas include clayey sands, which will be difficult to compact; the clayey sand soils may require stringent moisture control during compaction, particularly during rainy periods. Footings that are excavated through the upper layer of compacted sand fill soils into the native clayey sand, should be visually inspected and tested to verify the in-place density and condition of the subgrade bearing soils.

Care should be exercised in performing the site preparation procedures due the presence of clayey soils near the existing ground surface, in some areas of the project site. The use of heavy-vibratory equipment is not recommended due to the potential for disturbance and pumping of the near surface clayey soils. To avoid pumping of the underlying clayey soils, we recommend self-propelled vibrating equipment remain a minimum of two feet above the clayey soils. The sandy soils could be compacted with a vibratory roller operating in static mode or with a track-mounted dozer to avoid disturbance of the clayey soils prior to operation. We recommend a minimum of 2 feet of sand overlying the clayey soils prior to operation of construction equipment. Excessive disturbance of the clayey soils will degrade the strength characteristics of the soil and may result in an unsuitable soil which will require over-excavation and subsequent backfilling with selected material.

Due to the presence of near surface clayey soil it is important that the foundation design incorporate factors to minimize water seepage around the proposed foundation. The design factors should include undercutting around the perimeter of the structure, positive drainage such that water flows away from the structure, use of low permeability fill, gutters tied into the drainage system, use of drought tolerant landscaping, and limiting irrigating around the structure.

We recommend that we be provided the opportunity to review the project plans and specifications to confirm that our recommendations have been properly interpreted and implemented. If the structural loadings or the building locations change significantly from those discussed previously, we request the opportunity to review and possibly amend our recommendations with respect to those changes. The discovery of any subsurface conditions during construction which deviate from those encountered in the borings should be reported to us immediately for observation, evaluation, and recommendations.

9.1 Foundation Design Recommendations

Based on the results of our exploration, it is our opinion that the subsurface conditions at the site are adaptable for support of the proposed structure on a properly designed and constructed shallow foundation system, provided the site preparation and earthwork construction recommendations outlined in Section 9.3 of this report are performed. Provided the improvements and specific site preparation procedures are carefully followed, the parameters outlined below may be used for foundation design.

9.1.1 Bearing Pressure

The maximum allowable net soil bearing pressure for shallow foundations shall not exceed 2,500 pounds per square foot (psf). Net bearing pressure is defined as the soil bearing pressure at the base of the foundation in excess of the natural overburden pressure. The foundations shall be designed based upon the maximum load that could be imposed by all loading conditions. The allowable bearing pressure may be increased by 25 percent to account for short duration loadings such as wind or seismic.

9.1.2 Foundation Size

The minimum width recommended for any isolated column or continuous wall footing is 30 and 24 inches, respectively. Even though the maximum allowable soil bearing pressure may not be fully achieved, this width recommendation should control the minimum size of the foundations.

9.1.3 Bearing Depth

The exterior foundations should bear at a depth of at least 18 inches below the finished exterior grades and the interior foundations should bear at a depth of at least 18 inches below the finish floor elevation to provide confinement of the bearing level soils. It is recommended that stormwater be diverted away from the building area both during and permanently following construction.

9.1.4 Bearing Material

The foundations and floor slabs should bear on a compacted structural fill. The bearing level soils shall be densified to at least 95 percent of the modified Proctor maximum dry density (ASTM D 1557) to a depth of at least three (3) feet below the bearing levels, or approximately 4 feet below finished floor.

9.1.5 Settlement Estimates

Post-construction settlements of the structure will be influenced by several interrelated factors, such as (1) subsurface stratification and strength/compressibility characteristics; (2) footing size, bearing level, applied loads, and resulting bearing pressures beneath the foundations; and (3) site preparation and earthwork construction techniques used by the Contractor. Our settlement estimates for the structure are based on the site preparation/earthwork construction recommendations in Section 9.3 of this report. Any nonconformance with these recommendations could result in an increase in the estimated post-construction settlements of the structure.

Using the recommended maximum bearing pressure, the provided maximum structural loads, the anticipated fill loading and the field data which we have correlated to geotechnical strength and compressibility characteristics of the subsurface soils using N-value data, we estimate that total settlements of the structure should be less than ¾ inch if the site preparation recommendations in Section 9.3 are followed. Without appropriate site preparation procedures, total settlements could exceed 3/4 inch.

Differential settlements result from differences in applied bearing pressures and variations in the compressibility characteristics of the subsurface soils. We anticipate that differential settlements should be within tolerable limits of ½ inch or less in 40 feet length for masonry walls and ¾ inch or less between isolated interior columns, and ¾ inch between columns and floor slabs.

9.1.6 Floor Slab

The floor slab recommendations are predicated upon the understanding that structures have exposed concrete floor slabs throughout. The floor slab can be constructed as a slab-on-grade provided the subsequent lifts of structural backfill are compacted and tested in accordance with the recommendations included in this report. The floor slab can be designed using a subgrade reaction modulus of 150 pounds per cubic inch for slabs founded on the : required minimum 4 inch aggregate base and well compacted subgrade. Therefore, there is no cost premium to attain the recommended subgrade modulus.

The geotechnical requirements prefer the use of a capillary break consisting of free-draining aggregate. The specifications further allow use of a plastic vapor barrier if justified by site conditions or required by local building codes. In addressing the requirements outlined in the current "Geotechnical Investigation Specifications and Report Requirements" the Florida Building Code requires the use of vapor barriers beneath floor slabs. Typically, polyethylene plastic sheets are used in Florida to reduce floor dampness and minimize moisture emissions through floor slabs. In conformance with the Florida Building Code, we recommend the use of a vapor barrier beneath the floor slab.

The "vapor barrier" should consist of a polyvinyl chloride or polyethylene plastic sheet or membrane (minimum 15 MIL thickness meeting ASTM E1745, Class 'A' requirements). The performance of the "vapor barrier" is ultimately dependent upon its proper installation, including lapping and sealing plus repair of tears and punctures prior to placement of concrete. The vapor barrier should be placed immediately beneath the concrete slab atop 4 inches of compacted aggregate base. UES recommends the aggregate base material be constructed on a compacted subgrade fill in accordance with the Foundation Subsurface Preparation note included in this report.

9.1.7 Site Walls

Assuming the retaining walls and the subsurface walls in the tire lube express (TLE) service pit will be smooth concrete, we recommend using the following parameters for the upper 3 feet of in-situ sands and/or on-site and imported free draining fine sand backfill soil compacted to at least 95 percent of the Modified Proctor test maximum dry density for your retaining wall design.

Earth pressures on retaining walls are influenced by structural design of walls, conditions of wall restraint, construction methods, and the strength of the materials being restrained. The most common conditions assumed for earth retaining wall design are the active and at-rest conditions.

Active conditions apply to relatively flexible earth retention structures, such as free-standing walls, where some movement and rotation may occur to mobilize shear strength. Walls which are rigidly restrained, such as loading dock or service pits walls, should be designed for the at-rest condition. However, if the walls will be backfilled before they are braced by the floor slabs, they should also be designed to withstand active earth pressures as self-supporting cantilever walls.

Development of the full active earth pressure case requires a magnitude of horizontal wall movement that often cannot be tolerated or cannot occur due to the rigidity of the wall and other design restrictions such as the impact on adjacent structures. In such cases, walls are often designed for either the at-rest condition or a condition intermediate of the active and at-rest conditions, depending on the amount of permissible wall movement.

Passive earth pressure represents the maximum possible pressure when a structure is pushed against the soil, and is used in wall foundation design to help resist active or at-rest pressures. Because significant wall movements are required to develop the passive pressure, the total calculated passive pressure is usually reduced by one-half for design purposes.

We recommend that any proprietary retaining walls be backfilled with materials deemed suitable by the Retaining Wall Designer. For all other walls, typically sandy soils [SP, SP-SM, SP-SC] should be used as backfill. We recommend that the soils selected for use as backfill be tested as specified by either the Proprietary Retaining Wall Designer or UES prior to commencement of wall construction. Recommended soil parameters for design of low retaining walls for loading docks and landscape features using SP, SP-SM or SP-SC soils found on site are shown in Table 3.

TABLE 3 LATERAL EARTH PRESURE DESIGN PARAMETERS (LEVEL BACKFILL)*	
Design Parameter	**Recommended Value**
At-rest Earth Pressure Coefficient, K_o	0.5
Active Earth Pressure Coefficient, K_a	0.33
Passive Earth Pressure Coefficient, K_p	3.0
Wet Unit Soil Weight (pounds per cubic foot - pcf)	125
Submerged Unit Weight of Soil (pcf)	62
Coefficient of Friction (sliding)	0.4
Angle of Internal Friction, φ	30 degrees

* For sloping backfill or backfill with clayey sands the table values must be adjusted.
**Hydrostatic pressure should be accounted for based on seasonal high water table estimates and other site drainage considerations.

The recommended lateral earth pressure coefficients and equivalent fluid pressures do not consider the development of hydrostatic pressure behind the earth retaining wall structures. As such, positive wall drainage must be provided for all earth retaining structures. These drainage systems can be constructed of open-graded washed stone isolated from the soil backfill with a geosynthetic filter fabric and drained by perforated pipe, or with one of several wall drainage products made specifically for this application.

Our recommendations assume that the ground surface above the wall is level and that native or imported soils consisting of sands and sands with silt or clays will be used for wall backfill. Lateral earth pressures arising from surcharge loading should be added to the above earth pressures to determine the total lateral pressure. Additional consideration must also be given for sloped backfill at the top of the wall. In each circumstance the earth pressure coefficients for active and at-rest conditions will increase based upon the amount of surcharge and angle above horizontal of the sloped backfill.

9.1.8 Geologic Hazards – Desktop

There are no fault zones, landslides, or other geologic hazards associated with the site and immediate vicinity. Our "desktop" assessment of the presence of karst features included a review of available data from the United States Geological Survey (USGS) and Florida Geological Survey (FGS), and current topography survey. The FGS maintains an inventory of reported sinkholes as a continuation of the work originally performed by the Florida Sinkhole Research Institute. This sinkhole database is generally considered to be a record of more recent sinkholes, and does not incorporate older and more mature karst features such as large lakes. The FGS database is not a definitive or authoritative resource, and should only be used for a generalized overview of recent sinkhole relative density. Our assessment included a search of the FGS database for sinkholes within a 2 mile radius of the subject site. No sinkholes were reported within 2 miles of the site. We note that the FGS data base only contains more recently recorded sinkhole events. This map can provide a false sense of security for areas that have remained rural and undeveloped until more recently. A site Map presenting the FGS recorded subsidence locations local to the subject property is presented in Appendix E.

Our assessment also included a review of the USGS Quadrangle Map (High Springs). Fewer than 5 mapped natural lakes were identified surrounding the subject property within a two-mile radius of the site. These natural lakes are relic sinkholes that formed in the geologic past. In addition to the natural lakes, there are several manmade stormwater ponds. The excavation and construction of stormwater ponds can affect natural hydrogeologic processes. Some of these areas appear to have exposed groundwater as a result of excavation and construction operations. Our desktop analysis also included a review of a USDA Soil Survey aerial image of the project area. Based on the USDA Soil Survey aerial, at least ten (10) depressions were identified within a 2-mile radius of the project site.

The USGS Quadrangle Map, Florida Geological Survey, and current Topography Survey did not detect presence of surface karst features within the project site.

With regard to seismic considerations, UES reviewed the Florida Building Code (FBC) which has jurisdiction in the State of Florida. Since seismic design is not part of the FBC, we consulted the only available recognized source of seismic information, the International Building Code (Section 1613). Per Table 1613.5.2 we recommend a Site Class of E for this project site. Due to the deep permanent water table, the overall fines content of the soils and the minimal expected ground accelerations per Figures 1613.5(1) and (2), it is our opinion that the liquefaction potential of the site is minimal.

9.1.9 Expansive Clay Considerations

Portions of Alachua County, Florida are known to have shallow expansive clays which can cause differential foundation movement and associated cracking and distress to structures that are not adequately designed for these subsurface conditions. Part of the purpose of our exploration program was to identify the presence of potentially expansive soils on site and provide preliminary geotechnical recommendations for site preparation and foundation design to minimize the potential impact if these are found. If it is determined that structures and or pavement will be constructed in deeper areas with potential expansive clay soils, additional geotechnical exploration and analysis will be required to provide site specific requirements to mitigate the potential damage associated with the shrink/swell activity of these soils.

Based upon the findings of our field exploration, our experience in the general vicinity of the subject site, and the laboratory test results, it is our professional opinion that special foundation design considerations for expansive soils are not indicated. However, during construction all footings shall be probed to determine if undercutting of potentially expansive clayey soils is required.

9.2 Pavement Recommendations

9.2.1 General

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-effective combination of available construction materials. Concrete pavement has the advantage of the ability to "bridge" over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. Disadvantages of rigid pavement may include

an initial higher cost and more difficult patching of distressed areas than occurs with flexible pavement.

If encountered, we recommend undercutting the very clayey sands and sandy clays to a minimum depth of 24 inches below the proposed bottom of the base course in accordance with FDOT Standard Plans Index 120-002. We recommend proof-rolling of the exposed subgrade to help determine area that will need to be undercut. Positive drainage must be established to prevent irrigation and stormwater from migrating into the pavement area.

The design calculations and pavement section details for both a rigid and flexible pavement section are enclosed in Appendix D.

Referencing the "Geotechnical Investigation Specifications and Report Requirements" as provided by , the Minimum Pavement Surface Thickness is specified as follows:

A) Standard Duty
Asphalt - 3 inches
Concrete - 5 inches

B) Heavy Duty
Asphalt - 4 inches
Concrete - 6 inches

Further, the pavement section is to be designed for a 20 year life based on a terminal serviceability index (P_t) of 2, reliability of 85 percent, initial serviceability of 4.2 and a standard deviation of 0.45 for flexible pavement and 0.35 for rigid pavement.

Within the following tables, we have provided our recommendations for pavement design. These recommendations incorporate minimum pavement surface thickness specifications referenced above. *UES has selected pavement materials that are cost effective and locally available.*

9.2.2 Asphalt (Flexible) Pavement

Tables 4 and 5 contain our recommendations for standard and heavy duty pavement sections designed for equirement for total equivalent 18 kips single axle loads (E_{18}SAL) of 109,500 and 335,800, respectively.

TABLE 4
STANDARD DUTY FLEXIBLE PAVEMENT DESIGN

Pavement Layer	Thickness	Minimum Requirements
Superpave Asphalt Concrete(FDOT SP-9.5) Superpave Asphalt Concrete (FDOT SP-12.5)	1.5 Inch Minimum 1.5 Inch Minimum	Type SP Asphalt Traffic Level C/D-FDOT. FDOT Section 334
Limerock or Crushed Concrete Base	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

TABLE 5 HEAVY DUTY FLEXIBLE PAVEMENT DESIGN		
Pavement Layer	**Thickness**	**Minimum Requirements**
Superpave Asphalt Concrete(FDOT SP-9.5) Superpave Asphalt Concrete (FDOT SP-12.5)	1.5 Inch Minimum 2.5 Inch Minimum	Type SP Asphalt Traffic Level C/D-FDOT. FDOT Section 334
Limerock or Crushed Concrete Base	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of at least 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

9.2.2.1 Stabilized Subgrade

We recommend that subgrade materials be compacted to at least 98 percent of the modified Proctor maximum dry density (ASTM D 1557/ AASHTO T-180) value. Further, beneath the base course, stabilize the subgrade materials to a minimum Limerock Bearing Ratio (LBR) of 40 as specified by the current version of the Florida Department of Transportation (FDOT) "Standard Specifications for Roadway and Bridge Construction" (SSRBC) requirements for Type B Stabilized Subgrade, Section 160 and Section 914. For crushed concrete base, the subgrade material should be "free-draining" ($k > 1 \times 10^{-3}$ cm/sec) and therefore clayey soils or other impermeable stabilization material should not be used for the stabilized subgrade with a crushed concrete base course.

The primary function of stabilized subgrade beneath the base course is to provide a stable and firm subgrade so that the base can be properly and uniformly placed. Depending upon the soil type, fill material from an off-site source may have sufficient stability to provide the needed support without additional stabilizing material. Generally sands with shell or rock should have sufficient stability and may not require additional stabilizing material. Prior to compaction of the subgrade, the representative samples of soils exposed at rough subgrade from both on and off-site fill sources should be tested for Limerock Bearing Ratio (LBR) value on a frequency of one test per 20,000 square feet to evaluate whether or not additional stabilization will be required beneath the base course.

9.2.2.2 Base Course

We recommend the base course consist of locally available limerock complying with the requirements of the current version of the FDOT SSRBC, Section 200, and Section 911. The limerock should have a minimum LBR of 100 percent and should be mined or supplied from an FDOT approved source. Place the limerock in maximum 6 inch thick loose lifts and compact each lift to a minimum density of 98 percent of the modified Proctor maximum dry density (ASTM D1557/AASHTO T-180).

Alternatively, we believe locally available crushed concrete base of equal thickness could be substituted for the limerock. Crushed concrete should be supplied by an FDOT approved plant with quality control procedures and should have an average LBR value of not less than 100. The gradation for crushed concrete should meet the current requirements for graded aggregate base per Section 207, FDOT SSRBC, pages 206-208.

A prime and sand coat should be applied to the base to provide for a smooth, uniform surface for asphalt placement. Perform compliance testing for limerock or crushed concrete for full depth of the base at a frequency of one test per 10,000 square feet. Compliance testing should consist of performing in-place density tests and thickness measurements at the recommended frequency.

9.2.2.3 Surface and Binder Course

The wearing surface should consist of Florida Department of Transportation (FDOT) Type SP asphaltic concrete. Specific requirements for Type SP asphaltic concrete, Traffic Level C/D wearing surface are outlined in the Florida Department of Transportation (FDOT), *Standard Specifications for Road and Bridge Construction, current Edition,* Section 334.

The asphaltic concrete shall be placed in two layers. Specifically for light duty areas, the lower binder course shall consist of a minimum of 1.5 inches of FDOT Type SP-12.5. The surface course shall be a minimum of 1.5 inches of FDOT Type SP-9.5. For heavy duty pavements, the binder shall consist of a minimum of 2.5 inches of Type SP-12.5 with a surface course consisting of a minimum 1.5 inches of Type SP-9.5. Per Asphalt specs, the SuperPave (SP) surface course may contain up to 20 percent recycled asphalt pavement (RAP).

After placement and field compaction, the wearing surface should be cored to evaluate material thickness and to perform laboratory densities. Cores should be obtained at frequencies of at least one core per 10,000 square feet of placed pavement or a minimum of two cores per day's production.

9.2.2.4 Curbing

Typical curbing is extruded and placed atop the asphaltic concrete surface. This type of curbing does not act as a horizontal cutoff for lateral migration of storm and irrigation water into the base material and as a result of this it is not uncommon for base and subgrade materials adjacent to these areas to become saturated, promoting subsequent localized pavement deterioration. Consequently, we recommend that most pavements abutting irrigated landscape areas be equipped with an underdrain system that penetrates a minimum depth equivalent to the bottom of the stabilized subgrade to intercept trapped shallow water and discharge it into a closed system or other acceptable discharge point.

Alternatively, curbing around landscaped sections adjacent to the parking lots and driveways could be constructed with full-depth curb sections to reduce horizontal water migration. However, underdrains may still be recommended dependent upon the soil type and spatial relationships. UES should review final grading plans to evaluate the need and placement of pavement and landscape underdrains.

9.2.3 Concrete (Rigid) Pavements

Concrete pavement is a rigid pavement that transfers reduced wheel pressures to the underlying subgrade soils when compared to a flexible pavement section. Current t specifications require a base course beneath concrete pavement. We recommend that the base course be supported on a stabilized subgrade. Our recommendations for the rigid pavement system are presented below:

1. The stabilized subgrade should be at least 4 inches thick, "free-draining" ($k \geq 1 \times 10^{-3}$ cm/sec), and have a minimum LBR value of 40. The base course should be at least 4 inches thick, "free-draining" ($k \geq 1 \times 10^{-3}$ cm/sec), and have a minimum LBR value of 100.

2. The stabilized subgrade and base materials should be densified to at least 98 percent of modified Proctor test maximum dry density (ASTM D1557/AASHTO T-180).

3. The surface of the subgrade soils must be level, and any disturbances or wheel rutting corrected prior to placement of concrete.

4. Concrete pavement thickness should be uniform throughout, with exception to thickened edges (curb or footing).

5. The bottom of the pavement should be separated from the estimated typical wet season groundwater level by at least 12 inches.

Our recommendations for slab thickness for standard and heavy duty concrete pavements are presented below.

TABLE 6
(UNREINFORCED) CONCRETE PAVEMENT WITH FREE-DRAINING BASE

Minimum Pavement Thickness*	Maximum Control Joint Spacing	Recommended Sawcut Depth
Standard Duty - 5 Inches	10 Feet x 10 Feet	1 ¼ Inches
Heavy Duty - 6 Inches	12 Feet x 12 Feet	1 ½ Inches

*Minimum pavement thickness values if the "free-draining" base material is available. Free draining material should be at least 4 inches and have a minimum LBR of 100.

TABLE 7
(UNREINFORCED) CONCRETE PAVEMENT – WITH POORLY DRAINING MATERIAL

Minimum Pavement Thickness*	Maximum Control Joint Spacing	Recommended Sawcut Depth
Standard Duty – 6 Inches	10 Feet x 10 Feet	1 ½ Inches
Heavy Duty - 7 Inches	12 Feet x 12 Feet	1 ¾ Inches

*Minimum pavement thickness values if the "free-draining" base material is not available. Poorly drainage material such as crushed concrete aggregate base should be at least 4 inches and have a minimum LBR of 100. Crushed concrete aggregate base material should be placed over compacted stabilized subgrade.

We recommend using concrete with a minimum 28-day compressive strength of 4,000 psi and minimum 28-day flexural strength (modulus of rupture) of at least 600 pounds per square inch, based on 3rd point loading of concrete beam test samples. Layout of the sawcut control joints should form square panels, and the depth of sawcut joints should be ¼ of the concrete slab thickness. The control joints should be sawed within 6 hours of concrete placement or as soon as the concrete has sufficient strength to support workers and equipment. We recommend allowing UES to review and comment on the final concrete pavement design, including section and joint details (type of joints, joint spacing, etc.), prior to the start of construction.

For further details on concrete pavement construction, please reference the "Guide to Jointing of Non-Reinforced Concrete Pavements" published by the Florida Concrete and Products Association, Inc., and "Building Quality Concrete Parking Areas", published by the Portland Cement Association.

9.2.4 Groundwater Considerations

One of the most critical influences on pavement performance is the relationship between the pavement subgrade and the seasonal high groundwater level. It has been our experience that roadways and parking areas may be damaged as a result of deterioration of the base and the base/surface course bond from saturation of the subgrade and/or base materials. We recommend that the seasonal high groundwater and the bottom of the base course be separated by at least 24 inches. For concrete pavement the minimum separation may be reduced to 18 inches provided the compacted base and subgrade is "free-draining" material.

Based on the assumed finish floor elevation, existing topographic information available, and presumed pavement grades, it appears the recommended separation will be provided in most of the pavement areas; however as mentioned before some borings encounter sand-clay mixtures. Where encountered, we recommend undercutting the very clayey sands and sandy clays to a minimum depth of 24 inches below the proposed bottom of the base course in accordance with FDOT Standard Plans Index 120-002. If the separation is not provided by grading and/or permanent surface drainage improvements, underdrains may be required.

9.2.5 Construction Traffic

Light duty roadways and incomplete pavement sections may not perform satisfactorily under construction traffic loadings. We recommend that construction traffic (construction equipment, concrete trucks, sod trucks, garbage trucks, dump trucks, etc.) be re-routed away from these roadways or that the pavement section design account for these loadings.

9.3 Site Preparation

9.3.1 General

We recommend normal, good practice dry weather site preparation procedures for the building and pavement areas. These procedures include stripping/demolition of the site to remove vegetation, surficial organics, trees and root systems greater than ½ inch in diameter and other debris. Following stripping/demolition, the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas should be proof-rolled to detect soft/loose or questionable soils. A more detailed description of this work is as follows:

1. Prior to construction, existing underground utility lines within the construction area should be located. Provisions should be made to relocate interfering utilities to appropriate locations. It should be noted that if underground pipes are not properly removed or plugged, they may serve as conduits for subsurface erosion which may lead to excessive settlement of overlying structures.

2. Strip/demolish the proposed construction limits of topsoil, asphalt, and other deleterious materials within and 5 feet beyond the perimeter of the proposed building and pavement

areas.

3. The site should be graded to direct surface water runoff away from the construction areas. Positive drainage of improved areas should be maintained during construction and throughout the design life of the project. If required, perform remedial dewatering prior to any earthwork operations. Dewatering operations scheduled should be carefully evaluated for possible impacts to the existing foundation systems. Dewatering systems should not be decommissioned until the excavation is backfilled two feet above the groundwater level at the time of construction. Further, the site should always be graded to prohibit ponding of stormwater runoff.

4. After clearing and stripping of the site is completed, the prepared subgrade soils within the building area should be observed and probed by a qualified agent of testing agency to locate any surficial deposits of vegetation, excessive roots or debris. If identified, undercut the vegetation, organics, muck, or deleterious material until clean natural soils are encountered and backfill the resulting excavations according to the fill placement procedures provided later in this section.

5. The building pad area, including 5 feet beyond the perimeter, should be proof-rolled, deep compacted, and tested for compliance to compaction requirements, to a depth of three (3) feet below foundation bearing levels, four (4) feet below finished floor slab or Elevation +98 ft NAVD, whichever is deeper, prior to any fill placement.

   The Fuel Station building pad area, including 5 feet beyond the perimeter, should be proof-rolled, deep compacted, and tested for compliance to compaction requirements, to a depth of three (3) feet below foundation bearing levels, four (4) feet below finished floor slab or Elevation +94 ft NAVD, whichever is deeper, prior to any fill placement.

6. Weak subgrade soils identified during proof-rolling operations shall be excavated and removed from the site, and replaced with selected (low permeability) fill material. We recommend that the bottom of all footings be probed to confirm the suitability of the bearing soils. We recommend 4-foot static cone penetrometer probe and/or auger borings be performed in the proposed footing excavations to investigate for clayey soils, or below grade structures. We recommend you probe every column footing, probe every 50 lineal feet of wall footing. If encountered, fat clays (CH) shall be removed to a minimum of 4 feet below the bottom of the footing/floor slab. The over-excavated areas shall be backfilled with a compacted, low permeability, engineered fill material. Fill material shall consist of poorly draining, silty-clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8 inches or less are recommended.

7. In the areas to receive fill or at subgrade cut elevation, the subgrade should be compacted using a smooth drum vibratory roller having a minimum static, at-drum weight on the order of 10 tons and a drum diameter on the order of 3 to 4 feet making a minimum of eight overlapping passes with the second set of 4 passes perpendicular to the first set of 4 passes. If wet conditions are prevalent anywhere on site, at the discretion of a qualified representative of ' testing agency, a bridge lift of "dry" sand may be placed to raise the compaction surface above the water table sufficiently to enable effective

compaction. Typically, the material should exhibit moisture contents within +/- 2 percent of the modified Proctor optimum moisture content (ASTM D-1557) during the compaction operations. Compaction should continue until densities of at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557) have been uniformly achieved within the upper 36 inches of the compacted subgrade surface. If necessary to achieve the recommended soil compaction at depth, the loose/soft areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation. In non-building areas, compaction should continue until densities of at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557) have been uniformly achieved within the upper 24 inches of the compacted subgrade surface.

8. Place fill material, as required. The fill should consist of sand with less than 10 percent soil fines. Place fill in uniform 10- to 12-inch loose lifts and compact each lift to a minimum density of at least 95 percent of the modified Proctor maximum dry density (ASTM D1557). The last 12 inches of fill beneath the parking areas should be compacted to at least 98 percent of the Modified Proctor maximum dry density. Stabilize the upper 6 inches of this zone with shell or limerock as required to meet the subgrade recommendations contained in Section 9.2.2.1 and the Pavement Section Design, Appendix D.

9. Test the subgrade and each lift of backfill in over-excavated and fill areas for compaction at a frequency of not less than one test per 2,500 square feet in the building areas and one test per 10,000 square feet in paved areas.

10. In the building areas, test all footing cuts for compaction to a depth of 3 feet below bearing levels and probe footing, and building pad areas, to a depth of 4 feet to confirm suitability of bearing soils. We recommend you test every column footing, and conduct one test for every 50 lineal feet of wall footing.

11. If difficult compaction conditions are encountered during the site work operations, the compaction efforts should stop and a qualified representative of testing agency should be consulted for recommendations. The qualified representative of testing agency should observe proof-rolling of the exposed subgrade to determine if additional compaction is warranted or if any soil material needs to be over-excavated and replaced.

12. If site preparation work is performed during the rainy season (June through September, reference historic data and Climatic Atlas of the United States), special care should be taken to maintain positive drainage from the building pad and paved areas to drains or ditches around the site. Unexpected wet periods can also occur in Florida during the "dry" season. Such events can raise water tables to levels above seasonal highs without the associated high temperatures to evaporate ponded water. Therefore, the Contractor should practice wet weather means and methods for earthwork during the "dry" season as well. Groundwater and surface water control, use of granular fill material and aeration are the normal means to accommodate wet weather construction. All fill materials that are excavated from below the water table should be stockpiled for a sufficiently long period to allow drainage.

9.3.2 Suitability of Over-excavated Site Materials

9.3.2.1 Suitability Designation

From the point of view of evaluating the quality of site soils for re-use as fill material, we have subdivided the soil layers into four groups (Group A, Group B, Group C, Group D, and Group E) based on the percent fines determined from our laboratory tests. Please note that these groupings are not in accordance with industry standards but offered for ease of presentation and end use of the excavated soils. Also, organic soils are not suitable and are not recommended for use as structural fill material. Brief descriptions of the various groups based on fill suitability are presented in the following paragraphs. Table 8 shows the soil suitability groups.

TABLE 8
SUITABILITY OF EXCAVATED SOILS FOR RE-USE AS FILL

Designation	% fines passing No. 200 sieve	USCS Soil Classification	Suitability for re-use as fill material
Group A	0 - 5	SP	Favorable, freely draining, clean sands
Group B	5 - 12	SP - SM, SP - SC	Suitable, impedes infiltration and will require some aeration and moisture control
Group C	12 - 25	SM, SC, SM - SC	Poor, impedes infiltration, limit overall use, may be used for stabilizing material. Will require very strict moisture control.
Group D	> 25	SM, SC, SM – SC, CL, CH, ML, CH	Very Poor, not recommended for fill material, may be used as stabilizing material in pavement subgrade or used in green areas
Group E	organic	PT, OL, SP-OL, SM-OL	Unsuitable, must be removed/demucked and replaced with Group A or B soils

9.3.2.2 Soils & Suitability

A review of the subsurface conditions found in our Borings indicates that the predominate soil designations are Groups A and B, which is suitable for re-use as fill. Individual boring logs must be reviewed to determine the actual soil classification at any boring location. We estimate that about 50 percent of the soils to be over-excavated will be designated as Groups C or D. If encountered during excavation, soils in **Group D should not be used as backfill material due to difficulties in material handling**, however, these soils may be used in non-structural areas (green areas). Alternatively, they may be used greater than 5 feet below finished grade in deep fills for pavement areas with the understanding that there may be a negative effect on the project scheduling due to handling problems associated with moisture. Additionally, if these soils are not properly placed pavement performance may be negatively impacted. It should be noted that the successful use of group C and D soil types will be related to the sitework contractor's experience in working with these types of soils.

9.4 Sewer and Utility Lines

9.4.1 General Recommendations

We assume that proposed sewer and other deep utility lines at the site may have invert elevations several feet below existing grades. In general, the soils at this approximate level may

be sands to silty sands [SP/SM]; clayey sands and or clay [SC, CL, CH] may be encountered at deeper depths. The fine sand type soils, when excavated from below the water table, may require spreading and drying prior to reuse to achieve a moisture content sufficient to obtain the recommended degree of compaction. Silty sands may be reused as backfill material, but will require stringent moisture control to achieve compaction. The clayey soils [SC, CL, CH] should not be used as backfill material beside or above the utilities.

9.4.2 Trench Excavation and Backfill Recommendations

The following are our recommendations for construction of the proposed utility lines.

- Where required, the soils in the areas of excavations for the installation of the proposed gravity/force main lines should be dewatered prior to the start of excavation. The groundwater level should be maintained at least 24 inches below the base of the trench and compaction surface during construction and backfill activities.

- After proper dewatering, excavate the trench as per the design configuration. Excavated trenches should be set back to a stable configuration or shored, in either case in accordance with OSHA requirements. Adequate bracing should be provided if necessary to prevent side slope failures.

- Compact the trench bottom a minimum density of 95 percent of the Modified Proctor maximum dry density to a depth of 1-foot below the bottom of the pipe or place the pipe in gravel bedding as described by FDOT Design Standards. Remove rock, boulders or other hard lumpy or unyielding material to depth of 12 inches below the bottom of the pipe elevation. The subgrade after excavation in some areas may include silty-clayey sands [SM-SC/SC] [A-2-4]/[A-2-6], which will be difficult to compact. If these soils are soft in nature, they should be over-excavated and removed under the direction of the testing agency representative. Alternatively, approximately 6 to 12 inches of #57 stone (gravel) may be placed at the bottom and compacted to stabilize the subgrade. When utilizing graded stone material, sufficient amount of sand should be added to fill all voids created by the use of 57 stone. The undercut areas should be covered with geotextile (separation fabric). Some areas may also include very clayey sands or sandy clay [SC/CH][A-6]/[A-7]; these soils should be over-excavated and removed under the direction of the testing agency representative.

- Fill materials above the spring-line of the pipe should be compacted to a minimum of 95 percent of the Modified Proctor maximum dry density (AASHTO T-180/ASTM D-1557). Native soils consisting of clean sands with less than 12 percent fines may be used as backfill material provided they are inorganic, have moisture contents below the optimum level and are properly placed. As possible, we recommend you avoid using silty and clayey sands as backfill material for this project.

- If imported materials are used as trench backfill material, the imported fill should contain less than 5 percent soil fines passing a number 200 sieve. You may also use imported fill material containing 5 to 12 percent soil fines; however, strict moisture control measures will be required, particularly for placement of these materials in excavations extending below the groundwater level.

- Backfill placed around the pipe and extending up to a level of 12 inches above the top of the pipe should be placed in loose, 6-inch lifts and compacted with light-weight equipment such as a small plate compactor. The remaining backfill may be placed in loose, 12-inch lifts across the full trench width and compacted. All backfill lifts should be compacted to a minimum density of 95 percent of the Modified Proctor maximum dry density prior to the placement of additional backfill. Compaction within the backfill trench should be performed using light-weight compaction equipment until the backfill has attained a level of at least 4 feet above the crown of the pipe. Beneath pavement areas, the top 12 inches of backfill should be compacted to at least 98 percent.

- Compliance test for densities should be performed as recommended by FDOT standards. Additionally, local jurisdictional compaction requirements should be followed when stricter than the recommendations herein.

Backfill above and around thrust blocks should consist of clean fine sands (SP) compacted at least 98 percent of Modified Proctor maximum dry density (ASTM D 1557). For a design criteria, we recommend using an allowable passive earth pressure coefficient of K_p=3.0.

9.5 Underground Storage Tanks

9.5.1 General

It is assumed the tanks will have a maximum embedment depth of 10 feet below the existing ground surface. We anticipate the buried structure (tanks) will exert little or no net downward pressure on the soils, rather, the structure may be subject to hydrostatic uplift pressure when the tanks are empty. Below grade structures should be designed to resist lateral earth pressures and hydrostatic uplift pressures appropriate for their depth below existing grade and west season groundwater table.

The walls of the structures (tanks) should be designed to resist at-rest lateral earth pressures, with equivalent fluid densities above and below the water table being as follows:

Above Water Table – Equivalent Fluid Density 55 pcf
Below Water Table – Equivalent Fluid Density 90 pcf

The water table for well design purposes should be assumed to be 2 feet below prevailing grade.

9.5.2 Excavation Considerations

The proposed construction area should be dewatered as necessary and excavated to the required foundation depth. Excavation work will be required to meet OSHA Excavation Standard Subpart P regulations, Type C Soils. Either a braced sheet pile structure or an excavation with temporary side slopes cut back at 1.5 horizontal to 1.0 vertical can be implemented, depending on the specific project requirements. The side slope of 1.5 horizontal to 1.0 vertical is contingent upon the dewatering system adequately controlling slope seepage. Sheet piling should be designed according to OSHA sheeting and bracing requirements. We recommend a Florida registered Professional Engineer design the sheeting/bracing system. During excavation, excavated material should not be stockpiled at the top of the slope within a horizontal distance

equal to the excavation depth. Provisions for maintaining workman safety within excavations is the sole responsibility of the contractor.

We recommend positive drainage be established and maintained on the site during construction. Exposed subgrade soils consisting of silty and clayey soils will most likely result in saturated and pumping conditions due to the perched or standing water conditions. Further, short periods of intense rainfall can saturate surface soils, leading to instability during compaction and placement. In the event that heavy rainfall during construction activities resulted in unstable saturated conditions, the exposed saturated subgrade soils should be windrowed and aerated to reduce the moisture contents prior to further earthwork operations. Alternatively, the saturated soils could be over excavated and backfilled with compacted structural fill

9.5.3 Bedding Level Preparation

Based on our evaluation of the soil conditions encountered in this area, we offer the following recommendations for the proposed underground construction.

1. A dewatering system may be required for the project, if water perches above the clayey soils after significant rainfall. The water table should be maintained at least 2.0 feet below the proposed bottom of the tank elevation. The dewatering system should not be decommissioned until sufficient deadweight exists on the structure to prevent uplift protection system as described below, if necessary, is in place.

2. The subgrade after excavation in some areas may include silty-clayey sand type soils, which may be difficult to compact. If these soils are soft in nature, they should be over-excavated and removed under the direction of the testing agency representative. Alternatively, approximately 6 to 12 inches of #57 stone (gravel) may be placed at the bottom and compacted to stabilize the subgrade. The undercut area should be covered with a geotextile (separation) fabric.

3. The excavation bottom should be densified using hand-operated compaction equipment. Compaction should continue until a minimum density of 95 percent of the soils Modified Proctor maximum dry density (ASTM D1557) has been achieved as tested for a depth of 1.0 foot below tank bottoms.

4. Backfill which will be required around buried tanks should be compacted with a light hand-operated compactor to a density of 95 percent of the soils Modified Proctor maximum dry density. All backfill should be placed in level lifts not exceeding six inches loose thickness. Care should be taken not to over compact the backfill (i.e., limit compaction to a maximum of 98 percent of the maximum density) in order to limit the lateral loads applied to the proposed tanks. The sands excavated for the structure may be used as backfill.

9.5.4 Uplift Protection

When the fluid level within the fuel tank structure is maintained at or above the surrounding groundwater level, no net buoyancy will occur. However, when these structures are drained for maintenance or as fluid levels fluctuate within the tanks, a positive means of uplift protection may be necessary. Hydrostatic uplift forces can be resisted in several ways including:

1. Addition of dead weight to the structure.

2. Mobilizing the dead weight of the soil surrounding the structure through extension of footings outside the perimeter of the structure.

3. Use of a permanent gravity or mechanical dewatering system that is operated only when the structure is to be drained.

It is anticipated that use of one or more of the above methods may be necessary for uplift for protection.

9.6 Stormwater Management System

The field and laboratory test data indicates that the near-surface sands with silt generally have permeability rates of 9 to 16 feet per day, and the underlying clayey sand to sandy clay soils within the proposed stormwater management area for this project generally have permeability rates of less than 0.1 foot per day at the boring locations. Based upon the above findings, we recommend that you consider the soil parameters presented in Table 9 for design of the stormwater management system on the subject project site. It should be noted that the above referenced values are measured values and do not incorporate factor of safety.

TABLE 9 – STORMWATER MANAGEMENT SYSTEM SOIL DESIGN PARAMETERS			
Corresponding Soil Boring Test Locations	B9/B10	B11/B12	B13/B14
Average Ground Surface Elevation, feet	91	92.5	99
Average Depth to Confining Layer, feet	4.5	4.5	5
Average Confining Layer Elevation, feet	86.5	88	94
Estimated Average Unsaturated Vertical Infiltration rate, feet per day	9	11	10
Estimated Average Horizontal Hydraulic Conductivity, feet per day	16	18	17
Estimated Average Fillable Porosity, percentage	20	20	20
Estimated Seasonal High Water Table Elevation, feet	87.5	89	95
Estimated Seasonal High Water Table Depth, feet[1]	3.5	3.5	4

[1]The seasonal high water table will be a result of perched conditions.

9.7 Stormwater Management System Fill Suitability

The recovered soil samples were classified using visual and textural means, and limited laboratory testing. We offer below ***preliminary guidelines*** for the use of on-site soils, such as those excavated from the proposed retention pond, as fill material for the project.

Soil materials excavated and classified as fine sands to sand with silt and sand with clay (SP, SP-SM, SP-SC), with typically 12% fines or less (silt/clay fraction), may be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, provided the materials are properly dried, placed, and compacted.

Soil materials excavated and classified as silty fine sands [SM], with typically 12% to 25% fines, may also be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, after significant drying and some mixing with the fine sand material described above. Proper placement, proof rolling and compaction must also be performed.

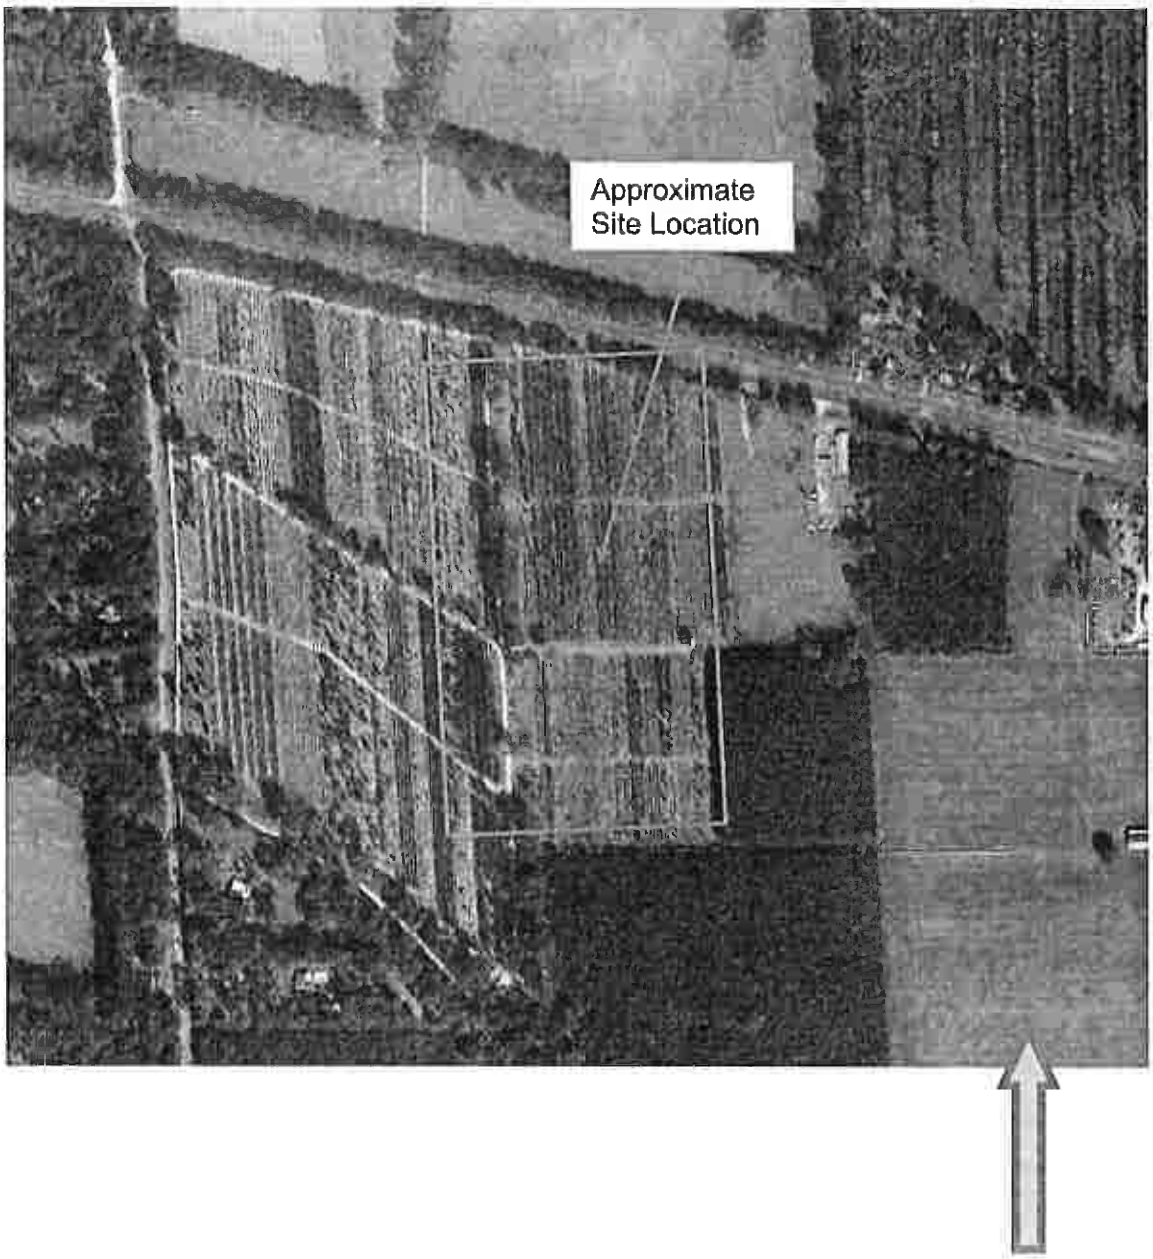
Soil materials excavated and classified as clayey sand, silt or clay (SC, ML, MH, CL, and CH) and any organic-laden soils (5% or greater organics by weight) should not be reused as fill beneath building or pavement sections. These materials could be used in green areas, if applicable and in non-structural applications where excessive ground subsidence will not create functional or aesthetic problems. It should be noted that silt and clay materials will retain water and if used near the final grade may become saturated and soft for a significant period of time following a rain event.

Soil borings for a typical geotechnical report are widely spaced and generally not sufficient for reliably detecting the presence of isolated, anomalous surface or subsurface conditions, or reliably estimating unsuitable or suitable material quantities. Accordingly, UES does not recommend relying on our boring information to negate presence of anomalous materials or for estimation of material quantities unless our contracted services ***specifically*** include sufficient exploration for such purpose(s) and within the report we so state that the level of exploration provided should be sufficient to detect such anomalous conditions or estimate such quantities. Therefore, UES will not be responsible for any extrapolation or use of our data by others beyond the purpose(s) for which it is applicable or intended.

9.8 Excavations

Excavations should be sloped as necessary to prevent slope failure and to allow backfilling. Temporary excavations below a depth of 4 feet should be sloped in accordance with current OSHA regulations (29 CFR Part 1926). Where lateral confinement will not permit slopes to be laid back, the excavation should be shored in accordance with OSHA requirements. During excavation, excavated material should not be stockpiled at the top of the slope within a horizontal distance equal to the excavation depth. Provisions for maintaining workman safety within excavations is the sole responsibility of the Contractor.

10.0 CLOSURE



Our interpretation of the site soil and groundwater conditions is based on our general knowledge of the area, subsurface borings performed and laboratory analysis conducted. UES did identify geotechnical considerations that may impact the planned development of the site, as we currently understand it, using conventional construction practices. The identified considerations are:

1. Shallow deposits of Clayey Sands [SC] that may not be re-usable as fill in utility excavations;
2. The subgrade after excavation, in some areas may include very clayey sands, which will be difficult to compact. The clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods.
3. Loose surficial sandy soils that will necessitate compaction to at least Elevation +98 feet, NAVD.

Standard methods of surficial stripping, general excavation, proof-rolling, compaction and backfilling should adequately prepare the site. testing agency should provide observation and testing services during the site preparation procedures to confirm that the earthwork operations meet the intent of the recommendations presented in this report. **UES strongly recommends that a pre-construction meeting be held with the following representatives in attendance at a minimum: Representative, General Contractor, Site (Earthwork) Contractor, Civil Engineer, Underground Utility Contractor, and UES Geotechnical Engineer and Material Testing Technician**. At this meeting, UES would describe in detail the geotechnical considerations that would impact the construction process and future serviceability of the improvements.

Tel: 352-955-2402

Client Identification: B-18 Set Number: E89168 Lab Number: E227905

Crop: **Bahiagrass Lawn**

Report Date: 20-Feb-26

Soil Test Results and Their Interpretations

Target pH: 5.5 This is the pH at which the above crop will grow at its optimum
pH (1:2 Sample:Water): 7.7 This is the pH of your sample in water medium
A-E Buffer Value: N/A Buffer pH is the pH of your soil in Adams-Evans Buffer(A-E Buffer). This is done to determine the lime requirement, which will help increase the soil pH to the target pH level desired by the crop. If the pH is higher than Target pH, Buffer pH will not be determined

AB-DTPA Extractable Nutrients

Nutrients	Level mg/kg or ppm	Interpretation	Nutrients	Level mg/kg or ppm	
Phosphorus (P)	25	HIGH	Sulfur (S)	5.4	*For these nutrients see directions on the following pages
Potassium (K)	35		Copper (Cu)	0.6	
Magnesium (Mg)	36		Manganese (Mn)	0.6	
			Zinc (Zn)	2.1	
			Boron (B)	0.0	
Calcium (Ca)	427	Ca is typically adequate in Florida soils			

Lime and Fertilizer Recommendations

Crop: Bahiagrass Lawn

Lime:	**0.00**	**lbs per 1000 sq. ft. per year**
Nitrogen(N):	**1-2**	**lbs per 1000 sq. ft. per year**
Phosphorus(P_2O_5):	**0.00**	**lbs per 1000 sq. ft. per year**
Potassium(K_2O):	**2.00**	**lbs per 1000 sq. ft. per year**
Magnesium(Mg):	**0.46**	**lbs per 1000 sq. ft. per year**

*** Do not to add more than 1 pound of nitrogen per application**

We do not test soil for N as there is no meaningful soil test for predicting N availability. Thus, the N recommendation was developed from research that measured response of the indicated crop to applied N fertilizer. If you expect significant nutrient release from organic sources such as crop residues or organic amendments, estimate the amount mineralized and subtract that amount from the fertilizer recommendations given below to arrive at crop needs.

IMPORTANT: Prior to making any of the recommended applications, read carefully the footnotes/directions on this report. If you have any questions, please call the county extension agent listed above.

The soil has been determined to be calcareous in nature because of its pH (>=7.4). At this pH, AB-DTPA extraction method was found suitable. However, only Phosphorus(P) was calibrated. No calibration was possible for Potassium(K) and Magnesium (Mg). Therefore, the recommendations for K and Mg are provided solely for successful crop performance and yields. Nitrogen(N) recommendations are provided based on research data and not on a soil test. Research studies are underway at different locations in the state to identify an appropriate extraction method for improved interpretations and recommendations for these soils. At that time, the recommendations will be modified, as appropriate

Email: soilslab@ifas.ufl.edu Web: soilslab.ifas.ufl.edu
Phone #:352-392-1950

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227905 **Crop: Bahiagrass Lawn**

General

- For details on turfgrass fertilization, consult UF/IFAS publication SL21, "General Recommendations for Fertilization of Turfgrasses on Florida Soils" available on the web at https://edis.ifas.ufl.edu/publication/LH014 or from your county extension office.

Soil pH

- The pH of this soil is quite high. If this is a natural condition (i.e., if it is not from the over-application of lime), it is generally impractical to lower the soil pH with soil amendments. Use plant species that are tolerant of high soil pH.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

  Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

This data report has been issued on the authority of Dr. Franta Majs, Laboratory Director, and Mrs. Nancy Wilkinson, QA Officer, in support of Florida Cooperative Extension Service.

Tel: 352-955-2402

Client Identification: B-18
Set Number: E89168 Lab Number: E227905
Crop: **Centipedegrass Lawn**
Report Date: 20-Feb-26

Soil Test Results and Their Interpretations

Target pH: 5.5	This is the pH at which the above crop will grow at its optimum
pH (1:2 Sample:Water): 7.7	This is the pH of your sample in water medium
A-E Buffer Value: N/A	Buffer pH is the pH of your soil in Adams-Evans Buffer(A-E Buffer). This is done to determine the lime requirement, which will help increase the soil pH to the target pH level desired by the crop. If the pH is higher than Target pH, Buffer pH will not be determined

AB-DTPA Extractable Nutrients

Nutrients	Level mg/kg or ppm	Interpretation	Nutrients	Level mg/kg or ppm	
Phosphorus (P)	**25**	**HIGH**	**Sulfur (S)**	**5.4**	***For these nutrients see directions on the following pages**
Potassium (K)	**35**		**Copper (Cu)**	**0.6**	
Magnesium (Mg)	**36**		**Manganese (Mn)**	**0.6**	
			Zinc (Zn)	**2.1**	
			Boron (B)	**0.0**	
Calcium (Ca)	**427**	**Ca is typically adequate in Florida soils**			

Lime and Fertilizer Recommendations

Crop: Centipedegrass Lawn

Lime:	**0.00**	**lbs per 1000 sq. ft. per year**
Nitrogen(N):	**0.4-2**	**lbs per 1000 sq. ft. per year**
Phosphorus(P_2O_5):	**0.00**	**lbs per 1000 sq. ft. per year**
Potassium(K_2O):	**2.00**	**lbs per 1000 sq. ft. per year**
Magnesium(Mg):	**0.46**	**lbs per 1000 sq. ft. per year**

*** Do not to add more than 1 pound of nitrogen per application**

We do not test soil for N as there is no meaningful soil test for predicting N availability. Thus, the N recommendation was developed from research that measured response of the indicated crop to applied N fertilizer. If you expect significant nutrient release from organic sources such as crop residues or organic amendments, estimate the amount mineralized and subtract that amount from the fertilizer recommendations given below to arrive at crop needs.

IMPORTANT: Prior to making any of the recommended applications, read carefully the footnotes/directions on this report. If you have any questions, please call the county extension agent listed above.

The soil has been determined to be calcareous in nature because of its pH (>=7.4). At this pH, AB-DTPA extraction method was found suitable. However, only Phosphorus(P) was calibrated. No calibration was possible for Potassium(K) and Magnesium (Mg). Therefore, the recommendations for K and Mg are provided solely for successful crop performance and yields. Nitrogen(N) recommendations are provided based on research data and not on a soil test. Research studies are underway at different locations in the state to identify an appropriate extraction method for improved interpretations and recommendations for these soils. At that time, the recommendations will be modified, as appropriate

Email: soilslab@ifas.ufl.edu Web: soilslab.ifas.ufl.edu
Phone #:352-392-1950

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227905 **Crop: Centipedegrass Lawn**

General

- For details on turfgrass fertilization, consult UF/IFAS publication SL21, "General Recommendations for Fertilization of Turfgrasses on Florida Soils" available on the web at https://edis.ifas.ufl.edu/publication/LH014 or from your county extension office.

Soil pH

- The pH of this soil is quite high. If this is a natural condition (i.e., if it is not from the over-application of lime), it is generally impractical to lower the soil pH with soil amendments. Use plant species that are tolerant of high soil pH.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

  Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

Phone #:352-392-1950

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227905 **Crop: Landscape Azaleas, Camellias, Gardenias, Hibiscus or Ixora**

General

- Indicated fertilizer rates, coupled with nutrients already in the soil, will satisfy the crop-nutrient requirement for the current growing season.

Fertilizer and water management are linked. Maximum fertilizer efficiency is achieved only with close attention to water management. Supply only enough irrigation water to satisfy plant requirements and minimize leaching conditions.

- Established trees (more than 3 to 5 years since transplanting) do not need routine fertilization.

For recently-planted trees, broadcast fertilizer within a circle 1.5 times the dripline diameter.

- Broadcast P_2O_5 either in one application or as half the recommended rate in each of two applications during the growing season. To minimize leaching losses, broadcast N and K_2O in small increments throughout the growing season. Schedule one application every 12 weeks (three times per growing season), adding 33% of the recommended rate of N and K_2O at each application. To insure equal coverage when fertilizer rates are small, blend all compatible fertilizers.

Soil pH

- The pH of this soil is quite high. If this is a natural condition (i.e., if it is not from the over-application of lime), it is generally impractical to lower the soil pH with soil amendments. Use plant species that are tolerant of high soil pH.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

If you expect significant nutrient release from organic sources such as crop residues or organic amendments, estimate the amount mineralized and subtract that amount from the fertilizer recommendations given below to arrive at crop needs.

IMPORTANT: Prior to making any of the recommended applications, read carefully the footnotes/directions on this report. If you have any questions, please call the county extension agent listed above.

The soil has been determined to be calcareous in nature because of its pH (>=7.4). At this pH, AB-DTPA extraction method was found suitable. However, only Phosphorus(P) was calibrated. No calibration was possible for Potassium(K) and Magnesium (Mg). Therefore, the recommendations for K and Mg are provided solely for successful crop performance and yields. Nitrogen(N) recommendations are provided based on research data and not on a soil test. Research studies are underway at different locations in the state to identify an appropriate extraction method for improved interpretations and recommendations for these soils. At that time, the recommendations will be modified, as appropriate

Phone #:352-392-1950

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227906 **Crop: Centipedegrass Lawn**

General

- For details on turfgrass fertilization, consult UF/IFAS publication SL21, "General Recommendations for Fertilization of Turfgrasses on Florida Soils" available on the web at https://edis.ifas.ufl.edu/publication/LH014 or from your county extension office.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

  Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

Magnesium

- Apply the equivalent of 35 lb Mg/A, or 0.8 lb Mg per 1000 sq. ft., in a soluble form like magnesium sulfate or potassium magnesium sulfate.

Tel: 352-955-2402

Client Identification: B-23
Set Number: E89168 Lab Number: E227906
Crop: **St. Augustinegrass Lawn**

Report Date: 20-Feb-26

Soil Test Results and Their Interpretations

Target pH: 6.5 This is the pH at which the above crop will grow at its optimum
pH (1:2 Sample:Water): 7.4 This is the pH of your sample in water medium
A-E Buffer Value: N/A Buffer pH is the pH of your soil in Adams-Evans Buffer(A-E Buffer). This is done to determine the lime requirement, which will help increase the soil pH to the target pH level desired by the crop. If the pH is higher than Target pH, Buffer pH will not be determined

AB-DTPA Extractable Nutrients

Nutrients	Level mg/kg or ppm	Interpretation	Nutrients	Level mg/kg or ppm	
Phosphorus (P)	35	HIGH	Sulfur (S)	3.3	*For these nutrients see directions on the following pages
Potassium (K)	22		Copper (Cu)	3.3	
Magnesium (Mg)	25		Manganese (Mn)	0.4	
			Zinc (Zn)	2.2	
			Boron (B)	0.0	
Calcium (Ca)	400	Ca is typically adequate in Florida soils			

Lime and Fertilizer Recommendations

Crop: St. Augustinegrass Lawn

Lime:	**0.00**	**lbs per 1000 sq. ft. per year**
Nitrogen(N):	**2-4**	**lbs per 1000 sq. ft. per year**
Phosphorus(P_2O_5):	**0.00**	**lbs per 1000 sq. ft. per year**
Potassium(K_2O):	**2.00**	**lbs per 1000 sq. ft. per year**
Magnesium(Mg):	**0.46**	**lbs per 1000 sq. ft. per year**

*** Do not to add more than 1 pound of nitrogen per application**

We do not test soil for N as there is no meaningful soil test for predicting N availability. Thus, the N recommendation was developed from research that measured response of the indicated crop to applied N fertilizer. If you expect significant nutrient release from organic sources such as crop residues or organic amendments, estimate the amount mineralized and subtract that amount from the fertilizer recommendations given below to arrive at crop needs.

IMPORTANT: Prior to making any of the recommended applications, read carefully the footnotes/directions on this report. If you have any questions, please call the county extension agent listed above.

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227906 **Crop: Landscape Azaleas, Camellias, Gardenias, Hibiscus or Ixora**

General

- Indicated fertilizer rates, coupled with nutrients already in the soil, will satisfy the crop-nutrient requirement for the current growing season.

Fertilizer and water management are linked. Maximum fertilizer efficiency is achieved only with close attention to water management. Supply only enough irrigation water to satisfy plant requirements and minimize leaching conditions.

- Established trees (more than 3 to 5 years since transplanting) do not need routine fertilization.

For recently-planted trees, broadcast fertilizer within a circle 1.5 times the dripline diameter.

- Broadcast P2O5 either in one application or as half the recommended rate in each of two applications during the growing season. To minimize leaching losses, broadcast N and K2O in small increments throughout the growing season. Schedule one application every 12 weeks (three times per growing season), adding 33% of the recommended rate of N and K2O at each application. To insure equal coverage when fertilizer rates are small, blend all compatible fertilizers.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

Magnesium

- Apply the equivalent of 35 lb Mg/A, or 0.8 lb Mg per 1000 sq. ft., in a soluble form like magnesium sulfate or potassium magnesium sulfate.

GUIDANCE ON MICRONUTRIENTS

The IFAS Extension Soil Testing Laboratory currently offers a soil test for four micronutrients, copper (Cu), manganese (Mn), zinc (Zn), and boron (B). Interpretations in terms of plant needs of the particular nutrients are still quite tentative. They are presented here with the understanding that other criteria such as crop production records and observation of deficiency symptoms should be used along with the test results in reaching the management decision concerning micronutrient fertilization.

Interpretation of extractable Cu, Mn, Zn, and B depends on the soil pH. The critical soil levels for these nutrients increase with pH for crops grown on acid sandy soils of Florida. Micronutrient availability in the alkaline pH range is better evaluated with a plant tissue test or with soil test extractants developed especially for alkaline soils.

Indiscriminate use of micronutrient soil tests should be avoided. However, if plant performance has been less than optimum in the past and the soil test levels are below those shown in the tables, fertilization with the respective micronutrients may be indicated.

COPPER

In Florida, Cu deficiencies have been generally confined to soils high in organic matter and so-called "new ground" just coming into cultivation in the flatwood areas. Known Cu phytotoxicity occurs in citrus groves and vegetable crop areas where Cu applied in fungicides and fertilizers has accumulated in the soil over the years. Liming to pH 7.0 is the simplest means of overcoming phytotoxicity.

Table 1 provides guidelines for interpreting the IFAS Micronutrient Soil Test values for extractable Cu in mineral soils. Dilute acids are poor extractants of Cu on organic soils and do not give reliable estimates of crop responses. The IFAS Soil Testing Lab does not presently provide a Cu soil test for organic soils.

Application of 3 to 5 pounds elemental Cu per acre (as copper sulfate or finely ground copper oxide) will correct Cu deficiencies in most crops growing on mineral soils. Mixing these Cu sources with macronutrient fertilizers presents no agronomic problems, provided segregation of the materials is avoided. A single Cu application may be sufficient for several years. Do not repeat this application until soil or tissue tests indicate a need for Cu. Copper added to soil is there "forever" and Florida already has too many cases of soils with phytotoxic levels of Cu. Fertilizer Cu should not be applied to mineral soils where Cu will be used as a pesticide.

Table 1. Tentative interpretation of extractable Cu in mineral soils

	Soil pH Minerals Soils Only		
	5.5-6.0	6.0-6.5	6.5-7.0
	ppm		
Level below which there may be a crop response to applied Cu	0.1-0.3	0.3-0.5	0.5*
Level above which Cu phytotoxicity may occur	2.0-3.0	3.0-5.0	5.0**

*If in doubt about copper nutrition of crop, get a tissue test

MANGANESE

There has been some success in predicting crop response to fertilizer Mn with extractable Mn. Lack of success in some cases has resulted from the complex nature of soil Mn and the many factors that affect its uptake by plants. Levels in table 2 are suggested as a guide for interpreting extractable Mn in mineral and organic soils.

Application of 8 to 10 pounds elemental Mn (as manganese sulfate or manganese oxide) per acre in banded fertilizer is recommended when the soil test levels are below those shown in Table 2. Broadcast applications are less effective and the rate should be increased to 20 or 30 pounds Mn if the fertilizer is broadcast. Uptake of Mn is generally best when Mn is banded with acid forming fertilizers. Field crops most likely to give a yield response to applied Mn in Florida are soybeans, small grains, and irrigated corn. Sugarcane grown on organic soils having pHs above 6.5 will also respond to banded Mn fertilizer.

ZINC

Table 2 presents a guide to interpretation of extractable Zn in both mineral and organic soils. Where Zn fertilization is needed, application rates may vary considerably with crop and Zn source but generally are around 5 to 10 pounds Zn per acre. For tree crops, use tissue tests to determine if Zn fertilization is needed, and it is known that no Zn is applied in the spray program.

Table 2. Interpretive guide to extractable Mn and Zn

	Soil pH Minerals Soils Only		
	5.5-6.0	6.0-6.5	6.5-7.0
	ppm		
Level below which there may be a crop response to applied Mn	3-5	5-7	7-9
Level below which there may be a crop response to applied Zn	0.5	0.5-1.0	1.0-3.0

The critical values shown in Table 2 are higher than those used in other states of the Southeastern U.S. and reflect a significant "margin of safety" in interpretation of the test results. These critical levels may be modified as results from field trials justify such changes.

BORON

A Mehlich 3-extractable B soil test of 0.05 ppm or higher is considered adequate for most crops grown in Florida.

B exists in both organic and inorganic forms in the soil. Total B in soils can range between 10 and 100 mg/kg (ppm) depending on the organic matter content in the surface layer, but only a small amount will be available for plant uptake at any given time. B becomes plant-available as soil organic matter is mineralized and as B-containing minerals slowly dissolve. B is often added to the soil unintentionally as a contaminant in fertilizers like superphosphate and with soil amendments like manures and lime. For Florida soils, the Ca-B relationship is of utmost importance because soils with high Ca will require higher applications of B. However, excessive application must be avoided at all times due to the potential for B toxicity.

Please read the following if B applications are being considered: For tomatoes and alfalfa, applications of elemental B up to 2.0 lbs per acre per year can be broadcast. For all other crops including row and vegetable crops, broadcast B applications should not exceed 0.5 lb per acre per year.

For intensively managed sunflower and certain vegetables (beets, broccoli, cabbage, cauliflower, green onions, sweet potatoes, greens), applications up to 1.0 lb per acre of elemental B can be considered.

When foliar spraying is considered for any crop, do not exceed 0.2 lb per acre of elemental B per spray. Additional sprays should be at least 2 weeks apart. Spraying prior to bloom will help with fruit set. B can be supplied in combination with pesticide or fungicide sprays where compatible.

As B toxicity is real, all B applications, broadcast or foliar, should supplement B applied through soil amendments and fertilizer sources.

APPENDIX C

DESCRIPTION OF LABORATORY TESTING PROCEDURES

UNIFIED SOIL CLASSIFICATION - ASTM D-2487

This practice describes a system for classifying mineral and organo-mineral soils for engineering purposes based on laboratory determination of particle size characteristics, liquid limit, and plasticity index.

WASH 200 TEST - ASTM D-1140

The Wash 200 test is performed by passing a representative soil sample over a No. 200 sieve and rinsing with water. The percentage of the soil grains passing this sieve is then calculated.

FULL SIEVE GRADATION TEST – ASTM D-422

On occasion it is helpful to evaluate the overall compositional characteristics of a soil and the #200 sieve analysis is supplemented with a full grain size distribution. A set of sieves with varying mesh sizes is used to determine the gradation of the soil particle sizes.

MOISTURE CONTENT DETERMINATION - ASTM D-2216

Moisture content is the ratio of the weight of water to the dry weight of soil. Moisture content is measured by drying a sample at 105 degrees Celsius. The moisture content is expressed as a percent of the oven dried soil mass.

ATTERBERG LIMITS – ASTM D-4318

The Atterberg limits are the upper and lower limits of the range of water content over which a soil exhibits plastic behavior, and are defined as the liquid limit and plastic limit, respectively.

The liquid limit is estimated as follows: The soil is mixed with distilled water to form a thick paste, which is then placed in a brass cup mounted on an edge pivot and rests initially on a rubber base. The base is then leveled off horizontally and divided by cutting a groove with a standard tool. The two halves of the soil gradually flow together as the cup is repeatedly dropped onto its base at a specified rate. The liquid limit is defined as the water content at which 25 blows are required to close the groove over a distance of 1/2 inch.

The plastic limit is estimated as follows: The soil is mixed with distilled water until it can be molded. A ball of soil is then rolled into a thread 1/8 inch in diameter between the hand and a glass plate. The soil is molded together again and the process repeated until the thread cracks when its diameter is 1/8 inch. The water content of the soil at this state is determined and defined as the plastic limit.

ORGANIC CONTENT – ASTM D-2974

Ash content of a pear or organic soil sample is determined by igniting the over dried sample from the moisture content determination in a muffle furnace at 440 degrees Celsius. The substance remaining after the ignition is the ash. The ash content is expressed as a percentage of the oven dried sample. Organic matter is determined by subtracting the percent ash from 100.

APPENDIX C

DESCRIPTION OF FIELD TESTING PROCEDURES

STANDARD PENETRATION TESTING – ASTM D-1586

Penetration tests were performed in accordance with ASTM Procedure D-1586, Penetration Test and Split-Barrel Sampling of Soils. This test procedure generally involves driving a 1.4-inch I.D. split-tube sampler into the soil profile in six inch increments for a minimum distance of 18 inches using a 140-pound hammer free-falling 30 inches. The total number of blows required to drive the sampler the second and third 6-inch increments is designated as the N-value, and provides an indication of in-place soil strength, density and consistency.

FOUNDATION SUBSURFACE PREPARATION –
FOUNDATION SUBSURFACE PREPARATION – GAS STATION
PAVEMENT DESIGN CALCULATIONS
PAVEMENT SECTION DESIGN
PAVEMENT SECTION DETAILS

PRELIMINARY FOUNDATION SUBSURFACE PREPARATION-

ALACHUA, ALACHUA COUNTY, FLORIDA

UNLESS SPECIFICALLY INDICATED OTHERWISE IN THE DRAWINGS AND/OR SPECIFICATIONS, THE LIMITS OF THIS SUBSURFACE PREPARATION ARE CONSIDERED TO BE THAT PORTION OF THE SITE DIRECTLY BENEATH AND 5 FEET BEYOND THE BUILDING AND APPURTENANCES. APPURTENANCES ARE THOSE ITEMS ATTACHED TO THE BUILDINGS PROPER (REFER TO DRAWING SHEET SP1), TYPICALLY INCLUDING, BUT NOT LIMITED TO, THE BUILDING SIDEWALKS, GARDEN CENTER, PORCHES, RAMPS, STOOPS, TRUCK WELLS/DOCKS, CONCRETE APRONS AT THE AUTOMOTIVE CENTER, COMPACTOR PAD, ETC. THE INTERIOR SLAB-ON GRADE BASE AND VAPOR BARRIER, WHERE REQUIRED, DO NOT EXTEND BEYOND THE LIMITS OF THE ACTUAL BUILDING AND APPURTENANCES.

ESTABLISH THE FINAL SUBGRADE ELEVATION TO ALLOW FOR THE CONCRETE SLAB AND BASE. REFERENCE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR REQUIRED SLAB THICKNESS. FOR THE BUILDING INTERIOR SLAB-ON-GRADE THE 4-INCH THICK BASE MATERIAL SHALL CONSIST OF FDOT LIMEROCK MATERIAL, WITH AT LEAST 97% (BY WEIGHT) PASSING A 3.5 INCH SIEVE AND THE MATERIAL SHALL BE GRADED UNIFORMLY DOWN TO DUST. THE FINE MATERIAL SHALL CONSIST ENTIRELY OF DUST OF FRACTURE. THE LIMEROCK SHALL HAVE A LIMEROCK BEARING RATIO (LBR) OF AT LEAST 100 AND NO MORE THAN 20% FINES WHEN WASHED THROUGH A NO. 200 SIEVE. THE FLOOR SLAB BEARING SOILS SHALL BE COVERED BY A LAPPED VAPOR RETARDER OF AT LEAST 15-MIL THICKNESS, CONFORMING TO ASTM E 1745, CLASS A. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ACCURATE MEASUREMENTS FOR ALL CUT AND FILL DEPTHS REQUIRED. ANY PROPOSED EQUIVALENT ALTERNATIVE BASE MATERIAL MUST BE SUBMITTED FOR APPROVAL WITHIN 30 DAYS AFTER AWARD OF CONTRACT. ANY EQUIVALENT ALTERNATIVE SHALL ONLY BE USED IF APPROVED BY THE CEC AND AOR.

EXISTING FOUNDATIONS, SLABS, PAVEMENTS, AND BELOW-GRADE STRUCTURES SHALL BE REMOVED FROM THE BUILDING AREA. REMOVE SURFACE VEGETATION, TOPSOIL, ROOT SYSTEMS, ORGANIC MATERIAL, EXISTING FILL, AND SOFT OR OTHERWISE UNSUITABLE MATERIAL FROM THE BUILDING AREA. PROOFROLL EXPOSED SUBGRADE. THE BOTTOM OF ALL FOOTINGS AND BUILDING PAD AREAS SHALL BE PROBED TO CONFIRM THE SUITABILITY OF THE BEARING SOILS. REMOVE AND REPLACE UNSUITABLE AREAS WITH SUITABLE MATERIAL. IF ENCOUNTERED, FAT CLAYS SHALL BE REMOVED TO A MINIMUM OF 4 FEET BELOW THE BOTTOM OF THE FOOTINGS/BUILDING PAD. THE OVER-EXCAVATED AREAS SHALL BE BACKFILLED WITH A COMPACTED, LOW PERMEABILITY, ENGINEERED FILL MATERIAL. FILL MATERIAL SHALL CONSIST OF POORLY DRAINING SILTY SAND OR CLAYEY SAND WITH BETWEEN 15% TO 30% MATERIAL PASSING THE NO. 200 SIEVE, A LIQUID LIMIT (LL) VALUE OF LESS THAN 30, AND A PLASTICITY INDEX (PI) VALUE LESS THAN 15.

SUBGRADE MATERIAL SHALL BE PLACED IN LOOSE LIFTS NOT EXCEEDING 12 INCHES IN THICKNESS AND COMPACTED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D-1557) AT A MOISTURE CONTENT WITHIN 2 PERCENT BELOW TO 2 PERCENT ABOVE THE OPTIMUM.

THE BEARING LEVEL SOILS SHOULD BE DENSIFIED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D1557) TO A DEPTH OF THREE FEET BELOW THE BEARING LEVELS, OR FOUR FEET BELOW FINISH FLOOR, OR ELEVATION +98 FT. NAVD, WHICHEVER IS DEEPER. THE FOUNDATION SYSTEM SHALL BE ISOLATED SPREAD FOOTINGS AT COLUMNS AND CONTINUOUS STRIP FOOTINGS AT WALLS.

PERCHED SURFACE AND GROUNDWATER MAY OCCUR IN SOME AREAS OF THE SITE AND SURFACE AND SHALLOW GROUNDWATER CONTROL SHOULD BE ANTICIPATED, PARTICULARLY IN LOW AREAS, OR AREAS THAT ARE DEEPLY STRIPPED OR UNDERCUT. SHALLOW GROUNDWATER MAINTENANCE TYPICALLY CONSISTS OF PUMPING FROM SUMPS IN PERIMETER DITCHES OR PITS. GROUNDWATER CONTROL IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

THIS FOUNDATION SUBSURFACE PREPARATION DOES NOT CONSTITUTE A COMPLETE SITE WORK SPECIFICATION. IN CASE OF CONFLICT, INFORMATION COVERED IN THIS PREPARATION SHALL TAKE PRECEDENCE OVER THE SPECIFICATIONS. REFER TO THE SPECIFICATIONS FOR SPECIFIC INFORMATION NOT COVERED IN THIS PREPARATION. THIS INFORMATION WAS TAKEN FROM A GEOTECHNICAL REPORT PREPARED BY UES PROFESSIONAL SOLUTIONS, LLC, UES PROJECT NO. A25140.00683.005, REPORT NO: 2162758. THE GEOTECHNICAL REPORT IS FOR INFORMATION ONLY AND IS NOT A CONSTRUCTION SPECIFICATION.

AN E-MAIL ADDRESS FOR THE GEOTECHNICAL ENGINEER, EDUARDO SUAREZ, P.E.:
esuarez@teamues.com

PRELIMINARY FOUNDATION SUBSURFACE PREPARATION- FUEL STATION SERVICE BUILDING

ALACHUA, ALACHUA COUNTY, FLORIDA

UNLESS SPECIFICALLY INDICATED OTHERWISE IN THE DRAWINGS AND/OR SPECIFICATIONS, THE LIMITS OF THIS SUBSURFACE PREPARATION ARE CONSIDERED TO BE THAT PORTION OF THE SITE DIRECTLY BENEATH AND 5 FEET BEYOND THE FUEL STATION SERVICE BUILDING AND SERVICE BUILDING FLATWORK AREAS, AS WELL AS DIRECTLY BENEATH CANOPY FOUNDATIONS. THE INTERIOR SLAB-ON GRADE BASE AND VAPOR BARRIER, WHERE REQUIRED, DO NOT EXTEND BEYOND THE LIMITS OF THE ACTUAL BUILDING AND APPURTENANCES.

AT THE SERVICE BUILDING AND FLATWORK SLABS, ESTABLISH THE FINAL SUBGRADE ELEVATION TO ALLOW FOR THE CONCRETE SLAB AND BASE. REFERENCE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR REQUIRED SLAB THICKNESS. FOR THE BUILDING INTERIOR SLAB-ON-GRADE THE 4-INCH THICK BASE MATERIAL SHALL CONSIST OF FDOT LIMEROCK MATERIAL, WITH AT LEAST 97% (BY WEIGHT) PASSING A 3.5 INCH SIEVE AND THE MATERIAL SHALL BE GRADED UNIFORMLY DOWN TO DUST. THE FINE MATERIAL SHALL CONSIST ENTIRELY OF DUST OF FRACTURE. THE LIMEROCK SHALL HAVE A LIMEROCK BEARING RATIO (LBR) OF AT LEAST 100 AND NO MORE THAN 20% FINES WHEN WASHED THROUGH A NO. 200 SIEVE. THE FLOOR SLAB BEARING SOILS SHALL BE COVERED BY A LAPPED VAPOR RETARDER OF AT LEAST 15-MIL THICKNESS, CONFORMING TO ASTM E 1745, CLASS A. AT THE CANOPY FOUNDATION, ESTABLISH THE FINAL SUBGRADE ELEVATION TO ALLOW FOR THE CANOPY CONCRETE FOUNDATIONS. REFERENCE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR REQUIRED FOUNDATION THICKNESS. AT THE CANOPY SLAB, THE MINIMUM 4-INCH THICK "FREE DRAINING" BASE MATERIAL SHALL CONFORM TO FDOT GRADED AGGREGATE BASE. AT ALL LOCATIONS IN THE FUEL STATION AREA, THE BASE SHALL BE PROVIDED BY THE BUILDING CONTRACTOR IN JOINT PROJECTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ACCURATE MEASUREMENTS FOR ALL CUT AND FILL DEPTHS REQUIRED. ANY PROPOSED EQUIVALENT ALTERNATIVE BASE MATERIAL MUST BE SUBMITTED FOR APPROVAL WITHIN 30 DAYS AFTER AWARD OF CONTRACT. ANY EQUIVALENT ALTERNATIVE SHALL ONLY BE USED IF APPROVED BY THE CEC AND AOR.

EXISTING FOUNDATIONS, SLABS, PAVEMENTS, AND BELOW-GRADE STRUCTURES SHALL BE REMOVED FROM THE BUILDING AREA. REMOVE SURFACE VEGETATION, TOPSOIL, ROOT SYSTEMS, ORGANIC MATERIAL, EXISTING FILL, AND SOFT OR OTHERWISE UNSUITABLE MATERIAL FROM THE BUILDING AREA. PROOFROLL EXPOSED SUBGRADE. THE BOTTOM OF ALL FOOTINGS AND BUILDING PAD AREAS SHALL BE PROBED TO CONFIRM THE SUITABILITY OF THE BEARING SOILS. REMOVE AND REPLACE UNSUITABLE AREAS WITH SUITABLE MATERIAL. SUBGRADE MATERIAL SHALL BE FREE OF ORGANIC AND OTHER DELETERIOUS MATERIALS, SHALL BE COMPRISED OF INORGANIC, NON PLASTIC GRANULAR SOILS WITH LESS THAN THAT 12 PERCENT PASSING THE #200 SIEVE (RELATIVELY CLEAN SAND WITH UNIFIED SOIL CLASSIFICATION OF SP, SP-SM, SP-SC OR SW-SM) AND SHALL MEET THE FOLLOWING REQUIREMENTS:

LOCATION WITH RESPECT TO FINAL GRADE	**P.I.**	**L.L.**
BUILDING AREA, BELOW UPPER 4 FEET	NP	NP
BUILDING AREA, UPPER 4 FEET	NP	NP

SUBGRADE MATERIAL SHALL BE PLACED IN LOOSE LIFTS NOT EXCEEDING 12 INCHES IN THICKNESS AND COMPACTED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D-1557) AT A MOISTURE CONTENT WITHIN 2 PERCENT BELOW TO 2 PERCENT ABOVE THE OPTIMUM.

THE BEARING LEVEL SOILS SHOULD BE DENSIFIED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D1557) TO A DEPTH OF THREE FEET BELOW BEARING LEVELS, OR FOUR FEET BELOW FINISH FLOOR, OR ELEVATION +94 FT. NAVD, WHICHEVER IS DEEPER. THE FOUNDATION SYSTEM SHALL BE ISOLATED SPREAD FOOTINGS AT COLUMNS AND CONTINUOUS STRIP FOOTINGS AT WALLS.

PERCHED SURFACE AND GROUNDWATER MAY OCCUR IN SOME AREAS OF THE SITE AND SURFACE AND SHALLOW GROUNDWATER CONTROL SHOULD BE ANTICIPATED, PARTICULARLY IN LOW AREAS, OR AREAS THAT ARE DEEPLY STRIPPED OR UNDERCUT. SHALLOW GROUNDWATER MAINTENANCE TYPICALLY CONSISTS OF PUMPING FROM SUMPS IN PERIMETER DITCHES OR PITS. GROUNDWATER CONTROL IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

THIS FOUNDATION SUBSURFACE PREPARATION DOES NOT CONSTITUTE A COMPLETE SITE WORK SPECIFICATION. IN CASE OF CONFLICT, INFORMATION COVERED IN THIS PREPARATION SHALL TAKE PRECEDENCE OVER THE SPECIFICATIONS. REFER TO THE SPECIFICATIONS FOR SPECIFIC INFORMATION NOT COVERED IN THIS PREPARATION. THIS INFORMATION WAS TAKEN FROM A GEOTECHNICAL REPORT PREPARED BY UES PROFESSIONAL SOLUTIONS, LLC, UES PROJECT NO. A25140.00683.005, REPORT NO: 2162758. THE GEOTECHNICAL REPORT IS FOR INFORMATION ONLY AND IS NOT A CONSTRUCTION SPECIFICATION.
AN E-MAIL ADDRESS FOR THE GEOTECHNICAL ENGINEER, EDUARDO SUAREZ, P.E.:
esuarez@teamues.com

PRELIMINARY GEOTECHNICAL EXPLORATION FACT SHEET

Project Location: Alachua, Alachua County, Florida

Engineer: Eduardo Suarez, P.E. **Phone No:** (352) 372-3392

Geotechnical Engineering Company: UES Professional Solutions, LLC

Report Date: March 6, 2026

Ground Water Elevation: Transient perched at +101 to +82, NAVD

Date Groundwater Measured NA

Topsoil/Stripping Depth: 6 to 12 inches

Undercut: If encountered, fat clays shall be removed to a minimum of 4 feet below the bottom of the footings. See Section 9.3 of this report for more detailed site preparation recommendations

pH: 6.34 to 6.44

Resistivity: 20,000 to 24,000 ohm-cm

Corrective Action for pH: Type II cement, control of minimum concrete cover over rebar, Protective coatings for steel which are within 2 feet of or below SHGWL

Cement Type: Type II cement with fly ash for below grade construction

Recommended local DOT base material (See Foundation Subsurface Preparation): FDOT limerock base. Very clayey sands and sandy clays shall be removed to a minimum in accordance with FDOT Standards Index 120-002

Modified Proctor Results: MDD 121, OMC 8.5% (See Appendix C)

Recommended Compaction Control Tests:

1 Test for Each 2,500 Sq. Ft. each Lift (bldg. area)

1 Test for Each 10,000 Sq. Ft. each Lift (parking area)

Structural Fill Maximum Lift Thickness 12 in. (Measured loose)

Subgrade Design LBR: LBR = 59

Fill Soils Characteristics

Maximum Liquid Limit: NP

Maximum Plasticity Index: NP

Specified Compaction: 95% Modified Proctor

Moisture Content Range: +/-2% of Optimum

COMPONENT	ASPHALT		CONCRETE	
	Standard	Heavy	Standard	Heavy
Stabilized Subgrade	6"	6"	*4"	*4"
Base Material (Limerock, or Soil Cement)	6"	6"	*4"	*4"
Asphaltic Base Course		N/A		
Leveling Binder Course	1.5"	2.5"		
Surface Course	1.5"	1.5"	5" (concrete)	6"

* The stabilized subgrade and base should be "free-draining"

As an alternative, if recommended "free-draining" materials are not available, and very poor drainage base material such as crushed concrete aggregate base material over compacted subgrade is used, the concrete thickness should be increased. Minimum pavement thickness should be 6 inches for standard duty and 7 inches for heavy duty.

NOTE: This information should not be used separately from the geotechnical report.

PRELIMINARY FOUNDATION DESIGN CRITERIA

Project Location: Alachua, Alachua County, Florida

ENGINEER: Eduardo Suarez, P.E.

GEOTECHNICAL ENGINEERING COMPANY: UES Professional Solutions, LLC

REPORT DATE: March 6, 2026 **Phone No:** (352) 372-3392

Foundation Type: Spread Footings

Allowable bearing pressure: 2,500 psf

Factor of Safety: +2

Minimum footing dimensions: Individual: 30" Continuous: 18"

Minimum footing Embedment: Exterior: 18" Interior: 18"

Frost depth: None

Maximum foundation settlements:

Total: less than 1"

Differential: less than 1/2" masonry walls and 3/4" between columns

(less than L/500 for Neighborhood Market/ less than L/400 for Fuel Station)

Slab:

Potential vertical rise: None Anticipated

Vapor barrier or capillary break (describe): Plastic Sheet (15 MIL Polyethylene)

Subgrade reaction modulus: 150 psi/in Method obtained: NAVFAC Dm 7.1, pg 219, Fig 6

Perimeter Drains (describe):

Building: None recommended

Retaining Walls: Loading Dock Wall/Pit

Pavements: None recommended

Retaining Walls:

Active Equivalent Fluid Pressure: 33 pcf
Passive Equivalent Fluid Pressure: 350 pcf
Passive Pressure Coefficient K_p=:: 3.00
Active Pressure Coefficient K_a=:: 0.33
At Rest Pressure Coefficient K_o=: 0.50
Coefficient of Friction: 0.40

COMMENTS: Based on finished floor elevation of +102 ft NAVD for the and +98 feet for the Fuel Station, compact the subgrade soils to 3 feet below bearing levels, or elevation +98 ft NAVD for the , whichever is deeper, to a minimum relative compaction of 95 percent of Modified Proctor Maximum Dry Density (ASTM D1557).

NOTE: This information should not be used separately from the geotechnical report.

PAVEMENT DESIGN CALCULATIONS

Minimum Pavement Design Recommendations per '

Standard Duty
- Design life of 20 years
- Equivalent 18 kip Single Axle Load (ESAL) = 73,000/109,500
- Daily ESAL = 15
- Reliability = 85%
- Initial Serviceability = 4.2
- Terminal Serviceability = 2.0
- Standard Deviation = 0.45 for flexible 0.35 for rigid
- Minimum thickness = 3" of Asphalt and 5" of Concrete

Heavy Duty
- Design life of 20 years
- Equivalent 18 kip Single Axle Load (ESAL) = 211,700/335,800
- Daily ESAL = 29
- Reliability = 85%
- Initial Serviceability = 4.2
- Terminal Serviceability = 2.0
- Standard Deviation = 0.45 for flexible 0.35 for rigid
- Minimum thickness = 4" of Asphalt and 6" of Concrete

Flexible Pavement Design

Florida Department of Transportation - Flexible Pavement Design Manual (March 2008)

Structural Numbers are calculated by the AASHTO Methods
AASHTO Design Equation for Flexible Pavement:

$$\log_{10} W_{18} = Z_R * S_0 + 9.36 * \log_{10}(SN+1) - 0.20 + \frac{\log_{10}\left(\frac{\Delta PSI}{4.2-1.5}\right)}{0.40 + \frac{1094}{(SN+1)^{5.19}}} + 2.32 * \log_{10}(M_R) - 8.07$$

SN_R = Structural Number required
W_{18} = Equivalent 18 kip Single Axle Load
Z_R = Standard Normal Deviate (taken from Page A.3.0 relative to Reliability)
M_R = Resilient Modulus psi (Table 5.1 from estimated LBR results)
S_0 = Standard Deviation
ΔPSI = Change in serviceability (Terminal Serviceability normally assumed 2.5)

FDOT Calculations continued

Required Structural Number - SN_R = **1.97** (Standard Duty)
Required Structural Number - SN_R = **2.35** (Heavy Duty)

Layer Thickness Calculations for Proposed Pavement Sections (SN_C)

$$SN_C = (a_1 * D_1) + (a_2 * D_2) + (a_3 * D_3) + \ldots + (a_N * D_N)$$

SN_C = Structural Number calculated
a_N = Layer coefficient of layer (FDOT Table 5.4 Structural Coefficients)
D_N = Layer thickness

Standard Duty
Proposed Pavement Section

Type	D*	a		
Asphalt	3 inches	0.44		1.32
Limerock/crushed Base (LBR 100)	6 inches	0.18		1.08
Type B Stabilized (LBR 40)	6 inches	0.08		0.48
			Total	2.88

Provided SN_C = **2.88** is greater than Required SN_R = **1.97** Good

Heavy Duty
Proposed Pavement Section

Type	D*	a		
Asphalt	4 inches	0.44		1.76
Limerock/crushed Base (LBR 100)	6 inches	0.18		1.08
Type B Stabilized (LBR 40)	6 inches	0.08		0.48
			Total	3.32

Provided SN_C = **3.32** is greater than Required SN_R = **2.35** Good

Rigid Pavement Design

Florida Department of Transportation - Flexible Pavement Design Manual (January 2009)

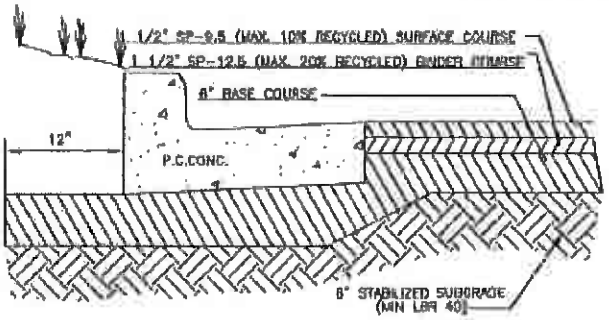
AASHTO - Design of Pavement Systems (1993)

Depths of Concrete required are calculated by the AASHTO Methods

AASHTO Design Equation for Rigid Pavement

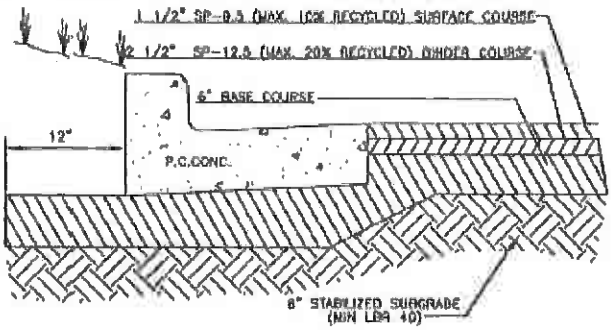
$$\log_{10} W_{18} = z_R * s_O + 7.35 * \log_{10}(D+1) - 0.06 + \frac{\log_{10}\left[\frac{\Delta PSI}{4.5-1.5}\right]}{1+\frac{1.624*10^7}{(D+1)^{8.46}}} + (4.22 - 0.32 p_t) * \log_{10}\left[\frac{s'_c * c_d\left[D^{0.75} - 1.132\right]}{215.63 * J\left[D^{0.75} - \frac{18.42}{(E_c/k)^{0.25}}\right]}\right]$$

D	= Depth of concrete required
W_{18}	= Equivalent 18 kip Single Axle Load
k	= Effective Modulus of Subgrade Reaction (selected as 200 pci; 100 pci without "free-draining" base)
s'_C	= Mean Concrete Modulus of Rupture (typically 600 psi)
J	= Load Transfer Coefficient (typically 3.8 for aggregate interlock)
c_d	= Drainage Coefficient (typically 1.0; 0.8 for subgrade without "free-draining" base)
ΔPSI	= Design Serviceability loss
S_O	= Standard Deviation



With "free-draining"4-inch base material:
The design thickness of concrete calculated for standard duty is: **5.0** inches
minimum required thickness = **5** inches [Therefore Good]

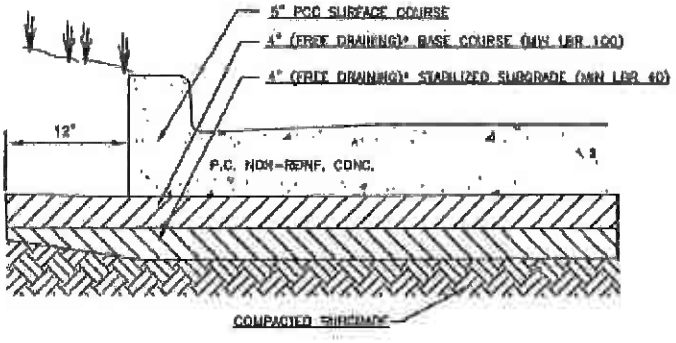
With "poorly draining" 4-inch base material:
The design thickness of concrete calculated for standard duty is: **5.8** inches



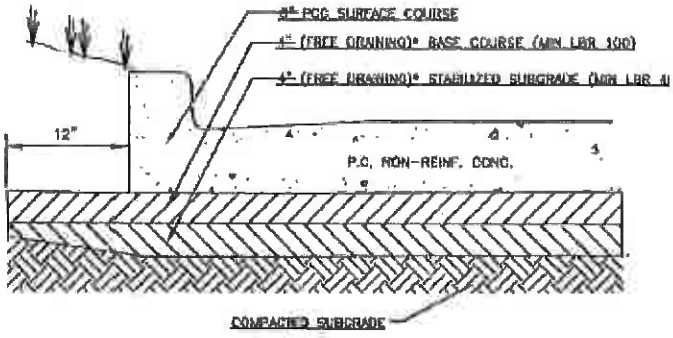
With "free-draining" 4-inch base material:
The design thickness of concrete calculated for heavy duty is: **5.6** inches
minimum required thickness = **6** inches [Therefore Good]

With "poorly -draining" 4-inch base material:
The design thickness of concrete calculated for heavy duty is: **6.6** inches

STANDARD ASPHALT PAVING



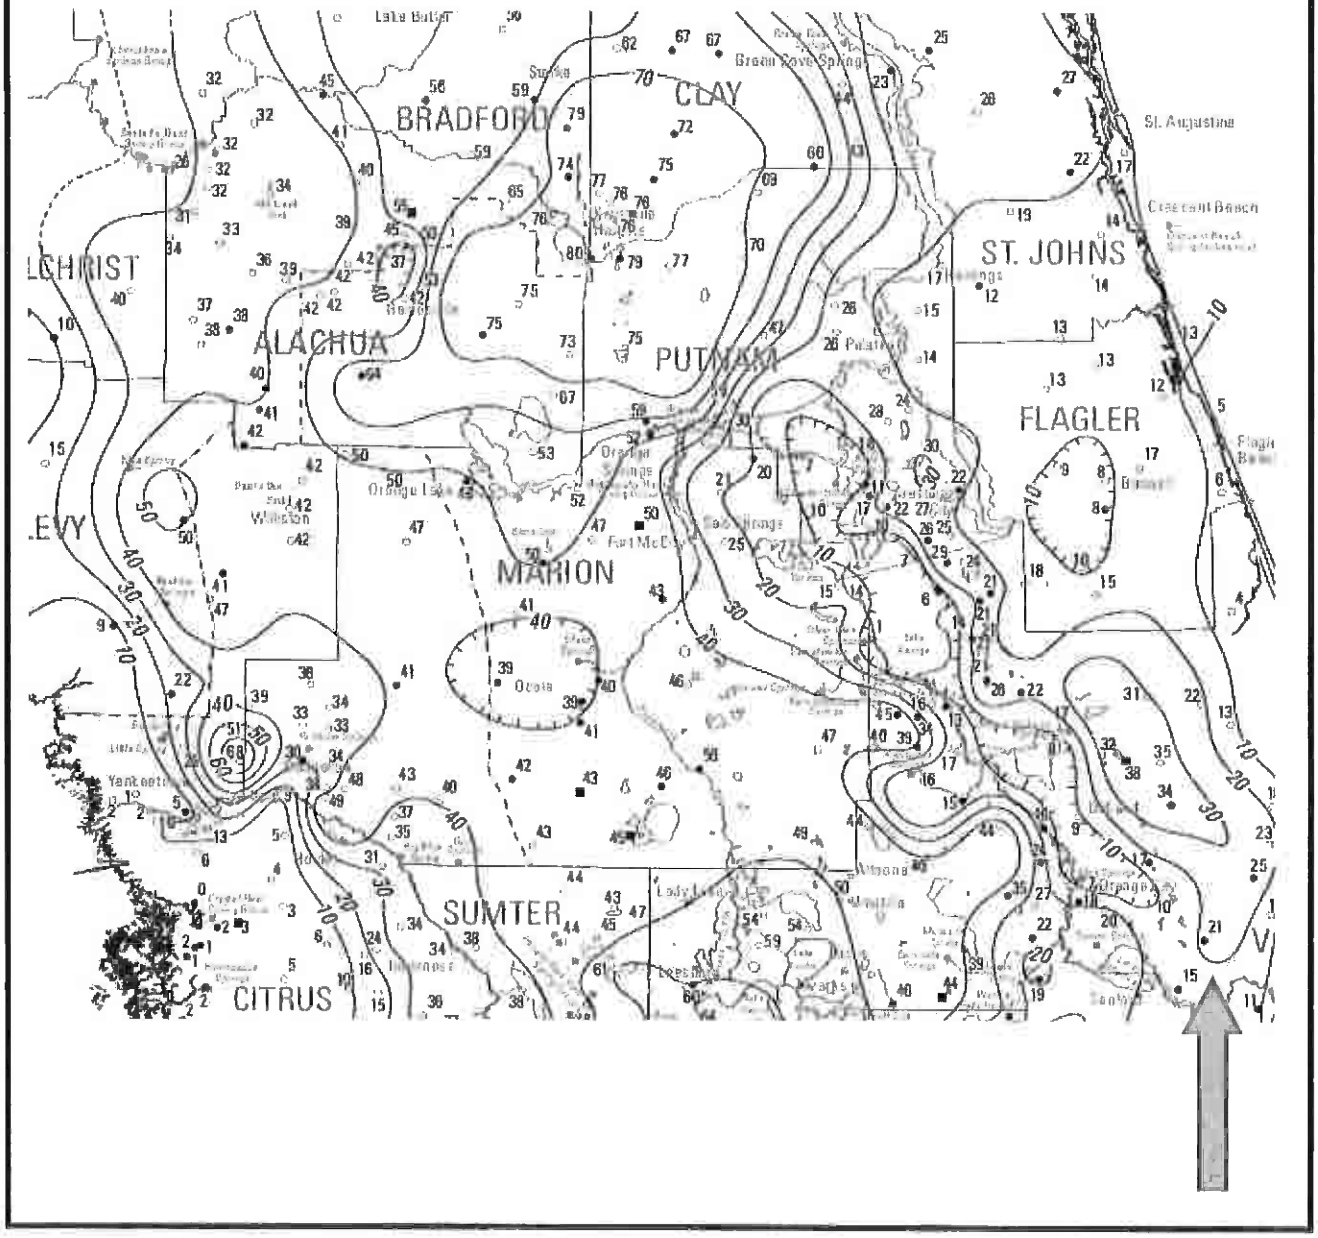
REGULAR DUTY
ASPHALT PAVING



HEAVY DUTY
ASPHALT PAVING

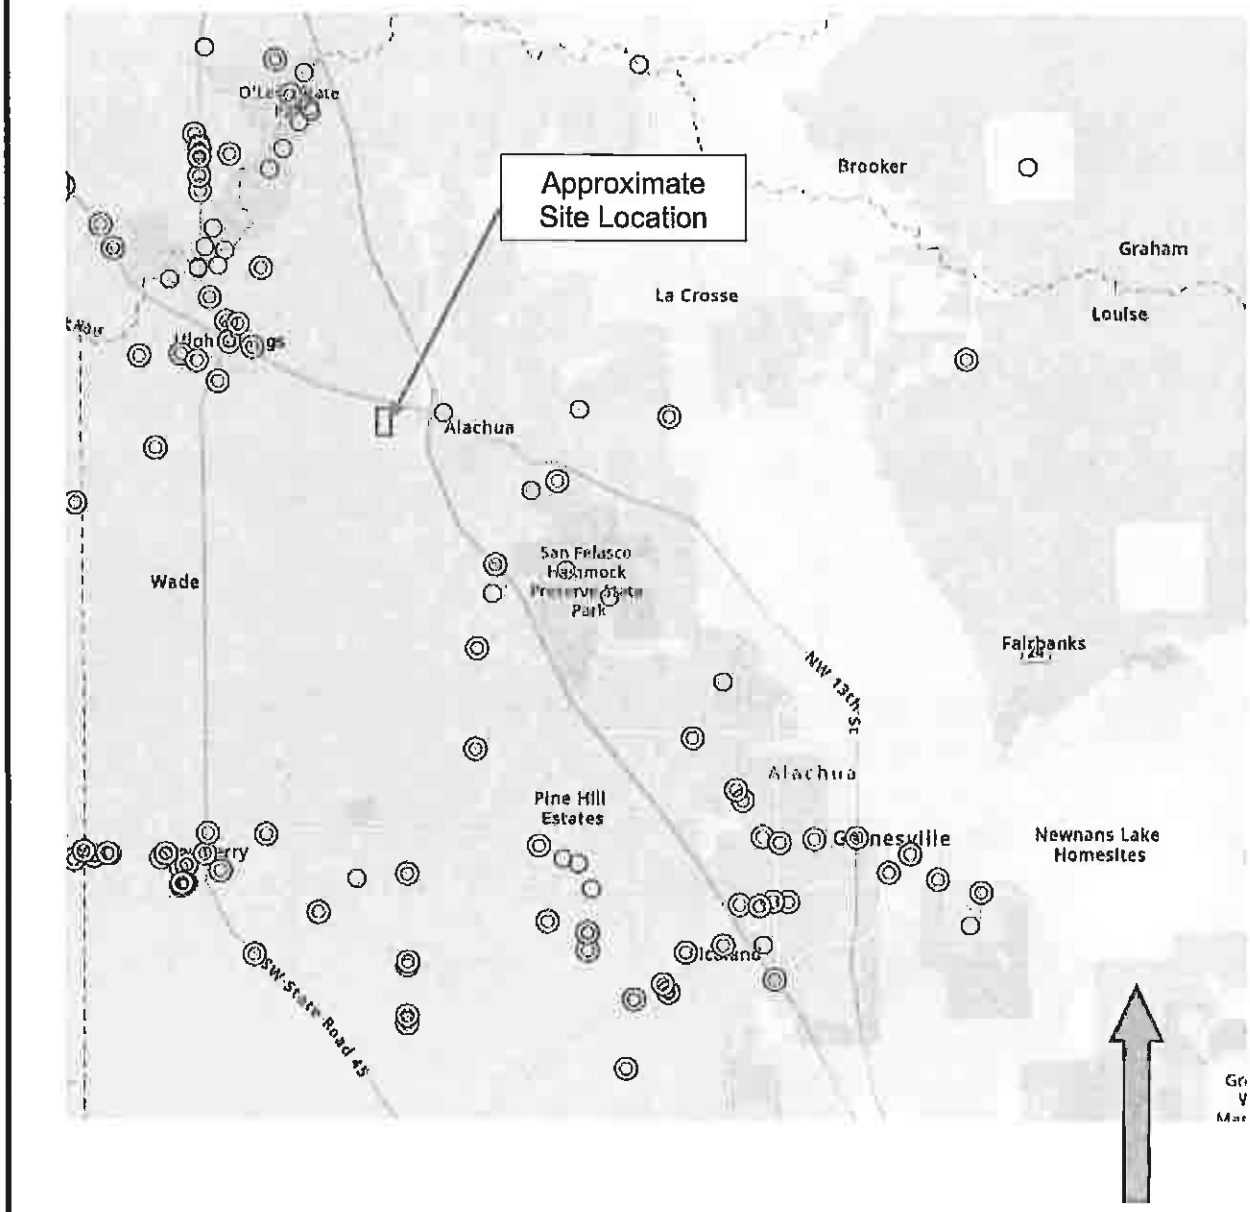
PC CONCRETE

REGULAR DUTY
CONCRETE PAVING



HEAVY DUTY
CONCRETE PAVING

NOTES:



1. FOR PREPARATION OF SUBGRADE, FILL PLACED WITHIN 12 INCHES OF BOTTOM OF STABILIZED SUBGRADE SHOULD BE COMPACTED TO AT LEAST 98% OF THE MATERIAL'S MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY. FILL PLACED BELOW THIS LEVEL SHOULD BE COMPACTED TO AT LEAST 95% OF THE MATERIAL'S MAXIMUM DRY DENSITY.
2. STABILIZED SUBGRADE SHOULD BE COMPACETED TO A MINIMUM OF 98% OF THE MATERIAL'S MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY.
3. LIMEROCK BASE COURSE SHOULD CONFORM TO THE REQUIREMENTS OF SECTION 200 OF THE F.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION AND BE COMPACTED TO AT LEAST 98% OF THE MATERIAL'S MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY.
4. ASPHALTIC SURFACE COURSE MIXTURES SHOULD BE IN ACCORDANCE WITH TYPE REFERENCED IN SECTION 330 OF THE F.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION.
5. THE PORTLAND CEMENT CONCRETE PAVEMENT MIXTURE SHOULD BE IN ACCORDANCE WITH THE AIR-ENTRAINED CONCRETE FOR PAVEMENT SECTION 350 OF THE F.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION. THE MIXTURE SHOULD BE DESIGNED TO DEVELOP A MINIMUM COMPRESSIVE STRENGTH OF 4000 PSI AT 28 DAYS WITH A 4 INCH MINIMUM SLUMP AND 5% TO 7% ENTRAINED AIR.
6. (*) BASE AND STABILIZED SUBGRADE COURSES BENEATH CONCRETE PAVEMENT SHALL HAVE A MINIMUM PERMEABILITY – (K) GREATER THAN OR EQUAL TO 0.001cm/sec. BASE AND SUBGRADE MATERIALS SHOULD BE COMPACTED TO AT LEAST 98% OF THE MATERIALS MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY.
7. IF RECOMMENDED "FREE DRAINING MATERIAL" IS NOT AVAILABLE AND VERY POOR DRAINAGE BASE MATERIAL SUCH AS CRUSHED CONCRETE AGGREGATE BASE MATERIAL, COMPACTED SUBGRADE IS USED, THE CONCRETE THICKNESS SHOULD BE INCREASED. MINIMUM PAVEMENT THICKNESS SHOULD BE 6 INCHES FOR REGULAR DUTY AND 7 INCHES FOR HEAVY DUTY.
8. FOR LIMEROCK, COQUINA, BANKRUN SHELL OR CRUSHED CONCRETE, MIN. LBR=100. FOR SAND/CLAY BASE, MIN. LBR=75. FOR SOIL CEMENT BASE, MIN. (7) DAY COMPRESSIVE STRENGTH=300 PSI.

APPENDIX F

GBA DOCUMENT
CONSTRAINTS AND RESTRICTIONS

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled.* No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be,* and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed.* The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only.* To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely.* Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures.* If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

CONSTRAINTS & RESTRICTIONS

The intent of this document is to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

WARRANTY

Universal Engineering Sciences has prepared this report for our client for his exclusive use, in accordance with generally accepted soil and foundation engineering practices, and makes no other warranty either expressed or implied as to the professional advice provided in the report.

UNANTICIPATED SOIL CONDITIONS

The analysis and recommendations submitted in this report are based upon the data obtained from soil borings performed at the locations indicated on the Boring Location Plan. This report does not reflect any variations which may occur between these borings.

The nature and extent of variations between borings may not become known until excavation begins. If variations appear, we may have to re-evaluate our recommendations after performing on-site observations and noting the characteristics of any variations.

CHANGED CONDITIONS

We recommend that the specifications for the project require that the contractor immediately notify Universal Engineering Sciences, as well as the owner, when subsurface conditions are encountered that are different from those present in this report.

No claim by the contractor for any conditions differing from those anticipated in the plans, specifications, and those found in this report, should be allowed unless the contractor notifies the owner and Universal Engineering Sciences of such changed conditions. Further, we recommend that all foundation work and site improvements be observed by a representative of Universal Engineering Sciences to monitor field conditions and changes, to verify design assumptions and to evaluate and recommend any appropriate modifications to this report.

MISINTERPRETATION OF SOIL ENGINEERING REPORT

Universal Engineering Sciences is responsible for the conclusions and opinions contained within this report based upon the data relating only to the specific project and location discussed herein. If the conclusions or recommendations based upon the data presented are made by others, those conclusions or recommendations are not the responsibility of Universal Engineering Sciences.

CHANGED STRUCTURE OR LOCATION

This report was prepared in order to aid in the evaluation of this project and to assist the architect or engineer in the design of this project. If any changes in the design or location of the structure as outlined in this report are planned, or if any structures are included or added that are not discussed in the report, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed and the conclusions modified or approved by Universal Engineering Sciences.

USE OF REPORT BY BIDDERS

Bidders who are examining the report prior to submission of a bid are cautioned that this report was prepared as an aid to the designers of the project and it may affect actual construction operations.

Bidders are urged to make their own soil borings, test pits, test caissons or other investigations to determine those conditions that may affect construction operations. Universal Engineering Sciences cannot be responsible for any interpretations made from this report or the attached boring logs with regard to their adequacy in reflecting subsurface conditions which will affect construction operations.

STRATA CHANGES

Strata changes are indicated by a definite line on the boring logs which accompany this report. However, the actual change in the ground may be more gradual. Where changes occur between soil samples, the location of the change must necessarily be estimated using all available information and may not be shown at the exact depth.

OBSERVATIONS DURING DRILLING

Attempts are made to detect and/or identify occurrences during drilling and sampling, such as: water level, boulders, zones of lost circulation, relative ease or resistance to drilling progress, unusual sample recovery, variation of driving resistance, obstructions, etc.; however, lack of mention does not preclude their presence.

WATER LEVELS

Water level readings have been made in the drill holes during drilling and they indicate normally occurring conditions. Water levels may not have been stabilized at the last reading. This data has been reviewed and interpretations made in this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, tides, and other factors not evident at the time measurements were made and reported. Since the probability of such variations is anticipated, design drawings and specifications should accommodate such possibilities and construction planning should be based upon such assumptions of variations.

LOCATION OF BURIED OBJECTS

All users of this report are cautioned that there was no requirement for Universal Engineering Sciences to attempt to locate any man-made buried objects during the course of this exploration and that no attempt was made by Universal Engineering Sciences to locate any such buried objects. Universal Engineering Sciences cannot be responsible for any buried man-made objects which are subsequently encountered during construction that are not discussed within the text of this report.

TIME

This report reflects the soil conditions at the time of exploration. If the report is not used in a reasonable amount of time, significant changes to the site may occur and additional reviews may be required.

UES™

GENERAL TERMS AND CONDITIONS

SECTION 1: BINDING AGREEMENT

1.1 By accepting the Proposal, Client accepts and agrees to be bound by all terms set forth in the Proposal and these General Terms and Conditions and any applicable addendum attached hereto. Client acknowledges and agrees that these General Terms and Conditions include certain state-specific terms and conditions that are applicable based on the location where the Services (as hereinafter defined) are to be performed. Attached hereto are State-Specific Addenda, each corresponding to a particular state or region.

1.2 If the Services are performed in Forida, Texas, California, Nevada, Oregon, Washington or Arizona, the State-Specific Addendum attached hereto is incorporated into and made a part of these General Terms and Conditions.

1.3 In the event of any conflict between these General Terms and Conditions and the terms of the applicable State-Specific Addendum, the terms of the State-Specific Addendum shall govern and control for Services performed in that state or region.

1.4 The Proposal and these General Terms and Conditions (collectively, the "Agreement") represent and contain the entire and only agreement and understanding among UES Professional Solutions, LLC, a Florida limited liability company and its affiliates (the "Company") and Client with respect to the subject matter of this Agreement and supersede any and all prior and contemporaneous oral and written agreements, understandings, representations, inducements, promises, warranties, and conditions among the parties.

SECTION 2: SERVICES

2.1 The Company is responsible for providing the services described under the Scope of Services ("Services") of the Proposal to which these General Terms and Conditions form a part. The term "the Company" as used herein includes all the Company's agents, employees, professional staff, and subcontractors.

2.2 The Company shall provide revised or additional services, including changes to the Services necessary due to changed or unforeseen conditions, only in accordance with a written addendum or change order (collectively, "Change Order") to the Agreement agreed to by the Company and Client, and only to the extent set forth in that Change Order.

2.3 The Company shall not be responsible for any delays, fees or costs associated with adverse or unusual weather conditions that prevent the Services from being safely conducted.

2.4 The Company shall provide the personnel, equipment, Level D personal protective equipment (as defined by the Occupational Safety and Health Administration ("OSHA"), and other materials necessary to provide the Services. The Company, at its sole discretion, may retain subcontractors or other third parties to assist it in the provision of the Services.

2.5 The terms "Project" and "Site" as used interchangeably in these General Terms and Conditions refer to the land and/or construction project on which or to which the Company is to provide Services under this Agreement.

2.6 The Company shall perform all Services hereunder as an independent contractor, and nothing contained herein shall be deemed to create any association, partnership, joint venture, or relationship of principal and agent or master and servant, or employer and employee between the parties hereto or any affiliates or subsidiaries thereof, or to provide either party with the right, power or authority, whether express or implied, to create any such duty or obligation on behalf of the other party.

SECTION 3: PROFESSIONAL STANDARD OF CARE

3.1 The Company will provide its Services under this Agreement in a manner consistent with the level of professional care and skill ordinarily exercised by similar professionals practicing contemporaneously under similar conditions in the locality of the Project. NO OTHER WARRANTY CONCERNING THE SERVICES THE COMPANY PROVIDES UNDER THE AGREEMENT OR ANY ADDENDUM OR CHANGE ORDER, EXPRESS OR IMPLIED, IS MADE, AND ALL OTHER WARRANTIES, INCLUDING THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY DISCLAIMED TO THE FULL EXTENT PERMITTED BY APPLICABLE LAW.

3.2 Client understands that subsurface investigations may involve drilling, boring, excavating or sampling through varied subsurface soil and water strata which, consistent with the prevailing standard of professional care, may result in the unavoidable or inadvertent cross-mingling of soil and water and any hazardous substances or constituents contained in them, and that this risk cannot be eliminated despite the exercise of professional care. IF SUBSURFACE INVESTIGATIONS ARE PART OF THE SERVICES, CLIENT WAIVES ANY CLAIM AGAINST THE COMPANY, AND SHALL INDEMNIFY, DEFEND, AND HOLD THE COMPANY HARMLESS FROM ANY CLAIM OR LIABILITY FOR INJURY OR LOSS ARISING FROM CROSS-CONTAMINATION RELATED TO SUCH SUBSURFACE EXPLORATIONS.

3.3 The Company will take reasonable precautions to minimize damage to the Site, but it is understood by Client that, in the normal course of the provision of the Services, including sampling or drilling, some damage to, or alteration of the Site is possible. The repair of such damage shall not be part of the Services unless explicitly specified in writing in the Agreement.

3.4 Execution and delivery of this Agreement by the Company is not a representation that the Company has visited the site, become generally familiar with local conditions under which the work is to be performed, or correlated personal observations with the requirements of the Scope of Services.

3.5 Client's payment in full of the amount owed for Services rendered shall be taken to mean that Client is satisfied with and has accepted the Company's Services.

SECTION 4: RESPONSIBILITIES

4.1 Client is responsible for providing the Company with a clear understanding of the project's nature and scope. Client shall supply the Company with sufficient and adequate information, including, but not limited to, maps, site plans, reports, surveys, plans and specifications, and designs, to allow the Company to properly complete the Services. Client assumes all liability for information not provided to the Company that may affect the quality or sufficiency of the Services.

4.2 Client acknowledges that the Company's responsibilities in providing the Services is limited to those services described in the Proposal, and the Client hereby assumes any collateral or affiliated duties necessitated by or for those Services. Such duties may include, but are not limited to, the provision of any required notices to any third party, or the securing of necessary permits or permissions from any third parties required for the Company's provision of the Services.

SECTION 5: SITE ACCESS AND SITE CONDITION

5.1 Client will grant or obtain at its expense lawful and safe access to the Site as needed for the Company to perform the Services and will notify all affected persons and entities in writing of the Company's presence. The access shall be adequate to allow the Company to conduct the Services, including bringing and storing equipment and tools on the Site and any necessary access to exterior and interior areas. The Company shall not be responsible for any delays, fees or costs caused by delayed or restricted access that prevents or slows the delivery of the Services. If the Site is not owned or operated by Client or the Client does not otherwise have the authority to grant the Company lawful access, Client shall be responsible for obtaining, at its own expense, an access agreement for the Site and any facilities located thereon and are necessary to perform the Services. The Company reserves the right to delay, without penalty, any Site visit and the provision of Services if a site access agreement, in the Company's reasonable judgment and discretion, would impose conditions, liabilities or risks on the Company in excess of those set forth in these General Terms and Conditions or the Agreement. IF THE SITE IS NOT OWNED BY CLIENT, CLIENT AGREES TO DEFEND, RELEASE, AND HOLD THE COMPANY, INCLUDING ITS OFFICERS, DIRECTORS, SHAREHOLDERS, EMPLOYEES, AGENTS, AFFILIATES AND SUCCESSORS (THE "COMPANY INDEMNITEES") HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ALLEGED BY THE SITE OWNER OR THE SITE OWNER'S EMPLOYEES, AGENTS, CONTRACTORS OR OTHER PERSONS OR ENTITIES ARISING FROM THE COMPANY'S PERFORMANCE OF SERVICES AT SUCH SITE.

5.2 Client shall be responsible for the safety of the Site where the Project is conducted and for providing a safe environment for the Company to provide the Services. The Company shall be responsible for the safe and compliant conduct of its personnel at the Site and shall also comply with the reasonable and lawful work rules for the Site. As required by applicable laws, the Company will prepare a site-specific Health and Safety Plan (HASP) applicable to its personnel for the Services provided at the Site. The Company shall not be responsible for the safety of other personnel at the Site, nor shall it be responsible for ensuring that the Site complies with environmental, health and safety laws, or reporting any unsafe conduct or non-compliance that it may observe. If the Company encounters conditions at the Site that are unsafe for its personnel, it reserves the right at its sole discretion to suspend or halt work until such conditions are cured. The Company shall not be responsible for any fees, costs or damages associated with any safety-related delays. Unless otherwise provided for in the Agreement, the Company shall not work in conditions that require personal protective equipment beyond that classified as Level D by OSHA, unless otherwise identified in the Proposal.

5.3 Client is responsible for accurately identifying to the Company in writing the existence and location of all subterranean structures and utilities on or affecting the Site and the Services. The Company will take reasonable precautions to avoid affecting subterranean structures and utilities disclosed to it in writing by Client. If included in the Agreement, Client may authorize the Company to conduct applicable private utility identification and clearance requirements on behalf of Client.

5.4 Unless otherwise stated in the Proposal, any soil or groundwater monitoring activities that are included in the Services are based on the assumption that soil borings and monitoring wells can be installed using standard truck-mounted drilling equipment, the locations are accessible to such equipment, and that surface conditions at each location consists of non-reinforced asphalt or concrete not exceeding six (6) inches in thickness and no concrete or asphalt cutting will be required. If the Company encounters materially different conditions at the Site, the Company shall inform Client, and a Change Order shall be agreed to that addresses any changes in schedule, fees or costs associated with the changed conditions.

SECTION 6: HAZARDOUS SUBSTANCES AND ENVIRONMENTAL CONDITIONS

6.1 Client represents it has informed the Company of all known or suspected Hazardous Substances on, under or near the Site of which it is aware, and that it has provided the Company with all studies, reports, investigations, or similar documents in its possession about the environmental conditions at the Site, including any documents and correspondence involving Federal, State or local environmental, health or safety regulatory notifications.

6.2 For purposes of the Agreement and these General Terms and Conditions, the term "Hazardous Substances" includes materials defined or regulated as hazardous substances, hazardous materials, hazardous wastes, hazardous constituents, solid wastes, pollutants, or toxic substances under any Federal, State or local environmental, health, safety or natural resources law, statute, regulation or ordinance, including but not limited to petroleum products, polychlorinated biphenyls, per- and polyfluoroalkyl substances, asbestos, and any other material or substance listed or identified by the United States Environmental Protection Agency or any similar State or local agency as presenting a potential danger to health, safety or the environment.

6.3 Except to the extent required by law, the Company shall not be responsible for making any disclosures to governmental agencies or the Site owner regarding the presence or release of Hazardous Substances on, under, from or around a Site.

6.4 **FOR ENVIRONMENTAL INVESTIGATION, GEOTECHNICAL AND REMEDIATION PROJECTS,** the discovery of Hazardous Substances or other environmental conditions on, under or near the Site not contemplated within the Services may constitute a changed condition, necessitating a Change Order. Although unlikely, Client acknowledges that such a discovery of Hazardous Substances may make it necessary for the Company to take immediate measures to protect the health and safety of its employees and other persons, or to arrange for others to do so, including and up to delaying or terminating work. Client agrees to compensate the Company for all expenses incurred or caused by the discovery of unanticipated Hazardous Substances or environmental conditions encountered at the Site, including but not limited to those related to worker protection and exposure, emergency response actions and equipment decontamination.

6.5 **FOR ENVIRONMENTAL INVESTIGATION AND REMEDIATION PROJECTS,** all substances on, in, or under Site, or obtained from Site as samples or as byproducts of the sampling process, shall be Client's property. The Company shall not be required to sign or certify a waste manifest, disposal ticket, or similar document relating to the transportation or disposal of wastes or Hazardous Substances. the Company may serve as Agent for Client if requested under a separate agreement and authorization. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances and shall not be so identified on any document.

FOR GEOTECHNICAL PROJECTS, all substances on, in, or under the Site, or obtained from the Site as samples or as byproducts of the sampling process, shall be Client's property. Unless otherwise expressly specified in the Agreement or the Services, the characterization, management and disposition of substances, including Hazardous Substances, generated during the Services (including, but not limited to, wastes, samples, produced soils or fluids, cuttings, or protective gear or equipment, etc.) is the sole responsibility of Client. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not and shall not be identified as a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances on any document. Unless specifically provided for in the Agreement, the Company shall not have any responsibilities with respect to the storage or preservation of samples, and Client agrees that the Company is not responsible or liable to Client for any loss of samples that are shipped to a testing facility or retained in storage.

6.6 The Company shall not have custody of any monitoring wells or permanent sampling locations installed as part of the Project, and shall not be responsible for proper maintenance, repair, or closure of such wells, unless otherwise provided for in the Agreement.

6.7 CLIENT AGREES TO DEFEND, INDEMNIFY, RELEASE, AND HOLD THE COMPANY INDEMNITEES HARMLESS FROM ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES (INCLUDING ATTORNEY'S FEES AND CONSULTANTS' FEES, COSTS OF DELAY OF THE SERVICES, AND ANY COSTS ASSOCIATED WITH POSSIBLE REDUCTION TO THE VALUE OF THE PROJECT OR THE SITE IN WHICH IT IS SITUATED) ARISING FROM (I) THE COMPANY'S DISCOVERY OF OR ITS EMPLOYEES' OR SUBCONTRACTORS' EXPOSURE TO HAZARDOUS SUBSTANCES OR SUSPECTED SUBSTANCES RELATED TO THE SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE ACTS, OMISSIONS OR WILLFUL MISCONDUCT; (II) ANY DISCLOSURES THE COMPANY IS REQUIRED TO MAKE BY LAW REGARDING HAZARDOUS SUBSTANCES OR ENVIRONMENTAL CONDITIONS AT A SITE; (III) ANY CLAIMS MADE ALLEGING THAT (A) THE COMPANY IS AN OWNER OR OPERATOR OF THE SITE AT WHICH THE SERVICES ARE RENDERED; (B) THE COMPANY IS THE GENERATOR, STORER OR TREATER OF HAZARDOUS SUBSTANCES AT SUCH SITE; OR (C) THAT THE COMPANY ARRANGED FOR THE TRANSPORTATION OR DISPOSAL OF ANY HAZARDOUS SUBSTANCES FROM THE SITE; (IV) ANY VIOLATION BY CLIENT OF ANY FEDERAL, STATE OR LOCAL LAW, REGULATION, ORDER, DECREE OR ORDINANCE RELATED TO HAZARDOUS SUBSTANCES; OR (V) ANY CLAIMS MADE BY THIRD-PARTIES WITH RESPECT TO ALLEGED EXPOSURES TO OR DAMAGES CAUSED BY HAZARDOUS SUBSTANCES AT OR FROM THE SITE OR DURING OR RELATED TO ANY PROJECT OR THE PROVISION OF SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE OR WILLFUL MISCONDUCT.

SECTION 7: REVIEWS, INSPECTIONS, TESTING, AND OBSERVATIONS

7.1 If the Services include oversight, monitoring or observation of work being conducted by third parties (other than the Company subcontractors), such Services shall be conducted solely to determine that the work being overseen, monitored, or observed is in general conformity to the contractual requirements between Client and such third parties. Client shall have sole responsibility and authority to reject, suspend or stop the work of such third parties, or modify or terminate any agreement between Client such third parties.

7.2 The Company shall not have the responsibility or authority to stop, suspend, or modify the work of such third parties, and does not guarantee that work it inspects conforms in all respects to the design, or to applicable laws, statutes, regulations, rules or codes, and it shall have no liability for design or construction defects, or the failure of Client's designers or contractors to comply with their contractual obligations.

7.3 Neither the activities of the Company pursuant to this Agreement, nor the presence of the Company or its employees, representatives, or subcontractors on the Project Site, shall be construed to impose upon the Company any responsibility for means or methods of work performance, superintendence, sequencing of construction, or safety or environmental conditions or compliance at the Project Site. Client acknowledges that Client or its contractor is solely responsible for Project jobsite safety and compliance with environmental, health and safety laws.

7.4 Client is responsible for scheduling all inspections and construction materials testing ("CMT") activities of the Company. The Company will not be responsible for tests and inspections that it does not perform due to Client's failure to timely schedule work. Client shall at the time of execution of the Agreement provide the Company with a proposed schedule for tests and inspections the Company shall perform. Client will give reasonable notice of all changes to that schedule. The Company shall not be required to conduct any tests or inspections on less than 72 hours written notice, nor after normal business hours or on weekends or holidays.

SECTION 8: BILLING AND PAYMENT

8.1 The Company will submit invoices to Client monthly or upon completion of Services. Invoices will show charges for different personnel and expense classifications. Partially completed items of work for which a fee has been specified may be billed based upon the percentage of completion as estimated by the Company. Reimbursable expenses, those outside of the scope of the proposed Services, will be charged to the Client at cost plus an applicable fee. Payment is due 30 days after presentation of invoice and is past due 31 days from invoice date. Client agrees to pay a finance charge of the lesser of one and one-half percent (1 ½ %) per month, or the maximum rate allowed by law, on past due accounts. If the Company incurs any expenses to collect overdue billings on invoices, the sums paid by the Company for reasonable attorneys' fees, court costs, the Company's time, the Company's expenses, and interest will be

due and owing by the Client. Client agrees that the Company may refuse to release to Client any reports, findings, data, and other work product until it has been paid in full for Services rendered.

SECTION 9: OWNERSHIP AND USE OF DOCUMENTS; INTELLECTUAL PROPERTY

9.1 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, as instruments of service, shall remain the property of the Company. Neither Client nor any other entity shall change or modify the Company's instruments of service. The Company disclaims any and all responsibility and liability for problems that may occur during implementation of the Company's plans, specifications, or recommendations when Company is not retained to observe such implementation. The Company will retain all pertinent records relating to the Services for a period of "five years or such longer period" of time required by applicable accrediting agency, unless specified in the Scope of Services following submission of the report or completion of the Services, during which period the records will be made available to the Client in a reasonable time and manner, subject to payment of a reasonable fee for the time of the Company's employees to assemble and transmit those documents.

9.2 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, are prepared for the sole and exclusive use of Client, and may not be given to any other entity, or used or relied upon by any other entity, without the express written consent of the Company. Such written consent may take the form of a "reliance letter" which must be agreed to by such other person or entity to whom the Services and instruments of service may be disclosed, and for which a separate fee will be charged. The Company shall be entitled to injunctive relief preventing/prohibiting any disclosure, reliance or attribution prohibited hereunder, and CLIENT SHALL RELEASE, INDEMNIFY, DEFEND, AND HOLD HARMLESS THE COMPANY FROM ANY LOSSES ARISING FROM OR RELATED TO SUCH UNAUTHORIZED DISCLOSURE, ATTRIBUTION OR RELIANCE. Client is the only entity to which the Company owes any duty or duties, in contract or tort, pursuant to or under this Agreement.

9.3 The Company shall retain sole and exclusive ownership of all ideas, concepts, theories, improvements, designs, original works of authorship, formulas, processes, models, software, algorithms, inventions, know-how, techniques, compositions of matter and any other information owned by the Company prior to the date of this Agreement or created or modified by the Company during the provision of the Services.

9.4 Each party may disclose to the other party certain information that it considers to be confidential ("Confidential Information") provided such information is disclosed in writing and clearly marked or, if orally disclosed, promptly thereafter reduced to writing and clearly marked "Confidential." In no event shall Confidential Information include information that: (a) is or becomes publicly available other than through a breach of the Agreement; (b) is known to the party receiving such information prior to disclosure or is independently developed by such party subsequent to such disclosure without reference to Confidential Information provided hereunder; or (c) is subsequently lawfully obtained by the party receiving such information from a third party without obligations of confidentiality. Each party agrees that it (a) will not disclose or divulge the other party's Confidential Information to any person, (b) will not use the other party's Confidential Information for its own benefit or the benefit of others, (c) will employ at least the same degree of care in protecting Confidential Information as it employs in protecting its own confidential information, and (d) will, upon termination of the Agreement, or at any time at the request of the other party, return to the other party or destroy all copies of the other party's Confidential Information. Notwithstanding the foregoing, each party may disclose the other party's Confidential Information to its employees, subcontractors and authorized agents who have a need to know such confidential information to fulfill its obligations under this Agreement. In the event a party receives a subpoena or other validly issued administrative or judicial process requesting the disclosure of the other party's Confidential Information, such party will promptly notify the other party and tender to it the defense of such demand and will cooperate (at the other party's expense) with the defense of such demand. Unless the demand shall have been timely quashed or extended, the party receiving the demand shall thereafter be entitled to comply with such demand when and to the extent required by law.

SECTION 10: RISK ALLOCATION AND INDEMNIFICATION

10.1 CLIENT AGREES THAT THE COMPANY'S LIABILITY FOR ANY DAMAGE ON ACCOUNT OF ANY BREACH OF CONTRACT, ERROR, OMISSION, OR PROFESSIONAL NEGLIGENCE WILL BE LIMITED TO A SUM NOT TO EXCEED THE GREATER OF $50,000 OR THE COMPANY'S FEE. If Client prefers to have higher limits on contractual or professional liability, the Company agrees to increase the limits up to a maximum of (i) $1,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of five percent of the total fee for Services or $1,000.00, or (ii) . $2,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of ten percent of the total fee for Services or $2,000.00. The additional charge for the higher liability limits is because of the greater risk assumed and is not strictly a charge for additional contractual or professional liability insurance.

10.2 CLIENT SHALL NOT BE LIABLE TO THE COMPANY AND THE COMPANY SHALL NOT BE LIABLE TO CLIENT FOR ANY PUNITIVE, INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS, LOSS OF USE, AND LOST SAVINGS) INCURRED BY EITHER PARTY DUE TO THE FAULT OF THE OTHER, REGARDLESS OF THE NATURE OF THE FAULT, OR WHETHER IT WAS COMMITTED BY CLIENT OR THE COMPANY, THEIR EMPLOYEES, AGENTS, OR SUBCONTRACTORS; OR WHETHER SUCH LIABILITY ARISES IN BREACH OF CONTRACT OR WARRANTY, TORT (INCLUDING NEGLIGENCE), STATUTORY, OR ANY OTHER CAUSE OF ACTION.

10.3 As used in this Agreement, the terms "claim" or "claims" mean any claim in contract, tort, or statute alleging negligence, errors, omissions, strict liability, statutory liability, breach of contract, breach of warranty, negligent misrepresentation, or any other act giving rise to liability.

10.4 Subject to the provisions of the limitation of liability described in this Section, Client and the Company each agree to indemnify and hold harmless the other party and the other party's affiliated companies, officers, directors, partners, employees, and representatives, from and against losses, damages, and judgments, including reasonable attorneys' fees and expenses recoverable under applicable law, but only to the extent they are legally determined to be caused by a negligent act, error, or omission of the indemnifying party or any of the indemnifying party's officers, directors, members, partners, agents, employees, or subconsultants in the performance of Services. If claims, losses, damages, and judgments are legally determined to be caused by the joint or concurrent negligence of Client and the Company, they shall be borne by each party in proportion to its negligence.

10.5 Notwithstanding any other term or provision in this Agreement, in recognition of the relative risks, rewards and benefits of the work being performed by the Company to both the Client and the Company, the risks have been allocated such that the Client agrees and acknowledged that, to the fullest extent permitted by law, the total liability of the Company to the Client for any and all injuries, claims, losses, expenses, damages or claim expenses arising out of this Agreement from any cause or causes of action whatsoever, whether arising out of contract, negligence, strict liability in tort, or warranty, shall not exceed the amount specified in Section 10 of the General Terms and Conditions.

SECTION 11: INSURANCE

11.1 The Company represents it has Worker's Compensation insurance in force, that it has commercial general liability coverage in the amount of $1,000,000.00 per occurrence and has professional liability insurance in the amount of $1,000,000.00 per claim.

11.2 Client shall maintain such insurance as is necessary to fully underwrite Client's defense and indemnity obligations set forth herein, and shall, upon request by the Company, provide proof to the Company to verify such insurance.

SECTION 12: DISPUTE RESOLUTION

12.1 All claims, disputes, and other matters in controversy between the Company and Client arising out of or in any way related to this Agreement or any Addendum or Change Order shall be decided by binding arbitration in accordance with the Construction Industry Rules of the American Arbitration Association then obtaining, and judgment on the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof. Notwithstanding the foregoing, the Company shall not be required to arbitrate any legal and/or equitable claims (including statutory and equitable liens) for collection of monies due. The successful party in any such action will be entitled to recover its reasonable attorneys' fees, expert witness fees, and other claim-related expenses and court costs incurred, and also the time value at prevailing rates of its employees reasonably incurred in prosecuting or defending the claims, with any claims against the Company subject to the limitations in Section 10. For the purposes hereof, "successful party" shall mean a party who receives an award greater than fifty (50%) percent of its claimed amount.

12.2 The sole and exclusive venue for any dispute resolution proceeding shall be the location in which the Company office performing the Services is located. This Agreement shall be governed by and construed in accordance with the laws of the jurisdiction in which the Company office performing the Services is located.

12.3 Notwithstanding the foregoing, all claims, including for negligence or any other cause whatsoever that the Client has or claims to have against the Company, shall be deemed waived unless (i) Client notifies the Company of the claim or claims within thirty (30) days of discovery thereof, and (ii) if the Client contends that a claim exists against the Company for negligence

or another violation of a standard of care owed by the Company, Client has first provided the Company with a written certification executed by an independent design professional currently practicing in the same discipline as the Company. The certification shall: a) identify the name of the professional; b) specify each and every act or omission that the certifier contends is a violation of the standard of care identified in this Agreement; and c) state in complete detail the basis for the certifier's opinion that each such act or omission constitutes such a violation. This certificate shall be provided to the Company not less than thirty (30) calendar days prior to the institution of any arbitration or judicial proceeding.

12.4 NOTWITHSTANDING THE FOREGOING, THE COMPANY SHALL HAVE NO LIABILITY FOR ANY CLAIM DISCOVERED BY CLIENT MORE THAN ONE YEAR AFTER DELIVERY OF THE LAST ISSUED REPORT BY THE COMPANY FOR THE SERVICES. THE PARTIES AGREE THAT THIS PROVISION IS MATERIAL TO THE DECISION OF THE COMPANY TO ENTER INTO THIS AGREEMENT, THAT IT IS A REASONABLE MEASURE TO ALLOCATE AND INSURE AGAINST RISK, AND THAT IT DOES NOT VIOLATE PUBLIC POLICY.

SECTION 13: TERMINATION

13.1 This Agreement may be terminated by either party upon seven (7) days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof, or in the case of a force majeure event such as terrorism, act of war, public health or other emergency. Such termination shall not be effective if such substantial failure or force majeure has been remedied before expiration of the period specified in the written notice. In the event of termination, the Company shall be paid for services performed to the termination notice date plus reasonable out of pocket termination expenses incurred or paid by the Company in connection with such termination and the winding down of its operations.

13.2 In the event of termination, or suspension for more than three (3) months, prior to completion of all reports contemplated by this Agreement, the Company may complete such analyses and records as are necessary to complete its files and may also complete a report on the Services performed to the date of notice of termination or suspension. The expense of termination or suspension shall include all direct out of pocket costs incurred or paid by the Company in completing such analyses, records, and reports.

SECTION 14: SOLICITATION OF EMPLOYEES

14.1 Client agrees that during the term of the Agreement, and for a period of one (1) year after the last date on which the Company has provided Services, Client shall not, directly or indirectly, solicit or attempt to solicit for employment, or contract directly or indirectly with, any employee of the Company except as authorized in writing by the Company.

SECTION 15: ASSIGNS

15.1 Neither Client nor the Company may assign this Agreement or assign or delegate any of its rights or obligations without the prior written consent of the other party.

SECTION 16: SURVIVAL

If any of the provisions of this Agreement is held by a court of competent jurisdiction to be illegal, invalid, or unenforceable, the enforceability of the remaining provisions will not be impaired and will survive. Limitations of liability and indemnities will survive termination of this Agreement for the period of all applicable statutes of limitations to which they relate.

SECTION 17: MISCELLANEOUS

17.1 This Agreement may not be amended or modified except by an agreement in writing signed by the party against whom the enforcement of any modification or amendment is sought.

17.2 Failure by either party at any time to enforce any obligation by the other party, to claim a breach of any term of the Agreement or to exercise any power agreed to hereunder will not be construed as a waiver of any right, power or obligation under the Agreement, will not affect any subsequent breach, and will not prejudice either party as regards any subsequent action.

17.3 The headings in these General Terms and Conditions are for reference only and are not intended to form part of the Agreement between the Parties.

17.4 It is agreed that this Agreement is entered into by the parties for the sole benefit of the parties to the Agreement, and that nothing in the Agreement shall be construed to create a right or benefit for any third party.

17.5 To the extent that a statute of limitations for any cause of action against the Company arising from this Agreement can be modified contractually in accordance with law, and the relevant statute of limitations for any claim arising of or relating to this Agreement, or the Services provided by Company r, is greater than two (2) years, the relevant statute of limitations shall be two (2) years from the date Company last provided Services. The parties agree that this provision is material to the decision of Company to enter into this agreement, that it is a reasonable measure to allocate and insure against risk, and that it does not violate public policy. This section shall not be construed as an agreement to increase the statute of limitations for any causes of action that are otherwise barred by law.

17.6 All future services rendered by the Company at Client's request for the Project described in the Proposal (whether by Change Order, Addendum, or amendment to this Agreement) shall be conducted under the terms of this Agreement.

CLIENT APPROVAL

In the event the Client authorizes work without returning a signed copy of the Proposal, the Client agrees to be bound by the General Terms and Conditions as stated herein. The Proposal presented has been read, understood, and accepted by the Client effective as of the date that the executed Proposal is returned to the Company.

STATE-SPECIFIC ADDENDUM – FLORIDA

SECTION 1: ADDENDUM TO AGREEMENT

1.1 This Florida addendum (this "Addendum") is made and entered into by and between the Company and Client and is effective as of the date of execution of the Agreement if the Services are performed in the State of Florida, and this Addendum is incorporated into and made a part of the General Terms and Conditions solely with respect to the Services covered by this Addendum.

SECTION 2: INDEMNITY

2.1 IN **ADDITION TO AND NOTWITHSTANDING ANY OTHER PROVISION IN THIS AGREEMENT**, CLIENT AGREES, TO THE FULLEST EXTENT PROVIDED BY LAW, TO RELEASE, DEFEND (WITH COUNSEL REASONABLY ACCEPTABLE TO THE COMPANY), INDEMNIFY, AND HOLD THE COMPANY INDEMNITEES HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES FROM OR BY ANY PERSON OR ENTITY ARISING FROM (1) ACTS OR OMISSIONS BY CLIENT, CLIENT'S AGENTS, STAFF, AND OTHERS EMPLOYED BY OR CONTRACTED TO CLIENT, INCLUDING ARCHITECTS, ENGINEERS, CONTRACTORS, SUBCONTRACTORS, AND CONSULTANTS, WHETHER OR NOT THE COMPANY IS RESPONSIBLE IN PART FOR THE ACTS OR OMISSIONS FOR WHICH CLIENT IS INDEMNIFYING THE COMPANY AND (2) THE PROVISION OF THE SERVICES BY THE COMPANY EXCEPT TO THE EXTENT CAUSED BY THE COMPANY'S GROSS NEGLIGENCE OR WILLFUL MISCONDUCT, SUCH EXCEPTION SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.2 THE COMPANY AGREES TO INDEMNIFY, AND HOLD CLIENT HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ARISING TO THE EXTENT SOLELY FROM THE GROSS NEGLIGENCE OR WILLFUL MISCONDUCT BY THE COMPANY IN THE PROVISION OF THE SERVICES, SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.3 To the extent either party's damages are covered by available insurance, Client and the Company waive all rights of subrogation against each other and against the contractors, subcontractors, consultants, agents, and employees of the other, except such rights as they may have to the proceeds of such insurance.

SECTION 3: INDIVIDUAL LIABILITY (5 POINTS LARGER THAN ADJACENT TEXT)

3.1 **PURSUANT TO FLORIDA STAT. 558.0035, AN INDIVIDUAL EMPLOYEE OR AGENT OF THE COMPANY MAY NOT BE HELD INDIVIDUALLY LIABLE FOR NEGLIGENCE.**

Goal 5: *Natural Groundwater Aquifer Recharge*

Objective 5.1: *Protection of High Aquifer Recharge Areas and Water Bodies*

The City recognizes the importance of the protection of high aquifer recharge areas, wellfield protection areas, lakes, streams, drainage basins, wetlands and stream-to-sink features as vital to the protection of groundwater resources. The City shall, through partnerships and using the best available data, provide protection for groundwater resources.

Policy 5.1.a: The City shall consider the best available hydrogeological information (e.g, Suwannee River Water Management District high aquifer recharge potential maps or site-specific data), and may require the collection of site-specific hydrogeological data, such as soil borings or electric resistivity tests, when assessing the impacts of proposed land use changes and developments in areas of high aquifer recharge potential. This information should be used in the determination of land use decisions on a case-by-case basis.

Policy 5.1.b: The City shall prioritize the acquisition of high aquifer recha
protection as conservation or open spa
bonds, lease agree

Re: Farmlands Planned Development

Honorable Mayor Welch:

I have been retained by Our Santa Fe River, Inc. regarding the process the City utilized to amend the City's Future Land Use Map ("FLUM") for the proposed Farmlands Planned Development. It is my understanding that the City Commission held only one (1) public hearing before adopting the proposed FLUM because it was a "small-scale development amendments adopted pursuant to Chapter 163.3187, Florida Statutes." On behalf of Our Santa Fe River, Inc. I respectfully disagree with the process the City is using to adopt this plan amendment. It is my opinion that pursuant to the City's Comprehensive Plan the City Commission must hold two (2) public hearings for comprehensive plan amendments. Let me explain.

The City of Alachua is considering a FLUM amendment and a rezoning for a development called Farmlands Planned Development, which would increase density and intensity of development on 46.70-acre parcel. Admittedly, the ***minimum*** requirements of Section 163.3187(2) Fla. Stat. require only "*one public hearing before the governing board*" to adopt a "*small scale development amendment,*" which is less than fifty (50) acres. The City's Ordinance 26-09 on this proposed FLUM amendment specifically cites this statutory provision to limit the number of public hearings.

However, the City of Alachua's Comprehensive Plan at "*Administration and Implementation Element Section IV*" sets forth the "*PROCESS & PROCEDURES FOR PUBLIC PARTICIPATION*" and at page 2-18 requires two (2) public hearings for plan amendments stating:

> *2. The City Commission* **shall hold two Public Hearings for Comprehensive Plan amendments** *as follows: A) First reading of the ordinance and Transmittal Hearing; B) second reading of the ordinance including final adoption of the proposed amendments.*

(Emphasis added.)

1819 Tamiami Drive
Tallahassee, FL 32301
(850) 321-8726
tkarlinelaw@gmail.com

Section IV of the City's Comprehensive Plan specifically states:

> *In order to provide for and encourage public participation throughout its comprehensive planning process,* **the City will adhere to the public participation procedures adopted by the City Commission and contained within this document**.

(Emphasis added.)

Finally, Section 163.3161(8), Fla. Stat., which governs the process to amend a local comprehensive plan recognizes that it sets forth the "*minimum requirements*" stating:

> *(8) The provisions of this act in their interpretation and application are declared to be* ***the minimum requirements necessary*** *to accomplish the stated intent, purposes, and objectives of this act; to protect human, environmental, social, and economic resources; and to maintain, through orderly growth and development, the character and stability of present and future land use and development in this state.*

(Emphasis added.) As a valid plan amendment is a condition precedent to a valid rezoning, and because this issue is apparently a matter of great public concern, on behalf of Our Santa Fe River, Inc. I request that the City Commission schedule an additional, duly noticed public hearing before considering whether to adopt the proposed FLUM amendment for the Farmlands Planned Development.

Thank you.

Proposed Alachua Commercial Center
US HWY 441
Alachua, Alachua County, Florida
UES Project No. A25140.00683.005 UES Report No. 2160889

Dear Mr. Berry:

UES Professional Solutions, LLC has completed a preliminary subsurface exploration at the above referenced site in Alachua, Alachua County, Florida. This preliminary Geotechnical Report is submitted in satisfaction of the contracted scope of services as summarized in UES Proposal No. 2156477v3, dated November 11, 2025. This exploration was performed in accordance with generally accepted soil and foundation engineering practices.

This Report presents the results of our field subsurface exploration and laboratory soil testing programs, and preliminary recommendations for geotechnical site preparation and foundation design and construction. These recommendations have been provided on the limited information available at the time, and once specific structure, pavement areas, grading, and other miscellaneous structure areas are known, additional geotechnical evaluation will be required.

We appreciate the opportunity to have worked with you on this project and look forward to a continued association. Please contact us if you have any questions, or if we may further assist you as your plans proceed.

Sincerely,
UES PROFESSIONAL SOLUTIONS, LLC

EXECUTIVE SUMMARY

We have prepared this executive summary as a general overview. Please refer to, and rely on, the full report for information about findings, recommendations, and other considerations.

Project Location and Description

The first phase of proposed commercial center will contain five anchor stores ranging in base floor area between 9,042 to 55,000 square feet along with attached shops, eight outparcels, associated drives and parking areas, and stormwater management system. The project site will be located along US Highway 441 in Alachua, Alachua County, Florida. Currently, the site is mostly undeveloped and moderately wooded. We anticipate, within the building areas, a significant amount of cut (more than 10 feet) at the southeast corner of the project site at Anchor 5), and nominal fill (up to 3 feet) at the northwest corner of the project site at Outparcel 1), will be required to achieve the proposed finish floor elevation(s). Existing elevations within the project site range from approximately +88 feet to +134 feet.

Soil and Groundwater Conditions

The groundwater level was not encountered below existing grades in the soil borings at the time of the field exploration program. Fluctuations in groundwater levels should be anticipated throughout the year, primarily due to seasonal variations in rainfall, surface runoff, construction activity, and other site specific factors that may vary from the time the borings were conducted. Based on the completed soil borings, the generalized subsurface soil profile consists of very loose to medium dense sands with varying silt and clay content, underlain by medium dense clayey sands to stiff clays to the boring termination depths.

Groundwater Considerations

Groundwater levels and seasonal high groundwater levels may be affected by the proposed construction which will modify the surface and subsurface hydrology. It may be necessary to provide a permanent subsurface drainage system for some improvements to maintain the recommended separation between the perched water table and various structural elements in the building, pavement, and truck well areas. Based upon the review of U.S.G.S. data, NRCS Soils Survey, and site boring data, we estimate that the normal seasonal high groundwater level will be deeper than 6 feet below the existing land surface (bls); however, stormwater can perch on clayey sands when sandy soils are present at the surface. Perched groundwater from seasonal rainfall and irrigation may affect the proposed improvements unless positive surface gradients and avoidance of trapped water conditions are incorporated into the site design.

Site Preparation

Site preparation for the project site will consist of stripping of surficial topsoil, and clearing of trees/vegetation and their associated root systems greater than ½ inch in diameter, followed by cut and fill sections necessitating cut slopes (more than 10 feet in height). In addition selective undercut of the native in-situ expansive clays to provide a minimum of 4 feet of separation from the base of foundation footings and slab and selectively to 2 feet below the bottom of the

stabilized subgrade component of the pavement section will be required. Normal proof-rolling and compaction of exposed subgrade, and filling to grade with compacted structural fill is also expected.

Foundation Design

Retail/Anchor Stores

After successful completion of the building site preparation, we recommend a shallow foundation system for support of the proposed building. The shallow spread foundations should be designed with a maximum allowable net soil bearing pressure of 2,500 pounds per square foot (psf) provided the building pad preparation recommendations presented in Section 9.3 of this report are followed.

Outparcels

After successful completion of the building site preparation, we recommend a shallow foundation system for support of the proposed building(s). The shallow spread foundations should be designed with a maximum allowable net soil bearing pressure of 2,500 pounds per square foot (psf) provided the building pad preparation recommendations presented in Section 9.3 of this report are followed.

Pavement Design

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-effective combination of available construction materials and is less susceptible to movement from the under laying clays. Concrete pavement has the advantage of the ability to “bridge” over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. However, concrete pavement can allow water intrusion which can aggravate the expansive soils. Recommendations for both rigid and flexible pavements are presented in Section 9.5 of this report. Typically, the most prevalent flexible pavement base material in Alachua County is limerock because of its local availability. Alternative base materials may be considered.

On-site Borrow and Excavation Considerations

Excess topsoil and organic soil may be used in landscaped areas. Clay material, undercut from the building footprint and/or pavement and drive areas, will need to be hauled off site or disposed of in non-structural areas.

With the exception of topsoil, debris, undiscovered organic soils and any potentially expansive clay, some of the near surface on-site soils may be reused as structural fill, but they will require careful moisture control. Soils classified as SP, SP-SM and SP-SC which are excavated from the proposed improvement areas may be used for structural fill provided the organic content is less than 5 percent. Soils classified as SM and SC with less than 25 percent fines and less than 5 percent organic content are generally suitable for use as structural fill with the understanding that greater than normal moisture control will be required for compaction. SM and SC soils with more than 25 percent fines and Plasticity Index of 15 or less are generally not suitable for structural fill but may be used deeper than 5 feet below finished grades in pavement area fills and will require significant moisture conditioning and working to effect the recommended compaction. It should be expected that most site soils reused as fill material will require greater handling on the part of the earthwork contractor to dry and work the soils.

Potential Geotechnical Constraints to site Development

Our interpretation of the site soil and groundwater conditions is based on our general knowledge of the area, subsurface borings performed and laboratory analysis conducted. UES did identify geotechnical considerations that may impact the planned development of the site, as we currently understand it, using conventional construction practices. The identified considerations are:

1. The presence of a very loose sand layers from 0 to 10 feet below land surface in most of the borings throughout the project site that will necessitate compaction.

2. Deposits of Clayey Sands [SC] and Sandy Clays [CH] that may not be re-usable as fill in utility excavations.

3. The subgrade after deeper excavation, in some areas may include very clayey sands, which will be difficult to compact. The clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods.

4. Steep slopes will have an impact on the construction process. Measures should be taken to prevent erosion of the slope, during construction and during the life of the project. Grading shall be designed to ensure that drainage flows away from all structures, especially structures that are cut into hillsides.

5. Due to the presence of near surface clays it is important that the construction design incorporate factors to minimize water seepage around the proposed structures. Design factors may include underdrain/drainage intercepting water runoff from the slopes, and positive drainage around structures.

6. Potentially expansive clay soils. Where present, the potentially detrimental effect of the expansive clays can be remediated through site grading, over-excavation and replacement, site drainage and stiffened foundation.

1.0 INTRODUCTION

UES Professional Solutions, LLC (UES) has completed the subsurface exploration for the proposed commercial center, which will be located along US Highway 441 in Alachua, Alachua County, Florida. Our exploration was authorized by Rise Partners, and was conducted as outlined in our Proposal Number 2156477v3, dated November 11, 2025. This exploration was performed in accordance with generally accepted soil and foundation engineering practices.

2.0 PROJECT CONSIDERATIONS

The first phase of proposed commercial center will contain five anchor stores ranging in base floor area between 9,042 to 55,000 square feet along with attached shops, eight outparcels, associated drives and parking areas, and stormwater management system. The project site will be located along US Highway 441 in Alachua, Alachua County, Florida. Currently, the site is mostly undeveloped and moderately wooded.

Our office was not provided with Foundation Plans or any other construction-related information other than that discussed herein. Considering the limitations stated above and based on prior experience with structures of this type, we assumed the following structural loading conditions: ground floor slab loads not exceeding 200 psf, a maximum of 5 kips per linear feet (klf) on wall footings, and a maximum loads of 50 kips (Outparcels) to 150 kips (Retails/Anchors Stores) on individual footings.

Across the project site, the site grades range from a high of about +134 feet at Anchor 5, to a low of about +88 feet at Outparcel 1, sloping from the southeast to the northwest. We anticipate, within the structural areas, a significant amount of cut (more than 10 feet) at the northeast corner of the project site at Anchor 5), and nominal fill (up to 3 feet) at the southwest corner of the project site at Outparcel 1), will be required to achieve the proposed finish floor elevation(s).

If any of the above information is incorrect or changes prior to construction, please contact UES immediately so that revisions to the recommendations contained in this report can be made, as necessary. In order to verify that these recommendations are properly interpreted and implemented, UES must be allowed to review the final design and specifications prior to the start of construction and understands that this is part of the overall geotechnical contract.

3.0 SITE DESCRIPTION

3.1 General

The subject site is a proposed Retail Store and five outparcels located within Section 8, Township 8 South, Range 18 East in Alachua County, Florida. The approximate parcel location is presented in Appendix B.

3.2 Soil Survey

Based on the 1985 Soil Survey for Alachua County, Florida, as prepared by the US Department of Agriculture, Natural Resources Conservation Service (NCRS), the predominant soil types at the site are identified as Arredondo fine sand, 0 to 5 percent slopes (3B), Fort Meade fine sand, 0 to 5 percent slopes (5B), Gainesville sand, 5 to 8 percent slopes (35C), and Kendrick fine sand, 5 to 8 percent slopes (30C). The published general description of these soils with depth, their published range of permeability characteristics and their published range of seasonal high groundwater levels, is presented in Table 1 below.

TABLE 1
Summary of NRCS Soil Survey Information

Soil Type	Constituents	Hydrologic Group	Natural Drainage	Soil Permeability (Inches/Hr)	Seasonal High Water Table
Arredondo fine sand, 0 to 5 percent slopes (3)	0-49" Fine sand 49-54" Loamy sand, loamy fine sand, sandy loam 54-86" Sandy loam, fine sandy loam, sandy clay loam	A	Well Drained	0-49" 6.0 – 20 49-54" 2.0 – 6.0 54-86" 0.2 – 2.0	Greater than 6 feet below ground surface
Fort Meade fine sand, 0 to 5 percent slopes (5B)	0-14" Fine sand 14-85" Loamy sand, loamy fine sand, fine sand	A	Well Drained	0-14" 6.0 – 20 14-85" 6.0 – 20	Greater than 6 feet below ground surface
Gainesville sand, 5 to 8 percent slopes (35C)	0-80" Sand, fine sand, loamy sand, loamy fine sand	A	Well Drained	0-80" 6.0 – 20	Greater than 6 feet below ground surface
Kendrick fine sand, 5 to 8 percent slopes (30C)	0-24" Sand 24-29" Sandy clay loam, fine sandy loam, sandy loam 29-76" Sandy clay loam, sandy clay	A	Well Drained	0-24" 6.0 – 20 24-29" 0.6 – 6.0 29-76" 0.06 – 2.0	Greater than 6 feet below ground surface

3.3 Topography

Based on elevations obtained from the Alachua County Property Appraiser Interactive GIS Map, site grades from a high of approximately +134 feet to a low of approximately +88 feet, generally sloping from the southeast to the northwest. A reproduction of a portion of the Interactive Map for the site area is included in Appendix B.

3.4 Geology

The general geology of central Alachua County is characterized by a surface veneer of Pleistocene and Pliocene sands and sandy clays overlying the Miocene-age Hawthorn Group. The Hawthorn Group includes a highly variable mixture of interbedded quartz sands, clays, carbonates, pebbles and grains occurring with thicknesses of up to 150 feet. Underlying the Hawthorn Group is the upper Eocene age Ocala Formation, occurring as a uniform limestone, which is approximately 200 feet thick and overlies the Eocene age Avon Park Formation, which can be up to 500 feet this. Both the Ocala and Hawthorn Formations dip to the northeast by approximately one degree.

The general hydrogeology of Alachua County consists of three aquifer systems; a surficial aquifer, an intermediate aquifer, and the Floridan aquifer system. The surficial aquifer exists as an unconfined water table situated over the impermeable Hawthorn Group and is usually a subdued reflection of surface topography. The intermediate aquifer system includes all rocks that collectively retard the exchange of water between the overlying surficial aquifer system and the underlying Floridan aquifer system. Water in this system is contained under confined conditions.

The Floridan aquifer system is a thick, carbonate sequence that functions regionally as a water-yielding hydraulic unit. The direction of shallow groundwater flow is generally toward surface water bodies. The potentiometric surface map of the upper Floridan Aquifer suggests groundwater elevations, outside perched zones, on the order of +30 to +40 feet, NGVD in the general site area.

4.0 PURPOSE AND SCOPE OF SERVICES

4.1 Purpose

The purposes of this exploration were:

- to explore and evaluate the subsurface conditions at the site and note potential geotechnical considerations that may affect the proposed design, construction, or serviceability of the proposed improvements,

- to provide preliminary geotechnical engineering recommendations for site preparation, pavement and foundation design parameters, and stormwater soil design parameters.

4.2 Scope of Service

A compilation of the services conducted by UES to date for the subsurface exploration program are as follows:

- Advancing twenty-nine (29) Standard Penetration Test (SPT) borings in the proposed building, parking and stormwater management areas to depths of 10 to 40 feet below existing land surface (bls).

- Analyzed previous soil boring data from six (6) SPT borings to depths of 15 feet, in the design of the stormwater pond. Boring data from a previous geotechnical exploration was provided in RFP documents,

- Performed two (2) Double-Ring Infiltrometer (DRI) tests within the proposed stormwater management area.

- Securing samples of representative soils found in the soil borings for laboratory analysis and classification by a member of our geotechnical staff.

- Measuring the existing site groundwater levels at the boring locations and providing an estimate of the typical wet season groundwater level.

- Conducting laboratory tests on selected soil samples obtained in the field to evaluate their engineering properties.

- Assessing the existing soil conditions with respect to the proposed construction.

- Preparing a report which documents the results of our subsurface exploration and analysis with geotechnical engineering recommendations.

4.3 Limitations

This report has been prepared for the exclusive use of Rise Partners to aid the Architect/Engineer in the design of the proposed site. The scope is limited to the specific project and locations described herein. Our description of the project's design parameters represents our understanding of the significant aspects relevant to soil and foundation characteristics. In the event that any changes in the design or location of the structures or improvements as outlined in this report are planned, we should be informed so the changes can be reviewed and the conclusions of this report modified, if required, and approved in writing by UES.

The recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated on the Boring Location Plan and from other information as referenced. This report does not reflect any variations which may occur between the boring locations. The nature and extent of such variations may not become evident until the course of construction. If variations become evident, it will then be necessary for a re-evaluation of the recommendations of this report after performing on-site observations during the construction period and noting the characteristics of the variations.

All users of this report are cautioned that there was no requirement for UES to attempt to locate any man-made buried objects or identify any other potentially hazardous conditions that may exist at the site during the course of this exploration. Therefore, no attempt was made by UES to locate or identify such concerns. UES cannot be responsible for any buried man-made objects or subsurface hazards which may be subsequently encountered during construction that are not discussed within the text of this report. We can provide this service if requested.

For a further description of the scope and limitations of this report please review the document attached within Appendix D, "Important Information About Your Geotechnical Engineering Report" prepared by GBA.

5.0 FIELD EXPLORATION

5.1 General

The soil borings were performed with a drill rig mounted on a rubber-tired truck. The boring locations were staked in the field by UES. The approximate locations of the borings are shown on the Boring Location Plan presented in Appendix A.

5.2 Standard Penetration Test Borings

As previously described in Section 4.2 and as indicated on the Boring Location Plan and General Description of Boring Locations in Appendix A, six (6) SPT borings were drilled to depths of 20 to 40 feet in the proposed building areas, eight (8) SPT borings were drilled to depths of 15 to 20 feet in the proposed outparcels, five (5) soil test borings to depths of 15 to 25 feet within the proposed stormwater management area, and ten (10) SPT borings to depths of 10 to 25 feet within the proposed pavement areas. The SPT borings were performed in general accordance with the procedures of ASTM D 1586 (Standard Method for Penetration Test and Split-Barrel Sampling of Soils). SPT data from previous UES field testing was analyzed for six (6) soil test borings to depths of 15 feet in the proposed stormwater management area. In addition, continuous sampling was performed within the upper 10 feet. The SPT drilling technique involves driving a standard split-barrel sampler into the soil by a 140-pound hammer, free falling 30 inches. The number of blows required to drive the sampler 1 foot, after an initial seating of 6 inches, is designated the penetration resistance, or N-value, an index to soil strength and consistency.

5.3 Double-Ring Infiltrometer (DRI) Tests

Two (2) Double-Ring Infiltrometer (DRI) tests were performed in accordance with the procedures of ASTM D-3385-88 *Standard Test Method for Infiltration Rate of Soils in Field Using Double-Ring Infiltrometer*. This test consisted of driving two open cylinders, one inside the other, into the ground partially filling the rings with water, and then maintaining the liquid at a constant level. The drop in water level in the inner ring was recorded on the measuring rod for

timed intervals. The tests were performed until the drop in water level was the same over the same time interval. The volume infiltrated during timed intervals was converted to an incremental infiltration velocity, expressed in inches/hour, and plotted versus elapsed time. The infiltration rate was the maximum steady state of average incremental infiltration velocity. The basic infiltration rate was obtained once the values of infiltration rates were constant. In-situ infiltration rates of soil results have been presented in **Appendix C**.

6.0 LABORATORY TESTING

The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). Representative soil samples were then selected from the retained soils and tested in our laboratory. The following is a summary of the laboratory tests performed in all studies, including prior geotechnical studies, for this site to date:

- Twenty-nine (29) Wash #200 fines content determinations – ASTM D-1140 (Standard Method for Particle Size Analysis of Soils).
- Two (2) Grain Sieve Analysis tests – ASTM D-422
- Six (6) Atterberg Limits Tests – ASTM D 4318-05
- Thirty-one (31) moisture content tests - ASTM D-2216
- Nine (9) Laboratory Permeability Tests – ASTM D-2434
- Two (2) Limerock Bearing Ratio (LBR) tests in lieu of the California Bearing Ratio (CBR) tests – Florida Department of Transportation FM-515 (Limerock Bearing Ratio).

These tests were performed to aid in classifying the recovered samples and to help in evaluating the general engineering characteristics of the site soils. The laboratory classification data is presented on the Boring Logs at the approximate depth sampled in Appendix A. All laboratory data is summarized and report sheets included in Appendix C. In addition, the detailed laboratory test procedures are enclosed in Appendix C.

The quantity and type of laboratory tests performed for the geotechnical exploration were selected by UES based on the soil conditions found and our experience and knowledge concerning the local soil conditions. We note that since most shallow sands in Florida are poorly graded fine sand it is customary to perform percent fines content testing only for classification purposes.

7.0 SOIL STRATIGRAPHY

7.1 Generalized Soil Profile

The results of our field exploration and laboratory analysis, together with pertinent information obtained from the SPT soil test borings, such as soil profiles, penetration resistance and stabilized groundwater levels are shown on the boring logs included in Appendix A. The Key to Boring Logs is also included in Appendix A.

The soil profiles were prepared from field logs after the recovered soil samples were visually classified by a member of our geotechnical staff. The stratification lines shown on the boring logs represent the approximate boundaries between soil types, and may not depict exact subsurface soil conditions. The actual soil boundaries may be more transitional than depicted. A composite generalized profile of the soils found at our boring locations is presented below in Table 2. For soil profiles at individual boring locations, please refer to the soil boring logs, Appendix A.

TABLE 2
GENERAL SOIL PROFILE

Typical depth (ft.)		Soil Descriptions
From	To	
0	1 to 18.5	Very loose to medium dense, orange SAND with silt to dark brown silty SAND [SP-SM, SM]
1 to 18.5	40*	Loose to medium dense, brown and orange clayey SAND [SC] to stiff to very stiff, gray and orange sandy CLAY [CH]

* Termination of Deepest Boring
[ ] Indicates Unified Soil Classification

Notable features within the general soil profile were: 1) The presence of a very loose sand layers from 0 to 10 feet below land surface in some of the borings throughout the project site, 2) The presence of clayey sands that may not be re-usable as fill in utility excavations, 3) The subgrade after deeper excavations in some areas may include clayey sands, which will be difficult to compact. The clayey sand soils may require stringent moisture control during compaction, particularly during rainy periods, 4) Potentially expansive clay soils, where present, the potentially detrimental effect of the expansive clays can be remediated through site grading, over-excavation and replacement, site drainage and stiffened foundation.

8.0 GROUNDWATER CONSIDERATIONS

8.1 Existing Groundwater Level

The groundwater level was not encountered below existing grades in the soil borings at the time of the field exploration program. Fluctuations in groundwater levels should be anticipated throughout the year, primarily due to seasonal variations in rainfall, surface runoff, construction activity, and other site specific factors that may vary from the time the borings were conducted.

8.2 Typical Wet Season Groundwater Level

The typical wet season groundwater level is defined as the highest groundwater level sustained for a period of 2 to 4 weeks during the "wet" season of the year, for existing site conditions, in a year with average normal rainfall amounts. Based on historical data and the Climatic Atlas of the United States, the rainy season in Alachua County, Florida typically occurs between June and September. To estimate the wet season water level at the boring locations, many factors may be considered.

Based upon the review of U.S.G.S. data, NRCS Soils Survey, and site boring data, a reasonable estimate for the normal seasonal high groundwater table will be at a depth of more

than 6 feet below the land surface (bls); however, stormwater can perch on top of clayey sands when sandy soils are present at the surface.

Please note, however, that peak stage elevations immediately following various intense storm events, may perch temporarily on the low permeability (clayey) soils. Further, it should be understood that changes in the surface hydrology and subsurface drainage from on-site and/or off-site improvements could have significant effects on the normal and seasonal high groundwater levels. Potential for water to perch will be directly related to grading and rainfall/irrigation amounts. Isolated areas with a transient perched groundwater should be expected to occur. The potential for transient perched groundwater levels shall be considered during the design of the site grades and during construction.

We recommend positive drainage be established and maintained on the site during construction. We further recommend permanent measures be constructed to maintain positive drainage from the site throughout the life of the project.

9.0 ANALYSIS AND PRELIMINARY RECOMMENDATIONS

9.1 General

In this section of the report, we present our preliminary recommendations for groundwater control, building foundations, site preparation, and construction related services. The following recommendations have been based upon a review of the attached soil test data, our limited understanding of the proposed construction, and experience with similar projects and subsurface conditions. **Due to the preliminary design stage of this project, building locations, structural loads, and grading information were unavailable. Therefore, it may be necessary to perform additional geotechnical services including additional test borings once the structure locations, stormwater management system, proposed grades, and structural loadings are available.**

9.2 Geotechnical Considerations

Our geotechnical engineering evaluation and recommendations for building pad and pavement area preparation and foundation design are based on (1) our site observations, (2) the collected field and laboratory data, and (3) our understanding of the project and structural information presented in this report.

Based on our exploration, the primary geotechnical considerations for the design and construction of the proposed building are the presence of potentially-expansive clays in the shallow subsurface profile, near-surface loose sandy layers that will necessitate compaction, and the extent and magnitude of the cut slopes that will be required as part of the grading plans. Subsurface sandy soils will undergo immediate settlements upon application of surface loads, and this could be a result of both fill placement for building pad construction and building construction. In light of the above, it becomes important to compact the subgrade soils as much as possible prior to both building pad fill placement and foundation construction.

Very loose sands were encountered in the building soil borings; the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas shall be proof-rolled to detect soft or loose soils. Proof-rolling operations should be followed by subgrade/backfill compaction operation. If necessary to achieve the recommended soil compaction at depth, the loose areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

Steep slopes will have an impact on the construction process, further detailed slope stability analysis shall be performed once proposed slopes and/or retaining walls plans are available. Seepage toward the face of the slope could cause erosion to the slope face and lead to a reduced stability of the slope. Therefore, measures should be taken to prevent erosion of the slope, during construction and during the life of the project. Grading shall be designed to ensure that drainage flows away from all structures, especially structures that are cut into hillsides. Erosion control methods shall be used during construction to protect water quality, control drainage, and reduce soil erosion.

The clayey sand soils may require stringent moisture control during compaction, particularly during rainy periods. Footings that are excavated through the upper layer of compacted sand fill soils into the native clayey sands, should be visually inspected and tested to verify the in-place density and condition of the subgrade bearing soils.

Care should be exercised in performing the site preparation procedures due to the presence of clayey soils near the existing ground surface. The use of heavy-vibratory equipment is not recommended due to the potential for disturbance and pumping of the near surface clayey soils. To avoid pumping of the underlying clayey soils, we recommend self-propelled vibrating equipment remain a minimum of two feet above the clayey soils. The sandy soils could be compacted with a vibratory roller operating in static mode or with a track-mounted dozer to avoid disturbance of the clayey soils prior to operation. We recommend a minimum of 2 feet of sand be present over the clayey soils prior to operation of construction equipment. Excessive disturbance of the clayey soils will degrade the strength characteristics of the soil and may result in an unsuitable soil which will require over-excavation and subsequent backfilling with selected material.

Due to the presence of near surface clayey soil, it is important that the foundation design incorporate factors to minimize water seepage around the proposed foundation. The design factors should include undercutting around the perimeter of the structure, positive drainage such that water flows away from the structure, use of low permeability fill, gutters tied into the drainage system, use of drought tolerant landscaping, and limiting irrigating around the structure.

Within some of the proposed building envelope at this site, we found somewhat shallow deposits of potentially expansive soils (CH). Therefore, where present on site, these shallow deposits of expansive soils must be addressed through site grading, over-excavation and replacement, site drainage and stiffened foundation. We recommend auger borings be performed in the proposed footing excavation and building pad areas to determine the extent of the undercutting of the potentially expansive material that will be needed.

The over-excavated areas should be backfilled with a compacted, low permeability, non-plastic engineered fill material. The low permeability backfill should continue to an elevation consistent with the top of the adjacent clay layers to minimize the potential for surface water to become trapped in the previously excavated areas. Low permeability, engineered fill material shall consist of poorly draining, silty sand or clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15, and be free of organics. A crushed limerock base material could be used as the low permeability material. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8-inches or less are recommended. Should the Contractor experience difficulty in achieving the appropriate level of compaction, a thinner lift should be utilized.

In pavement cut areas, we recommend undercutting clayey soils to a minimum depth of 2 feet below the proposed bottom of roadway base course elevation, in accordance with FDOT Standards.

If the structural conditions or other project information are incorrect, please contact us so that we can review our recommendations. Also, the discovery of any site or subsurface conditions during construction which deviate from the data obtained during this geotechnical exploration should also be reported to us for further evaluation.

If it is determined that structures and or pavement will be constructed in areas with potential expansive clay soils, additional geotechnical exploration, laboratory testing and engineering analysis will be required to provide site specific requirements to mitigate the potential damage associated with the shrink/swell activity of these soils.

As described in Florida Building Code (FBC), Building and Structures on or adjacent to slopes shall comply with section 1808.7. Wall and floors retaining earth and enclosing spaces below finished ground level, shall be waterproofed and/or damp proofed in accordance with Florida Building Code Section 1814.

We consider the recommendations presented in the subsequent sections of this report appropriate for the planned construction. As part of the overall geotechnical contract, we recommend that UES be provided the opportunity to review the foundation plans and earthwork specifications to verify that our recommendations have been properly interpreted and incorporated into the design documents.

9.3 Preliminary Foundation Design Recommendations

Based on the results of our exploration, it is our opinion that the subsurface conditions at the project site are adaptable for support of the proposed structure on a properly designed and constructed shallow foundation system, provided the site preparation and earthwork construction recommendations outlined in Section 9.3 of this report are performed. Provided the improvements and specific site preparation procedures are carefully followed, the parameters outlined below may be used for foundation design.

9.3.1 Bearing Pressure

Retail/Anchor Stores

The maximum allowable net soil bearing pressure for use in shallow foundation design should not exceed 2,500 pounds per square foot (psf). Net bearing pressure is defined as the soil bearing pressure at the base of the foundation in excess of the natural overburden pressure. The foundations should be designed based upon the maximum load that could be imposed by all loading conditions. The allowable bearing pressure may be increased by 25 percent to account for short duration loadings such as wind or seismic.

If the proposed building frame can not tolerate the estimated magnitudes of differential settlements over a lateral distance of 20 feet, and/or the Owner desires to provide additional reduction of the potential effects of clays on the structure, we recommend the Building Designers consider the use of grade beam foundations, for support of load bearing walls on this project. The deeper concrete section, and top and bottom steel configuration of a typical grade

beam foundation, should help mitigate differential settlement concerns. A modulus of subgrade reaction of 100 pounds per cubic inch (pci) may be used for grade beam foundation design.

Outparcels

The maximum allowable net soil bearing pressure for use in shallow foundation design should not exceed 2,500 pounds per square foot (psf). Net bearing pressure is defined as the soil bearing pressure at the base of the foundation in excess of the natural overburden pressure. The foundations should be designed based upon the maximum load that could be imposed by all loading conditions. The allowable bearing pressure may be increased by 25 percent to account for short duration loadings such as wind or seismic.

9.3.2 Foundation Size

Retail/Anchor Stores

The minimum width recommended for any isolated column or continuous wall footings are 30 and 18 inches, respectively. Even though the maximum allowable soil bearing pressure may not be fully achieved, this width recommendation should control the minimum size of the foundations.

Outparcels

The minimum widths recommended for any isolated column or continuous wall footings are 24 inches and 18 inches, respectively. Even though the maximum allowable soil bearing pressure may not be fully achieved, this width recommendation should control the minimum size of the foundations. For monolithic slabs, the thickened sections should have minimum width of 12 inches and be embedded a minimum of 12 inches.

9.3.3 Bearing Depth

Retail/Anchor Stores

The exterior foundations should bear at a depth of at least 18 inches below the finished exterior grades and the interior foundations should bear at a depth of at least 18 inches below the finish floor elevation to provide confinement of the bearing level soils. It is recommended that stormwater be diverted away from the building area both during and permanently following construction.

Outparcels

The exterior foundations should bear at a depth of at least 18 inches below the finished exterior grades and the interior foundations should bear at a depth of at least 12 inches below the finish floor elevation to provide confinement to the bearing level soils. It is recommended that stormwater be diverted away from the building exteriors to reduce the possibility of erosion beneath the exterior footings. The thickened section of a monolithic slab/foundation system should be embedded a minimum of 12 inches.

9.3.4 Bearing Material

The foundations and floor slabs may bear in/on either the compacted native soils or structural fill. The bearing level soils should be densified to at least 95 percent of the Modified Proctor maximum dry density (ASTM D 1557) to a depth of at least **four feet** below the bearing levels.

The structural borings indicated that clay was present to depths of less than 10 feet below existing grades beneath some of the building footprint areas. We recommend that the bottom of all footings and building pad areas be probed to confirm the suitability of the bearing soils.

9.3.5 Settlement Estimates

Post-construction settlements of the structure will be influenced by several interrelated factors, such as (1) subsurface stratification and strength/compressibility characteristics; (2) footing size, bearing level, applied loads, and resulting bearing pressures beneath the foundations; and (3) site preparation and earthwork construction techniques used by the contractor. Our settlement estimates for the structure are based on the site preparation/earthwork construction recommendations in Section 9.3 of this report. Any non-conformance with these recommendations could result in an increase in the estimated post-construction settlements of the structure.

Using the recommended maximum bearing pressure, the provided maximum structural loads, the anticipated fill loading and the field data which we have correlated to geotechnical strength and compressibility characteristics of the subsurface soils using N-value data, we estimate that total settlements of the structure should be less than 1 inch if the site preparation recommendations in Section 9.3 are followed. Without appropriate site preparation procedures, total settlements could exceed 1 inch.

Differential settlements result from differences in applied bearing pressures and variations in the compressibility characteristics of the subsurface soils. We anticipate that differential settlements should be within tolerable limits of ½ inch or less in 20 linear feet.

9.3.6 Floor Slab

The floor slab can be designed using a modulus of subgrade reaction (K) of 100 pci for slabs founded on minimum 4 inch sub-base material and well compacted subgrade. The 4-inch thick sub-base material may consist of a compacted structural fill, as described in Preliminary Building Site Preparation section of this report.

Should floor slab be designed using a subgrade reaction of 150 pci, the floor slab can be founded on a minimum 4-inch thick compacted aggregate base and well compacted subgrade. The base material may consist of a crushed limerock material with at least 97% (by weight) passing a 3.5 inch sieve and the material shall be graded uniformly down to dust.

Conventional floor slabs may be supported upon the compacted fill and should be structurally isolated from other foundation elements or adequately reinforced to prevent distress due to differential movements.

It is recommended the floor slab bearing soils be covered with an impervious membrane to reduce moisture entry and floor dampness. A 15-mil thick plastic membrane is commonly used for this purpose. Care should be exercised not to tear large sections of the membrane during placement of reinforcing steel and concrete.

9.3.7 Site Walls

Earth pressures on retaining walls are influenced by structural design of walls, conditions of wall restraint, construction methods, and the strength of the materials being restrained. The most common conditions assumed for earth retaining wall design are the active and at-rest conditions.

Active conditions apply to relatively flexible earth retention structures, such as free-standing walls, where some movement and rotation may occur to mobilize shear strength. Walls which are rigidly restrained, such as loading dock or service pits walls, should be designed for the at-rest condition. However, if the walls will be backfilled before they are braced by the floor slabs, they should also be designed to withstand active earth pressures as self-supporting cantilever walls. Development of the full active earth pressure case requires a magnitude of horizontal wall movement that often cannot be tolerated or cannot occur due to the rigidity of the wall and other design restrictions such as the impact on adjacent structures. In such cases, walls are often designed for either the at-rest condition or a condition intermediate of the active and at-rest conditions, depending on the amount of permissible wall movement. Passive earth pressure represents the maximum possible pressure when a structure is pushed against the soil, and is used in wall foundation design to help resist active or at-rest pressures. Because significant wall movements are required to develop the passive pressure, the total calculated passive pressure is usually reduced by one-half for design purposes.

We recommend that any proprietary retaining walls be backfilled with materials deemed suitable by the retaining wall designer. For all other walls, typically sandy soils [SP, SP-SM, SP-SC] should be used as backfill. We recommend that the soils selected for use as backfill be tested as specified by either the proprietary retaining wall designer or UES prior to commencement of wall construction. Recommended soil parameters for design of low retaining walls for loading docks and landscape features using SP, SP-SM or SP-SC soils found on site are shown in Table 3.

TABLE 3
Lateral Earth Pressure Design Parameters (Level Backfill)*

Design Parameter	Recommended Value
At-rest Earth Pressure Coefficient, K_o	0.5
Active Earth Pressure Coefficient, K_a	0.33
Passive Earth Pressure Coefficient, K_p	3.0
Wet Unit Soil Weight (pounds per cubic foot - pcf)	125
Submerged Unit Weight of Soil (pcf)	62
Coefficient of Friction (sliding)	0.4
Angle of Internal Friction, φ	30 degrees

* For sloping backfill or backfill with clayey sands the table values must be adjusted.
**Hydrostatic pressure should be accounted for based on seasonal high water table estimates and other site drainage considerations

The recommended lateral earth pressure coefficients and equivalent fluid pressures do not consider the development of hydrostatic pressure behind the earth retaining wall structures. As such, positive wall drainage must be provided for all earth retaining structures. These drainage systems can be constructed of open-graded washed stone isolated from the soil backfill with a

geosynthetic filter fabric and drained by perforated pipe, or with one of several wall drainage products made specifically for this application.

Our recommendations assume that the ground surface above the wall is level and that native or imported soils consisting of sands and sands with silt or clays will be used for wall backfill. Lateral earth pressures arising from surcharge loading should be added to the above earth pressures to determine the total lateral pressure. Additional consideration must also be given for sloped backfill at the top of the wall. In each circumstance the earth pressure coefficients for active and at-rest conditions will increase based upon the amount of surcharge and angle above horizontal of the sloped backfill.

9.4 Preliminary Building Site Preparation

9.4.1 General

We recommend normal, good practice dry weather site preparation procedures for the building and pavement areas. These procedures include: stripping/demolition of the site to remove: vegetation, surficial organics, trees and root systems greater than ½ inch in diameter and other debris. Following stripping/demolition, the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas should be proof-rolled to detect soft or loose soils. A more detailed description of this work is as follows:

1. Prior to construction, existing underground utility lines within the construction area should be located. Provisions should be made to relocate interfering utilities to appropriate locations. It should be noted that if underground pipes are not properly removed or plugged, they may serve as conduits for subsurface erosion which may lead to excessive settlement of overlying structures.

2. Strip/demolish the proposed construction limits of topsoil, asphalt, existing above and below grade structures, and other deleterious materials within and 5 feet beyond the perimeter of the proposed building areas. Expect typical stripping at this site to depths of 6 to 12 inches. Deeper clearing and grubbing depths may be encountered in heavily vegetated areas. Demolition in areas with existing structures should include complete removal of all above and below grade foundations and other improvements. Also, all utilities, foundations and other below grade structures (foundations, utility pipes, etc.) should be removed and the excavation backfilled as described below.

   Deeper removal of debris should be anticipated to remove footings and utilities from the demolition of the existing structure(s). All debris and deleterious material should be removed and replaced with suitable structural fill. Fill material should be placed and compacted in accordance with the site preparation procedures. Excavated areas should be set back to a stable configuration or shored, in either case in accordance with OSHA requirements. Adequate bracing should be provided if necessary to prevent side slope failures.

3. The site should be graded to direct surface water runoff away from the construction areas. Positive drainage of improved areas should be maintained during construction and throughout the design life of the project. If required, perform remedial dewatering prior to any earthwork operations. Dewatering operations scheduled should be carefully evaluated for possible impacts to the existing foundation systems. Dewatering systems should not be decommissioned until the excavation is backfilled two feet above the groundwater level at the time of construction. Further, the site should always be graded

to prohibit ponding of stormwater runoff.

4. After clearing and stripping of the site is completed, the prepared subgrade soils within the building area should be observed and probed by a qualified agent of the testing agency to locate any surficial deposits of vegetation, excessive roots or debris. If identified, undercut the vegetation, organics, muck, or deleterious material until clean natural soils are encountered and backfill the resulting excavations according to the fill placement procedures provided later in this section.

5. The building pad areas, including 5 feet beyond the perimeter where possible, should be proof-rolled and tested for compliance to compaction requirements, to a depth of four (4) feet below stripped subgrade, prior to any fill placement.

6. Weak subgrade soils identified during proof-rolling operations should be excavated and removed from the site, and replaced with selected (low permeability) fill material. We recommend that the bottom of all footings be probed to confirm the suitability of the bearing soils. We recommend 4-foot static cone penetrometer probe and/or auger borings be performed in the proposed footing excavations to investigate for clayey soils. We recommend you probe every column footing, probe every 50 lineal feet of wall footing. If encountered, fat clays (CH) shall be removed to a minimum of 4 feet below the bottom of the footing/floor slab. UES should be contacted to develop appropriate site specific remediation recommendations. The over-excavated areas shall be backfilled with a compacted, low permeability, engineered fill material. Fill material shall consist of poorly draining, silty-clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8 inches or less are recommended.

7. In the areas to receive fill or at subgrade cut elevation, the subgrade should be compacted using a smooth drum vibratory roller having a minimum static, at-drum weight on the order of 10 tons and a drum diameter on the order of 3 to 4 feet making a minimum of eight overlapping passes with the second set of 4 passes perpendicular to the first set of 4 passes. If wet conditions are prevalent anywhere on site, at the discretion of a qualified representative of the testing agency, a bridge lift of “dry” sand may be placed to raise the compaction surface above the water table sufficiently to enable effective compaction. Typically, the material should exhibit moisture contents within +/- 2 percent of the Modified Proctor optimum moisture content (ASTM D-1557) during the compaction operations. Compaction should continue until densities of at least 95 percent of the Modified Proctor maximum dry density (ASTM D-1557) have been uniformly achieved within the upper 48 inches of the compacted subgrade surface. If necessary to achieve the recommended soil compaction at depth, the loose/soft areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

8. Place fill material, as required. Offsite fill should consist of sand with less than 10 percent soil fines, unless a low permeability engineered fill material is required. Place fill in uniform 10- to 12-inch lifts and compact each lift to a minimum density of at least 95 percent of the Modified Proctor maximum dry density (ASTM D1557). Verification testing should be performed prior to the next lift being placed.

9. Test the subgrade and each lift of backfill in over-excavated and fill areas for compaction at a frequency of not less than one test per 2,500 square feet in the building areas and one test per 10,000 square feet in paved areas.

10. In the building areas, test all footing cuts for compaction to a depth of 4 feet. We recommend you test every column footing, and conduct one test for every 100 lineal feet of wall footing.

11. If difficult compaction conditions are encountered during the site work operations, the compaction efforts should stop and a qualified representative of the testing agency should be consulted for recommendations. The qualified representative of the testing agency should observe proof-rolling of the exposed subgrade to determine if additional compaction is warranted or if any soil material needs to be over-excavated and replaced.

12. If site preparation work is performed during the rainy season (June through September, reference historic data and Climatic Atlas of the United States), special care should be taken to maintain positive drainage from the building pad and paved areas to drains or ditches around the site. Unexpected wet periods can also occur in Florida during the "dry" season. Such events can raise water tables to levels above seasonal highs without the associated high temperatures to evaporate ponded water. Therefore, the contractor should practice wet weather means and methods for earthwork during the "dry" season as well. Groundwater and surface water control, use of granular fill material and aeration are the normal means to accommodate wet weather construction. All fill materials that are excavated from below the water table should be stockpiled for a sufficiently long period to allow drainage.

9.5 Preliminary Pavement Recommendations

9.5.1 General

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-effective combination of available construction materials and is less susceptible to movement from the under laying clays. Concrete pavement has the advantage of the ability to "bridge" over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. However, concrete pavement can allow water intrusion which can aggravate the expansive soils. Disadvantages of rigid pavement may also include an initial higher cost and more difficult patching of distressed areas than occurs with flexible pavement.

If encountered, we recommend undercutting the clayey sands and clays to a depth of 24 inches below the bottom of the base course, or concrete pavement level, in accordance with FDOT Standard Plans Index 120-002. We recommend proof-rolling of the exposed subgrade to help determine areas that will need to be undercut. Positive drainage around the roadway area should be established to prevent irrigation and stormwater from migrating into the pavement area.

9.5.2 Asphalt (Flexible) Pavement

Tables 4 and 5 contain our recommendations for standard and heavy duty pavement sections design. Based on projects of similar experience we estimate total equivalent 18 kips single axle loads ($E_{18}SAL$) of 110,000 and 300,000, for standard and heavy duty pavements, respectively.

TABLE 4
STANDARD DUTY FLEXIBLE PAVEMENT DESIGN

Pavement Layer	Thickness	Minimum Requirements
Asphalt Surface (FDOT SP-9.5) Asphalt Binder (FDOT SP-9.5)	1 Inch Minimum 1 Inch Minimum	93% (tolerance ±2%) Laboratory Maximum Density (G_{mm})
Limerock or Crushed Concrete Base	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

TABLE 5
HEAVY DUTY FLEXIBLE PAVEMENT DESIGN

Pavement Layer	Thickness	Minimum Requirements
Asphalt Surface (FDOT SP-9.5) Asphalt Binder (FDOT SP-12.5)	1 Inch Minimum 2 Inch Minimum	93% (tolerance ±2%) Laboratory Maximum Density (G_{mm})l.
Limerock or Crushed Concrete Base	8 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of at least 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

9.5.2.1 Stabilized Subgrade

We recommend that subgrade materials be compacted to at least 98 percent of the Modified Proctor maximum dry density (ASTM D 1557/ AASHTO T-180) value. Further, beneath the base course, stabilize the subgrade materials to a minimum Limerock Bearing Ratio (LBR) of 40 as specified by the current version of the Florida Department of Transportation (FDOT) “Standard Specifications for Roadway and Bridge Construction” (SSRBC) requirements for Type B Stabilized Subgrade, Section 160 and Section 914. For crushed concrete base, the subgrade material should be "free-draining" ($k > 1 \times 10^{-3}$ cm/sec) and therefore on-site clayey sands, clays, or other impermeable stabilization material shall not be used for mixing with in-place sands.

The primary function of stabilized subgrade beneath the base course is to provide a stable and firm subgrade so that the base can be properly and uniformly placed. Depending upon the soil type, fill material from an off-site source may have sufficient stability to provide the needed support without additional stabilizing material. Generally sands with shell or rock should have sufficient stability and may not require additional stabilizing material. Prior to compaction of the subgrade, the representative samples of soils exposed at rough subgrade from both on and off-site fill sources should be tested for Limerock Bearing Ratio (LBR) value on a frequency of one test per 20,000 square feet to evaluate whether or not additional stabilization will be required beneath the base course.

9.5.2.2 Base Course

We recommend the base course consist of locally available limerock complying with the requirements of the current version of the FDOT SSRBC, Section 200, and Section 911. The limerock should have a minimum LBR of 100 percent and should be mined or supplied from an FDOT approved source. Place the limerock in maximum 6 inch thick loose lifts and compact each lift to a minimum density of 98 percent of the Modified Proctor maximum dry density (ASTM D1557/AASHTO T-180).

Alternatively, we believe locally available crushed concrete base of equal thickness could be substituted for the limerock. Crushed concrete should be supplied by an F.D.O.T. approved plant with quality control procedures and should have an average LBR value of not less than 100. The gradation for crushed concrete should meet the current requirements for graded aggregate base per Section 204, FDOT SSRBC.

A prime and sand coat should be applied to the base to provide for a smooth, uniform surface for asphalt placement. Perform compliance testing for limerock or crushed concrete for full depth of the base at a frequency of one test per 10,000 square feet. Compliance testing should consist of performing in-place density tests and thickness measurements at the recommended frequency.

9.5.2.3 Surface and Binder Course

The wearing surface should consist of Florida Department of Transportation (FDOT) Type SP asphaltic concrete. Specific requirements for Type SP asphaltic concrete, Traffic Level C/D wearing surface are outlined in the Florida Department of Transportation (FDOT), *Standard Specifications for Road and Bridge Construction, current Edition.*

The surface course should consist of FDOT SP-9.5 fine mix for light-duty areas and FDOT SP-12.5 and/or SP-9.5 fine mix for heavy duty areas. Specific requirements for the SuperPave asphaltic concrete structural course are outlined in the latest edition of FDOT, Standard Specifications for Road and Bridge Construction.

After placement and field compaction, the wearing surface should be cored to evaluate material thickness and to perform laboratory densities. Cores should be obtained at frequencies of at least one core per 10,000 square feet of placed pavement, or a minimum of two cores per day's production.

9.5.2.4 Curbing

Typical curbing is extruded and placed atop the asphaltic concrete surface. This type of curbing does not act as a horizontal cutoff for lateral migration of storm and irrigation water into the base material and as a result of this it is not uncommon for base and subgrade materials adjacent to these areas to become saturated, promoting subsequent localized pavement deterioration. Consequently, we recommend that most pavements abutting irrigated landscape areas be equipped with an underdrain system that penetrates a minimum depth equivalent to the bottom of the stabilized subgrade to intercept trapped shallow water and discharge it into a closed system or other acceptable discharge point.

Alternatively, curbing around landscaped sections adjacent to the parking lots and driveways could be constructed with full-depth curb sections to reduce horizontal water migration. However, underdrains may still be recommended dependent upon the soil type and spatial relationships. UES should review final grading plans to evaluate the need and placement of pavement and landscape underdrains.

9.5.3 Concrete (Rigid) Pavements

Concrete pavement is a rigid pavement that transfers reduced wheel pressures to the underlying subgrade soils when compared to a flexible pavement section. We recommend that the concrete pavement be supported on a stabilized subgrade. Our recommendations for the rigid pavement system are presented below:

1. The stabilized subgrade shall be at least 12 inches thick, “free-draining” (k≥ 5 feet/day) and have a positive seepage discharge point.

2. The stabilized subgrade and base materials should be densified to at least 98 percent of Modified Proctor test maximum dry density (ASTM D1557/AASHTO T-180).

3. The surface of the subgrade soils must be level, and any disturbances or wheel rutting corrected prior to placement of concrete.

4. Concrete pavement thickness should be uniform throughout, with exception to thickened edges (curb or footing).

5. The bottom of the pavement should be separated from the estimated typical wet season groundwater level by at least 12 inches.

6. We do not recommend the use of a limerock base course directly below the concrete pavement area

For a standard and heavy duty pavement we recommend using the design shown in Table 6.

TABLE 6
(UNREINFORCED) CONCRETE PAVEMENT

Minimum Pavement Thickness	Maximum Control Joint Spacing	Recommended Sawcut Depth
Standard Duty – 5 Inches	10 Feet x 10 Feet	1 ¼ Inches
Heavy Duty – 6 Inches	12 Feet x 12 Feet	1 ½ Inches

We recommend using concrete with a minimum 28-day compressive strength of 4,000 psi and minimum 28-day flexural strength (modulus of rupture) of at least 600 pounds per square inch, based on 3rd point loading of concrete beam test samples. Layout of the sawcut control joints should form square panels, and the depth of sawcut joints should be ¼ of the concrete slab thickness. The control joints should be sawed within 6 hours of concrete placement or as soon as the concrete has sufficient strength to support workers and equipment. We recommend allowing UES to review and comment on the final concrete pavement design, including section and joint details (type of joints, joint spacing, etc.), prior to the start of construction.

For further details on concrete pavement construction, please reference the "Guide to Jointing of Non-Reinforced Concrete Pavements" published by the Florida Concrete and Products Association, Inc., and "Building Quality Concrete Parking Areas", published by the Portland Cement Association.

9.5.4 Groundwater Considerations

One of the most critical influences on pavement performance is the relationship between the pavement subgrade and the seasonal high groundwater level. It has been our experience that roadways and parking areas may be damaged as a result of deterioration of the base and the base/surface course bond from saturation of the subgrade and/or base materials. We recommend that the seasonal high groundwater and the bottom of the base course be separated by at least 24 inches. For concrete pavement the minimum separation may be reduced to 18 inches provided the compacted base and subgrade is “free-draining” material.

Provided the native in-situ clays are selectively undercut a minimum of 2 feet below the bottom of the base of the pavement section, the recommended separation should be provided. The separation should be confirmed by reviewing the final site grading and paving plan. If the separation is not provided by grading and/or permanent surface drainage improvements, underdrains may be required.

9.5.5 Construction Traffic

Light duty roadways and incomplete pavement sections may not perform satisfactorily under construction traffic loadings. We recommend that construction traffic (construction equipment, concrete trucks, sod trucks, garbage trucks, dump trucks, etc.) be re-routed away from these roadways or that the pavement section design account for these loadings.

9.5.6 Site Preparation for New pavement Areas

Following is a list of our recommended site preparation procedures to prepare the new pavement areas for the proposed construction.

1. Strip the pavement areas of any roots, vegetation, debris, organics, etc. Stripping should be performed at least 3 feet beyond pavement edges. We recommend that the stripped surface be observed and probed by representatives of UES.

2. Following site clearing, grubbing and rough grading, the pavement areas should be proof-rolled using a large, fully loaded rubber-tired vehicle (dump truck) or similar equipment. Proof-rolling will help locate any surficial zones of especially loose or soft or unsuitable soils not encountered in the soil test borings, and should help provide more uniformity in the sandy subsurface soil profile. Unusual or unanticipated conditions identified during this process must be immediately brought to the attention of the UES Geotechnical Engineer. Field density testing is not required during proof-rolling operations.

3. If encountered within 24 inches below the bottom of the base course, we recommend undercutting clayey sands to clays in accordance with FDOT Standard Plans Index 120-002. Within the pavement areas, compact the exposed soils to at least 95 percent of the Modified Proctor test maximum dry density (ASTM D 1557) to a depth of at least 1 foot below the stripped surface and full depth of fill, or at least 2 feet below the bottom of base course (or concrete pavement) level, whichever is greater. Please note that the surficial soils within the new pavement areas may contain varying quantities of silt and clay. These silty/clayey soils tend to readily hold moisture and may require more stringent compactive efforts than clean fine sands.

4. Soil density testing to verify the uniformity of compactive efforts should be performed at a frequency of at least one (1) test for every 5,000 square feet per foot of compacted increment, or at a minimum of four test locations, whichever is greater.

5. Prior to the placement of the base course within the new asphalt pavement areas, the upper 12 inches of subgrade should be stabilized by pounding or mixing limerock into the subgrade in order to provide a stable and firm surface, so that the base course can be properly and uniformly placed and compacted to at least 98 percent of the Modified Proctor maximum dry density (ASTM D 1557). Compliance testing should be performed at a frequency of one test per 10,000 square feet, or at a minimum of three test locations, whichever is greater.

9.6 Suitability of Over excavated Site Materials

The recovered soil samples were classified using visual and textural means, and limited laboratory testing. We offer below ***preliminary guidelines*** for the use of on-site soils, such as those excavated in cut sections and the proposed stormwater management basin, as fill material for the project.

Soil materials excavated and classified as fine sands to sand with silt and sand with clay (SP, SP-SM, SP-SC), with typically 12% fines or less (silt/clay fraction), may be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, provided the materials are properly dried, placed, and compacted.

Soil materials excavated and classified as silty fine sands [SM], with typically 12% to 25% fines, may also be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, after significant drying and some mixing with the fine sand material described above. Proper placement, proof rolling and compaction must also be performed.

Soil materials excavated and classified as clayey sand, silt or clay (SC, ML, MH, CL, and CH) and any organic-laden soils (5% or greater organics by weight) should not be reused as fill beneath building or pavement sections. These materials could be used in green areas, if applicable and in non-structural applications where excessive ground subsidence will not create functional or aesthetic problems. It should be noted that silt and clay materials will retain water and if used near the final grade may become saturated and soft for a significant period of time following a rain event.

Soil borings for a typical geotechnical report are widely spaced and generally not sufficient for reliably detecting the presence of isolated, anomalous surface or subsurface conditions, or reliably estimating unsuitable or suitable material quantities. Accordingly, UES does not recommend relying on our boring information to negate presence of anomalous materials or for estimation of material quantities unless our contracted services ***specifically*** include sufficient exploration for such purpose(s) and within the report we so state that the level of exploration provided should be sufficient to detect such anomalous conditions or estimate such quantities. Therefore, UES will not be responsible for any extrapolation or use of our data by others beyond the purpose(s) for which it is applicable or intended.

9.7 Sewer and Utility Lines

9.7.1 General Recommendations

We assume that proposed sewer and other deep utility lines at the site may have invert elevations several feet below existing grades. In general, the soils at this approximate level may be sands to silty sands [SP/SM]; clayey sands and or clay [SC, CL, CH] may be encountered at deeper depths. The fine sand type soils, when excavated from below the water table, may require spreading and drying prior to reuse to achieve a moisture content sufficient to obtain the recommended degree of compaction. Silty sands may be reused as backfill material, but will require stringent moisture control to achieve compaction. The clayey soils [SC, CL, CH] should not be used as backfill material beside or above the utilities.

9.7.2 Trench Excavation and Backfill Recommendations

The following recommendations should be followed while installing the proposed utility lines.

- Where required, the soils in the areas of excavations for the installation of the proposed gravity/force main lines should be dewatered prior to the start of excavation. The groundwater level should be maintained at least 24 inches below the base of the trench and compaction surface during construction and backfill activities.

- After proper dewatering, excavate the trench as per the design configuration. Excavated trenches should be set back to a stable configuration or shored, in either case in accordance with OSHA requirements. Adequate bracing should be provided if necessary to prevent side slope failures.

- Compact the trench bottom a minimum density of 95 percent of the Modified Proctor maximum dry density to a depth of 1-foot below the bottom of the pipe or place the pipe in gravel bedding as described by FDOT Design Standards. Remove rock, boulders or other hard lumpy or unyielding material to depth of 12 inches below the bottom of the pipe elevation. The subgrade after excavation in some areas may include silty-clayey sands [SM-SC/SC] [A-2-4]/[A-2-6], which will be difficult to compact. If these soils are soft in nature, they should be over-excavated and removed under the direction of the testing agency representative. Alternatively, approximately 6 to 12 inches of #57 stone (gravel) may be placed at the bottom and compacted to stabilize the subgrade. When utilizing graded stone material, sufficient amount of sand should be added to fill all voids created by the use of 57 stone. The undercut areas should be covered with geotextile (separation fabric). Some areas may also include very clayey sands or sandy clay [SC/CH][A-6]/[A-7]; these soils should be over-excavated and removed under the direction of the testing agency representative.

- Fill materials above the spring-line of the pipe should be compacted to a minimum of 95 percent of the Modified Proctor maximum dry density (AASHTO T-180/ASTM D-1557). Native soils consisting of clean sands with less than 12 percent fines may be used as backfill material provided they are inorganic, have moisture contents below the optimum level and are properly placed. As possible, we recommend you avoid using silty and clayey sands as backfill material for this project.

- If imported materials are used as trench backfill material, the imported fill should contain less than 5 percent soil fines passing a number 200 sieve. You may also use imported fill material containing 5 to 12 percent soil fines; however, strict moisture control measures will be required, particularly for placement of these materials in excavations extending below the groundwater level.

- Backfill placed around the pipe and extending up to a level of 12 inches above the top of the pipe should be placed in loose, 6-inch lifts and compacted with light-weight equipment such as a small plate compactor. The remaining backfill may be placed in loose, 12-inch lifts across the full trench width and compacted. All backfill lifts should be compacted to a minimum density of 95 percent of the Modified Proctor maximum dry density prior to the placement of additional backfill. Compaction within the backfill trench should be performed using light-weight compaction equipment until the backfill has attained a level of at least 4 feet above the crown of the pipe. Beneath pavement areas, the top 12 inches of backfill should be compacted to at least 98 percent.

- Compliance test for densities should be performed as recommended by FDOT standards. Additionally, local jurisdictional compaction requirements should be followed when stricter than the recommendations herein.

9.8 Excavations

Excavations should be sloped as necessary to prevent slope failure and to allow backfilling. Temporary excavations below a depth of 4 feet should be sloped in accordance with OSHA regulations (29 CFR Part 1926) dated October 31, 1989. Where lateral confinement will not permit slopes to be laid back, the excavation should be shored in accordance with OSHA requirements. During excavation, excavated material should not be stockpiled at the top of the slope within a horizontal distance equal to the excavation depth. Provisions for maintaining workman safety within excavations is the sole responsibility of the contractor.

9.9 Stormwater Management System

The field and laboratory test data indicates that the near-surface sands with silt to silty sands generally have permeability rates of 0.5 to 21 feet per day, and the underlying clayey sand to sandy clay soils within the proposed stormwater management area for this project generally have permeability rates of less than 0.1 foot per day at the boring locations. Based upon the above findings, we recommend that you consider the soil parameters presented in Table 7 for design of the stormwater management system on the subject project site. It should be noted that the above referenced values are measured values and do not incorporate factor of safety.

TABLE 7 – STORMWATER MANAGEMENT SYSTEM SOIL DESIGN PARAMETERS

Corresponding Soil Boring Test Locations	B25/B26/B34/B35	B27/B28/B29	B30/B31/B32/B33
Average Depth to Confining Layer, feet	7	8	5
Estimated Average Unsaturated Vertical Infiltration rate, feet per day	7.5	1.5	2
Estimated Average Horizontal Hydraulic Conductivity, feet per day	12.5	2.5	3
Estimated Average Fillable Porosity, percentage	20	15	15
Estimated Seasonal High Water Table Depth, feet[1]	6.5	7.5	4.5

[1]The seasonal high water table will be a result of perched conditions.

10.0 POTENTIAL GEOTECHNICAL CONSTRAINTS TO SITE DEVELOPMENT

Our interpretation of the site soil and groundwater conditions is based on our general knowledge of the area, subsurface borings performed and laboratory analysis conducted. UES did identify geotechnical considerations that may impact the planned development of the site, as we currently understand it, using conventional construction practices. The identified considerations are:

1. The presence of a very loose sand layers from 0 to 10 feet below land surface in most of the borings throughout the project site that will necessitate compaction.

2. Deposits of Clayey Sands [SC] and Sandy Clays [CH] that may not be re-usable as fill in utility excavations.

3. The subgrade after deeper excavation, in some areas may include very clayey sands, which will be difficult to compact. The clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods.

4. Steep slopes will have an impact on the construction process. Measures should be taken to prevent erosion of the slope, during construction and during the life of the project. Grading shall be designed to ensure that drainage flows away from all structures, especially structures that are cut into hillsides.

5. Due to the presence of near surface clays it is important that the construction design incorporate factors to minimize water seepage around the proposed structures. Design factors may include underdrain/drainage intercepting water runoff from the slopes, and positive drainage around structures.

6. Potentially expansive clay soils. Where present, the potentially detrimental effect of the expansive clays can be remediated through site grading, over-excavation and replacement, site drainage and stiffened foundation.

11.0 REPORT LIMITATIONS

This Report has been prepared for the exclusive use of Rise Partners, and other members of the Design/Construction Team for the specific project discussed in this Report. This Report has been prepared in accordance with generally accepted local geotechnical engineering practices; no other warranty is expressed or implied.

The scope is limited to the specific project and locations described herein. Our description of the project's design parameters represents our understanding of the significant aspects relevant to soil and foundation characteristics. In the event that any changes in the design or location of the structures as outlined in this report are planned, we should be informed so the changes can be reviewed and the conclusions of this report modified, if required, and approved in writing by UES.

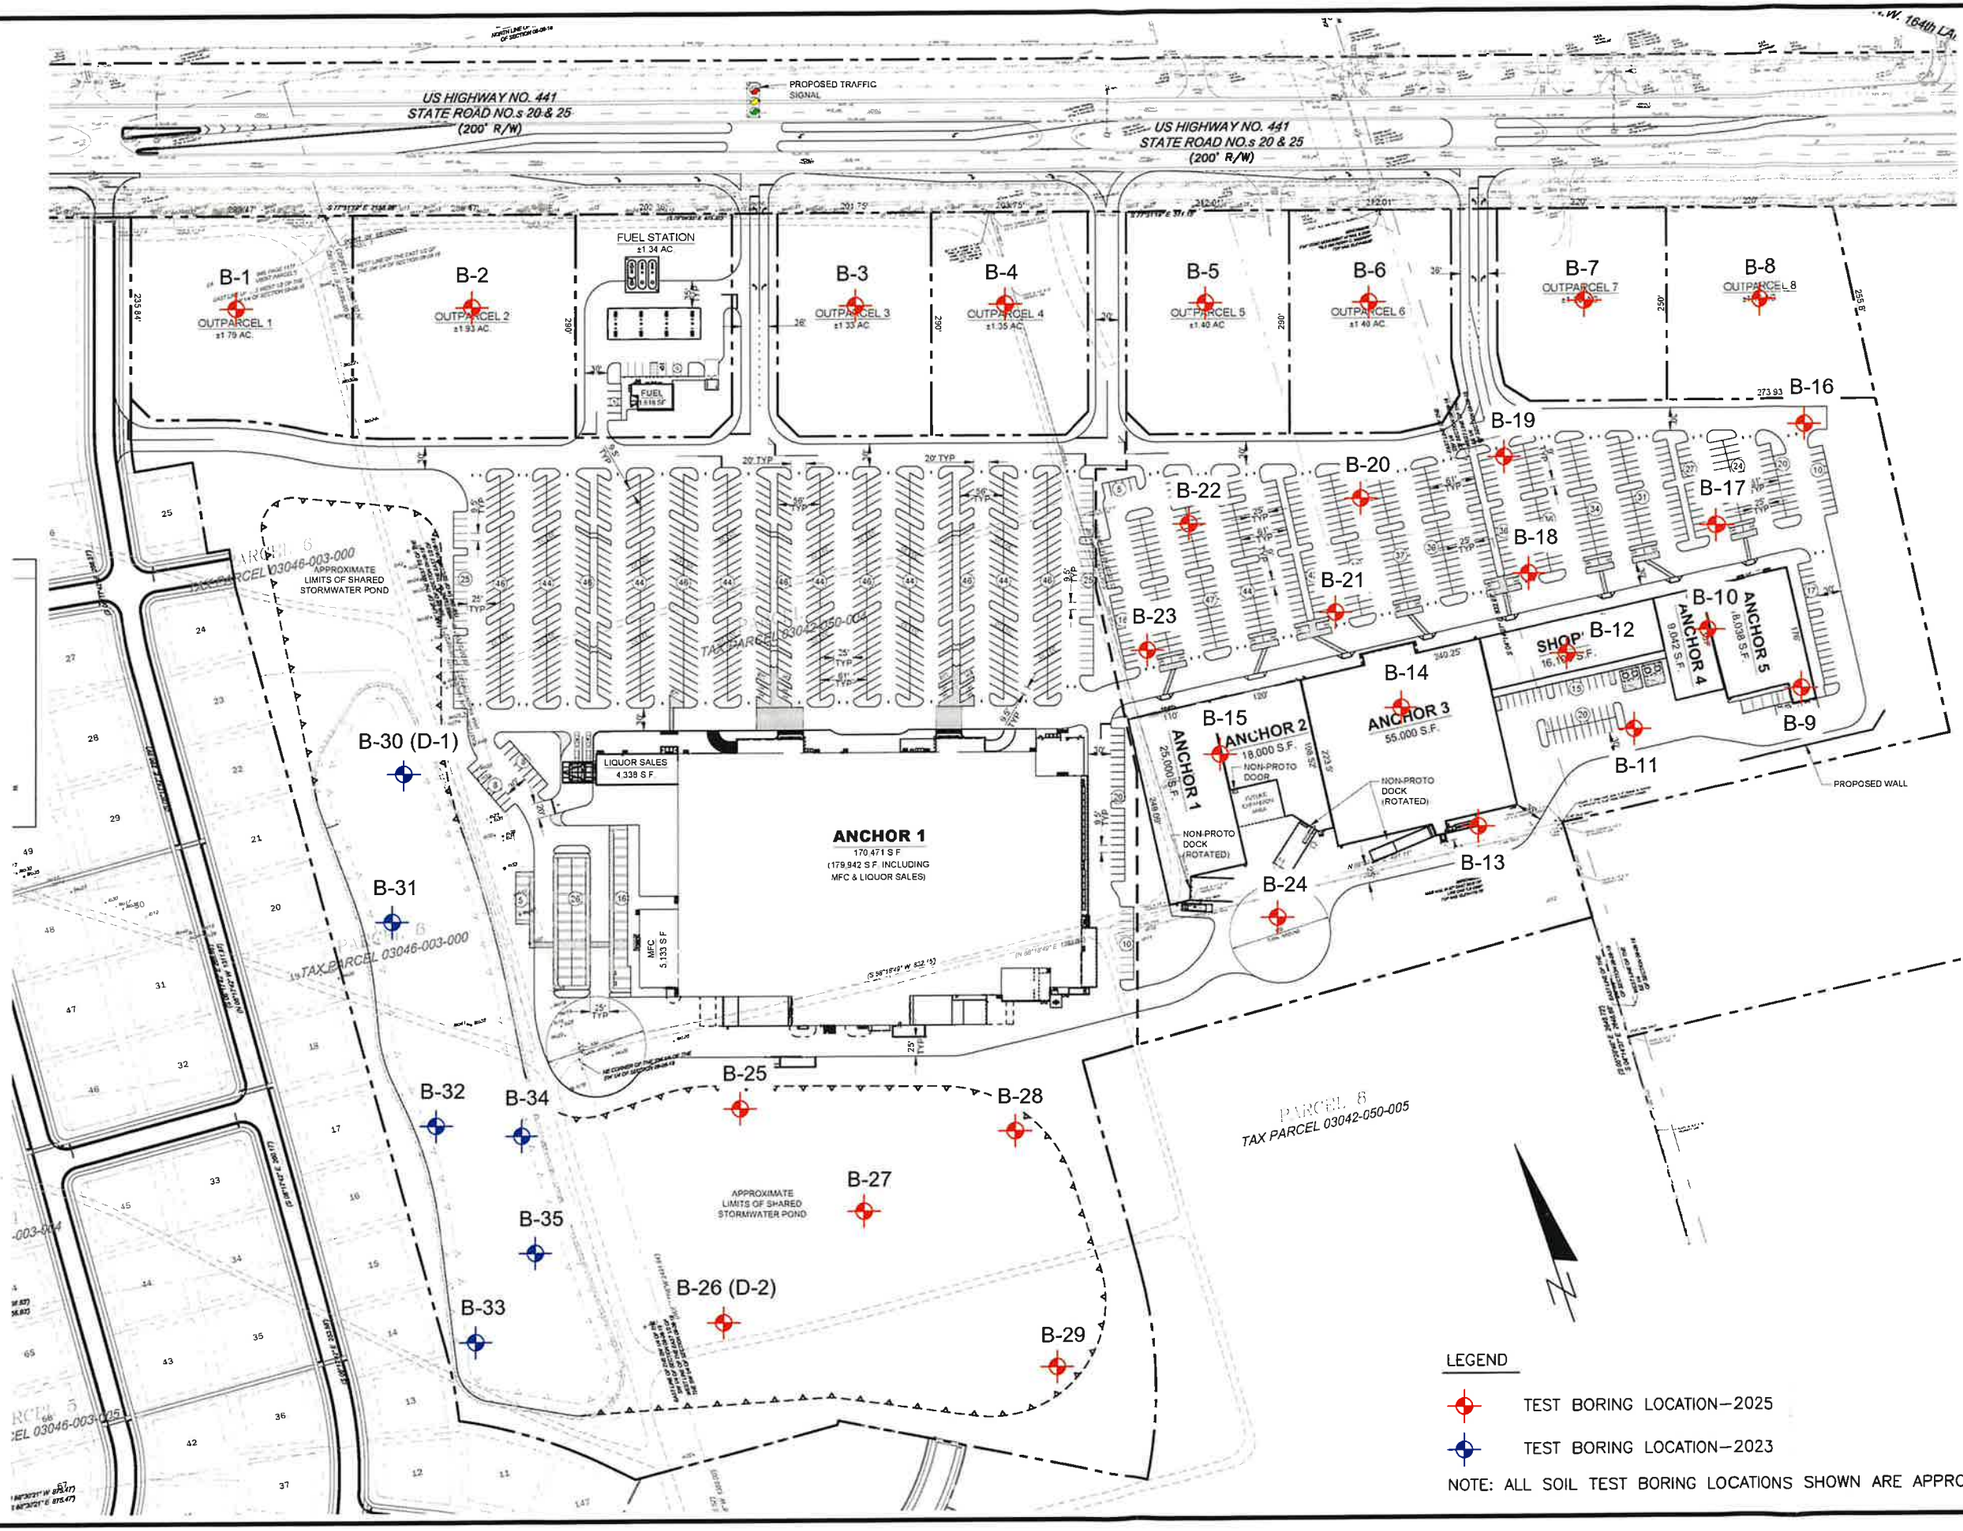
The recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated on the Boring Location Plan and from other information as referenced. This report does not reflect any variations that may occur between the boring locations. The nature and extent of such variations may not become evident until the course of construction. If variations become evident, it will then be necessary for a re-evaluation of the recommendations of this report after performing on-site observations and/or additional testing during the construction period and noting the characteristics of the variations.

Please note that this exploration was preliminary in nature, and was designed to help determine the presence of any near surface constraints which would significantly impact the intended development of the subject site, as well as affect the cost of construction. The information obtained from this exploration is not sufficient for final design of foundation systems, building and pavement grades, and stormwater ponds.

We strongly recommended that the information obtained from this preliminary exploration be supplemented with a more comprehensive subsurface exploration once the site plan have been finalized. Deeper soil borings are also required if you wish to evaluate the presence of deeper deposits of unsuitable soils on site. The foundations for the building and the pavement grades

should be designed based on the information obtained from a comprehensive geotechnical exploration program.

This report has not been prepared to meet the full needs of design professionals, contractors, or any other parties. Any use of this report without the guidance of the geotechnical engineer who prepared it constitutes improper usage which could lead to erroneous assumptions, faulty conclusions, and other problems.



During the early stages of most construction projects, geotechnical issues not addressed in this report may arise. Because of the natural limitations inherent in working with the subsurface, it is not possible for a geotechnical engineer to predict and address all possible problems. A GBA publication, "Important Information About Your Geotechnical Engineering Report" appears in Appendix C, and will help explain the nature of geotechnical issues. Further, we present documents in Appendix C: Constraints and Restrictions, to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

APPENDIX C

DESCRIPTION OF LABORATORY TESTING PROCEDURES

UNIFIED SOIL CLASSIFICATION - ASTM D-2487

This practice describes a system for classifying mineral and organo-mineral soils for engineering purposes based on laboratory determination of particle size characteristics, liquid limit, and plasticity index.

WASH 200 TEST - ASTM D-1140

The Wash 200 test is performed by passing a representative soil sample over a No. 200 sieve and rinsing with water. The percentage of the soil grains passing this sieve is then calculated.

FULL SIEVE GRADATION TEST – ASTM D-422

On occasion it is helpful to evaluate the overall compositional characteristics of a soil and the #200 sieve analysis is supplemented with a full grain size distribution. A set of sieves with varying mesh sizes is used to determine the gradation of the soil particle sizes.

MOISTURE CONTENT DETERMINATION - ASTM D-2216

Moisture content is the ratio of the weight of water to the dry weight of soil. Moisture content is measured by drying a sample at 105 degrees Celsius. The moisture content is expressed as a percent of the oven dried soil mass.

ATTERBERG LIMITS – ASTM D-4318

The Atterberg limits are the upper and lower limits of the range of water content over which a soil exhibits plastic behavior, and are defined as the liquid limit and plastic limit, respectively.

The liquid limit is estimated as follows: The soil is mixed with distilled water to form a thick paste, which is then placed in a brass cup mounted on an edge pivot and rests initially on a rubber base. The base is then leveled off horizontally and divided by cutting a groove with a standard tool. The two halves of the soil gradually flow together as the cup is repeatedly dropped onto its base at a specified rate. The liquid limit is defined as the water content at which 25 blows are required to close the groove over a distance of 1/2 inch.

The plastic limit is estimated as follows: The soil is mixed with distilled water until it can be molded. A ball of soil is then rolled into a thread 1/8 inch in diameter between the hand and a glass plate. The soil is molded together again and the process repeated until the thread cracks when its diameter is 1/8 inch. The water content of the soil at this state is determined and defined as the plastic limit.

ORGANIC CONTENT - ASTM D-2974

Ash content of a peat or organic soil sample is determined by igniting the oven dried sample from the moisture content determination in a muffle furnace at 440 degrees Celsius. The substance remaining after the ignition is the ash. The ash content is expressed as a percentage of the oven dried sample. Organic material is determined by subtracting the percent ash from 100.

PERMEABILITY OF GRANULAR SOILS (CONSTANT HEAD) - ASTM D-2434

In summary, this test method covers the determination of the coefficient of permeability by a constant-head method for the laminar flow of water through granular soils. The procedure is to establish representative values of the coefficient of permeability of granular soils that may occur in natural deposits. The constant head laboratory permeability test is performed by placing the soil sample in a tube (permeameter) and seating the sample on both ends with a porous disk. The tube and soil sample are then sealed and the soil sample is saturated. Once the soil sample has been saturated, a constant head water supply is run through the sample. A pair of manometer tubes is used to measure the pressure head change through the soil. Once the manometer tubes indicate steady state flow, test measurements of pressure head difference, quantity of flow, and time of flow are made. The data recovered from this test are then used to calculate Darcy's Coefficient of Permeability (k) of the soil.

SPECIFIC GRAVITY OF SOIL ASTM D-854

This test method determines the ratio of the mass of a unit volume of soil solids to the mass of the same volume of gas free distilled water at 20 degrees Celsius. Soil is placed into a calibrated pycnometer, water is added, and then the soil and water are de-aired. The specific gravity of the soil specimen is determined through the mass of the pycnometer and water, the calibrated mass of the dry pycnometer, the calibrated volume of the pycnometer, the density of the water at the test temperature, the mass of the oven dried soils, and the mass of the pycnometer water and soil solids at the test temperature.

APPENDIX C

DESCRIPTION OF FIELD TESTING PROCEDURES

DOUBLE RING INFILTROMETER - ASTM D-3385

The Double-Ring Infiltrometer test is performed in general accordance with the procedures outlined in the latest revision of ASTM D3385, "Infiltration Rate of Soils using Double Ring Infiltrometers". The out ring, approximately 24 inches in diameter, was driven to a depth of 6 inches below the test depth. The inner ring, approximately, 12 inches in diameter, was inserted inside the outer ring, centered, and driven to a depth of approximately 2 to 4 inches below the test depth. The 2 rings were filled simultaneously with 4 inches of water.

The water level was maintained throughout the test period, with the required amount of water added to maintain this level in both rings recorded at time intervals of 15 minutes. After reaching a stabilized inflow volume of water, the test was continued for approximately 120 minutes.

STANDARD PENETRATION TESTING – ASTM D-1586

Penetration tests were performed in accordance with ASTM Procedure D-1586, Penetration Test and Split-Barrel Sampling of Soils. This test procedure generally involves driving a 1.4-inch I.D. split-tube sampler into the soil profile in six inch increments for a minimum distance of 18 inches using a 140-pound hammer free-falling 30 inches. The total number of blows required to drive the sampler the second and third 6-inch increments is designated as the N-value, and provides an indication of in-place soil strength, density and consistency.

APPENDIX D

Important Information About Your Geotechnical Engineering Report
Constraint and Restrictions

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled*. No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be*, and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed*. The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only*. To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely*. Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures*. If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

CONSTRAINTS & RESTRICTIONS

The intent of this document is to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

WARRANTY

Universal Engineering Sciences has prepared this report for our client for his exclusive use, in accordance with generally accepted soil and foundation engineering practices, and makes no other warranty either expressed or implied as to the professional advice provided in the report.

UNANTICIPATED SOIL CONDITIONS

The analysis and recommendations submitted in this report are based upon the data obtained from soil borings performed at the locations indicated on the Boring Location Plan. This report does not reflect any variations which may occur between these borings.

The nature and extent of variations between borings may not become known until excavation begins. If variations appear, we may have to re-evaluate our recommendations after performing on-site observations and noting the characteristics of any variations.

CHANGED CONDITIONS

We recommend that the specifications for the project require that the contractor immediately notify Universal Engineering Sciences, as well as the owner, when subsurface conditions are encountered that are different from those present in this report.

No claim by the contractor for any conditions differing from those anticipated in the plans, specifications, and those found in this report, should be allowed unless the contractor notifies the owner and Universal Engineering Sciences of such changed conditions. Further, we recommend that all foundation work and site improvements be observed by a representative of Universal Engineering Sciences to monitor field conditions and changes, to verify design assumptions and to evaluate and recommend any appropriate modifications to this report.

MISINTERPRETATION OF SOIL ENGINEERING REPORT

Universal Engineering Sciences is responsible for the conclusions and opinions contained within this report based upon the data relating only to the specific project and location discussed herein. If the conclusions or recommendations based upon the data presented are made by others, those conclusions or recommendations are not the responsibility of Universal Engineering Sciences.

CHANGED STRUCTURE OR LOCATION

This report was prepared in order to aid in the evaluation of this project and to assist the architect or engineer in the design of this project. If any changes in the design or location of the structure as outlined in this report are planned, or if any structures are included or added that are not discussed in the report, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed and the conclusions modified or approved by Universal Engineering Sciences.

USE OF REPORT BY BIDDERS

Bidders who are examining the report prior to submission of a bid are cautioned that this report was prepared as an aid to the designers of the project and it may affect actual construction operations.

Bidders are urged to make their own soil borings, test pits, test caissons or other investigations to determine those conditions that may affect construction operations. Universal Engineering Sciences cannot be responsible for any interpretations made from this report or the attached boring logs with regard to their adequacy in reflecting subsurface conditions which will affect construction operations.

STRATA CHANGES

Strata changes are indicated by a definite line on the boring logs which accompany this report. However, the actual change in the ground may be more gradual. Where changes occur between soil samples, the location of the change must necessarily be estimated using all available information and may not be shown at the exact depth.

OBSERVATIONS DURING DRILLING

Attempts are made to detect and/or identify occurrences during drilling and sampling, such as: water level, boulders, zones of lost circulation, relative ease or resistance to drilling progress, unusual sample recovery, variation of driving resistance, obstructions, etc.; however, lack of mention does not preclude their presence.

WATER LEVELS

Water level readings have been made in the drill holes during drilling and they indicate normally occurring conditions. Water levels may not have been stabilized at the last reading. This data has been reviewed and interpretations made in this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, tides, and other factors not evident at the time measurements were made and reported. Since the probability of such variations is anticipated, design drawings and specifications should accommodate such possibilities and construction planning should be based upon such assumptions of variations.

LOCATION OF BURIED OBJECTS

All users of this report are cautioned that there was no requirement for Universal Engineering Sciences to attempt to locate any man-made buried objects during the course of this exploration and that no attempt was made by Universal Engineering Sciences to locate any such buried objects. Universal Engineering Sciences cannot be responsible for any buried man-made objects which are subsequently encountered during construction that are not discussed within the text of this report.

TIME

This report reflects the soil conditions at the time of exploration. If the report is not used in a reasonable amount of time, significant changes to the site may occur and additional reviews may be required.

GENERAL TERMS AND CONDITIONS

SECTION 1: BINDING AGREEMENT

1.1 By accepting the Proposal, Client accepts and agrees to be bound by all terms set forth in the Proposal and these General Terms and Conditions and any applicable addendum attached hereto. Client acknowledges and agrees that these General Terms and Conditions include certain state-specific terms and conditions that are applicable based on the location where the Services (as hereinafter defined) are to be performed. Attached hereto are State-Specific Addenda, each corresponding to a particular state or region.

1.2 If the Services are performed in Forida, Texas, California, Nevada, Oregon, Washington or Arizona, the State-Specific Addendum attached hereto **is** incorporated into and made a part of these General Terms and Conditions.

1.3 In the event of any conflict between these General Terms and Conditions and the terms of the applicable State-Specific Addendum, the terms of the State-Specific Addendum shall govern and control for Services performed in that state or region.

1.4 The Proposal and these General Terms and Conditions (collectively, the "Agreement") represent and contain the entire and only agreement and understanding among UES Professional Solutions, LLC, a Florida limited liability company and its affiliates (the "Company") and Client with respect to the subject matter of this Agreement and supersede any and all prior and contemporaneous oral and written agreements, understandings, representations, inducements, promises, warranties, and conditions among the parties.

SECTION 2: SERVICES

2.1 The Company is responsible for providing the services described under the Scope of Services ("Services") of the Proposal to which these General Terms and Conditions form a part. The term "the Company" as used herein includes all the Company's agents, employees, professional staff, and subcontractors.

2.2 The Company shall provide revised or additional services, including changes to the Services necessary due to changed or unforeseen conditions, only in accordance with a written addendum or change order (collectively, "Change Order") to the Agreement agreed to by the Company and Client, and only to the extent set forth in that Change Order.

2.3 The Company shall not be responsible for any delays, fees or costs associated with adverse or unusual weather conditions that prevent the Services from being safely conducted.

2.4 The Company shall provide the personnel, equipment, Level D personal protective equipment (as defined by the Occupational Safety and Health Administration ("OSHA"), and other materials necessary to provide the Services. The Company, at its sole discretion, may retain subcontractors or other third parties to assist it in the provision of the Services.

2.5 The terms "Project" and "Site" as used interchangeably in these General Terms and Conditions refer to the land and/or construction project on which or to which the Company is to provide Services under this Agreement.

2.6 The Company shall perform all Services hereunder as an independent contractor, and nothing contained herein shall be deemed to create any association, partnership, joint venture, or relationship of principal and agent or master and servant, or employer and employee between the parties hereto or any affiliates or subsidiaries thereof, or to provide either party with the right, power or authority, whether express or implied, to create any such duty or obligation on behalf of the other party.

SECTION 3: PROFESSIONAL STANDARD OF CARE

3.1 The Company will provide its Services under this Agreement in a manner consistent with the level of professional care and skill ordinarily exercised by similar professionals practicing contemporaneously under similar conditions in the locality of the Project. NO OTHER WARRANTY CONCERNING THE SERVICES THE COMPANY PROVIDES UNDER THE AGREEMENT OR ANY ADDENDUM OR CHANGE ORDER, EXPRESS OR IMPLIED, IS MADE, AND ALL OTHER WARRANTIES, INCLUDING THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY DISCLAIMED TO THE FULL EXTENT PERMITTED BY APPLICABLE LAW.

3.2 Client understands that subsurface investigations may involve drilling, boring, excavating or sampling through varied subsurface soil and water strata which, consistent with the prevailing standard of professional care, may result in the unavoidable or inadvertent cross-mingling of soil and water and any hazardous substances or constituents contained in them, and that this risk cannot be eliminated despite the exercise of professional care. IF SUBSURFACE INVESTIGATIONS ARE PART OF THE SERVICES, CLIENT WAIVES ANY CLAIM AGAINST THE COMPANY, AND SHALL INDEMNIFY, DEFEND, AND HOLD THE COMPANY HARMLESS FROM ANY CLAIM OR LIABILITY FOR INJURY OR LOSS ARISING FROM CROSS-CONTAMINATION RELATED TO SUCH SUBSURFACE EXPLORATIONS.

3.3 The Company will take reasonable precautions to minimize damage to the Site, but it is understood by Client that, in the normal course of the provision of the Services, including sampling or drilling, some damage to, or alteration of the Site is possible. The repair of such damage shall not be part of the Services unless explicitly specified in writing in the Agreement.

3.4 Execution and delivery of this Agreement by the Company is not a representation that the Company has visited the site, become generally familiar with local conditions under which the work is to be performed, or correlated personal observations with the requirements of the Scope of Services.

3.5 Client's payment in full of the amount owed for Services rendered shall be taken to mean that Client is satisfied with and has accepted the Company's Services.

SECTION 4: RESPONSIBILITIES

4.1 Client is responsible for providing the Company with a clear understanding of the project's nature and scope. Client shall supply the Company with sufficient and adequate information, including, but not limited to, maps, site plans, reports, surveys, plans and specifications, and designs, to allow the Company to properly complete the Services. Client assumes all liability for information not provided to the Company that may affect the quality or sufficiency of the Services.

4.2 Client acknowledges that the Company's responsibilities in providing the Services is limited to those services described in the Proposal, and the Client hereby assumes any collateral or affiliated duties necessitated by or for those Services. Such duties may include, but are not limited to, the provision of any required notices to any third party, or the securing of necessary permits or permissions from any third parties required for the Company's provision of the Services.

SECTION 5: SITE ACCESS AND SITE CONDITION

5.1 Client will grant or obtain at its expense lawful and safe access to the Site as needed for the Company to perform the Services and will notify all affected persons and entities in writing of the Company's presence. The access shall be adequate to allow the Company to conduct the Services, including bringing and storing equipment and tools on the Site and any necessary access to exterior and interior areas. The Company shall not be responsible for any delays, fees or costs caused by delayed or restricted access that prevents or slows the delivery of the Services. If the Site is not owned or operated by Client or the Client does not otherwise have the authority to grant the Company lawful access, Client shall be responsible for obtaining, at its own expense, an access agreement for the Site and any facilities located thereon and are necessary to perform the Services. The Company reserves the right to delay, without penalty, any Site visit and the provision of Services if a site access agreement, in the Company's reasonable judgment and discretion, would impose conditions, liabilities or risks on the Company in excess of those set forth in these General Terms and Conditions or the Agreement. IF THE SITE IS NOT OWNED BY CLIENT, CLIENT AGREES TO DEFEND, RELEASE, AND HOLD THE COMPANY, INCLUDING ITS OFFICERS, DIRECTORS, SHAREHOLDERS, EMPLOYEES, AGENTS, AFFILIATES AND SUCCESSORS (THE "COMPANY INDEMNITEES") HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ALLEGED BY THE SITE OWNER OR THE SITE OWNER'S EMPLOYEES, AGENTS, CONTRACTORS OR OTHER PERSONS OR ENTITIES ARISING FROM THE COMPANY'S PERFORMANCE OF SERVICES AT SUCH SITE.

5.2 Client shall be responsible for the safety of the Site where the Project is conducted and for providing a safe environment for the Company to provide the Services. The Company shall be responsible for the safe and compliant conduct of its personnel at the Site and shall also comply with the reasonable and lawful work rules for the Site. As required by applicable laws, the Company will prepare a site-specific Health and Safety Plan (HASP) applicable to its personnel for the Services provided at the Site. The Company shall not be responsible for the safety of other personnel at the Site, nor shall it be responsible for ensuring that the Site complies with environmental, health and safety laws, or reporting any unsafe conduct or non-compliance that it may observe. If the Company encounters conditions at the Site that are unsafe for its personnel, it reserves the right at its sole discretion to suspend or halt work until such conditions are cured. The Company shall not be responsible for any fees, costs or damages associated with any safety-related delays. Unless otherwise provided for in the Agreement, the Company shall not work in conditions that require personal protective equipment beyond that classified as Level D by OSHA, unless otherwise identified in the Proposal.

5.3 Client is responsible for accurately identifying to the Company in writing the existence and location of all subterranean structures and utilities on or affecting the Site and the Services. The Company will take reasonable precautions to avoid affecting subterranean structures and utilities disclosed to it in writing by Client. If included in the Agreement, Client may authorize the Company to conduct applicable private utility identification and clearance requirements on behalf of Client.

5.4 Unless otherwise stated in the Proposal, any soil or groundwater monitoring activities that are included in the Services are based on the assumption that soil borings and monitoring wells can be installed using standard truck-mounted drilling equipment, the locations are accessible to such equipment, and that surface conditions at each location consists of non-reinforced asphalt or concrete not exceeding six (6) inches in thickness and no concrete or asphalt cutting will be required. If the Company encounters materially different conditions at the Site, the Company shall inform Client, and a Change Order shall be agreed to that addresses any changes in schedule, fees or costs associated with the changed conditions.

SECTION 6: HAZARDOUS SUBSTANCES AND ENVIRONMENTAL CONDITIONS

6.1 Client represents it has informed the Company of all known or suspected Hazardous Substances on, under or near the Site of which it is aware, and that it has provided the Company with all studies, reports, investigations, or similar documents in its possession about the environmental conditions at the Site, including any documents and correspondence involving Federal, State or local environmental, health or safety regulatory notifications.

6.2 For purposes of the Agreement and these General Terms and Conditions, the term "Hazardous Substances" includes materials defined or regulated as hazardous substances, hazardous materials, hazardous wastes, hazardous constituents, solid wastes, pollutants, or toxic substances under any Federal, State or local environmental, health, safety or natural resources law, statute, regulation or ordinance, including but not limited to petroleum products, polychlorinated biphenyls, per- and polyfluoroalkyl substances, asbestos, and any other material or substance listed or identified by the United States Environmental Protection Agency or any similar State or local agency as presenting a potential danger to health, safety or the environment.

6.3 Except to the extent required by law, the Company shall not be responsible for making any disclosures to governmental agencies or the Site owner regarding the presence or release of Hazardous Substances on, under, from or around a Site.

6.4 **FOR ENVIRONMENTAL INVESTIGATION, GEOTECHNICAL AND REMEDIATION PROJECTS,** the discovery of Hazardous Substances or other environmental conditions on, under or near the Site not contemplated within the Services may constitute a changed condition, necessitating a Change Order. Although unlikely, Client acknowledges that such a discovery of Hazardous Substances may make it necessary for the Company to take immediate measures to protect the health and safety of its employees and other persons, or to arrange for others to do so, including and up to delaying or terminating work. Client agrees to compensate the Company for all expenses incurred or caused by the discovery of unanticipated Hazardous Substances or environmental conditions encountered at the Site, including but not limited to those related to worker protection and exposure, emergency response actions and equipment decontamination.

6.5 **FOR ENVIRONMENTAL INVESTIGATION AND REMEDIATION PROJECTS,** all substances on, in, or under Site, or obtained from Site as samples or as byproducts of the sampling process, shall be Client's property. The Company shall not be required to sign or certify a waste manifest, disposal ticket, or similar document relating to the transportation or disposal of wastes or Hazardous Substances. the Company may serve as Agent for Client if requested under a separate agreement and authorization. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances and shall not be so identified on any document.

FOR GEOTECHNICAL PROJECTS, all substances on, in, or under the Site, or obtained from the Site as samples or as byproducts of the sampling process, shall be Client's property. Unless otherwise expressly specified in the Agreement or the Services, the characterization, management and disposition of substances, including Hazardous Substances, generated during the Services (including, but not limited to, wastes, samples, produced soils or fluids, cuttings, or protective gear or equipment, etc.) is the sole responsibility of Client. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not and shall not be identified as a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances on any document. Unless specifically provided for in the Agreement, the Company shall not have any responsibilities with respect to the storage or preservation of samples, and Client agrees that the Company is not responsible or liable to Client for any loss of samples that are shipped to a testing facility or retained in storage.

6.6 The Company shall not have custody of any monitoring wells or permanent sampling locations installed as part of the Project, and shall not be responsible for proper maintenance, repair, or closure of such wells, unless otherwise provided for in the Agreement.

6.7 CLIENT AGREES TO DEFEND, INDEMNIFY, RELEASE, AND HOLD THE COMPANY INDEMNITEES HARMLESS FROM ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES (INCLUDING ATTORNEY'S FEES AND CONSULTANTS' FEES, COSTS OF DELAY OF THE SERVICES, AND ANY COSTS ASSOCIATED WITH POSSIBLE REDUCTION TO THE VALUE OF THE PROJECT OR THE SITE IN WHICH IT IS SITUATED) ARISING FROM (I) THE COMPANY'S DISCOVERY OF OR ITS EMPLOYEES' OR SUBCONTRACTORS' EXPOSURE TO HAZARDOUS SUBSTANCES OR SUSPECTED SUBSTANCES RELATED TO THE SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE ACTS, OMISSIONS OR WILLFUL MISCONDUCT; (II) ANY DISCLOSURES THE COMPANY IS REQUIRED TO MAKE BY LAW REGARDING HAZARDOUS SUBSTANCES OR ENVIRONMENTAL CONDITIONS AT A SITE; (III) ANY CLAIMS MADE ALLEGING THAT (A) THE COMPANY IS AN OWNER OR OPERATOR OF THE SITE AT WHICH THE SERVICES ARE RENDERED; (B) THE COMPANY IS THE GENERATOR, STORER OR TREATER OF HAZARDOUS SUBSTANCES AT SUCH SITE; OR (C) THAT THE COMPANY ARRANGED FOR THE TRANSPORTATION OR DISPOSAL OF ANY HAZARDOUS SUBSTANCES FROM THE SITE; (IV) ANY VIOLATION BY CLIENT OF ANY FEDERAL, STATE OR LOCAL LAW, REGULATION, ORDER, DECREE OR ORDINANCE RELATED TO HAZARDOUS SUBSTANCES; OR (V) ANY CLAIMS MADE BY THIRD-PARTIES WITH RESPECT TO ALLEGED EXPOSURES TO OR DAMAGES CAUSED BY HAZARDOUS SUBSTANCES AT OR FROM THE SITE OR DURING OR RELATED TO ANY PROJECT OR THE PROVISION OF SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE OR WILLFUL MISCONDUCT.

SECTION 7: REVIEWS, INSPECTIONS, TESTING, AND OBSERVATIONS

7.1 If the Services include oversight, monitoring or observation of work being conducted by third parties (other than the Company subcontractors), such Services shall be conducted solely to determine that the work being overseen, monitored, or observed is in general conformity to the contractual requirements between Client and such third parties. Client shall have sole responsibility and authority to reject, suspend or stop the work of such third parties, or modify or terminate any agreement between Client such third parties.

7.2 The Company shall not have the responsibility or authority to stop, suspend, or modify the work of such third parties, and does not guarantee that work it inspects conforms in all respects to the design, or to applicable laws, statutes, regulations, rules or codes, and it shall have no liability for design or construction defects, or the failure of Client's designers or contractors to comply with their contractual obligations.

7.3 Neither the activities of the Company pursuant to this Agreement, nor the presence of the Company or its employees, representatives, or subcontractors on the Project Site, shall be construed to impose upon the Company any responsibility for means or methods of work performance, superintendence, sequencing of construction, or safety or environmental conditions or compliance at the Project Site. Client acknowledges that Client or its contractor is solely responsible for Project jobsite safety and compliance with environmental, health and safety laws.

7.4 Client is responsible for scheduling all inspections and construction materials testing ("CMT") activities of the Company. The Company will not be responsible for tests and inspections that it does not perform due to Client's failure to timely schedule work. Client shall at the time of execution of the Agreement provide the Company with a proposed schedule for tests and inspections the Company shall perform. Client will give reasonable notice of all changes to that schedule. The Company shall not be required to conduct any tests or inspections on less than 72 hours written notice, nor after normal business hours or on weekends or holidays.

SECTION 8: BILLING AND PAYMENT

8.1 The Company will submit invoices to Client monthly or upon completion of Services. Invoices will show charges for different personnel and expense classifications. Partially completed items of work for which a fee has been specified may be billed based upon the percentage of completion as estimated by the Company. Reimbursable expenses, those outside of the scope of the proposed Services, will be charged to the Client at cost plus an applicable fee. Payment is due 30 days after presentation of invoice and is past due 31 days from invoice date. Client agrees to pay a finance charge of the lesser of one and one-half percent (1 ½ %) per month, or the maximum rate allowed by law, on past due accounts. If the Company incurs any expenses to collect overdue billings on invoices, the sums paid by the Company for reasonable attorneys' fees, court costs, the Company's time, the Company's expenses, and interest will be

due and owing by the Client. Client agrees that the Company may refuse to release to Client any reports, findings, data, and other work product until it has been paid in full for Services rendered.

Section 9: Ownership and Use of Documents; Intellectual Property

9.1 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, as instruments of service, shall remain the property of the Company. Neither Client nor any other entity shall change or modify the Company's instruments of service. The Company disclaims any and all responsibility and liability for problems that may occur during implementation of the Company's plans, specifications, or recommendations when Company is not retained to observe such implementation. The Company will retain all pertinent records relating to the Services for a period of "five years or such longer period" of time required by applicable accrediting agency, unless specified in the Scope of Services following submission of the report or completion of the Services, during which period the records will be made available to the Client in a reasonable time and manner, subject to payment of a reasonable fee for the time of the Company's employees to assemble and transmit those documents.

9.2 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, are prepared for the sole and exclusive use of Client, and may not be given to any other entity, or used or relied upon by any other entity, without the express written consent of the Company. Such written consent may take the form of a "reliance letter" which must be agreed to by such other person or entity to whom the Services and instruments of service may be disclosed, and for which a separate fee will be charged. The Company shall be entitled to injunctive relief preventing/prohibiting any disclosure, reliance or attribution prohibited hereunder, and CLIENT SHALL RELEASE, INDEMNIFY, DEFEND, AND HOLD HARMLESS THE COMPANY FROM ANY LOSSES ARISING FROM OR RELATED TO SUCH UNAUTHORIZED DISCLOSURE, ATTRIBUTION OR RELIANCE. Client is the only entity to which the Company owes any duty or duties, in contract or tort, pursuant to or under this Agreement.

9.3 The Company shall retain sole and exclusive ownership of all ideas, concepts, theories, improvements, designs, original works of authorship, formulas, processes, models, software, algorithms, inventions, know-how, techniques, compositions of matter and any other information owned by the Company prior to the date of this Agreement or created or modified by the Company during the provision of the Services.

9.4 Each party may disclose to the other party certain information that it considers to be confidential ("Confidential Information") provided such information is disclosed in writing and clearly marked or, if orally disclosed, promptly thereafter reduced to writing and clearly marked "Confidential." In no event shall Confidential Information include information that: (a) is or becomes publicly available other than through a breach of the Agreement; (b) is known to the party receiving such information prior to disclosure or is independently developed by such party subsequent to such disclosure without reference to Confidential Information provided hereunder; or (c) is subsequently lawfully obtained by the party receiving such information from a third party without obligations of confidentiality. Each party agrees that it (a) will not disclose or divulge the other party's Confidential Information to any person, (b) will not use the other party's Confidential Information for its own benefit or the benefit of others, (c) will employ at least the same degree of care in protecting Confidential Information as it employs in protecting its own confidential information, and (d) will, upon termination of the Agreement, or at any time at the request of the other party, return to the other party or destroy all copies of the other party's Confidential Information. Notwithstanding the foregoing, each party may disclose the other party's Confidential Information to its employees, subcontractors and authorized agents who have a need to know such confidential information to fulfill its obligations under this Agreement. In the event a party receives a subpoena or other validly issued administrative or judicial process requesting the disclosure of the other party's Confidential Information, such party will promptly notify the other party and tender to it the defense of such demand and will cooperate (at the other party's expense) with the defense of such demand. Unless the demand shall have been timely quashed or extended, the party receiving the demand shall thereafter be entitled to comply with such demand when and to the extent required by law.

Section 10: Risk Allocation and Indemnification

10.1 CLIENT AGREES THAT THE COMPANY'S LIABILITY FOR ANY DAMAGE ON ACCOUNT OF ANY BREACH OF CONTRACT, ERROR, OMISSION, OR PROFESSIONAL NEGLIGENCE WILL BE LIMITED TO A SUM NOT TO EXCEED THE GREATER OF $50,000 OR THE COMPANY'S FEE. If Client prefers to have higher limits on contractual or professional liability, the Company agrees to increase the limits up to a maximum of (i) $1,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of five percent of the total fee for Services or $1,000.00, or (ii) . $2,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of ten percent of the total fee for Services or $2,000.00. The additional charge for the higher liability limits is because of the greater risk assumed and is not strictly a charge for additional contractual or professional liability insurance.

10.2 CLIENT SHALL NOT BE LIABLE TO THE COMPANY AND THE COMPANY SHALL NOT BE LIABLE TO CLIENT FOR ANY PUNITIVE, INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS, LOSS OF USE, AND LOST SAVINGS) INCURRED BY EITHER PARTY DUE TO THE FAULT OF THE OTHER, REGARDLESS OF THE NATURE OF THE FAULT, OR WHETHER IT WAS COMMITTED BY CLIENT OR THE COMPANY, THEIR EMPLOYEES, AGENTS, OR SUBCONTRACTORS; OR WHETHER SUCH LIABILITY ARISES IN BREACH OF CONTRACT OR WARRANTY, TORT (INCLUDING NEGLIGENCE), STATUTORY, OR ANY OTHER CAUSE OF ACTION.

10.3 As used in this Agreement, the terms "claim" or "claims" mean any claim in contract, tort, or statute alleging negligence, errors, omissions, strict liability, statutory liability, breach of contract, breach of warranty, negligent misrepresentation, or any other act giving rise to liability.

10.4 Subject to the provisions of the limitation of liability described in this Section, Client and the Company each agree to indemnify and hold harmless the other party and the other party's affiliated companies, officers, directors, partners, employees, and representatives, from and against losses, damages, and judgments, including reasonable attorneys' fees and expenses recoverable under applicable law, but only to the extent they are legally determined to be caused by a negligent act, error, or omission of the indemnifying party or any of the indemnifying party's officers, directors, members, partners, agents, employees, or subconsultants in the performance of Services. If claims, losses, damages, and judgments are legally determined to be caused by the joint or concurrent negligence of Client and the Company, they shall be borne by each party in proportion to its negligence.

10.5 Notwithstanding any other term or provision in this Agreement, in recognition of the relative risks, rewards and benefits of the work being performed by the Company to both the Client and the Company, the risks have been allocated such that the Client agrees and acknowledged that, to the fullest extent permitted by law, the total liability of the Company to the Client for any and all injuries, claims, losses, expenses, damages or claim expenses arising out of this Agreement from any cause or causes of action whatsoever, whether arising out of contract, negligence, strict liability in tort, or warranty, shall not exceed the amount specified in Section 10 of the General Terms and Conditions.

Section 11: Insurance

11.1 The Company represents it has Worker's Compensation insurance in force, that it has commercial general liability coverage in the amount of $1,000,000.00 per occurrence and has professional liability insurance in the amount of $1,000,000.00 per claim.

11.2 Client shall maintain such insurance as is necessary to fully underwrite Client's defense and indemnity obligations set forth herein, and shall, upon request by the Company, provide proof to the Company to verify such insurance.

Section 12: Dispute Resolution

12.1 All claims, disputes, and other matters in controversy between the Company and Client arising out of or in any way related to this Agreement or any Addendum or Change Order shall be decided by binding arbitration in accordance with the Construction Industry Rules of the American Arbitration Association then obtaining, and judgment on the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof. Notwithstanding the foregoing, the Company shall not be required to arbitrate any legal and/or equitable claims (including statutory and equitable liens) for collection of monies due. The successful party in any such action will be entitled to recover its reasonable attorneys' fees, expert witness fees, and other claim-related expenses and court costs incurred, and also the time value at prevailing rates of its employees reasonably incurred in prosecuting or defending the claims, with any claims against the Company subject to the limitations in Section 10. For the purposes hereof, "successful party" shall mean a party who receives an award greater than fifty (50%) percent of its claimed amount.

12.2 The sole and exclusive venue for any dispute resolution proceeding shall be the location in which the Company office performing the Services is located. This Agreement shall be governed by and construed in accordance with the laws of the jurisdiction in which the Company office performing the Services is located.

12.3 Notwithstanding the foregoing, all claims, including for negligence or any other cause whatsoever that the Client has or claims to have against the Company, shall be deemed waived unless (i) Client notifies the Company of the claim or claims within thirty (30) days of discovery thereof, and (ii) if the Client contends that a claim exists against the Company for negligence

or another violation of a standard of care owed by the Company, Client has first provided the Company with a written certification executed by an independent design professional currently practicing in the same discipline as the Company. The certification shall: a) identify the name of the professional; b) specify each and every act or omission that the certifier contends is a violation of the standard of care identified in this Agreement; and c) state in complete detail the basis for the certifier's opinion that each such act or omission constitutes such a violation. This certificate shall be provided to the Company not less than thirty (30) calendar days prior to the institution of any arbitration or judicial proceeding.

12.4 NOTWITHSTANDING THE FOREGOING, THE COMPANY SHALL HAVE NO LIABILITY FOR ANY CLAIM DISCOVERED BY CLIENT MORE THAN ONE YEAR AFTER DELIVERY OF THE LAST ISSUED REPORT BY THE COMPANY FOR THE SERVICES. THE PARTIES AGREE THAT THIS PROVISION IS MATERIAL TO THE DECISION OF THE COMPANY TO ENTER INTO THIS AGREEMENT, THAT IT IS A REASONABLE MEASURE TO ALLOCATE AND INSURE AGAINST RISK, AND THAT IT DOES NOT VIOLATE PUBLIC POLICY.

Section 13: Termination

13.1 This Agreement may be terminated by either party upon seven (7) days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof, or in the case of a force majeure event such as terrorism, act of war, public health or other emergency. Such termination shall not be effective if such substantial failure or force majeure has been remedied before expiration of the period specified in the written notice. In the event of termination, the Company shall be paid for services performed to the termination notice date plus reasonable out of pocket termination expenses incurred or paid by the Company in connection with such termination and the winding down of its operations.

13.2 In the event of termination, or suspension for more than three (3) months, prior to completion of all reports contemplated by this Agreement, the Company may complete such analyses and records as are necessary to complete its files and may also complete a report on the Services performed to the date of notice of termination or suspension. The expense of termination or suspension shall include all direct out of pocket costs incurred or paid by the Company in completing such analyses, records, and reports.

Section 14: Solicitation of Employees

14.1 Client agrees that during the term of the Agreement, and for a period of one (1) year after the last date on which the Company has provided Services, Client shall not, directly or indirectly, solicit or attempt to solicit for employment, or contract directly or indirectly with, any employee of the Company except as authorized in writing by the Company.

Section 15: Assigns

15.1 Neither Client nor the Company may assign this Agreement or assign or delegate any of its rights or obligations without the prior written consent of the other party.

Section 16: Survival

If any of the provisions of this Agreement is held by a court of competent jurisdiction to be illegal, invalid, or unenforceable, the enforceability of the remaining provisions will not be impaired and will survive. Limitations of liability and indemnities will survive termination of this Agreement for the period of all applicable statutes of limitations to which they relate.

Section 17: Miscellaneous

17.1 This Agreement may not be amended or modified except by an agreement in writing signed by the party against whom the enforcement of any modification or amendment is sought.

17.2 Failure by either party at any time to enforce any obligation by the other party, to claim a breach of any term of the Agreement or to exercise any power agreed to hereunder will not be construed as a waiver of any right, power or obligation under the Agreement, will not affect any subsequent breach, and will not prejudice either party as regards any subsequent action.

17.3 The headings in these General Terms and Conditions are for reference only and are not intended to form part of the Agreement between the Parties.

17.4 It is agreed that this Agreement is entered into by the parties for the sole benefit of the parties to the Agreement, and that nothing in the Agreement shall be construed to create a right or benefit for any third party.

17.5 To the extent that a statute of limitations for any cause of action against the Company arising from this Agreement can be modified contractually in accordance with law, and the relevant statute of limitations for any claim arising of or relating to this Agreement, or the Services provided by Company r, is greater than two (2) years, the relevant statute of limitations shall be two (2) years from the date Company last provided Services. The parties agree that this provision is material to the decision of Company to enter into this agreement, that it is a reasonable measure to allocate and insure against risk, and that it does not violate public policy. This section shall not be construed as an agreement to increase the statute of limitations for any causes of action that are otherwise barred by law.

17.6 All future services rendered by the Company at Client's request for the Project described in the Proposal (whether by Change Order, Addendum, or amendment to this Agreement) shall be conducted under the terms of this Agreement.

CLIENT APPROVAL

In the event the Client authorizes work without returning a signed copy of the Proposal, the Client agrees to be bound by the General Terms and Conditions as stated herein. The Proposal presented has been read, understood, and accepted by the Client effective as of the date that the executed Proposal is returned to the Company.

STATE-SPECIFIC ADDENDUM – FLORIDA

SECTION 1: ADDENDUM TO AGREEMENT

1.1 This Florida addendum (this "Addendum") is made and entered into by and between the Company and Client and is effective as of the date of execution of the Agreement if the Services are performed in the State of Florida, and this Addendum is incorporated into and made a part of the General Terms and Conditions solely with respect to the Services covered by this Addendum.

SECTION 2: INDEMNITY

2.1 IN **ADDITION TO AND NOTWITHSTANDING ANY OTHER PROVISION IN THIS AGREEMENT**, CLIENT AGREES, TO THE FULLEST EXTENT PROVIDED BY LAW, TO RELEASE, DEFEND (WITH COUNSEL REASONABLY ACCEPTABLE TO THE COMPANY), INDEMNIFY, AND HOLD THE COMPANY INDEMNITEES HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES FROM OR BY ANY PERSON OR ENTITY ARISING FROM (1) ACTS OR OMISSIONS BY CLIENT, CLIENT'S AGENTS, STAFF, AND OTHERS EMPLOYED BY OR CONTRACTED TO CLIENT, INCLUDING ARCHITECTS, ENGINEERS, CONTRACTORS, SUBCONTRACTORS, AND CONSULTANTS, WHETHER OR NOT THE COMPANY IS RESPONSIBLE IN PART FOR THE ACTS OR OMISSIONS FOR WHICH CLIENT IS INDEMNIFYING THE COMPANY AND (2) THE PROVISION OF THE SERVICES BY THE COMPANY EXCEPT TO THE EXTENT CAUSED BY THE COMPANY'S GROSS NEGLIGENCE OR WILLFUL MISCONDUCT, SUCH EXCEPTION SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.2 THE COMPANY AGREES TO INDEMNIFY, AND HOLD CLIENT HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ARISING TO THE EXTENT SOLELY FROM THE GROSS NEGLIGENCE OR WILLFUL MISCONDUCT BY THE COMPANY IN THE PROVISION OF THE SERVICES, SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.3 To the extent either party's damages are covered by available insurance, Client and the Company waive all rights of subrogation against each other and against the contractors, subcontractors, consultants, agents, and employees of the other, except such rights as they may have to the proceeds of such insurance.

SECTION 3: INDIVIDUAL LIABILITY (5 POINTS LARGER THAN ADJACENT TEXT)

3.1 **PURSUANT TO FLORIDA STAT. 558.0035, AN INDIVIDUAL EMPLOYEE OR AGENT OF THE COMPANY MAY NOT BE HELD INDIVIDUALLY LIABLE FOR NEGLIGENCE.**

UES Project No. A25140.00683.005 UES Report No. 2162758

Dear Mr. Berry:

UES Professional Solutions, LLC has completed the subsurface exploration at the above referenced site in Alachua, Alachua County, Florida. The preliminary exploration was conducted in general accordance with authorized proposal 2162534, dated February 13, 2026. This preliminary exploration was performed in accordance with generally accepted soil and foundation engineering practices and ; "Geotechnical Investigation Specifications and Report Requirements" dated September 25, 2018.

The following report presents the results of our preliminary field exploration and a geotechnical engineering interpretation of those results with respect to the project characteristics provided to us. Included are: general recommendations for site preparation procedures, foundation design parameters, pavement design and subgrade preparation. This preliminary report is provided to assist your project feasibility schedule. The initial and final geotechnical report will formalize the subsurface findings and provide test borings, and recommendations. We appreciate the opportunity to have worked with you on this project and look forward to a continued association. Please contact us if you have any questions, or if we may further assist you as your plans proceed.

EXECUTIVE SUMMARY

We have prepared this executive summary as a general overview. Please refer to, and rely on, the full report for information about findings, recommendations, and other considerations.

Project Location and Description

The proposed will be a prototype C-171-SGR-QR and will be approximately 170,471 square feet, with truck well, associated drives and parking areas, and a gas station. The project site will be located adjacent to the southeast corner of US HWY 441 and NW 118th Street in Alachua, Alachua County, Florida. The site is currently undeveloped.

Finish floor elevation for the proposed will be set at 102 feet. We anticipate, within the building area, a significant amount of cut and fill (up to 3 feet of cut and 10 feet of fill) will be required to achieve the proposed finish floor elevation. Existing elevations within the proposed building footprint range from approximately 105 feet to 92 feet NAVD. Additionally, we anticipate significant amounts of cut and fill to achieve the proposed parking and drive grades,with up to 4 feet of cut or nine feet fill being expected in the surrounding pavement areas assuming existing grades between approximately 105 to 92 feet.

Soil and Groundwater Conditions

In general, the soil test borings encountered sand to sand with silt and sand with clay interbedded with lenses of silty sand [SP, SP-SC, SP-SM, SM] between the elevations of approximately +101 feet to at least +82 feet, NAVD. Below, the sand with silt to silty sands, the soil test borings generally encountered clayey sand to sandy clay layer [SC/CH] to maximum boring termination depths of 20 feet below ground surface.

Variations in depth, thickness and consistency of the soil strata depicted in the Generalized Soil Profile occurred at the individual boring locations. The amount of silt and clay fines present in the soil strata varied between boring locations. The clayey sand [SC], sandy clay [CL], and clay [CH], strata were found at all of the boring locations.

The subgrade after excavation, in some areas may include silty-clayey sands, which may be difficult to compact. The silty-clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods. Normal proof-rolling and compaction of exposed subgrade, and filling to grade with compacted selected structural fill is also expected.

Very loose sand with silt was encountered in some of the soil borings; the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas shall be proof-rolled to detect soft or loose soils. Proof-rolling operations should be followed by subgrade/backfill compaction operation. If necessary to achieve the recommended soil compaction at depth, the loose areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

Groundwater Considerations

Groundwater levels and seasonal high groundwater levels may be affected by the proposed construction which will modify the surface and subsurface hydrology. Based on the general grading information provided, it should not be necessary to provide a permanent subsurface drainage system for the building and pavement areas. To maintain the recommended separation between the water table and various structural elements in the truck well areas we recommend a permanent drainage system in the loading dock/truck well and TLE pit areas.

We found shallow deposits of silty-clayey sands [SM-SC, SC] across the site during our site exploration. Due to the poor permeability characteristics of these silty-clayey soils, these soils tend to act as an aquiclude (a sediment through which groundwater cannot pass) to the natural infiltration of the rainwater. Therefore, rainfall will most likely temporarily perch on top of these relatively impermeable soils causing isolated areas with temporary groundwater levels significantly higher during periods of heavy or extended rainfall or artificial irrigation.

Based on site-specific information and factors listed above, we estimate the following "pre-development", transient, perched seasonal high groundwater levels:

Building Pad:	Between elevations 101 to 88 feet NAVD or below
Driveway & Parking Lot Areas:	Between elevations 90 to 82 feet NAVD or below

It is important to note that the pre-development and post-development transient perched seasonal high groundwater levels will be a function of the elevation location of the top of the aquiclude (SM-SC, SC) and will generally occur approximately 1 foot above the top of the aquiclude, where present or where created by site grading.

Site Preparation

Site preparation for the site will consist of stripping of surficial organics and clearing of trees/vegetation and their associated root systems greater than ½ inch in diameter, followed by surface densification, proof-rolling and compaction of existing subgrade, and filling to construction grade with structural fill.

Foundation Design

After successful completion of the building site preparation, we recommend a shallow foundation system be used for support of the proposed building. The shallow spread foundations should be designed with a net allowable soil bearing pressure of 2,500 pounds per square foot (psf) provided the building pad preparation recommendations presented in Section 9 of this report are followed.

Pavement Design

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-

effective combination of available construction materials. Concrete pavement has the advantage of the ability to “bridge” over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. Recommendations for both rigid and flexible pavements are presented in Section 9.2 of this report.

Typically, the most prevalent flexible pavement base material in Alachua County is limerock because of its local availability. Alternative base materials may be considered as requested.

On-site Borrow and Excavation Considerations

With the exception of topsoil, debris and undiscovered organic soils, the on-site soils may be reused as structural fill, but they will require careful moisture control. Excess topsoil and organic soil may be used in landscaped areas.

Soils classified as SP, SP-SM and SP-SC may be used for structural fill provided the organic content is less than 5 percent. Soils classified as SM and SC with less than 25 percent fines and less than 5 percent organic content are generally suitable for use as structural fill with the understanding that greater than normal moisture control will be required for compaction. SM and SC soils with more than 25 percent fines and Plasticity Index of 15 or greater are generally not suitable for structural fill but may be used deeper than 5 feet below finished grades in pavement area fills and will require significant moisture conditioning and working to effect the recommended compaction. It shall be expected that most site soils reused as fill material will require greater handling on the part of the Earthwork Contractor to dry and work the soils.

1.0 INTRODUCTION

UES Professional Solutions, LLC (UES) has completed the preliminary subsurface exploration for the proposed , which will be located at the SWC of US 441 and NW 118th Street in Alachua, Alachua County, Florida. Our exploration was authorized by Sam Berry of Rise Partners and was conducted as outlined in our Proposal Number 2162534, dated February 13, 2026. This exploration was performed in accordance with generally accepted soil and foundation engineering practices and Geotechnical Investigation Specifications and Report Requirements", dated September 25, 2018. The quantity, location of the building and non-building area test borings have been adjusted by CPH for this preliminary report. This report is provided to assist your project feasibility schedule. The initial and final geotechnical report will formalize the subsurface findings and provide additional test borings, and recommendations.

2.0 PROJECT CONSIDERATIONS

The geotechnical exploration was planned and executed based on the Boring Exhibit, dated February 12, 2026, prepared by CPH, Consulting LLC (CPH). These plans were also used in developing the scope of the preliminary geotechnical subsurface exploration. The proposed will be a prototype C-171-SGR-QR and will be approximately 170,471 square feet, with truck well, associated drives and parking areas, and a gas station. The parking lot will occupy the western, eastern, and northern portion of the property. Stormwater management facilities will be located along the southern and western portions of the site.

The proposed will be single story, high bay commercial structure. The store building will be constructed of a combination of load-bearing concrete block walls and steel columns supporting roof loads by means of steel joist girders and steel joists. Typical bay spacing between columns is approximately 55 by 48 feet. Typical gravity loads for interior columns are 85 kips with a maximum total loading under severe live load conditions of 150 kips. Maximum column uplift force from wind is estimated at 30 kips. Typical gravity loads for exterior columns are 50 kips each. The concrete block wall gravity loads will range from 1.5 to 2.0 kips per lineal foot for non-load bearing walls and 4.0 to 6.0 kips per lineal foot for load bearing wall. The estimated maximum uniform floor slab live load is 125 pounds per square foot, and the estimated maximum concentrated floor slab load is 5 kips.

The proposed Gas Station will include fuel islands, canopy, small service building and underground storage tanks. Typical gravity axial loads for interior columns are 12 kips with a maximum total loading under severe live load conditions of 25 to 40 kips. Further, the foundation for the canopy structure may be sized and embedded at greater depths to resist uplift forces. Maximum column uplift forces from wind is estimated at 25 kips. Based on the information provided, we assume that the finished floor elevation for the fuel station to be +98 feet.

Two types of pavement sections will be required at the project; standard duty and heavy duty pavements. Per requirements the standard duty pavement will be designed for equivalent 18 kip single axle loads (E_{18}SAL) of 109,500 over a 20 year design life. The heavy duty pavement section will be designed for approximately 335,800 E_{18}SALs over a 20 year design life. Terminal serviceability, initial serviceability, and reliability for all pavement sections will be 2.0, 4.2, and 85%, respectively.

Across the proposed building, the site grades range from a high of about +105 feet to a low of about +92 feet. Based on the presumed finish floor elevation of 102.0 feet, we anticipate approximately 3 feet of cut and 10 feet of fill below the existing ground surface in the proposed building area to achieve subgrade elevation with up to 4 feet of cut or nine feet fill being expected in the surrounding pavement areas assuming existing grades between approximately 105 to 92 feet.

Current grading plans do not require cut and fill slopes equal to or greater than 3H:1V. Based on the site elevations and the conceptual site plan provided to UES, most of the site will not require cutting or filling over 10 feet high.

We assume the building will be constructed with an exposed concrete floor slab throughout the facility and founded on a minimum 4 inch thick compacted base material.

If any of the above information is incorrect or changes prior to construction, please contact UES immediately so that revisions to the recommendations contained in this report can be made, as necessary. In order to verify that these recommendations are properly interpreted and implemented, UES must be allowed to review the final design and specifications prior to the start of construction and understands that this is part of the overall geotechnical contract.

Deviations from the GISRR are listed below.

- Limerock Bearing Ratio (LBR) FM 5-515 was used to test the subgrade soils in lieu of California Bearing Ratio (CBR) tests since LBR is the standard test required by the Florida Department of Transportation (FDOT) to test the base and stabilized subgrade materials for pavements.

- Boring quantities for the proposed building, stormwater management areas, parking and access roads, and retaining walls deviated from the Geotechnical Investigation Specifications and Report Requirements.

- The site and planned construction are not located in a jurisdiction governed by International Building Code (IBC) and therefore the 100 feet deep test boring was not performed, however, in the absence of any governing standard for seismic matters in Florida, and based on our general geologic knowledge of the site and vicinity, we assigned an IBC site classification in order to meet report content specification.

3.0 SITE DESCRIPTION

3.1 General

The subject site is a proposed located within Section 8, Township 8 South, Range 18 East in Alachua County, Florida. More specifically, the property is located adjacent to the southeast corner of US HWY 441 and NW 118th Street in Alachua, Alachua County, Florida. The site is currently undeveloped.

3.2 Soil Survey

Based on the 1985 Soil Survey for Alachua County, Florida, as prepared by the US Department of Agriculture, Natural Resources Conservation Service (NCRS), the predominant soil types at the site are identified as Arredondo fine sand, 0 to 5 percent slopes (3B), Arredondo fine sand, 5 to 8 percent slopes (3C), and Fort Meade fine sand, 0 to 5 percent slopes (5B). The published general description of these soils with depth, their published range of permeability characteristics and their published range of seasonal high groundwater levels, is presented in Table 1 below.

TABLE 1
Summary of NRCS Soil Survey Information

Soil Type	Constituents	Hydrologic Group	Natural Drainage	Soil Permeability (Inches/Hr)	Seasonal High Water Table
Arredondo fine sand, 0 to 5 percent slopes (3B)	0-49" Fine sand 49-54" Loamy sand, loamy fine sand, sandy loam 54-86" Sandy loam, fine sandy loam, sandy clay loam	A	Well Drained	0-49" 6.0 – 20 49-54" 2.0 – 6.0 54-86" 0.2 – 2.0	Greater than 6 feet below ground surface
Arredondo fine sand, 5 to 8 percent slopes (3C)	0-65" Fine sand 65-88" Sandy loam, fine sandy loam, sandy clay loam	A	Well Drained	0-65" 6.0 – 20 65-88" 0.2 – 2.0	Greater than 6 feet below ground surface
Fort Meade fine sand, 0 to 5 percent slopes (5B)	0-14" Fine sand 14-85" Loamy sand, loamy fine sand, fine sand	A	Well Drained	0-14" 6.0 – 20 14-85" 6.0 – 20	Greater than 6 feet below ground surface

3.3 Topography

According to information obtained from the Grading Plan prepared by Foresite Group for this site, the ground surface elevation across the site area ranges between approximately +105 feet to +85 feet. A copy of a portion of the USGS Map for the site area is included in Appendix A.

3.4 Geology

The general geology of central Alachua County is characterized by a surface veneer of Pleistocene and Pliocene sands and sandy clays overlying the Miocene-age Hawthorn Group. The Hawthorn Group includes a highly variable mixture of interbedded quartz sands, clays, carbonates, pebbles and grains occurring with thicknesses of up to 150 feet. Underlying the Hawthorn Group is the upper Eocene age Ocala Formation, occurring as a uniform limestone, which is approximately 200 feet thick and overlies the Eocene age Avon Park Formation, which can be up to 500 feet this. Both the Ocala and Hawthorn Formations dip to the northeast by approximately one degree.

The general hydrogeology of Alachua County consists of three aquifer systems; a surficial aquifer, an intermediate aquifer, and the Floridan aquifer system. The surficial aquifer exists as an unconfined water table situated over the impermeable Hawthorn Group and is usually a subdued reflection of surface topography. The intermediate aquifer system includes all rocks that collectively retard the exchange of water between the overlying surficial aquifer system and the underlying Floridan aquifer system. Water in this system is contained under confined conditions.

The Floridan aquifer system is a thick, carbonate sequence that functions regionally as a water-yielding hydraulic unit. The direction of shallow groundwater flow is generally toward surface water bodies. The potentiometric surface map of the upper Floridan Aquifer suggests groundwater elevations, outside perched zones, on the order of +30 to +40 feet, NGVD in the general site area.

4.0 PURPOSE AND SCOPE OF SERVICES

4.1 Purpose

The purposes of this exploration were:

- to explore and evaluate the subsurface conditions at the site and note potential geotechnical considerations that may affect the proposed design, construction, or serviceability of the proposed improvements,

- to provide preliminary geotechnical engineering recommendations for site preparation, pavement and foundation design parameters.

4.2 Scope of Service

A compilation of the services conducted by UES to date for the subsurface exploration program are as follows:

- Advanced five (5) Standard Penetration Test (SPT) borings in the proposed building and truck dock areas to depths of 25 feet below existing land surface (bls).

- Advanced three (3) Standard Penetration Test (SPT) borings in the proposed fueling station area to depths of 25 feet below existing land surface (bls).

- Advanced six (6) Standard Penetration Test (SPT) borings in the proposed stormwater management system area to depths of 20 feet below existing land surface (bls).

- Advanced eleven (11) Standard Penetration Test (SPT) borings in the proposed parking lot and driveway areas to depths of 20 feet below existing land surface (bls).

- Secured samples of representative soils found in the soil borings for laboratory analysis and classification by a member of our geotechnical staff. As required all samples not used for laboratory testing have been stored for at least six months.

- Recorded site groundwater levels at the boring locations and providing an estimate of the typical wet season groundwater level.

- Conducted laboratory tests on selected soil samples obtained in the field to evaluate their engineering properties.

- Assessed the existing soil conditions with respect to the proposed construction.

- Prepared a preliminary report which documents the results of our subsurface exploration and analysis with geotechnical engineering recommendations.

The site and planned construction are not located in a jurisdiction governed by International Building Code (IBC) and therefore the 100 foot deep test boring was not performed, however, in the absence of any governing standard for seismic matter in Florida, and based on our general geologic knowledge of the site and vicinity, we assigned an IBC site classification in order to meet ' report content specification. Since there are no planned cut or fill areas of 3 feet or more, no borings were required for these purposes.

The quantity, location of the building and non-building area test borings have been adjusted by CPH for this preliminary report. This report is provided to assist your project feasibility schedule. The initial and final geotechnical report will formalize the subsurface findings and provide additional test borings, and recommendations.

4.3 Limitations

This report has been prepared for the exclusive use of Rise Partners and other members of the Design/Construction Team for the specific project discussed in this Report to aid the Architect/Engineer in the evaluation of the proposed .
This preliminary report is also hereby certified to , and its affiliates, successors, and assigns (hereinafter referred to collectively as "' Accordingly, has a right to rely on this preliminary report and all of the contents therein as though it were issued to ' directly. The scope is limited to the specific project and locations described herein. Our description of the project's design parameters represents our understanding of the significant aspects relevant to soil and foundation characteristics. In the event that any changes in the design or location of the structures or improvements as outlined in this report are planned, we should be informed so the changes can be reviewed and the conclusions of this report modified, if required, and approved in writing by UES.

The recommendations submitted in this report are based upon the data obtained from the soil borings performed at the locations indicated on the Boring Location Plan and from other information as referenced. This report does not reflect any variations which may occur between the boring locations. The nature and extent of such variations may not become evident until the course of construction. If variations become evident, it will then be necessary for a re-evaluation of the recommendations of this report after performing on-site observations during the construction period and noting the characteristics of the variations.

All users of this report are cautioned that there was no requirement for UES to attempt to locate any man-made buried objects or identify any other potentially hazardous conditions that may exist at the site during the course of this exploration. Therefore, no attempt was made by UES to locate or identify such concerns. UES cannot be responsible for any buried man-made objects or subsurface hazards which may be subsequently encountered during construction that are not discussed within the text of this report. We can provide this service if requested.

For a further description of the scope and limitations of this report please review the document attached within Appendix F, "Important Information About Your Geotechnical Engineering Report" prepared by GBA.

5.0 FIELD EXPLORATION

5.1 General

The soil borings were performed with a drill rig mounted on a rubber-tired truck. The boring locations were staked by UES prior to our mobilization to the site. The approximate locations of the borings are shown on the Boring Location Plan presented in Appendix B. Estimated ground surface elevations are presented in tabular form, Boring Survey Control, in Appendix B and also presented on the boring logs. Existing groundwater levels were recorded at the time of our soil test borings.

5.2 Standard Penetration Test Borings

As previously described in Section 4.2 and as indicated on the Boring Location Plan in Appendix B, five (5) SPT borings were drilled to depths of 25 feet in the proposed t building and truck dock areas. Three (3) SPT borings were drilled to depths of 25 feet beneath the proposed fueling station site. Six (6) SPT borings were drilled to depths of 20 feet within the proposed stormwater management system. Eleven (11) SPT borings were drilled to depths of 20 feet within the proposed parking and driveway areas.

The SPT borings were performed in general accordance with the procedures of ASTM D 1586 (Standard Method for Penetration Test and Split-Barrel Sampling of Soils). In addition, continuous sampling was performed within the upper 10 feet. The SPT drilling technique involves driving a standard split-barrel sampler into the soil by a 140-pound hammer, free falling 30 inches. The number of blows required to drive the sampler 1 foot, after an initial seating of 6 inches, is designated the penetration resistance, or N-value, an index to soil strength and consistency.

The results of the classification and stratification have been shown on the attached Boring Logs. It should be noted that soil conditions might vary between soil test boring locations, and between the subsurface soil strata interfaces which have been shown on the Boring Logs. The soil test boring data reflect information from the specific test locations only. This report presents an evaluation of site conditions on the basis of traditional geotechnical procedures for site characterization. The recovered samples were not examined, either visually or analytically, for chemical composition or environmental hazards.

6.0 LABORATORY TESTING

The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). The soil samples recovered from the split-barrel sampler were visually classified in general accordance with the guidelines of ASTM D 2487 Standard Classification of Soils for Engineering Purposes (Unified Soil Classification System). Representative soil samples were then selected from the retained soils and tested in our laboratory. The following is a summary of the laboratory tests performed in all studies for this site to date:

- Fourteen (14) Wash #200 fines content determinations - ASTM D 1140 (Standard Method for Particle Size Analysis of Soils)

- Four (4) Grain Sieve Analysis tests – ASTM D-422
- Eighteen (18) moisture content tests – ASTM D 2216
- Four (4) Atterberg Limits Tests – ASTM D 4318-05
- Two (2) organic content test – ASTM D 2974 (Standard Test Methods for Moisture, Ash, and Organic Matter of Peat and Other Organic Soils).
- Four (4) Permeability Test – ASTM D-2434
- One (1) Limerock Bearing Ratio (LBR) test - Florida Department of Transportation FM-515 (Limerock Bearing Ratio)
- Two (2) Corrosion Series (pH, sulfates, chlorides, and resistivity) from surficial soils
- One (1) Topsoil Series, per specifications
- One (1) Modified Proctor test ASTM D-1557

These tests were performed to aid in classifying the recovered samples and to help in evaluating the general engineering characteristics of the site soils. The laboratory classification data is presented on the Boring Logs at the approximate depth sampled in Appendix B. All laboratory data is summarized and report sheets included in Appendix C. In addition, the detailed laboratory test procedures are enclosed in Appendix C.

The surficial clayey soils found in the building footprint soil borings consisted of clayey sands [SC] with generally less than 35 percent fines passing the No. 200 sieve. Due to the low clay fraction and cohesion of these soils we did not perform any unconfined compression tests. BTEX Testing for fuel tank borings was not performed because the water table was not encountered in the soil borings during drilling operations. The quantity and type of laboratory tests performed for the geotechnical exploration were selected by UES based on the soil conditions found and our experience and knowledge concerning the local soil conditions. We note that since most shallow sands in Florida are poorly graded fine sand it is customary to perform percent fines content testing only for classification purposes.

7.0 SOIL STRATIGRAPHY

7.1 Generalized Soil Profile

The results of our field exploration and laboratory analysis, together with pertinent information obtained from the SPT borings, such as soil profiles, penetration resistance and stabilized groundwater levels are shown on the boring logs included in Appendix B. The Key to Boring Logs is also included in Appendix B. The soil profiles were prepared from field logs after the recovered soil samples were visually classified by a member of our geotechnical staff. The stratification lines shown on the boring logs represent the approximate boundaries between soil types, and may not depict exact subsurface soil conditions. The actual soil boundaries may be more transitional than depicted. A composite generalized profile of the soils found at our boring

locations is presented below in Table 2. For soil profiles at individual boring locations, please refer to the soil boring logs, Appendix B.

TABLE 2
GENERAL SOIL PROFILE

Typical Elevation (ft.)		Soil Descriptions	Range of SPT "N" Blow Count
From	To		
105/87	101/82	Very loose to loose brown and orange SAND to SAND with silt, and clay [SP, SP-SM, SP-SC]	1/12" to 30
101/82	80/67	Very loose to medium dense, orange and tan silty-clayey SAND to stiff green and orange sandy CLAY [SM, SM-SC, SC, CH]	2 to 29

* Termination of Deepest Boring
[ ] Indicates Unified Soil Classification

Significant variations in depth, thickness and consistency of the soil strata depicted in the General Soil Profile occurred at the individual boring locations. The amount of silt and clay fines present in the soil strata varied between boring locations. Very clayey sand [SC], and sandy clay [CL], and clay [CH] strata were found at all the boring locations.

7.2 Soil Corrosion Characteristics

UES routinely performs pH, resistivity, sulfates and chloride tests for evaluation of corrosion potential of soils. According to the guidelines of the Florida Department of Transportation (FDOT) "Florida-Concrete Design, Environmental Classification and Construction Criteria" (based on the three tier scale of slightly, moderately, and extremely aggressive) the results of the pH, sulfate, chloride, and resistivity tests indicate that the surficial soils in the building and parking area are "moderately aggressive" to steel and concrete. The controlling factor in the test results was the pH level (pH=6.34). Therefore we recommend use of Type II cement with fly ash for below grade concrete construction.

Further, adequate concrete cover should be provided for concrete substructures and protective galvanized coating is recommended for steel utility lines which extend below the seasonal high groundwater level. Accelerated corrosion conditions typically occur when below grade structures are in prolonged contact with groundwater, allowing the contact of corrosive compounds to the concrete and reinforcing steel. The results of these tests are listed on the Report of Corrosion Parameters sheet enclosed with the laboratory test results in Appendix C. Results of pH and resistivity tests with recommended measures are also presented on the "Geotechnical Investigation Fact Sheet".

7.3 Topsoil Analysis

Per : criteria, topsoil analysis were performed on composites of surface samples collected. The results are presented in tabular form in Appendix C.

8.0 GROUNDWATER CONSIDERATIONS

8.1 Existing Groundwater Level

We attempted to measure the water level in the boreholes upon completion of the soil borings. At the time our field exploration was conducted we did not encounter a stabilized groundwater level within a depth of 25 feet below existing grade in any of the borings performed. Based on available data, we estimate the permanent water table to be near elevation +30 to +40 feet NAVD. This equates to about 50 to 60 feet below grade depending on the ground surface elevations.

8.2 Typical Wet Season Groundwater Level

The typical wet season groundwater level is defined as the highest groundwater level sustained for a period of 2 to 4 weeks during the "wet" season of the year, for existing site conditions, in a year with average normal rainfall amounts. Based on historical data, the rainy season in Alachua County, Florida typically occurs between June and September. To estimate the wet season water level at the boring locations, many factors were considered, including the following:

As mentioned previously, we found shallow deposits of silty-clayey sands across the site during our site exploration. Due to the poor permeability characteristics of these silty-clayey soils, these soils tend to act as an aquiclude (a sediment through which groundwater can not pass) to the natural infiltration of the rainwater. Therefore, surface water will most likely temporarily perch on top of these relatively impermeable soils causing isolated areas with temporary groundwater levels significantly higher during periods of heavy rainfall or artificial irrigation.

Based on site-specific information and factors listed above, we estimate the following "pre-development", transient, perched seasonal high groundwater levels:

Building Pad:	Between elevations 101 to 88 feet NAVD or below
Driveway & Parking Lot Areas:	Between elevations 90 to 82 feet NAVD or below

It is important to note that the pre-development and post-development transient perched seasonal high groundwater levels will be a function of the elevation location of the top of the aquiclude (SM-SC, SC) and will generally occur approximately 1 foot above the top of the aquiclude, where present or where created by site grading.

Our estimated seasonal high groundwater levels are based on the existing site conditions and are presented on each of the boring logs shown in Appendix B. Please note, however, that peak stage elevations immediately following various intense storm events, may be somewhat higher than the estimated typical wet season levels. Further, it should be understood that changes in the surface hydrology and subsurface drainage from on-site or off-site improvements could have significant effects on the normal and seasonal high groundwater levels.

9.0 ANALYSIS AND RECOMMENDATIONS

Our geotechnical engineering evaluation and recommendations for building pad and pavement area preparation and foundation design are based on (1) our site observations, (2) the collected

field and laboratory data, and (3) our understanding of the project and structural information presented in this report.

Based on our exploration, the primary geotechnical considerations for the design and construction of the proposed structure are the presence of loose sandy soils in the near-surface profile. Subsurface sandy soils will undergo immediate settlements upon application of surface loads, and this could be a result of both fill placement for building pad construction and building construction. In light of the above, it becomes important to compact the subgrade soils as much as possible prior to both building pad fill placement and foundation construction.

Very loose sand with silt was encountered in some of the soil borings; the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas shall be proof-rolled to detect soft or loose soils. Proof-rolling operations should be followed by subgrade/backfill compaction operation. If necessary to achieve the recommended soil compaction at depth, the loose areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation.

Our local experience has found that fat clay layers [CH] are often laterally discontinuous, which makes it more difficult to ascertain their presence on a given project parcel. If at the time of construction the contractor encounters or suspects that clay soils may be near the grade slab or foundation bearing elevations, UES shall be contacted to prepare appropriate recommendations. **We recommend that the bottom of all footings be probed to confirm the suitability of the bearing soils. We recommend 4-foot static cone penetrometer probe and auger borings be performed in the proposed footings excavations to investigate for clayey soils.** If encountered, fat clays (CH) shall be removed to a minimum of 4 feet fellow the bottom of the footing/floor slab. The over-excavated areas shall be backfilled with a compacted, low permeability, engineered fill material. Fill material shall consist of poorly draining, silty sand or clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8 inches or less are recommended.

The subgrade after excavation, in some areas include clayey sands, which will be difficult to compact; the clayey sand soils may require stringent moisture control during compaction, particularly during rainy periods. Footings that are excavated through the upper layer of compacted sand fill soils into the native clayey sand, should be visually inspected and tested to verify the in-place density and condition of the subgrade bearing soils.

Care should be exercised in performing the site preparation procedures due the presence of clayey soils near the existing ground surface, in some areas of the project site. The use of heavy-vibratory equipment is not recommended due to the potential for disturbance and pumping of the near surface clayey soils. To avoid pumping of the underlying clayey soils, we recommend self-propelled vibrating equipment remain a minimum of two feet above the clayey soils. The sandy soils could be compacted with a vibratory roller operating in static mode or with a track-mounted dozer to avoid disturbance of the clayey soils prior to operation. We recommend a minimum of 2 feet of sand overlying the clayey soils prior to operation of construction equipment. Excessive disturbance of the clayey soils will degrade the strength characteristics of the soil and may result in an unsuitable soil which will require over-excavation and subsequent backfilling with selected material.

Due to the presence of near surface clayey soil it is important that the foundation design incorporate factors to minimize water seepage around the proposed foundation. The design factors should include undercutting around the perimeter of the structure, positive drainage such that water flows away from the structure, use of low permeability fill, gutters tied into the drainage system, use of drought tolerant landscaping, and limiting irrigating around the structure.

We recommend that we be provided the opportunity to review the project plans and specifications to confirm that our recommendations have been properly interpreted and implemented. If the structural loadings or the building locations change significantly from those discussed previously, we request the opportunity to review and possibly amend our recommendations with respect to those changes. The discovery of any subsurface conditions during construction which deviate from those encountered in the borings should be reported to us immediately for observation, evaluation, and recommendations.

9.1 Foundation Design Recommendations

Based on the results of our exploration, it is our opinion that the subsurface conditions at the site are adaptable for support of the proposed structure on a properly designed and constructed shallow foundation system, provided the site preparation and earthwork construction recommendations outlined in Section 9.3 of this report are performed. Provided the improvements and specific site preparation procedures are carefully followed, the parameters outlined below may be used for foundation design.

9.1.1 Bearing Pressure

The maximum allowable net soil bearing pressure for shallow foundations shall not exceed 2,500 pounds per square foot (psf). Net bearing pressure is defined as the soil bearing pressure at the base of the foundation in excess of the natural overburden pressure. The foundations shall be designed based upon the maximum load that could be imposed by all loading conditions. The allowable bearing pressure may be increased by 25 percent to account for short duration loadings such as wind or seismic.

9.1.2 Foundation Size

The minimum width recommended for any isolated column or continuous wall footing is 30 and 24 inches, respectively. Even though the maximum allowable soil bearing pressure may not be fully achieved, this width recommendation should control the minimum size of the foundations.

9.1.3 Bearing Depth

The exterior foundations should bear at a depth of at least 18 inches below the finished exterior grades and the interior foundations should bear at a depth of at least 18 inches below the finish floor elevation to provide confinement of the bearing level soils. It is recommended that stormwater be diverted away from the building area both during and permanently following construction.

9.1.4 Bearing Material

The foundations and floor slabs should bear on a compacted structural fill. The bearing level soils shall be densified to at least 95 percent of the modified Proctor maximum dry density (ASTM D 1557) to a depth of at least three (3) feet below the bearing levels, or approximately 4 feet below finished floor.

9.1.5 Settlement Estimates

Post-construction settlements of the structure will be influenced by several interrelated factors, such as (1) subsurface stratification and strength/compressibility characteristics; (2) footing size, bearing level, applied loads, and resulting bearing pressures beneath the foundations; and (3) site preparation and earthwork construction techniques used by the Contractor. Our settlement estimates for the structure are based on the site preparation/earthwork construction recommendations in Section 9.3 of this report. Any nonconformance with these recommendations could result in an increase in the estimated post-construction settlements of the structure.

Using the recommended maximum bearing pressure, the provided maximum structural loads, the anticipated fill loading and the field data which we have correlated to geotechnical strength and compressibility characteristics of the subsurface soils using N-value data, we estimate that total settlements of the structure should be less than ¾ inch if the site preparation recommendations in Section 9.3 are followed. Without appropriate site preparation procedures, total settlements could exceed 3/4 inch.

Differential settlements result from differences in applied bearing pressures and variations in the compressibility characteristics of the subsurface soils. We anticipate that differential settlements should be within tolerable limits of ½ inch or less in 40 feet length for masonry walls and ¾ inch or less between isolated interior columns, and ¾ inch between columns and floor slabs.

9.1.6 Floor Slab

The floor slab recommendations are predicated upon the understanding that structures have exposed concrete floor slabs throughout. The floor slab can be constructed as a slab-on-grade provided the subsequent lifts of structural backfill are compacted and tested in accordance with the recommendations included in this report. The floor slab can be designed using a subgrade reaction modulus of 150 pounds per cubic inch for slabs founded on the : required minimum 4 inch aggregate base and well compacted subgrade. Therefore, there is no cost premium to attain the recommended subgrade modulus.

The geotechnical requirements prefer the use of a capillary break consisting of free-draining aggregate. The specifications further allow use of a plastic vapor barrier if justified by site conditions or required by local building codes. In addressing the requirements outlined in the current “Geotechnical Investigation Specifications and Report Requirements” the Florida Building Code requires the use of vapor barriers beneath floor slabs. Typically, polyethylene plastic sheets are used in Florida to reduce floor dampness and minimize moisture emissions through floor slabs. In conformance with the Florida Building Code, we recommend the use of a vapor barrier beneath the floor slab.

The “vapor barrier” should consist of a polyvinyl chloride or polyethylene plastic sheet or membrane (minimum 15 MIL thickness meeting ASTM E1745, Class ‘A’ requirements). The performance of the “vapor barrier” is ultimately dependent upon its proper installation, including lapping and sealing plus repair of tears and punctures prior to placement of concrete. The vapor barrier should be placed immediately beneath the concrete slab atop 4 inches of compacted aggregate base. UES recommends the aggregate base material be constructed on a compacted subgrade fill in accordance with the Foundation Subsurface Preparation note included in this report.

9.1.7 Site Walls

Assuming the retaining walls and the subsurface walls in the tire lube express (TLE) service pit will be smooth concrete, we recommend using the following parameters for the upper 3 feet of in-situ sands and/or on-site and imported free draining fine sand backfill soil compacted to at least 95 percent of the Modified Proctor test maximum dry density for your retaining wall design.

Earth pressures on retaining walls are influenced by structural design of walls, conditions of wall restraint, construction methods, and the strength of the materials being restrained. The most common conditions assumed for earth retaining wall design are the active and at-rest conditions.

Active conditions apply to relatively flexible earth retention structures, such as free-standing walls, where some movement and rotation may occur to mobilize shear strength. Walls which are rigidly restrained, such as loading dock or service pits walls, should be designed for the at-rest condition. However, if the walls will be backfilled before they are braced by the floor slabs, they should also be designed to withstand active earth pressures as self-supporting cantilever walls.

Development of the full active earth pressure case requires a magnitude of horizontal wall movement that often cannot be tolerated or cannot occur due to the rigidity of the wall and other design restrictions such as the impact on adjacent structures. In such cases, walls are often designed for either the at-rest condition or a condition intermediate of the active and at-rest conditions, depending on the amount of permissible wall movement.

Passive earth pressure represents the maximum possible pressure when a structure is pushed against the soil, and is used in wall foundation design to help resist active or at-rest pressures. Because significant wall movements are required to develop the passive pressure, the total calculated passive pressure is usually reduced by one-half for design purposes.

We recommend that any proprietary retaining walls be backfilled with materials deemed suitable by the Retaining Wall Designer. For all other walls, typically sandy soils [SP, SP-SM, SP-SC] should be used as backfill. We recommend that the soils selected for use as backfill be tested as specified by either the Proprietary Retaining Wall Designer or UES prior to commencement of wall construction. Recommended soil parameters for design of low retaining walls for loading docks and landscape features using SP, SP-SM or SP-SC soils found on site are shown in Table 3.

TABLE 3 LATERAL EARTH PRESURE DESIGN PARAMETERS (LEVEL BACKFILL)*	
Design Parameter	**Recommended Value**
At-rest Earth Pressure Coefficient, K_o	0.5
Active Earth Pressure Coefficient, K_a	0.33
Passive Earth Pressure Coefficient, K_p	3.0
Wet Unit Soil Weight (pounds per cubic foot - pcf)	125
Submerged Unit Weight of Soil (pcf)	62
Coefficient of Friction (sliding)	0.4
Angle of Internal Friction, φ	30 degrees

* For sloping backfill or backfill with clayey sands the table values must be adjusted.
**Hydrostatic pressure should be accounted for based on seasonal high water table estimates and other site drainage considerations.

The recommended lateral earth pressure coefficients and equivalent fluid pressures do not consider the development of hydrostatic pressure behind the earth retaining wall structures. As such, positive wall drainage must be provided for all earth retaining structures. These drainage systems can be constructed of open-graded washed stone isolated from the soil backfill with a geosynthetic filter fabric and drained by perforated pipe, or with one of several wall drainage products made specifically for this application.

Our recommendations assume that the ground surface above the wall is level and that native or imported soils consisting of sands and sands with silt or clays will be used for wall backfill. Lateral earth pressures arising from surcharge loading should be added to the above earth pressures to determine the total lateral pressure. Additional consideration must also be given for sloped backfill at the top of the wall. In each circumstance the earth pressure coefficients for active and at-rest conditions will increase based upon the amount of surcharge and angle above horizontal of the sloped backfill.

9.1.8 Geologic Hazards – Desktop

There are no fault zones, landslides, or other geologic hazards associated with the site and immediate vicinity. Our “desktop” assessment of the presence of karst features included a review of available data from the United States Geological Survey (USGS) and Florida Geological Survey (FGS), and current topography survey. The FGS maintains an inventory of reported sinkholes as a continuation of the work originally performed by the Florida Sinkhole Research Institute. This sinkhole database is generally considered to be a record of more recent sinkholes, and does not incorporate older and more mature karst features such as large lakes. The FGS database is not a definitive or authoritative resource, and should only be used for a generalized overview of recent sinkhole relative density. Our assessment included a search of the FGS database for sinkholes within a 2 mile radius of the subject site. No sinkholes were reported within 2 miles of the site. We note that the FGS data base only contains more recently recorded sinkhole events. This map can provide a false sense of security for areas that have remained rural and undeveloped until more recently. A site Map presenting the FGS recorded subsidence locations local to the subject property is presented in Appendix E.

Our assessment also included a review of the USGS Quadrangle Map (High Springs). Fewer than 5 mapped natural lakes were identified surrounding the subject property within a two-mile radius of the site. These natural lakes are relic sinkholes that formed in the geologic past. In addition to the natural lakes, there are several manmade stormwater ponds. The excavation and construction of stormwater ponds can affect natural hydrogeologic processes. Some of these areas appear to have exposed groundwater as a result of excavation and construction operations. Our desktop analysis also included a review of a USDA Soil Survey aerial image of the project area. Based on the USDA Soil Survey aerial, at least ten (10) depressions were identified within a 2-mile radius of the project site.

The USGS Quadrangle Map, Florida Geological Survey, and current Topography Survey did not detect presence of surface karst features within the project site.

With regard to seismic considerations, UES reviewed the Florida Building Code (FBC) which has jurisdiction in the State of Florida. Since seismic design is not part of the FBC, we consulted the only available recognized source of seismic information, the International Building Code (Section 1613). Per Table 1613.5.2 we recommend a Site Class of E for this project site. Due to the deep permanent water table, the overall fines content of the soils and the minimal expected ground accelerations per Figures 1613.5(1) and (2), it is our opinion that the liquefaction potential of the site is minimal.

9.1.9 Expansive Clay Considerations

Portions of Alachua County, Florida are known to have shallow expansive clays which can cause differential foundation movement and associated cracking and distress to structures that are not adequately designed for these subsurface conditions. Part of the purpose of our exploration program was to identify the presence of potentially expansive soils on site and provide preliminary geotechnical recommendations for site preparation and foundation design to minimize the potential impact if these are found. If it is determined that structures and or pavement will be constructed in deeper areas with potential expansive clay soils, additional geotechnical exploration and analysis will be required to provide site specific requirements to mitigate the potential damage associated with the shrink/swell activity of these soils.

Based upon the findings of our field exploration, our experience in the general vicinity of the subject site, and the laboratory test results, it is our professional opinion that special foundation design considerations for expansive soils are not indicated. However, during construction all footings shall be probed to determine if undercutting of potentially expansive clayey soils is required.

9.2 Pavement Recommendations

9.2.1 General

A rigid or flexible pavement section could be used on this project. Flexible pavement combines the strength and durability of several layer components to produce an appropriate and cost-effective combination of available construction materials. Concrete pavement has the advantage of the ability to “bridge” over isolated soft areas, it requires less security lighting, and it typically has a longer service life than asphalt pavement. Disadvantages of rigid pavement may include

an initial higher cost and more difficult patching of distressed areas than occurs with flexible pavement.

If encountered, we recommend undercutting the very clayey sands and sandy clays to a minimum depth of 24 inches below the proposed bottom of the base course in accordance with FDOT Standard Plans Index 120-002. We recommend proof-rolling of the exposed subgrade to help determine area that will need to be undercut. Positive drainage must be established to prevent irrigation and stormwater from migrating into the pavement area.

The design calculations and pavement section details for both a rigid and flexible pavement section are enclosed in Appendix D.

Referencing the "Geotechnical Investigation Specifications and Report Requirements" as provided by , the Minimum Pavement Surface Thickness is specified as follows:

A) Standard Duty
Asphalt - 3 inches
Concrete - 5 inches

B) Heavy Duty
Asphalt - 4 inches
Concrete - 6 inches

Further, the pavement section is to be designed for a 20 year life based on a terminal serviceability index (P_t) of 2, reliability of 85 percent, initial serviceability of 4.2 and a standard deviation of 0.45 for flexible pavement and 0.35 for rigid pavement.

Within the following tables, we have provided our recommendations for pavement design. These recommendations incorporate minimum pavement surface thickness specifications referenced above. *UES has selected pavement materials that are cost effective and locally available.*

9.2.2 Asphalt (Flexible) Pavement

Tables 4 and 5 contain our recommendations for standard and heavy duty pavement sections designed for equirement for total equivalent 18 kips single axle loads (E_{18}SAL) of 109,500 and 335,800, respectively.

TABLE 4
STANDARD DUTY FLEXIBLE PAVEMENT DESIGN

Pavement Layer	Thickness	Minimum Requirements
Superpave Asphalt Concrete(FDOT SP-9.5) Superpave Asphalt Concrete (FDOT SP-12.5)	1.5 Inch Minimum 1.5 Inch Minimum	Type SP Asphalt Traffic Level C/D-FDOT. FDOT Section 334
Limerock or Crushed Concrete Base	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

TABLE 5 HEAVY DUTY FLEXIBLE PAVEMENT DESIGN		
Pavement Layer	**Thickness**	**Minimum Requirements**
Superpave Asphalt Concrete(FDOT SP-9.5) Superpave Asphalt Concrete (FDOT SP-12.5)	1.5 Inch Minimum 2.5 Inch Minimum	Type SP Asphalt Traffic Level C/D-FDOT. FDOT Section 334
Limerock or Crushed Concrete Base	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of at least 100
Stabilized Subgrade	6 Inch Minimum	98% Modified Proctor test maximum dry density, Limerock Bearing Ratio (LBR) of 40.

9.2.2.1 Stabilized Subgrade

We recommend that subgrade materials be compacted to at least 98 percent of the modified Proctor maximum dry density (ASTM D 1557/ AASHTO T-180) value. Further, beneath the base course, stabilize the subgrade materials to a minimum Limerock Bearing Ratio (LBR) of 40 as specified by the current version of the Florida Department of Transportation (FDOT) “Standard Specifications for Roadway and Bridge Construction” (SSRBC) requirements for Type B Stabilized Subgrade, Section 160 and Section 914. For crushed concrete base, the subgrade material should be "free-draining" ($k > 1 \times 10^{-3}$ cm/sec) and therefore clayey soils or other impermeable stabilization material should not be used for the stabilized subgrade with a crushed concrete base course.

The primary function of stabilized subgrade beneath the base course is to provide a stable and firm subgrade so that the base can be properly and uniformly placed. Depending upon the soil type, fill material from an off-site source may have sufficient stability to provide the needed support without additional stabilizing material. Generally sands with shell or rock should have sufficient stability and may not require additional stabilizing material. Prior to compaction of the subgrade, the representative samples of soils exposed at rough subgrade from both on and off-site fill sources should be tested for Limerock Bearing Ratio (LBR) value on a frequency of one test per 20,000 square feet to evaluate whether or not additional stabilization will be required beneath the base course.

9.2.2.2 Base Course

We recommend the base course consist of locally available limerock complying with the requirements of the current version of the FDOT SSRBC, Section 200, and Section 911. The limerock should have a minimum LBR of 100 percent and should be mined or supplied from an FDOT approved source. Place the limerock in maximum 6 inch thick loose lifts and compact each lift to a minimum density of 98 percent of the modified Proctor maximum dry density (ASTM D1557/AASHTO T-180).

Alternatively, we believe locally available crushed concrete base of equal thickness could be substituted for the limerock. Crushed concrete should be supplied by an FDOT approved plant with quality control procedures and should have an average LBR value of not less than 100. The gradation for crushed concrete should meet the current requirements for graded aggregate base per Section 207, FDOT SSRBC, pages 206-208.

A prime and sand coat should be applied to the base to provide for a smooth, uniform surface for asphalt placement. Perform compliance testing for limerock or crushed concrete for full depth of the base at a frequency of one test per 10,000 square feet. Compliance testing should consist of performing in-place density tests and thickness measurements at the recommended frequency.

9.2.2.3 Surface and Binder Course

The wearing surface should consist of Florida Department of Transportation (FDOT) Type SP asphaltic concrete. Specific requirements for Type SP asphaltic concrete, Traffic Level C/D wearing surface are outlined in the Florida Department of Transportation (FDOT), *Standard Specifications for Road and Bridge Construction, current Edition,* Section 334.

The asphaltic concrete shall be placed in two layers. Specifically for light duty areas, the lower binder course shall consist of a minimum of 1.5 inches of FDOT Type SP-12.5. The surface course shall be a minimum of 1.5 inches of FDOT Type SP-9.5. For heavy duty pavements, the binder shall consist of a minimum of 2.5 inches of Type SP-12.5 with a surface course consisting of a minimum 1.5 inches of Type SP-9.5. Per Asphalt specs, the SuperPave (SP) surface course may contain up to 20 percent recycled asphalt pavement (RAP).

After placement and field compaction, the wearing surface should be cored to evaluate material thickness and to perform laboratory densities. Cores should be obtained at frequencies of at least one core per 10,000 square feet of placed pavement or a minimum of two cores per day's production.

9.2.2.4 Curbing

Typical curbing is extruded and placed atop the asphaltic concrete surface. This type of curbing does not act as a horizontal cutoff for lateral migration of storm and irrigation water into the base material and as a result of this it is not uncommon for base and subgrade materials adjacent to these areas to become saturated, promoting subsequent localized pavement deterioration. Consequently, we recommend that most pavements abutting irrigated landscape areas be equipped with an underdrain system that penetrates a minimum depth equivalent to the bottom of the stabilized subgrade to intercept trapped shallow water and discharge it into a closed system or other acceptable discharge point.

Alternatively, curbing around landscaped sections adjacent to the parking lots and driveways could be constructed with full-depth curb sections to reduce horizontal water migration. However, underdrains may still be recommended dependent upon the soil type and spatial relationships. UES should review final grading plans to evaluate the need and placement of pavement and landscape underdrains.

9.2.3 Concrete (Rigid) Pavements

Concrete pavement is a rigid pavement that transfers reduced wheel pressures to the underlying subgrade soils when compared to a flexible pavement section. Current t specifications require a base course beneath concrete pavement. We recommend that the base course be supported on a stabilized subgrade. Our recommendations for the rigid pavement system are presented below:

1. The stabilized subgrade should be at least 4 inches thick, "free-draining" ($k \geq 1 \times 10^{-3}$ cm/sec), and have a minimum LBR value of 40. The base course should be at least 4 inches thick, "free-draining" ($k \geq 1 \times 10^{-3}$ cm/sec), and have a minimum LBR value of 100.

2. The stabilized subgrade and base materials should be densified to at least 98 percent of modified Proctor test maximum dry density (ASTM D1557/AASHTO T-180).

3. The surface of the subgrade soils must be level, and any disturbances or wheel rutting corrected prior to placement of concrete.

4. Concrete pavement thickness should be uniform throughout, with exception to thickened edges (curb or footing).

5. The bottom of the pavement should be separated from the estimated typical wet season groundwater level by at least 12 inches.

Our recommendations for slab thickness for standard and heavy duty concrete pavements are presented below.

TABLE 6
(UNREINFORCED) CONCRETE PAVEMENT WITH FREE-DRAINING BASE

Minimum Pavement Thickness*	Maximum Control Joint Spacing	Recommended Sawcut Depth
Standard Duty - 5 Inches	10 Feet x 10 Feet	1 ¼ Inches
Heavy Duty - 6 Inches	12 Feet x 12 Feet	1 ½ Inches

*Minimum pavement thickness values if the "free-draining" base material is available. Free draining material should be at least 4 inches and have a minimum LBR of 100.

TABLE 7
(UNREINFORCED) CONCRETE PAVEMENT – WITH POORLY DRAINING MATERIAL

Minimum Pavement Thickness*	Maximum Control Joint Spacing	Recommended Sawcut Depth
Standard Duty – 6 Inches	10 Feet x 10 Feet	1 ½ Inches
Heavy Duty - 7 Inches	12 Feet x 12 Feet	1 ¾ Inches

*Minimum pavement thickness values if the "free-draining" base material is not available. Poorly drainage material such as crushed concrete aggregate base should be at least 4 inches and have a minimum LBR of 100. Crushed concrete aggregate base material should be placed over compacted stabilized subgrade.

We recommend using concrete with a minimum 28-day compressive strength of 4,000 psi and minimum 28-day flexural strength (modulus of rupture) of at least 600 pounds per square inch, based on 3rd point loading of concrete beam test samples. Layout of the sawcut control joints should form square panels, and the depth of sawcut joints should be ¼ of the concrete slab thickness. The control joints should be sawed within 6 hours of concrete placement or as soon as the concrete has sufficient strength to support workers and equipment. We recommend allowing UES to review and comment on the final concrete pavement design, including section and joint details (type of joints, joint spacing, etc.), prior to the start of construction.

For further details on concrete pavement construction, please reference the "Guide to Jointing of Non-Reinforced Concrete Pavements" published by the Florida Concrete and Products Association, Inc., and "Building Quality Concrete Parking Areas", published by the Portland Cement Association.

9.2.4 Groundwater Considerations

One of the most critical influences on pavement performance is the relationship between the pavement subgrade and the seasonal high groundwater level. It has been our experience that roadways and parking areas may be damaged as a result of deterioration of the base and the base/surface course bond from saturation of the subgrade and/or base materials. We recommend that the seasonal high groundwater and the bottom of the base course be separated by at least 24 inches. For concrete pavement the minimum separation may be reduced to 18 inches provided the compacted base and subgrade is “free-draining” material.

Based on the assumed finish floor elevation, existing topographic information available, and presumed pavement grades, it appears the recommended separation will be provided in most of the pavement areas; however as mentioned before some borings encounter sand-clay mixtures. Where encountered, we recommend undercutting the very clayey sands and sandy clays to a minimum depth of 24 inches below the proposed bottom of the base course in accordance with FDOT Standard Plans Index 120-002. If the separation is not provided by grading and/or permanent surface drainage improvements, underdrains may be required.

9.2.5 Construction Traffic

Light duty roadways and incomplete pavement sections may not perform satisfactorily under construction traffic loadings. We recommend that construction traffic (construction equipment, concrete trucks, sod trucks, garbage trucks, dump trucks, etc.) be re-routed away from these roadways or that the pavement section design account for these loadings.

9.3 Site Preparation

9.3.1 General

We recommend normal, good practice dry weather site preparation procedures for the building and pavement areas. These procedures include stripping/demolition of the site to remove vegetation, surficial organics, trees and root systems greater than ½ inch in diameter and other debris. Following stripping/demolition, the exposed subgrade soils in areas to receive fill or at the subgrade elevation in cut areas should be proof-rolled to detect soft/loose or questionable soils. A more detailed description of this work is as follows:

1. Prior to construction, existing underground utility lines within the construction area should be located. Provisions should be made to relocate interfering utilities to appropriate locations. It should be noted that if underground pipes are not properly removed or plugged, they may serve as conduits for subsurface erosion which may lead to excessive settlement of overlying structures.

2. Strip/demolish the proposed construction limits of topsoil, asphalt, and other deleterious materials within and 5 feet beyond the perimeter of the proposed building and pavement

areas.

3. The site should be graded to direct surface water runoff away from the construction areas. Positive drainage of improved areas should be maintained during construction and throughout the design life of the project. If required, perform remedial dewatering prior to any earthwork operations. Dewatering operations scheduled should be carefully evaluated for possible impacts to the existing foundation systems. Dewatering systems should not be decommissioned until the excavation is backfilled two feet above the groundwater level at the time of construction. Further, the site should always be graded to prohibit ponding of stormwater runoff.

4. After clearing and stripping of the site is completed, the prepared subgrade soils within the building area should be observed and probed by a qualified agent of testing agency to locate any surficial deposits of vegetation, excessive roots or debris. If identified, undercut the vegetation, organics, muck, or deleterious material until clean natural soils are encountered and backfill the resulting excavations according to the fill placement procedures provided later in this section.

5. The building pad area, including 5 feet beyond the perimeter, should be proof-rolled, deep compacted, and tested for compliance to compaction requirements, to a depth of three (3) feet below foundation bearing levels, four (4) feet below finished floor slab or Elevation +98 ft NAVD, whichever is deeper, prior to any fill placement.

   The Fuel Station building pad area, including 5 feet beyond the perimeter, should be proof-rolled, deep compacted, and tested for compliance to compaction requirements, to a depth of three (3) feet below foundation bearing levels, four (4) feet below finished floor slab or Elevation +94 ft NAVD, whichever is deeper, prior to any fill placement.

6. Weak subgrade soils identified during proof-rolling operations shall be excavated and removed from the site, and replaced with selected (low permeability) fill material. We recommend that the bottom of all footings be probed to confirm the suitability of the bearing soils. We recommend 4-foot static cone penetrometer probe and/or auger borings be performed in the proposed footing excavations to investigate for clayey soils, or below grade structures. We recommend you probe every column footing, probe every 50 lineal feet of wall footing. If encountered, fat clays (CH) shall be removed to a minimum of 4 feet below the bottom of the footing/floor slab. The over-excavated areas shall be backfilled with a compacted, low permeability, engineered fill material. Fill material shall consist of poorly draining, silty-clayey sand with between 15% to 30% material passing the No. 200 sieve, a Liquid Limit (LL) value less than 30, and a Plasticity Index (PI) value less than 15. Special compaction equipment and strict moisture control may be required to achieve the minimum compaction specifications. Loose lift thicknesses of 8 inches or less are recommended.

7. In the areas to receive fill or at subgrade cut elevation, the subgrade should be compacted using a smooth drum vibratory roller having a minimum static, at-drum weight on the order of 10 tons and a drum diameter on the order of 3 to 4 feet making a minimum of eight overlapping passes with the second set of 4 passes perpendicular to the first set of 4 passes. If wet conditions are prevalent anywhere on site, at the discretion of a qualified representative of testing agency, a bridge lift of “dry” sand may be placed to raise the compaction surface above the water table sufficiently to enable effective

compaction. Typically, the material should exhibit moisture contents within +/- 2 percent of the modified Proctor optimum moisture content (ASTM D-1557) during the compaction operations. Compaction should continue until densities of at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557) have been uniformly achieved within the upper 36 inches of the compacted subgrade surface. If necessary to achieve the recommended soil compaction at depth, the loose/soft areas may be undercut, the exposed subgrade soils compacted, and then the areas backfilled using 6-inch lifts to final subgrade elevation. In non-building areas, compaction should continue until densities of at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557) have been uniformly achieved within the upper 24 inches of the compacted subgrade surface.

8. Place fill material, as required. The fill should consist of sand with less than 10 percent soil fines. Place fill in uniform 10- to 12-inch loose lifts and compact each lift to a minimum density of at least 95 percent of the modified Proctor maximum dry density (ASTM D1557). The last 12 inches of fill beneath the parking areas should be compacted to at least 98 percent of the Modified Proctor maximum dry density. Stabilize the upper 6 inches of this zone with shell or limerock as required to meet the subgrade recommendations contained in Section 9.2.2.1 and the Pavement Section Design, Appendix D.

9. Test the subgrade and each lift of backfill in over-excavated and fill areas for compaction at a frequency of not less than one test per 2,500 square feet in the building areas and one test per 10,000 square feet in paved areas.

10. In the building areas, test all footing cuts for compaction to a depth of 3 feet below bearing levels and probe footing, and building pad areas, to a depth of 4 feet to confirm suitability of bearing soils. We recommend you test every column footing, and conduct one test for every 50 lineal feet of wall footing.

11. If difficult compaction conditions are encountered during the site work operations, the compaction efforts should stop and a qualified representative of testing agency should be consulted for recommendations. The qualified representative of testing agency should observe proof-rolling of the exposed subgrade to determine if additional compaction is warranted or if any soil material needs to be over-excavated and replaced.

12. If site preparation work is performed during the rainy season (June through September, reference historic data and Climatic Atlas of the United States), special care should be taken to maintain positive drainage from the building pad and paved areas to drains or ditches around the site. Unexpected wet periods can also occur in Florida during the “dry” season. Such events can raise water tables to levels above seasonal highs without the associated high temperatures to evaporate ponded water. Therefore, the Contractor should practice wet weather means and methods for earthwork during the “dry” season as well. Groundwater and surface water control, use of granular fill material and aeration are the normal means to accommodate wet weather construction. All fill materials that are excavated from below the water table should be stockpiled for a sufficiently long period to allow drainage.

9.3.2 Suitability of Over-excavated Site Materials

9.3.2.1 Suitability Designation

From the point of view of evaluating the quality of site soils for re-use as fill material, we have subdivided the soil layers into four groups (Group A, Group B, Group C, Group D, and Group E) based on the percent fines determined from our laboratory tests. Please note that these groupings are not in accordance with industry standards but offered for ease of presentation and end use of the excavated soils. Also, organic soils are not suitable and are not recommended for use as structural fill material. Brief descriptions of the various groups based on fill suitability are presented in the following paragraphs. Table 8 shows the soil suitability groups.

TABLE 8
SUITABILITY OF EXCAVATED SOILS FOR RE-USE AS FILL

Designation	% fines passing No. 200 sieve	USCS Soil Classification	Suitability for re-use as fill material
Group A	0 - 5	SP	Favorable, freely draining, clean sands
Group B	5 - 12	SP - SM, SP - SC	Suitable, impedes infiltration and will require some aeration and moisture control
Group C	12 - 25	SM, SC, SM - SC	Poor, impedes infiltration, limit overall use, may be used for stabilizing material. Will require very strict moisture control.
Group D	> 25	SM, SC, SM – SC, CL, CH, ML, CH	Very Poor, not recommended for fill material, may be used as stabilizing material in pavement subgrade or used in green areas
Group E	organic	PT, OL, SP-OL, SM-OL	Unsuitable, must be removed/demucked and replaced with Group A or B soils

9.3.2.2 Soils & Suitability

A review of the subsurface conditions found in our Borings indicates that the predominate soil designations are Groups A and B, which is suitable for re-use as fill. Individual boring logs must be reviewed to determine the actual soil classification at any boring location. We estimate that about 50 percent of the soils to be over-excavated will be designated as Groups C or D. If encountered during excavation, soils in **Group D should not be used as backfill material due to difficulties in material handling**, however, these soils may be used in non-structural areas (green areas). Alternatively, they may be used greater than 5 feet below finished grade in deep fills for pavement areas with the understanding that there may be a negative effect on the project scheduling due to handling problems associated with moisture. Additionally, if these soils are not properly placed pavement performance may be negatively impacted. It should be noted that the successful use of group C and D soil types will be related to the sitework contractor's experience in working with these types of soils.

9.4 Sewer and Utility Lines

9.4.1 General Recommendations

We assume that proposed sewer and other deep utility lines at the site may have invert elevations several feet below existing grades. In general, the soils at this approximate level may

be sands to silty sands [SP/SM]; clayey sands and or clay [SC, CL, CH] may be encountered at deeper depths. The fine sand type soils, when excavated from below the water table, may require spreading and drying prior to reuse to achieve a moisture content sufficient to obtain the recommended degree of compaction. Silty sands may be reused as backfill material, but will require stringent moisture control to achieve compaction. The clayey soils [SC, CL, CH] should not be used as backfill material beside or above the utilities.

9.4.2 Trench Excavation and Backfill Recommendations

The following are our recommendations for construction of the proposed utility lines.

- Where required, the soils in the areas of excavations for the installation of the proposed gravity/force main lines should be dewatered prior to the start of excavation. The groundwater level should be maintained at least 24 inches below the base of the trench and compaction surface during construction and backfill activities.

- After proper dewatering, excavate the trench as per the design configuration. Excavated trenches should be set back to a stable configuration or shored, in either case in accordance with OSHA requirements. Adequate bracing should be provided if necessary to prevent side slope failures.

- Compact the trench bottom a minimum density of 95 percent of the Modified Proctor maximum dry density to a depth of 1-foot below the bottom of the pipe or place the pipe in gravel bedding as described by FDOT Design Standards. Remove rock, boulders or other hard lumpy or unyielding material to depth of 12 inches below the bottom of the pipe elevation. The subgrade after excavation in some areas may include silty-clayey sands [SM-SC/SC] [A-2-4]/[A-2-6], which will be difficult to compact. If these soils are soft in nature, they should be over-excavated and removed under the direction of the testing agency representative. Alternatively, approximately 6 to 12 inches of #57 stone (gravel) may be placed at the bottom and compacted to stabilize the subgrade. When utilizing graded stone material, sufficient amount of sand should be added to fill all voids created by the use of 57 stone. The undercut areas should be covered with geotextile (separation fabric). Some areas may also include very clayey sands or sandy clay [SC/CH][A-6]/[A-7]; these soils should be over-excavated and removed under the direction of the testing agency representative.

- Fill materials above the spring-line of the pipe should be compacted to a minimum of 95 percent of the Modified Proctor maximum dry density (AASHTO T-180/ASTM D-1557). Native soils consisting of clean sands with less than 12 percent fines may be used as backfill material provided they are inorganic, have moisture contents below the optimum level and are properly placed. As possible, we recommend you avoid using silty and clayey sands as backfill material for this project.

- If imported materials are used as trench backfill material, the imported fill should contain less than 5 percent soil fines passing a number 200 sieve. You may also use imported fill material containing 5 to 12 percent soil fines; however, strict moisture control measures will be required, particularly for placement of these materials in excavations extending below the groundwater level.

- Backfill placed around the pipe and extending up to a level of 12 inches above the top of the pipe should be placed in loose, 6-inch lifts and compacted with light-weight equipment such as a small plate compactor. The remaining backfill may be placed in loose, 12-inch lifts across the full trench width and compacted. All backfill lifts should be compacted to a minimum density of 95 percent of the Modified Proctor maximum dry density prior to the placement of additional backfill. Compaction within the backfill trench should be performed using light-weight compaction equipment until the backfill has attained a level of at least 4 feet above the crown of the pipe. Beneath pavement areas, the top 12 inches of backfill should be compacted to at least 98 percent.

- Compliance test for densities should be performed as recommended by FDOT standards. Additionally, local jurisdictional compaction requirements should be followed when stricter than the recommendations herein.

Backfill above and around thrust blocks should consist of clean fine sands (SP) compacted at least 98 percent of Modified Proctor maximum dry density (ASTM D 1557). For a design criteria, we recommend using an allowable passive earth pressure coefficient of K_p=3.0.

9.5 Underground Storage Tanks

9.5.1 General

It is assumed the tanks will have a maximum embedment depth of 10 feet below the existing ground surface. We anticipate the buried structure (tanks) will exert little or no net downward pressure on the soils, rather, the structure may be subject to hydrostatic uplift pressure when the tanks are empty. Below grade structures should be designed to resist lateral earth pressures and hydrostatic uplift pressures appropriate for their depth below existing grade and west season groundwater table.

The walls of the structures (tanks) should be designed to resist at-rest lateral earth pressures, with equivalent fluid densities above and below the water table being as follows:

Above Water Table – Equivalent Fluid Density 55 pcf
Below Water Table – Equivalent Fluid Density 90 pcf

The water table for well design purposes should be assumed to be 2 feet below prevailing grade.

9.5.2 Excavation Considerations

The proposed construction area should be dewatered as necessary and excavated to the required foundation depth. Excavation work will be required to meet OSHA Excavation Standard Subpart P regulations, Type C Soils. Either a braced sheet pile structure or an excavation with temporary side slopes cut back at 1.5 horizontal to 1.0 vertical can be implemented, depending on the specific project requirements. The side slope of 1.5 horizontal to 1.0 vertical is contingent upon the dewatering system adequately controlling slope seepage. Sheet piling should be designed according to OSHA sheeting and bracing requirements. We recommend a Florida registered Professional Engineer design the sheeting/bracing system. During excavation, excavated material should not be stockpiled at the top of the slope within a horizontal distance

equal to the excavation depth. Provisions for maintaining workman safety within excavations is the sole responsibility of the contractor.

We recommend positive drainage be established and maintained on the site during construction. Exposed subgrade soils consisting of silty and clayey soils will most likely result in saturated and pumping conditions due to the perched or standing water conditions. Further, short periods of intense rainfall can saturate surface soils, leading to instability during compaction and placement. In the event that heavy rainfall during construction activities resulted in unstable saturated conditions, the exposed saturated subgrade soils should be windrowed and aerated to reduce the moisture contents prior to further earthwork operations. Alternatively, the saturated soils could be over excavated and backfilled with compacted structural fill

9.5.3 Bedding Level Preparation

Based on our evaluation of the soil conditions encountered in this area, we offer the following recommendations for the proposed underground construction.

1. A dewatering system may be required for the project, if water perches above the clayey soils after significant rainfall. The water table should be maintained at least 2.0 feet below the proposed bottom of the tank elevation. The dewatering system should not be decommissioned until sufficient deadweight exists on the structure to prevent uplift protection system as described below, if necessary, is in place.

2. The subgrade after excavation in some areas may include silty-clayey sand type soils, which may be difficult to compact. If these soils are soft in nature, they should be over-excavated and removed under the direction of the testing agency representative. Alternatively, approximately 6 to 12 inches of #57 stone (gravel) may be placed at the bottom and compacted to stabilize the subgrade. The undercut area should be covered with a geotextile (separation) fabric.

3. The excavation bottom should be densified using hand-operated compaction equipment. Compaction should continue until a minimum density of 95 percent of the soils Modified Proctor maximum dry density (ASTM D1557) has been achieved as tested for a depth of 1.0 foot below tank bottoms.

4. Backfill which will be required around buried tanks should be compacted with a light hand-operated compactor to a density of 95 percent of the soils Modified Proctor maximum dry density. All backfill should be placed in level lifts not exceeding six inches loose thickness. Care should be taken not to over compact the backfill (i.e., limit compaction to a maximum of 98 percent of the maximum density) in order to limit the lateral loads applied to the proposed tanks. The sands excavated for the structure may be used as backfill.

9.5.4 Uplift Protection

When the fluid level within the fuel tank structure is maintained at or above the surrounding groundwater level, no net buoyancy will occur. However, when these structures are drained for maintenance or as fluid levels fluctuate within the tanks, a positive means of uplift protection may be necessary. Hydrostatic uplift forces can be resisted in several ways including:

1. Addition of dead weight to the structure.

2. Mobilizing the dead weight of the soil surrounding the structure through extension of footings outside the perimeter of the structure.

3. Use of a permanent gravity or mechanical dewatering system that is operated only when the structure is to be drained.

It is anticipated that use of one or more of the above methods may be necessary for uplift for protection.

9.6 Stormwater Management System

The field and laboratory test data indicates that the near-surface sands with silt generally have permeability rates of 9 to 16 feet per day, and the underlying clayey sand to sandy clay soils within the proposed stormwater management area for this project generally have permeability rates of less than 0.1 foot per day at the boring locations. Based upon the above findings, we recommend that you consider the soil parameters presented in Table 9 for design of the stormwater management system on the subject project site. It should be noted that the above referenced values are measured values and do not incorporate factor of safety.

TABLE 9 – STORMWATER MANAGEMENT SYSTEM SOIL DESIGN PARAMETERS			
Corresponding Soil Boring Test Locations	B9/B10	B11/B12	B13/B14
Average Ground Surface Elevation, feet	91	92.5	99
Average Depth to Confining Layer, feet	4.5	4.5	5
Average Confining Layer Elevation, feet	86.5	88	94
Estimated Average Unsaturated Vertical Infiltration rate, feet per day	9	11	10
Estimated Average Horizontal Hydraulic Conductivity, feet per day	16	18	17
Estimated Average Fillable Porosity, percentage	20	20	20
Estimated Seasonal High Water Table Elevation, feet	87.5	89	95
Estimated Seasonal High Water Table Depth, feet[1]	3.5	3.5	4

[1]The seasonal high water table will be a result of perched conditions.

9.7 Stormwater Management System Fill Suitability

The recovered soil samples were classified using visual and textural means, and limited laboratory testing. We offer below ***preliminary guidelines*** for the use of on-site soils, such as those excavated from the proposed retention pond, as fill material for the project.

Soil materials excavated and classified as fine sands to sand with silt and sand with clay (SP, SP-SM, SP-SC), with typically 12% fines or less (silt/clay fraction), may be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, provided the materials are properly dried, placed, and compacted.

Soil materials excavated and classified as silty fine sands [SM], with typically 12% to 25% fines, may also be considered suitable for use as utility trench backfill, as well as building pad and pavement subgrade structural fill, after significant drying and some mixing with the fine sand material described above. Proper placement, proof rolling and compaction must also be performed.

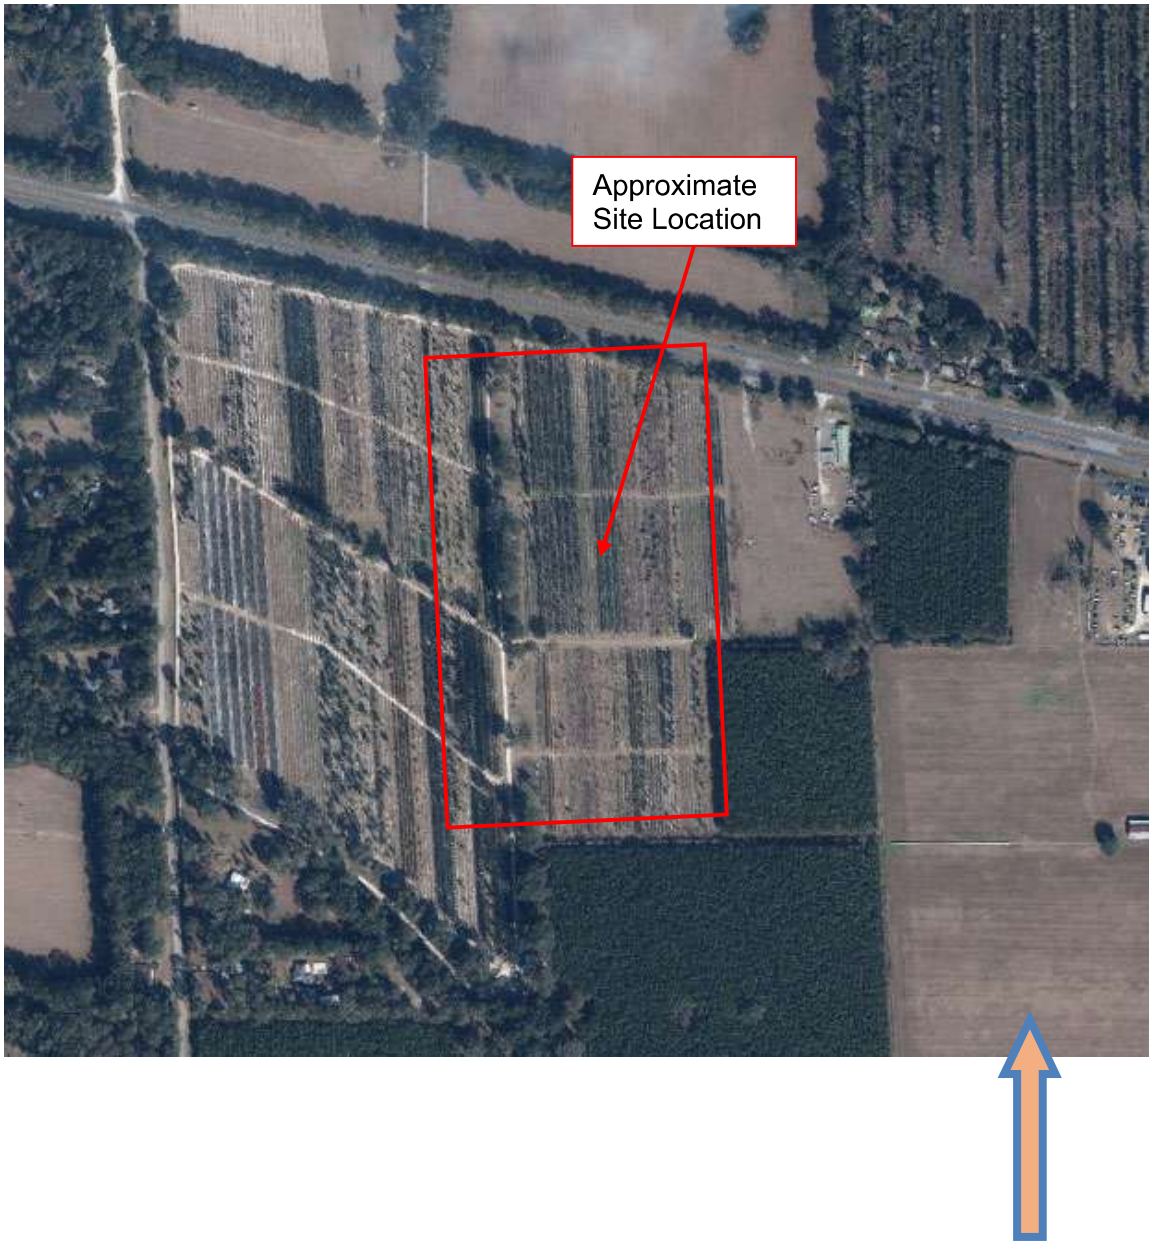
Soil materials excavated and classified as clayey sand, silt or clay (SC, ML, MH, CL, and CH) and any organic-laden soils (5% or greater organics by weight) should not be reused as fill beneath building or pavement sections. These materials could be used in green areas, if applicable and in non-structural applications where excessive ground subsidence will not create functional or aesthetic problems. It should be noted that silt and clay materials will retain water and if used near the final grade may become saturated and soft for a significant period of time following a rain event.

Soil borings for a typical geotechnical report are widely spaced and generally not sufficient for reliably detecting the presence of isolated, anomalous surface or subsurface conditions, or reliably estimating unsuitable or suitable material quantities. Accordingly, UES does not recommend relying on our boring information to negate presence of anomalous materials or for estimation of material quantities unless our contracted services ***specifically*** include sufficient exploration for such purpose(s) and within the report we so state that the level of exploration provided should be sufficient to detect such anomalous conditions or estimate such quantities. Therefore, UES will not be responsible for any extrapolation or use of our data by others beyond the purpose(s) for which it is applicable or intended.

9.8 Excavations

Excavations should be sloped as necessary to prevent slope failure and to allow backfilling. Temporary excavations below a depth of 4 feet should be sloped in accordance with current OSHA regulations (29 CFR Part 1926). Where lateral confinement will not permit slopes to be laid back, the excavation should be shored in accordance with OSHA requirements. During excavation, excavated material should not be stockpiled at the top of the slope within a horizontal distance equal to the excavation depth. Provisions for maintaining workman safety within excavations is the sole responsibility of the Contractor.

10.0 CLOSURE



Our interpretation of the site soil and groundwater conditions is based on our general knowledge of the area, subsurface borings performed and laboratory analysis conducted. UES did identify geotechnical considerations that may impact the planned development of the site, as we currently understand it, using conventional construction practices. The identified considerations are:

1. Shallow deposits of Clayey Sands [SC] that may not be re-usable as fill in utility excavations;
2. The subgrade after excavation, in some areas may include very clayey sands, which will be difficult to compact. The clayey sandy soils may require stringent moisture control during compaction, particularly during rainy periods.
3. Loose surficial sandy soils that will necessitate compaction to at least Elevation +98 feet, NAVD.

Standard methods of surficial stripping, general excavation, proof-rolling, compaction and backfilling should adequately prepare the site. testing agency should provide observation and testing services during the site preparation procedures to confirm that the earthwork operations meet the intent of the recommendations presented in this report. **UES strongly recommends that a pre-construction meeting be held with the following representatives in attendance at a minimum: Representative, General Contractor, Site (Earthwork) Contractor, Civil Engineer, Underground Utility Contractor, and UES Geotechnical Engineer and Material Testing Technician**. At this meeting, UES would describe in detail the geotechnical considerations that would impact the construction process and future serviceability of the improvements.

KEY TO BORING LOGS

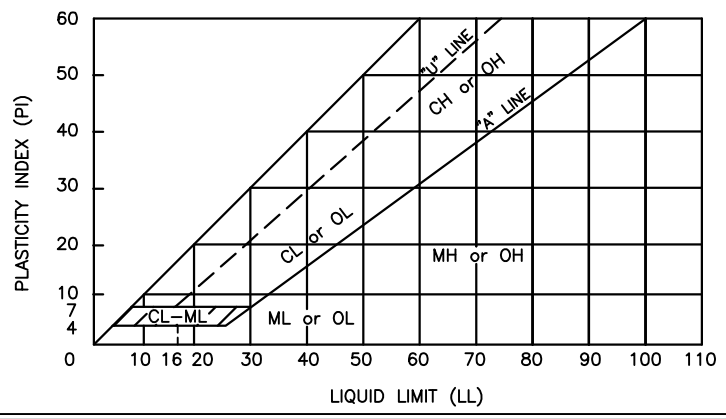
SYMBOLS

22	Number of Blows of a 140–lb Weight Falling 30 in. Required to Drive Standard Spoon One Foot
WOR	Weight of Drill Rods
S	Thin–Wall Shelby Tube Undisturbed Sampler Used
90% Rec.	Percent Core Recovery from Rock Core–Drilling Operations
	Sample Taken at this Level
	Sample Not Taken at this Level
	Change in Soil Strata
	Free Ground Water Level
	Seasonal High Ground Water Level

GRANULAR MATERIALS

Relative Density	Safety Hammer SPT N (Blows/Ft.)	Automatic Hammer SPT N (Blows/Ft.)
Very Loose	Less than 4	Less than 3
Loose	4–10	3–8
Medium Dense	10–30	8–24
Dense	30–50	24–40
Very Dense	>50	>40

COHESIVE MATERIALS



Consistency	Safety Hammer SPT N (Blows/Ft.)	Automatic Hammer SPT N (Blows/Ft.)
Very Soft	Less than 2	Less than 1
Soft	2–4	1–3
Firm	4–8	3–6
Stiff	8–15	6–12
Very Stiff	15–30	12–24
Hard	>30	>24

UNIFIED CLASSIFICATION SYSTEM

MAJOR DIVISIONS			GROUP SYMBOLS	TYPICAL NAMES
COARSE-GRAINED SOILS More than 50% retained on No. 200 sieve*	GRAVELS 50% or more of coarse fraction retained on No. 200 sieve	CLEAN GRAVELS	GW	Well–graded gravels and gravel–sand mixtures, little or no fines
			GP	Poorly graded gravels and gravel–sand mixtures, little or no fines
		GRAVELS WITH FINES	GM	Silty gravels, gravel–sand–silt mixtures
			GC	Clayey gravels, gravel–sand–clay mixtures
	SANDS More than 50% of coarse fraction passes No. 4 sieve	CLEAN SANDS	SW	Well–graded sands and gravelly sands, little or no fines
			SP	Poorly graded sands and gravelly sands, little or no fines
		SANDS WITH FINES	SM	Silty sands, sand–silt mixtures
			SC	Clayey sands, sand–clay mixtures
FINE-GRAINED SOILS 50% or more passes No. 200 sieve*	SILTS AND CLAYS Liquid limit 50% or less		ML	Inorganic silts, very fine sands, rock flour, silty or clayey fine sands
			CL	Inorganic clays of low to medium plasticity, gravelly clays, sandy clays silty clays, lean clays
			OL	Organic silts and organic silty clays of low plasticity
	SILTS AND CLAYS Liquid limit greater than 50%		MH	Inorganic silts, micaceous or diatomacaceous fine sands or silts, elastic silts
			CH	Inorganic clays or high plasticity, fat clays
			OH	Organic clays of medium to high plasticity
Highly organic Soils			PT	Peat, muck and other highly organic soils

* Based on the material passing the 3–in. (75mm) sieve.

PLASTICITY CHART

Tel: 352-955-2402

Client Identification: B-18 Set Number: E89168 Lab Number: E227905

Crop: **Bahiagrass Lawn**

Report Date: 20-Feb-26

Soil Test Results and Their Interpretations

Target pH:	**5.5**	This is the pH at which the above crop will grow at its optimum
pH (1:2 Sample:Water):	**7.7**	This is the pH of your sample in water medium
A-E Buffer Value:	**N/A**	Buffer pH is the pH of your soil in Adams-Evans Buffer(A-E Buffer). This is done to determine the lime requirement, which will help increase the soil pH to the target pH level desired by the crop. If the pH is higher than Target pH, Buffer pH will not be determined

AB-DTPA Extractable Nutrients

Nutrients	Level mg/kg or ppm	Interpretation	Nutrients	Level mg/kg or ppm	
Phosphorus (P)	**25**	**HIGH**	**Sulfur** (S)	**5.4**	***For these nutrients see directions on the following pages**
Potassium (K)	**35**		**Copper** (Cu)	**0.6**	
Magnesium (Mg)	**36**		**Manganese** (Mn)	**0.6**	
			Zinc (Zn)	**2.1**	
			Boron (B)	**0.0**	
Calcium (Ca)	**427**	**Ca is typically adequate in Florida soils**			

Lime and Fertilizer Recommendations

Crop: Bahiagrass Lawn

Lime:	**0.00**	**lbs per 1000 sq. ft. per year**
Nitrogen(N):	**1-2**	**lbs per 1000 sq. ft. per year**
Phosphorus(P_2O_5):	**0.00**	**lbs per 1000 sq. ft. per year**
Potassium(K_2O):	**2.00**	**lbs per 1000 sq. ft. per year**
Magnesium(Mg):	**0.46**	**lbs per 1000 sq. ft. per year**

*** Do not to add more than 1 pound of nitrogen per application**

We do not test soil for N as there is no meaningful soil test for predicting N availability. Thus, the N recommendation was developed from research that measured response of the indicated crop to applied N fertilizer. If you expect significant nutrient release from organic sources such as crop residues or organic amendments, estimate the amount mineralized and subtract that amount from the fertilizer recommendations given below to arrive at crop needs.

IMPORTANT: Prior to making any of the recommended applications, read carefully the footnotes/directions on this report. If you have any questions, please call the county extension agent listed above.

The soil has been determined to be calcareous in nature because of its pH (>=7.4). At this pH, AB-DTPA extraction method was found suitable. However, only Phosphorus(P) was calibrated. No calibration was possible for Potassium(K) and Magnesium (Mg). Therefore, the recommendations for K and Mg are provided solely for successful crop performance and yields. Nitrogen(N) recommendations are provided based on research data and not on a soil test. Research studies are underway at different locations in the state to identify an appropriate extraction method for improved interpretations and recommendations for these soils. At that time, the recommendations will be modified, as appropriate

UF UNIVERSITY of FLORIDA IFAS

Email: soilslab@ifas.ufl.edu Web: soilslab.ifas.ufl.edu
Phone #:352-392-1950

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227905 **Crop: Bahiagrass Lawn**

General

- For details on turfgrass fertilization, consult UF/IFAS publication SL21, "General Recommendations for Fertilization of Turfgrasses on Florida Soils" available on the web at https://edis.ifas.ufl.edu/publication/LH014 or from your county extension office.

Soil pH

- The pH of this soil is quite high. If this is a natural condition (i.e., if it is not from the over-application of lime), it is generally impractical to lower the soil pH with soil amendments. Use plant species that are tolerant of high soil pH.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

  Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

This data report has been issued on the authority of Dr. Franta Majs, Laboratory Director, and Mrs. Nancy Wilkinson, QA Officer, in support of Florida Cooperative Extension Service.

A-E Buffer Value: N/A	Buffer pH is the pH of your soil in Adams-Evans Buffer(A-E Buffer). This is done to determine the lime requirement, which will help increase the soil pH to the target pH level desired by the crop. If the pH is higher than Target pH, Buffer pH will not be determined

AB-DTPA Extractable Nutrients

Nutrients	Level mg/kg or ppm	Interpretation	Nutrients	Level mg/kg or ppm	
Phosphorus (P)	**25**	**HIGH**	**Sulfur** (S)	**5.4**	***For these nutrients see directions on the following pages**
Potassium (K)	**35**		**Copper** (Cu)	**0.6**	
Magnesium (Mg)	**36**		**Manganese** (Mn)	**0.6**	
			Zinc (Zn)	**2.1**	
			Boron (B)	**0.0**	
Calcium (Ca)	**427**	**Ca is typically adequate in Florida soils**			

Lime and Fertilizer Recommendations

Crop: Landscape Azaleas, Camellias, Gardenias, Hibiscus or Ixora

Lime:	**0.00**	**lbs per 1000 sq. ft.**
Nitrogen(N):	**1.10**	**lbs per 1000 sq. ft.**
Phosphorus(P_2O_5):	**0.00**	**lbs per 1000 sq. ft.**
Potassium(K_2O):	**0.70**	**lbs per 1000 sq. ft.**
Magnesium(Mg):	**0.46**	**lbs per 1000 sq. ft.**

*** Do not to add more than 1 pound of nitrogen per application**

We do not test soil for N as there is no meaningful soil test for predicting N availability. Thus, the N recommendation was developed from research that measured response of the indicated crop to applied N fertilizer. If you expect significant nutrient release from organic sources such as crop residues or organic amendments, estimate the amount mineralized and subtract that amount from the fertilizer recommendations given below to arrive at crop needs.

IMPORTANT: Prior to making any of the recommended applications, read carefully the footnotes/directions on this report. If you have any questions, please call the county extension agent listed above.

The soil has been determined to be calcareous in nature because of its pH (>=7.4). At this pH, AB-DTPA extraction method was found suitable. However, only Phosphorus(P) was calibrated. No calibration was possible for Potassium(K) and Magnesium (Mg). Therefore, the recommendations for K and Mg are provided solely for successful crop performance and yields. Nitrogen(N) recommendations are provided based on research data and not on a soil test. Research studies are underway at different locations in the state to identify an appropriate extraction method for improved interpretations and recommendations for these soils. At that time, the recommendations will be modified, as appropriate

Email: soilslab@ifas.ufl.edu Web: soilslab.ifas.ufl.edu
Phone #:352-392-1950

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227905 **Crop: Landscape Azaleas, Camellias, Gardenias, Hibiscus or Ixora**

General

- Indicated fertilizer rates, coupled with nutrients already in the soil, will satisfy the crop-nutrient requirement for the current growing season.

Fertilizer and water management are linked. Maximum fertilizer efficiency is achieved only with close attention to water management. Supply only enough irrigation water to satisfy plant requirements and minimize leaching conditions.

- Established trees (more than 3 to 5 years since transplanting) do not need routine fertilization.

For recently-planted trees, broadcast fertilizer within a circle 1.5 times the dripline diameter.

- Broadcast P2O5 either in one application or as half the recommended rate in each of two applications during the growing season. To minimize leaching losses, broadcast N and K2O in small increments throughout the growing season. Schedule one application every 12 weeks (three times per growing season), adding 33% of the recommended rate of N and K2O at each application. To insure equal coverage when fertilizer rates are small, blend all compatible fertilizers.

Soil pH

- The pH of this soil is quite high. If this is a natural condition (i.e., if it is not from the over-application of lime), it is generally impractical to lower the soil pH with soil amendments. Use plant species that are tolerant of high soil pH.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

If you expect significant nutrient release from organic sources such as crop residues or organic amendments, estimate the amount mineralized and subtract that amount from the fertilizer recommendations given below to arrive at crop needs.

IMPORTANT: Prior to making any of the recommended applications, read carefully the footnotes/directions on this report. If you have any questions, please call the county extension agent listed above.

The soil has been determined to be calcareous in nature because of its pH (>=7.4). At this pH, AB-DTPA extraction method was found suitable. However, only Phosphorus(P) was calibrated. No calibration was possible for Potassium(K) and Magnesium (Mg). Therefore, the recommendations for K and Mg are provided solely for successful crop performance and yields. Nitrogen(N) recommendations are provided based on research data and not on a soil test. Research studies are underway at different locations in the state to identify an appropriate extraction method for improved interpretations and recommendations for these soils. At that time, the recommendations will be modified, as appropriate

UF UNIVERSITY of FLORIDA IFAS

UF/IFAS Analytical Services Laboratories

Email: soilslab@ifas.ufl.edu Web: soilslab.ifas.ufl.edu
Phone #:352-392-1950

Prior to making any of the above recommended applications, it is important to read carefully the following footnotes and follow the directions provided on fertilizer applications, timing, doses, sources, sulfur and micronutrients, irrigation, etc.

Directions

Sample Number: 227906 **Crop: Landscape Azaleas, Camellias, Gardenias, Hibiscus or Ixora**

General

- Indicated fertilizer rates, coupled with nutrients already in the soil, will satisfy the crop-nutrient requirement for the current growing season.

Fertilizer and water management are linked. Maximum fertilizer efficiency is achieved only with close attention to water management. Supply only enough irrigation water to satisfy plant requirements and minimize leaching conditions.

- Established trees (more than 3 to 5 years since transplanting) do not need routine fertilization.

For recently-planted trees, broadcast fertilizer within a circle 1.5 times the dripline diameter.

- Broadcast P2O5 either in one application or as half the recommended rate in each of two applications during the growing season. To minimize leaching losses, broadcast N and K2O in small increments throughout the growing season. Schedule one application every 12 weeks (three times per growing season), adding 33% of the recommended rate of N and K2O at each application. To insure equal coverage when fertilizer rates are small, blend all compatible fertilizers.

Sulfur

- Application of sulfur is not required if the S test value is greater than 6.0 mg/kg (ppm). If the soil test value is less than 6.0 mg/kg (ppm) apply S as shown:

Fertilizer should contain enough S to apply 15 to 20 lb S per acre. Apply in the sulfate form (e.g., gypsum, ammonium sulfate, magnesium sulfate, potassium sulfate, potassium magnesium sulfate), since elemental S will react too slowly to supply the S needs of the crop.

Magnesium

- Apply the equivalent of 35 lb Mg/A, or 0.8 lb Mg per 1000 sq. ft., in a soluble form like magnesium sulfate or potassium magnesium sulfate.

This data report has been issued on the authority of Dr. Franta Majs, Laboratory Director, and Mrs. Nancy Wilkinson, QA Officer, in support of Florida Cooperative Extension Service.

GUIDANCE ON MICRONUTRIENTS

The IFAS Extension Soil Testing Laboratory currently offers a soil test for four micronutrients, copper (Cu), manganese (Mn), zinc (Zn), and boron (B). Interpretations in terms of plant needs of the particular nutrients are still quite tentative. They are presented here with the understanding that other criteria such as crop production records and observation of deficiency symptoms should be used along with the test results in reaching the management decision concerning micronutrient fertilization.

Interpretation of extractable Cu, Mn, Zn, and B depends on the soil pH. The critical soil levels for these nutrients increase with pH for crops grown on acid sandy soils of Florida. Micronutrient availability in the alkaline pH range is better evaluated with a plant tissue test or with soil test extractants developed especially for alkaline soils.

Indiscriminate use of micronutrient soil tests should be avoided. However, if plant performance has been less than optimum in the past and the soil test levels are below those shown in the tables, fertilization with the respective micronutrients may be indicated.

COPPER

In Florida, Cu deficiencies have been generally confined to soils high in organic matter and so-called "new ground" just coming into cultivation in the flatwood areas. Known Cu phytotoxicity occurs in citrus groves and vegetable crop areas where Cu applied in fungicides and fertilizers has accumulated in the soil over the years. Liming to pH 7.0 is the simplest means of overcoming phytotoxicity.

Table 1 provides guidelines for interpreting the IFAS Micronutrient Soil Test values for extractable Cu in mineral soils. Dilute acids are poor extractants of Cu on organic soils and do not give reliable estimates of crop responses. The IFAS Soil Testing Lab does not presently provide a Cu soil test for organic soils.

Application of 3 to 5 pounds elemental Cu per acre (as copper sulfate or finely ground copper oxide) will correct Cu deficiencies in most crops growing on mineral soils. Mixing these Cu sources with macronutrient fertilizers presents no agronomic problems, provided segregation of the materials is avoided. A single Cu application may be sufficient for several years. Do not repeat this application until soil or tissue tests indicate a need for Cu. Copper added to soil is there "forever" and Florida already has too many cases of soils with phytotoxic levels of Cu. Fertilizer Cu should not be applied to mineral soils where Cu will be used as a pesticide.

Table 1. Tentative interpretation of extractable Cu in mineral soils

	Soil pH Minerals Soils Only		
	5.5-6.0	6.0-6.5	6.5-7.0
	ppm		
Level below which there may be a crop response to applied Cu	0.1-0.3	0.3-0.5	0.5*
Level above which Cu phytotoxicity may occur	2.0-3.0	3.0-5.0	5.0**

*If in doubt about copper nutrition of crop, get a tissue test

MANGANESE

There has been some success in predicting crop response to fertilizer Mn with extractable Mn. Lack of success in some cases has resulted from the complex nature of soil Mn and the many factors that affect its uptake by plants. Levels in table 2 are suggested as a guide for interpreting extractable Mn in mineral and organic soils.

Application of 8 to 10 pounds elemental Mn (as manganese sulfate or manganese oxide) per acre in banded fertilizer is recommended when the soil test levels are below those shown in Table 2. Broadcast applications are less effective and the rate should be increased to 20 or 30 pounds Mn if the fertilizer is broadcast. Uptake of Mn is generally best when Mn is banded with acid forming fertilizers. Field crops most likely to give a yield response to applied Mn in Florida are soybeans, small grains, and irrigated corn. Sugarcane grown on organic soils having pHs above 6.5 will also respond to banded Mn fertilizer.

ZINC

Table 2 presents a guide to interpretation of extractable Zn in both mineral and organic soils. Where Zn fertilization is needed, application rates may vary considerably with crop and Zn source but generally are around 5 to 10 pounds Zn per acre. For tree crops, use tissue tests to determine if Zn fertilization is needed, and it is known that no Zn is applied in the spray program.

Table 2. Interpretive guide to extractable Mn and Zn

	Soil pH Minerals Soils Only		
	5.5-6.0	6.0-6.5	6.5-7.0
	ppm		
Level below which there may be a crop response to applied Mn	3-5	5-7	7-9
Level below which there may be a crop response to applied Zn	0.5	0.5-1.0	1.0-3.0

The critical values shown in Table 2 are higher than those used in other states of the Southeastern U.S. and reflect a significant "margin of safety" in interpretation of the test results. These critical levels may be modified as results from field trials justify such changes.

BORON

A Mehlich 3-extractable B soil test of 0.05 ppm or higher is considered adequate for most crops grown in Florida.

B exists in both organic and inorganic forms in the soil. Total B in soils can range between 10 and 100 mg/kg (ppm) depending on the organic matter content in the surface layer, but only a small amount will be available for plant uptake at any given time. B becomes plant-available as soil organic matter is mineralized and as B-containing minerals slowly dissolve. B is often added to the soil unintentionally as a contaminant in fertilizers like superphosphate and with soil amendments like manures and lime. For Florida soils, the Ca-B relationship is of utmost importance because soils with high Ca will require higher applications of B. However, excessive application must be avoided at all times due to the potential for B toxicity.

Please read the following if B applications are being considered: For tomatoes and alfalfa, applications of elemental B up to 2.0 lbs per acre per year can be broadcast. For all other crops including row and vegetable crops, broadcast B applications should not exceed 0.5 lb per acre per year.

For intensively managed sunflower and certain vegetables (beets, broccoli, cabbage, cauliflower, green onions, sweet potatoes, greens), applications up to 1.0 lb per acre of elemental B can be considered.

When foliar spraying is considered for any crop, do not exceed 0.2 lb per acre of elemental B per spray. Additional sprays should be at least 2 weeks apart. Spraying prior to bloom will help with fruit set. B can be supplied in combination with pesticide or fungicide sprays where compatible.

As B toxicity is real, all B applications, broadcast or foliar, should supplement B applied through soil amendments and fertilizer sources.

APPENDIX C

DESCRIPTION OF LABORATORY TESTING PROCEDURES

UNIFIED SOIL CLASSIFICATION - ASTM D-2487

This practice describes a system for classifying mineral and organo-mineral soils for engineering purposes based on laboratory determination of particle size characteristics, liquid limit, and plasticity index.

WASH 200 TEST - ASTM D-1140

The Wash 200 test is performed by passing a representative soil sample over a No. 200 sieve and rinsing with water. The percentage of the soil grains passing this sieve is then calculated.

FULL SIEVE GRADATION TEST – ASTM D-422

On occasion it is helpful to evaluate the overall compositional characteristics of a soil and the #200 sieve analysis is supplemented with a full grain size distribution. A set of sieves with varying mesh sizes is used to determine the gradation of the soil particle sizes.

MOISTURE CONTENT DETERMINATION - ASTM D-2216

Moisture content is the ratio of the weight of water to the dry weight of soil. Moisture content is measured by drying a sample at 105 degrees Celsius. The moisture content is expressed as a percent of the oven dried soil mass.

ATTERBERG LIMITS – ASTM D-4318

The Atterberg limits are the upper and lower limits of the range of water content over which a soil exhibits plastic behavior, and are defined as the liquid limit and plastic limit, respectively.

The liquid limit is estimated as follows: The soil is mixed with distilled water to form a thick paste, which is then placed in a brass cup mounted on an edge pivot and rests initially on a rubber base. The base is then leveled off horizontally and divided by cutting a groove with a standard tool. The two halves of the soil gradually flow together as the cup is repeatedly dropped onto its base at a specified rate. The liquid limit is defined as the water content at which 25 blows are required to close the groove over a distance of 1/2 inch.

The plastic limit is estimated as follows: The soil is mixed with distilled water until it can be molded. A ball of soil is then rolled into a thread 1/8 inch in diameter between the hand and a glass plate. The soil is molded together again and the process repeated until the thread cracks when its diameter is 1/8 inch. The water content of the soil at this state is determined and defined as the plastic limit.

ORGANIC CONTENT – ASTM D-2974

Ash content of a pear or organic soil sample is determined by igniting the over dried sample from the moisture content determination in a muffle furnace at 440 degrees Celsius. The substance remaining after the ignition is the ash. The ash content is expressed as a percentage of the oven dried sample. Organic matter is determined by subtracting the percent ash from 100.

APPENDIX C

DESCRIPTION OF FIELD TESTING PROCEDURES

STANDARD PENETRATION TESTING – ASTM D-1586

Penetration tests were performed in accordance with ASTM Procedure D-1586, Penetration Test and Split-Barrel Sampling of Soils. This test procedure generally involves driving a 1.4-inch I.D. split-tube sampler into the soil profile in six inch increments for a minimum distance of 18 inches using a 140-pound hammer free-falling 30 inches. The total number of blows required to drive the sampler the second and third 6-inch increments is designated as the N-value, and provides an indication of in-place soil strength, density and consistency.

FOUNDATION DESIGN CRITERIA
GEOTECHNICAL EXPLORATION FACT SHEET
FOUNDATION SUBSURFACE PREPARATION –
FOUNDATION SUBSURFACE PREPARATION – GAS STATION
PAVEMENT DESIGN CALCULATIONS
PAVEMENT SECTION DESIGN
PAVEMENT SECTION DETAILS

PRELIMINARY FOUNDATION SUBSURFACE PREPARATION-

ALACHUA, ALACHUA COUNTY, FLORIDA

UNLESS SPECIFICALLY INDICATED OTHERWISE IN THE DRAWINGS AND/OR SPECIFICATIONS, THE LIMITS OF THIS SUBSURFACE PREPARATION ARE CONSIDERED TO BE THAT PORTION OF THE SITE DIRECTLY BENEATH AND 5 FEET BEYOND THE BUILDING AND APPURTENANCES. APPURTENANCES ARE THOSE ITEMS ATTACHED TO THE BUILDINGS PROPER (REFER TO DRAWING SHEET SP1), TYPICALLY INCLUDING, BUT NOT LIMITED TO, THE BUILDING SIDEWALKS, GARDEN CENTER, PORCHES, RAMPS, STOOPS, TRUCK WELLS/DOCKS, CONCRETE APRONS AT THE AUTOMOTIVE CENTER, COMPACTOR PAD, ETC. THE INTERIOR SLAB-ON GRADE BASE AND VAPOR BARRIER, WHERE REQUIRED, DO NOT EXTEND BEYOND THE LIMITS OF THE ACTUAL BUILDING AND APPURTENANCES.

ESTABLISH THE FINAL SUBGRADE ELEVATION TO ALLOW FOR THE CONCRETE SLAB AND BASE. REFERENCE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR REQUIRED SLAB THICKNESS. FOR THE BUILDING INTERIOR SLAB-ON-GRADE THE 4-INCH THICK BASE MATERIAL SHALL CONSIST OF FDOT LIMEROCK MATERIAL, WITH AT LEAST 97% (BY WEIGHT) PASSING A 3.5 INCH SIEVE AND THE MATERIAL SHALL BE GRADED UNIFORMLY DOWN TO DUST. THE FINE MATERIAL SHALL CONSIST ENTIRELY OF DUST OF FRACTURE. THE LIMEROCK SHALL HAVE A LIMEROCK BEARING RATIO (LBR) OF AT LEAST 100 AND NO MORE THAN 20% FINES WHEN WASHED THROUGH A NO. 200 SIEVE. THE FLOOR SLAB BEARING SOILS SHALL BE COVERED BY A LAPPED VAPOR RETARDER OF AT LEAST 15-MIL THICKNESS, CONFORMING TO ASTM E 1745, CLASS A. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ACCURATE MEASUREMENTS FOR ALL CUT AND FILL DEPTHS REQUIRED. ANY PROPOSED EQUIVALENT ALTERNATIVE BASE MATERIAL MUST BE SUBMITTED FOR APPROVAL WITHIN 30 DAYS AFTER AWARD OF CONTRACT. ANY EQUIVALENT ALTERNATIVE SHALL ONLY BE USED IF APPROVED BY THE CEC AND AOR.

EXISTING FOUNDATIONS, SLABS, PAVEMENTS, AND BELOW-GRADE STRUCTURES SHALL BE REMOVED FROM THE BUILDING AREA. REMOVE SURFACE VEGETATION, TOPSOIL, ROOT SYSTEMS, ORGANIC MATERIAL, EXISTING FILL, AND SOFT OR OTHERWISE UNSUITABLE MATERIAL FROM THE BUILDING AREA. PROOFROLL EXPOSED SUBGRADE. THE BOTTOM OF ALL FOOTINGS AND BUILDING PAD AREAS SHALL BE PROBED TO CONFIRM THE SUITABILITY OF THE BEARING SOILS. REMOVE AND REPLACE UNSUITABLE AREAS WITH SUITABLE MATERIAL. IF ENCOUNTERED, FAT CLAYS SHALL BE REMOVED TO A MINIMUM OF 4 FEET BELOW THE BOTTOM OF THE FOOTINGS/BUILDING PAD. THE OVER-EXCAVATED AREAS SHALL BE BACKFILLED WITH A COMPACTED, LOW PERMEABILITY, ENGINEERED FILL MATERIAL. FILL MATERIAL SHALL CONSIST OF POORLY DRAINING SILTY SAND OR CLAYEY SAND WITH BETWEEN 15% TO 30% MATERIAL PASSING THE NO. 200 SIEVE, A LIQUID LIMIT (LL) VALUE OF LESS THAN 30, AND A PLASTICITY INDEX (PI) VALUE LESS THAN 15.

SUBGRADE MATERIAL SHALL BE PLACED IN LOOSE LIFTS NOT EXCEEDING 12 INCHES IN THICKNESS AND COMPACTED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D-1557) AT A MOISTURE CONTENT WITHIN 2 PERCENT BELOW TO 2 PERCENT ABOVE THE OPTIMUM.

THE BEARING LEVEL SOILS SHOULD BE DENSIFIED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D1557) TO A DEPTH OF THREE FEET BELOW THE BEARING LEVELS, OR FOUR FEET BELOW FINISH FLOOR, OR ELEVATION +98 FT. NAVD, WHICHEVER IS DEEPER. THE FOUNDATION SYSTEM SHALL BE ISOLATED SPREAD FOOTINGS AT COLUMNS AND CONTINUOUS STRIP FOOTINGS AT WALLS.

PERCHED SURFACE AND GROUNDWATER MAY OCCUR IN SOME AREAS OF THE SITE AND SURFACE AND SHALLOW GROUNDWATER CONTROL SHOULD BE ANTICIPATED, PARTICULARLY IN LOW AREAS, OR AREAS THAT ARE DEEPLY STRIPPED OR UNDERCUT. SHALLOW GROUNDWATER MAINTENANCE TYPICALLY CONSISTS OF PUMPING FROM SUMPS IN PERIMETER DITCHES OR PITS. GROUNDWATER CONTROL IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

THIS FOUNDATION SUBSURFACE PREPARATION DOES NOT CONSTITUTE A COMPLETE SITE WORK SPECIFICATION. IN CASE OF CONFLICT, INFORMATION COVERED IN THIS PREPARATION SHALL TAKE PRECEDENCE OVER THE SPECIFICATIONS. REFER TO THE SPECIFICATIONS FOR SPECIFIC INFORMATION NOT COVERED IN THIS PREPARATION. THIS INFORMATION WAS TAKEN FROM A GEOTECHNICAL REPORT PREPARED BY UES PROFESSIONAL SOLUTIONS, LLC, UES PROJECT NO. A25140.00683.005, REPORT NO: 2162758. THE GEOTECHNICAL REPORT IS FOR INFORMATION ONLY AND IS NOT A CONSTRUCTION SPECIFICATION.

esuarez@teamues.com

PRELIMINARY FOUNDATION SUBSURFACE PREPARATION- FUEL STATION SERVICE BUILDING

ALACHUA, ALACHUA COUNTY, FLORIDA

UNLESS SPECIFICALLY INDICATED OTHERWISE IN THE DRAWINGS AND/OR SPECIFICATIONS, THE LIMITS OF THIS SUBSURFACE PREPARATION ARE CONSIDERED TO BE THAT PORTION OF THE SITE DIRECTLY BENEATH AND 5 FEET BEYOND THE FUEL STATION SERVICE BUILDING AND SERVICE BUILDING FLATWORK AREAS, AS WELL AS DIRECTLY BENEATH CANOPY FOUNDATIONS. THE INTERIOR SLAB-ON GRADE BASE AND VAPOR BARRIER, WHERE REQUIRED, DO NOT EXTEND BEYOND THE LIMITS OF THE ACTUAL BUILDING AND APPURTENANCES.

AT THE SERVICE BUILDING AND FLATWORK SLABS, ESTABLISH THE FINAL SUBGRADE ELEVATION TO ALLOW FOR THE CONCRETE SLAB AND BASE. REFERENCE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR REQUIRED SLAB THICKNESS. FOR THE BUILDING INTERIOR SLAB-ON-GRADE THE 4-INCH THICK BASE MATERIAL SHALL CONSIST OF FDOT LIMEROCK MATERIAL, WITH AT LEAST 97% (BY WEIGHT) PASSING A 3.5 INCH SIEVE AND THE MATERIAL SHALL BE GRADED UNIFORMLY DOWN TO DUST. THE FINE MATERIAL SHALL CONSIST ENTIRELY OF DUST OF FRACTURE. THE LIMEROCK SHALL HAVE A LIMEROCK BEARING RATIO (LBR) OF AT LEAST 100 AND NO MORE THAN 20% FINES WHEN WASHED THROUGH A NO. 200 SIEVE. THE FLOOR SLAB BEARING SOILS SHALL BE COVERED BY A LAPPED VAPOR RETARDER OF AT LEAST 15-MIL THICKNESS, CONFORMING TO ASTM E 1745, CLASS A. AT THE CANOPY FOUNDATION, ESTABLISH THE FINAL SUBGRADE ELEVATION TO ALLOW FOR THE CANOPY CONCRETE FOUNDATIONS. REFERENCE ARCHITECTURAL AND STRUCTURAL DRAWINGS FOR REQUIRED FOUNDATION THICKNESS. AT THE CANOPY SLAB, THE MINIMUM 4-INCH THICK “FREE DRAINING” BASE MATERIAL SHALL CONFORM TO FDOT GRADED AGGREGATE BASE. AT ALL LOCATIONS IN THE FUEL STATION AREA, THE BASE SHALL BE PROVIDED BY THE BUILDING CONTRACTOR IN JOINT PROJECTS. THE CONTRACTOR SHALL BE RESPONSIBLE FOR OBTAINING ACCURATE MEASUREMENTS FOR ALL CUT AND FILL DEPTHS REQUIRED. ANY PROPOSED EQUIVALENT ALTERNATIVE BASE MATERIAL MUST BE SUBMITTED FOR APPROVAL WITHIN 30 DAYS AFTER AWARD OF CONTRACT. ANY EQUIVALENT ALTERNATIVE SHALL ONLY BE USED IF APPROVED BY THE CEC AND AOR.

EXISTING FOUNDATIONS, SLABS, PAVEMENTS, AND BELOW-GRADE STRUCTURES SHALL BE REMOVED FROM THE BUILDING AREA. REMOVE SURFACE VEGETATION, TOPSOIL, ROOT SYSTEMS, ORGANIC MATERIAL, EXISTING FILL, AND SOFT OR OTHERWISE UNSUITABLE MATERIAL FROM THE BUILDING AREA. PROOFROLL EXPOSED SUBGRADE. THE BOTTOM OF ALL FOOTINGS AND BUILDING PAD AREAS SHALL BE PROBED TO CONFIRM THE SUITABILITY OF THE BEARING SOILS. REMOVE AND REPLACE UNSUITABLE AREAS WITH SUITABLE MATERIAL. SUBGRADE MATERIAL SHALL BE FREE OF ORGANIC AND OTHER DELETERIOUS MATERIALS, SHALL BE COMPRISED OF INORGANIC, NON PLASTIC GRANULAR SOILS WITH LESS THAN THAT 12 PERCENT PASSING THE #200 SIEVE (RELATIVELY CLEAN SAND WITH UNIFIED SOIL CLASSIFICATION OF SP, SP-SM, SP-SC OR SW-SM) AND SHALL MEET THE FOLLOWING REQUIREMENTS:

LOCATION WITH RESPECT TO FINAL GRADE	**P.I.**	**L.L.**
BUILDING AREA, BELOW UPPER 4 FEET	NP	NP
BUILDING AREA, UPPER 4 FEET	NP	NP

SUBGRADE MATERIAL SHALL BE PLACED IN LOOSE LIFTS NOT EXCEEDING 12 INCHES IN THICKNESS AND COMPACTED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D-1557) AT A MOISTURE CONTENT WITHIN 2 PERCENT BELOW TO 2 PERCENT ABOVE THE OPTIMUM.

THE BEARING LEVEL SOILS SHOULD BE DENSIFIED TO AT LEAST 95 PERCENT OF THE MODIFIED PROCTOR MAXIMUM DRY DENSITY (ASTM D1557) TO A DEPTH OF THREE FEET BELOW BEARING LEVELS, OR FOUR FEET BELOW FINISH FLOOR, OR ELEVATION +94 FT. NAVD, WHICHEVER IS DEEPER. THE FOUNDATION SYSTEM SHALL BE ISOLATED SPREAD FOOTINGS AT COLUMNS AND CONTINUOUS STRIP FOOTINGS AT WALLS.

PERCHED SURFACE AND GROUNDWATER MAY OCCUR IN SOME AREAS OF THE SITE AND SURFACE AND SHALLOW GROUNDWATER CONTROL SHOULD BE ANTICIPATED, PARTICULARLY IN LOW AREAS, OR AREAS THAT ARE DEEPLY STRIPPED OR UNDERCUT. SHALLOW GROUNDWATER MAINTENANCE TYPICALLY CONSISTS OF PUMPING FROM SUMPS IN PERIMETER DITCHES OR PITS. GROUNDWATER CONTROL IS THE SOLE RESPONSIBILITY OF THE CONTRACTOR.

THIS FOUNDATION SUBSURFACE PREPARATION DOES NOT CONSTITUTE A COMPLETE SITE WORK SPECIFICATION. IN CASE OF CONFLICT, INFORMATION COVERED IN THIS PREPARATION SHALL TAKE PRECEDENCE OVER THE SPECIFICATIONS. REFER TO THE SPECIFICATIONS FOR SPECIFIC INFORMATION NOT COVERED IN THIS PREPARATION. THIS INFORMATION WAS TAKEN FROM A GEOTECHNICAL REPORT PREPARED BY UES PROFESSIONAL SOLUTIONS, LLC, UES PROJECT NO. A25140.00683.005, REPORT NO: 2162758. AN E-MAIL ADDRESS FOR THE GEOTECHNICAL ENGINEER, EDUARDO SUAREZ, P.E.:
esuarez@teamues.com

PRELIMINARY GEOTECHNICAL EXPLORATION FACT SHEET

Project Location: Alachua, Alachua County, Florida

Engineer: Eduardo Suarez, P.E. **Phone No:** (352) 372-3392

Geotechnical Engineering Company: UES Professional Solutions, LLC

Report Date: March 6, 2026

Ground Water Elevation: Transient perched at +101 to +82, NAVD

Date Groundwater Measured NA

Topsoil/Stripping Depth: 6 to 12 inches

Undercut: If encountered, fat clays shall be removed to a minimum of 4 feet below the bottom of the footings. See Section 9.3 of this report for more detailed site preparation recommendations

pH: 6.34 to 6.44

Resistivity: 20,000 to 24,000 ohm-cm

Corrective Action for pH: Type II cement, control of minimum concrete cover over rebar, Protective coatings for steel which are within 2 feet of or below SHGWL

Cement Type: Type II cement with fly ash for below grade construction

Recommended local DOT base material (See Foundation Subsurface Preparation): FDOT limerock base. Very clayey sands and sandy clays shall be removed to a minimum in accordance with FDOT Standards Index 120-002

Modified Proctor Results: MDD 121, OMC 8.5% (See Appendix C)

Recommended Compaction Control Tests:

1 Test for Each 2,500 Sq. Ft. each Lift (bldg. area)

1 Test for Each 10,000 Sq. Ft. each Lift (parking area)

Structural Fill Maximum Lift Thickness 12 in. (Measured loose)

Subgrade Design LBR: LBR = 59

Fill Soils Characteristics

Maximum Liquid Limit: NP

Maximum Plasticity Index: NP

Specified Compaction: 95% Modified Proctor

Moisture Content Range: +/-2% of Optimum

COMPONENT	ASPHALT		CONCRETE	
	Standard	Heavy	Standard	Heavy
Stabilized Subgrade	6"	6"	*4"	*4"
Base Material (Limerock, or Soil Cement)	6"	6"	*4"	*4"
Asphaltic Base Course		N/A		
Leveling Binder Course	1.5"	2.5"		
Surface Course	1.5"	1.5"	5" (concrete)	6"

* The stabilized subgrade and base should be "free-draining"

As an alternative, if recommended “free-draining” materials are not available, and very poor drainage base material such as crushed concrete aggregate base material over compacted subgrade is used, the concrete thickness should be increased. Minimum pavement thickness should be 6 inches for standard duty and 7 inches for heavy duty.

NOTE: This information should not be used separately from the geotechnical report.

PRELIMINARY FOUNDATION DESIGN CRITERIA

Project Location: Alachua, Alachua County, Florida

ENGINEER: Eduardo Suarez, P.E.

GEOTECHNICAL ENGINEERING COMPANY: UES Professional Solutions, LLC

REPORT DATE: March 6, 2026 **Phone No:** (352) 372-3392

Foundation Type: Spread Footings

Allowable bearing pressure: 2,500 psf

Factor of Safety: +2

Minimum footing dimensions: Individual: 30" Continuous: 18"

Minimum footing Embedment: Exterior: 18" Interior: 18"

Frost depth: None

Maximum foundation settlements:

Total: less than 1"

Differential: less than 1/2" masonry walls and 3/4" between columns

(less than L/500 for Neighborhood Market/ less than L/400 for Fuel Station)

Slab:

Potential vertical rise: None Anticipated

Vapor barrier or capillary break (describe): Plastic Sheet (15 MIL Polyethylene)

Subgrade reaction modulus: 150 psi/in Method obtained: NAVFAC Dm 7.1, pg 219, Fig 6

Perimeter Drains (describe):

Building: None recommended

Retaining Walls: Loading Dock Wall/Pit

Pavements: None recommended

Retaining Walls:

Active Equivalent Fluid Pressure: 33 pcf
Passive Equivalent Fluid Pressure: 350 pcf
Passive Pressure Coefficient K_p=:: 3.00
Active Pressure Coefficient K_a=:: 0.33
At Rest Pressure Coefficient K_o=: 0.50
Coefficient of Friction: 0.40

COMMENTS: Based on finished floor elevation of +102 ft NAVD for the and +98 feet for the Fuel Station, compact the subgrade soils to 3 feet below bearing levels, or elevation +98 ft NAVD for the , whichever is deeper, to a minimum relative compaction of 95 percent of Modified Proctor Maximum Dry Density (ASTM D1557).

NOTE: This information should not be used separately from the geotechnical report.

PAVEMENT DESIGN CALCULATIONS

Minimum Pavement Design Recommendations per

Standard Duty
- Design life of 20 years
- Equivalent 18 kip Single Axle Load (ESAL) = 73,000/109,500
- Daily ESAL = 15
- Reliability = 85%
- Initial Serviceability = 4.2
- Terminal Serviceability = 2.0
- Standard Deviation = 0.45 for flexible 0.35 for rigid
- Minimum thickness = 3" of Asphalt and 5" of Concrete

Heavy Duty
- Design life of 20 years
- Equivalent 18 kip Single Axle Load (ESAL) = 211,700/335,800
- Daily ESAL = 29
- Reliability = 85%
- Initial Serviceability = 4.2
- Terminal Serviceability = 2.0
- Standard Deviation = 0.45 for flexible 0.35 for rigid
- Minimum thickness = 4" of Asphalt and 6" of Concrete

Flexible Pavement Design

Florida Department of Transportation - Flexible Pavement Design Manual (March 2008)

Structural Numbers are calculated by the AASHTO Methods
AASHTO Design Equation for Flexible Pavement:

$$\log_{10} W_{18} = Z_R * S_0 + 9.36 * \log_{10}(SN+1) - 0.20 + \frac{\log_{10}\left(\frac{\Delta PSI}{4.2-1.5}\right)}{0.40 + \frac{1094}{(SN+1)^{5.19}}} + 2.32 * \log_{10}(M_R) - 8.07$$

SN_R = Structural Number required
W_{18} = Equivalent 18 kip Single Axle Load
Z_R = Standard Normal Deviate (taken from Page A.3.0 relative to Reliability)
M_R = Resilient Modulus psi (Table 5.1 from estimated LBR results)
S_0 = Standard Deviation
ΔPSI = Change in serviceability (Terminal Serviceability normally assumed 2.5)

FDOT Calculations continued

Required Structural Number - SN_R = **1.97** (Standard Duty)
Required Structural Number - SN_R = **2.35** (Heavy Duty)

Layer Thickness Calculations for Proposed Pavement Sections (SN_C)

$$SN_C = (a_1 * D_1) + (a_2 * D_2) + (a_3 * D_3) + \ldots + (a_N * D_N)$$

SN_C = Structural Number calculated
a_N = Layer coefficient of layer (FDOT Table 5.4 Structural Coefficients)
D_N = Layer thickness

Standard Duty
Proposed Pavement Section

Type	D*	a		
Asphalt	3 inches	0.44		1.32
Limerock/crushed Base (LBR 100)	6 inches	0.18		1.08
Type B Stabilized (LBR 40)	6 inches	0.08		0.48
			Total	2.88

Provided SN_C = **2.88** is greater than Required SN_R = **1.97** Good

Heavy Duty
Proposed Pavement Section

Type	D*	a		
Asphalt	4 inches	0.44		1.76
Limerock/crushed Base (LBR 100)	6 inches	0.18		1.08
Type B Stabilized (LBR 40)	6 inches	0.08		0.48
			Total	3.32

Provided SN_C = **3.32** is greater than Required SN_R = **2.35** Good

Rigid Pavement Design

Florida Department of Transportation - Flexible Pavement Design Manual (January 2009)

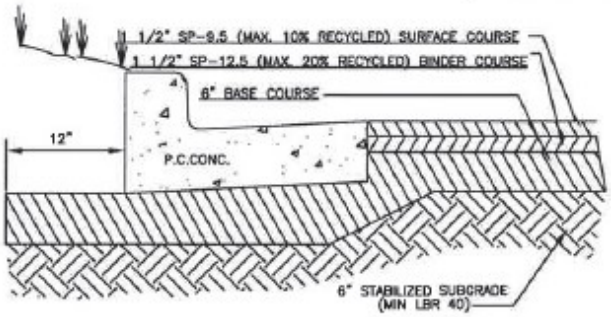
AASHTO - Design of Pavement Systems (1993)

Depths of Concrete required are calculated by the AASHTO Methods

AASHTO Design Equation for Rigid Pavement

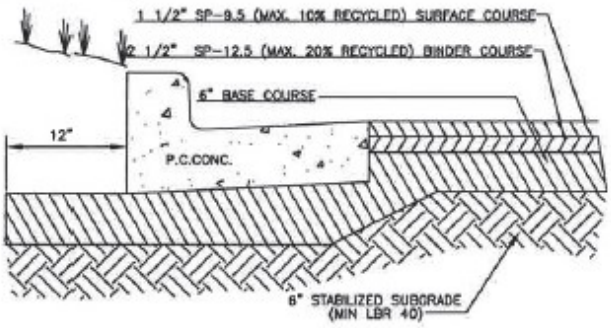
$$\log_{10} W_{18} = z_R * s_O + 7.35 * \log_{10}(D+1) - 0.06 + \frac{\log_{10}\left[\frac{\Delta PSI}{4.5-1.5}\right]}{1+\frac{1.624*10^7}{(D+1)^{8.46}}} + (4.22 - 0.32 p_t) * \log_{10}\left[\frac{s'_c * c_d\left[D^{0.75} - 1.132\right]}{215.63 * J\left[D^{0.75} - \frac{18.42}{(E_c/k)^{0.25}}\right]}\right]$$

D	= Depth of concrete required
W_{18}	= Equivalent 18 kip Single Axle Load
k	= Effective Modulus of Subgrade Reaction (selected as 200 pci; 100 pci without "free-draining" base)
s'_c	= Mean Concrete Modulus of Rupture (typically 600 psi)
J	= Load Transfer Coefficient (typically 3.8 for aggregate interlock)
c_d	= Drainage Coefficient (typically 1.0; 0.8 for subgrade without "free-draining" base)
ΔPSI	= Design Serviceability loss
S_O	= Standard Deviation



With "free-draining"4-inch base material:
The design thickness of concrete calculated for standard duty is: **5.0** inches
minimum required thickness = **5** inches [Therefore Good]

With "poorly draining" 4-inch base material:
The design thickness of concrete calculated for standard duty is: **5.8** inches



With "free-draining" 4-inch base material:
The design thickness of concrete calculated for heavy duty is: **5.6** inches
minimum required thickness = **6** inches [Therefore Good]

With "poorly -draining" 4-inch base material:
The design thickness of concrete calculated for heavy duty is: **6.6** inches

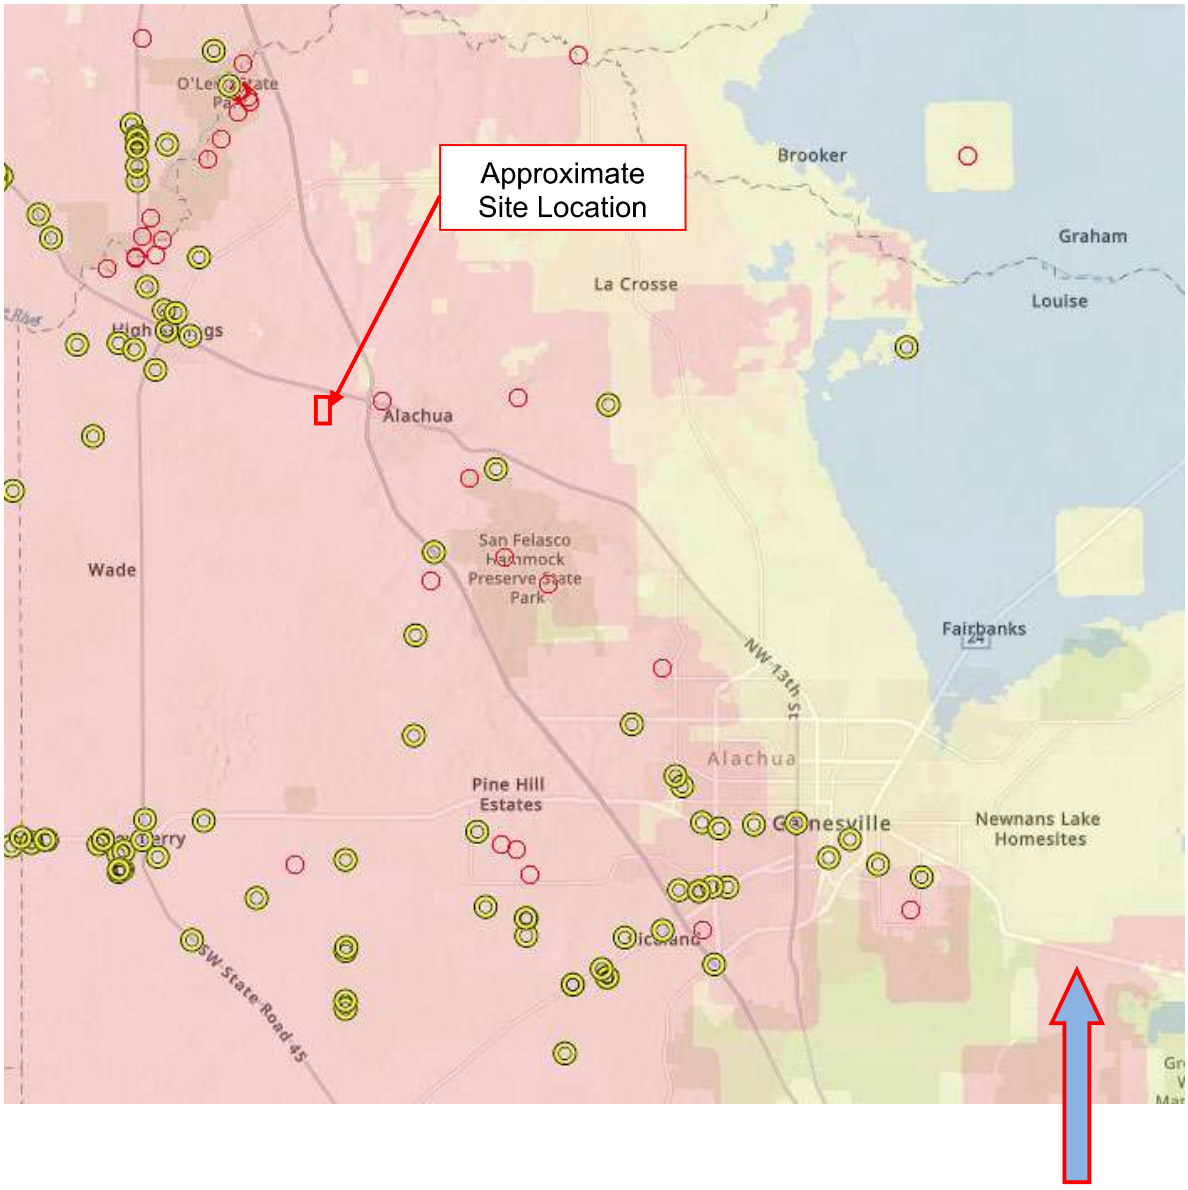
NOTES:



1. FOR PREPARATION OF SUBGRADE, FILL PLACED WITHIN 12 INCHES OF BOTTOM OF STABILIZED SUBGRADE SHOULD BE COMPACTED TO AT LEAST 98% OF THE MATERIAL'S MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY. FILL PLACED BELOW THIS LEVEL SHOULD BE COMPACTED TO AT LEAST 95% OF THE MATERIAL'S MAXIMUM DRY DENSITY.
2. STABILIZED SUBGRADE SHOULD BE COMPACETED TO A MINIMUM OF 98% OF THE MATERIAL'S MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY.
3. LIMEROCK BASE COURSE SHOULD CONFORM TO THE REQUIREMENTS OF SECTION 200 OF THE F.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION AND BE COMPACTED TO AT LEAST 98% OF THE MATERIAL'S MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY.
4. ASPHALTIC SURFACE COURSE MIXTURES SHOULD BE IN ACCORDANCE WITH TYPE REFERENCED IN SECTION 330 OF THE F.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION.
5. THE PORTLAND CEMENT CONCRETE PAVEMENT MIXTURE SHOULD BE IN ACCORDANCE WITH THE AIR-ENTRAINED CONCRETE FOR PAVEMENT SECTION 350 OF THE F.D.O.T. STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION. THE MIXTURE SHOULD BE DESIGNED TO DEVELOP A MINIMUM COMPRESSIVE STRENGTH OF 4000 PSI AT 28 DAYS WITH A 4 INCH MINIMUM SLUMP AND 5% TO 7% ENTRAINED AIR.
6. (*) BASE AND STABILIZED SUBGRADE COURSES BENEATH CONCRETE PAVEMENT SHALL HAVE A MINIMUM PERMEABILITY - (K) GREATER THAN OR EQUAL TO 0.001cm/sec. BASE AND SUBGRADE MATERIALS SHOULD BE COMPACTED TO AT LEAST 98% OF THE MATERIALS MODIFIED PROCTOR (AASHTO T 180 / ASTM D 1557) MAXIMUM DRY DENSITY.
7. IF RECOMMENDED "FREE DRAINING MATERIAL" IS NOT AVAILABLE AND VERY POOR DRAINAGE BASE MATERIAL SUCH AS CRUSHED CONCRETE AGGREGATE BASE MATERIAL, COMPACTED SUBGRADE IS USED, THE CONCRETE THICKNESS SHOULD BE INCREASED. MINIMUM PAVEMENT THICKNESS SHOULD BE 6 INCHES FOR REGULAR DUTY AND 7 INCHES FOR HEAVY DUTY.
8. FOR LIMEROCK, COQUINA, BANKRUN SHELL OR CRUSHED CONCRETE, MIN. LBR=100. FOR SAND/CLAY BASE, MIN. LBR=75. FOR SOIL CEMENT BASE, MIN. (7) DAY COMPRESSIVE STRENGTH=300 PSI.

APPENDIX F

GBA DOCUMENT
CONSTRAINTS AND RESTRICTIONS

Important Information about This

Geotechnical-Engineering Report

Subsurface problems are a principal cause of construction delays, cost overruns, claims, and disputes.

While you cannot eliminate all such risks, you can manage them. The following information is provided to help.

The Geoprofessional Business Association (GBA) has prepared this advisory to help you – assumedly a client representative – interpret and apply this geotechnical-engineering report as effectively as possible. In that way, clients can benefit from a lowered exposure to the subsurface problems that, for decades, have been a principal cause of construction delays, cost overruns, claims, and disputes. If you have questions or want more information about any of the issues discussed below, contact your GBA-member geotechnical engineer. Active involvement in the Geoprofessional Business Association exposes geotechnical engineers to a wide array of risk-confrontation techniques that can be of genuine benefit for everyone involved with a construction project.

Geotechnical-Engineering Services Are Performed for Specific Purposes, Persons, and Projects

Geotechnical engineers structure their services to meet the specific needs of their clients. A geotechnical-engineering study conducted for a given civil engineer will not likely meet the needs of a civil-works constructor or even a different civil engineer. Because each geotechnical-engineering study is unique, each geotechnical-engineering report is unique, prepared *solely* for the client. *Those who rely on a geotechnical-engineering report prepared for a different client can be seriously misled*. No one except authorized client representatives should rely on this geotechnical-engineering report without first conferring with the geotechnical engineer who prepared it. *And no one – not even you – should apply this report for any purpose or project except the one originally contemplated.*

Read this Report in Full

Costly problems have occurred because those relying on a geotechnical-engineering report did not read it *in its entirety*. Do not rely on an executive summary. Do not read selected elements only. *Read this report in full.*

You Need to Inform Your Geotechnical Engineer about Change

Your geotechnical engineer considered unique, project-specific factors when designing the study behind this report and developing the confirmation-dependent recommendations the report conveys. A few typical factors include:

- the client's goals, objectives, budget, schedule, and risk-management preferences;
- the general nature of the structure involved, its size, configuration, and performance criteria;
- the structure's location and orientation on the site; and
- other planned or existing site improvements, such as retaining walls, access roads, parking lots, and underground utilities.

Typical changes that could erode the reliability of this report include those that affect:

- the site's size or shape;
- the function of the proposed structure, as when it's changed from a parking garage to an office building, or from a light-industrial plant to a refrigerated warehouse;
- the elevation, configuration, location, orientation, or weight of the proposed structure;
- the composition of the design team; or
- project ownership.

As a general rule, *always* inform your geotechnical engineer of project changes – even minor ones – and request an assessment of their impact. *The geotechnical engineer who prepared this report cannot accept responsibility or liability for problems that arise because the geotechnical engineer was not informed about developments the engineer otherwise would have considered.*

This Report May Not Be Reliable

Do not rely on this report if your geotechnical engineer prepared it:

- for a different client;
- for a different project;
- for a different site (that may or may not include all or a portion of the original site); or
- before important events occurred at the site or adjacent to it; e.g., man-made events like construction or environmental remediation, or natural events like floods, droughts, earthquakes, or groundwater fluctuations.

Note, too, that it could be unwise to rely on a geotechnical-engineering report whose reliability may have been affected by the passage of time, because of factors like changed subsurface conditions; new or modified codes, standards, or regulations; or new techniques or tools. *If your geotechnical engineer has not indicated an "apply-by" date on the report, ask what it should be*, and, in general, *if you are the least bit uncertain* about the continued reliability of this report, contact your geotechnical engineer before applying it. A minor amount of additional testing or analysis – if any is required at all – could prevent major problems.

Most of the "Findings" Related in This Report Are Professional Opinions

Before construction begins, geotechnical engineers explore a site's subsurface through various sampling and testing procedures. *Geotechnical engineers can observe actual subsurface conditions only at those specific locations where sampling and testing were performed.* The data derived from that sampling and testing were reviewed by your geotechnical engineer, who then applied professional judgment to form opinions about subsurface conditions throughout the site. Actual sitewide-subsurface conditions may differ – maybe significantly – from those indicated in this report. Confront that risk by retaining your geotechnical engineer to serve on the design team from project start to project finish, so the individual can provide informed guidance quickly, whenever needed.

This Report's Recommendations Are Confirmation-Dependent

The recommendations included in this report – including any options or alternatives – are confirmation-dependent. In other words, *they are not final*, because the geotechnical engineer who developed them relied heavily on judgment and opinion to do so. Your geotechnical engineer can finalize the recommendations *only after observing actual subsurface conditions* revealed during construction. If through observation your geotechnical engineer confirms that the conditions assumed to exist actually do exist, the recommendations can be relied upon, assuming no other changes have occurred. *The geotechnical engineer who prepared this report cannot assume responsibility or liability for confirmation-dependent recommendations if you fail to retain that engineer to perform construction observation.*

This Report Could Be Misinterpreted

Other design professionals' misinterpretation of geotechnical-engineering reports has resulted in costly problems. Confront that risk by having your geotechnical engineer serve as a full-time member of the design team, to:

- confer with other design-team members,
- help develop specifications,
- review pertinent elements of other design professionals' plans and specifications, and
- be on hand quickly whenever geotechnical-engineering guidance is needed.

You should also confront the risk of constructors misinterpreting this report. Do so by retaining your geotechnical engineer to participate in prebid and preconstruction conferences and to perform construction observation.

Give Constructors a Complete Report and Guidance

Some owners and design professionals mistakenly believe they can shift unanticipated-subsurface-conditions liability to constructors by limiting the information they provide for bid preparation. To help prevent the costly, contentious problems this practice has caused, include the complete geotechnical-engineering report, along with any attachments or appendices, with your contract documents, *but be certain to note conspicuously that you've included the material for informational purposes only*. To avoid misunderstanding, you may also want to note that "informational purposes" means constructors have no right to rely on the interpretations, opinions, conclusions, or recommendations in the report, but they may rely on the factual data relative to the specific times, locations, and depths/elevations referenced. Be certain that constructors know they may learn about specific project requirements, including options selected from the report, *only* from the design drawings and specifications. Remind constructors that they may perform their own studies if they want to, and *be sure to allow enough time* to permit them to do so. Only then might you be in a position to give constructors the information available to you, while requiring them to at least share some of the financial responsibilities stemming from unanticipated conditions. Conducting prebid and preconstruction conferences can also be valuable in this respect.

Read Responsibility Provisions Closely

Some client representatives, design professionals, and constructors do not realize that geotechnical engineering is far less exact than other engineering disciplines. That lack of understanding has nurtured unrealistic expectations that have resulted in disappointments, delays, cost overruns, claims, and disputes. To confront that risk, geotechnical engineers commonly include explanatory provisions in their reports. Sometimes labeled "limitations," many of these provisions indicate where geotechnical engineers' responsibilities begin and end, to help others recognize their own responsibilities and risks. *Read these provisions closely*. Ask questions. Your geotechnical engineer should respond fully and frankly.

Geoenvironmental Concerns Are Not Covered

The personnel, equipment, and techniques used to perform an environmental study – e.g., a "phase-one" or "phase-two" environmental site assessment – differ significantly from those used to perform a geotechnical-engineering study. For that reason, a geotechnical-engineering report does not usually relate any environmental findings, conclusions, or recommendations; e.g., about the likelihood of encountering underground storage tanks or regulated contaminants. *Unanticipated subsurface environmental problems have led to project failures*. If you have not yet obtained your own environmental information, ask your geotechnical consultant for risk-management guidance. As a general rule, *do not rely on an environmental report prepared for a different client, site, or project, or that is more than six months old.*

Obtain Professional Assistance to Deal with Moisture Infiltration and Mold

While your geotechnical engineer may have addressed groundwater, water infiltration, or similar issues in this report, none of the engineer's services were designed, conducted, or intended to prevent uncontrolled migration of moisture – including water vapor – from the soil through building slabs and walls and into the building interior, where it can cause mold growth and material-performance deficiencies. Accordingly, ***proper implementation of the geotechnical engineer's recommendations will not of itself be sufficient to prevent moisture infiltration.*** Confront the risk of moisture infiltration by including building-envelope or mold specialists on the design team. ***Geotechnical engineers are not building-envelope or mold specialists.***

CONSTRAINTS & RESTRICTIONS

The intent of this document is to bring to your attention the potential concerns and the basic limitations of a typical geotechnical report.

WARRANTY

Universal Engineering Sciences has prepared this report for our client for his exclusive use, in accordance with generally accepted soil and foundation engineering practices, and makes no other warranty either expressed or implied as to the professional advice provided in the report.

UNANTICIPATED SOIL CONDITIONS

The analysis and recommendations submitted in this report are based upon the data obtained from soil borings performed at the locations indicated on the Boring Location Plan. This report does not reflect any variations which may occur between these borings.

The nature and extent of variations between borings may not become known until excavation begins. If variations appear, we may have to re-evaluate our recommendations after performing on-site observations and noting the characteristics of any variations.

CHANGED CONDITIONS

We recommend that the specifications for the project require that the contractor immediately notify Universal Engineering Sciences, as well as the owner, when subsurface conditions are encountered that are different from those present in this report.

No claim by the contractor for any conditions differing from those anticipated in the plans, specifications, and those found in this report, should be allowed unless the contractor notifies the owner and Universal Engineering Sciences of such changed conditions. Further, we recommend that all foundation work and site improvements be observed by a representative of Universal Engineering Sciences to monitor field conditions and changes, to verify design assumptions and to evaluate and recommend any appropriate modifications to this report.

MISINTERPRETATION OF SOIL ENGINEERING REPORT

Universal Engineering Sciences is responsible for the conclusions and opinions contained within this report based upon the data relating only to the specific project and location discussed herein. If the conclusions or recommendations based upon the data presented are made by others, those conclusions or recommendations are not the responsibility of Universal Engineering Sciences.

CHANGED STRUCTURE OR LOCATION

This report was prepared in order to aid in the evaluation of this project and to assist the architect or engineer in the design of this project. If any changes in the design or location of the structure as outlined in this report are planned, or if any structures are included or added that are not discussed in the report, the conclusions and recommendations contained in this report shall not be considered valid unless the changes are reviewed and the conclusions modified or approved by Universal Engineering Sciences.

USE OF REPORT BY BIDDERS

Bidders who are examining the report prior to submission of a bid are cautioned that this report was prepared as an aid to the designers of the project and it may affect actual construction operations.

Bidders are urged to make their own soil borings, test pits, test caissons or other investigations to determine those conditions that may affect construction operations. Universal Engineering Sciences cannot be responsible for any interpretations made from this report or the attached boring logs with regard to their adequacy in reflecting subsurface conditions which will affect construction operations.

STRATA CHANGES

Strata changes are indicated by a definite line on the boring logs which accompany this report. However, the actual change in the ground may be more gradual. Where changes occur between soil samples, the location of the change must necessarily be estimated using all available information and may not be shown at the exact depth.

OBSERVATIONS DURING DRILLING

Attempts are made to detect and/or identify occurrences during drilling and sampling, such as: water level, boulders, zones of lost circulation, relative ease or resistance to drilling progress, unusual sample recovery, variation of driving resistance, obstructions, etc.; however, lack of mention does not preclude their presence.

WATER LEVELS

Water level readings have been made in the drill holes during drilling and they indicate normally occurring conditions. Water levels may not have been stabilized at the last reading. This data has been reviewed and interpretations made in this report. However, it must be noted that fluctuations in the level of the groundwater may occur due to variations in rainfall, temperature, tides, and other factors not evident at the time measurements were made and reported. Since the probability of such variations is anticipated, design drawings and specifications should accommodate such possibilities and construction planning should be based upon such assumptions of variations.

LOCATION OF BURIED OBJECTS

All users of this report are cautioned that there was no requirement for Universal Engineering Sciences to attempt to locate any man-made buried objects during the course of this exploration and that no attempt was made by Universal Engineering Sciences to locate any such buried objects. Universal Engineering Sciences cannot be responsible for any buried man-made objects which are subsequently encountered during construction that are not discussed within the text of this report.

TIME

This report reflects the soil conditions at the time of exploration. If the report is not used in a reasonable amount of time, significant changes to the site may occur and additional reviews may be required.

GENERAL TERMS AND CONDITIONS

SECTION 1: BINDING AGREEMENT

1.1 By accepting the Proposal, Client accepts and agrees to be bound by all terms set forth in the Proposal and these General Terms and Conditions and any applicable addendum attached hereto. Client acknowledges and agrees that these General Terms and Conditions include certain state-specific terms and conditions that are applicable based on the location where the Services (as hereinafter defined) are to be performed. Attached hereto are State-Specific Addenda, each corresponding to a particular state or region.

1.2 If the Services are performed in Forida, Texas, California, Nevada, Oregon, Washington or Arizona, the State-Specific Addendum attached hereto **is** incorporated into and made a part of these General Terms and Conditions.

1.3 In the event of any conflict between these General Terms and Conditions and the terms of the applicable State-Specific Addendum, the terms of the State-Specific Addendum shall govern and control for Services performed in that state or region.

1.4 The Proposal and these General Terms and Conditions (collectively, the "Agreement") represent and contain the entire and only agreement and understanding among UES Professional Solutions, LLC, a Florida limited liability company and its affiliates (the "Company") and Client with respect to the subject matter of this Agreement and supersede any and all prior and contemporaneous oral and written agreements, understandings, representations, inducements, promises, warranties, and conditions among the parties.

SECTION 2: SERVICES

2.1 The Company is responsible for providing the services described under the Scope of Services ("Services") of the Proposal to which these General Terms and Conditions form a part. The term "the Company" as used herein includes all the Company's agents, employees, professional staff, and subcontractors.

2.2 The Company shall provide revised or additional services, including changes to the Services necessary due to changed or unforeseen conditions, only in accordance with a written addendum or change order (collectively, "Change Order") to the Agreement agreed to by the Company and Client, and only to the extent set forth in that Change Order.

2.3 The Company shall not be responsible for any delays, fees or costs associated with adverse or unusual weather conditions that prevent the Services from being safely conducted.

2.4 The Company shall provide the personnel, equipment, Level D personal protective equipment (as defined by the Occupational Safety and Health Administration ("OSHA"), and other materials necessary to provide the Services. The Company, at its sole discretion, may retain subcontractors or other third parties to assist it in the provision of the Services.

2.5 The terms "Project" and "Site" as used interchangeably in these General Terms and Conditions refer to the land and/or construction project on which or to which the Company is to provide Services under this Agreement.

2.6 The Company shall perform all Services hereunder as an independent contractor, and nothing contained herein shall be deemed to create any association, partnership, joint venture, or relationship of principal and agent or master and servant, or employer and employee between the parties hereto or any affiliates or subsidiaries thereof, or to provide either party with the right, power or authority, whether express or implied, to create any such duty or obligation on behalf of the other party.

SECTION 3: PROFESSIONAL STANDARD OF CARE

3.1 The Company will provide its Services under this Agreement in a manner consistent with the level of professional care and skill ordinarily exercised by similar professionals practicing contemporaneously under similar conditions in the locality of the Project. NO OTHER WARRANTY CONCERNING THE SERVICES THE COMPANY PROVIDES UNDER THE AGREEMENT OR ANY ADDENDUM OR CHANGE ORDER, EXPRESS OR IMPLIED, IS MADE, AND ALL OTHER WARRANTIES, INCLUDING THE WARRANTY OF FITNESS FOR A PARTICULAR PURPOSE, ARE HEREBY DISCLAIMED TO THE FULL EXTENT PERMITTED BY APPLICABLE LAW.

3.2 Client understands that subsurface investigations may involve drilling, boring, excavating or sampling through varied subsurface soil and water strata which, consistent with the prevailing standard of professional care, may result in the unavoidable or inadvertent cross-mingling of soil and water and any hazardous substances or constituents contained in them, and that this risk cannot be eliminated despite the exercise of professional care. IF SUBSURFACE INVESTIGATIONS ARE PART OF THE SERVICES, CLIENT WAIVES ANY CLAIM AGAINST THE COMPANY, AND SHALL INDEMNIFY, DEFEND, AND HOLD THE COMPANY HARMLESS FROM ANY CLAIM OR LIABILITY FOR INJURY OR LOSS ARISING FROM CROSS-CONTAMINATION RELATED TO SUCH SUBSURFACE EXPLORATIONS.

3.3 The Company will take reasonable precautions to minimize damage to the Site, but it is understood by Client that, in the normal course of the provision of the Services, including sampling or drilling, some damage to, or alteration of the Site is possible. The repair of such damage shall not be part of the Services unless explicitly specified in writing in the Agreement.

3.4 Execution and delivery of this Agreement by the Company is not a representation that the Company has visited the site, become generally familiar with local conditions under which the work is to be performed, or correlated personal observations with the requirements of the Scope of Services.

3.5 Client's payment in full of the amount owed for Services rendered shall be taken to mean that Client is satisfied with and has accepted the Company's Services.

SECTION 4: RESPONSIBILITIES

4.1 Client is responsible for providing the Company with a clear understanding of the project's nature and scope. Client shall supply the Company with sufficient and adequate information, including, but not limited to, maps, site plans, reports, surveys, plans and specifications, and designs, to allow the Company to properly complete the Services. Client assumes all liability for information not provided to the Company that may affect the quality or sufficiency of the Services.

4.2 Client acknowledges that the Company's responsibilities in providing the Services is limited to those services described in the Proposal, and the Client hereby assumes any collateral or affiliated duties necessitated by or for those Services. Such duties may include, but are not limited to, the provision of any required notices to any third party, or the securing of necessary permits or permissions from any third parties required for the Company's provision of the Services.

SECTION 5: SITE ACCESS AND SITE CONDITION

5.1 Client will grant or obtain at its expense lawful and safe access to the Site as needed for the Company to perform the Services and will notify all affected persons and entities in writing of the Company's presence. The access shall be adequate to allow the Company to conduct the Services, including bringing and storing equipment and tools on the Site and any necessary access to exterior and interior areas. The Company shall not be responsible for any delays, fees or costs caused by delayed or restricted access that prevents or slows the delivery of the Services. If the Site is not owned or operated by Client or the Client does not otherwise have the authority to grant the Company lawful access, Client shall be responsible for obtaining, at its own expense, an access agreement for the Site and any facilities located thereon and are necessary to perform the Services. The Company reserves the right to delay, without penalty, any Site visit and the provision of Services if a site access agreement, in the Company's reasonable judgment and discretion, would impose conditions, liabilities or risks on the Company in excess of those set forth in these General Terms and Conditions or the Agreement. IF THE SITE IS NOT OWNED BY CLIENT, CLIENT AGREES TO DEFEND, RELEASE, AND HOLD THE COMPANY, INCLUDING ITS OFFICERS, DIRECTORS, SHAREHOLDERS, EMPLOYEES, AGENTS, AFFILIATES AND SUCCESSORS (THE "COMPANY INDEMNITEES") HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ALLEGED BY THE SITE OWNER OR THE SITE OWNER'S EMPLOYEES, AGENTS, CONTRACTORS OR OTHER PERSONS OR ENTITIES ARISING FROM THE COMPANY'S PERFORMANCE OF SERVICES AT SUCH SITE.

5.2 Client shall be responsible for the safety of the Site where the Project is conducted and for providing a safe environment for the Company to provide the Services. The Company shall be responsible for the safe and compliant conduct of its personnel at the Site and shall also comply with the reasonable and lawful work rules for the Site. As required by applicable laws, the Company will prepare a site-specific Health and Safety Plan (HASP) applicable to its personnel for the Services provided at the Site. The Company shall not be responsible for the safety of other personnel at the Site, nor shall it be responsible for ensuring that the Site complies with environmental, health and safety laws, or reporting any unsafe conduct or non-compliance that it may observe. If the Company encounters conditions at the Site that are unsafe for its personnel, it reserves the right at its sole discretion to suspend or halt work until such conditions are cured. The Company shall not be responsible for any fees, costs or damages associated with any safety-related delays. Unless otherwise provided for in the Agreement, the Company shall not work in conditions that require personal protective equipment beyond that classified as Level D by OSHA, unless otherwise identified in the Proposal.

5.3 Client is responsible for accurately identifying to the Company in writing the existence and location of all subterranean structures and utilities on or affecting the Site and the Services. The Company will take reasonable precautions to avoid affecting subterranean structures and utilities disclosed to it in writing by Client. If included in the Agreement, Client may authorize the Company to conduct applicable private utility identification and clearance requirements on behalf of Client.

5.4 Unless otherwise stated in the Proposal, any soil or groundwater monitoring activities that are included in the Services are based on the assumption that soil borings and monitoring wells can be installed using standard truck-mounted drilling equipment, the locations are accessible to such equipment, and that surface conditions at each location consists of non-reinforced asphalt or concrete not exceeding six (6) inches in thickness and no concrete or asphalt cutting will be required. If the Company encounters materially different conditions at the Site, the Company shall inform Client, and a Change Order shall be agreed to that addresses any changes in schedule, fees or costs associated with the changed conditions.

Section 6: Hazardous Substances and Environmental Conditions

6.1 Client represents it has informed the Company of all known or suspected Hazardous Substances on, under or near the Site of which it is aware, and that it has provided the Company with all studies, reports, investigations, or similar documents in its possession about the environmental conditions at the Site, including any documents and correspondence involving Federal, State or local environmental, health or safety regulatory notifications.

6.2 For purposes of the Agreement and these General Terms and Conditions, the term "Hazardous Substances" includes materials defined or regulated as hazardous substances, hazardous materials, hazardous wastes, hazardous constituents, solid wastes, pollutants, or toxic substances under any Federal, State or local environmental, health, safety or natural resources law, statute, regulation or ordinance, including but not limited to petroleum products, polychlorinated biphenyls, per- and polyfluoroalkyl substances, asbestos, and any other material or substance listed or identified by the United States Environmental Protection Agency or any similar State or local agency as presenting a potential danger to health, safety or the environment.

6.3 Except to the extent required by law, the Company shall not be responsible for making any disclosures to governmental agencies or the Site owner regarding the presence or release of Hazardous Substances on, under, from or around a Site.

6.4 **FOR ENVIRONMENTAL INVESTIGATION, GEOTECHNICAL AND REMEDIATION PROJECTS,** the discovery of Hazardous Substances or other environmental conditions on, under or near the Site not contemplated within the Services may constitute a changed condition, necessitating a Change Order. Although unlikely, Client acknowledges that such a discovery of Hazardous Substances may make it necessary for the Company to take immediate measures to protect the health and safety of its employees and other persons, or to arrange for others to do so, including and up to delaying or terminating work. Client agrees to compensate the Company for all expenses incurred or caused by the discovery of unanticipated Hazardous Substances or environmental conditions encountered at the Site, including but not limited to those related to worker protection and exposure, emergency response actions and equipment decontamination.

6.5 **FOR ENVIRONMENTAL INVESTIGATION AND REMEDIATION PROJECTS,** all substances on, in, or under Site, or obtained from Site as samples or as byproducts of the sampling process, shall be Client's property. The Company shall not be required to sign or certify a waste manifest, disposal ticket, or similar document relating to the transportation or disposal of wastes or Hazardous Substances. the Company may serve as Agent for Client if requested under a separate agreement and authorization. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances and shall not be so identified on any document.

FOR GEOTECHNICAL PROJECTS, all substances on, in, or under the Site, or obtained from the Site as samples or as byproducts of the sampling process, shall be Client's property. Unless otherwise expressly specified in the Agreement or the Services, the characterization, management and disposition of substances, including Hazardous Substances, generated during the Services (including, but not limited to, wastes, samples, produced soils or fluids, cuttings, or protective gear or equipment, etc.) is the sole responsibility of Client. Client shall be considered the "generator" of any hazardous or other wastes, as that term is defined in the Resource Conservation and Recovery Act, 42 U.S.C. § 6901 et seq. and agrees that it shall assume all duties as "generator" of any waste material associated with the Services. Further, Client agrees that the Company is not and shall not be identified as a generator, storer, treater, transporter, arranger, or disposer of wastes or Hazardous Substances on any document. Unless specifically provided for in the Agreement, the Company shall not have any responsibilities with respect to the storage or preservation of samples, and Client agrees that the Company is not responsible or liable to Client for any loss of samples that are shipped to a testing facility or retained in storage.

6.6 The Company shall not have custody of any monitoring wells or permanent sampling locations installed as part of the Project, and shall not be responsible for proper maintenance, repair, or closure of such wells, unless otherwise provided for in the Agreement.

6.7 CLIENT AGREES TO DEFEND, INDEMNIFY, RELEASE, AND HOLD THE COMPANY INDEMNITEES HARMLESS FROM ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES (INCLUDING ATTORNEY'S FEES AND CONSULTANTS' FEES, COSTS OF DELAY OF THE SERVICES, AND ANY COSTS ASSOCIATED WITH POSSIBLE REDUCTION TO THE VALUE OF THE PROJECT OR THE SITE IN WHICH IT IS SITUATED) ARISING FROM (I) THE COMPANY'S DISCOVERY OF OR ITS EMPLOYEES' OR SUBCONTRACTORS' EXPOSURE TO HAZARDOUS SUBSTANCES OR SUSPECTED SUBSTANCES RELATED TO THE SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE ACTS, OMISSIONS OR WILLFUL MISCONDUCT; (II) ANY DISCLOSURES THE COMPANY IS REQUIRED TO MAKE BY LAW REGARDING HAZARDOUS SUBSTANCES OR ENVIRONMENTAL CONDITIONS AT A SITE; (III) ANY CLAIMS MADE ALLEGING THAT (A) THE COMPANY IS AN OWNER OR OPERATOR OF THE SITE AT WHICH THE SERVICES ARE RENDERED; (B) THE COMPANY IS THE GENERATOR, STORER OR TREATER OF HAZARDOUS SUBSTANCES AT SUCH SITE; OR (C) THAT THE COMPANY ARRANGED FOR THE TRANSPORTATION OR DISPOSAL OF ANY HAZARDOUS SUBSTANCES FROM THE SITE; (IV) ANY VIOLATION BY CLIENT OF ANY FEDERAL, STATE OR LOCAL LAW, REGULATION, ORDER, DECREE OR ORDINANCE RELATED TO HAZARDOUS SUBSTANCES; OR (V) ANY CLAIMS MADE BY THIRD-PARTIES WITH RESPECT TO ALLEGED EXPOSURES TO OR DAMAGES CAUSED BY HAZARDOUS SUBSTANCES AT OR FROM THE SITE OR DURING OR RELATED TO ANY PROJECT OR THE PROVISION OF SERVICES, TO THE EXTENT CAUSED BY CLIENT'S NEGLIGENCE OR WILLFUL MISCONDUCT.

Section 7: Reviews, Inspections, Testing, And Observations

7.1 If the Services include oversight, monitoring or observation of work being conducted by third parties (other than the Company subcontractors), such Services shall be conducted solely to determine that the work being overseen, monitored, or observed is in general conformity to the contractual requirements between Client and such third parties. Client shall have sole responsibility and authority to reject, suspend or stop the work of such third parties, or modify or terminate any agreement between Client such third parties.

7.2 The Company shall not have the responsibility or authority to stop, suspend, or modify the work of such third parties, and does not guarantee that work it inspects conforms in all respects to the design, or to applicable laws, statutes, regulations, rules or codes, and it shall have no liability for design or construction defects, or the failure of Client's designers or contractors to comply with their contractual obligations.

7.3 Neither the activities of the Company pursuant to this Agreement, nor the presence of the Company or its employees, representatives, or subcontractors on the Project Site, shall be construed to impose upon the Company any responsibility for means or methods of work performance, superintendence, sequencing of construction, or safety or environmental conditions or compliance at the Project Site. Client acknowledges that Client or its contractor is solely responsible for Project jobsite safety and compliance with environmental, health and safety laws.

7.4 Client is responsible for scheduling all inspections and construction materials testing ("CMT") activities of the Company. The Company will not be responsible for tests and inspections that it does not perform due to Client's failure to timely schedule work. Client shall at the time of execution of the Agreement provide the Company with a proposed schedule for tests and inspections the Company shall perform. Client will give reasonable notice of all changes to that schedule. The Company shall not be required to conduct any tests or inspections on less than 72 hours written notice, nor after normal business hours or on weekends or holidays.

Section 8: Billing and Payment

8.1 The Company will submit invoices to Client monthly or upon completion of Services. Invoices will show charges for different personnel and expense classifications. Partially completed items of work for which a fee has been specified may be billed based upon the percentage of completion as estimated by the Company. Reimbursable expenses, those outside of the scope of the proposed Services, will be charged to the Client at cost plus an applicable fee. Payment is due 30 days after presentation of invoice and is past due 31 days from invoice date. Client agrees to pay a finance charge of the lesser of one and one-half percent (1 ½ %) per month, or the maximum rate allowed by law, on past due accounts. If the Company incurs any expenses to collect overdue billings on invoices, the sums paid by the Company for reasonable attorneys' fees, court costs, the Company's time, the Company's expenses, and interest will be

due and owing by the Client. Client agrees that the Company may refuse to release to Client any reports, findings, data, and other work product until it has been paid in full for Services rendered.

Section 9: Ownership and Use of Documents; Intellectual Property

9.1 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, as instruments of service, shall remain the property of the Company. Neither Client nor any other entity shall change or modify the Company's instruments of service. The Company disclaims any and all responsibility and liability for problems that may occur during implementation of the Company's plans, specifications, or recommendations when Company is not retained to observe such implementation. The Company will retain all pertinent records relating to the Services for a period of "five years or such longer period" of time required by applicable accrediting agency, unless specified in the Scope of Services following submission of the report or completion of the Services, during which period the records will be made available to the Client in a reasonable time and manner, subject to payment of a reasonable fee for the time of the Company's employees to assemble and transmit those documents.

9.2 All reports, boring logs, field data, field notes, laboratory test data, calculations, estimates, and other documents prepared by the Company, are prepared for the sole and exclusive use of Client, and may not be given to any other entity, or used or relied upon by any other entity, without the express written consent of the Company. Such written consent may take the form of a "reliance letter" which must be agreed to by such other person or entity to whom the Services and instruments of service may be disclosed, and for which a separate fee will be charged. The Company shall be entitled to injunctive relief preventing/prohibiting any disclosure, reliance or attribution prohibited hereunder, and CLIENT SHALL RELEASE, INDEMNIFY, DEFEND, AND HOLD HARMLESS THE COMPANY FROM ANY LOSSES ARISING FROM OR RELATED TO SUCH UNAUTHORIZED DISCLOSURE, ATTRIBUTION OR RELIANCE. Client is the only entity to which the Company owes any duty or duties, in contract or tort, pursuant to or under this Agreement.

9.3 The Company shall retain sole and exclusive ownership of all ideas, concepts, theories, improvements, designs, original works of authorship, formulas, processes, models, software, algorithms, inventions, know-how, techniques, compositions of matter and any other information owned by the Company prior to the date of this Agreement or created or modified by the Company during the provision of the Services.

9.4 Each party may disclose to the other party certain information that it considers to be confidential ("Confidential Information") provided such information is disclosed in writing and clearly marked or, if orally disclosed, promptly thereafter reduced to writing and clearly marked "Confidential." In no event shall Confidential Information include information that: (a) is or becomes publicly available other than through a breach of the Agreement; (b) is known to the party receiving such information prior to disclosure or is independently developed by such party subsequent to such disclosure without reference to Confidential Information provided hereunder; or (c) is subsequently lawfully obtained by the party receiving such information from a third party without obligations of confidentiality. Each party agrees that it (a) will not disclose or divulge the other party's Confidential Information to any person, (b) will not use the other party's Confidential Information for its own benefit or the benefit of others, (c) will employ at least the same degree of care in protecting Confidential Information as it employs in protecting its own confidential information, and (d) will, upon termination of the Agreement, or at any time at the request of the other party, return to the other party or destroy all copies of the other party's Confidential Information. Notwithstanding the foregoing, each party may disclose the other party's Confidential Information to its employees, subcontractors and authorized agents who have a need to know such confidential information to fulfill its obligations under this Agreement. In the event a party receives a subpoena or other validly issued administrative or judicial process requesting the disclosure of the other party's Confidential Information, such party will promptly notify the other party and tender to it the defense of such demand and will cooperate (at the other party's expense) with the defense of such demand. Unless the demand shall have been timely quashed or extended, the party receiving the demand shall thereafter be entitled to comply with such demand when and to the extent required by law.

Section 10: Risk Allocation and Indemnification

10.1 CLIENT AGREES THAT THE COMPANY'S LIABILITY FOR ANY DAMAGE ON ACCOUNT OF ANY BREACH OF CONTRACT, ERROR, OMISSION, OR PROFESSIONAL NEGLIGENCE WILL BE LIMITED TO A SUM NOT TO EXCEED THE GREATER OF $50,000 OR THE COMPANY'S FEE. If Client prefers to have higher limits on contractual or professional liability, the Company agrees to increase the limits up to a maximum of (i) $1,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of five percent of the total fee for Services or $1,000.00, or (ii) . $2,000,000.00 upon Client's written request at the time of accepting the Proposal provided that Client agrees to pay an additional consideration of the greater of ten percent of the total fee for Services or $2,000.00. The additional charge for the higher liability limits is because of the greater risk assumed and is not strictly a charge for additional contractual or professional liability insurance.

10.2 CLIENT SHALL NOT BE LIABLE TO THE COMPANY AND THE COMPANY SHALL NOT BE LIABLE TO CLIENT FOR ANY PUNITIVE, INCIDENTAL, SPECIAL, OR CONSEQUENTIAL DAMAGES (INCLUDING LOST PROFITS, LOSS OF USE, AND LOST SAVINGS) INCURRED BY EITHER PARTY DUE TO THE FAULT OF THE OTHER, REGARDLESS OF THE NATURE OF THE FAULT, OR WHETHER IT WAS COMMITTED BY CLIENT OR THE COMPANY, THEIR EMPLOYEES, AGENTS, OR SUBCONTRACTORS; OR WHETHER SUCH LIABILITY ARISES IN BREACH OF CONTRACT OR WARRANTY, TORT (INCLUDING NEGLIGENCE), STATUTORY, OR ANY OTHER CAUSE OF ACTION.

10.3 As used in this Agreement, the terms "claim" or "claims" mean any claim in contract, tort, or statute alleging negligence, errors, omissions, strict liability, statutory liability, breach of contract, breach of warranty, negligent misrepresentation, or any other act giving rise to liability.

10.4 Subject to the provisions of the limitation of liability described in this Section, Client and the Company each agree to indemnify and hold harmless the other party and the other party's affiliated companies, officers, directors, partners, employees, and representatives, from and against losses, damages, and judgments, including reasonable attorneys' fees and expenses recoverable under applicable law, but only to the extent they are legally determined to be caused by a negligent act, error, or omission of the indemnifying party or any of the indemnifying party's officers, directors, members, partners, agents, employees, or subconsultants in the performance of Services. If claims, losses, damages, and judgments are legally determined to be caused by the joint or concurrent negligence of Client and the Company, they shall be borne by each party in proportion to its negligence.

10.5 Notwithstanding any other term or provision in this Agreement, in recognition of the relative risks, rewards and benefits of the work being performed by the Company to both the Client and the Company, the risks have been allocated such that the Client agrees and acknowledged that, to the fullest extent permitted by law, the total liability of the Company to the Client for any and all injuries, claims, losses, expenses, damages or claim expenses arising out of this Agreement from any cause or causes of action whatsoever, whether arising out of contract, negligence, strict liability in tort, or warranty, shall not exceed the amount specified in Section 10 of the General Terms and Conditions.

Section 11: Insurance

11.1 The Company represents it has Worker's Compensation insurance in force, that it has commercial general liability coverage in the amount of $1,000,000.00 per occurrence and has professional liability insurance in the amount of $1,000,000.00 per claim.

11.2 Client shall maintain such insurance as is necessary to fully underwrite Client's defense and indemnity obligations set forth herein, and shall, upon request by the Company, provide proof to the Company to verify such insurance.

Section 12: Dispute Resolution

12.1 All claims, disputes, and other matters in controversy between the Company and Client arising out of or in any way related to this Agreement or any Addendum or Change Order shall be decided by binding arbitration in accordance with the Construction Industry Rules of the American Arbitration Association then obtaining, and judgment on the award rendered by the arbitrator(s) may be entered in any court having jurisdiction thereof. Notwithstanding the foregoing, the Company shall not be required to arbitrate any legal and/or equitable claims (including statutory and equitable liens) for collection of monies due. The successful party in any such action will be entitled to recover its reasonable attorneys' fees, expert witness fees, and other claim-related expenses and court costs incurred, and also the time value at prevailing rates of its employees reasonably incurred in prosecuting or defending the claims, with any claims against the Company subject to the limitations in Section 10. For the purposes hereof, "successful party" shall mean a party who receives an award greater than fifty (50%) percent of its claimed amount.

12.2 The sole and exclusive venue for any dispute resolution proceeding shall be the location in which the Company office performing the Services is located. This Agreement shall be governed by and construed in accordance with the laws of the jurisdiction in which the Company office performing the Services is located.

12.3 Notwithstanding the foregoing, all claims, including for negligence or any other cause whatsoever that the Client has or claims to have against the Company, shall be deemed waived unless (i) Client notifies the Company of the claim or claims within thirty (30) days of discovery thereof, and (ii) if the Client contends that a claim exists against the Company for negligence

or another violation of a standard of care owed by the Company, Client has first provided the Company with a written certification executed by an independent design professional currently practicing in the same discipline as the Company. The certification shall: a) identify the name of the professional; b) specify each and every act or omission that the certifier contends is a violation of the standard of care identified in this Agreement; and c) state in complete detail the basis for the certifier's opinion that each such act or omission constitutes such a violation. This certificate shall be provided to the Company not less than thirty (30) calendar days prior to the institution of any arbitration or judicial proceeding.

12.4 NOTWITHSTANDING THE FOREGOING, THE COMPANY SHALL HAVE NO LIABILITY FOR ANY CLAIM DISCOVERED BY CLIENT MORE THAN ONE YEAR AFTER DELIVERY OF THE LAST ISSUED REPORT BY THE COMPANY FOR THE SERVICES. THE PARTIES AGREE THAT THIS PROVISION IS MATERIAL TO THE DECISION OF THE COMPANY TO ENTER INTO THIS AGREEMENT, THAT IT IS A REASONABLE MEASURE TO ALLOCATE AND INSURE AGAINST RISK, AND THAT IT DOES NOT VIOLATE PUBLIC POLICY.

Section 13: Termination

13.1 This Agreement may be terminated by either party upon seven (7) days written notice in the event of substantial failure by the other party to perform in accordance with the terms hereof, or in the case of a force majeure event such as terrorism, act of war, public health or other emergency. Such termination shall not be effective if such substantial failure or force majeure has been remedied before expiration of the period specified in the written notice. In the event of termination, the Company shall be paid for services performed to the termination notice date plus reasonable out of pocket termination expenses incurred or paid by the Company in connection with such termination and the winding down of its operations.

13.2 In the event of termination, or suspension for more than three (3) months, prior to completion of all reports contemplated by this Agreement, the Company may complete such analyses and records as are necessary to complete its files and may also complete a report on the Services performed to the date of notice of termination or suspension. The expense of termination or suspension shall include all direct out of pocket costs incurred or paid by the Company in completing such analyses, records, and reports.

Section 14: Solicitation of Employees

14.1 Client agrees that during the term of the Agreement, and for a period of one (1) year after the last date on which the Company has provided Services, Client shall not, directly or indirectly, solicit or attempt to solicit for employment, or contract directly or indirectly with, any employee of the Company except as authorized in writing by the Company.

Section 15: Assigns

15.1 Neither Client nor the Company may assign this Agreement or assign or delegate any of its rights or obligations without the prior written consent of the other party.

Section 16: Survival

If any of the provisions of this Agreement is held by a court of competent jurisdiction to be illegal, invalid, or unenforceable, the enforceability of the remaining provisions will not be impaired and will survive. Limitations of liability and indemnities will survive termination of this Agreement for the period of all applicable statutes of limitations to which they relate.

Section 17: Miscellaneous

17.1 This Agreement may not be amended or modified except by an agreement in writing signed by the party against whom the enforcement of any modification or amendment is sought.

17.2 Failure by either party at any time to enforce any obligation by the other party, to claim a breach of any term of the Agreement or to exercise any power agreed to hereunder will not be construed as a waiver of any right, power or obligation under the Agreement, will not affect any subsequent breach, and will not prejudice either party as regards any subsequent action.

17.3 The headings in these General Terms and Conditions are for reference only and are not intended to form part of the Agreement between the Parties.

17.4 It is agreed that this Agreement is entered into by the parties for the sole benefit of the parties to the Agreement, and that nothing in the Agreement shall be construed to create a right or benefit for any third party.

17.5 To the extent that a statute of limitations for any cause of action against the Company arising from this Agreement can be modified contractually in accordance with law, and the relevant statute of limitations for any claim arising of or relating to this Agreement, or the Services provided by Company r, is greater than two (2) years, the relevant statute of limitations shall be two (2) years from the date Company last provided Services. The parties agree that this provision is material to the decision of Company to enter into this agreement, that it is a reasonable measure to allocate and insure against risk, and that it does not violate public policy. This section shall not be construed as an agreement to increase the statute of limitations for any causes of action that are otherwise barred by law.

17.6 All future services rendered by the Company at Client's request for the Project described in the Proposal (whether by Change Order, Addendum, or amendment to this Agreement) shall be conducted under the terms of this Agreement.

CLIENT APPROVAL

In the event the Client authorizes work without returning a signed copy of the Proposal, the Client agrees to be bound by the General Terms and Conditions as stated herein. The Proposal presented has been read, understood, and accepted by the Client effective as of the date that the executed Proposal is returned to the Company.

STATE-SPECIFIC ADDENDUM – FLORIDA

SECTION 1: ADDENDUM TO AGREEMENT

1.1 This Florida addendum (this "Addendum") is made and entered into by and between the Company and Client and is effective as of the date of execution of the Agreement if the Services are performed in the State of Florida, and this Addendum is incorporated into and made a part of the General Terms and Conditions solely with respect to the Services covered by this Addendum.

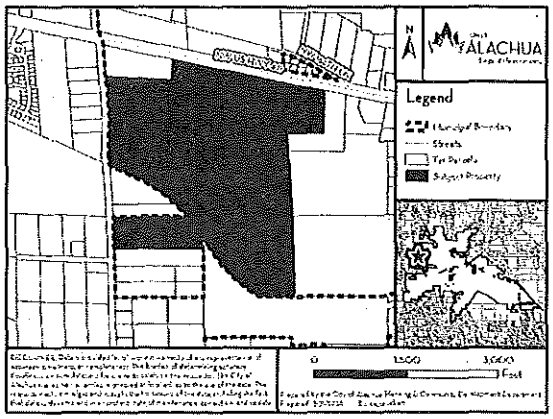
SECTION 2: INDEMNITY

2.1 IN **ADDITION TO AND NOTWITHSTANDING ANY OTHER PROVISION IN THIS AGREEMENT**, CLIENT AGREES, TO THE FULLEST EXTENT PROVIDED BY LAW, TO RELEASE, DEFEND (WITH COUNSEL REASONABLY ACCEPTABLE TO THE COMPANY), INDEMNIFY, AND HOLD THE COMPANY INDEMNITEES HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES FROM OR BY ANY PERSON OR ENTITY ARISING FROM (1) ACTS OR OMISSIONS BY CLIENT, CLIENT'S AGENTS, STAFF, AND OTHERS EMPLOYED BY OR CONTRACTED TO CLIENT, INCLUDING ARCHITECTS, ENGINEERS, CONTRACTORS, SUBCONTRACTORS, AND CONSULTANTS, WHETHER OR NOT THE COMPANY IS RESPONSIBLE IN PART FOR THE ACTS OR OMISSIONS FOR WHICH CLIENT IS INDEMNIFYING THE COMPANY AND (2) THE PROVISION OF THE SERVICES BY THE COMPANY EXCEPT TO THE EXTENT CAUSED BY THE COMPANY'S GROSS NEGLIGENCE OR WILLFUL MISCONDUCT, SUCH EXCEPTION SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.2 THE COMPANY AGREES TO INDEMNIFY, AND HOLD CLIENT HARMLESS FOR ANY AND ALL CLAIMS, LOSSES, DAMAGES OR LIABILITIES ARISING TO THE EXTENT SOLELY FROM THE GROSS NEGLIGENCE OR WILLFUL MISCONDUCT BY THE COMPANY IN THE PROVISION OF THE SERVICES, SUBJECT TO THE LIMITS SET FORTH IN SECTION 10 OF THE GENERAL TERMS AND CONDITIONS.

2.3 To the extent either party's damages are covered by available insurance, Client and the Company waive all rights of subrogation against each other and against the contractors, subcontractors, consultants, agents, and employees of the other, except such rights as they may have to the proceeds of such insurance.

SECTION 3: INDIVIDUAL LIABILITY (5 POINTS LARGER THAN ADJACENT TEXT)



3.1 **PURSUANT TO FLORIDA STAT. 558.0035, AN INDIVIDUAL EMPLOYEE OR AGENT OF THE COMPANY MAY NOT BE HELD INDIVIDUALLY LIABLE FOR NEGLIGENCE.**

PUBLIC NOTICE OF ENACTMENT OF AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on June 8, 2026, at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following ordinance as titled:

Ordinance 26-10

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS FROM COMMUNITY COMMERCIAL ("CC"), COMMERCIAL INTENSIVE ("CI"), AND PLANNED DEVELOPMENT–RESIDENTIAL ("PD-R") TO PD-R AND PLANNED DEVELOPMENT – COMMERCIAL ("PD-COMM") ON A ± 182-ACRE SUBJECT PROPERTY; GENERALLY LOCATED AT 16650 NW US HIGHWAY 441; TAX PARCELS 03042-050-003; 03042-050-004; 03042-050-005; 03042-050-010; 03042-051-001; 03046-003-000; 03046-003-001; 03046-003-003; 03046-003-004; 03046-003-005; 03875-001-001; 03875-010-001; 03875-010-002; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application, staff report, and any related materials are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

Posted Notice Location Map
PR26-0002 | Farmlands Commercial

Pursuant to Section 2.2.9(D) of the City's Land Development Regulations, posted notice signs must be placed on the land that is the subject of the application, along each street which is adjacent to or runs through the land in a manner that makes them clearly visible. Signs shall be posted at regular intervals of not more than 400 feet when the land subject to the application has less than 1,500 feet of road frontage. When the land subject to the application has 1,500 feet or more of road frontage, signs shall be posted at intervals of not more than 1,320 feet.

Signs shall be inspected by the City subsequent to their posting. The applicant shall be responsible for ensuring that the posted notice is maintained on the land subject to the application until the completion of the final public hearing on the application.

SIGNS MUST BE REMOVED BY THE APPLICANT WITHIN TEN DAYS AFTER THE FINAL DECISION ON THE APPLICATION

AFFIDAVIT FOR POSTED LAND USE SIGN

I, Erica Samples, POSTED THE LAND USE SIGN(S)
(Print Name)

ON July 10, 2026 FOR THE Farmlands Commercial Rezoning
(Date) (Project name & type of action)

LAND USE ACTION AS PER ARTICLE 2.2.9(D) OF THE LAND DEVELOPMENT

REGULATIONS. THIS WILL BE INCLUDED IN THE STAFF REPORT.

(Signature)

Eight
(Number of signs)

Posted Notice Location Map
PR26-0002 | Farmlands Commercial

Pursuant to Section 2.2.9(D) of the City's Land Development Regulations, posted notice signs must be placed on the land that is the subject of the application, along each street which is adjacent to or runs through the land in a manner that makes them clearly visible. Signs shall be posted at regular intervals of not more than 400 feet when the land subject to the application has less than 1,500 feet of road frontage. When the land subject to the application has 1,500 feet or more of road frontage, signs shall be posted at intervals of not more than 1,320 feet.

Signs shall be inspected by the City subsequent to their posting. The applicant shall be responsible for ensuring that the posted notice is maintained on the land subject to the application until the completion of the final public hearing on the application.

SIGNS MUST BE REMOVED BY THE APPLICANT WITHIN TEN DAYS AFTER THE FINAL DECISION ON THE APPLICATION

PUBLIC NOTICE OF ENACTMENT OF AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on August 24, 2026, at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following ordinance as titled:

ORDINANCE 26-10

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS FROM COMMUNITY COMMERCIAL ("CC"), COMMERCIAL INTENSIVE ("CI"), AND PLANNEDDEVELOPMENT–RESIDENTIAL("PD-R") TO PD-R AND PLANNED DEVELOPMENT – COMMERCIAL ("PD-COMM") ON A ± 182-ACRE SUBJECT PROPERTY; GENERALLY LOCATED AT 16650 NW US HIGHWAY 441; TAX PARCELS 03042-050-003; 03042-050-004; 03042-050-005; 03042-050-010; 03042-051-001; 03046-003-000; 03046-003-001; 03046-003-003; 03046-003-004; 03046-003-005; 03875-001-001; 03875-010-001; 03875-010-002; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application, staff report, and any related materials are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

(Published: Alachua County Today - August 13, 2026)

NOTICE OF HEARING TO REIMPOSE AND PROVIDE FOR COLLECTION OF MAINTENANCE ASSESSMENTS IN THE TK BASIN MAINTENANCE ASSESSMENT AREA

Notice is hereby given that the City Commission of the City of Alachua, Florida will conduct a public hearing to consider reimposition of maintenance special assessments in the TK Basin Maintenance Assessment Area, as shown above, to continue funding the maintenance and operating costs of the TK stormwater basin within the Maintenance Assessment Area. The hearing will be held at 6:00 P.M., or as soon thereafter as the matter can be heard, on September 14, 2026, in the James A. Lewis Commission Chambers, at the Alachua City Hall located at 15100 NW 142nd Terrace, Alachua, Florida, for the purpose of receiving public comment on the reimposition and collection of the maintenance assessments on the ad valorem tax bill. All affected real property owners have a right to appear at the hearing and to file written objections with the Deputy City Clerk any time prior to the public hearing. If a person decides to appeal any decision made by the City Commission with respect to any matter considered at the hearing, such person will need a record of the proceedings and may need to ensure that a verbatim record is made, including the testimony and evidence upon which the appeal is to be made. In accordance with the Americans with Disabilities Act, persons needing a special accommodation or an interpreter to participate in this proceeding should contact the Deputy City Clerk's office at (386) 418-6103, at least two (2) business days prior to the date of the hearing.

The assessment for each parcel of real property is based on each parcel's percentage of the total land acreage within the TK watershed. A more specific description of the maintenance costs and the method of computing the assessment for each parcel of real property are set forth in the Initial Assessment Resolution (Resolution No. 10-20). Copies of the Master Capital Project and Service Assessment Ordinance (Ordinance No. 10-13), the Initial Assessment Resolution, the Final Assessment Resolution (Resolution No. 10-25), the Preliminary Rate Resolution (Resolution No. 26-09), and the updated Maintenance Assessment Roll are available for inspection at the office of the Deputy City Clerk, located at City Hall, 15100 NW 142nd Terrace, Alachua, Florida.

The City intends to continue collection of the maintenance assessments on your ad valorem tax bill to be mailed in November 2026, as authorized by Section 197.3632, Florida Statutes. Failure to pay the assessments will cause a tax certificate to be issued against the real property which may result in a loss of title. Unless proper steps are initiated in a court of competent jurisdiction to secure relief within 20 days from the date of City Commission's action at the above hearing (including the method of apportionment, the rate of assessment and the imposition of assessments), such action shall be the final adjudication of the issues presented.

If you have any questions, please contact the Deputy City Clerk at (386) 418-6103, Monday through Thursday between 7:30 a.m. and 6:00 p.m.

ALACHUA, FLORIDA

AFFIDAVIT FOR POSTED LAND USE SIGN

I, CRAIG BRASHIER, POSTED THE LAND USE SIGN(S)
(Print Name)

ON 8/10/2026 FOR THE Farmlands Commercial Rezoning
(Date) (Project name & type of action)

LAND USE ACTION AS PER ARTICLE 2.2.9(D) OF THE LAND DEVELOPMENT

REGULATIONS. THIS WILL BE INCLUDED IN THE STAFF REPORT.

(Signature)

Eight
(Number of signs)

Posted Notice Location Map
PR26-0002 | Farmlands Commercial

Pursuant to Section 2.2.9(D) of the City's Land Development Regulations, posted notice signs must be placed on the land that is the subject of the application, along each street which is adjacent to or runs through the land in a manner that makes them clearly visible. Signs shall be posted at regular intervals of not more than 400 feet when the land subject to the application has less than 1,500 feet of road frontage. When the land subject to the application has 1,500 feet or more of road frontage, signs shall be posted at intervals of not more than 1,320 feet.

Signs shall be inspected by the City subsequent to their posting. The applicant shall be responsible for ensuring that the posted notice is maintained on the land subject to the application until the completion of the final public hearing on the application.

SIGNS MUST BE REMOVED BY THE APPLICANT WITHIN TEN DAYS AFTER THE FINAL DECISION ON THE APPLICATION

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application, staff report, and any related materials are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

Subject: 6/8 No to Farmlands: Protect Small Businesses
Date: Monday, June 8, 2026 11:24:55 AM

Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle.

This is a legislative decision, which means the Commission is not required to approve it.

During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." Please consider my voice in your decision.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community.

If the Commission does not believe this proposal is the right fit for this location, you have the ability to vote no or ask the applicant to return with a less intensive proposal.

Key considerations:

* Traffic: Increased regional traffic on an already congested US 441
* Scale: A significant increase in commercial intensity
* Community impact: Potential impacts to downtown Main Street and community character

Thank you for your time and consideration.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community.

If the Commission does not believe this proposal is the right fit for this location, you have the ability to vote no or ask the applicant to return with a less intensive proposal.

Key considerations:

* Traffic: Increased regional traffic on an already congested US 441
* Scale: A significant increase in commercial intensity
* Community impact: Potential impacts to downtown Main Street and community character

Thank you for your time and consideration.

Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle.

This is a legislative decision, which means the Commission is not required to approve it.

During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." Please consider my voice in your decision.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

Mainly I'm concerned about the heavy traffic and trucks it will bring to the US highway 235 where there have already been multiple car accidents in front of the school Alachua Learning Center. More cars means more chances of reckless drivers and accidents!

Also, If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle.

This is a legislative decision, which means the Commission is not required to approve it.

During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

I have experienced this personally with rush hour backed up to Lowe's from Santa Fe HS headed north and the exact opposite headed south in the mornings. This corridor is a main thoroughfare for several counties in the area and the only alternative to I-75 which has frequent crashes and other longstanding issues.

I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community.

If the Commission does not believe this proposal is the right fit for this location, you have the ability to vote no or ask the applicant to return with a less intensive proposal.

Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle.

How about water supply and the ability to process waste water. I read that the City is already at the 85% mark and needs help. Why would we want to burden the water process, and even further, in the middle of a draught. There is already enough uncontrolled development in my area. Off of 441 and 156, there is a huge acreage of trees just cut down, and I saw plans for 100 homes to be built. Where are the roads and water coming from? Road 235 already has had many accidents, and crowding with more traffic will not help safety. What about roads? Why is heavy industrial equipment being allowed where there is barely small paved road (156). This area also creates a fire hazard, with huge piles of dead trees all over. This is in addition to fire hazard of another 25 acres near me which was clear cut about 2 years ago, and huge piles of just ready to burn trees and brush still sits there.

I don't see how you can vote for more development when current projects are likely going to damage water supply capacities, overstress roads not meant for heavy traffic, and reduce our quality of life by adding yet more cement in place of trees.

This is a legislative decision, which means the Commission is not required to approve it.

During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." Please consider my voice in your decision.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community.

If the Commission does not believe this proposal is the right fit for this location, you have the ability to vote no or ask the applicant to return with a less intensive proposal.

Key considerations:

* Traffic: Increased regional traffic on an already congested US 441
* Scale: A significant increase in commercial intensity
* Community impact: Potential impacts to downtown Main Street and community character

Also, stress of water supply at a time of draught. We are asked to reduce our water use at our homes. Why are we asked to conserve, while huge building projects are going to consume more than thousands of homes.

Thank you for your time and consideration.

Sincerely,

Dhira Crunkilton

Dear Mr. Mayor and Commissioners, I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed. If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle. This is a legislative decision, which means the Commission is not required to approve it. During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." Please consider my voice in your decision. US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua. I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community. Dear Mr. Mayor and Commissioners,
I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

Stop developing Alachua. Take care of the citizens by responsibly managing the county not sellout off to the highest bidder.

We are a uniquely positioned environmental resource that can support local health. We don't need another big box store.

If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle. This is a legislative decision, which means the Commission is not required to approve it. Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle.

This is a legislative decision, which means the Commission is not required to approve it.

During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." Please consider my voice in your decision.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community.

If the Commission does not believe this proposal is the right fit for this location, you have the ability to vote no or ask the applicant to return with a less intensive proposal.

Key considerations:

* Traffic: Increased regional traffic on an already congested US 441
* Scale: A significant increase in commercial intensity
* Community impact: Potential impacts to downtown Main Street and community character

Thank you for your time and consideration.

I moved here from Long Island NY 12 years ago. My home was in an area where there was acres upon acres of farmland. Over the years developers built new neighborhoods with huge houses on small pieces of property. Before you knew it the majority of the people who had moved to the area to get away from congestion realized that they didn't like driving 15 minutes to a store and they missed all of the conveniences of the area they moved from. Little by little every conceivable creature comfort was built which changed the whole landscape and feel of the town.
In today's world people can shop online and have everything under the sun delivered to their home.
I really would hate to see this same thing happening here.

Thank you for your time and consideration.
Sincerely,
Karen Mott

Subject: DENY THE FARMLANDS LAND USE CHANGE !!!!!!!!!
Date: Saturday, June 20, 2026 12:19:37 PM

TRAFFIC IS TOO HEAVY ON JUST ABOUT EVERY SINGLE ROAD IN THIS AREA !!!!!! STOP BUILDING DAMN YOU !!!!!! YOU ARE RUINING THE ENTIRE AREA !!!!! NO ONE WANTS IT !!!!

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

Debbie Hagstrom

Subject:	Farmlands -- May 4th agenda item
Date:	Sunday, April 26, 2026 1:24:50 PM

Dear Mr. Mayor and Commissioners,

On May 4th you will consider Ordinance 26-09 submitted by the so-called "Farmlands" development of Southeastern Tree Farm bordering US 441 and NW 188th Street. I am writing to encourage you to vote "**No**".

Farmlands is asking the City to change 46 acres of its Comprehensive Land Use Map from primarily Residential to Commercial Intensive to make way for a 60 acre shopping center with 450,000 square feet of retail space.

The anchor tenant of this sprawling shopping center will likely be a Walmart Supercenter with its associated gas station and automotive center. A Walmart in this location will attract north and southbound travelers on I-75 and will draw in customers from miles to the east and west. US 441 already experiences heavy congestion throughout the day in this area. The addition of regional traffic to the Walmart will substantially increase daily travel time for residents and will negatively impact the small-town feel of our community. In addition, a Walmart will inevitably pull commercial activity away from downtown Alachua and is likely to drive local mom-and-pop stores out of business.

Please do not allow this bad idea to proceed. Thank you.

Gary Pappas

Subject: Farmlands commercial project
Date: Wednesday, June 3, 2026 2:24:23 PM

As a restaurant owner in downtown Alachua, I believe more commercial/shopping will benefit everyone. Please vote YES for The Farmlands commercial project. Keep in mind the supporters do not show up only the people who oppose everything in Alachua.

The developer has put together a well-designed plan that will serve the residents very well. The part time and full-time local jobs starting from day one will benefit the local community. The Santa Fe high school students will be able to have jobs while in school.

Instead of having several 441 openings where people turn into the different businesses you can have a more comprehensive plan. It's all zoned commercial on that 441 strip. It will all get developed, will it be with 1 plan or all separately. All done together at the same time is significantly better.

This will greatly help the city when the property taxes go away in the near future!

VOTE YES for this project.

From: Denise Lugris Connard
To: Planning Division
Subject: Farmlands Comp Plan
Date: Saturday, May 30, 2026 10:13:04 AM

We just know that this adjustment to the plan will wreak havoc for our wonderful community. These concerns we residents have ned to be taken seriously— Please protect our community and what makes Alachua a good life community with small town vibes and culture. Please protect that.

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Denise Lugris Connard

Subject:	Farmlands Land Use - May 4th meeting
Date:	Monday, April 27, 2026 11:21:09 AM

Good morning Mr. Mayor and Commissioners,

We are writing in regards to the upcoming May 4th agenda item "Farmlands" and the request for changes in the Future Land Use Map. We respectfully and urgently request that you all vote NO on this request as it is proposed.

If it is developed as this request proposes - with possibly a large national anchor tenant, like Walmart - this location will draw immense regional traffic well beyond what the roads can or are designed to handle. Also to be considered are the damaging effects to the environment, our local small businesses and our small town charm.

This change to the type of land use is a policy decision, not an automatic approval. You are not required to approve it and surely you can see it would be a detriment to all of us and our lovely community.

US Hwy 441 already experiences heavy congestion with daily back-ups (both directions), and additional regional traffic would definitely increase the already congested traffic. Growth at this scale will negatively affect us and we will certainly lose the small-town feel that has drawn people to Alachua and which Alachua has promoted and been proud of.

No doubt a large commercial center will pull activity away from our downtown Main Street, decrease purchases at small, family-owned business and affect the charm that defines our community.

Each of you has the ability and authority to decide if this level of intensity is right for this location. Your vote can be NO —— PLEASE vote NO on this proposal and require the applicant to come back with a less intensive proposal. PLEASE consider the consequences of such a proposed land use. Our community needs protection and you can protect it!

Key considerations:
- **Traffic**: Increased regional traffic on an already congested US 441
- **Scale**: A significant increase in commercial intensity
- **Community impact**: Significant impacts to downtown Main Street, other small businesses in the area and our rural character/small town charm

We appreciate your time and consideration in the very important vote.

Steve & Denise Connard

From: Stella Burnham
To: Planning Division; City Commissioners
Subject: Farmlands May 4th
Date: Friday, April 24, 2026 6:16:07 PM

I firmly oppose the commercial use of the Farmland Commerical project in Alachua area. Frankly even the name of this project is disgraceful. My family has farmed in Alachua for four generations and the casual disregard for the farming community is repulsive to me.

The rapid development in this town poses a significant threat to our community's well-being. The traffic congestion on 441 is unbearable, and the small town is being gradually displaced from its long-time residents. We have chosen to live here because we desire a peaceful and less crowded environment.

Over the past five years, the Alachua Commission has made decisions that have negatively impacted the town's sustainability. The unsustainable development of farmland has resulted in the destruction of the Mill Creek sink, which is a vital natural resource for our community. It is imperative that the commission consider the long-term consequences of its actions and prioritize the preservation of our environment. These changes are not sustainable with the current resources.

We did not want the hundreds of additional homes that were recently approved. Now Alachua County school board wants to close two of the local schools, which will create the perfect storm for traffic in Alachua each morning. None of these plans are sustainable. Do you commissioners live here and experience this traffic? How can you not be concerned?

As a lifelong resident of Alachua, I am deeply concerned about the direction in which our city is heading. I believe that development should be approached with extreme caution and that any rezoning should be transparent and accountable. The current state of affairs in Alachua is characterized by unethical business practices and a lack of oversight. It is crucial that we take immediate action to address these issues and ensure the future of our beloved city.

Extremely Concerned Citizen ,

Stella Burnham

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

Thank you for your time.

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

I believe allowing this land to be developed with a large national anchor tenant, like Walmart, will have negative implications for the cities of Alachua and High Springs alike.

A large commercial center at this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

Lastly, I am extremely concerned about the potential environmental impact of the development of such a large commercial area on our aquifer and springs.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character
-Environmental impact: Protect our natural lands

Thank you for your time.

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

Thank you for your time.

As someone who saw the changes in Miami-Dade county as a young child, and eventually moved to Broward after Hurricane Andrew because of the HORRIBLE traffic and congestion I eventually moved to Alachua because of the small town feel and the fact that it wasn't congested like the cities a lot of Alachua residents have moved away from. Adding something beyond what the roads can handle would cause congestion and traffic like those many residents chose to escape. Please vote no on this change.

Thank you for your time.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

***Please also keep in mind that I personally moved away from Broward County and specifically chose to move to Alachua because of the small town feel, the “road-less travel” type feel, and that it truly felt like the Florida I grew up begging my parents to move to. Adding this would take away from that feeling that not only draws people to Alachua, but keeps people here. Please vote no on this!

Thank you for your time.

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

I live in the Briarwood development off of CR 235A and experience the already heavy, and increasing congestion on US 441 every time I leave my home. Additional regional traffic could further impact daily travel time, and increase the likelihood of traffic accidents.

Growth at this scale will change the small-town feel that has drawn people to Alachua. The addition of a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community. I am also concerned it will adversely affect our locally owned small businesses.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it. You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

Please listen to those that voted you into office.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it. You should be obligated the people and wildlife that currently live here, not future residents. We don't mind having less shopping choices close to home/ we want our small towns to remain small.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua and the High Springs area.

I am also concerned that a large commercial center will pull activity away from our downtown Main Streets in Alachua and High Springs and affect the charm that defines our communities.

You have the ability to decide if this level of intensity is right for this location. If it is not, you should vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character
- Impact Wildlife including several endangered species.

Thank you for your time.

This pre-written email sums it up nicely. We do not need Walmart (or another car wash for that matter) in this area. Not every small town needs to become Gainesville. High Springs has McDonalds now, and not even one that can accommodate dine-in very well; why? We didn't need McDonalds; we need our town fixed up. We need road repair and we need family-friendly activities. We do not need more discount stores (High Springs has THREE Dollar General stores; Alachua has two), car washes, or fast-food restaurants. Why not entice a business we don't have already? How about a Golden Corral? At least that's something that isn't already within a 30-minute drive. If people want a city with all the stores, then they can move to one. Keep our small towns small!

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.
Although a traffic survey suggested that traffic would decrease because the residents would work and shop in the area at the small cupcake store the applicant suggested will be there, we want a guarantee that it will be a small cupcake store and NOT a big box store. If they can't guarantee the names of the store then their traffic survey is meaningless. Likely a commercial business will want to serve many customers beyond the 203 homes in the neighborhood!

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

I would like to say that I am against the zoning change for the development of the Farmlands commercial property. The 441 corridor cannot handle this type of traffic as it is already over burdened with traffic we already have in this area. The commuting and daily traffic is a nightmare now! We do not need big box stores in the city of Alachua. Walmart is 15 minutes to the south along with anything else that is needed. Additional homes in this area will definitely cause more issues as well. The infrastructure of Alachua and neighboring High Springs 5Miles from the proposed location cannot absorb this trype of growth on our roads, in our schools or on our aquifers. Please seriously consider the unwanted and unneeded impact this zoning change and development will cause. Vote no!

To: Planning Division
Subject: Farmlands: a bad idea for the good life City
Date: Sunday, May 31, 2026 6:01:31 PM

We did not move here to have a Walmart across the street. If that was the case, we would have moved to Gainesville. Do not let an out-of-state developer ruin our city with this massive shopping center. I encourage you to reject this land use application. It is a bad idea for the good life City. Thank you.

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Subject: From a resident who lives on this street, please don"t do this to us!!
Date: Monday, June 8, 2026 10:09:14 AM

My family and I live on our family's land that we have owned for the last 50 years. It is special to us. The stars. The birds, the sounds. Beautiful nature. Fresh well water. Growing our own vegetables and enjoying this beautiful setting. To us and our neighbors, this area is an inviting retreat. We don't want more traffic, noise and light pollution. We have seen a dramatic increase in traffic over the past t years and 441 is often bumper to bumper already from this intersection to the interstate. We worry about the environmental repercussions, pollution to air and ground, the water and sewer impact in a small area. We weren't built for this. Our area isn't meant for this. This isn't our vision. There's already a huge burden on this land with the existing developments and tower hill project, new neighborhoods that seemingly pop up overnight. We can't do this to our beautiful land. We are intentionally developing a food forest to pass on to our children. It is being directly threatened.

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

Please bring a big box store to Alachua. I'm tired of having to drive all the way into Gainesville for things I need. The population already lives in this area, so the traffic is already here. Please help us save time and GAS by bringing a big box store here.

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Heather Branaman

Mayor and Commissioners,

As an Alachua resident, I support the Farmlands Shopping Center because it will bring jobs, new investment, and much-needed shopping and services closer to home.

Many residents currently have to travel to Gainesville for everyday needs. This project would provide more convenient options locally while creating approximately 1,200 permanent jobs, more than 1,290 construction jobs, and over $151 million in private investment.

The development would also generate significant new tax revenue for the city, helping fund local services without increasing taxes on residents.

I encourage you to vote in favor of the Farmlands Shopping Center and support this opportunity for Alachua's future.

Dylan Witt

Subject: June 8: Vote NO to Farmlands Request PSSC26-0002
Date: Sunday, May 24, 2026 12:36:33 PM

Dear Mayor and Commissioners,

Please exersize your authority and vote to protect our dwindling natural resources.

I am writing regarding the June 8th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

Thank you for your time.

Dear Mayor and Commissioners,

I'm writing about the Farmlands item on the June 8th agenda, specifically the request for a Future Land Use Map change. I'm asking you to vote no on this as proposed.

I want to be clear about something, this is a policy decision, not an automatic approval. You have the authority to say no, and I hope you will.

If this moves forward with a large national anchor tenant like Walmart, we are talking about regional traffic, not just local trips. US 441 is already one of the more congested corridors in this area, and layering a big-box regional draw on top of that is not a minor adjustment. It changes the character of how people move through our town every day.

Beyond traffic, I'm genuinely worried about what this does to downtown. Main Street has a charm that took a long time to build and is easy to lose. A large commercial center at this scale pulls spending, attention, and energy away from the core of our community. Once that shift happens, it is hard to reverse.

Alachua still has a small-town feel. People moved here, or stayed here, because of that. This kind of intensity at this location puts that at risk.

If the current proposal is too much for this site, you can vote no or ask the applicant to come back with something less intensive. That option is on the table, and I hope you use it.

Thank you for your time and for the work you do on behalf of our community.

Sincerely,
Tim Martin

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

Thank you for your time.

Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

Dear Mr. Mayor and Commissioners,

I have am writing as an individual that has multi-generational roots here dating back to before Alachua was incorporated. It is regarding the June 8th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

We need to petition the federal government to grant a new exchange off I-75 directly to the distribution centers as business only exit, not developed, limited to a truck stop/gas station with a restaurant inside similar to Ellisville exit at US 441 in Columbia county. 441, 235 & 235 A along with Peggy road are already dangerous areas with heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community. You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal. Key considerations: - Traffic: Increased regional traffic on an already congested US 441 - Scale: A significant increase in commercial intensity - Community impact: Potential impacts to downtown Main Street and rural character Thank you for your time.

Subject: June 8: Vote NO to Farmlands Request PSSC26-0002
Date: Tuesday, May 12, 2026 4:31:11 PM

Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed. If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua. I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations: - Traffic: Increased regional traffic on an already congested US 441 - Scale: A significant increase in commercial intensity - Community impact: Potential impacts to downtown Main Street and rural character

Thank you for your time.

Subject: June 8th agenda. No to Farmlands: Protect Small Businesses
Date: Wednesday, June 3, 2026 1:37:36 PM

Dear Mr. Mayor and Commissioners,

I am writing concerning the June 8 agenda item referred to as Farmlands and the requested amendment to the Future Land Use Map. I respectfully urge you to vote against this proposal in its current form.

Should this site ultimately be developed with a major national retailer, such as Walmart, it has the potential to attract traffic from throughout the region. The resulting increase in vehicle volume could place substantial strain on surrounding roadways that are already heavily utilized.

Because this is a legislative matter, the Commission is under no obligation to approve the request.

During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained that, outside of quasi-judicial proceedings, elected officials retain the discretion to determine whether a proposal is appropriate for the community. As he stated in the meeting recording: "…As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." I respectfully ask that you take my concerns into account when making that decision.

US 441 already experiences significant traffic congestion, and additional regional draw could further impact travel times, roadway safety, and overall quality of life for residents. Development of this magnitude could also alter the small-town atmosphere that many people value and that makes Alachua unique.

Additionally, I am concerned that a large-scale commercial development

could divert customers and economic activity away from downtown Main Street and High Springs, potentially affecting the locally focused character and businesses that contribute to the area's identity.

If the Commission concludes that this proposal is not the right fit for this location, you have the authority to deny the request or encourage the applicant to return with a proposal of a more appropriate scale and intensity.

Key considerations include:

• Traffic – Increased regional traffic on an already busy US 441 corridor

• Scale – A substantial expansion in commercial intensity for the area

• Community Impact – Potential effects on downtown Main Street, High Springs, and the character of the community

Thank you for your time, service, and thoughtful consideration of this matter.

Subject: June 8th Vote: Farmlands Ordinances 26-09 and 26-10
Date: Saturday, June 6, 2026 5:49:56 PM

Mayor and Commissioners,

As someone who works in healthcare, I know our community is growing and more families are choosing to call Alachua home. The growth is already here, and we need the jobs, businesses, and services to keep up with it.

Many residents currently have to drive to Gainesville for shopping, groceries, and other everyday needs. The Farmlands development would make life more convenient for local families while creating good jobs and bringing new investment to our community.

This project would also generate new tax revenue to help support local services without raising taxes on residents. With property taxes likely on the way out, base on our governor's push, this would be more beneficial than property owners for tax purposes. I believe it is a smarter investment in Alachua's future, and I hope you will vote in favor of the Farmlands development.

From: Chris Beatty
To: Planning Division; City Commissioners
Subject: June 8th Vote: Farmlands Ordinances 26-09 and 26-10
Date: Monday, June 8, 2026 9:23:21 AM

Dear Mayor and Alachua City Commissioners,

I support the Farmlands Shopping Center because it will make everyday life more convenient for local families while providing important benefits for our community.

Many residents often have to drive to Gainesville for shopping, groceries, and other errands. Bringing more stores and services to Alachua would save time, reduce travel, and allow residents to spend more of their money locally.

The project would also generate significant new tax revenue for the city. The property currently generates about $15,900 per year in property taxes, but the Farmlands development is projected to generate more than $1.4 million annually. That additional revenue can help support city services, infrastructure, and other community needs without increasing taxes on local residents. I encourage you to vote in favor of the Farmlands Shopping Center.

Chris Beatty
Alachua County, FL Resident

From: Janice Osejo
To: Planning Division
Subject: Just Say NO!!
Date: Monday, June 1, 2026 3:48:46 PM

Highway 441 is overcrowded TODAY! We have Tower Hill Headquarters coming bringing even more traffic plus new neighborhoods. At 5:00 pm it is a bottleneck. Emergency services are impacted as those of us whose homes border 441. Please keep Alachua the Good Life Community and DO NOT OVER CAPACÍTATE our roadway. We do not want to become another Archer Road!!!

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Subject: New Walmart here and CR 235 and 235A
Date: Tuesday, July 28, 2026 9:45:12 AM

Good morning,
I understand it was announced that the new Walmart will be built in Alachua when there is already a Walmart about 13 miles away. Traffic here is awful, even on Peggy Road with all of the many distribution centers. We do not need a Walmart. We need a red light at Peggy road and 235A. The things that need to be done are: completely resurface of CR 235 and 235A. Also Peggy Road is now needing repairs.

Alachua is a great place to live, Walmart is a trashy and dangerous place to even buy groceries from. It will definitely decrease anyone's attraction to the small nice town of Alachua.

The residents of Alachua that pay taxes should get a vote and have a voice.

I'm very disappointed that the few nice restaurants downtown and near the old Hitchcocks won't get as much business but my main issue is the infrastructure for Traffic.

We elect city councilman to represent what we the residents want, not what the city wants to make more money for them.

Thank you for your time,
Dianne Beauchamp

Dear Mr. Mayor and Commissioners,

I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle.

This is a legislative decision, which means the Commission is not required to approve it.

During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." Please consider my voice in your decision.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community.

If the Commission does not believe this proposal is the right fit for this location, you have the ability to vote no or ask the applicant to return with a less intensive proposal.

Key considerations:

* Traffic: Increased regional traffic on an already congested US 441
* Scale: A significant increase in commercial intensity
* Community impact: Potential impacts to downtown Main Street and community character

Thank you for your time and consideration.

Subject: Please consider the consequences for our community
Date: Monday, June 22, 2026 5:16:04 PM

PLEASE consider listening to the voices of the community.

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

kristin cohen

Subject: Please deny the farmland comp amendment
Date: Sunday, June 7, 2026 8:28:45 AM

We don’t want the higher crime and traffic congestion. We moved here because it is quiet and peaceful and safe. Our infrastructure is already under pressure.

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua’s future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Donna Haley

We do not need or want more sprawl in Alachua County. Please deny the Farmlands Comp plan amendment.

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

David Hastings

Don't ruin our state! We can CHOOSE to not repeat the ecological destruction other places have created! Save our uniqueness for future generations!

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

Peggy Hughes

We live in this area and chose to live off-grid here for a reason. It seems you are trying to build this city up, but in doing so you are simply duplicating things that already exist elsewhere. This is a small, old, vintage town. Why not support and preserve that identity instead of bringing in huge corporate stores? Make it a more quaint and unique town. It appears that much of this development is focused around the expressway, giving travelers more reasons to exit there. But that is not needed. There are already plenty of Walmarts and big-box stores off the expressway. Many people enjoy stopping in small towns, especially when they offer charming specialty shops, mom-and-pop businesses, local restaurants, and ice cream shops. If travelers knew they could find those kinds of unique experiences within five or ten minutes of the exit, they would still come. A Walmart in Alachua is not serving those of us who live here. None of us want it. High Springs does not want stores like that in its community either.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use
Date: Wednesday, June 17, 2026 11:16:52 AM

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

From where will the water come to support more sprawl?Recently our area has been in a significant rainfall deficit
- and with climate change less rainfall may well become the norm.
It never ceases to amaze me that municipalities continue to approve more development, more sprawl but I never hear anything about the associated increased water demand.
I'm 72 years old and have been in Alachua County since 1979. Personally, I do NOT need more people, more vehicles, more restaurants and stores, more concrete and pavement, to enhance my quality of life.
Alachua County and its municipalites seem hell-bent on turning our area into another Orlando, FL.
STOP IT - STOP IT NOW!

Dear Mayor, Commissioners, and City Staff,

The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use
Date: Saturday, June 13, 2026 9:03:16 AM

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.

The reason why I moved to Alachua County the High Springs area. This was a house that was already built. I did not take up any land. I bought a house that somebody was moving from love the little town atmosphere by bringing in a big box store. It's just gonna choke out a little home town feeling.
Along with big box, stores comes with unwanted crime that nobody really wants to see move into Alachua or High Springs
Please vote. No, I'll accept the drive further to go to a big box store.

It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Chris Greene

Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use
Date: Thursday, June 4, 2026 9:02:24 AM

I live in this area and the light at 441 /235A is already congested and there is not a crosswalk going over 441 so children and sometimes workers try to cross that street which can be dangerous. In addition, there is not enough traffic planning in that area to not cause this to be a heavy traffic area and residence, not being able to leave or returned to their homes.

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur. Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.

This project greatly alters the communities of Alachua and High Springs. Any small town character that is left will be destroyed by this project. Already, the exit area is quickly becoming Newberry Road. If we wanted any of that, we would live in Gainesville! If I have an urgent need for Walmart, I will drive the few miles down the road to Gainesville. That is as close as I need a Walmart to be!! The speed at which we are losing any small town character is shameful!! Let's save what we have left!!

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

I was raised in Alachua and High Springs, and I believe that the impact of the proposed future land use for the Farmlands Project will have a negative impact on our local small businesses, infrastructure, and aquifer. Our small city has become increasingly more congested and the rapid growth is also affecting driving and pedestrian safety. As a local resident who lives, works, and volunteers in this community, I want to voice my opposition to this plan. Please vote no to preserve the beauty, safety, and small businesses of our beautiful town.
Sincerely,
Adrienne Paxton

Dear Mayor, Commissioners, and City Staff,

441 is already at max traffic load. My water bill goes up each year and we had to improve the waste water plant - what next

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur.
Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Gerard Murphy

I own a 130-year-old historic soda shop in downtown High Springs. Brad and I have invested heavily in preserving a piece of this town's history because we believe our historic downtown is worth protecting.

A big-box store located close to downtown could have a devastating impact on the small businesses that give High Springs its unique character. Many local businesses are already struggling. Pulling customers away from Main Street risks empty storefronts, lost jobs, and the erosion of the historic district that makes our community special.

I also understand the concerns about rising property taxes. Homeowners deserve relief. But eliminating property tax revenue without a clear plan to fund police, fire protection, roads, parks, and infrastructure is not the answer.

High Springs needs thoughtful growth that strengthens our community, supports local businesses, and preserves our historic identity. We can do better than choosing between our future and our heritage.

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.

Traffic in town is already crazy. There is plenty of shopping close enough by that we don't need more. Our roads are in horrible shape. People move to towns like Alachua because they want space they don't want traffic and they want the small town feel. The commissioners and city planners seem hell bent on wrecking that. Please stop the madness.

I have been a resident of Alachua County for almost 50 years, and I have lived in the City of Alachua since 2020. I moved to Alachua to get away from the intensive over development of Gainesville. This proposal is not only a risk for the City of Alachua, due to safety on Hwy 441, it continues to overfill our already overcrowded schools, and loss of our small town! Just because a developer wants to build it shouldn't be an automatic yes. The overall impact is horrible as my message describes. There's not a single resident in the City of Alachua that wants this!

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

We don't want a parking lot! Infrastructure before building! Expose what the area will encompass!

Dear Mayor, Commissioners, and City Staff,
I urge the City of Alachua to deny the proposed Comprehensive Plan / Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.
This is not a minor adjustment. It is a major land-use decision that would permanently change the character, traffic patterns, infrastructure demands, and development pressure along the Highway 441 corridor west of 235A.
The Comprehensive Plan should not be treated as a document to rewrite whenever a developer seeks more intensity. It represents many hours of community visioning, public participation, planning, and compromise. Residents helped shape that plan because they were asked to define Alachua's future. Its limits on commercial land use reflect a public judgment about where intense development belongs, how much is appropriate, and how growth should occur.
Changing this area from 7 acres of commercial use to 40 acres would disregard that community vision. Once the Future Land Use Map is changed, the City will have far less ability to say no later. This amendment would invite large-scale, car-dependent commercial sprawl and set a dangerous precedent for treating the Comprehensive Plan as negotiable instead of protective.
This proposal raises serious concerns about traffic congestion and safety on Highway 441 and 235A; impacts to nearby residents, schools, rural lands, and neighborhoods; increased water, wastewater, stormwater, and utility demands; loss of community character in the Alachua / High Springs region; and piecemeal planning that approves intensity first and addresses consequences later.
The burden should be on the applicant to prove that this major commercial expansion is necessary, compatible, fiscally responsible, and protective of the public interest. That showing has not been made.
I respectfully ask the City Commission to vote NO on the Comprehensive Plan amendment expanding commercial land use from 7 acres to 40 acres. Please honor the community visioning behind the existing plan, protect residents from unnecessary commercial sprawl, and require full review of cumulative impacts before granting any increase in development intensity.
This is not just a development application. It is a decision about what kind of city Alachua intends to become.
Sincerely,

Sincerely,

Neil Boyle

From: Nk Acevedo
To: Planning Division
Subject: Please Deny the Farmlands Comp Plan Amendment Expanding Commercial Land Use
Date: Monday, June 29, 2026 6:01:34 PM

Dear Mayor, Commissioners, and City Staff,

I urge the City of Alachua to deny the proposed Comprehensive Plan/Future Land Use Map amendment for the Farmlands project that would expand commercial land use from approximately 7 acres to 40 acres.

This is not a minor adjustment. It is a major land-use decision that would permanently change the character of North Alachua County and open the door to large-scale commercial sprawl along the Highway 441 corridor.

The Comprehensive Plan represents years of public input and community visioning about how and where growth should occur. Expanding commercial development nearly six-fold in this location disregards that vision and creates development pressure that will extend far beyond this single project.

Residents already experience increasing traffic congestion and safety concerns along Highway 441 and County Road 235A. Adding nearly 450,000 square feet of commercial development will bring substantially more vehicles, congestion, noise, and infrastructure demands to an area that was never envisioned as a major commercial center. Once this level of intensity is approved, the impacts will be felt every day by nearby residents, commuters, schools, and businesses.

The proposal also places additional pressure on a high aquifer recharge area that helps replenish the Floridan Aquifer - our source of drinking water and the foundation of North Florida's springs, rivers, and wetlands. As our population grows, protecting clean water should be a priority, not an afterthought.

The burden should be on the applicant to prove that this dramatic increase in commercial intensity is necessary, compatible, and in the public interest. That burden has not been met.

Please vote NO on this amendment. Protect our community vision, our quality of life, our water resources, and the rural character that makes this area special.

This decision is not simply about one development. It is about what kind of future we want for Alachua.

Sincerely,

Sincerely,

Nk Acevedo

To: Planning Division
Subject: Postpone Farmlands Rezoning—Investigate the Risks Before Approving Irreversible Development
Date: Friday, July 24, 2026 4:37:52 PM

Dear Mayor Welch and Commissioners:

On behalf of the Sierra Club Suwannee–St. Johns Group, we respectfully request that the City Commission postpone consideration of the Farmlands rezoning and conduct a properly noticed second reading of the associated Future Land Use Map amendment before taking any further action on the Planned Development.

The FLUM amendment and rezoning are inseparably connected. The rezoning depends upon the expanded commercial land-use designation approved by a narrow 3–2 vote on June 22. Before considering a rezoning that could authorize up to 454,000 square feet of commercial development and 203 residences, the Commission should ensure that the underlying land-use amendment has completed every required procedural step and received the fullest possible public examination.

The applicant should also be required to explain what material circumstances have changed since the property's earlier modification from Agricultural to Community Commercial. The applicant recently obtained that commercial designation but did not develop the property under the approved modification. Instead, it returned seeking a far larger commercial entitlement with substantially greater impacts.

Before this increased request is even considered, the applicant should demonstrate why the existing commercial designation is inadequate, what new need or changed condition justifies this escalation, and why the previously approved development opportunity was not pursued. Without such an explanation, this sequence creates the appearance that the earlier modification served merely as a foothold for obtaining a much larger and more consequential commercial entitlement.

This is not a minor procedural matter. The FLUM amendment fundamentally changes the intensity and character of development permitted along this portion of U.S. 441. A second reading would allow the Commission to consider the significant information and unresolved concerns that have emerged since the June 22 vote.

Sierra Club remains opposed to the Farmlands proposal for the following reasons:

The increased commercial entitlement has not been justified. The applicant did not act upon the property's recent modification from Agricultural to Community Commercial before seeking a substantially larger commercial designation. The record should explain what has materially changed, why the existing entitlement is insufficient, and what demonstrated

community need justifies this escalation. Incremental approvals should not be used to establish a foothold and then leverage it into a development of far greater scale and impact.

The site investigation was preliminary, limited, and incomplete. Based on information presented in the record, the entire property does not appear to have been comprehensively evaluated. The test borings, wells, excavations, or other methods used to characterize site conditions also appear to have been limited in number, location, and depth. If testimony indicated that some investigations extended only approximately 20 feet, the applicant should be required to clarify exactly which investigations reached that depth and distinguish those test depths from the separate estimate of approximately 20 feet between the proposed stormwater-basin bottom and limestone. Limited sampling cannot reliably characterize conditions across a property of this size or rule out deeper karst features, buried sinkholes, landfill materials, groundwater concerns, or contaminant pathways.

Karst and sinkhole risks remain unresolved. The applicant's investigation was preliminary, groundwater conditions were largely undetermined, and no geophysical survey was conducted to identify buried karst features. The City's engineering reviewer warned that excavation of a proposed stormwater basin could leave only about 20 feet above limestone and noted that sinkholes have developed beneath other stormwater facilities with similar separation. The absence of an identified sinkhole is not evidence that none exists when the investigation capable of detecting buried karst has not been performed.

Material site conditions were not adequately disclosed or analyzed. The nearby decommissioned landfill, EDB contamination history, groundwater-monitoring wells, reported sinkhole features, plume information, and other environmental constraints were not meaningfully addressed in the applicant's materials or staff report. These are not peripheral details. They bear directly on whether the proposed development pattern, excavation, and concentrated stormwater infiltration are safe.

The City appears to have relied substantially on the applicant's information without adequate independent verification. The applicant has a direct financial interest in obtaining approval, yet the record does not demonstrate that the applicant's environmental conclusions, site characterization, utility projections, or omissions were subjected to a comprehensive, property-wide, independent technical review. Where the submitted information is incomplete, unverified, or contradicted by other records, it cannot reasonably support definitive findings that the site is suitable and significant adverse effects are unlikely.

The proposal lacks adequate groundwater and stormwater analysis. No site-specific seasonal-high groundwater level, groundwater-flow direction, baseline water-quality assessment, complete stormwater-capacity analysis, or contaminant-transport evaluation has been provided. The record also lacks runoff calculations, required storage volumes, water-quality treatment analysis, emergency-overflow routes, and a karst-collapse

contingency. Critical investigations have been deferred until after the land-use and rezoning decisions.

Wastewater capacity has not been demonstrated for the full range of permitted uses. Staff's estimated 96,150 gallons per day relies on a generic commercial-flow assumption that does not account for potentially intensive uses such as restaurants, hotels, assisted-living facilities, schools, or medical uses. The analysis also does not demonstrate downstream lift-station, force-main, collection-system, peak-flow, or treatment capacity.

The commercial development authorized is not sufficiently limited. Descriptions of a particular retailer or conceptual site plan are not binding protections. Once approved, the PD could allow a much larger or substantially different combination of commercial uses than residents have been led to expect.

Traffic impacts have not been credibly resolved. The proposal relies on questionable internal-capture assumptions and characterizes U.S. 441, a major state highway, as susceptible to "traffic calming." Residents who regularly travel this corridor understand that development of this scale could substantially worsen congestion and safety conditions.

The proposal is incompatible with the community's character and long-term vision. Expanding approximately seven acres of commercial future land use to roughly 40 acres would encourage highway-oriented sprawl and establish a damaging precedent for this largely rural gateway between Alachua and High Springs.

The burden belongs to the applicant to establish—before approval—that the substantially increased commercial intensity is justified, safe, serviceable, and consistent with the Comprehensive Plan. Promises to investigate the decisive questions later do not constitute competent, substantial evidence that the land can support the development now being authorized.

We therefore respectfully request that the Commission:

- Postpone the Farmlands rezoning hearing;
- Direct the City Attorney to explain publicly whether all required readings, notices, transmittals, and adoption procedures for the FLUM amendment have been completed;
- Schedule a properly noticed second reading of the FLUM amendment before considering the dependent rezoning;

- Allow the public to submit evidence and comment on the complete land-use record;
- Require the applicant to identify precisely which portions of the property were investigated, the number and location of all borings, wells, excavations, and other test sites, the methods used, the depths reached, and the basis for concluding that this limited investigation adequately characterizes the entire property;
- Require comprehensive, property-wide karst and hydrogeologic evaluation, including mandatory geophysical screening of proposed stormwater facilities, targeted investigation of identified anomalies, and seasonal-high groundwater measurements;
- Require independent review of the decommissioned landfill, EDB contamination, monitoring-well records, groundwater-plume information, groundwater-flow direction, and potential contaminant-migration pathways;
- Require a complete stormwater-capacity and water-quality analysis and a use-specific, maximum-demand wastewater analysis, including verification of lift-station, force-main, collection-system, treatment, and peak-flow capacity;
- Require substantive independent technical review by qualified professionals retained by or answerable to the City, rather than relying primarily upon the applicant’s representations;
- Require the applicant to provide a documented explanation of what has materially changed since the earlier Agricultural-to-Community Commercial modification, why that approved opportunity was not pursued, and what demonstrated public need justifies the increased commercial acreage and intensity now requested; and
- Deny, or substantially reduce, the proposed commercial intensity unless the applicant establishes through competent, substantial evidence that the increased entitlement is justified, compatible with the surrounding community, within the City’s water, wastewater, stormwater, and transportation capacity, and protective of groundwater and public safety.

What competent, independently verified evidence permits the City to approve this rezoning when the entire property has not been comprehensively investigated, the testing appears limited in scope and depth, material site conditions were not fully disclosed, no geophysical karst survey was performed, and essential environmental and utility studies remain

unfinished?

A decision of this consequence deserves the most thorough examination possible. Once the expanded land-use entitlement and rezoning are granted, the City may have limited ability to correct mistakes revealed by later investigations. Alachua's residents, water resources, infrastructure, and rural character deserve careful planning—not unanswered questions followed by irreversible approvals.

The Commission should not allow a recently granted commercial modification to become merely a foot in the door for a much larger entitlement that was neither contemplated nor justified when the property first transitioned away from agricultural use. Nor should it approve the development intensity first and investigate whether the property can safely support it later.

Respectfully,

Sierra Club Suwannee–St. Johns Group
Executive Committee

From: Haripriya Benedict

Subject: Support for The Farmlands Commercial Application
Date: Thursday, June 4, 2026 7:44:00 PM

I am writing to express my strong endorsement for The Farmlands commercial application and to respectfully urge a favorable vote. This project presents a well-considered and meticulously planned opportunity to enhance shopping and dining options for residents across the Alachua area. As someone who frequents Alachua for work 5-6 days a week, I have observed the limited shopping and dining establishments available in the area. It is important to note that the proposed development will not detract from the existing downtown businesses. A pertinent example is Gainesville, where despite substantial commercial growth along Archer Road, the downtown area continues to flourish. Furthermore, the Farmlands project is notably less intensive than what the current zoning permits. It is worth highlighting that the entire stretch of 441 in this vicinity is already designated for commercial use, and there are no residential properties adjacent to the Farmlands commercial site or the additional property. In light of these considerations, I firmly believe that this project will bring significant advantages to the community. I would also like to draw attention to the fact that the individuals attending the meetings in person often express opposition to various projects. For instance, they opposed the Publix/Lowes development, yet many of them now patronize these establishments. It is essential to recognize that there are numerous supporters of this project who may not be present at these meetings. Thank you for taking the time to consider my perspective.

Merry Anthony

Subject: Support for the Farmlands Shopping Center Project
Date: Friday, June 5, 2026 10:47:29 AM

The Florida State Hispanic Chamber of Commerce has long championed policies and projects that create economic opportunity, strengthen local communities, and support small business growth across Florida. Representing more than 604,000 Hispanic-owned businesses that contribute over $90 billion annually to our state's economy, we understand the importance of responsible development that creates jobs, expands commerce, and improves quality of life.

The proposed Farmlands Shopping Center in Alachua represents exactly the kind of investment that can help communities thrive. The project is expected to create approximately 1,200 permanent jobs and more than 1,290 construction jobs, providing meaningful employment opportunities and generating economic activity that will benefit local families and businesses alike.

Beyond its economic impact, the development will provide residents with greater access to shopping, services, and everyday necessities closer to home. For working families, seniors, and residents who currently travel outside the community for many basic needs, the project offers increased convenience while keeping more consumer spending and business activity within Alachua.

The Farmlands Shopping Center will also deliver significant long-term benefits to the community through increased tax revenue. The project is projected to generate more than $1.4 million annually in property taxes, substantially increasing resources available for local schools, city services, libraries, and other community priorities, all without raising taxes on residents.

Projects like this help create stronger local economies, support entrepreneurs, attract investment, and provide communities with the resources they need to grow and prosper. For these reasons, the Florida State Hispanic Chamber of Commerce respectfully urges you to support the Farmlands Shopping Center.

Best,

Julio Fuentes
President
FSHCC

Subject:	The Farmlands commercial application
Date:	Tuesday, June 2, 2026 11:56:30 AM

I am writing to express my strong support for The Farmlands commercial application and to respectfully encourage a **YES vote.** This project represents a thoughtful, well-planned opportunity to expand shopping and dining options for residents throughout the Alachua area.

The proposed development will not diminish the vitality of downtown businesses. Gainesville provides a clear comparison: despite significant commercial growth along Archer Road, its downtown continues to thrive. The Farmlands project is also far less intensive than what current zoning would allow.

Additionally, the planned interior road network will help reduce traffic pressure on 441 by providing alternative routes within the development. This is a far better solution than multiple separate entrances and unrelated projects along the corridor. The entire stretch of 441 in this area is already zoned for commercial use, and no existing residences border the additional Farmlands commercial property.

For these reasons, I believe this project offers meaningful benefits to the community while aligning with responsible growth and existing land-use plans.

Thank you for your time and consideration.

City Commissioners,

I respectfully urge you to vote in favor of the Farmland project and support responsible growth in our community. This development will create new jobs, generate additional tax revenue, and strengthen our local economy.

Currently, many residents travel outside the city to shop and spend money elsewhere. By expanding local retail and commercial opportunities, we can keep more of those dollars within our community while providing greater convenience for residents. Supporting projects like Farmland helps ensure continued economic growth and enhances the quality of life for those who live and work here.

Thank you for your consideration, and I encourage you to vote yes on the Farmland project.

Best regards,

Paul Norris

Subject: URGENT—Affected Party Registration for July 27 Farmlands Hearing.
Date: Sunday, July 26, 2026 12:14:16 PM

Good morning,
I would like to apply for affected party status for this Monday July 27th hearing at noon. My name is Celine A. Benedict. My address and tax parcel numbers are provided below. I own and reside on 15 acres on NW 188th Street near the proposed development, including 10 acres purchased for agricultural use.

I request Affected Party status because this application may directly and adversely affect my property interests, including my access, groundwater, agricultural use, expenses, health and safety.

NW 188th Street provides my regular access to U.S. 441. I use this route to travel to and from my home, agricultural property, work, my child's school and other daily destinations. The additional traffic and the proposed traffic signals and project access points described in the application would directly affect my ingress and egress. Because of my property's location and reliance on this particular access route, these impacts are more direct and particularized than traffic impacts experienced by the public generally.

In addition, the contaminated-groundwater plume map attached shows that part of my property lies within the documented plume area. I rely on groundwater and use the property for agricultural purposes. Any development-related effects on groundwater movement or contamination could therefore directly affect my water supply, agricultural work and income, and my expenses—including the potential cost of obtaining City water for agricultural use.

I am therefore not affected merely as a member of the general public. I possess specific property interests that may suffer particularized traffic, environmental, agricultural, financial, health and safety impacts from this application. I respectfully request Affected Party status so that I may present evidence and testimony, cross-examine the applicant and City staff, and offer rebuttal as permitted by the City's quasi-judicial procedures.

Please confirm receipt of this registration and its supporting materials and advise me immediately if anything further is required.

Legal name: Celine S. Assouline Benedict
Address: 14828 nw 188th st, we also own the 10 acres next to us.
Tax parcel numbers: 03883-010-003, 03883-004-000, and 03883-001-000
Contact: Realtorbenedict@gmail.com, 305-394-4772

Applying for: Affected party status for the Farmlands Commercial/Rise rezoning application.

Thank you so much,
Mrs Benedict

Subject: Vote No to Farmlands on 06/08/26
Date: Friday, June 5, 2026 5:40:47 PM

Dear Honorable Mayor and Respected Commissioners,

Regarding the June 8 agenda item known as “Farmlands” and the request for a Future Land Use Map change. I respectfully ask that you “vote NO” on this request as proposed.

If developed with a large national anchor tenant, such as Walmart, this location will draw regional traffic - well beyond what the surrounding roads are designed to reasonably handle.

This is a legislative decision, which means the Commission is not required to approve.

US 441 already experiences heavy daily congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

More concerning is that large commercial centers could pull activity away from downtown Main Street and affect the local charm that defines our community.

Key considerations:

* Traffic: Increased regional traffic on an already congested US 441
* Scale: A significant increase in commercial intensity
* Community impact: Potential impacts to downtown Main Street and community character

Thank you for your time and thoughtful consideration!

Respectfully,

John Havlik
13825 NW 147th Ave

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

Thank you for your time.

Dear Mr. Mayor and Commissioners,

I am writing to express my opposition to the May 4th agenda item regarding the "Farmlands" request for a Future Land Use Map change. I respectfully ask that you vote no on this proposal.

A large-scale commercial development at this location, potentially featuring a national anchor tenant, would generate regional traffic exceeding the capacity of our current infrastructure. US 441 already experiences significant congestion, and growth at this scale threatens the small-town character that defines Alachua. Furthermore, I am concerned that such a large commercial center would divert activity away from our downtown Main Street.

Please consider the following key points:

- Traffic: Increased regional pressure on the already congested US 441.
- Scale: An inappropriate increase in commercial intensity for this area.
- Community Impact: Potential negative effects on the vitality of Main Street and our rural character.

This land use change is a policy decision within your discretion. If this level of intensity is not right for this, I urge you to deny the request or ask the applicant to submit a less intensive proposal.

Thank you for your time and for your service to our community.

Sincerely,

Riley Hubbard

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

I am also concerned that a large commercial center will pull activity away from our downtown Main Street and affect the charm that defines our community.

You have the ability to decide if this level of intensity is right for this location. If it is not, you can vote no or ask the applicant to come back with a less intensive proposal.

Key considerations:
- Traffic: Increased regional traffic on an already congested US 441
- Scale: A significant increase in commercial intensity
- Community impact: Potential impacts to downtown Main Street and rural character

Thank you for your time.

Dear Mr. Mayor and Commissioners,

I am writing regarding the May 4th agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, like Walmart, this location will draw regional traffic well beyond what the roads can handle.

This type of land use change is a policy decision, not an automatic approval. You are not required to approve it.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel. Growth at this scale will change the small-town feel that has drawn people to Alachua.

Subject: Vote YES on Farmlands
Date: Thursday, June 4, 2026 7:07:05 PM

I am writing to express my support for The Farmlands commercial application and to respectfully encourage a YES vote. This project represents a well-planned opportunity to expand shopping and dining options for residents throughout the Alachua area. For someone who works in Alachua 5-6 days per week it really lacks shopping/restaurants.
The proposed development will not diminish the downtown businesses. Gainesville provides a clear comparison: despite significant commercial growth along Archer Road, its downtown continues to thrive. The Farmlands project is also far less intensive than what current zoning would allow.
That entire stretch of 441 in this area is already zoned for commercial use, and no existing residences border the Farmlands commercial property or the additional property.
For these reasons, I believe this project offers meaningful benefits to the community.
The only people that attend the meetings in person come to oppose everything. They opposed the Publix/Lowes yet all shop there now?
Please understand there are more people who wants this project they just don't attend the meetings!
Thank you for your time and consideration.

Subject: We don't need another parking lot and store we need clean air and water!!!
Date: Tuesday, June 2, 2026 6:39:18 PM

Dear Mr. Mayor and Commissioners,
We don't need another huge parking lot instead of green grass and trees. We don't need another store selling plastic stuff we mostly don't need - which will end up in land fills and be on this planet for up to a thousand years. We don"t need more semi trucks going from the warehouse to a big box store on 441 during morning traffic- as they also drive too fast as they pass Ala unlearning Academy during school morning drop off and pick up - This would also add even more traffic coming off of 75 onto 441 daily with all the added traffic and car pollution washing into our aquifer. We don't need more semi- trucks wrecking our roads that our tax dollars pay to repair.
What we need is clean air and clean water to drink for ourselves and our great-great grand children. The small businesses in High Springs and downtown Alachua would struggle with big store coming in. Please consider these owners - many of whom are residents here as well.

I am writing regarding the June 8 agenda item known as Farmlands and the request for a Future Land Use Map change. I respectfully ask that you vote NO on this request as proposed.

If developed with a large national anchor tenant, such as Walmart, this location could draw regional traffic well beyond what the surrounding roads can reasonably handle.

This is a legislative decision, which means the Commission is not required to approve it.

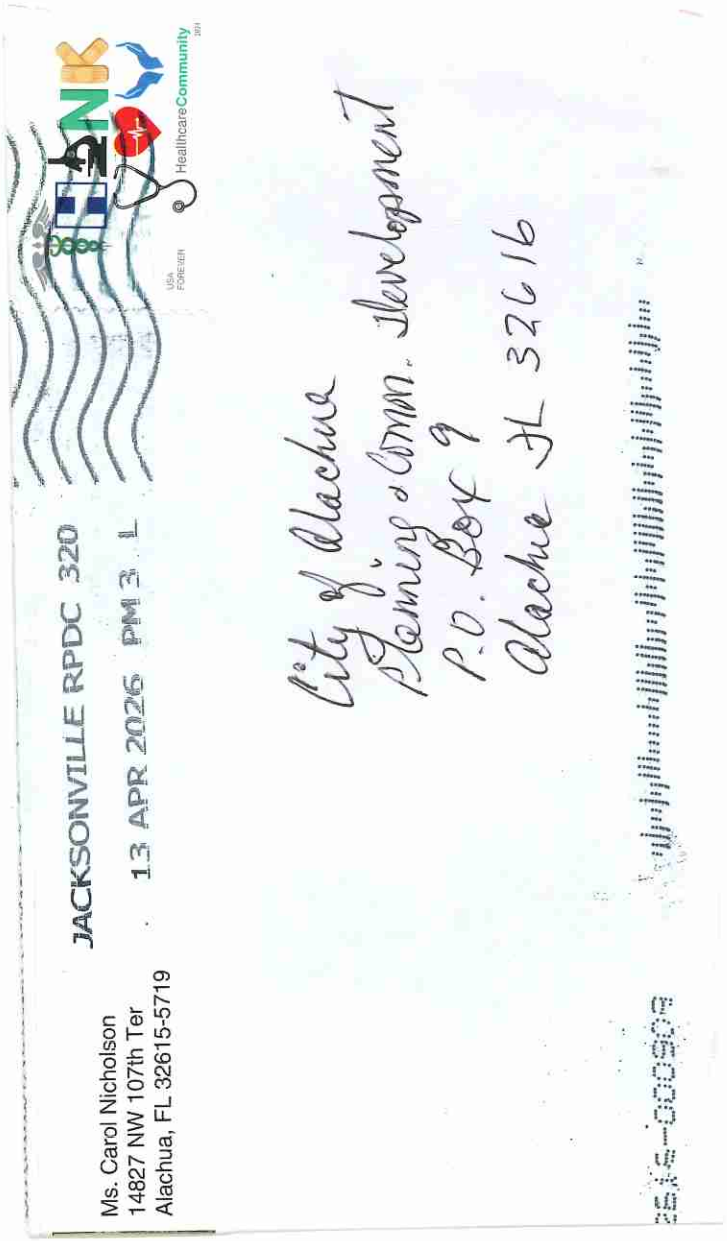
During the joint Planning & Zoning Board and Commission workshop for Our Alachua 2050, Planning Director Bryan Thomas explained this clearly in the recording that outside of quasi-judicial hearings: "...As the deciding body you can decide even though this is legal, do I still think it's good for my community? So, you have that choice to make." Please consider my voice in your decision.

US 441 already experiences heavy congestion, and additional regional traffic could further impact daily travel and quality of life. Growth at this scale would also change the small-town character that draws many people to Alachua.

I am also concerned that a large commercial center could pull activity away from downtown Main Street and High Springs, which can affect the local charm that defines our community.

If the Commission does not believe this proposal is the right fit for this location, you have the ability to vote no or ask the applicant to return with a less intensive proposal.

Key considerations:



* Traffic: Increased regional traffic on an already congested US 441
* Scale: A significant increase in commercial intensity
* Community impact: Potential impacts to downtown Main Street and community character

Thank you for your time and consideration.

Re: application #PSSE 26-0002

I cannot attend the April 21 public hearing but wish to express my opinion as a resident of 37 years.
Please stop approving multi family homes on low acreage such as this. The growth of such units is not supported by the infrastructure. But more importantly, the "Good Life" city of Alachua is becoming the not so Good Life town. People come for the rural environment not for unmanaged growth. Keep acreage at minimum of 1/2 acre per single family home please.

Commission Agenda Item

MEETING DATE: August 24, 2026

SUBJECT: Ordinance 26-11: AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE SMALL-SCALE AMENDMENT OF THE CITY OF ALACHUA COMPREHENSIVE PLAN FUTURE LAND USE MAP; AMENDING THE FUTURE LAND USE MAP CLASSIFICATION OF A ± 1.48-ACRE SUBJECT PROPERTY FROM MEDIUM DENSITY RESIDENTIAL AND RECREATION TO PUBLIC; GENERALLY LOCATED AT 15818 NW 140TH ST (TAX PARCEL 03120-000-000; 03113-000-000; 03114-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE (Legislative Hearing; Second Reading).

PREPARED BY: Parker Stevens

RECOMMENDED ACTION:

Staff recommends that the City Commission find the small-scale Comprehensive Plan amendment for the City of Alachua to be consistent with the City of Alachua Comprehensive Plan and approved Ordinance 26-11 upon second reading and final reading for August 24, 2026.

Recommended Motion: I move that, based upon the presentation before this Commission and Staff's recommendation, this Commission finds the application for a small-scale Comprehensive Plan amendment for the City of Alachua to be consistent with the City of Alachua Comprehensive Plan and approved Ordinance 26-11 upon second and final reading for August 24, 2026.

Summary

This application is a request by the City of Alachua (applicant/property owner) for consideration of an amendment to the City of Alachua Future Land Use Map (FLUM). The proposed amendment would change the future land use designation from Medium Density Residential and Recreation to Public.

The subject properties are generally located at 15818 NW 140th Street on a ± 1.48-acre subject property (tax parcel numbers 03113-000-000; 03114-000-000; and 03120-000-000). The applicant has submitted a companion application for a site-specific amendment to the Official Zoning Atlas (rezoning), which proposes to amend the zoning of one parcel of the subject property from Residential Single Family - 3 (RSF-3) to Government Facility (GF).

Ordinance 26-11 was approved by the City Commission upon first reading on July 27, 2026.

Existing Future Land Use Designation

Objective 1.2 and Policy 1.2.a-e of the Future Land Use Element (FLUE) establish the Residential land use category. Objective 1.2. states that the Residential land use category is established in order to ensure an orderly urban growth pattern that will provide a variety of housing to its residents and provides for the best use of available lands for residential development. Permitted uses within the Residential land use category are established in Policies 1.2.a – 1.2.e of the FLUE, and include: single family detached dwelling units, accessory dwelling units, manufactured or modular homes meeting certain design criteria, supporting community services such as schools, houses of worship, parks, community centers, mobile homes (within mobile home parks only), duplexes, quadplexes, townhomes, Residential Planned Developments, apartments, live/work units, traditional mixed-use Neighborhood Planned Developments, group living, neighborhood-scale retail and services (where the area dedicated to such uses is less than or equal to 30,000 square feet of floor area and is designed specifically to serve the surrounding neighborhood, including, but not limited to, a convenience stores without gas pumps, dry cleaners, pharmacies, local markets, restaurants, personal services, and professional offices.)

Proposed Future Land Use Designation

Objective 1.6 and Policies 1.6.a-c of the Future Land Use Element establishes the Public land use category, stating that appropriate locations for public facility land uses, to include all lands owned and managed by a governmental entity, should be based upon the following minimum criteria: public facilities are those uses which, at a minimum, relate to government owned and managed transportation, sanitary sewer, potable water, solid waste, drainage, conservation, education, government service systems, and other utilities such as gas, electric, telephone and cable. Exceptions may be made for transmission or collection facilities, rights-of-ways, and easements, which may be made for transmission or collection facilities, rights-of-ways, and easements, which may be located in any land use category; public facility land uses may be located within all land use categories on the Future Land Use Map provided such uses are compatible with adjacent land uses consistent with this Comprehensive Plan; and the City shall encourage the use of common corridors for utility systems, including sanitary sewer, potable water, re-use, electricity, gas and other utilities.

ORDINANCE 26-11

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE SMALL-SCALE AMENDMENT OF THE CITY OF ALACHUA COMPREHENSIVE PLAN FUTURE LAND USE MAP; AMENDING THE FUTURE LAND USE MAP CLASSIFICATION OF A ± 1.48-ACRE SUBJECT PROPERTY FROM MEDIUM DENSITY RESIDENTIAL, RECREATION TO PUBLIC; GENERALLY LOCATED AT 15818 NW 140TH ST (TAX PARCEL 03120-000-000; 03113-000-000; 03114-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, an application for a small-scale Comprehensive Plan amendment to the City of Alachua Comprehensive Plan Future Land Use Map as further described herein has been filed with the City (the "Amendment") by the City of Alachua. ("Agent" and "Property Owner"); and,

WHEREAS, a duly advertised public hearing was conducted on the proposed Amendment on June 9, 2026, by the Planning and Zoning Board, sitting as the Local Planning Agency ("LPA"), and the LPA reviewed and considered all comments received during the public hearing concerning the application and made its recommendation to the City Commission; and,

WHEREAS, Chapter 163.3187, Florida Statutes, establishes the process for adoption of small-scale comprehensive plan amendments, including that small-scale development amendments adopted pursuant to Chapter 163.3187, Florida Statutes, require only one public hearing before the governing board; and,

WHEREAS, pursuant to Chapter 163.3187(2), Florida Statutes, the City Commission held two duly advertised public hearing on July 27, 2026, and on _____, 2026, on the proposed Amendment (the "Adoption Hearing") and provided for and received public participation; and,

WHEREAS, the City Commission has determined and found said application for the Amendment to be consistent with the City of Alachua Comprehensive Plan; and,

WHEREAS, for reasons set forth in this ordinance that is hereby adopted and incorporated as findings of fact, that the City Commission finds and declares that the enactment of this Amendment is in the furtherance of the public health, safety, morals, order, comfort, convenience, appearance, prosperity, or general welfare;

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Findings of Fact and Conclusions of Law

1. The above recitals are true and correct and are incorporated herein by reference.
2. The Amendment is consistent with the City of Alachua Comprehensive Plan.
3. The Amendment will not cause a reduction in the adopted level of service standards for transportation, potable water, sanitary sewer, solid waste, stormwater, recreation, or public schools.

Section 2. Comprehensive Plan Future Land Use Map Amended

The City of Alachua Comprehensive Plan Future Land Use Map is hereby amended from Medium Density Residential (± 0.44-acres), Recreation (± 1.04-acres), to Public (± 1.48-acres), on a ± 1.48-acre subject property, consisting of Tax Parcel Numbers 03120-000-000, 03113-000-000, and 03114-000-000 in accordance with the legal descriptions found in Exhibit "A" and map found in Exhibit "B" attached hereto.

Section 3. Ordinance to be Construed Liberally

This ordinance shall be liberally construed in order to effectively carry out the purposes hereof which are deemed to be in the best interest of the public health, safety, and welfare of the citizens and residents of the City of Alachua, Florida.

Section 4. Repealing Clause

All ordinances or parts of ordinances in conflict with this ordinance are, to the extent they conflict with this ordinance, repealed.

Section 5. Providing for Severability

It is the declared intent of the Alachua City Commission that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by a court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 6. Effective Date

This Ordinance shall be effective upon its passage and adoption on the second and final reading. The effective date of this Amendment, unless timely challenged, shall be 31 days after adoption in accordance with Chapter 163.3187, Florida Statutes. If timely challenged, this Amendment shall become effective on the date the state land planning agency or Administrative Commission enters a final order determining this adopted Amendment to be in compliance with Chapter 163.3187, Florida Statutes. No development orders, development permit, or land uses dependent on this Amendment may be issued or commenced before this Amendment has become effective.

PASSED on first reading on the 27th day of July, 2026.

PASSED and **DULY ADOPTED**, in regular session, with a quorum present and voting, by the City Commission, upon first and final reading this _____, day of _____ , 2026.

Staff Report

Planning & Zoning Board Hearing Date: June 9, 2026
Legislative Hearing **Application #: PSCC26-0001**

SUBJECT:	A request to amend the Future Land Use Map (FLUM) from Medium Density Residential and Recreation to Public on a ± 1.48-acre subject property.
APPLICANT/AGENT:	City of Alachua
PROPERTY OWNER:	City of Alachua
LOCATION:	15818 NW 140th Street
PARCEL ID NUMBERS:	03113-000-000; 03114-000-000; 03120-000-000
FLUM DESIGNATION:	Medium Density Residential; Recreation
ZONING:	Residential Single Family – 3 (RSF-3); Government Facility
OVERLAY:	N/A
ACREAGE:	± 1.48
PROJECT PLANNER:	Parker A.H. Stevens
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board transmit the proposed Small-Scale Comprehensive Plan Amendment submitted by the City of Alachua to the City Commission with a recommendation to approve.
RECOMMENDED MOTION:	*I move that, based upon the competent substantial evidence, the presentation before this Board, and Staff's recommendation, this Board finds the application for a Small-Scale Comprehensive Plan Amendment for the City of Alachua, to be consistent with the City of Alachua Comprehensive Plan and transmits the application to the City Commission with a recommendation to approve.*

SUMMARY

This application is a request by the City of Alachua (applicant/property owner) for consideration of an amendment to the City of Alachua Future Land Use Map (FLUM). The proposed amendment would change the future land use designation from Medium Density Residential and Recreation to Public on a ± 1.48-acre subject property with tax parcel number 03113-000-000; 03114-000-000; and 03120-000-000.

The applicant has submitted a companion application for a site-specific amendment to the Official Zoning Atlas (rezoning), which proposes to amend the zoning of one parcel of the subject property from Residential Single Family - 3 (RSF-3) to Government Facility (GF).

Existing Future Land Use Designation

Objective 1.2 and Policy 1.2.a-e of the Future Land Use Element (FLUE) establish the Residential land use category. Objective 1.2. states that the Residential land use category is established in order to ensure an orderly urban growth pattern that will provide a variety of housing to its residents and provides for the best use of available lands for residential development. Permitted uses within the Residential land use category are established in Policies 1.2.a – 1.2.e of the FLUE, and include: single family detached dwelling units, accessory dwelling units, manufactured or modular homes meeting certain design criteria, supporting community services such as schools, houses of worship, parks, community centers, mobile homes (within mobile home parks only), duplexes, quadplexes, townhomes, Residential Planned Developments, apartments, live/work units, traditional mixed-use Neighborhood Planned Developments, group living, neighborhood-scale retail and services (where the area dedicated to such uses is less than or equal to 30,000 square feet of floor area and is designed specifically to serve the surrounding neighborhood, including, but not limited to, a convenience stores without gas pumps, dry cleaners, pharmacies, local markets, restaurants, personal services, and professional offices.

Proposed Future Land Use Designation

Objective 1.6 and Policies 1.6.a-c of the Future Land Use Element establishes the Public land use category, stating that appropriate locations for public facility land uses, to include all lands owned and managed by a governmental entity, should be based upon the following minimum criteria: public facilities are those uses which, at a minimum, relate to government owned and managed transportation, sanitary sewer, potable water, solid waste, drainage, conservation, education, government service systems, and other utilities such as gas, electric, telephone and cable. Exceptions may be made for transmission or collection facilities, rights-of-ways, and easements, which may be made for transmission or collection facilities, rights-of-ways, and easements, which may be located in any land use category; public facility land uses may be located within all land use categories on the Future Land Use Map provided such uses are compatible with adjacent land uses consistent with this Comprehensive Plan; and the City shall encourage the use of common corridors for utility systems, including sanitary sewer, potable water, re-use, electricity, gas and other utilities.

Table 1. Comparison of Existing/Proposed FLUM Designations

	Existing FLUM Designation	Existing FLUM Designation	Proposed FLUM Designation
FLUM Designation:	Medium Density Residential	Recreation	Public
Max. Gross Density:	N/A	1 unit / 4 acres 1 Unit	1 unit / 1 acre 1 unit
Max. Floor Area:	0.5 Floor Area Ratio (FAR) 32,234.4 square feet	N/A	N/A
Typical Uses:	1. single family detached dwelling units, 2. accessory dwelling units, 3. manufactured or modular homes meeting certain design criteria, 4. residential planned developments, 5. supporting community services such as schools, houses of worship, parks, and community centers, 6. mobile homes (within mobile home parks only), 7. duplexes/quadplexes, townhomes,	1. City-owned recreation facilities; 2. Community gardens 3. Neighborhood parks, 4. Commercial recreation	1. public facilities are those uses which, at a minimum, relate to government owned and managed transportation, sanitary sewer, potable water, solid waste, drainage, conservation, education, government service systems, and other utilities such as gas, electric, telephone and cable; 2. public, private, and charter school
Net Increase/ Decrease:	N/A		

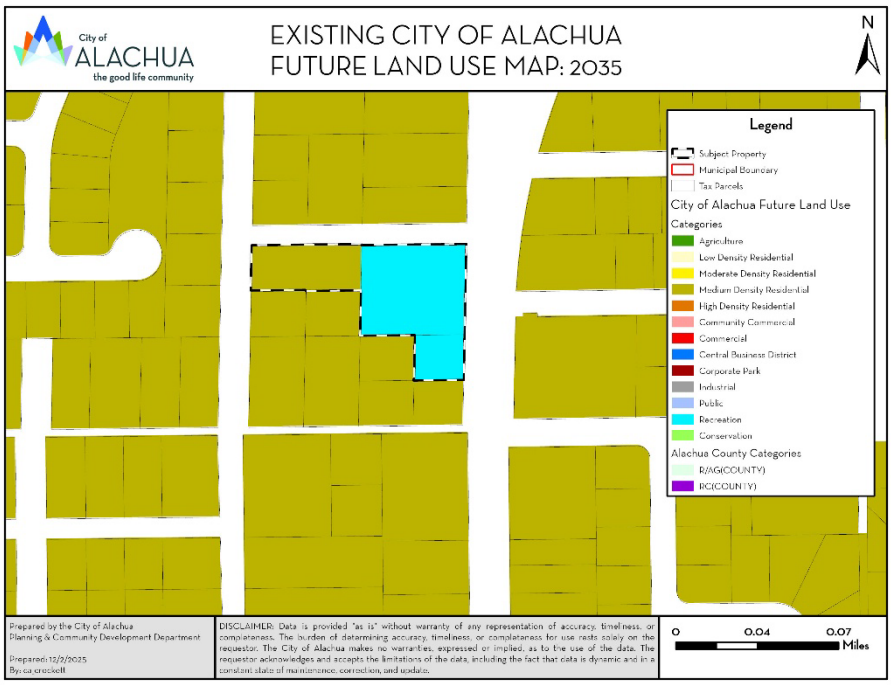

Figure 1. Existing Future Land Use Map with Subject Property

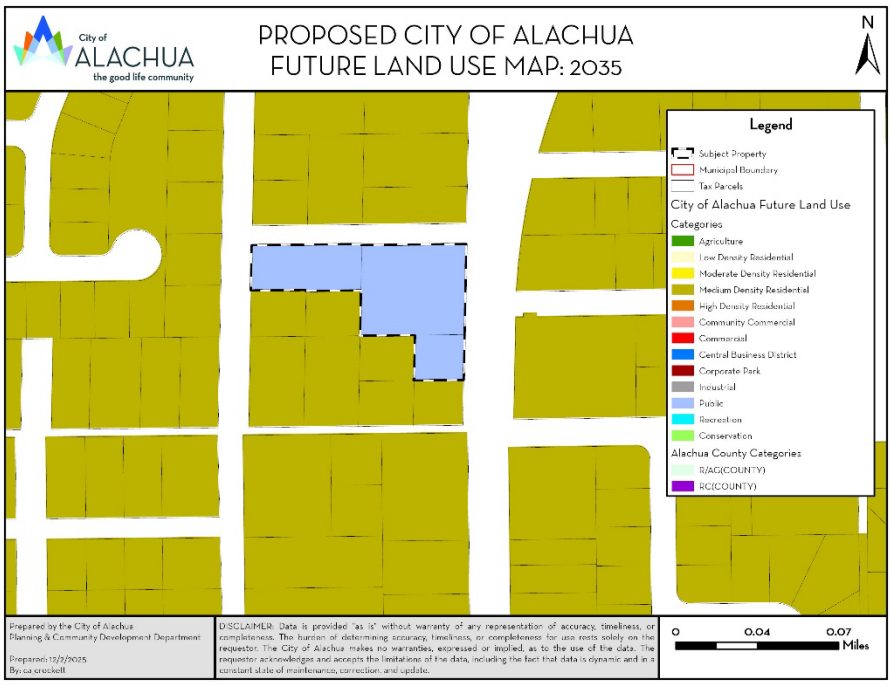

Figure 2. Proposed Future Land Use Map with Subject Property

EXISTING USES

The subject property is mostly undeveloped and is comprised of a mixture of cleared lands and naturally wooded areas. A community center building is located on tax parcel 03113-000-000, which is a conforming land use.

SURROUNDING USES

The existing uses, Future Land Use Map (FLUM) designations, and zoning districts of the surrounding area are identified in Table 2. Figure 3 provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. The information below is not intended to be all-inclusive, and may not identify all existing uses, FLUM designations, and/or zoning districts surrounding the subject property.)

Table 2. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Single Family and Vacant Residential	Medium Density Residential	Residential Single Family -3 (RSF-3)
South	Single Family and Vacant Residential	Medium Density Residential	Residential Single Family -3 (RSF-3)
East	Single Family and Vacant Residential	Medium Density Residential	Residential Single Family -3 (RSF-3); Residential Multi Family – 8 (RMF-8)
West	Single Family and Vacant Residential	Medium Density Residential	Residential Single Family -3 (RSF-3); Residential Single Family – 6 (RSF-6)

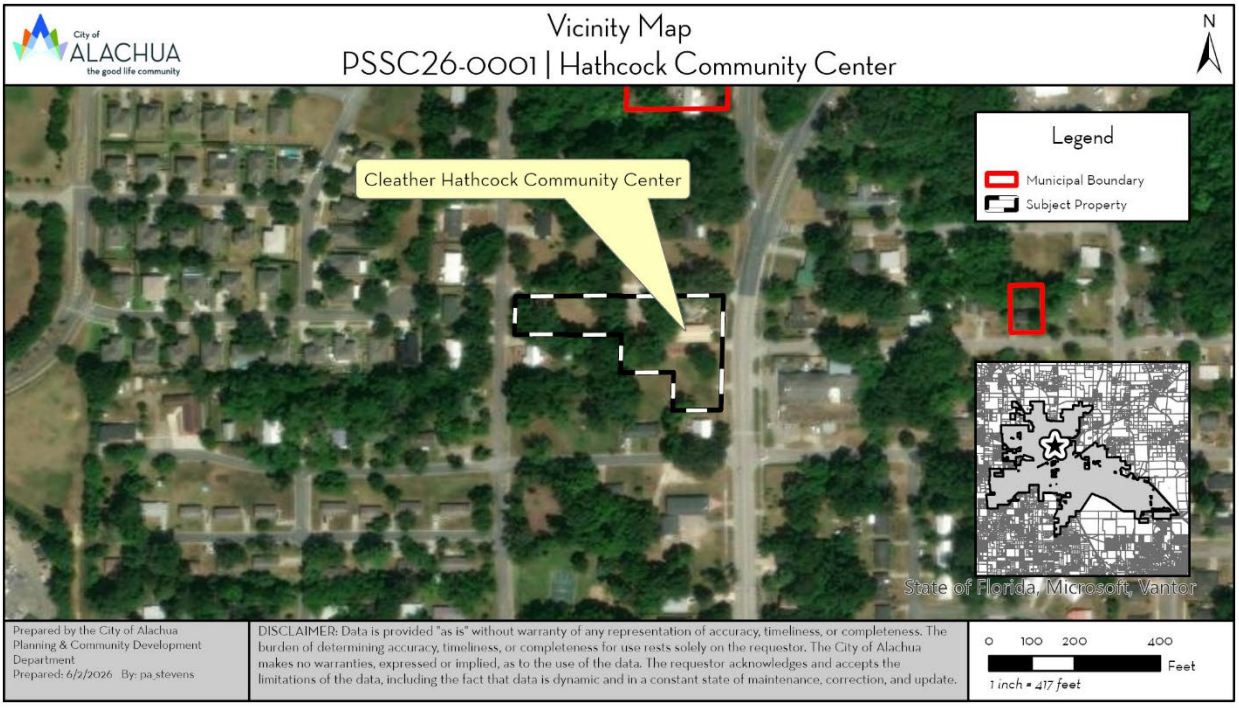

Figure 3. Vicinity Map

NEIGHBORHOOD MEETING

The purpose of a neighborhood meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. As required by Section 2.2.4 of the LDRs, all property owners within 400 feet of the subject property were notified of the meeting and notice of the meeting was published in a newspaper of general circulation.

While not required for a small-scale Comprehensive Plan amendment, a neighborhood meeting was held on January 1, 2026 at 15818 NW 140th Street (Cleather Hathcock Community Center), to discuss the accompanying rezoning application. The applicant was available to answer questions. Materials submitted by the applicant indicated the meeting was attended by five members of the community.

NEEDS ANALYSIS

Chapter 163.3177(6)(a)4., Florida Statues, requires the future land use element of a comprehensive plan to provide a balance of uses that foster vibrant, viable communities and economic development opportunities and address outdated development patterns, such as antiquated subdivisions. The amount of land designated for future land uses should allow the operation of real estate markets to provide adequate choices for permanent and seasonal residents and business and may not be limited solely by the projected population. The element shall accommodate at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a

10-year planning period unless otherwise limited under s. 380.05, including related rules of the Administration Commission.

The proposed amendment reduces the potential for residential development by one dwelling unit and does not alter the potential for commercial development. A need has been exhibited in this area for additional community services through the City's FY26 Strategic Plan and community workshops. The proposed amendment will not hinder the ability for markets to provide adequate choice and will not impact the 10-year planning period.

URBAN SPRAWL ANALYSIS

Chapter 163.3177, Florida Statutes, establishes eight "Urban Form" criteria. An amendment to the Future Land Use Map is presumed to not be considered urban sprawl if it meets four of the eight urban form criteria. These urban form criteria, and an evaluation of each as each may relate to this application, are provided below.

(I) Directs or locates economic growth and associated land development to geographic areas of the community in a manner that does not have an adverse impact on and protects natural resources and ecosystems.

Evaluation & Findings: The proposed amendment is small-scale and the subject property is located in an already developed area of the City. The subject property has existing development and the proposed future land use categories would not meaningfully increase the intensity of development or alter the allowed uses in a way that would result in adverse environmental impacts.

(II) Promotes the efficient and cost-effective provision or extension of public infrastructure and services.

Evaluation & Findings: The proposed amendment is small-scale and the subject property is already served by public infrastructure and services; therefore, the amendment would promote the efficient and cost-effective provision of public infrastructure.

(III) Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that will support a range of housing choices and a multimodal transportation system, including pedestrian, bicycle, and transit, if available.

Evaluation & Findings: The proposed amendment would permit additional community service space in a predominately single-family residential area, encouraging a mix of uses and supporting a multimodal transportation system by placing functional uses near residences who would otherwise have to drive to these uses.

(IV) Promotes conservation of water and energy.

Evaluation & Findings: N/A

(V) Preserves agricultural areas and activities, including silviculture, and dormant, unique, and prime farmlands and soils.

Evaluation & Findings: The proposed amendment does not directly preserve nor directly replace or encroach upon agricultural areas.

(VI) Preserves open space and natural lands and provides for public open space and recreation needs.

Evaluation & Findings: The proposed amendment would provide for additional public open space and recreation needs. Although the amendment proposes amending the Recreation land use to Public, the Public land use will be larger than the existing Recreation land use and will allow for a greater array of uses, including public open space.

(VII) Creates a balance of land uses based upon the demand of the residential population for the nonresidential needs of an area.

Evaluation & Findings: The proposed amendment would permit additional community service space in a predominately single-family residential area, encouraging a better balance between the demand for residential and the nonresidential needs of that residential population.

(VIII) Provides uses, densities, and intensities of use and urban form that would remediate an existing or planned development pattern in the vicinity that constitutes sprawl or if it provides for an innovative development pattern such as transit-oriented developments or new towns as defined in s. 163.3164.

Evaluation & Findings: N/A

COMPREHENSIVE PLAN CONSISTENCY ANALYSIS

The goals, objectives, and policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. An evaluation and findings of consistency with the identified GOPs is also provided below.

Future Land Use Element

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.6: *Public*

The City shall designate a Public land use category. Appropriate locations for public facility land uses, to include all lands owned and managed by a governmental entity, should be based upon the following minimum criteria:

1. Public facilities are those uses which, at a minimum, relate to government owned and managed transportation, sanitary sewer, potable water, solid waste, drainage, conservation, education, government service systems, and other utilities such as gas, electric, telephone and cable.
2. Public facility land uses may be located within all land use categories on the Future Land Use Map provided such uses are compatible with adjacent land uses consistent with this Comprehensive Plan.
3. The City shall encourage the use of common corridors for utility systems, including sanitary sewer, potable water, re-use, electricity, gas and other utilities.

Evaluation & Findings: The Comprehensive Plan includes "parks and recreation systems" in the definition of public facilities. The Public land use category refers to a broad set of government service systems, which includes parks and recreation systems. The current use of the property is a community center which is permitted in the Public land use category.

Objective 3.5: *Protection of Historic Districts and Historic Resources*

The City shall ensure that its land use, transportation, housing, and economic development policies and regulations are consistent with and adequately facilitate historic preservation.

Evaluation & Findings: The subject property, although located in an already developed portion of the City, is not known to have any listed historic resources on it and the subject property is not located within a historic district.

Policy 4.1.c: Compatible infill development shall be encouraged within the Central City Area.

Objective 4.3: *Redevelopment*

The City shall encourage the redevelopment of existing developed properties, vacant properties or buildings, or abandoned properties and buildings, particularly within the Community Redevelopment Area and the Central City Area.

Evaluation & Findings: The subject property is located within the Central City Area. The proposed amendment would enable future redevelopment of the existing Hathcock Community Center, retaining a public use but expanding the service options outside of solely the Recreation land use. This will provide greater flexibility and expand the public use into the existing Medium Density Residential portion of the subject property.

Recreation Element

Policy 1.2.b: The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

Evaluation & Findings: The proposed amendment would add additional functional park space to the City's level of service capacity by including the existing Medium Density Residential portion of the subject property.

ENVIRONMENTAL CONDITIONS ANALYSIS

Wetlands

Wetlands are areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal conditions do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

Evaluation & Findings: There are no delineated wetlands on the subject property. Should wetlands be discovered, the development will be required to conform with the applicable policies and regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Strategic Ecosystems

Strategic Ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1987 and updated in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation & Findings: The subject property is not located within or adjacent to a strategic ecosystem; therefore, the development will have no impact upon any strategic ecosystems identified within the ecological inventory report.

Regulated Plant & Animal Species

The Florida Natural Areas Inventory (FNAI) has identified areas throughout the State of Florida which may contain good quality natural communities. This data layer is known as the Potential Natural Areas (PNA) data layer, and identifies privately owned lands that are not managed or listed for conservation purposes. These areas were delineated by FNAI scientific staff through interpretation of natural vegetation from 1988-1993 FDOT aerial photographs and from input received during Regional Ecological Workshops held for each regional planning council. These workshops were attended by experts familiar with natural areas in the region.

Potential Natural Areas were assigned ranks of Priority 1 through Priority 5 based on size, perceived quality, and type of natural community present. The areas included in Priority 5 are exceptions to the above criteria. These areas were identified through the same process of aerial photographic interpretation and regional workshops as the PNA 1 through 4 ranked sites, but do not meet the standard criteria.

Evaluation & Findings: No species identified as endangered, threatened, or of special concern are known to exist on the subject property. No areas of the subject property have been prioritized as part of the Florida Natural Areas Inventory. If a regulated plant or animal species is discovered, the development will be required to conform with the applicable policies and

regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Soil Survey

The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff.) There are four hydrologic groups: A, B, C, and D. "Group A" soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. "Group D" soils have a lower infiltration rate and therefore a higher runoff potential.

There is 1 soil type found within the subject property, shown in Table 3.

Table 3. Soil Types

Soil Type	Hydrologic Group	Drainage Class	Limitations		% of Subject Property (may not total to 100% due to rounding)
			Dwellings Without Basements	Small Commercial Buildings	
Arredondo-Urban Land Complex; 5% Slopes	A	Well Drained	N/A	N/A	± 100%

Evaluation & Findings: The soil present on the subject property is well-drained, and is generally conducive to residential and commercial development. No limitations for commercial developments are noted to exist. The proposed land use categories are generally suitable for the subject property in relation to soils.

Flood Potential

Panel 12001C0140D of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated June 16, 2006 indicates that the development area is in Flood Zone X (areas determined to be outside of the 500-year floodplain).

Evaluation & Findings: Since the subject property is located in Flood Zone X, there are no issues related to flood potential.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations.

Evaluation & Findings: The subject property is not located within an area of high aquifer recharge as identified on the Suwannee River Water Management District's high aquifer recharge potential (HARP) map. No potential sink holes are known to exist on the site. No new stormwater management facilities are proposed.

Wellfield Protection Zones

Policy 7.2.1 of the Future Land Use Element of the City's Comprehensive Plan establishes a 500-foot radius area around each city-owned potable water well.

Evaluation & Findings: The subject property is not located within a City of Alachua wellfield protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the City's Comprehensive Plan; therefore, there are no issues related to wellfield protection.

Historic Structures/Markers and Historic Features

The State of Florida and the Alachua County Historic Resources Inventory identify historic structures in addition to the City's Historic Overlay District, as established by Section 3.7 of the City's Land Development Regulations.

Evaluation & Findings: The subject property is not within the City's Historic Overlay District and the State of Florida and Alachua County Historic Resources Inventory note no historic structures or markers on the subject property.

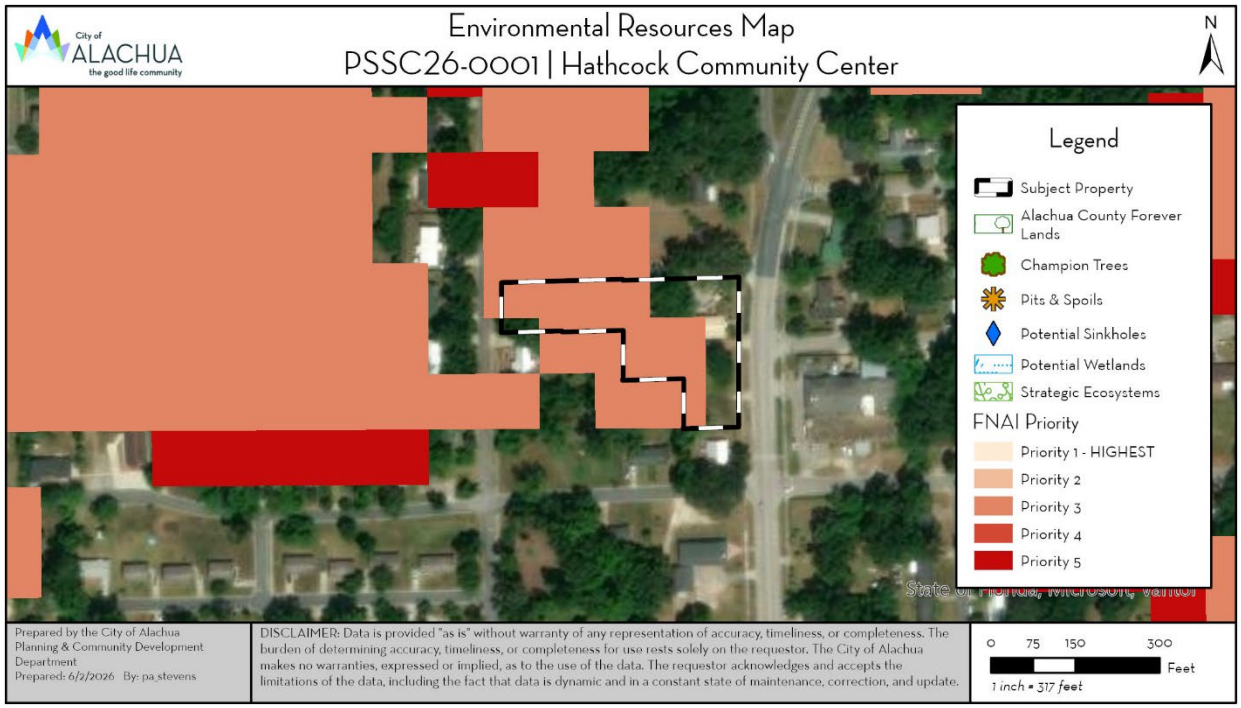

Figure 4. Environmental Resources Map

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

Section 2.4.2(E)(1) of the City's Land Development Regulations (LDRs) establishes the standards with which all amendments to the Official Zoning Atlas must be found compliant. An evaluation of the application against the standards of Section 2.4.2(E)(1) is provided below.

(1) **Competent substantial evidence provided**. The applicant has provided competent substantial evidence that is made part of the record of the hearing that:

(a) ***Consistent with the Comprehensive Plan***. The proposed amendment is consistent with and furthers the goals, objectives and policies of the Comprehensive Plan.

Evaluation: An evaluation of consistency with the City of Alachua Comprehensive Plan has been submitted as part of this application.

(b) ***Consistent with ordinances***. The proposed amendment is not in conflict with any portion of these LDRs or any of the City Code of Ordinances.

Evaluation: This analysis demonstrates consistency with the Land Development Regulations and the proposed zone district of GF would not conflict with any ordinances.

(c) ***Logical development pattern***. The proposed amendment would result in a logical and orderly development pattern

Evaluation: The proposed zone district of GF would extend an existing GF zone district and expand the existing community center located central to a residential area which it primarily serves, resulting in a logical development pattern.

(d) ***Premature development***. The proposed amendment will not create premature development in undeveloped or rural areas.

Evaluation: The surrounding area is urban in context and is mostly developed. The amendment would not result in premature development in an undeveloped area.

(e) ***Incompatible with adjacent lands***. The uses permitted by the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands.

Evaluation: The subject property is adjacent to GF and the existing community center to the east, RSF-3 and single-family residential to the north and south, and RSF-6 and single-family residential to the west. The GF zone district permits a wide range of community service uses, all of which are generally compatible with residential uses as the GF district is "intended to include public lands for the purpose of accommodating governmental facilities." Any uses which are less compatible will be required to be properly buffered as required by the Comprehensive Plan and Land Development Regulations.

(f) *Adverse effect on local character* The proposed amendment will not adversely effect the character of the general area where it is proposed to be located by creating excessive traffic, density and/or intensities of use, building height and bulk, noise, lights or other physical effects or nuisances.

Evaluation: The GF zone district permits a wide range of community service uses, all of which are generally compatible with residential uses as the GF district is "intended to include public lands for the purpose of accommodating governmental facilities." Any uses which are less compatible will be required to be properly buffered as required by the Comprehensive Plan and Land Development Regulations. No adverse effects on local character are anticipated as a result of the proposed amendment.

(g) *Not deviate from pattern of development*. The uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located.

Evaluation: The proposed zone district of GF would extend an existing GF zone district and expand the existing community center located central to a residential area which it primarily serves, maintaining the existing development pattern of the surrounding area.

(h) *Encourage sprawl*. The proposed amendment will not encourage urban sprawl, either by resulting in strip or ribbon commercial development, leap-frog development or low-density single dimensional development.

Evaluation: The surrounding area is urban in context and is mostly developed. The subject property is also located in the Central City Area. The proposed zone district of GF does not permit residential uses of any density nor is it intended for highway-oriented uses. The companion small-scale Comprehensive Plan amendment application has been evaluated for urban sprawl against the 13 primary indicators and eight urban form criteria established in Florida Statutes. The proposed amendment would not encourage urban sprawl.

(i) *Spot zoning*. The proposed amendment will not result in the creation of an isolated zone district unrelated to adjacent and surrounding zone districts (spot zoning).

Evaluation: The proposed amendment would extend an existing GF zone district adjacent to residential zone districts (primarily RSF-3) which the GF zone district primarily serves. The zone districts are related and not isolated and would not result in spot zoning.

(j) *Public facilities*. The proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, stormwater management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development.

Evaluation: The subject property is within the City's service areas for both potable water and sanitary sewer and utilities are available at the subject property. No major extensions of utilities would be required.

(k) ***No adverse effect on the environment***. The proposed amendment would not result in significantly adverse impacts on the natural environment, including, but not limited to, water, air, noise, stormwater management, wildlife, vegetation, wetlands, and the natural functioning of the environment.

Evaluation: The subject property is not known to have any significant environmental features or wildlife habitat on the site and is already within in urban area. There are regulated tree species on the site and all requirements in Section 6.2 of the City's Land Development Regulations will apply at time of development.

PUBLIC FACILITIES IMPACT ANALYSIS

Section 2.4.14 of the City's Land Development Regulations (LDRs) establishes the standards for a Certificate of Concurrency Compliance which applies to all development orders unless exempted by Section 2.4.14(C). The application has been reviewed for impacts to roads, sanitary sewer, solid waste, stormwater management, potable water, and recreation facilities to ensure the application's potential impacts do not negatively impact the level of service (LOS) for those public facilities.

As the subject property has existing development compatible with the Public land use, and the proposed amendment does not alter to seek the current service or demand volumes of the subject property, this application is considered to have de minimis, or no impacts on public facility levels of service. Concurrency will be reevaluated as part of respective applications should redevelopment be proposed.

SMALL SCALE COMPREHENSIVE PLAN AMENDMENT
STAFF REPORT

SUPPORTING MATERIALS
SUBMITTED BY CITY STAFF TO THE
PLANNING AND ZONING BOARD

ORDINANCE 26-XX

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE SMALL-SCALE AMENDMENT OF THE CITY OF ALACHUA COMPREHENSIVE PLAN FUTURE LAND USE MAP; AMENDING THE FUTURE LAND USE MAP CLASSIFICATION OF A ± 1.48-ACRE SUBJECT PROPERTY FROM MEDIUM DENSITY RESIDENTIAL, RECREATION TO PUBLIC; GENERALLY LOCATED AT 15818 NW 140TH ST (TAX PARCEL 03120-000-000; 03113-000-000; 03114-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, an application for a small-scale Comprehensive Plan amendment to the City of Alachua Comprehensive Plan Future Land Use Map as further described herein has been filed with the City (the "Amendment") by the City of Alachua. ("Agent" and "Property Owner"); and,

WHEREAS, a duly advertised public hearing was conducted on the proposed Amendment on _____, 2026, by the Planning and Zoning Board, sitting as the Local Planning Agency ("LPA"), and the LPA reviewed and considered all comments received during the public hearing concerning the application and made its recommendation to the City Commission; and,

WHEREAS, Chapter 163.3187, Florida Statutes, establishes the process for adoption of small-scale comprehensive plan amendments, including that small-scale development amendments adopted pursuant to Chapter 163.3187, Florida Statutes, require only one public hearing before the governing board; and,

WHEREAS, pursuant to Chapter 163.3187(2), Florida Statutes, the City Commission held a duly advertised public hearing on _____, 2026, on the proposed Amendment (the "Adoption Hearing") and provided for and received public participation; and,

WHEREAS, the City Commission has determined and found said application for the Amendment to be consistent with the City of Alachua Comprehensive Plan; and,

WHEREAS, for reasons set forth in this ordinance that is hereby adopted and incorporated as findings of fact, that the City Commission finds and declares that the enactment of this Amendment is in the furtherance of the public health, safety, morals, order, comfort, convenience, appearance, prosperity, or general welfare;

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Findings of Fact and Conclusions of Law

1. The above recitals are true and correct and are incorporated herein by reference.
2. The Amendment is consistent with the City of Alachua Comprehensive Plan.
3. The Amendment will not cause a reduction in the adopted level of service standards for transportation, potable water, sanitary sewer, solid waste, stormwater, recreation, or public schools.

Section 2. Comprehensive Plan Future Land Use Map Amended

The City of Alachua Comprehensive Plan Future Land Use Map is hereby amended from Medium Density Residential (± 0.44-acres), Recreation (± 1.04-acres), to Public (± 1.48-acres), on a ± 1.48-acre subject property, consisting of Tax Parcel Numbers 03120-000-000, 03113-000-000, and 03114-000-000 in accordance with the legal descriptions found in Exhibit "A" and map found in Exhibit "B" attached hereto.

Section 3. Ordinance to be Construed Liberally

This ordinance shall be liberally construed in order to effectively carry out the purposes hereof which are deemed to be in the best interest of the public health, safety, and welfare of the citizens and residents of the City of Alachua, Florida.

Section 4. Repealing Clause

All ordinances or parts of ordinances in conflict with this ordinance are, to the extent they conflict with this ordinance, repealed.

Section 5. Providing for Severability

It is the declared intent of the Alachua City Commission that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by a court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 6. Effective Date

This Ordinance shall be effective upon its passage and adoption on the second and final reading. The effective date of this Amendment, unless timely challenged, shall be 31 days after adoption in accordance with Chapter 163.3187, Florida Statutes. If timely challenged, this Amendment shall become effective on the date the state land planning agency or Administrative Commission enters a final order determining this adopted Amendment to be in compliance with Chapter 163.3187, Florida Statutes. No development orders, development permit, or land uses dependent on this Amendment may be issued or commenced before this Amendment has become effective.

RE: Notice of Hearing to be Scheduled for Hathcock Community Center Small-Scale Comprehensive Plan Map Amendment and a Site-Specific Amendment to the Official Zoning Atlas (Rezoning).

Dear Mr. Crockett,

On January 7, 2026, the City of Alachua Planning & Community Development Department received your application for a Small-Scale Comprehensive Plan Map Amendment and a Site-Specific Amendment to the Official Zoning Atlas (Rezoning) for the Hathcock Community Center submitted on behalf of the City of Alachua. Based on review of the materials submitted, the City has determined that this application can now be scheduled for a hearing before the Planning & Zoning Board.

The application has been scheduled for the **June 9, 2026** Planning & Zoning Board meeting.

You must provide two *double sided, three-hole punched, color sets* of each **complete** application package, seven full size sets of site plans, and a digital copy of all materials in PDF format on a CD or by emailing a Cloud/FTP link to download the materials to planning@cityofalachua.org *no later than 10 business days prior to the Planning & Zoning Board meeting at which your application is scheduled to be heard*; therefore, the above referenced materials must be submitted to the City no later than ***Wednesday, May 20, 2026*** Materials may be submitted earlier than this date.

Additionally, Section 2.2.9(D) of the Land Development Regulations requires the applicant to place posted notice signs on the subject property at least 14 days prior to the public hearing; therefore, posted notice signs must be placed on the property no later than ***Thursday, May 21 2026***. These signs will be ready for pickup after 12:00 PM on Wednesday, May 20, 2026. You will be notified again when the signs are available.

If you plan to utilize a PowerPoint presentation or would like other materials to be available for reference during the public hearing, please submit the presentation or materials no later than 12:00 PM on the last business day prior to the Planning & Zoning Board meeting; therefore, the presentation or materials must be submitted no later than 12:00 PM on ***Monday, June 8, 2026***. Any presentation or materials may be submitted electronically by emailing them to planning@cityofalachua.org.

If you have any questions regarding the information above, please contact me at (386) 418-6123 or at pa_stevens@cityofalachua.org.

Sincerely,

Parker A.H. Stevens

RE: **Completeness Review for City of Alachua Hathcock Center, Small Scale Comprehensive Plan Map Amendment (SSCPA) and Amendment to the Official Zoning Atlas (Rezoning) Applications**

Dear Carson Crockett,

On January 07, 2026, the City of Alachua Planning & Community Development Department received your revised applications for a Small-Scale Comprehensive Plan Amendment (SSCPA) and a Site-Specific Amendment to the Official Zoning Atlas (Rezoning) on behalf of the City of Alachua. The applications propose to amend the Future Land Use Map (FLUM) Designation on parcels 03113-000-000 and 03120-000-000, 1.04 +/- acre, from Recreation to Public, parcel 03114-000-000, 0.44 +/- acre, from Medium Density Residential to Public, and to rezone parcel 03114-000-000 from Residential Single Family-3 (RSF-3) to Government Facilities (GF).

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee, in this case waived. The Planning Department has reviewed the aforementioned applications for completeness and finds that **the applications are now complete**.

An in-depth review of the content of the applications will now be performed, and the findings discussed at a Project Assistance Team (PAT) Meeting, which will be sent under separate cover.

If you have any questions regarding the information above, please contact me at (386) 418-6122 or br_thomas@cityofalachua.org.

Sincerely,

Bryan S. Thomas

Comprehensive Plan Amendment Application

☐ **Large** Scale Comprehensive Plan Amendment (greater than 10 acres)

☑ **Small** Scale Comprehensive Plan Amendment (10 acres or less)

NOTE: It is the burden of the applicant to be familiar with the requirements of Chapter 163, Florida Statutes, which are related to Comprehensive Plan Amendments. Requirements for Comprehensive Plan Amendments may change with each Legislative Session. Please contact the Planning and Community Development Department if you need assistance with locating this information.

A. PROJECT

1. Project Name: Hathcock Community Center SSCPA
2. Address of Subject Property: 15818 NW 140th Street
3. Parcel ID Number(s): 03113-000-000; 03114-000-000; 03120-000-000
4. Existing Use of Property: Community Center
5. Existing Future Land Use Map Designation: Recreation; Medium Density Residential
6. Proposed Future Land Use Map Designation: Public
7. Acreage: +/- 1.48

B. APPLICANT

1. Applicant's Status ☒ Owner (title holder) ☐ Agent
2. Name of Applicant(s) or Contact Person(s): Carson J. Crockett, AICP Title: Principal Planner
   Company (if applicable): City of Alachua, Planning & Community Development
   Mailing address: P.O. Box 9
   City: Alachua State: Florida ZIP: 32616
   Telephone: ( )386-418-6137 FAX: ( ) e-mail: ccrockett@cityofalachua.org
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): _____
   Mailing Address: _____
   City: _____ State: _____ ZIP: _____
   * Must provide executed Property Owner Affidavit authorizing the agent to act on behalf of the property owner.

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☐ Yes ☒ No
   If yes, list names of all parties involved: _____
   If yes, is the contract/option contingent or absolute? ☐ Contingent ☐ Absolute

D. ATTACHMENTS

1. Statement of proposed change and maps which illustrate the proposed change.
2. Urban Sprawl Analysis which evaluates as to whether the plan amendment incorporates a development pattern or urban form that achieves four or more of the following eight criteria:
   - (I) Directs growth and development to areas of the community in a manner that does not adversely impact natural resources;
   - (II) Promotes the efficient and cost effective provision or extension of public infrastructure and services;
   - (III) Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that support a range of housing choices and a multimodal transportation system;
   - (IV) Promotes conservation of water and energy;
   - (V) Preserves agricultural areas and activities;

(VI) Preserves open space and natural lands and provides for public open space and recreation needs;
(VII) Creates a balance of land uses based on demands of residential population for the nonresidential needs of an area; and,
(VIII) Provides uses, densities and intensities of use and urban form that would remediate an existing or planned sprawl development pattern or provides for an innovative development pattern such as transit oriented development or new towns.

3. Concurrency Impact Analysis which considers the impact on public facilities, including potable water, sanitary sewer, transportation, solid waste, recreation, stormwater, and public schools in accordance with Article 2.4.14 of the Land Development Regulations.

4. Needs Analysis which demonstrates the necessity for the proposed increase in the proposed Future Land Use Map Designation. This analysis may consist, in whole or part, of a market impact study or real estate needs analysis.

5. Analysis of Consistency with the City of Alachua Comprehensive Plan (analysis must identify specific Goals, Objectives, and Policies and describe in detail how the application complies with the noted Goal, Objective, or Policy.)

6. A current aerial map of the property (may be obtained from the Alachua County Property Appraiser).

7. Three (3) sets of labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits. (Obtain from the Alachua County Property Appraiser).

8. If the application includes any Future Land Use Map Designation which permits residential uses, Public School Student Generation Form.

9. Legal description with tax parcel number.

10. Proof of ownership.

11. Proof of payment of taxes.

12. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any necessary technical review will be billed to the applicant at the rate of the reviewing entity. The invoice shall be paid in full prior to any legislative and/or quasi-judicial action of any kind on the petition, appeal, or development application.

All 12 attachments are required for a complete application. **A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.**

I/We certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

RE: Hathcock Community Center Small-Scale Comprehensive Plan Amendment (SSCPA)

Dear Bryan S. Thomas,

The City of Alachua is initiating a small-scale Comprehensive Plan amendment (SSCPA) on property owned and maintained by the City. The application proposes amending the future land use designation from Medium Density Residential and Recreation to Public on a +/- 1.48-acre subject property located at 15818 NW 140th Street (tax parcels 03113-000-000; 03114-000-000; 03120-000-000). The subject property is currently home to the existing Hathcock Community Center. This future land use amendment would allow property that the City recently acquired to be incorporated into the ongoing improvement project for the subject property.

A companion rezoning application has been submitted for this property.

If you have any questions regarding the information above, please contact me at (386) 418-6137 or at ccrockett@cityofalachua.org.

Sincerely,

Carson J. Crockett, AICP

RE: **Hathcock Community Center SSCPA Urban Sprawl Analysis**

Chapter 163.3177, Florida Statutes, establishes eight "Urban Form" criteria. An amendment to the Future Land Use Map is presumed to not be considered urban sprawl if it meets four of the eight urban form criteria. These urban form criteria, and an evaluation of each as each may relate to this application, are provided below.

(I) Directs or locates economic growth and associated land development to geographic areas of the community in a manner that does not have an adverse impact on and protects natural resources and ecosystems.

Evaluation & Findings: The proposed amendment is small-scale and the subject property is located in an already developed area of the City. The subject property has existing development and the proposed future land use categories would not meaningfully increase the intensity of development or alter the allowed uses in a way that would result in adverse environmental impacts.

(II) Promotes the efficient and cost-effective provision or extension of public infrastructure and services.

Evaluation & Findings: The proposed amendment is small-scale and the subject property is already served by public infrastructure and services; therefore, the amendment would promote the efficient and cost-effective provision of public infrastructure.

(III) Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that will support a range of housing choices and a multimodal transportation system, including pedestrian, bicycle, and transit, if available.

Evaluation & Findings: The proposed amendment would permit additional community service space in a predominately single-family residential area, encouraging a mix of uses and supporting a multimodal transportation system by placing functional uses near residences who would otherwise have to drive to these uses.

(IV) Promotes conservation of water and energy.

Evaluation & Findings: N/A

(V) Preserves agricultural areas and activities, including silviculture, and dormant, unique, and prime farmlands and soils.

Evaluation & Findings: The proposed amendment does not directly preserve nor directly replace or encroach upon agricultural areas.

(VI) Preserves open space and natural lands and provides for public open space and recreation needs.

Evaluation & Findings: The proposed amendment would provide for additional public open space and recreation needs. Although the amendment proposes amending the Recreation land use to Public, the Public land use will be larger than the existing Recreation land use and will allow for a greater array of uses, including public open space.

(VII) Creates a balance of land uses based upon the demand of the residential population for the nonresidential needs of an area.

Evaluation & Findings: The proposed amendment would permit additional community service space in a predominately single-family residential area, encouraging a better balance between the demand for residential and the nonresidential needs of that residential population.

(VIII) Provides uses, densities, and intensities of use and urban form that would remediate an existing or planned development pattern in the vicinity that constitutes sprawl or if it provides for an innovative development pattern such as transit-oriented developments or new towns as defined in s. 163.3164.

Evaluation & Findings: N/A

RE: **Hathcock Community Center SSCPA Concurrency Impact Analysis**

As the subject property has existing development compatible with the Public land use, and the proposed amendment does not alter to seek the current service or demand volumes of the subject property, this application is considered to have de minimis, or no impacts on public facility levels of service. Concurrency will be reevaluated as part of respective applications should redevelopment be proposed.

Date: December 2, 2025

To: Bryan S. Thomas, AICP
Planning & Community Development Director

From: Carson J. Crockett, AICP
Principal Planner

RE: **Hathcock Community Center SSCPA Needs Analysis**

Chapter 163.3177(6)(a)4., Florida Statues, requires the future land use element of a comprehensive plan to provide a balance of uses that foster vibrant, viable communities and economic development opportunities and address outdated development patterns, such as antiquated subdivisions. The amount of land designated for future land uses should allow the operation of real estate markets to provide adequate choices for permanent and seasonal residents and business and may not be limited solely by the projected population. The element shall accommodate at least the minimum amount of land required to accommodate the medium projections as published by the Office of Economic and Demographic Research for at least a 10-year planning period unless otherwise limited under s. 380.05, including related rules of the Administration Commission.

The proposed amendment reduces the potential for residential development by one dwelling unit and does not alter the potential for commercial development. A need has been exhibited in this area for additional community services through the City's FY26 Strategic Plan and community workshops. The proposed amendment will not hinder the ability for markets to provide adequate choice and will not impact the 10-year planning period.

RE: **Hathcock Community Center SSCPA Comprehensive Plan Consistency**

The goals, objectives, and policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. An evaluation and findings of consistency with the identified GOPs is also provided below.

Future Land Use Element

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.6: *Public*

The City shall designate a Public land use category. Appropriate locations for public facility land uses, to include all lands owned and managed by a governmental entity, should be based upon the following minimum criteria:

1. Public facilities are those uses which, at a minimum, relate to government owned and managed transportation, sanitary sewer, potable water, solid waste, drainage, conservation, education, government service systems, and other utilities such as gas, electric, telephone and cable.
2. Public facility land uses may be located within all land use categories on the Future Land Use Map provided such uses are compatible with adjacent land uses consistent with this Comprehensive Plan.
3. The City shall encourage the use of common corridors for utility systems, including sanitary sewer, potable water, re-use, electricity, gas and other utilities.

Evaluation & Findings: The Comprehensive Plan includes "parks and recreation systems" in the definition of public facilities. The Public land use category refers to a broad set of government service systems, which includes parks and recreation systems. The current use of the property is a community center which is permitted in the Public land use category.

Objective 3.5: *Protection of Historic Districts and Historic Resources*

The City shall ensure that its land use, transportation, housing, and economic development policies and regulations are consistent with and adequately facilitate historic preservation.

Evaluation & Findings: The subject property, although located in an already developed portion of the City, is not known to have any listed historic resources on it and the subject property is not located within a historic district.

Policy 4.1.c: Compatible infill development shall be encouraged within the Central City Area.

Objective 4.3: *Redevelopment*

The City shall encourage the redevelopment of existing developed properties, vacant properties or buildings, or abandoned properties and buildings, particularly within the Community Redevelopment Area and the Central City Area.

Evaluation & Findings: The subject property is located within the Central City Area. The proposed amendment would enable future redevelopment of the existing Hathcock Community Center, retaining a public use but expanding the service options outside of solely the Recreation land use. This will provide greater flexibility and expand the public use into the existing Medium Density Residential portion of the subject property.

Recreation Element

Policy 1.2.b: The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

Evaluation & Findings: The proposed amendment would add additional functional park space to the City's level of service capacity by including the existing Medium Density Residential portion of the subject property.

This indenture made the 22nd day of October, 2025 between Paristamika V. Owens, whose post office address is 1829 Northeast 3rd Avenue, Gainesville, FL 32641, of the County of Alachua, Florida, Grantor, to City of Alachua Florida, a municipality in Alachua County, whose post office address is 15100 Northwest 142 Terrace, Alachua, FL 32615, of the County of Alachua, Florida, Grantee:

Witnesseth, that said Grantor, for and in consideration of the sum of TEN DOLLARS (U.S.$10.00) and other good and valuable considerations to said Grantor in hand paid by said Grantee, the receipt whereof is hereby acknowledged, has granted, bargained, and sold to the said Grantee, and Grantee's heirs and assigns forever, the following described land, situate, lying and being in Alachua County, Florida, to-wit:

The North 1/2 of Lot 2, Block 25, of Alachua Realty Co.'s Addition to the City of Alachua Fla as per the plat thereof recorded in Plat Book A, Page 100, of the Public Records of Alachua County, Florida.

The subject property is not the homestead of Grantor.

Together with all the tenements, hereditaments and appurtenances thereto belonging or in anywise appertaining.

Subject to taxes for 2025 and subsequent years, not yet due and payable; covenants, restrictions, easements, reservations and limitations of record, if any.

TO HAVE AND TO HOLD the same in fee simple forever.

And Grantor hereby covenant with the Grantee that the Grantor is lawfully seized of said land in fee simple, that Grantor have good right and lawful authority to sell and convey said land and that the Grantor hereby fully warrant the title to said land and will defend the same against the lawful claims of all persons whomsoever.

In Witness Whereof, Grantor have hereunto set Grantor's hand and seal the day and year first above written.

Signed, sealed and delivered in our presence:

Paristamika V. Owens

QUIT CLAIM DEED

This Indenture, made this 16th day of January, 2013, between **Thelma Allen**, whose post office address is Post Office Box 676, Dade City, Florida 33526, Grantor, and **Tommy L. Moore**, whose post office address is 21925 NW 210th Avenue, High Springs, Florida 32643, Grantee;

WITNESSETH that said Grantor, for and in consideration of the sum of Ten and 00/100 ($10.00) Dollars, in hand paid by said Grantee, the receipt whereof is hereby acknowledged, has remised, released and quit claimed, and by these presents does remise, release and quitclaim unto said Grantee all the right, title, interest, claim and demand which said Grantor has in and to the following described lot, piece or parcel of land, situate lying and being in the County of Alachua, State of Florida, to wit:

The NE 1/4 of Lot 4, Block 25 of Alachua Realty Company's Addition to the City of Alachua, Florida, according to the map or plat thereof, as recorded in Plat Book "A", Page 100 of the Public Records of Alachua County, Florida

Grantor warrants that at the time of this conveyance, the subject property is not the Grantor's homestead within the meaning of the Constitution of the State of Florida, nor of her spouse, if any, nor is it contiguous to or a part of homestead property.

TO HAVE AND TO HOLD the same, together with all and singular the appurtenances thereunto belonging or in anywise appertaining, and all the estate right, title, interest and claim whatsoever of said Grantor, either in law or equity, to the only proper use, benefit and behalf of said Grantee.

IN WITNESS WHEREOF, said Grantor has hereunto set her hand and seal on the day and year first above written.

Signed, sealed and delivered in our presence:

had been replaced several times because of suspicious activity, unauthorized charges reportedly continued to appear on newly issued cards.

The relative also reported that $1,465 in cash had disappeared from various locations inside the victim's home over multiple dates.

subscription, cellphone expenses and Cash App transfers totaling approximately $100.

Authorities also alleged the victim's debit card was used to pay for a three-night stay at a Holiday Inn Express in Gainesville.

Investigators interviewed Williams on Aug. 1, 2025. According to

debit card to pay his car insurance and transferring money through a Cash App account associated with his deceased grandfather.

Investigators said Williams initially claimed he had used the card only once but later acknowledged using it "once or twice" to make car payments and to pay for a hotel stay.

Manhood Foundation marks Memorial Day with community service

Alachua County Today
STAFF REPORT

JONESVILLE – Members of the Manhood Youth Development Foundation joined parents and community members on Memorial Day to honor military veterans through a day of service and remembrance at Pleasant Plains United Methodist Church in Jonesville.

The annual Memorial Day observance brought together young men from the organization, members of its Parent Support Group and local residents for a ceremony focused on recognizing veterans and preserving the meaning of the national holiday.

As part of the event, participants removed worn American flags and replaced them with new flags at more than 70 veterans' gravesites throughout the church cemetery.

Organizers said this year's observance also coincides with national recognition of America's 250th anniversary, adding historical significance to the annual tradition.

Following the cemetery activities, participants gathered in the church family life center for lunch and leadership activities designed to strengthen communication and public speaking skills among the youth participants.

Photo special to *Alachua County Today*

Photo Caption: Young men with the Manhood Youth Development Foundation place flags at veterans' graves during Memorial Day activities in Jonesville.

According to organizers, Parent Support Group member Mr. Albury led a public speaking session intended to help prepare the young men for an upcoming annual celebration event scheduled for June 7.

The Manhood Youth Development Foundation's annual celebration is planned from 3 p.m. to 5 p.m. at the Santa Fe College Blount Center in downtown Gainesville and will be open to the public.

The Memorial Day event blended community service with mentorship opportunities, continuing the organization's efforts to promote leadership development and civic involvement among local youth.

The annual observance also served as a reminder of the purpose behind Memorial Day, honoring military service and remembering those who served the country.

NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning and Zoning Board of the City of Alachua will hold a public hearing on June 9, 2026 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following:

Application #: PSSC26-0001 – Hathcock Community Center

A request by the City of Alachua, applicant and property owner, for consideration of an amendment to the City of Alachua Future Land Use Map (FLUM). The proposed amendment would change the future land use designation of a ± 0.49-acre subject property from Medium Density Residential to Recreation. The subject property is Alachua County Tax Parcel 03042-052-007. Existing FLU: Moderate Density Residential; Proposed FLU: Recreation.

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application, staff report, and any related materials are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. one week prior to the date of hearing. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

AFFIDAVIT FOR POSTED LAND USE SIGN

I, Parker A.H. Stevens, POSTED THE LAND USE SIGN(S)
(Print Name)

ON 5-20-2026 FOR THE Hathcock Community Center Small Scale Comp Plan
(Date) (Project name & type of action)

LAND USE ACTION AS PER ARTICLE 2.2.9(D) OF THE LAND DEVELOPMENT

REGULATIONS. THIS WILL BE INCLUDED IN THE STAFF REPORT.

(Signature)

3
(Number of signs)

Posted Notice Location Map
PSSC26-0001 | Hathcock Community Center

Pursuant to Section 2.2.9(D) of the City's Land Development Regulations, posted notice signs must be placed on the land that is the subject of the application, along each street which is adjacent to or runs through the land in a manner that makes them clearly visible. Signs shall be posted at regular intervals of not more than 400 feet when the land subject to the application has less than 1,500 feet of road frontage. When the land subject to the application has 1,500 feet or more of road frontage, signs shall be posted at intervals of not more than 1,320 feet.

Signs shall be inspected by the City subsequent to their posting. The applicant shall be responsible for ensuring that the posted notice is maintained on the land subject to the application until the completion of the final public hearing on the application.

SIGNS MUST BE REMOVED BY THE APPLICANT WITHIN TEN DAYS AFTER THE FINAL DECISION ON THE APPLICATION

THE GOOD LIFE COMMUNITY

Commission Agenda Item

MEETING DATE: August 24, 2026

SUBJECT: Ordinance 26-12: AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS FROM RESIDENTIAL SINGLE FAMILY – 3 ("RSF-3"), TO GOVERNMENT FACILITY ("GF") ON A ± 0.49-ACRE SUBJECT PROPERTY; GENERALLY LOCATED AT THE SOUTHEAST CORNER OF NW 159TH LANE AND NW 141ST STREET, AND WEST OF THE CLEATHER HATHCOCK COMMUNITY CENTER; TAX PARCEL 03114-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE (Quasi-Judicial Hearing; Second Reading).

PREPARED BY: Parker Stevens

RECOMMENDED ACTION:

Staff recommends that the City Commission find the site-specific amendment to the Official Zoning Atlas for the City of Alachua to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City's Land Development Regulations and adopt Ordinance 26-12 upon second and final reading.

Recommended Motion: I move that, based upon the presentation before this Commission and Staff's recommendation, this Commission finds the application for a site-specific amendment to the Official Zoning Atlas for the City of Alachua to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City's Land Development Regulations and adopt Ordinance 26-12 upon second and final reading.

Summary

This application is a request by the City of Alachua for consideration of a site-specific amendment to the City of Alachua Official Zoning Atlas (rezoning). The proposed amendment would change the zone district from Residential Single Family – 3 (RSF-3) to Government Facility (GF) on a ± 0.49-acre subject property generally located at the southeast corner of NW 159th Lane and NW 141st street, and west of the Cleather Hathcock Community Center (tax parcel 03114-000-000).

The subject property is generally located at the corner of NW 141st Street and NW 159th Lane (tax parcel number 03114-000-000).

The applicant has submitted a companion application for a small-scale comprehensive plan amendment, which proposes to amend the future land use designation of the subject property

from Medium Density Residential and Recreation to Public.

The application was approved upon First Reading on July 27, 2026.

Existing Zone District
Section 3.4.2 of the City's Land Development Regulations establishes the general purposes of the business zone districts, with Section 3.4.2(B) establishing the specific purposes for the Residential Single Family – 3 (RSF-3) district. 3.4.2(B) - RSF-3, Residential Single Family – 3. The RSF-3 district is established as a district in which the principal use of land is single-family residential development at a moderate density in areas served by water and sewer systems. The regulations of this district are intended to discourage any use that would substantially interfere with the development of single-family dwellings and that would be detrimental to the quiet residential nature of the district. Complementary uses customarily found in residential zone districts, such as community facilities, religious institutions, parks and playgrounds, and schools, are also allowed. The maximum density allowed is three dwelling units an acre. The subject property is currently zoned for Residential Single Family – 3 (RSF – 3), which does not permit the type of development activity proposed by the applicant.

Proposed Zone District
Section 3.5.1 of the City's Land Development Regulations establishes the general purposes of the business zone districts, with Section 3.5.2(I) establishing the specific purposes for the Government Facility (GF) district. 3.5.2(I)- GF: Governmental Facilities District. The GF District is established and intended to include public lands for the purpose of accommodating governmental facilities. Governmental facilities include, but are not limited to, recreational, community and governmental uses and activities (such as governmental offices and facilities, emergency services, baseball fields, softball fields, soccer fields, tennis courts, and similar uses), utilities (such as potable water and sanitary sewer treatment facilities, electric facilities, communications, gas, stormwater management facilities, and other similar public utilities), public storage yards, airports, parking lots, libraries, hospitals, cultural facilities, religious institutions, educational facilities (such as public and private schools meeting the educational requirements of the State of Florida, public or private colleges and/or universities authorized or licensed by the State, but not including technical, business, or trade schools), and uses including privately owned entities which provide a public service (such as but not limited to, nonprofit agencies).

ORDINANCE 26-12

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS FROM RESIDENTIAL SINGLE FAMILY – 3 ("RSF-3"), TO GOVERNMENT FACILITY ("GF") ON A ± 0.49-ACRE SUBJECT PROPERTY; GENERALLY LOCATED AT THE SOUTHEAST CORNER OF NW 159TH LANE AND NW 141ST STREET, AND WEST OF THE CLEATHER HATHCOCK COMMUNITY CENTER; TAX PARCEL 03114-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, an application for a site-specific amendment to the Official Zoning Atlas ("Amendment") as further described herein has been filed with the City (the "Amendment") by the City of Alachua. ("Applicant" and "Property Owner"); and,

WHEREAS, a duly advertised quasi-judicial public hearing was conducted on the Amendment on June 9, 2026, by the City of Alachua Planning and Zoning Board ("PZB"), and the PZB reviewed and considered comments received during the quasi-judicial public hearing concerning the application and made its recommendation for approval to the City Commission; and,

WHEREAS, the City Commission considered the recommendations of the PZB at duly advertised quasi-judicial public hearings on July 27, 2026, and _____, 2026, and provided for and received public participation at both public hearings; and,

WHEREAS, the City Commission has determined and found the proposed Amendment to be consistent with the City of Alachua Comprehensive Plan and Land Development Regulations; and,

WHEREAS, for reasons set forth in this ordinance that is hereby adopted and incorporated as findings of fact, that the City Commission finds and declares that the enactment of this Amendment is in the furtherance of the public health, safety, morals, order, comfort, convenience, appearance, prosperity, or general welfare;

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Findings of Fact and Conclusions of Law

1. The above recitals are true and correct and are incorporated herein by reference.
2. The Amendment is consistent with the City of Alachua Comprehensive Plan and Land Development Regulations.
3. The Amendment will not cause a reduction in the adopted level of service standards for transportation, potable water, sanitary sewer, solid waste, stormwater, recreation, or public schools.

Section 2. Official Zoning Atlas Amended

The City of Alachua Official Zoning Atlas is hereby amended from Residential Single Family - 3 (RSF-3) to Government Facility (GF) on a ± 0.49-acre subject property, consisting of tax parcel number 03114-000-000 in accordance with the legal description found in Exhibit "A" and map found in Exhibit "B" attached hereto and incorporated herein by reference.

Section 3. Ordinance to be Construed Liberally

This ordinance shall be liberally construed in order to effectively carry out the purposes hereof which are deemed to be in the best interest of the public health, safety, and welfare of the citizens and residents of Alachua, Florida.

Section 4. Repealing Clause

All ordinances or parts of ordinances in conflict with this ordinance are, to the extent they conflict with this ordinance, repealed.

Section 5. Providing for Severability

It is the declared intent of the Alachua City Commission that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by a court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 6. Effective Date

This Ordinance shall be effective upon its passage and adoption on the second and final reading.

PASSED on first reading on the 27st day of July, 2026.

PASSED and **DULY ADOPTED**, in regular session, with a quorum present and voting, by the City Commission, upon second reading this _____, day of _____ , 2026

Staff Report

Planning & Zoning Board Hearing Date: June 9, 2026
Quasi-Judicial Hearing **Application #:PR26-0001**

SUBJECT:	A request to amend the existing land use of tax parcel 03114-000-000 from Residential Single Family – 3 (RSF-3) to Government Facility (GF).
APPLICANT/AGENT:	City of Alachua
PROPERTY OWNER:	City of Alachua
LOCATION:	N/A
PARCEL ID NUMBER:	03114-000-000
FLUM DESIGNATION:	Medium Density Residential
ZONING:	Residential Single Family – 3 (RSF-3)
OVERLAY:	N/A
ACREAGE:	± 0.44 acres
PROJECT PLANNER:	Parker A.H. Stevens
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board find the site-specific amendment to the Official Zoning Atlas for the City of Alachua to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City's Land Development Regulations and transmit the application to the City Commission with a recommendation to approve.
RECOMMENDED MOTION:	*I move that, based upon the competent substantial evidence, the presentation before this Board, and Staff's recommendation, this Board finds the application for a Site-Specific Amendment to the Official Zoning Atlas for the City of Alachua to be consistent with the City of Alachua Comprehensive Plan and in compliance with the City's Land Development Regulations and transmits the application to the City Commission with a recommendation to approve.*

SUMMARY

This application is a request by the City of Alachua for consideration of a site-specific amendment to the City of Alachua Official Zoning Atlas (rezoning). The proposed amendment would change the zone district from Residential Single Family – 3 (RSF-3) to Government Facility (GF) on a ± 0.49-acre subject property generally located at the southeast corner of NW 159th Lane and NW 141st street, and west of the Cleather Hathcock Community Center (tax parcel 03114-000-000).

The applicant has submitted a companion application for a small-scale comprehensive plan amendment, which proposes to amend the future land use designation of the subject property from Medium Density Residential and Recreation to Public.

Existing Zone District

Section 3.4.2 of the City's Land Development Regulations establishes the general purposes of the business zone districts, with Section 3.4.2(B) establishing the specific purposes for the Residential Single Family – 3 (RSF-3) district.

3.4.2(B) *RSF-3, Residential Single Family – 3.* The RSF-3 district is established as a district in which the principal use of land is single-family residential development at a moderate density in areas served by water and sewer systems. The regulations of this district are intended to discourage any use that would substantially interfere with the development of single-family dwellings and that would be detrimental to the quiet residential nature of the district. Complementary uses customarily found in residential zone districts, such as community facilities, religious institutions, parks and playgrounds, and schools, are also allowed. The maximum density allowed is three dwelling units an acre.

The subject property is currently zoned for Residential Single Family – 3 (RSF – 3), which does not permit the type of development activity proposed by the applicant.

Proposed Zone District

Section 3.5.1 of the City's Land Development Regulations establishes the general purposes of the business zone districts, with Section 3.5.2(I) establishing the specific purposes for the Government Facility (GF) district.

3.5.2(I) *GF: Governmental Facilities District.* The GF District is established and intended to include public lands for the purpose of accommodating governmental facilities. Governmental facilities include, but are not limited to, recreational, community and governmental uses and activities (such as governmental offices and facilities, emergency services, baseball fields, softball fields, soccer fields, tennis courts, and similar uses), utilities (such as potable water and sanitary sewer treatment facilities, electric facilities, communications, gas, stormwater management facilities, and other similar public utilities), public storage yards, airports, parking lots, libraries, hospitals, cultural facilities, religious institutions, educational facilities (such as public and private schools meeting the educational requirements of the State of Florida, public or private colleges and/or universities authorized or licensed by the State, but not including technical, business, or

trade schools), and uses including privately owned entities which provide a public service (such as but not limited to, nonprofit agencies).

	Existing FLUM Designation	Proposed FLUM Designation
FLUM Designation:	Residential Single Family - 3	Government Facility
Max. Gross Density:	3 dwellings/1-acre 2 dwelling units	N/A
Max. Floor Area:	N/A	N/A
Typical Uses:	1. Single-family detached dwelling units; 2. Manufactured homes; 3. Accessory dwelling units; 4. Group living; and, 5. Agricultural related uses.	1. Community center; 2. Cultural facility; 3. Library; 4. Senior center; 5. Youth club facility; 6. College or university; 7. School; 8. Vocational school; 9. Youth club facility; 10. Governmental maintenance, storage, and distribution facility; 11. Government office; 12. Post office; 13. Hospital; 14. Auditorium; 15. Convention center; 16. Religious institution, with seating capacity less than 300 in sanctuary or main activity area; 17. Religious institution, with seating capacity of 300 or greater in sanctuary or main activity area, or with accessory schools, day care centers with more than 50 children, or recreational facilities; 18. Arboretum, 19. Botanical garden, 20. Cemetary, columbaria, mausoleum 21. Community garden 22. Golf course, public 23. Park, private and public 24. Public square, 25. Recreational trail; 26. Resource-based recreation uses, nonintensive; 27. Fire and EMS; 28. Police station; 29. Substation for fire and City police; 30. Airport; 31. Airplane landing strip; 32. Helicopter landing facilities; 33. Passenger terminal, surface transportation;

		34. Senior center; 35. Wireless communication tower and/or antenna, freestanding; 36. Wireless communication antenna, collocation on existing tower; 37. Wireless communication antenna, placement on existing building; 38. Railroad right-of-way; 39. Utility, major; 40. Utility, minor; 41. Conference center; 42; Parking lot; 43: Parking structure; 44. Banquet hall; 45. Commercial recreation, indoor; 46. Neighborhood recreation center; 47. Theater; 48. Archery range; 49. Arena, amphitheater, auditorium, stadium; 50. Commercial recreation; outdoor; 51. Landfill.

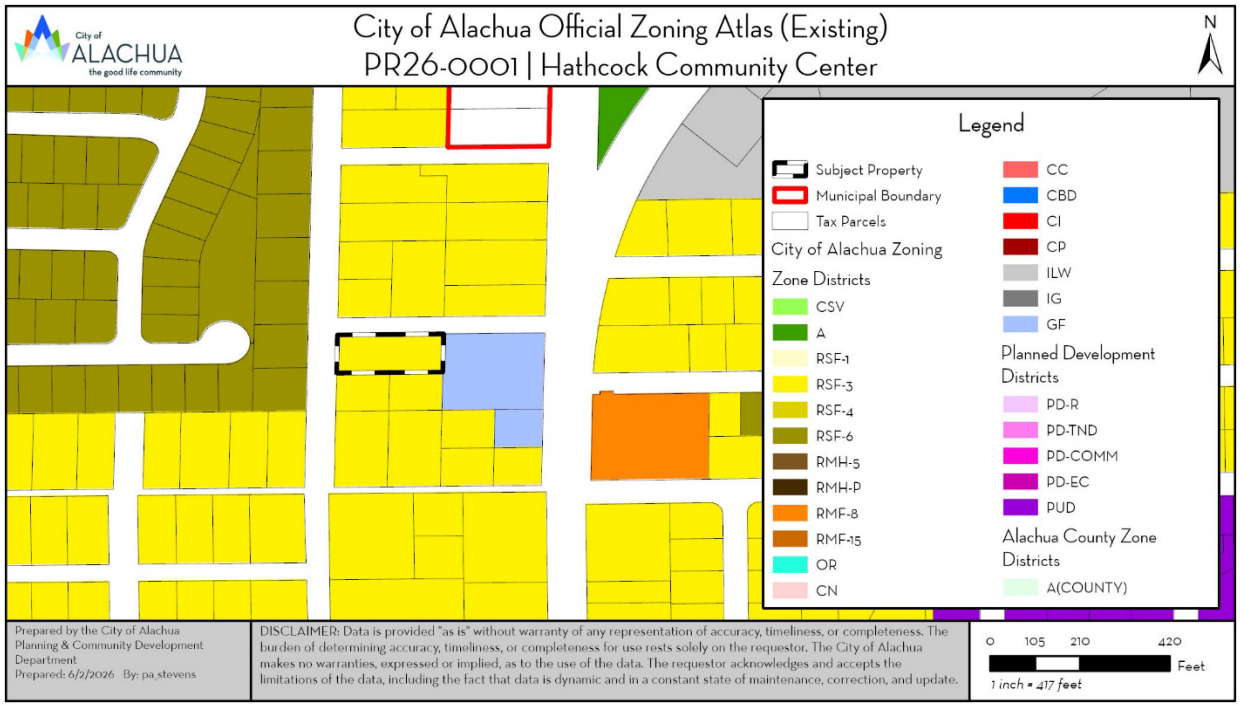

Figure 1. Existing Official Zoning Atlas with Subject Property

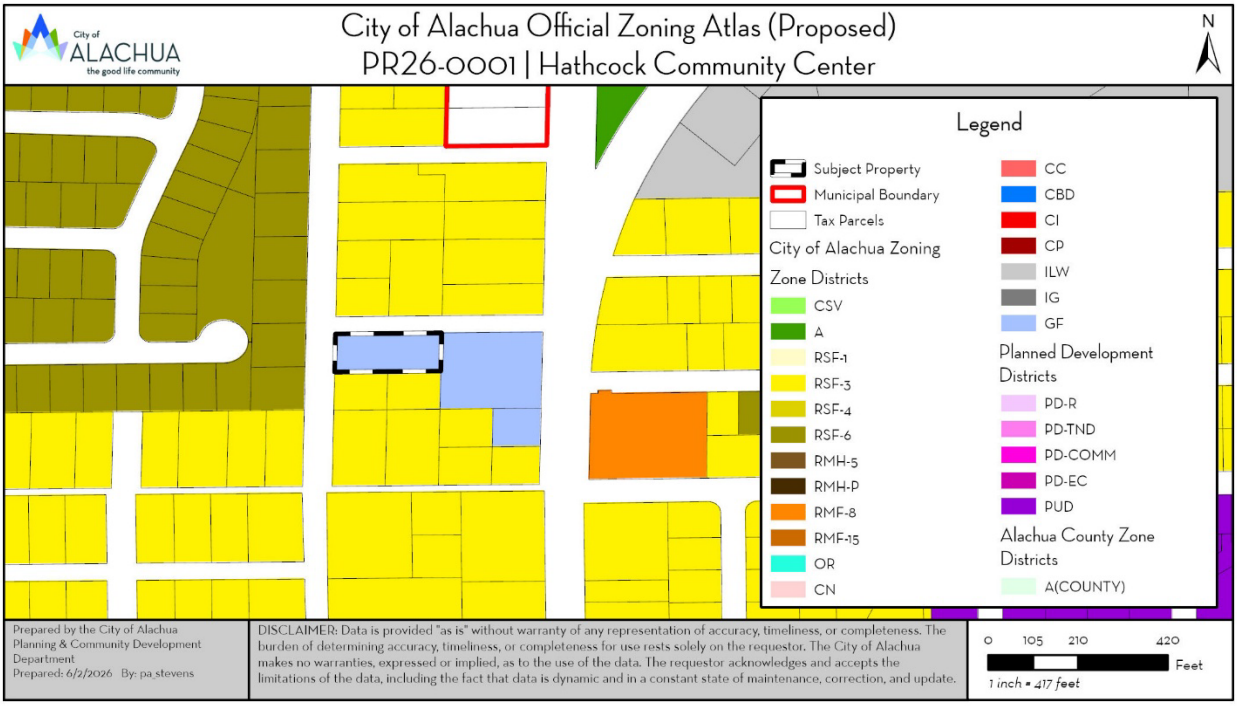

Figure 2. Proposed Future Land Use Map with Subject Property

EXISTING USES

The subject property is undeveloped and is comprised of a mixture of cleared lands and naturally wooded areas.

SURROUNDING USES

The existing uses, Future Land Use Map (FLUM) designations, and zoning districts of the surrounding area are identified in Table 2. Figure 3 provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. The information below is not intended to be all-inclusive, and may not identify all existing uses, FLUM designations, and/or zoning districts surrounding the subject property.)

Table 2. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Vacant Residential	Medium Density Residential	Residential, Single Family (RSF-3)
North	Vacant Residential	Medium Density Residential	Residential, Single Family (RSF-3)
South	Vacant Residential	Medium Density Residential	Residential, Single Family (RSF-3)
South	Single-Family Residential	Medium Density Residential	Residential, Single Family (RSF-3)
East	Community Center	Recreation	Government Facilities (GF)
West	Mobile Home	Medium Density Residential	Residential, Single-Family (RSF-5)

Figure 3. Vicinity Map

NEIGHBORHOOD MEETING

The purpose of a neighborhood meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. Neighborhood meetings are required for rezoning applications.

A neighborhood meeting was held on January 6, 2026 at 15818 NW 140th Street (Cleather Hathcock Community Center). As required by Section 2.2.4 of the City's Land Development Regulations, all property owners within 400 feet of the subject property were notified and notice of the meeting was published in a newspaper of general circulation. The applicant was available to answer questions. Materials submitted by the applicant indicate that the meeting

was attended by 5 members of the public. A neighborhood meeting summary is included in the submission materials.

COMPREHENSIVE PLAN CONSISTENCY ANALYSIS

The goals, objectives, and policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

Future Land Use Element

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.6: *Public*

The City shall designate a Public land use category. Appropriate locations for public facility land uses, to include all lands owned and managed by a governmental entity, should be based upon the following minimum criteria:

1. Public facilities are those uses which, at a minimum, relate to government owned and managed transportation, sanitary sewer, potable water, solid waste, drainage, conservation, education, government service systems, and other utilities such as gas, electric, telephone and cable.
2. Public facility land uses may be located within all land use categories on the Future Land Use Map provided such uses are compatible with adjacent land uses consistent with this Comprehensive Plan.
3. The City shall encourage the use of common corridors for utility systems, including sanitary sewer, potable water, re-use, electricity, gas and other utilities.

Evaluation & Findings: The Comprehensive Plan includes "parks and recreation systems" in the definition of public facilities. The GF zone district permits a broad set of government service uses, which includes parks and recreation systems. The current use of the property vacant residential, but the property will be incorporated with the neighboring Hathcock Community Center, which is a permitted use in the GF zone district.

Objective 3.5: *Protection of Historic Districts and Historic Resources*

The City shall ensure that its land use, transportation, housing, and economic development policies and regulations are consistent with and adequately facilitate historic preservation.

Evaluation & Findings: The subject property, although located in an already developed portion of the City, is not known to have any listed historic resources on it and the subject property is not located within a historic district.

Policy 4.1.c: Compatible infill development shall be encouraged within the Central City Area.

Objective 4.3: *Redevelopment*

The City shall encourage the redevelopment of existing developed properties, vacant properties or buildings, or abandoned properties and buildings, particularly within the Community Redevelopment Area and the Central City Area.

Evaluation & Findings: The subject property is located within the Central City Area. The existing use of the property is vacant residential and the proposed amendment would enable expansion of the existing Hathcock Community Center consistent with this policy..

Recreation Element

Policy 1.2.b: The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

Evaluation & Findings: The proposed amendment would add additional functional park space to the City's level of service capacity by expanding the GF zone district from the adjacent Hathcock Center to the subject property currently zoned RSF-3.

ENVIRONMENTAL CONDITIONS ANALYSIS

Wetlands

Wetlands are areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal conditions do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

Evaluation & Findings: There are no delineated wetlands on the subject property. Should wetlands be discovered, the development will be required to conform with the applicable policies and regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Strategic Ecosystems

Strategic Ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1987 and updated in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation & Findings: The subject property is not located within or adjacent to a strategic ecosystem; therefore, the development will have no impact upon any strategic ecosystems identified within the ecological inventory report.

Regulated Plant & Animal Species

The Florida Natural Areas Inventory (FNAI) has identified areas throughout the State of Florida which may contain good quality natural communities. This data layer is known as the Potential Natural Areas (PNA) data layer, and identifies privately owned lands that are not managed or listed for conservation purposes. These areas were delineated by FNAI scientific staff through interpretation of natural vegetation from 1988-1993 FDOT aerial photographs and from input received during Regional Ecological Workshops held for each regional planning council. These workshops were attended by experts familiar with natural areas in the region.

Potential Natural Areas were assigned ranks of Priority 1 through Priority 5 based on size, perceived quality, and type of natural community present. The areas included in Priority 5 are exceptions to the above criteria. These areas were identified through the same process of aerial photographic interpretation and regional workshops as the PNA 1 through 4 ranked sites, but do not meet the standard criteria.

Evaluation & Findings: No species identified as endangered, threatened, or of special concern are known to exist on the subject property. No areas of the subject property have been prioritized as part of the Florida Natural Areas Inventory. If a regulated plant or animal species is discovered, the development will be required to conform with the applicable policies and regulations established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Soil Survey

The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff.) There are four hydrologic groups: A, B, C, and D. "Group A" soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. "Group D" soils have a lower infiltration rate and therefore a higher runoff potential.

There are 1 soil type found within the subject property, shown in Table 3.

Table 3. Soil Types

Soil Type	Hydrologic Group	Drainage Class	Limitations		% of Subject Property (may not total to 100% due to rounding)
			Dwellings Without Basements	Small Commercial Buildings	
Arredondo-Urban Land Complex; 5% Slopes	A	Well Drained	None	None	± 100%

Evaluation & Findings: The soil types present on the subject property do not pose any significant limitations for development.

Flood Potential

Panel 12001C0140D of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated June 16, 2006 indicates that the development area is in Flood Zone X (areas determined to be outside of the 500-year floodplain).

Evaluation & Findings: Since the subject property is located in Flood Zone X, there are no issues related to flood potential.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations.

Evaluation & Findings: The subject property is not located within an area of high aquifer recharge as identified on the Suwannee River Water Management District's high aquifer recharge potential (HARP) map. No potential sink holes are known to exist on the site. No new stormwater management facilities are proposed.

Wellfield Protection Zones

Policy 7.2.1 of the Future Land Use Element of the City's Comprehensive Plan establishes a 500-foot radius area around each city-owned potable water well.

Evaluation & Findings: The subject property is not located within a City of Alachua wellfield protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the City's Comprehensive Plan; therefore, there are no issues related to wellfield protection.

Historic Structures/Markers and Historic Features

The State of Florida and the Alachua County Historic Resources Inventory identify historic structures in addition to the City's Historic Overlay District, as established by Section 3.7 of the City's Land Development Regulations.

Evaluation & Findings: The subject property is not within the City's Historic Overlay District and the State of Florida and Alachua County Historic Resources Inventory note no historic structures or markers on the subject property.

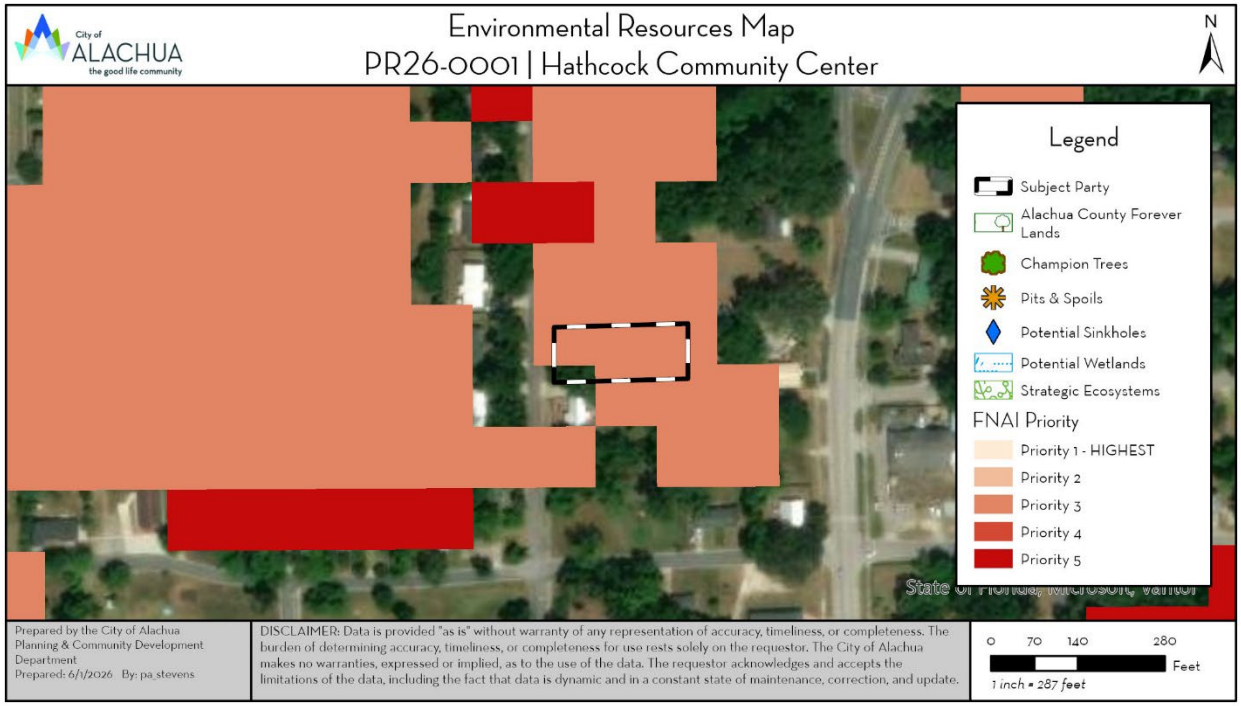

Figure 4. Environmental Resources Map

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

Section 2.4.2(E)(1) of the City's Land Development Regulations (LDRs) establishes the standards with which all amendments to the Official Zoning Atlas must be found compliant. An evaluation of the application against the standards of Section 2.4.2(E)(1) is provided below.

(1) **Competent substantial evidence provided**. The applicant has provided competent substantial evidence that is made part of the record of the hearing that:

(a) ***Consistent with the Comprehensive Plan***. The proposed amendment is consistent with and furthers the goals, objectives and policies of the Comprehensive Plan.

Evaluation: An evaluation of consistency with the City of Alachua Comprehensive Plan has been submitted as part of this application.

(b) ***Consistent with ordinances***. The proposed amendment is not in conflict with any portion of these LDRs or any of the City Code of Ordinances.

Evaluation: This analysis demonstrates consistency with the Land Development Regulations and the proposed zone district of GF would not conflict with any ordinances.

(c) ***Logical development pattern***. The proposed amendment would result in a logical and orderly development pattern

Evaluation: The proposed zone district of GF would extend an existing GF zone district and expand the existing community center located central to a residential area which it primarily serves, resulting in a logical development pattern.

(d) ***Premature development***. The proposed amendment will not create premature development in undeveloped or rural areas.

Evaluation: The surrounding area is urban in context and is mostly developed. The amendment would not result in premature development in an undeveloped area.

(e) ***Incompatible with adjacent lands***. The uses permitted by the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands.

Evaluation: The subject property is adjacent to GF and the existing community center to the east, RSF-3 and single-family residential to the north and south, and RSF-6 and single-family residential to the west. The GF zone district permits a wide range of community service uses, all of which are generally compatible with residential uses as the GF district is "intended to include public lands for the purpose of accommodating governmental facilities." Any uses which are less compatible will be required to be properly buffered as required by the Comprehensive Plan and Land Development Regulations.

(f) *Adverse effect on local character* The proposed amendment will not adversely effect the character of the general area where it is proposed to be located by creating excessive traffic, density and/or intensities of use, building height and bulk, noise, lights or other physical effects or nuisances.

Evaluation: The GF zone district permits a wide range of community service uses, all of which are generally compatible with residential uses as the GF district is "intended to include public lands for the purpose of accommodating governmental facilities." Any uses which are less compatible will be required to be properly buffered as required by the Comprehensive Plan and Land Development Regulations. No adverse effects on local character are anticipated as a result of the proposed amendment.

(g) *Not deviate from pattern of development*. The uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located.

Evaluation: The proposed zone district of GF would extend an existing GF zone district and expand the existing community center located central to a residential area which it primarily serves, maintaining the existing development pattern of the surrounding area.

(h) *Encourage sprawl*. The proposed amendment will not encourage urban sprawl, either by resulting in strip or ribbon commercial development, leap-frog development or low-density single dimensional development.

Evaluation: The surrounding area is urban in context and is mostly developed. The subject property is also located in the Central City Area. The proposed zone district of GF does not permit residential uses of any density nor is it intended for highway-oriented uses. The companion small-scale Comprehensive Plan amendment application has been evaluated for urban sprawl against the 13 primary indicators and eight urban form criteria established in Florida Statutes. The proposed amendment would not encourage urban sprawl.

(i) *Spot zoning*. The proposed amendment will not result in the creation of an isolated zone district unrelated to adjacent and surrounding zone districts (spot zoning).

Evaluation: The proposed amendment would extend an existing GF zone district adjacent to residential zone districts (primarily RSF-3) which the GF zone district primarily serves. The zone districts are related and not isolated and would not result in spot zoning.

(j) *Public facilities*. The proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, stormwater management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development.

Evaluation: The subject property is within the City's service areas for both potable water and sanitary sewer and utilities are available at the subject property. No major extensions of utilities would be required.

(k) ***No adverse effect on the environment***. The proposed amendment would not result in significantly adverse impacts on the natural environment, including, but not limited to, water, air, noise, stormwater management, wildlife, vegetation, wetlands, and the natural functioning of the environment.

Evaluation: The subject property is not known to have any significant environmental features or wildlife habitat on the site and is already within in urban area. There are regulated tree species on the site and all requirements in Section 6.2 of the City's Land Development Regulations will apply at time of development.

PUBLIC FACILITIES IMPACT ANALYSIS

Section 2.4.14 of the City's Land Development Regulations (LDRs) establishes the standards for a Certificate of Concurrency Compliance which applies to all development orders unless exempted by Section 2.4.14(C). The application has been reviewed for impacts to roads, sanitary sewer, solid waste, stormwater management, potable water, and recreation facilities to ensure the application's potential impacts do not negatively impact the level of service (LOS) for those public facilities.

The subject property is approximately 0.49-acres in size and the GF zone district permits a floor area ratio of up to 1.0 for parcels once acre or less in size. This permits a theoretical maximum build out of 21,344 square feet. These concurrency calculations considered the use of the property as a community center with the theoretical maximum build out scenario; however, it is unlikely that the maximum floor area permitted is ever reached.

Traffic Impact

The following impacts are projected at maximum build out of the subject property on the roadway segments identified in Table 4-1.

Table 4-1. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2]	Segment Description	Lanes	Functional Classification	Area Type	LOS
4	U.S. Hwy 441 from CR25A East Intersection to SR 235	4/D	Principle Arterial	Urban Trans	D
5	U.S. Hwy 441 from SR 235 to I-75	4/D	Principle Arterial	COMM	D
8	SR 235 from NW 143rd Place to US 441	2/U Bays	Major Collector	Comm	D
9	SR 235 from US 441 to NW 140th Street	2/U Bays	Major Collector	Comm	D
10	SR 235 from NW 140th Street to East City Limit	2/U	Major Collector	Comm	D
12	CR 241 from NW SR 235 to North City Limit	2/U	Major Collector	Comm	D

1 City of Alachua Comprehensive Plan, Transportation Element.
2 For developments generating less than 1,000 trips, affected roadway segments are identified as all those wholly or partially located within 1/2 mile of the development's ingress/egress, or to the nearest intersecting major street, whichever is greater [Section 2.4.14(H)(2)(a)of the LDRs].

Table 4-2. Projected Impact on Affected Comprehensive Plan Roadway Segments

Traffic System Category	Segment 4 U.S. Hwy 441		Segment 5 U.S. Hwy 441		Segment 8 SR 235

Residual Capacity	5,122	395	8,982	800	7,845	702
Residual Percentage of Permitted Design Capacity Utilized	64.43%	69.38%	37.63%	37.98%	48.12%	48.34%

1 AADT & Peak Hour MSVs calculated using LOSPLAN 2012. County Facilities reflect a 10 percent reduction in the MSV calculated within LOSPLAN 2012 as set forth in the Generalized Tables for AADT / Peak Hour Volumes, FDOT 2018 Q/LOS Handbook.
2 Florida Department of Transportation. (2026). *2025 Count Data*. Accessed via Florida Traffic Online April 2026.
3 Source: City of Alachua April 13 2026 Development Monitoring Report.
4 Trip Generation Formula: ITE Trip Generation 11th edition (Code 495: Recreational Community Center); 28.82 AADT/1,000 sq. ft. * 21,344 sq. ft. = 615 AADT; 2.53 PM Peak/1,000 sq. ft. * 21,344 sq. ft. = 54 PM Peak Trips; Trip Distribution: Segment 4 – 17%; Segment 5 – 17%; Segment 8 – 16%; Segment 9 – 100%; Segment 10 – 25%; Segment 12 – 25%.

Evaluation & Findings: The projected trips would not negatively impact the level of service standard of any roadway segment.

Potable Water Impacts

Table 5. Potable Water Impacts

System Category	Gallons Per Day
Current Permitted Capacity[1]	3,000,000
Less Actual Potable Water Flows[1]	1,447,333
Reserved Capacity[2]	350,1000
Available Capacity	1,202,567
Increase/Decrease in Potable Water Demand from Application[3]	5,692
Residual Capacity	1,196,875
Residual Percentage of Permitted Design Capacity Utilized	60.10%

1 City of Alachua Public Services Department, April 2026
2 City of Alachua April 13 2026 Development Monitoring Report
3 Formula: Per FAC Chapter 62-0008: Parks, Public Picnic with toilet only: 4 GPD/Person*(1 person/15 sq. ft.*21,344 sq. ft.) = 5,692 GPD

The projected potable water demand would not negatively impact the level of service standard of the City's solid waste facilities.

Sanitary Sewer Impacts

Table 6. Sanitary Sewer Impacts

System Category	Gallons Per Day
Treatment Plant Permitted Capacity[1]	1,500,000
Less Actual Treatment Plant Flows[1]	756,000
Reserved Capacity[2]	325.846
Available Capacity	418,154
Increase/Decrease in Sanitary Sewer Demand from Application[3]	5,692
Residual Capacity	412,462
Residual Percentage of Permitted Design Capacity Utilized	72.50%

1 City of Alachua Public Services Department, April 2026
2 City of Alachua April 13 2026 Development Monitoring Report
3 Formula: Per FAC Chapter 62-0008: Parks, Public Picnic with toilet only: 4 GPD/Person*(1 person/15 sq. ft.*21,344 sq. ft.) = 5,692 GPD

The projected sanitary sewer demand would not negatively impact the level of service standard of the City's solid waste facilities.

Solid Waste Impacts

Table 7. Solid Waste Impacts

System Category	Pounds Per Day	Tons Per Year
Existing Demand[1]	45,412.00	8,287.69
Reserved Capacity[2]	43,496.82	7,938.17
Increase/Decrease in Demand Generated by Application[3]	256.13	46.74
New River Solid Waste Facility Anticipated Capacity[4]	30+ Years	

1 Bureau of Economic & Business Research, University of Florida, Estimates of Population by County and City in Florida (2025); Policy 2.1.a, Community Facilities Element. Formula: 11,353 Persons x 0.73 tons per year.
2 City of Alachua April 13 2026 Development Monitoring Report
3 Formula: Scincero and Sincero; Enviornmental Engineering: A Design Approach. Prentice Hall, New Jersey. 1996. (12lbs/1,000 sq. ft.*21,344 sq. ft. = 256.13 lbs/day).
4 New River Solid Waste Association, April 2026

The projected solid waste generated would not negatively impact the level of service standard of the City's solid waste facilities.

Recreation Facilities

The proposed zone district does not permit any residential development; therefore, there are no impacts to recreation facilities. Additionally, the proposed zone district would actually increase the amount of lands designated for public and recreational use in the City. The amendment will have no impact to the level of service of recreation facilities.

Public School Facilities

The proposed zone district does not permit any residential development; therefore, there are no impacts to public school facilities. The amendment will have no impact to the level of service of public-school facilities.

SUBMITTED BY CITY STAFF TO THE
PLANNING AND ZONING BOARD

ORDINANCE 26-XX

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS FROM RESIDENTIAL SINGLE FAMILY – 3 ("RSF-3"), TO GOVERNMENT FACILITY ("GF") ON A ± 0.49-ACRE SUBJECT PROPERTY; GENERALLY LOCATED AT THE SOUTHEAST CORNER OF NW 159TH LANE AND NW 141ST STREET, AND WEST OF THE CLEATHER HATHCOCK COMMUNITY CENTER; TAX PARCEL 03114-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, an application for a site-specific amendment to the Official Zoning Atlas ("Amendment") as further described herein has been filed with the City (the "Amendment") by the City of Alachua. ("Applicant" and "Property Owner"); and,

WHEREAS, a duly advertised quasi-judicial public hearing was conducted on the Amendment on June 9, 2026, by the City of Alachua Planning and Zoning Board ("PZB"), and the PZB reviewed and considered comments received during the quasi-judicial public hearing concerning the application and made its recommendation for _____ to the City Commission; and,

WHEREAS, the City Commission considered the recommendations of the PZB at duly advertised quasi-judicial public hearings on _____, 2026, and _____, 2026, and provided for and received public participation at both public hearings; and,

WHEREAS, the City Commission has determined and found the proposed Amendment to be consistent with the City of Alachua Comprehensive Plan and Land Development Regulations; and,

WHEREAS, for reasons set forth in this ordinance that is hereby adopted and incorporated as findings of fact, that the City Commission finds and declares that the enactment of this Amendment is in the furtherance of the public health, safety, morals, order, comfort, convenience, appearance, prosperity, or general welfare;

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Findings of Fact and Conclusions of Law

1. The above recitals are true and correct and are incorporated herein by reference.
2. The Amendment is consistent with the City of Alachua Comprehensive Plan and Land Development Regulations.
3. The Amendment will not cause a reduction in the adopted level of service standards for transportation, potable water, sanitary sewer, solid waste, stormwater, recreation, or public schools.

Section 2. Official Zoning Atlas Amended

The City of Alachua Official Zoning Atlas is hereby amended from Residential Single Family - 3 (RSF-3) to Government Facility (GF) on a ± 0.49-acre subject property, consisting of tax parcel number 03114-000-000 in accordance with the legal description found in Exhibit "A" and map found in Exhibit "B" attached hereto and incorporated herein by reference.

RE: Notice of Hearing to be Scheduled for Hathcock Community Center Small-Scale Comprehensive Plan Map Amendment and a Site-Specific Amendment to the Official Zoning Atlas (Rezoning).

Dear Mr. Crockett,

On January 7, 2026, the City of Alachua Planning & Community Development Department received your application for a Small-Scale Comprehensive Plan Map Amendment and a Site-Specific Amendment to the Official Zoning Atlas (Rezoning) for the Hathcock Community Center submitted on behalf of the City of Alachua. Based on review of the materials submitted, the City has determined that this application can now be scheduled for a hearing before the Planning & Zoning Board.

The application has been scheduled for the **June 9, 2026** Planning & Zoning Board meeting.

You must provide two *double sided, three-hole punched, color sets* of each **complete** application package, seven full size sets of site plans, and a digital copy of all materials in PDF format on a CD or by emailing a Cloud/FTP link to download the materials to planning@cityofalachua.org *no later than 10 business days prior to the Planning & Zoning Board meeting at which your application is scheduled to be heard*; therefore, the above referenced materials must be submitted to the City no later than ***Wednesday, May 20, 2026*** Materials may be submitted earlier than this date.

Additionally, Section 2.2.9(D) of the Land Development Regulations requires the applicant to place posted notice signs on the subject property at least 14 days prior to the public hearing; therefore, posted notice signs must be placed on the property no later than ***Thursday, May 21 2026***. These signs will be ready for pickup after 12:00 PM on Wednesday, May 20, 2026. You will be notified again when the signs are available.

If you plan to utilize a PowerPoint presentation or would like other materials to be available for reference during the public hearing, please submit the presentation or materials no later than 12:00 PM on the last business day prior to the Planning & Zoning Board meeting; therefore, the presentation or materials must be submitted no later than 12:00 PM on ***Monday, June 8, 2026***. Any presentation or materials may be submitted electronically by emailing them to planning@cityofalachua.org.

If you have any questions regarding the information above, please contact me at (386) 418-6123 or at pa_stevens@cityofalachua.org.

Sincerely,

Parker A.H. Stevens
Planner

RE: **Completeness Review for City of Alachua Hathcock Center, Small Scale Comprehensive Plan Map Amendment (SSCPA) and Amendment to the Official Zoning Atlas (Rezoning) Applications**

Dear Carson Crockett,

On January 07, 2026, the City of Alachua Planning & Community Development Department received your revised applications for a Small-Scale Comprehensive Plan Amendment (SSCPA) and a Site-Specific Amendment to the Official Zoning Atlas (Rezoning) on behalf of the City of Alachua. The applications propose to amend the Future Land Use Map (FLUM) Designation on parcels 03113-000-000 and 03120-000-000, 1.04 +/- acre, from Recreation to Public, parcel 03114-000-000, 0.44 +/- acre, from Medium Density Residential to Public, and to rezone parcel 03114-000-000 from Residential Single Family-3 (RSF-3) to Government Facilities (GF).

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee, in this case waived. The Planning Department has reviewed the aforementioned applications for completeness and finds that **the applications are now complete**.

An in-depth review of the content of the applications will now be performed, and the findings discussed at a Project Assistance Team (PAT) Meeting, which will be sent under separate cover.

If you have any questions regarding the information above, please contact me at (386) 418-6122 or br_thomas@cityofalachua.org.

Sincerely,

Bryan S. Thomas

1. Project Name: Hathcock Community Center Rezoning
2. Address of Subject Property: Unassigned
3. Parcel ID Number(s): 03114-000-000
4. Existing Use of Property: Vacant Residential
5. Future Land Use Map Designation : Medium Density Residential; Proposed Public
6. Existing Zoning Designation: RSF-3
7. Proposed Zoning Designation: GF
8. Acreage: +/- 0.49

B. APPLICANT

1. Applicant's Status ☒ Owner (title holder) ☐ Agent
2. Name of Applicant(s) or Contact Person(s): Carson J. Crockett, AICP Title: Principal Planner
   Company (if applicable): City of Alachua, Planning & Community Development Department
   Mailing address: P.O. Box 9
   City: Alachua State: Florida ZIP: 32616
   Telephone: ( ) 386-418-6137 FAX: ( ) e-mail: ccrockett@cityofalachua.org
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): _____
   Mailing Address: _____
   City: _____ State: _____ ZIP: _____
   * Must provide executed Property Owner Affidavit authorizing the agent to act on behalf of the property owner.

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☐ Yes ☒ No
   If yes, list names of all parties involved: _____
   If yes, is the contract/option contingent or absolute? ☐ Contingent ☐ Absolute

D. ATTACHMENTS

1. Statement of proposed change, including a map showing the proposed zoning change and zoning designations on surrounding properties
2. A current aerial map or plat of the property. (may be obtained from the Alachua County Property Appraiser.)
3. Concurrency Impact Analysis showing the impact on public facilities, including potable water, sanitary sewer, transportation, solid waste, recreation, stormwater, and public schools in accordance with Article 2.4.14 of the Land Development Regulations.
4. Analysis of Consistency with the City of Alachua Comprehensive Plan (analysis must identify specific Goals, Objectives, and Policies and describe in detail how the application complies with the noted Goal, Objective, or Policy.)

5. Analysis of compliance with the Standards for Site Specific Amendments to the Official Zoning Atlas, as defined in Section 2.4.2 of the Land Development Regulations (LDRs), and listed below:

   i. Consistent with Comprehensive Plan
   The proposed amendment is consistent with and furthers the goals, objectives, and policies of the Comprehensive Plan.

   ii. Consistent with Ordinances
   The proposed amendment is not in conflict with any portion of these LDRs or any of the City Code of Ordinances.

   iii. Logical Development Pattern
   The proposed amendment would result in a logical and orderly development pattern.

   iv. Pre-Mature Development
   The proposed amendment will not create premature development in undeveloped or rural areas.

   v. Incompatible with Adjacent Lands
   The uses permitted by the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands.

   vi. Adverse Effect on Local Character
   The proposed amendment will not adversely effect the character of the general area where it is proposed to be located by creating excessive traffic, density and/or intensities of use, building height and bulk, noise, lights, or other physical effects or nuisances.

   vii. Not Deviate from Pattern of Development
   The uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located.

   viii. Encourage Sprawl
   The proposed amendment will not encourage urban sprawl, either by resulting in strip or ribbon commercial development, leap-frog development or low density single dimensional development.

   ix. Spot Zoning
   The proposed amendment will not result in the creation of an isolated zone district unrelated to adjacent and surrounding zone districts (spot zoning).

   x. Public Facilities
   The proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, storm water management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development.

   xi. No Adverse Effect on the Environment
   The proposed amendment would not result in significantly adverse impacts on the natural environment, including but not limited to water, air, noise, storm water management, wildlife, vegetation, wetlands, and the natural functioning of the environment.

6. Three (3) sets of labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits. (Obtain from the Alachua County Property Appraiser).

7. Neighborhood Meeting Materials, including:
   i. Copy of the required published notice (advertisement) – must be published a newspaper of general circulation, as defined in Article 10 of the City's Land Development Regulations
   ii. Copy of written notice (letter) sent to all property owners within 400 feet, and mailing labels or list of those who received written notice
   iii. Written summary of meeting – must include (1) those in attendance; (2) a summary of the issues related to the development proposal discussed; (3) comments by those in attendance about the development proposal; and, (4) any other information deemed appropriate.

8. For applications requesting a zoning which permits residential uses, Public School Student Generation Form.

9. Legal description with tax parcel number.

10. Proof of ownership.

11. Proof of payment of taxes.

12. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any necessary technical review will be billed to the applicant at the rate of the reviewing entity. The invoice shall be paid in full prior to any legislative and/or quasi-judicial action of any kind on the petition, appeal, or development application.

All 12 attachments are required for a complete application. A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

I/We certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

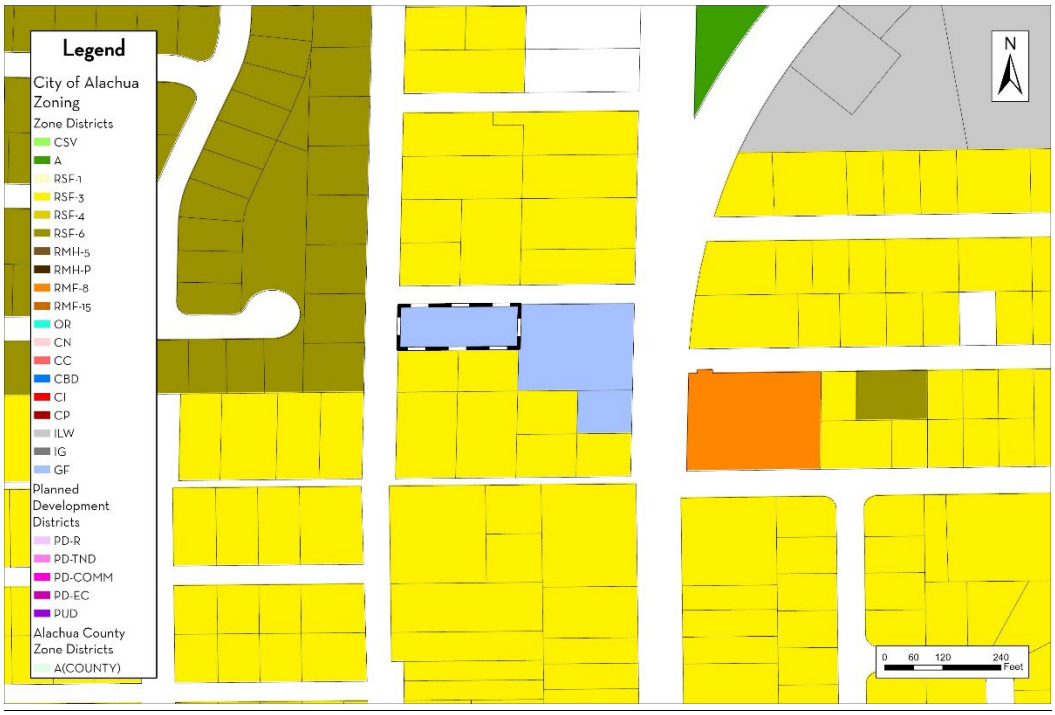
RE: Hathcock Community Center Site-Specific Amendment to the Official Zoning Atlas



Dear Bryan S. Thomas,

The City of Alachua is initiating a site-specific amendment to the Official Zoning Atlas (Rezoning) on property owned and maintained by the City. The application proposes amending the zone district from Residential Single-Family – 3 (RSF-3) to Government Facility (GF) on a +/- 0.49-acre subject property generally located at the southeast corner of NW 159th Lane and NW 141st Street, and west of the Cleather Hathcock Community Center (tax parcels 03114-000-000). The subject property is currently vacant residential. This amendment would allow property that the City recently acquired to be incorporated into the ongoing improvement project for the Cleather Hathcock Community Center.

Existing Zone District

Proposed Zone District

This application is a companion application to a small-scale Comprehensive Plan amendment.

If you have any questions regarding the information above, please contact me at (386) 418-6137 or at ccrockett@cityofalachua.org.

Sincerely,

Carson J. Crockett, AICP

Date: January 7, 2026

To: Bryan S. Thomas, AICP
Planning & Community Development Director

From: Carson J. Crockett, AICP
Principal Planner

RE: **Hathcock Community Center Rezoning Concurrency Impact Analysis**

The subject property is approximately 0.49-acres in size and the GF zone district permits a floor area ratio of up to 1.0 for parcels once acre or less in size. This permits a theoretical maximum build out of 21,344 square feet. These concurrency calculations considered the use of the property as a community center with the theoretical maximum build out scenario; however, it is unlikely that the maximum floor area permitted is ever reached.

Traffic Impact

The following impacts are projected at maximum build out of the subject property on the roadway segments identified in Table 1-1.

Table 1-1. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2]	Segment Description	Lanes	Functional Classification	Area Type	LOS
4	U.S. Hwy 441 from CR25A East Intersection to SR 235	4/D	Principle Arterial	Urban Trans	D
5	U.S. Hwy 441 from SR 235 to I-75	4/D	Principle Arterial	COMM	D
8	SR 235 from NW 143rd Place to US 441	2/U Bays	Major Collector	Comm	D
9	SR 235 from US 441 to NW 140th Street	2/U Bays	Major Collector	Comm	D
10	SR 235 from NW 140th Street to East City Limit	2/U	Major Collector	Comm	D
12	CR 241 from NW SR 235 to North City Limit	2/U	Major Collector	Comm	D

1 City of Alachua Comprehensive Plan, Transportation Element.
2 For developments generating less than 1,000 trips, affected roadway segments are identified as all those wholly or partially located within 1/2 mile of the development's ingress/egress, or to the nearest intersecting major street, whichever is greater [Section 2.4.14(H)(2)(a)of the LDRs].

Table 1-2. Projected Impact on Affected Comprehensive Plan Roadway Segments

Traffic System Category	Segment 4 U.S. Hwy 441		Segment 5 U.S. Hwy 441		Segment 8 SR 235	
	AADT	PM Peak	AADT	PM Peak	AADT	PM Peak

Available Capacity	1,007,636
Increase/Decrease in Potable Water Demand from Application[3]	5,692
Residual Capacity	1,001,944
Residual Percentage of Permitted Design Capacity Utilized	66.60%

1 City of Alachua Public Services Department, April 2025
2 City of Alachua January 2026 Development Monitoring Report
3 Formula: Per FAC Chapter 62-0008: Parks, Public Picnic with toilet only: 4 GPD/Person*(1 person/15 sq. ft.*21,344 sq. ft.) = 5,692 GPD

The projected potable water demand would not negatively impact the level of service standard of the City's solid waste facilities.

Sanitary Sewer Impacts

Table 3. Sanitary Sewer Impacts

System Category	Gallons Per Day
Treatment Plant Permitted Capacity[1]	1,500,000
Less Actual Treatment Plant Flows[1]	813,000
Reserved Capacity[2]	396,935
Available Capacity	290,065
Increase/Decrease in Sanitary Sewer Demand from Application[3]	5,692
Residual Capacity	284,373
Residual Percentage of Permitted Design Capacity Utilized	81.04%

1 City of Alachua Public Services Department, April 2025
2 City of Alachua January 2026 Development Monitoring Report
3 Formula: Per FAC Chapter 62-0008: Parks, Public Picnic with toilet only: 4 GPD/Person*(1 person/15 sq. ft.*21,344 sq. ft.) = 5,692 GPD

The projected sanitary sewer demand would not negatively impact the level of service standard of the City's solid waste facilities.

Solid Waste Impacts

Table 4. Solid Waste Impacts

System Category	Pounds Per Day	Tons Per Year
Existing Demand[1]	45,184.00	8,246.08
Reserved Capacity[2]	30,294.66	5,528.78
Increase/Decrease in Demand Generated by Application[3]	256.13	46.74
New River Solid Waste Facility Anticipated Capacity[4]	30+ Years	

1 Bureau of Economic & Business Research, University of Florida, Estimates of Population by County and City in Florida (2023); Policy 2.1.a, Community Facilities Element. Formula: 11,015 Persons x 0.73 tons per year.
2 City of Alachua January 2026 Development Monitoring Report
3 Formula: Scincero and Sincero; Enviornmental Engineering: A Design Approach. Prentice Hall, New Jersey. 1996. (12lbs/1,000 sq. ft.*21,344 sq. ft. = 256.13 lbs/day).
4 New River Solid Waste Association, April 2025

The projected solid waste generated would not negatively impact the level of service standard of the City's solid waste facilities.

Recreation Facilities

The proposed zone district does not permit any residential development; therefore, there are no impacts to recreation facilities. Additionally, the proposed zone district would actually increase the amount of lands designated for public and recreational use in the City. The amendment will have no impact to the level of service of recreation facilities.

Public School Facilities

The proposed zone district does not permit any residential development; therefore, there are no impacts to public school facilities. The amendment will have no impact to the level of service of public school facilities.

PLANNING & COMMUNITY DEVELOPMENT
DIRECTOR BRYAN S. THOMAS, AICP

Date: January 7, 2026

To: Bryan S. Thomas, AICP
Planning & Community Development Director

From: Carson J. Crockett, AICP
Principal Planner

RE: **Hathcock Community Center Rezoning Comprehensive Plan Consistency**

The goals, objectives, and policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. An evaluation and findings of consistency with the identified GOPs is also provided below.

Future Land Use Element

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.6: *Public*

The City shall designate a Public land use category. Appropriate locations for public facility land uses, to include all lands owned and managed by a governmental entity, should be based upon the following minimum criteria:

1. Public facilities are those uses which, at a minimum, relate to government owned and managed transportation, sanitary sewer, potable water, solid waste, drainage, conservation, education, government service systems, and other utilities such as gas, electric, telephone and cable.
2. Public facility land uses may be located within all land use categories on the Future Land Use Map provided such uses are compatible with adjacent land uses consistent with this Comprehensive Plan.
3. The City shall encourage the use of common corridors for utility systems, including sanitary sewer, potable water, re-use, electricity, gas and other utilities.

Evaluation & Findings: The Comprehensive Plan includes "parks and recreation systems" in the definition of public facilities. The GF zone district permits a broad set of government service uses, which includes parks and recreation systems. The current use of the property

vacant residential, but the property will be incorporated with the neighboring Hathcock Community Center, which is a permitted use in the GF zone district.

Objective 3.5: *Protection of Historic Districts and Historic Resources*

The City shall ensure that its land use, transportation, housing, and economic development policies and regulations are consistent with and adequately facilitate historic preservation.

Evaluation & Findings: The subject property, although located in an already developed portion of the City, is not known to have any listed historic resources on it and the subject property is not located within a historic district.

Policy 4.1.c: Compatible infill development shall be encouraged within the Central City Area.

Objective 4.3: *Redevelopment*

The City shall encourage the redevelopment of existing developed properties, vacant properties or buildings, or abandoned properties and buildings, particularly within the Community Redevelopment Area and the Central City Area.

Evaluation & Findings: The subject property is located within the Central City Area. The existing use of the property is vacant residential and the proposed amendment would enable expansion of the existing Hathcock Community Center consistent with this policy..

Recreation Element

Policy 1.2.b: The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

Evaluation & Findings: The proposed amendment would add additional functional park space to the City's level of service capacity by expanding the GF zone district from the adjacent Hathcock Center to the subject property currently zoned RSF-3.

RE: **Hathcock Community Center Rezoning LDRs Analysis**

Section 2.4.2(E)(1) of the City's Land Development Regulations (LDRs) establishes the standards with which all amendments to the Official Zoning Atlas must be found compliant. An evaluation of the application against the standards of Section 2.4.2(E)(1) is provided below.

(1) **Competent substantial evidence provided**. The applicant has provided competent substantial evidence that is made part of the record of the hearing that:

(a) ***Consistent with the Comprehensive Plan***. The proposed amendment is consistent with and furthers the goals, objectives and policies of the Comprehensive Plan.

Evaluation: An evaluation of consistency with the City of Alachua Comprehensive Plan has been submitted as part of this application.

(b) ***Consistent with ordinances***. The proposed amendment is not in conflict with any portion of these LDRs or any of the City Code of Ordinances.

Evaluation: This analysis demonstrates consistency with the Land Development Regulations and the proposed zone district of GF would not conflict with any ordinances.

(c) ***Logical development pattern***. The proposed amendment would result in a logical and orderly development pattern

Evaluation: The proposed zone district of GF would extend an existing GF zone district and expand the existing community center located central to a residential area which it primarily serves, resulting in a logical development pattern.

(d) ***Premature development***. The proposed amendment will not create premature development in undeveloped or rural areas.

Evaluation: The surrounding area is urban in context and is mostly developed. The amendment would not result in premature development in an undeveloped area.

(e) *Incompatible with adjacent lands*. The uses permitted by the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands.

Evaluation: The subject property is adjacent to GF and the existing community center to the east, RSF-3 and single-family residential to the north and south, and RSF-6 and single-family residential to the west. The GF zone district permits a wide range of community service uses, all of which are generally compatible with residential uses as the GF district is "intended to include public lands for the purpose of accommodating governmental facilities." Any uses which are less compatible will be required to be properly buffered as required by the Comprehensive Plan and Land Development Regulations.

(f) *Adverse effect on local character* The proposed amendment will not adversely effect the character of the general area where it is proposed to be located by creating excessive traffic, density and/or intensities of use, building height and bulk, noise, lights or other physical effects or nuisances.

Evaluation: The GF zone district permits a wide range of community service uses, all of which are generally compatible with residential uses as the GF district is "intended to include public lands for the purpose of accommodating governmental facilities." Any uses which are less compatible will be required to be properly buffered as required by the Comprehensive Plan and Land Development Regulations. No adverse effects on local character are anticipated as a result of the proposed amendment.

(g) *Not deviate from pattern of development*. The uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located.

Evaluation: The proposed zone district of GF would extend an existing GF zone district and expand the existing community center located central to a residential area which it primarily serves, maintaining the existing development pattern of the surrounding area.

(h) *Encourage sprawl*. The proposed amendment will not encourage urban sprawl, either by resulting in strip or ribbon commercial development, leap-frog development or low-density single dimensional development.

Evaluation: The surrounding area is urban in context and is mostly developed. The subject property is also located in the Central City Area. The proposed zone district of GF does not permit residential uses of any density nor is it intended for highway-oriented uses. The companion small-scale Comprehensive Plan amendment application has been evaluated for urban sprawl against the 13 primary indicators and eight urban form criteria established in Florida Statutes. The proposed amendment would not encourage urban sprawl.

(i) *Spot zoning*. The proposed amendment will not result in the creation of an isolated zone district unrelated to adjacent and surrounding zone districts (spot zoning).

Evaluation: The proposed amendment would extend an existing GF zone district adjacent to residential zone districts (primarily RSF-3) which the GF zone district primarily serves. The zone districts are related and not isolated and would not result in spot zoning.

(j) *Public facilities*. The proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, stormwater management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development.

Evaluation: The subject property is within the City's service areas for both potable water and sanitary sewer and utilities are available at the subject property. No major extensions of utilities would be required.

(k) *No adverse effect on the environment*. The proposed amendment would not result in significantly adverse impacts on the natural environment, including, but not limited to, water, air, noise, stormwater management, wildlife, vegetation, wetlands, and the natural functioning of the environment.

Evaluation: The subject property is not known to have any significant environmental features or wildlife habitat on the site and is already within in urban area. There are regulated tree species on the site and all requirements in Section 6.2 of the City's Land Development Regulations will apply at time of development.

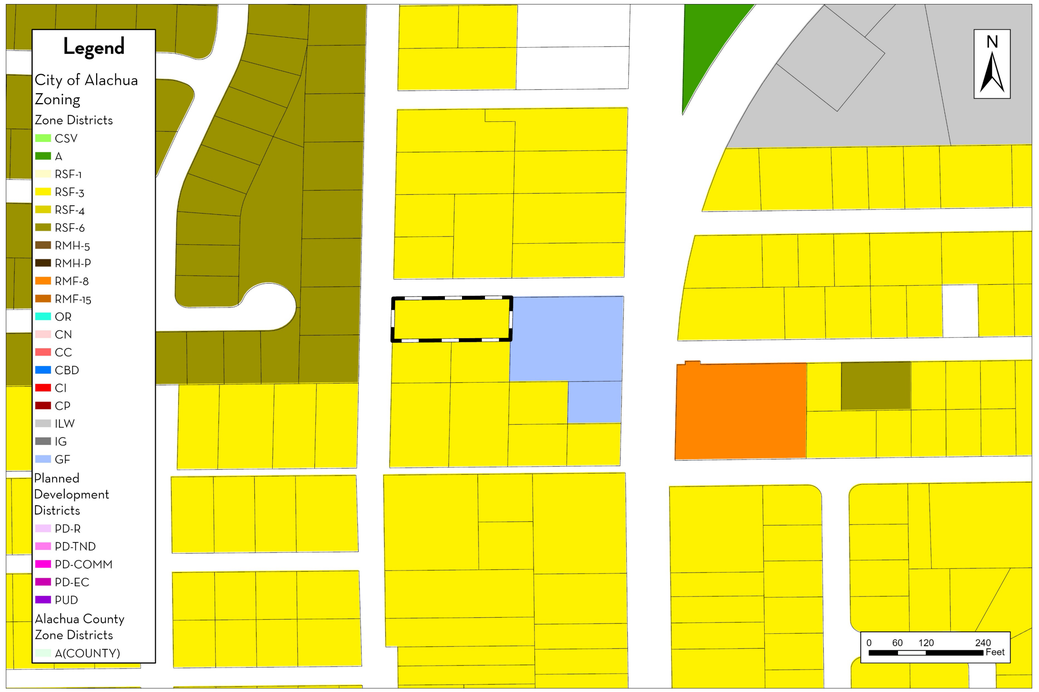
Neighborhood Meeting Tonight

to discuss

Rezoning of the subject property generally located at the southeast corner of NW 159th lane and NW 141st Street, and west of the Cleather Hathcock Community Center

This is not a public hearing. The purpose of this meeting is to inform neighboring property owners of the nature of the proposal and to seek their comments.

The Subject Property



The property proposed to be rezoned is directly adjacent to the present day Hathcock Center, located just south of NW 159th Lane and east of NW 141st Street.

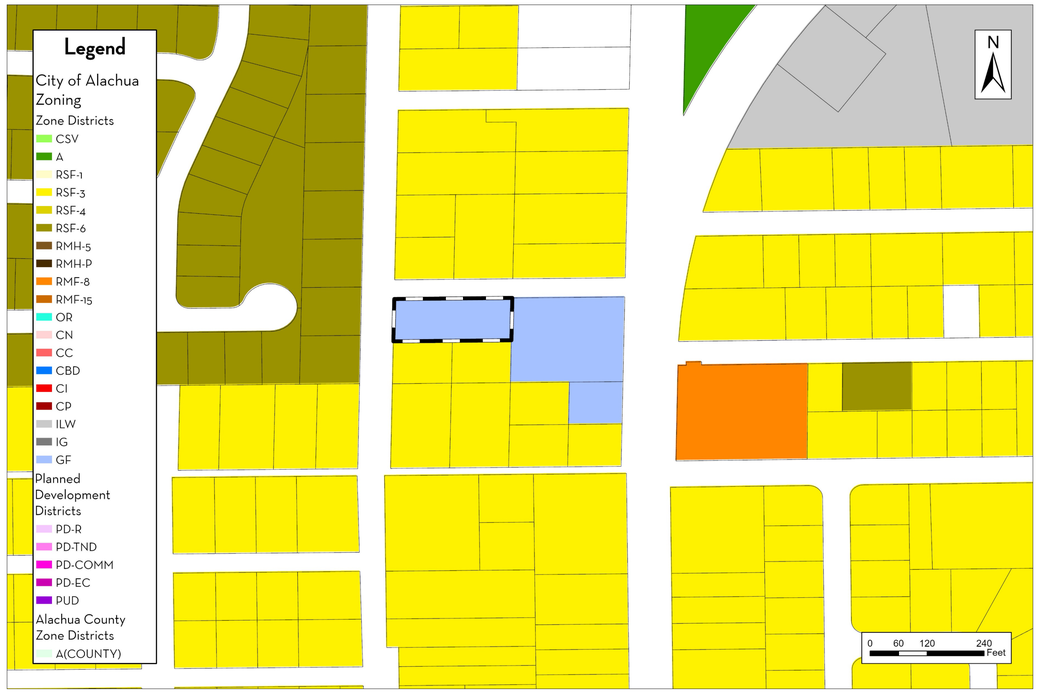
The property is approximately 0.49-acres (or 21,344 square feet).

The property has historically been zoned for some form of residential development, but has remained vacant and undeveloped for several years. This is the current state of the property.

The City of Alachua recently acquired the parcel with the intent to incorporate the property into the Hathcock Center. The rezoning of the property from Residential Single-Family – 3 (RSF-3) to Government Facility (GF) will better reflect the property's function as part of the Hathcock Center and the City's Recreation & Culture Department.

Existing Zone District

The property is currently zoned as Residential Single-Family – 3 (RSF-3).



The RSF-3 zone district permits up to 3 dwelling units per acre and typically permits the development of single-family homes and supporting community services. Little to no non-residential or non-institutional development is permitted in the RSF-3 zone district.

Proposed Zone District

The proposed zone district is Government Facility (GF).

The GF zone district is typically used on government owned lands, including City lands. The GF zone district does not permit for any residential development. Development is typically limited to public and institutional uses.

In this case, the rezoning is to directly serve the Hathcock Center.

From: Carson J. Crockett, AICP
Principal Planner

RE: **Hathcock Community Center Rezoning Neighborhood Meeting Summary**

On January 6, 2026, the Planning & Community Development Department held a neighborhood meeting at the Cleather Hathcock Community Center (located at 15818 NW 140th Street) to discuss the rezoning of the +/- 0.49-acre subject property (tax parcel 03114-000-000). The neighborhood meeting was held in an open house format. Carson J. Crockett, AICP, was present to conduct the meeting and Bryan S. Thomas, AICP and Parker Stevens were present as representatives of the City to observe. The proposed rezoning from RSF-3 to GF was discussed with each attendee and the purpose of the rezoning to include the recently acquired property into the Hathcock Center property was discussed.

Meeting Start: 6:00 PM. Five total participants, but only four signed in. See attached sign in sheet

- Participants expressed a desire to ensure the large heritage trees on the property are preserved during the following stages of the site design and development review process.
- Participants asked if the City had attempted to acquire additional parcels to the south. Staff confirmed that the City had attempted to purchase parcel 03119-000-000, but were unable at this time.
- Participants asked where stormwater from future development would drain to, whether it be SR 235 or another basin. Staff confirmed that stormwater currently flows towards SR 235, but any future development would require onsite stormwater facilities. One participant followed up with concerns about the design of stormwater facilities in the area.
- Participants asked about the design of the proposed community center project. Staff indicated that they were not involved in that portion of the project and that the meeting was solely to discuss the rezoning of parcel 03114-000-000.
- Participants relayed a strong appreciation for the history of the surrounding neighborhood and property.

- Participants were concerned that the neighborhood meeting notices did not reach far enough. Staff confirmed that the mailings sent complied with the City's Land Development Regulations.
- Most participants expressed positive reactions regarding the rezoning. Most comments and concerns were related to the future design of the site and proposed community center project.

Last Participant Departed: 6:48 PM. Staff remained on site until 7:00 PM for any other participants to attend.

WARRANTY DEED

(STATUTORY FORM – SECTION 689.02, F.S.)

This indenture made the 22nd day of October, 2025 between Paristamika V. Owens, whose post office address is 1829 Northeast 3rd Avenue, Gainesville, FL 32641, of the County of Alachua, Florida, Grantor, to City of Alachua Florida, a municipality in Alachua County, whose post office address is 15100 Northwest 142 Terrace, Alachua, FL 32615, of the County of Alachua, Florida, Grantee:

Witnesseth, that said Grantor, for and in consideration of the sum of TEN DOLLARS (U.S.$10.00) and other good and valuable considerations to said Grantor in hand paid by said Grantee, the receipt whereof is hereby acknowledged, has granted, bargained, and sold to the said Grantee, and Grantee's heirs and assigns forever, the following described land, situate, lying and being in Alachua County, Florida, to-wit:

The North 1/2 of Lot 2, Block 25, of Alachua Realty Co.'s Addition to the City of Alachua Fla as per the plat thereof recorded in Plat Book A, Page 100, of the Public Records of Alachua County, Florida.

The subject property is not the homestead of Grantor.

Together with all the tenements, hereditaments and appurtenances thereto belonging or in anywise appertaining.

Subject to taxes for 2025 and subsequent years, not yet due and payable; covenants, restrictions, easements, reservations and limitations of record, if any.

TO HAVE AND TO HOLD the same in fee simple forever.

And Grantor hereby covenant with the Grantee that the Grantor is lawfully seized of said land in fee simple, that Grantor have good right and lawful authority to sell and convey said land and that the Grantor hereby fully warrant the title to said land and will defend the same against the lawful claims of all persons whomsoever.

In Witness Whereof, Grantor have hereunto set Grantor's hand and seal the day and year first above written.

Signed, sealed and delivered in our presence:

Paristamika V. Owens

City of ALACHUA

PUBLIC NOTICE OF ENACTMENT OF AN ORDINANCE THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on August 24, 2026 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following:

ORDINANCE 26-11

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE SMALL-SCALE AMENDMENT OF THE CITY OF ALACHUA COMPREHENISVE PLAN FUTURE LAND USE MAP; AMENDING THE FUTURE LAND USE MAP CLASSIFICATION FROM MEDIUM DENSITY RESIDENTIAL AND RECREATION TO PUBLIC ON A ± 1.48-ACRE SUBJECT PROPERTY GENERALLY LOCATED AT 15818 NW 140TH STREET; TAX PARCEL NUMBERS 03113-000-000; 03114-000-000; 03120-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application, staff report, and any related application materials are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m., one week prior to the date of hearing. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

our town special."

The Neighbor Challenge also features an ongoing Business Spotlight recognizing local organizations that contribute to the community. The inaugural spotlight highlights Glanzer Realty. Other participating businesses and organizations include Newberry Jam, Capricious Local Eatery, Edward Jones, The Yellow Acres, Mitchell's Specialty Meats and Bakery, Two Sisters Coffee Co., Newberry Parks & Recreation and the City of Newberry.

Recreation and Enrichment

The Martin Luther King Jr. Community Center will continue offering summer recreation and enrichment programs through Aug. 31. Weekly activities include open gym pickleball on Newberry High School students will host a free community car wash July 18-19 at the school's bus loop. Sponsored by Quikrete Cement, the event is open to residents of Newberry and Archer who present proof of residency. Students will wash cars, trucks, vans and SUVs from 11 a.m. to 3 p.m. both days.

Operation Cool Down

Families looking for relief from the summer heat can take part in Operation Cool Down on July 20 at Newberry Place.

Hosted by the City of Newberry and the Newberry Fire Department, the event will run from 10:30 to 11:30 a.m. and will feature water activities, opportunities for children to meet local firefighters and frozen treats.

Organizers noted that

Property Taxes

Homeowners will also have an opportunity to learn more about property taxes during a free educational program on July 22. Presented by the Alachua County Property Appraiser's Office, the program is intended for residents who recently purchased a home, moved

participants to register in advance.

CITY OF ARCHER ESTABLISHED 1947

NOTICE OF PUBLIC HEARING BY CITY COMMISSION ARCHER, FLORIDA

Notice is hereby given that the proposed ordinance, whose title hereafter appears, will have a second reading on the 27th day of July 2026, at the Special City Commission meeting starting at 6:45 p.m. or as soon after as may be heard. The public is hereby notified that the City Commission will conduct an in-person public hearing on July 27th, 2026, at 6:45p.m., or as soon thereafter as the matters can be heard.

A copy of said ordinance may be inspected by any member of the public at the Office of the City Manager. All interested parties may appear and be heard with respect to the proposed ordinance.

ORDINANCE NUMBER 03-2026

AN ORDINANCE OF THE CITY OF ARCHER, FLORIDA AMENDING CHAPTER 35, SECTION 35-7 TO REPEAL SUBSECTION (H) DUE TO STATUTORY PRE-EMPTION; PROVIDING FOR REPEAL OF ALL CONFLICTING ORDINANCES; PROVIDING FOR SEVERABILITY AND PROVIDING AN EFFECTIVE DATE.

All interested people are invited to attend and be heard. Written comments may be filed with the City Managers Office for consideration.

All persons are advised that, if they decide to appeal any decision made at this public hearing or meeting, they will need a record of the proceedings and, for such purpose, they may need to ensure that a verbatim record of the proceedings is made, which record includes the testimony and evidence upon which the appeal is to be based.

City of ALACHUA

PUBLIC NOTICE OF ENACTMENT OF AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on July 27, 2026, at 12:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following ordinance as titled:

Ordinance 26-10

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS FROM COMMUNITY COMMERCIAL ("CC"), COMMERCIAL INTENSIVE ("CI"), AND PLANNED DEVELOPMENT–RESIDENTIAL ("PD-R") TO PD-R AND PLANNED DEVELOPMENT – COMMERCIAL ("PD-COMM") ON A ± 182-ACRE SUBJECT PROPERTY; GENERALLY LOCATED AT 16650 NW US HIGHWAY 441; TAX PARCELS 03042-050-003; 03042-050-004; 03042-050-005; 03042-050-010; 03042-051-001; 03046-003-000; 03046-003-001; 03046-003-003; 03046-003-004; 03046-003-005; 03875-001-001; 03875-010-001; 03875-010-002; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application, staff report, and any related materials are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

AFFIDAVIT FOR POSTED LAND USE SIGN

I, JEAN-PAUL PEREZ, POSTED THE LAND USE SIGN(S)
(Print Name)

ON 7/1/2026 FOR THE Hathcock Community Center (Rezoning)
(Date) (Project name & type of action)

LAND USE ACTION AS PER ARTICLE 2.2.9(D) OF THE LAND DEVELOPMENT

REGULATIONS. THIS WILL BE INCLUDED IN THE STAFF REPORT.

(Signature)

3
(Number of signs)

Posted Notice Location Map
PR26-0001 | Hathcock Community Center

Pursuant to Section 2.2.9(D) of the City's Land Development Regulations, posted notice signs must be placed on the land that is the subject of the application, along each street which is adjacent to or runs through the land in a manner that makes them clearly visible. Signs shall be posted at regular intervals of not more than 400 feet when the land subject to the application has less than 1,500 feet of road frontage. When the land subject to the application has 1,500 feet or more of road frontage, signs shall be posted at intervals of not more than 1,320 feet.

Signs shall be inspected by the City subsequent to their posting. The applicant shall be responsible for ensuring that the posted notice is maintained on the land subject to the application until the completion of the final public hearing on the application.

SIGNS MUST BE REMOVED BY THE APPLICANT WITHIN TEN DAYS AFTER THE FINAL DECISION ON THE APPLICATION

Commission Agenda Item

MEETING DATE: August 24, 2026

SUBJECT: Ordinance 26-14: An ordinance of the City of Alachua, Florida; Extending the corporate limits of the City of Alachua, Florida to include certain lands lying contiguous to the existing corporate limits of the City (Tax Parcel 03961-000-000); Providing that all existing laws, ordinances, rules and regulations shall apply in said area; Providing the property and inhabitants are subject to existing indebtedness and liable for taxation; providing for severability; and providing an effective date. (Legislative Hearing; Second Reading)

PREPARED BY: Parker Stevens

RECOMMENDED ACTION:

Staff recommends that the City Commission approve Ordinance 26-14 upon second and final reading on August 24, 2026.

I move that, based on the competent substantial evidence provided, this Commission adopt Ordinance 26-14 upon second and final reading of Ordinance 26-14 for August 24, 2026.

Summary

The review process for Voluntary Annexations is governed by Florida Statute 177.044. In order for an area to be annexed, it must be contiguous to a municipality, be reasonably compact, and not create an enclave.

The ± 39.73-acre subject property is generally located 14062 NW US Highway 441 (tax parcel(s) 03961-000-000),and has an Alachua County future land use designation of Agricultural / Rural, and Alachua County zoning designation of Agricultural.

In compliance with F.S. 171.044 (5), a copy of the notice, via certified mail, was sent to the Alachua County Board of County Commissioners on April 16, 2026, not fewer than 10 days prior to publishing the ordinance notice. Per F.S. 177.044 (2), the notice was published for two consecutive weeks, July 23 and 30, 2026, in the Alachua County Today newspaper prior to the hearing.

The Alachua County Board of County Commissioners has not provided any comment on the proposed annexation to date.

The City Commission approved Ordinance 26-14 upon first reading on August 10, 2026.

Section 1.7.7 of the City's Land Development Regulations states that lands being annexed shall retain their current unincorporated zone district classification until an amendment to the Comprehensive Plan is adopted by the City. The landowner may request, or the City Commission or Planning and Zoning Board, in the City's sole discretion, may initiate a zone district classification in accordance with Section 2.4.2, Site-specific amendments to the Official Zoning Atlas, following adoption of the Comprehensive Plan amendment. The zone district classification shall be consistent with the Comprehensive Plan Future Land Use Map Designation. No development, redevelopment, or expansion shall be initiated until the City adopts an amendment to the Comprehensive Plan and Official Zoning Atlas for the area being annexed.

ORDINANCE 26-14

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA; EXTENDING THE CORPORATE LIMITS OF THE CITY OF ALACHUA, FLORIDA TO INCLUDE CERTAIN LANDS LYING CONTIGUOUS TO THE EXISTING CORPORATE LIMITS OF THE CITY (TAX PARCEL 03961-000-000); PROVIDING THAT ALL EXISTING LAWS, ORDINANCES, RULES AND REGULATIONS SHALL APPLY IN SAID AREA; PROVIDING THAT THE PROPERTY LAND INHABITANTS ARE SUBJECT TO EXISTING INDEBTEDNESS AND LIABLE FOR TAXATION; PROVIDING FOR SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, Hills & Lindsay & McMillan & Pardi & Werner, individuals, applicants & owners of the property to be annexed, has authorized the execution of a petition requesting that the City limits of the City of Alachua, Florida, be extended to include their land; and,

WHEREAS, pursuant to the provisions of Florida Statute 171.044, a notice of annexation has been published once each week for two consecutive weeks in the Alachua County Today newspaper, meeting the requirements of advertising in Florida Statute 171.044; and,

WHEREAS, pursuant to the provisions of Florida Statute 171.044, a notice of annexation has been delivered by certified mail to the Board of County Commissioners of Alachua County, Florida no fewer than 10 days prior to the publishing of the first required notice of annexation meeting the requirements of notice in Florida Statute 171.044; and,

WHEREAS, the City Commission of the City of Alachua, Florida finds that the real property is contiguous to the existing corporate limits of the City, and is reasonably compact, and does not create an enclave, and meets the requirements for voluntary annexation as established in Florida Statute 171.044;

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Extending the Corporate Limits of the City of Alachua, Florida to Include Certain Lands Lying Contiguous to the Existing Corporate Limits of the City

A. Legal Description (Tax Parcel 03961-000-000).

The corporate limits of the City of Alachua, Florida are hereby amended to include lands described in the legal description attached to this ordinance and identified as "Exhibit A."

B. Map.

A location map – including the amended municipal boundary of the City of Alachua, Florida – is hereby attached to this ordinance and identified as "Exhibit B."

Section 2. Providing that All Existing Laws, Ordinances, Rules and Regulations Shall Apply

All laws, ordinances, rules and regulations of the City of Alachua, Florida of general application throughout the existing boundaries and corporate limits shall apply through the boundaries and corporate limits of said City as extended by this Ordinance.

Section 3. Official Zoning Atlas

Until the City of Alachua, Florida shall exercise its zoning power over the territories annexed, all of the current zoning regulations and maps heretofore adopted by the Board of County Commissioners of Alachua County, Florida shall continue in full force and effect throughout the territory annexed, and shall be enforced by the City of Alachua.

Section 4. Repealing Clause

All ordinances or parts of ordinances in conflict with this ordinance are, to the extent they conflict with this ordinance, repealed.

Section 5. Providing for Severability

It is the declared intent of the Alachua City Commission that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by a court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 6. Effective Date

This Ordinance shall be effective upon its passage and adoption on the second and final reading.

PASSED on first reading on the 10th day of August, 2026.

PASSED and **DULY ADOPTED**, in regular session, with a quorum present and voting, by the City Commission, upon second reading this _____, day of _____ , 2026.

Voluntary Annexation Application

Reference City of Alachua Land Development Regulations, Section 1.7.7

Important Information and Procedures:

Two (2) public hearings before the City Commission are required to consider a request for voluntary annexation. *Applicants or their authorized agents should be present at all public hearings.*

Annexation of property into the City's jurisdiction does not change the Future Land Use Map Designation or zoning of the property. The property will retain its current designations until amended by the property owner. The property owner will be responsible for submitting applications and fees for a Comprehensive Plan Amendment to the Future Land Use Map and a rezoning within one year of the effective date of the annexation.

A. PROJECT

1. Project Name: Project McMillan
2. Address of Subject Property: 14062 and 14060 NW US HWY 441
3. Parcel ID Number(s): 03961-000-000
4. Existing Use of Property: Agricultural activities
5. Future Land Use Map Designation: County - Rural / AG
6. Zoning Classification: Agricultural
7. Acreage: 40
8. Number and Type of Existing Structures on the Property: Misc. small structures / hay barn / single family home

B. APPLICANT

1. Applicant's Status ■ Owner (title holder) ☐ Agent
2. Name of Applicant(s) or Contact Person(s): Hill & Lindsay & McMillan & Pardi & Werner Title: Individuals
   Company (if applicable): N/A
   Physical address: N/A
   Mailing Address: Scruggs, Carmichael and Wershow, P.A. ATTN Kelley Jones. 4923 NW 43rd Street
   City: Gainesville State: FL ZIP: 32606
   Telephone: (352) 376-5242 FAX: _____ e-mail: kelley@scwlegal.org
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): _____
   Mailing Address: _____
   City: _____ State: _____ ZIP: _____
   Telephone: _____ FAX: _____ e-mail: _____

   * Must provide executed Authorized Agent Affidavit authorizing the agent to act on behalf of the property owner.

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ■ Yes ☐ No
   If yes, list names of all parties involved: Atlee Property Partners, LLC
   If yes, is the contract/option contingent or absolute? ■ Contingent ☐ Absolute

D. **ATTACHMENTS**

1. A current aerial map or plat of the property (may be obtained from the Alachua County Property Appraiser.)
2. Two (2) sets of all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits. (Obtain from the Alachua County Property Appraiser).
3. Property survey or boundary sketch of the property, including legal description (metes and bounds) with tax parcel number, signed and sealed by a professional land surveyor.
4. Proof of ownership (recorded warranty deed.)
5. Proof of payment of taxes.
6. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any necessary technical review will be billed to the applicant at the rate of the reviewing entity. The invoice shall be paid in full prior to any legislative and/or quasi-judicial action of any kind on the petition, appeal, or development application.

All 6 attachments are required for a complete application. **A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.**

I/We certify and acknowledge that I/We are the owner(s) of real property hereinafter described, or have received and hereby submit written authorization from the owner(s) of the real property to act on their behalf. I/We petition the City of Alachua to extend its corporate limits by voluntary annexation to include the attached legal description of real property.

I/We hereby certify:

1. That the real property described in the attached legal description is contiguous to the existing city limits of the City of Alachua, Florida.
2. That the real property described in the attached legal description is reasonably compact in character.
3. That annexation of the real property described in the attached legal description will not result in the creation of enclaves (that is areas of unincorporated county property completely surrounded by the City of Alachua.)
4. That the owner is the fee simple absolute owner of the real property described in the attached legal description and that there are no leans, encumbrances of title, clouds of any type.
5. That the information contained herein is true and correct to the best of my/our knowledge.
6. That, in accordance with Section 1.7.7 of the City's Land Development Regulations, the property owner will be responsible for submitting applications and fees for a Comprehensive Plan Amendment to the Future Land Use Map and a rezoning within one year of the effective date of the annexation.

J.K. JESS IRBY, ESQ. CLERK OF COURT
ALACHUA COUNTY, Florida

Doc Stamp-Deed: $0.70

This instrument prepared without benefit of title search or legal opinion of title by:

Marvin W. Bingham, Jr., Esq.
BINGHAM & MIKOLAITIS, P.A.
P.O. Box 1930
Alachua, Florida 32616-1930
File #18-279

Tax Parcel #03961-000-000 and #03961-002-000

NOTE TO CLERK, DOR AUDITORS, PROPERTY TAX APPRAISER, AND TAX COLLECTOR:
This deed is exempt from deed documentary stamp tax pursuant to Letter of Technical Advice No. 00B4-024 and does not result in loss of previously filed Homestead Exemption or re-assessment of property value pursuant to FS 193.155, FS 193.1554, and AGO 2001-31 (April 26, 2001).

WARRANTY DEED
(Enhanced Life Estate)

THIS INDENTURE, made this 18th day of December, 2018 between **EULA LOLE MCMILLAN, an unremarried widow**, whose post office address is P. O. Box 1011, Alachua, FL 32616, Grantor, and **EULA LOLE MCMILLAN** , whose post office address is P. O. Box 1011, Alachua, FL 32616, for a life estate, without any liability for waste, with full power and authority in said life tenant to sell, convey, mortgage, lease or otherwise dispose of the property described below, in fee simple, with or without consideration, without joinder of the remaindermen, and with full power and authority to retain any and all proceeds generated thereby, and upon the death of the life tenant, the remainder, if any, to **LORRAINE PARDI, PAULA COY WERNER, JENNIFER LEE LINDSAY, JACQUELINE CHRISTINE HILL and GARY WARREN MCMILLAN,** whose post office address is P.O. Box 1011, Alachua, FL 32616, as Grantees.

Grantor reserves the right to re-convey the property to herself without the necessity for any consideration being paid and by doing so thus terminates any interest that might otherwise have accrued to the Grantee(s)/remainder persons or to their creditors, heirs, assigns or successors in interest.

WITNESSETH that said Grantor, for and in consideration of the sum of Ten and no/100 ($10.00) Dollars, and other good and valuable considerations to said Grantor in hand paid by said Grantees, the receipt whereof is hereby acknowledged, has granted, bargained and sold to the said Grantees, and

Grantees' heirs and assigns forever, the following described land, situate, lying and being in **Alachua County**, Florida, to wit:

Tax Parcel #03961-000-000

The SW 1/4 of the NE 1/4, and the West 210 feet of the NW 1/4 of the NE 1/4 lying South of SR-25 (U.S. 441), LESS the North 100 feet of the West 210 feet of the NW 1/4 of the NE 1/4 lying South of SR-25, of Section 24, Township 8 South, Range 18 East, Alachua County, Florida.

Tax Parcel #03961-002-000

The North 100 feet of the West 210 feet of the NW 1/4 of the NE 1/4 lying South of SR-25 of Section 24, Township 8 South, Range 18 East, Alachua County, Florida.

SUBJECT TO, and together with, all covenants, easements, reservations and restrictions of record, and taxes for the year 2019 and all subsequent years,

TOGETHER WITH all the tenements, hereditaments and appurtenances thereto belonging or in anywise appertaining,

TO HAVE AND TO HOLD, the same in fee simple forever.

AND said Grantor hereby covenants with said Grantees that the Grantor is lawfully seized of said land in fee simple; that the Grantor has a good right and lawful authority to sell and convey said land; that the Grantor hereby fully warrants the title to said land and will defend the same against the lawful claims of all persons whomsoever, and that said land is free of all encumbrances, except taxes accruing subsequent to December 31, 2018.

IN WITNESS WHEREOF, Grantor has hereunto set her hand and seal the day and year first above written.

Signed, sealed and delivered in our presence:

Witness: Marvin W. Bingham, Jr.

Witness: Susan L. Mikolaitis

Eula Lole McMillan, Grantor

City of Alachua

TRACI L. GRESHAM
CITY MANAGER

PLANNING & COMMUNITY DEVELOPMENT
DIRECTOR KATHY WINBURN, AICP

June 1, 2017

RE: Annexation Cycle Open in the City of Alachua

Dear Property Owner:

Property you own in proximity to the City of Alachua city limits has been identified as an enclave. This means that your property is located within Alachua County, but is surrounded on all sides by property located within the City of Alachua.

The City of Alachua has opened up an Annexation Cycle. For all applications for annexation submitted by the end of the business day on August 1, 2017, the **APPLICATION FEES HAVE BEEN WAIVED.**

Attached is an information sheet outlining some of the benefits to becoming part of the City of Alachua, known as the *Good Life Community*.

Should you have any questions or wish to set up a time to discuss the annexation of your property into the City of Alachua city limits, please feel free to contact the Planning & Community Development Department at (386) 418-6120. An application for annexation is also available on the front page of the City's website at www.cityofalachua.com.

Sincerely,

Kathy Winburn

Kathy Winburn, AICP
Planning & Community Development Director

14062 and 14060 NW US Hwy 441

Pros of Annexing Into the City Limits of the City of Alachua

- Potentially Expedited Development Review Process Compared to the County *
  - Building Permit (for new single-family residence, 2-3 weeks in City vs. 5-6 weeks in County)
  - Plat/Subdivision Process (approximately 6 months in City vs. 10-12 months in County)
  - Site Plan Process (approximately 3 months in City vs. 5 months in County)
- Fees/Taxes
  - No Fire, Sheriff or Unincorporated Services Municipal Services Taxing Unit (MSTU)
  - No County Transportation or Park Impact Fees (approximately $4,300 for a new 1,500 square foot single-family residence in the County)
- Access to Elected Officials
  - More convenient and easier access to local government (City of Alachua City Hall instead of County Administration Building in Gainesville)
  - Per capita constituents (1 City Commissioner to 2,000 citizens vs. 1 County Commissioner to 51,000 citizens)
- Less expensive utility rates (if already connected to City utilities)
- Being a part of and helping to guide the "Good Life Community"
  - Premier Parks and Recreation Facilities and Programs
  - Charming, Walkable Downtown District
  - Community Schools with Strong Support
  - Advisory Boards to the City Commission
- Local Police Coverage (potential for faster response times)

* Length of process may vary depending upon the completeness of the application.

Jesse says, "Why is it that people say they "slept like a baby" when babies wake up every two hours?"

plenty of zucchini. Perhaps this recipe will give you another way to utilize this wonderful vegetable. This recipe works with yellow squash, or a mix of yellow and zucchini.

Ingredients
- Cooking Spray
- 2 cups all-purpose flour
- 1 tablespoon baking powder
- ¾ teaspoon salt
- ¾ cup shredded zucchini

Directions

Heat oven to 450°. Spray baking sheet with cooking spray.

Combine flour, baking powder, salt and red pepper. Stir in the cheese.

Mix the milk, butter and zucchini in a separate bowl. Stir the zucchini mixture into they won't get done in the middle. Should make about 3 dozen.

Bake 8-10 minutes until golden brown. Serve warm with plenty of butter.

SOLICITING:

Continued from page A1

Moore faces multiple charges after online sting

as part of the North Florida Internet Crimes Against Children Task Force.

The operation brought together local, state and federal law enforcement agencies to identify people suspected of using the internet to entice, solicit, traffic or travel to meet minors for sexual exploitation or human trafficking.

According to information released by the Sheriff's Office, an undercover deputy began communicating with Richard Matthew Moore through the Pure app before the conversation moved to Snapchat. The deputy posed as a 15-year-old girl.

Investigators reported that Moore acknowledged the purported girl's age but continued engaging in sexually explicit conversation. According to the Sheriff's Office, Moore told the undercover persona that knowing she was 15 sexually aroused him.

Moore and the undercover persona discussed meeting in person Aug. 1, investigators reported. The conversation resumed Aug. 3, when Moore allegedly sent an explicit photograph of himself.

Authorities said Moore later drove to a Gainesville park expecting to meet the person he believed was 15 and was arrested at the park.

After being advised of his Miranda rights, Moore reportedly admitted using Pure and Snapchat to communicate with the undercover persona. According to the Sheriff's Office, he also admitted communicating with other minors for sexual gratification.

Investigators reported that Moore admitted sending the explicit photograph and asking the undercover persona to send him a partially nude photograph. Moore denied that he intended to engage in sexual activity during the planned meeting, according to authorities.

Moore also reportedly admitted deleting Snapchat content before encountering law enforcement.

He was charged with using a computer or electronic device to solicit a minor for sexual activity, traveling to meet a minor after using a computer to solicit or lure the child, and unlawful use of a two-way communication device.

According to the information provided by the Sheriff's Office, Moore has no local criminal history.

Judge Susan Miller-Jones ordered Moore held without bail pending a hearing on a motion by the State Attorney's Office seeking to have him detained without bail until trial. If the judge denies the motion, bail will be set at that hearing.

The charges are accusations, and Moore is presumed innocent unless proven guilty

Obituary

Dorothy Miller

Dorothy Miller's sunrise was in Alachua on Feb. 7, 1937. Her start in life was a bit precarious due to the loss of her beloved mother three months after her birth. Through God's grace, she was raised with the love and care of her maternal grandmother, Lucy Nickels, and her aunt, Lucille Nickels Anderson. Two years later, her Aunt Lucille gave Dorothy a playmate and named her Margaret. Dorothy and Margaret were raised as sisters and introduced each other as such for their entire lives.

Dorothy was promoted through the segregated school system of Alachua County during the 40s and 50s. At the completion of her education, she traveled to various cities throughout the Sunshine State, married several times, and worked in the field of nursing, giving birth to her miracle baby, Bryan Daniels, on Sept. 20, 1959.

MILLER

Eventually, life brought her back to Alachua. Back to the house in Leroy's Addition that has been in her family since 1913. Where she was born and raised and now raised her only child. Upon her return to Alachua, she worked in the Alachua County School System until her retirement.

Her later struggles in life didn't stop the love she had for her only grandchild, Quinton Daniels, nor the love her niece, Paris Davis-Reed held for her.

As the last elder in a long line of African American women over 100 years strong in Alachua, our hearts are heavy at her Sunset, Sunday, Aug. 2, 2026.

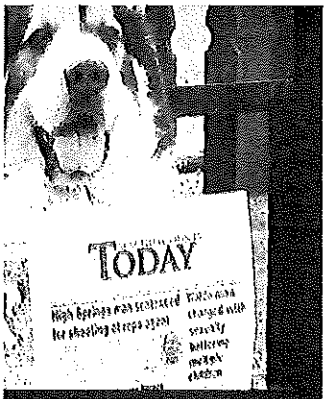
City of ALACHUA

NOTICE OF ENACTMENT OF AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on August 24, 2026 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following proposed ordinance as titled:

ORDINANCE 26-14



AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA; EXTENDING THE CORPORATE LIMITS OF THE CITY OF ALACHUA, FLORIDA TO INCLUDE CERTAIN LANDS LYING CONTIGUOUS TO THE EXISTING CORPORATE LIMITS OF THE CITY (TAX PARCEL 03961-000-000); PROVIDING THAT ALL EXISTING LAWS, ORDINANCES, RULES AND REGULATIONS SHALL APPLY IN SAID AREA; PROVIDING THAT THE PROPERTY LAND INHABITANTS ARE SUBJECT TO EXISTING INDEBTEDNESS AND LIABLE FOR TAXATION; PROVIDING FOR SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

The ± 39.73-acre subject property is generally located 14062 NW US Highway 441 (tax parcel(s) 03961-000-000). Copies of the application, complete legal description of the subject property, and proposed ordinance are available for public inspection at the Planning & Community Development Department in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. and copies can be obtained from the Office of the Deputy City Clerk.

At the public hearing, all interested parties may appear and be heard with respect to the application. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

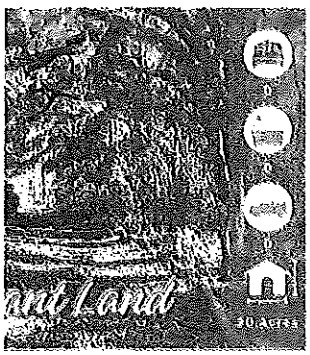
U SHOULD TOO!

help provide equipment, travel gear and training resources for the school's soccer program.

In addition to raising money, the event highlighted the relationship between youth soccer and the high school program by giving younger athletes an opportunity to interact with older players and members of the local soccer community.



The tournament was organized by Santa Fe High School boys soccer head coach and alumnus players and fans of all ages for a fantastic day of fast-paced soccer and community connection," organizers said in a statement. "The tournament successfully bridged the gap between the youth recreation level and the high school program, uniting local families, alumni, and soccer enthusiasts for a common cause."

They also thanked the many volunteers, participants and supporters who helped make the event possible.

NOTICE OF ENACTMENT OF AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on August 10, 2026 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following proposed ordinance as titled:

ORDINANCE 26-14

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA; EXTENDING THE CORPORATE LIMITS OF THE CITY OF ALACHUA, FLORIDA TO INCLUDE CERTAIN LANDS LYING CONTIGUOUS TO THE EXISTING CORPORATE LIMITS OF THE CITY (TAX PARCEL 03961-000-000); PROVIDING THAT ALL EXISTING LAWS, ORDINANCES, RULES AND REGULATIONS SHALL APPLY IN SAID AREA; PROVIDING THAT THE PROPERTY LAND INHABITANTS ARE SUBJECT TO EXISTING INDEBTEDNESS AND LIABLE FOR TAXATION; PROVIDING FOR SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

The ± 39.73-acre subject property is generally located 14062 NW US Highway 441 (tax parcel(s) 03961-000-000). Copies of the application, complete legal description of the subject property, and proposed ordinance are available for public inspection at the Planning & Community Development Department in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. and copies can be obtained from the Office of the Deputy City Clerk.

At the public hearing, all interested parties may appear and be heard with respect to the application. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

ORDINANCE 26-14

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA; EXTENDING THE CORPORATE LIMITS OF THE CITY OF ALACHUA, FLORIDA TO INCLUDE CERTAIN LANDS LYING CONTIGUOUS TO THE EXISTING CORPORATE LIMITS OF THE CITY (TAX PARCEL 03961-000-000); PROVIDING THAT ALL EXISTING LAWS, ORDINANCES, RULES AND REGULATIONS SHALL APPLY IN SAID AREA; PROVIDING THAT THE PROPERTY LAND INHABITANTS ARE SUBJECT TO EXISTING INDEBTEDNESS AND LIABLE FOR TAXATION; PROVIDING FOR SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, Hills & Lindsay & McMillan & Pardi & Werner, individuals, applicants & owners of the property to be annexed, has authorized the execution of a petition requesting that the City limits of the City of Alachua, Florida, be extended to include their land; and,

WHEREAS, pursuant to the provisions of Florida Statute 171.044, a notice of annexation has been published once each week for two consecutive weeks in the Alachua County Today newspaper, meeting the requirements of advertising in Florida Statute 171.044; and,

WHEREAS, pursuant to the provisions of Florida Statute 171.044, a notice of annexation has been delivered by certified mail to the Board of County Commissioners of Alachua County, Florida no fewer than 10 days prior to the publishing of the first required notice of annexation meeting the requirements of notice in Florida Statute 171.044; and,

WHEREAS, the City Commission of the City of Alachua, Florida finds that the real property is contiguous to the existing corporate limits of the City, and is reasonably compact, and does not create an enclave, and meets the requirements for voluntary annexation as established in Florida Statute 171.044;

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Extending the Corporate Limits of the City of Alachua, Florida to Include Certain Lands Lying Contiguous to the Existing Corporate Limits of the City

A. Legal Description (Tax Parcel 03961-000-000).

The corporate limits of the City of Alachua, Florida are hereby amended to include lands described in the legal description attached to this ordinance and identified as "Exhibit A."

B. Map.

A location map – including the amended municipal boundary of the City of Alachua, Florida – is hereby attached to this ordinance and identified as "Exhibit B."

DRAFT

Section 2. Providing that All Existing Laws, Ordinances, Rules and Regulations Shall Apply

All laws, ordinances, rules and regulations of the City of Alachua, Florida of general application throughout the existing boundaries and corporate limits shall apply through the boundaries and corporate limits of said City as extended by this Ordinance.

Section 3. Official Zoning Atlas

Until the City of Alachua, Florida shall exercise its zoning power over the territories annexed, all of the current zoning regulations and maps heretofore adopted by the Board of County Commissioners of Alachua County, Florida shall continue in full force and effect throughout the territory annexed, and shall be enforced by the City of Alachua.

Section 4. Repealing Clause

All ordinances or parts of ordinances in conflict with this ordinance are, to the extent they conflict with this ordinance, repealed.

Section 5. Providing for Severability

It is the declared intent of the Alachua City Commission that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by a court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 6. Effective Date

This Ordinance shall be effective upon its passage and adoption on the second and final reading.

PASSED on first reading on the 10th day of August, 2026.

PASSED and **DULY ADOPTED**, in regular session, with a quorum present and voting, by the City Commission, upon second reading this _____, day of _____ , 2026.

Commission Agenda Item

MEETING DATE: August 24, 2026

SUBJECT: Ordinance 26-15, Second Reading; Extending Ordinance 0-96-21 - Clay Electric Cooperative, Electric Utility Franchise Agreement

PREPARED BY: Michael Carrillo

RECOMMENDED ACTION:

Approve Ordinance 26-15 on Second Reading.

Summary

The City of Alachua provides reliable and affordable electric utility services to approximately 5,300 residential and commercial customers within our Electric Service Territory, as documented by the Florida Public Service Commission. The remaining electric customers within our city limits are served by Clay Electric Cooperative, Duke Energy of Florida, and Gainesville Regional Utilities, based on these utilities' respective Electric Service Territories through Electric Franchise Agreements.

An Electric Franchise Agreement is a negotiated contract between a municipality (or local government) and an electric service provider, granting the utility the right to serve customers within a specific geographic area. This legal arrangement under public utility law authorizes the utility to operate in the jurisdiction, typically for a set term (often 20 years or more). The agreement generally includes provisions for rates and the use of public rights-of-way for infrastructure installation and maintenance.

Ordinance 26-15 extends the existing 30-year Clay Electric Franchise Agreement for an additional 30 years and stipulates a monthly franchise payment of 6% of Clay Electric's base revenues from the customers it serves within the City of Alachua.

By approving Ordinance 26-15, we ensure the continuity of service for 880 existing Clay Electric customers within the limits of the City of Alachua.

FINANCIAL IMPACT

This Franchise Agreement has provided the City of Alachua with revenue of approximately $23,300 / month on average.

ORDINANCE 26-15

AN ORDINANCE OF THE CITY OF ALACHUA; EXTENDING ORDINANCE NO. 0-96-21; AN ORDINANCE GRANTING CLAY ELECTRIC COOPERATIVE A NON-EXCLUSIVE ELECTRIC UTILITY FRANCHISE TO OCCUPY MUNICIPAL STREETS AND RIGHTS-OF-WAY IN THE CITY OF ALACHUA, FLORIDA, FOR THE PURPOSE OF PROVIDING ELECTRIC AND POWER SERVICES; PRESCRIBING THE TERMS AND CONDITIONS ACCOMPANYING THE GRANT OF FRANCHISE; PROVIDING FOR SEVERABILITY OF PROVISIONS; AND PROVIDING AN EFFECTIVE DATE.

WHEREAS, the City of Alachua provides for in Appendix A, Article I, Section 1 of its Code of Ordinances the list of agreements and franchises; and

WHEREAS, the City of Alachua, by passing Ordinance 0-96-21 on second and final reading on September 4, 1996, granted to Clay Electric Cooperative, Inc. a Non-Exclusive Electric Utility Franchise to occupy municipal streets and rights-of-ways; and

WHEREAS, Ordinance 0-96-21 has been listed but not published in the City of Alachua Code of Ordinances; and

WHEREAS, Ordinance 0-96-21 is a valid, legal Non-Exclusive Electric Utility Franchise even though it is not published in the City of Alachua Code of Ordinances; and

WHEREAS, Ordinance 0-96-21 provided for a franchise term of thirty (30) years from September 4, 1996; and

WHEREAS, on September 3, 2026, the Non-Exclusive Electric Utility Franchise will expire; and

WHEREAS, the City of Alachua received a letter from Clay Electric Cooperative, Inc. dated January 13, 2026, indicating its proposal for an extension of the current Non-Exclusive Electric Utility Franchise for a period of thirty (30) years, with an expiration date of September 3, 2056.

WHEREAS, the City of Alachua shares in the desire to extend the Clay Electric Cooperative, Inc. Non-Exclusive Electric Utility Franchise for a period of thirty (30) years, with an expiration date of September 3, 2056; and

WHEREAS, the City of Alachua Commission finds the mutual desire to extend the Non-Exclusive Electric Utility Franchise for an additional thirty (30) years to be in the public interest; and

NOW, THEREFORE, BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA;

The foregoing recitals are true, confirmed, affirmed and adopted as if repeated in their entirety and set forth herein.

Section 1. Extending Ordinance 0-96-21

Ordinance 0-96-21 shall continue to have full effect and be in force from and after the final passage hereof, as required by law and upon the filing of an acceptance by Grantee of all the terms thereof with the Grantor and shall continue in force and effect for a term of thirty (30) years after the effective date of this ordinance, or as long as the territory agreement between the parties is in full force and effect, whichever is less.

Section 2. Inclusion of Code

It is the intention of the City Commission of the City of Alachua, Florida and it is hereby provided that the provision of this ordinance shall become and be made part of the Code of Ordinances of the City of Alachua, Florida; that the sections of this ordinance may be renumbered or re-lettered and that the word "ordinance" may be changed to "section," "article" or other appropriate designation to accomplish such intention.

Section 3. Providing for Severability

It is the declared intent of the City Commission of the City of Alachua, Florida, that, if any section, sentence, clause, phrase or provision of this ordinance is for any reason held or declared to be unconstitutional, voice or inoperative by a court or agency of competent jurisdiction, such holding if invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 4. Repealing all Ordinances in Conflict

All other ordinances or parts of ordinances in conflict herewith, are to the extent of such conflict, hereby repealed.

Section 5. Providing an Effective Date

This Ordinance shall become effective September 3, 2026.

PASSED on second reading on the ___ day of August 2026.

CITY COMMISSION OF THE
CITY OF ALACHUA, FLORIDA

_____
Walter Welch, Mayor

SEAL

ATTEST:

_____
Rodolfo Valladares, City Manager/City Clerk

APPROVED AS TO FORM:

_____
S. Scott Walker, City Attorney

ORDINANCE NO. 0-96-21

AN ORDINANCE GRANTING TO CLAY ELECTRIC COOPERATIVE A NON-EXCLUSIVE ELECTRIC UTILITY FRANCHISE TO OCCUPY MUNICIPAL STREETS AND RIGHTS-OF-WAY IN THE CITY OF ALACHUA, FLORIDA, FOR THE PURPOSE OF PROVIDING ELECTRIC AND POWER SERVICES; PRESCRIBING THE TERMS AND CONDITIONS ACCOMPANYING THE GRANT OF FRANCHISE; PROVIDING FOR SEVERABILITY OF PROVISIONS; AND PROVIDING AN EFFECTIVE DATE.

BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA:

SECTION 1. Findings.

(A) The Grantor deems it necessary, desirable and in the interest of its citizens to establish by ordinance a franchise granting to Grantee the permission to occupy Rights-of-Way in the City of Alachua, Florida, for the purpose of providing electric services.

(B) The Grantee is willing to undertake the installation and operation of its electric utility facilities under a franchise from Grantor.

SECTION 2. Short Title.

This Ordinance shall be known and may be cited as the "Clay Electric Cooperative, Inc. Electric Franchise."

SECTION 3. Definitions.

For the purposes of this Ordinance, the following terms, phrases, words, and their derivations shall have the meaning given herein. When not inconsistent with the context, words in the present tense include the future, words in the plural number include the singular number, and words in the singular number include the plural number. The word "shall" is always mandatory and not merely directory.

(A) "Grantor" - The City of Alachua, Florida.

(B) "Grantee" - Clay Electric Cooperative, Inc., its successors and assigns.

(C) "Electric Utility System" - An electric power system installed and operated in the Franchise Area in accordance with the provisions of the Florida Public Service Commission establishing technical standards, service areas, tariffs and operating standards, which shall include but not be limited to electric light, heat, power, and energy facilities, and a generation, transmission, and distribution system, with such extensions thereof and additions thereto as shall hereafter be made.

(D) "Franchise Area" - That area for which Grantee provides Electric Utility Service which is within the corporate city limits of the Grantor.

(E) "Base Revenues" - Revenues from the sale of electricity, net of customer credits, to residential, commercial, and industrial customers and City sponsored streetlighting all within the corporate limits of the City.

(F) "Person" - Any person, firm, partnership, association, corporation, company or organization of any kind.

(G) "Rights-of-Way" - All of the public streets, alleys, highways, waterways, bridges, easements, sidewalks and parks of the City, as they now exist or may be hereafter constructed, opened, laid out or extended within the present limits of the City, or in such territory as may hereafter be added to, consolidated or annexed to the City.

(H) "Retail Wheeling" - A customer/supplier arrangement whereby an electric energy provider utilizes transmission and/or distribution facilities of Grantee to make energy sales directly to an end use customer located within the Franchise Area.

(I) "Adversely Affected" - For the Grantee, a loss of one percent (1%) of Base Revenues within the corporate city limits due to Retail Wheeling. For the Grantor, a loss of one percent (1%) of franchise fees due to Retail Wheeling.

SECTION 4. Grant of Authority.

(A) There is hereby granted by Grantor, to Grantee, the right and privilege to construct, erect, operate, own and maintain, in, upon, along, across, above, over and under Rights-of-Way now laid out or dedicated, and all extensions thereof, and additions thereto in the corporate city limits, poles, wires, cables, underground conduits, manholes, fiber optic cable for its own use and other fixtures necessary or proper for the maintenance and operation of its Electric Utility System, provided that all portions of the same shall conform to the National Electrical Safety Code. This Franchise is awarded subject to the provisions of general or special laws of Florida now existing or hereinafter enacted. This grant of authority is limited to the provision by Grantee of electric utility services. Grantee agrees that without the prior written permission of Grantor, it will not allow any entity providing a wireless communication system to acquire rights to occupy Rights-of-Way under this Franchise. In the event Grantee desires to use its existing facilities, or construct new facilities, in order to provide public communications, leased fiber optic capacity, or video services to existing or potential consumers, Grantee must obtain additional and separate permission from Grantor for such activities.

(B) Annexation or Contraction. Grantee agrees that the Franchise Area is subject to expansion or reduction by annexation and contraction of municipal boundaries. If Grantor approves any Franchise Area expansion or reduction by annexation or contraction, Grantor will provide written notice to Grantee. Grantee must revise its payments due to any expansion or reduction by annexation within a reasonable time after notice to Grantee, but no later than sixty (60) days after receipt of notice.

(C) Non-Exclusive Use. The right to use and occupy Rights-of-Way for the purposes herein set forth shall be non-exclusive, and the Grantor reserves the right to grant a similar use of said Rights-of-Way, to any person at any time during the period of this Franchise so long as such grant does not materially and adversely impact Grantee's right to use and occupy Rights-of-Way as aforesaid.

SECTION 5. Term of Franchise.

(A) Except as otherwise provided herein, the Franchise and rights herein granted shall take effect and be in force from and after the final passage hereof, as required by law and upon the filing of an acceptance by Grantee of all the terms thereof with the Grantor and shall continue in force and effect for a term of thirty (30) years after the effective date of this Franchise ordinance, or as long as the territory agreement between the parties is in full force and effect, whichever is less.

(B) However, if in the event the appropriate governmental authorities authorize Retail Wheeling, then, either party, if Adversely Affected thereby, may reopen this ordinance upon thirty (30) days written notice to the other for the sole purpose of addressing franchise fee payments between Grantee and Grantor. If the parties are unable to agree within ninety (90) days of reopening, either party may declare an impasse and may file an action in the Circuit Court in Alachua County, Florida for declaratory relief as to the proper franchise fee in light of Retail Wheeling.

(C) Each party shall bear its own costs in such a proceeding. During the pendency of any negotiations pursuant to the reopener or any declaratory action arising therefrom the current franchise payment as set forth in Section 6 shall continue to apply. Provided, however, if as a result of such negotiations or any declaratory action arising therefrom, a different franchise payment is determined, that new franchise payment shall apply retroactively to the first full month following the date this ordinance is reopened and the parties shall balance their accounts accordingly.

(D) In all events, Grantor shall not grant more favorable treatment to providers of Retail Wheeling than is granted to Grantee under this ordinance, it being the intent of the parties that no future provider of electric service, be it generation, transmission or distribution service, to customers within the corporate limits of Grantor shall be given a competitive advantage over Grantee.

SECTION 6. Payment to Grantor.

(A) Effective the first day of the second month beginning after the effective date of this ordinance, Grantor shall be entitled to receive from Grantee a monthly franchise amount which will equal six percent (6%) of Grantee's Base Revenues for the preceding month which amount shall be the total compensation due Grantor for the rights, authority and privileges granted by this Franchise.

(B) Payment shall be made to the Grantor for each month no later than the twentieth (20th) day of the following month. The monthly payment may be made by wire transfer. Any monthly payment or any portion thereof received twenty (20) days after the due date shall be subject to interest at the rate of 10% percent per annum until all payments are paid in full .

SECTION 7. Favored Nations

(A) In the event Grantee shall hereafter accept an electric utility franchise ordinance from any municipality providing for the payment of a franchise fee in excess of the amount provided for per Section 6 above, the Grantee shall immediately notify the Grantor and the Grantor reserves the right to amend this Franchise to require the Grantee to pay the Grantor such additional franchise fees. The Grantee's failure to notify Grantor of such additional payments does not limit Grantor's rights to such additional franchise fees nor limit Grantee's liability with respect thereto including late payments outlined in Section 6 (B).

(B) In no event shall Grantor receive a franchise fee that is less, in terms of percentage and/or Base Revenues, than any other governmental entity within Grantee's service area, except that, in the event Grantor shall hereafter grant a utility franchise to any other energy supplier providing for the payment of a franchise fee less than the amount provided for in Section 6 above, then Grantor shall be obligated to accept an amendment of this ordinance providing for a decrease in the franchise fee to such lesser amount.

SECTION 8. Rates and Services Provided.

The rates to be charged and services provided by the Grantee for electric service within the corporate limits of Grantor during the term of this franchise shall be as provided in the Grantee's tariffs now or hereafter approved by the Florida Public Service Commission, or such agency of the State of Florida or other entity as may have proper jurisdiction over such rates and charges of Grantee.

SECTION 9. Character of Service.

Grantee agrees that the materials to be used in the construction, operation and maintenance of the electric distribution system and the service to be rendered thereby shall be in every respect equal to those provided to Grantee's other franchised communities.

SECTION 10. Indemnification.

(A) Grantor shall in no way be liable or responsible for any accident or damage that may occur in the construction, operation or maintenance by Grantee of its facilities thereunder, and the acceptance of this franchise by Grantee shall be deemed an agreement on the part of the Grantee to indemnify Grantor and hold it harmless against any and all liability, loss, cost, damage or expense which Grantor may incur by reason of the neglect, default, or misconduct of Grantee in the construction, operation, or maintenance of its electric utility facilities thereunder.

(B) Grantee shall maintain throughout the term of this Franchise sufficient financial resources to provide self insurance insuring the Grantor and Grantee with regard to all damages set forth in Section 10 (A) in the minimum amounts of:

(I) $1,000,000 for bodily injury or death to a person;
$3,000,000 for bodily injury or death resulting from any one accident.

(ii) $50,000 for property damage resulting from any one accident.

(iii) $1,000,000 for all other types of liability.

(C) It is acknowledged by the Grantor that Grantee provides its own liability insurance (self insured). Grantee must submit on an annual basis, when submitting its annual audited financial report, documentation that clearly demonstrates that it has accumulated sufficient financial resources in order to provide insurance coverage as indicated in Section 10(B) above.

SECTION 11. Approval of Transfer.

(A) The rights and privileges granted by this Franchise shall not be sold, or assigned in whole or in part without the Grantor's prior written approval; however, such consent shall not be unreasonably withheld. No such sale or assignment shall be effective until the vendee or assignee has filed with the Grantor an instrument, duly executed, reciting the fact of such sale, or assignment and agreeing to perform all the conditions thereof.

(B) Grantee shall annually submit to Grantor, Attention: City Clerk's Department, a copy of its Audited Annual Financial Report upon its normal issuance of same. By acceptance of this Franchise, the Grantee specifically agrees that in the event of any violation of this Section, after thirty (30) days written notice and an opportunity for Grantee to cure, Grantor may cause the Franchise granted herein to be terminated.

SECTION 12. Grantor Rights in Franchise.

The right is hereby reserved to the Grantor to adopt, in addition to the provisions herein contained and existing applicable ordinances, such additional regulations as it shall find necessary in the exercise of its police power, provided that such regulations, by ordinance or otherwise, shall be reasonable, and shall not be in conflict with the laws of the State of Florida or the lawful regulations of any state agency possessing the power to regulate the activities of the Grantee or materially interfere with the benefits conferred on Grantee hereunder.

SECTION 13. Work in the Right-of-Way.

The Grantee is hereby granted the right, authority and privilege to make all necessary excavations in said square, streets, avenue, alleys, thoroughfares, public grounds and other parts of Grantor. The Grantee shall have the right to fasten and to stretch and lay along the lines of said poles, conduits, pipes and cables necessary for transmitting and conveying the electric current to be used in Grantee's business, together with all the right and privileges necessary or convenient for the full use including the right to trim, cut and keep clear all trees and limbs along said lines that may in any way endanger the proper operation of same. Moreover, the Grantee shall have the right to construct, erect, operate and maintain in said City an electric system consisting of central plant or plants, with all the engines, boilers, dynamos, machines and devices, and appliances that may be required for generating electricity, together with necessary substations, lines and related facilities and for carrying Grantee's business; provided that, in accomplishing these purposes, the streets of said City shall not be unreasonably obstructed and work in connection therewith shall be done and carried on in conformity with such reasonable rules, regulations and local ordinances with reference thereto as may be adopted by Grantor for the protection of the public.

SECTION 14. Records and Reports.

The following records and reports shall be filed with or available to Grantor:

(A) Grantee Rules and Regulations. Copies of rules, regulations, terms and conditions adopted by Grantee that relate to Grantee's use of Grantor's Right-of-Way shall be available upon request by Grantor.

(B) Accounting. Grantee shall use the system of accounts and the form of books, accounts, records, and memoranda prescribed by the Florida Public Service Commission, or as mutually agreed to by Grantor and Grantee. Should the Florida Public Service Commission cease to exist, the City retains the right to require the Grantee to maintain a system of accounts and forms of books and accounts and memoranda prescribed by the Federal Energy Regulatory Commission or any other applicable agency.

(C) Reports. The Grantee will attach to each payment a statement of its estimated Base Revenues by revenue account for the period on which such payment is based, signed by an authorized representative of the Grantee, in such reasonable form and detail as Grantor may from time to time prescribe, sufficient to show the source and method of computation of Base Revenues. The acceptance of any statement or payment shall not estop the Grantor from asserting that the amount paid is not the amount due or from recovering any deficit by any lawful proceeding, including interest to be applied at the rate set forth in Section 6 (B).

(D) Availability of Records and Reports. Grantee shall supply all accounts and records of the Grantee and/or all such information that the Grantor or its representatives may from time to time reasonably request or require relative to the calculation of franchise fees. Such financial records shall be kept and maintained in accordance with generally accepted accounting principles. All of the these records shall, on written request of Grantor, be open for examination and audit by Grantor and Grantor's representatives during ordinary business hours, and such records shall be retained by Grantee for a period of five (5) years.

(E) Audit. Grantor may require an audit of Grantee's books at minimum of once every five years. Grantee will reimburse Grantor's audit costs if the audit identifies errors in the Grantee's franchise Base Revenues of five percent (5%) or more for the period audited. Errors identified during the audit process shall be projected for any additional time periods not covered during the audit if there is a reasonable probability these errors occurred during the unaudited period, but not for more than five (5) years. If an underpayment of franchise fees has occurred, interest will be computed at a rate of ten percent (10%) per annum. Both the underpayment and interest shall be paid within thirty (30) days after receipt of demand therefor from Grantor.

SECTION 15. Grantor's Authority.

(A) Nothing in this Franchise shall prevent Grantor from levying and collecting such taxes as Grantor may from time to time be empowered, by law, to levy and collect provided such taxes shall be applied uniformly to all persons within Grantor's corporate limits and shall not constitute an additional tax or fee for Grantee's use of the Rights-of-Way. Such taxes are not considered part of the franchise fees.

(B) In the event the Grantor acquires the property rights of Grantee as well as any extensions thereof within and without the City, used in or useful in or connected with Grantee's Electric Utility System and the extensions thereof, all grants or renewals shall at once terminate.

SECTION 16. Severability.

Should any section or provision of this Franchise Ordinance or any portion thereof, the deletion of which would not adversely affect (in the general sense) the receipt of any material benefits or, substantially increase the burden of any party hereunder, be declared by a court of competent jurisdiction to be invalid, such decision shall not affect the validity of the remainder, as a whole or any part thereof, other than the part declared to be invalid. In the event of any such partial invalidity, the Grantor and Grantee shall meet and negotiate in good faith to obtain a replacement provision that is in compliance with the judicial authority's decision.

SECTION 17. Acceptance.

This ordinance shall become effective upon being legally passed and adopted by the City Commission of the City of Alachua, as provided by law; and it is further agreed that Grantee shall accept this franchise as of the date of the passage and adoption by the City Commission and shall signify its acceptance in writing within thirty days after the City Commission's approval of this ordinance by filing its written acceptance with the City Clerk.

SECTION 18. Attorney's Fees and Expenses.

Except as otherwise provided for herein, Grantor and Grantee hereto agree that if litigation becomes necessary to enforce any of the obligations, terms and conditions of this Franchise, each party shall bear their own costs and attorney's fees.

SECTION 19. Governing Law and Venue.

(A) The rights and privileges granted to Grantee by this Franchise shall at all times be subordinate and inferior to the rights of the public in and to the ordinary use of Grantor's Rights-of-Way and nothing in this Franchise shall be considered as a surrender by Grantor of its right and power to use and relocate the use of its Rights-of-Way.

(B) The Franchise and rights herein granted are subject to the provisions of existing Federal laws and the laws of the State of Florida and those hereafter enacted pertaining to the granting of franchises and to Retail Wheeling.

(C) Venue. In the event that any legal proceeding is brought to enforce the terms of this Franchise, the same shall be brought in Alachua County, Florida, or, if a federal claim, in the U.S. District Court in and for the Middle District of Florida.

SECTION 20. Notices.

Except in exigent circumstances, all notices by either Grantor or Grantee to the other shall be made by either depositing such notice in the United States Mail, Certified Mail return receipt requested or by facsimile. Any notice served by certified mail return receipt shall be deemed delivered five (5) days after the date of such deposit in the United States mail unless otherwise provided. Any notice given by facsimile is deemed received by next Business Day. "Business Day" for purposes of this section shall mean Monday through Friday, with Saturday, Sunday and Grantor and Grantee observed holidays excepted. All notices shall be addressed as follows:

To Grantor:

City Manager
City of Alachua
P.O. Box 9
Alachua, FL 32615

To Grantee:

General Counsel
Clay Electric Cooperative, Inc.
P.O. Box 308
Keystone Heights, FL 32656

Notice shall be given as required by this Franchise and for all other emergencies. Notice shall be provided to the above-named addressees unless directed otherwise in writing by Grantor or Grantee.

SECTION 21. Non-waiver Provision.

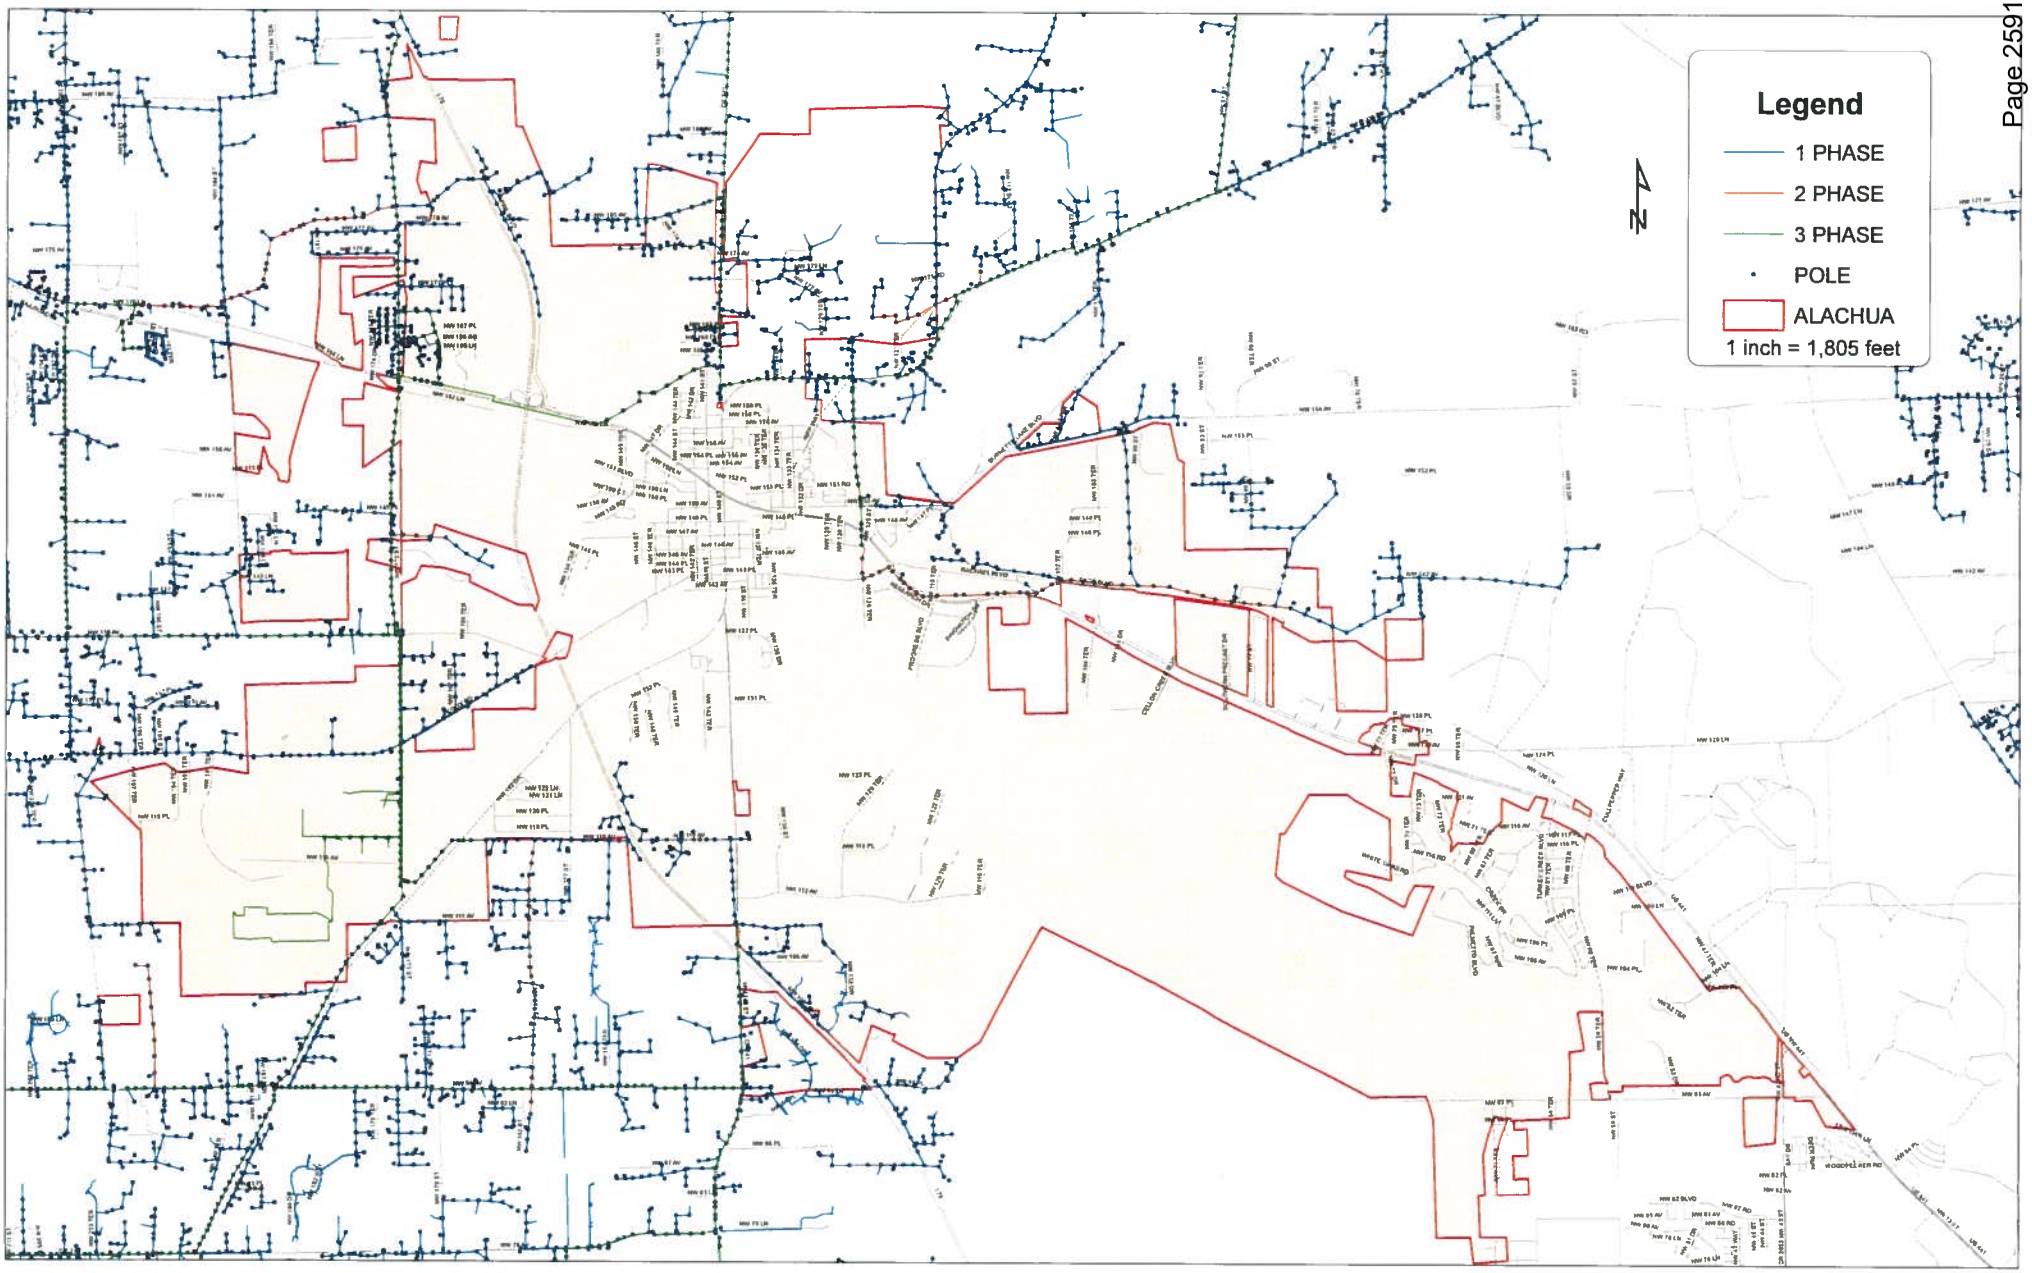
The failure of either party to insist in any one or more instances upon the strict performance of any one or more of the terms or provisions of this Franchise shall not be construed as a waiver or relinquishment for the future of any such term or provision, and the same shall continue in full force and effect. No waiver or relinquishment shall be deemed to have been made by either party unless said waiver or relinquishment is in writing and signed by the parties.

SECTION 22. Effective Date.

This Franchise shall take effect immediately upon adoption.

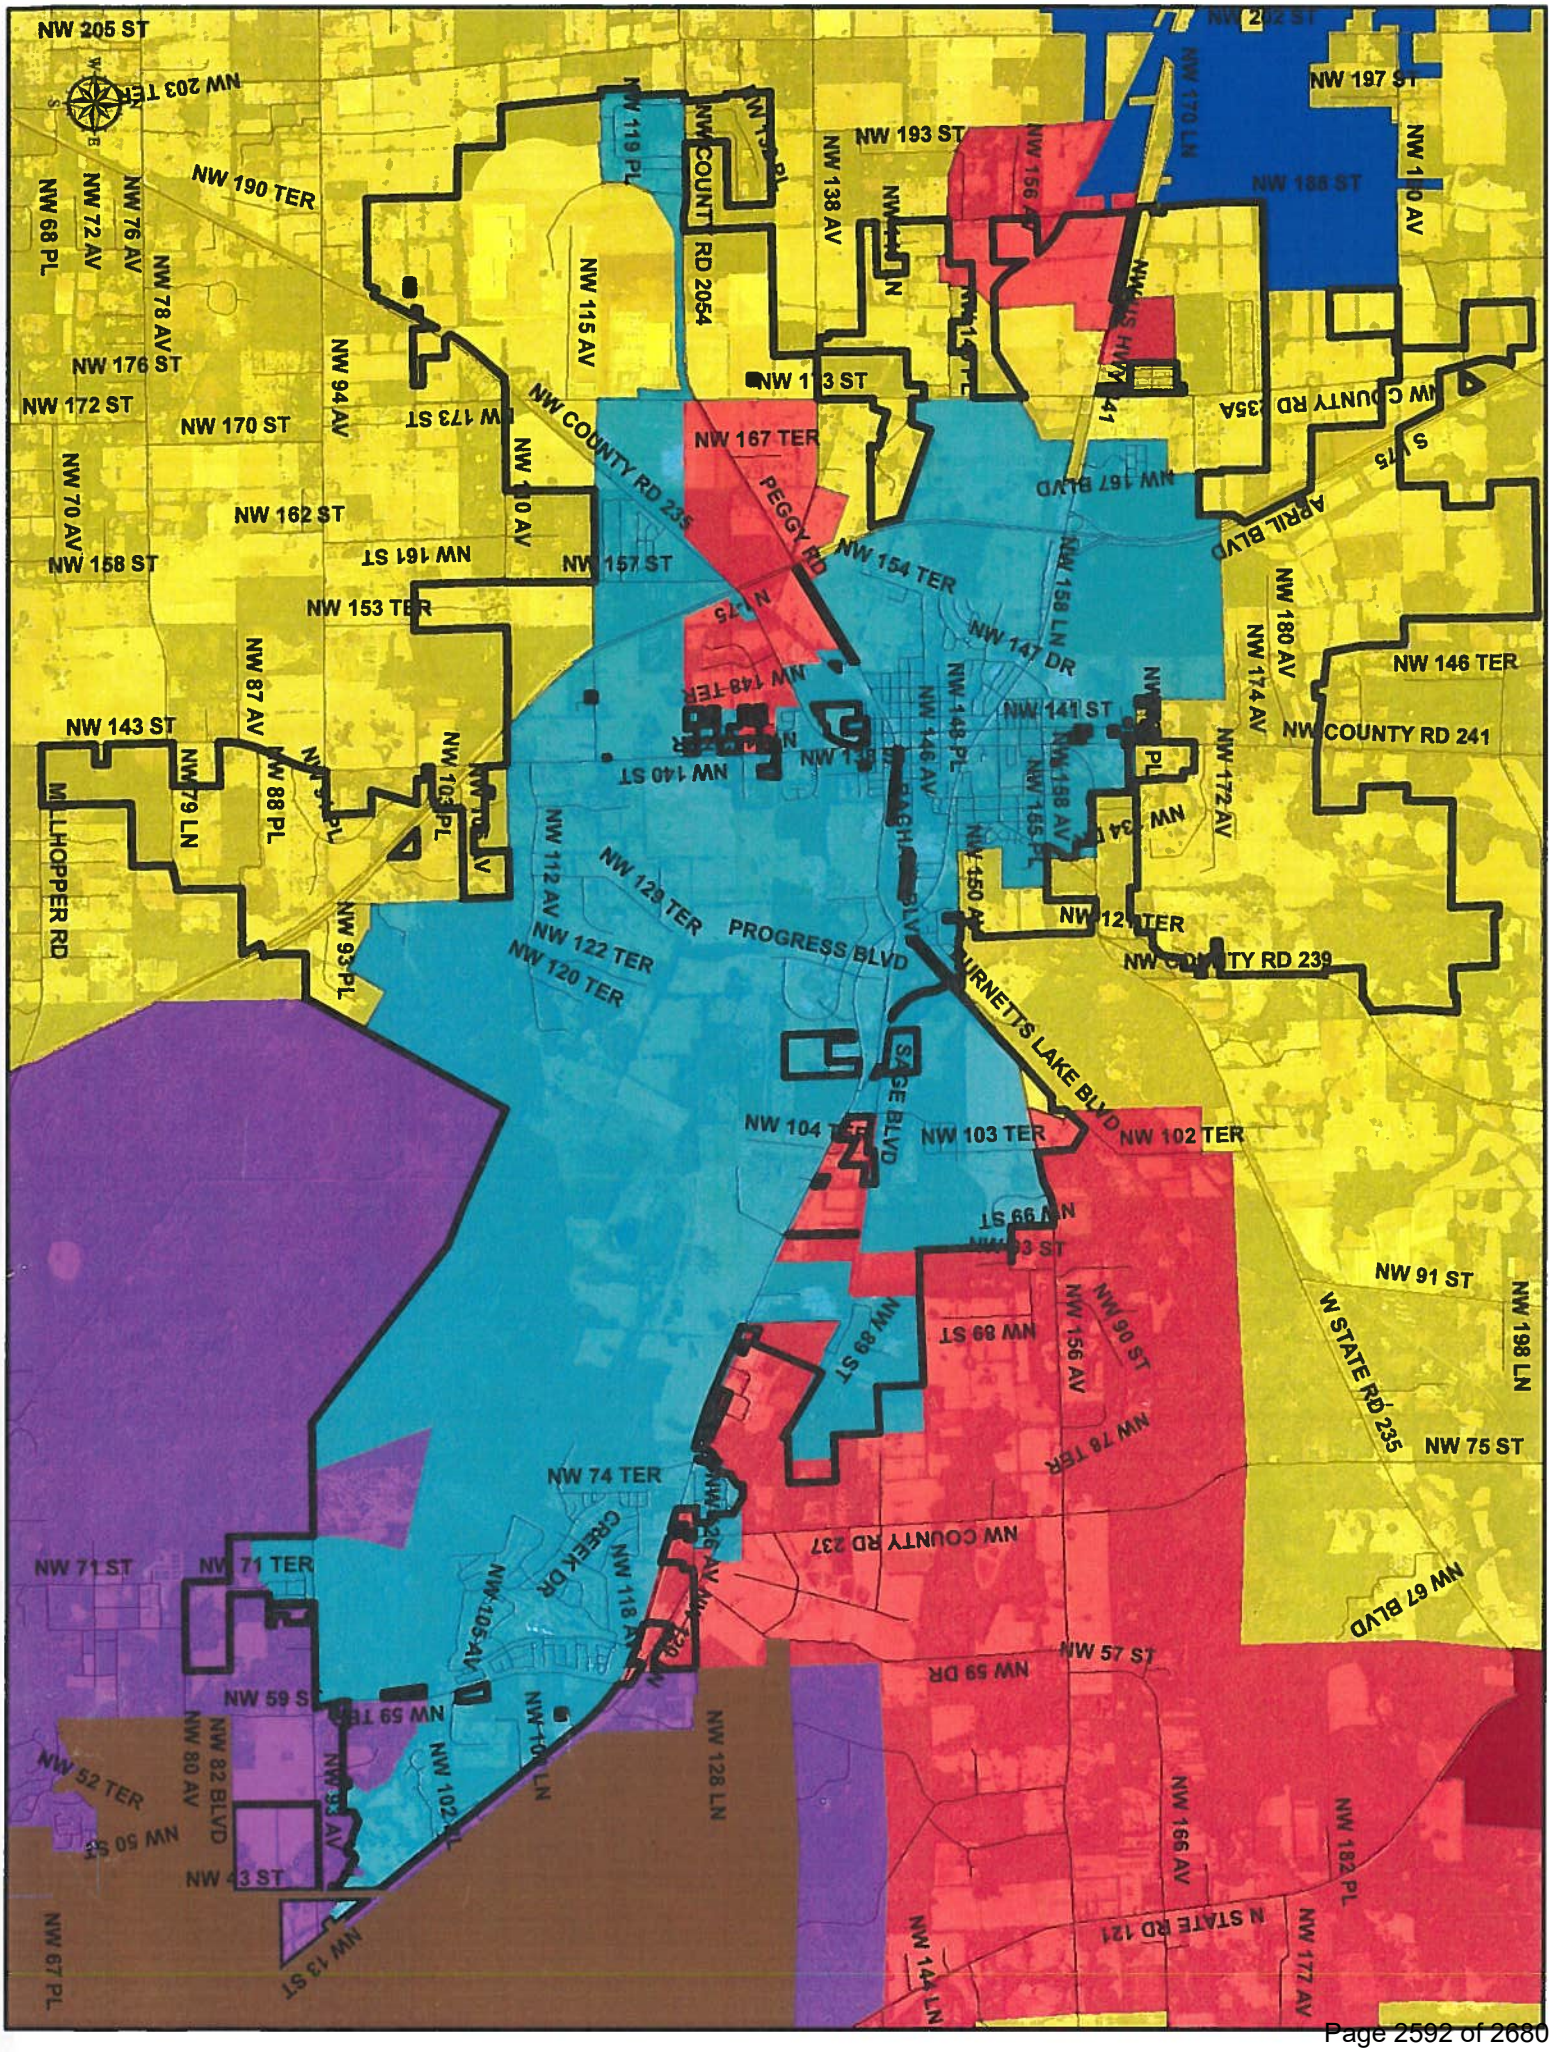
PASSED ON FIRST READING this 19th day of August, 1996.

PASSED ON SECOND AND FINAL READING AND ADOPTED September 4, 1996



Mayor Jimmy Swick, II.

Attest:



City Clerk Charles M. Morris

Approved as to form and legal sufficiency:

Re: Recommendation for Extending the Term of Ordinance 96-21

Dear Mr. Rodolfo:

The City of Alachua's ("Alachua") Ordinance 96-21 is a franchise agreement between Alachua and Clay Electric Cooperative ("Clay") which is set to expire on September 3, 2026, following a 30-year term. Clay has proposed extending the term for another 30-years through an extension agreement. Reef Energy LLC ("Reef") reviewed Ordinance 96-21 to determine if it was in Alachua's best interest to extend the term for another 30-years .

In conducting the review, Reef focused on the following areas:

- Ensuring the commercial terms and conditions of the existing 30-year Ordinance 96-21 are still relevant and current.
  - Reef compared Ordinance 96-21 to several franchise agreements executed in the last couple of years in the State of Florida
  - Reef found the basic structure and commercial terms/conditions to be nearly identical
- Ensure the 6% franchise fee is competitive with other franchise agreements in Florida
  - Ordinance 96-21 compensates Alachua with a franchise fee of 6% of Clay's Base Revenues.
  - Reef compared the franchise fees of various franchise agreements executed over the last several years. Franchise fees ranged from 4.5% to 6%, with 6% being the most common.
  - Ordinance 96-21 contains a Most Favored Nations clause which states that if Clay executes a future franchise agreement with a franchise fee higher than 6%, Alachua will automatically receive the higher franchise fee on a going forward basis.
- Ensure the proposed 30-year term is appropriate.
  - A 30-year term was most common for the franchise agreements that Reef reviewed.
  - The Most Favored Nations clause discussed above provides a mechanism to increase the franchise fee under certain circumstances, thus a longer term such as 30-years poses little risk of missing out on the potential for higher franchise fees in the future.

Based on the above review, I recommend that Alachua extend the term of Ordinance 96-21 by 30-years by executing the proposed extension agreement.

If you have any questions or comments, please let me know.

Sincerely,

Tim Gerrish
President, Reef Energy LLC

ACCEPTANCE OF FRANCHISE AGREEMENT EXTENSION
BY CLAY ELECTRIC COOPERATIVE, INC.

Clay Electric Cooperative, Inc. ("Clay Electric") does hereby accept the terms of franchise agreement extension as contained in Ordinance 26-15 of City of Alachua, Florida ("City"), extending the term of Clay Electric's Franchise Agreement with the City to September 3, 2056, and agrees to comply with each of the terms thereof.

Dated this 3rd day of August, 2026.

Commission Agenda Item

MEETING DATE: August 24, 2026
SUBJECT: Ordinance 26-16, Second Reading; Amending Code 38 - Utility Rates
PREPARED BY: Rodolfo Valladares
RECOMMENDED ACTION:
Approve Ordinance 26-16 on Second Reading, to become effective October 1, 2026.

Summary

The City of Alachua establishes electric, water, wastewater, and reclaimed water rates to generate revenues sufficient to operate, maintain, repair, and improve its utility systems while ensuring each utility remains financially self-supporting. The City's utility rates are evaluated annually as part of the budget development process to determine whether adjustments are necessary to address increases in operating costs, capital investment needs, regulatory requirements, and long-term system sustainability.

Staff utilizes comprehensive financial models to develop electric, water, wastewater, and reclaimed water rates. These models forecast revenues, operating expenses, debt service obligations, capital improvement needs, and reserve requirements to determine whether existing rates are sufficient to support the continued delivery of reliable utility services. Based on this annual evaluation, Staff recommends adjustments to electric, water, wastewater, and reclaimed water rates, as well as revisions to water meter installation charges and applicable water and wastewater capital facility charges, to ensure each utility fund remains financially sustainable.

For water and wastewater utilities, the Florida Public Service Commission (FPSC) annually publishes a Water and Wastewater Price Index that identifies inflationary and deflationary changes affecting major operating expense categories. The latest FPSC-approved Water and Wastewater Price Index is 2.46% and serves as one of several factors considered when evaluating the City's utility rates.

As identified in Ordinance 26-16, the proposed rate adjustments are:

- Electric: Increase electric rates by 2.5%.
- Water: Increase water rates by 3%.
- Wastewater: Increase wastewater rates by 2.5%.
- Reclaimed Water: Increase reclaimed water rates by 2.5%.

The proposed increases apply to applicable customer charges, availability charges, and consumption charges. In addition, the ordinance includes a 3% increase to the water meter installation charge and water capital facility charges, as well as a 2.5% increase to wastewater capital facility charges.

Notices of the Rate Hearing were provided through the City's utility billing system in accordance with Section 180.136, Florida Statutes.

PUBLIC NOTICE
NOTICE OF ENACTMENT OF AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA

The City of Alachua City Commission will hold a public hearing on a proposed ordinance on August 24, 2026 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers of City Hall, at 15100 NW 142nd Terrace, Alachua, Florida.

The ordinance title is as follows:

ORDINANCE 26-16

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA; AMENDING THE FOLLOWING SECTIONS OF CHAPTER 38 OF THE CITY OF ALACHUA CODE OF ORDINANCES: SECTION 38-99(A) INCREASING THE WATER METER INSTALLATION CHARGE; 38-101(A) INCREASING THE WATER CAPITAL FACILITIES CHARGE; 38-102(A)(1) INCREASING THE WATER MONTHLY CUSTOMER CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY WATER SYSTEM; SECTION 38-102(A)(2) INCREASING THE MONTHLY WATER AVAILABILITY CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY'S WATER SYSTEM; SECTION 38-102(A)(3) INCREASING THE WATER CONSUMPTION CHARGES FOR RESIDENTIAL SERVICE, NONRESIDENTIAL SERVICE, AND IRRIGATION SERVICE; SECTION 38-139(A) INCREASING THE WASTEWATER CAPITAL FACILITIES CHARGE; SECTION 38-140(A)(1) INCREASING THE WASTEWATER MONTHLY CUSTOMER CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY WATER SYSTEM; SECTION 38-140(A)(2) INCREASING THE WASTEWATER USAGE CHARGES FOR RESIDENTIAL SERVICE AND NONRESIDENTIAL SERVICE; SECTION 38-141(A)(1) INCREASING THE RECLAIMED WATER MONTHLY CUSTOMER CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY RECLAIMED WATER SYSTEM; SECTION 38-141(A)(2) INCREASING THE RECLAIMED WATER USAGE CHARGE; SECTION 38-170 RESIDENTIAL ELECTRIC SERVICE, SECTION 38-171 NONRESIDENTIAL DEMAND SERVICE AND SECTION 38-172 NONRESIDENTIAL NONDEMAND SERVICE; INCREASING THE BASE RATES FOR RESIDENTIAL ELECTRIC SERVICE, GENERAL SERVICE DEMAND, GENERAL SERVICE LARGE DEMAND AND GENERAL SERVICE NONDEMAND; PROVIDING FOR THE REPEAL OF ALL ORDINANCES IN CONFLICT; PROVIDING FOR INCLUSION IN THE CITY CODE; AND, PROVIDING AN EFFECTIVE DATE.

At the public hearing, all interested parties may appear and be heard with respect to the proposed ordinance. Copies of the proposed ordinance and related materials are available for public inspection at the Office of the City Clerk, 15100 NW 142nd Terrace, Monday-Thursday between the hours of 7:30 a.m. to 6:00 p.m. the Thursday prior to the City Commission meeting. **Written comments on the proposed ordinance may be sent to the following address: City of Alachua, Attn: Public Services Department, P.O. Box 9, Alachua, FL 32616.** Notice is given pursuant to Section 286.0105, Florida Statutes, that in order to appeal any decision made at these public hearings, you will need to ensure that a verbatim record is made. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

ORDINANCE 26-16

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA; AMENDING THE FOLLOWING SECTIONS OF CHAPTER 38 OF THE CITY OF ALACHUA CODE OF ORDINANCES: SECTION 38-99(A) INCREASING THE WATER METER INSTALLATION CHARGE; 38-101(A) INCREASING THE WATER CAPITAL FACILITIES CHARGE; 38-102(A)(1) INCREASING THE WATER MONTHLY CUSTOMER CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY WATER SYSTEM; SECTION 38-102(A)(2) INCREASING THE MONTHLY WATER AVAILABILITY CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY'S WATER SYSTEM; SECTION 38-102(A)(3) INCREASING THE WATER CONSUMPTION CHARGES FOR RESIDENTIAL SERVICE, NONRESIDENTIAL SERVICE, AND IRRIGATION SERVICE; SECTION 38-139(A) INCREASING THE WASTEWATER CAPITAL FACILITIES CHARGE; SECTION 38-140(A)(1) INCREASING THE WASTEWATER MONTHLY CUSTOMER CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY WATER SYSTEM; SECTION 38-140(A)(2) INCREASING THE WASTEWATER USAGE CHARGES FOR RESIDENTIAL SERVICE AND NONRESIDENTIAL SERVICE; SECTION 38-141(A)(1) INCREASING THE RECLAIMED WATER MONTHLY CUSTOMER CHARGE FOR EACH METERED POINT OF CONNECTION TO THE CITY RECLAIMED WATER SYSTEM; SECTION 38-141(A)(2) INCREASING THE RECLAIMED WATER USAGE CHARGE; SECTION 38-170 RESIDENTIAL ELECTRIC SERVICE, SECTION 38-171 NONRESIDENTIAL DEMAND SERVICE AND SECTION 38-172 NONRESIDENTIAL NONDEMAND SERVICE; INCREASING THE BASE RATES FOR RESIDENTIAL ELECTRIC SERVICE, GENERAL SERVICE DEMAND, GENERAL SERVICE LARGE DEMAND AND GENERAL SERVICE NONDEMAND; PROVIDING FOR THE REPEAL OF ALL ORDINANCES IN CONFLICT; PROVIDING FOR INCLUSION IN THE CITY CODE; AND, PROVIDING AN EFFECTIVE DATE.

WHEREAS, the City of Alachua provides water, wastewater, reclaimed water, and electric services to residential and non-residential customers located within its water, wastewater, and electric service territories; and,

WHEREAS, the current residential customer and non-residential charges for water, wastewater, reclaimed water, and electric services are not adequate to cover the cost of providing such services, and,

WHEREAS, the City Commission, being fully advised of the facts and circumstances, hereby finds it necessary and in the interest of prudent management of public assets and business affairs to increase the current residential and non-residential charges for water, wastewater, reclaimed water, and electric services in order to equitably and adequately fund the cost of such essential services, and

WHEREAS, the City of Alachua Commission hereby amends Section 38-99(a), Section 38-101(a), Section 38-102(a)(1), Section 38-102(a)(2) Section 38-102(a)(3), Section 38-139(a), Section 38-140(a)(1), Section 38-140(a)(2), Section 38-141(a)(1), and Section 38-141(a)(2), SECTION 38-170 (a), SECTION 38-171 (a), SECTION 38-171 (b), SECTION 38-172 (a) of the City of Alachua Code of Ordinances.

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Amendment of Code of Ordinances

The following sections of Chapter 38 of the City of Alachua Code of Ordinances are hereby amended to read as follows:

Section 38-99. Water meter installation charge.

(a) Upon written application and payment to the City of the charges required herein, the City shall furnish all labor, material and equipment necessary, in accordance with the standard construction specifications of the City, to provide water service to the consumer's property line. Each applicant shall pay to the City, prior to the issuance of a building permit, a water meter installation charge based on the schedule in this subsection. The following schedule of rates will apply to all property within the corporate City limits:

Water Meter Installation Charges

(Domestic and Irrigation)

Meter Size (inches)	Water Meter Installation Charge
5/8 x 3/4	$619
3/4	$675
1	$693
1 - 1 ½	$798
2	Actual Cost
3	Actual Cost
3 (with backflow)	Actual Cost
4	Actual Cost
4 (with backflow)	Actual Cost

Section 38-101. Water capital facilities charge.

(Domestic and Irrigation)

(a) Each applicant for water service shall pay to the City a water capital facilities charge, where no water capital facilities charge has been previously paid, prior to conducting the final inspection. This charge is prescribed for various categories of consumers as follows: For residential and commercial consumers, the water capital facilities charge shall be based on the sizes and type of the water meters installed according to the schedule in this subsection. The following schedule of charges shall apply to all property within the corporate limits:

Water Meter Size (inches)		Water Capital Facilities Charge Treatment Facilities	Distribution Facilities	Total
5/8 x ¾		$2,136	$644	$2,780
1		$5,343	$1,604	$6,947
1 ½		$10,680	$3,206	$13,886
2		$17,088	$5,126	$22,214
3	*Compound*	$34,174	$10,253	$44,427
3	*Turbine*	$74,756	$22,430	$97,186
4	*Compound*	$53,398	$16,023	$69,421
4	*Turbine*	$213,591	$64,077	$277,668
6	*Compound*	$106,796	$32,038	$138,834
6	Turbine	$427,183	$128,155	$555,338

Section 38-102. Rates for Consumption of Water are hereby amended as set forth below.

(a) *Rates*. The rates to be assessed and collected from customers of water furnished as set forth below.

Water System Consumption Charges.

(1) *Customer charge.* Each customer must pay a customer charge for each metered point of connection to the City's water system.

CUSTOMER CHARGE	$11.65 per month

(2) *Water availability charge.* Each customer must pay a water availability charge for each metered point of connection to the City's water system based upon water meter size associated with each connection point.

5/8" x ¾"	$1.52 per month
1"	$3.90 per month
1 ½"	$8.80 per month
2"	$15.58 per month
3"	$33.76 per month
4"	$62.30 per month
6"	$140.26 per month
8"	$249.36 per month

(3) *Water consumption charge(s).* Each customer must pay for water consumed through each connection point based upon water service type.

RESIDENTIAL SERVICE

Tier 1 (0 – 4,000 gallons)	$2.78 per 1,000 gallons
Tier 2 (4,001 – 8,000 gallons)	$3.62 per 1,000 gallons
Tier 3 (8,001 gallons and above)	$5.41 per 1,000 gallons

NON-RESIDENTIAL (Commercial, Industrial and Fire Line Service)

Tier 1 (All consumption)	$3.62 per 1,000 gallons

IRRIGATION (Residential and Non-Residential Service)

Tier 1 (All consumption)	$5.41 per 1,000 gallons

Section 38-139. Wastewater capital facilities charge.

(a) Each applicant for wastewater service shall pay to the City a wastewater capital facilities charge, where no wastewater capital facilities charge has been previously paid, prior to conducting the final inspection. This charge is prescribed for various categories of consumers as follows: For residential and commercial consumers, the wastewater capital facilities charge shall be based on the sizes and type of the water meters installed according to the schedule in this subsection. The following schedule of charges shall apply to all property within the corporate limits:

Water Meter Size (inches)	Wastewater Capital Facilities Charge Treatment Facilities	Collection Facilities	Total
5/8 x ¾	$3,927	$954	$4,881
1	$9,822	$2,390	$12,212
1 ½	$19,642	$4,774	$24,416
2	$31,433	$7,639	$39,072
3 *Compound*	$62,853	$15,278	$78,131
3 *Turbine*	$137,497	$33,419	$170,916
4 *Compound*	$98,212	$23,871	$122,083
4 *Turbine*	$392,848	$95,484	$488,332
6 *Compound*	$196,425	$47,742	$244,167
6 Turbine	$785,695	$190,969	$976,664

Section 38-140. Wastewater rates and charges are hereby amended as set forth below:

(a) *Rates*. There is hereby established a schedule of monthly rates and charges for the use of or availability for the use of wastewater collection, treatment and disposal service which in part is based on the amount of water used from the City water system as measured by the customer water meter. Wastewater service charges shall be billed to and be the responsibility of the customer responsible for paying the water bill at any specific location. These rates will apply to all locations within the corporate city limits.

Wastewater System Usage Charges.

(1) *Wastewater Customer charge*. Each customer must pay a wastewater customer charge for each metered (water meter) point of connection to the City's water system.

CUSTOMER CHARGE	$13.82 per month

(2) Wastewater Usage Charge(s). Each customer must pay for wastewater discharged into the City's wastewater collection system based upon customer class:

RESIDENTIAL CUSTOMERS	$7.27 per 1,000 gallons
NON-RESIDENTIAL (Commercial & Industrial)	$10.11 per 1,000 gallons

Section 38-141. Reclaimed water rates and charges are hereby amended as set forth below:

(a) *Rates.* There is hereby established a schedule of monthly rates and charges for the use of or availability for the use of reclaimed water. These rates will apply to all locations within the corporate city limits.

Reclaimed Water System Usage Charges.

(1) Reclaimed water customer charge. Each customer must pay a reclaimed water customer charge for each metered point of connection to the City's reclaimed water system.

CUSTOMER CHARGE	$10.39 per month

(2) Reclaimed water usage charge(s). Each customer must pay for reclaimed water withdrawn from the City reclaimed water system.

CONSUMPTION CHARGE	$0.94 per 1,000 gallons

Sec. 38-170. - Residential electric service.

(a) Base rate. The rate to be charged and collected for electric energy furnished by the City to consumers for residential service shall be a customer service charge.

CUSTOMER CHARGE	$9.37 per month

Plus a kilowatt hour per month consumption charge for the first 1,000 kilowatt hours of energy consumed.

ENERGY CHARGE (1ST – 1,000 KWH)	$0.0957 per kWh

Plus a kilowatt hour per month consumption charge in excess of 1,000 kilowatt hours of energy consumed.

ENERGY CHARGE (Above – 1,000 KWH)	$0.1062 per kWh

(b) Taxes. An amount equal to all applicable taxes imposed against the sale or consumption of electric energy shall be added to the rates hereinabove set forth. The United States of America, the State and all political subdivisions, agencies, boards, commissions and instrumentalities thereof and all recognized churches are exempt from the City's utility tax.

(c) Availability. This service is available to consumers both within and outside the corporate limits of the city.

Sec. 38-171. - Nonresidential demand service.

(a) Base rate for general service demand. The rate to be charged and collected for electric energy furnished by the City for nonresidential demand service shall be a customer service charge.

CUSTOMER CHARGE	$46.85 per month

Plus a kilowatt demand charge per month consumption for energy consumed.

DEMAND CHARGE	$7.54 per kW

Plus a kilowatt hour per month consumption charge for energy consumed.

ENERGY CHARGE	$0.0719 per kWh

(b) Base rate for general service large demand. The rate to be charged and collected for electric energy furnished by the City for nonresidential large demand service shall be a customer service charge.

CUSTOMER CHARGE	$46.85 per month

Plus a kilowatt hour per month consumption charge for energy consumed.

DEMAND CHARGE	$7.54 per kW

Plus a kilowatt hour per month consumption charge for energy consumed.

ENERGY CHARGE	$0.0687 per kWh

(c) Taxes. An amount equal to all applicable taxes imposed against the sale on consumption of electric energy shall be added to the rates hereinabove set forth. The United States of America, the State and all political subdivisions, agencies, boards, commissions and instrumentalities thereof an all recognized churches are exempt from the City's utility tax.
(d) Availability. This service is available to consumers both within and outside the corporate limits of the city.

Sec. 38-172. - Nonresidential non-demand service.

(a) Base Rate. The rate to be charged and collect for electric energy furnished by the City to consumers for general service non-demand service shall be a customer service charge.

CUSTOMER CHARGE	$11.97 per month

Plus a kilowatt hour per month consumption charge for energy consumed.

ENERGY CHARGE	$0.1010 per kWh

(b) Taxes. An amount equal to all applicable taxes imposed against the sale of consumption of electric energy shall be added to the rates hereinabove set forth. The United States of America, the State and all political subdivisions, agencies, boards, commissions and instrumentalities thereof and all recognized churches are exempt from the City's utility tax.
(c) Availability. This service is available to consumers both within and outside the corporate limits of the city.

Section 2. Inclusion of the Code

It is the intention of the City Commission of the City of Alachua, Florida, and it is hereby provided that the provisions of this ordinance shall become and be made a part of the Code of Ordinances of the City of Alachua, Florida; that the sections of this ordinance may be renumbered or re-lettered and that the word "ordinance" may be changed to "section", "article" or other appropriate designation to accomplish such intention

Section 3. Repealing Clause

All ordinances or parts of ordinances in conflict with this ordinance are, to the extent they conflict with this ordinance, repealed.

Section 4. Providing for Severability

It is the declared intent of the Alachua City Commission that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by a court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 5. Effective Date

This Ordinance shall be effective upon its passage and adoption on the second and final reading.

PASSED on first reading on the 10th day of August, 2026.

PASSED and **DULY ADOPTED**, in regular session, with a quorum present and voting, by the City Commission, upon second and final reading on the 24th day of August, 2026.

CITY COMMISSION OF THE
CITY OF ALACHUA, FLORIDA

Walter Welch, Mayor
SEAL

ATTEST:

Rodolfo Valladares, City Manager/Clerk

APPROVED AS TO FORM

S. Scott Walker, City Attorney

City of Alachua
THE GOOD LIFE COMMUNITY

Commission Agenda **Item**

MEETING DATE: August 24, 2026
SUBJECT: Renewal of City Commercial Insurance Package
PREPARED BY: Cap Wilson
RECOMMENDED ACTION:
authorize and direct the City Manager to execute any and all documents necessary to renew the proposed City Commercial Insurance Package with the Florida Municipal Insurance Trust (FMIT) including the decrease of the named storm deductible/limit option from 10% to 5% at a cost of $20,316.00.

Summary

FY2026-27 FMIT Commercial Insurance Package

Commercial Package:

The City of Alachua Commercial Insurance Package includes coverage for General/Professional Liability, Law Enforcement Liability, Cyber Liability, Automobile Liability, Automobile Physical Damage, Property and Workers Compensation. There is a 10.98% reduction in our Property coverage ($85,330,146.00 replacement cost coverage) that is offset by increases in all other coverages yielding a total commercial package premium increase of 10.46% (i.e., $92,551.00 annually and $23,137.75 quarterly) more than the current year. The Renewal Quote for FY2026-27 is attached alongside the Renewal Quote for FY2025-26.

Discussion concerning rate changes follows:

General and Professional Liability:

General and Professional Liability includes Law Enforcement (LEO) coverage. All three (3) are tied directly to payroll, except that the LEO calculation includes a factor based on the number of sworn personnel. Police officers are classified at a higher rate based on the number of personnel since they represent a higher risk factor and based on the number of officers since they generate claims explicitly excluded from coverage for those against other employees. Civil Rights violations, constitutional claims, such as Fourth Amendment search and seizure and intentional tort of false arrest, assault and battery are a few examples. FMIT does not separate coverage for LEOs from the standard policy language but does so by endorsement.

The City payroll is reported as increasing 13.00% ($1,429,242.00). However, in the face of a 13.00% payroll increase, a 7.63% increase over the current year was negotiated.

FY2025-26 Premium: $200,621.00

FY2026-27 Premium: $217,202.00 (+7.63%, +$16,581.00 per fiscal year)

Cyber Liability:

Cyber Liability is coming into its fifth year of being separate and independent from General and Professional Liability. For FY2025-26, the renewal premium was $3,165.00. For FY2026-27, the renewal rate is $3,723.00, a roughly 14.99% increase (i.e., $558.00). FMIT underwriting is still attempting to establish their baseline premium for this type of coverage.

FY2025-26 Premium: $3,165.00

FY2026-27 Premium: $3,723.00 (+14.99%, +$558.00 per fiscal year)

Automobile Liability and Physical Damage:

The City and FMIT are still in the process of reconciling the number of vehicles to be insured. FMIT is in the process of migrating its software that reconciles the City fleet schedule. The City has supplied the correct numbers and FMIT is working towards reconciling its data. The Automobile Liability and Physical Damage quoted premium will be reconciled at a later date. No wide variation is anticipated from that quoted in the renewal proposal based on the numbers.

This coverage includes all city vehicles—no matter the size—and equipment. The City fleet consists of approximately 122 vehicles. The City FY2025-26 premium for Automobile Liability was $57,209.00 and $36,960.00 for Physical Damage. For FY2026-27, the Automobile Liability premium is $77,289.00 and $59,158.00 for Physical Damage, resulting in an averaged increase of 31.75% or $42,278.00 among both lines of coverage. The City, over the past couple fiscal years, has been moving out older, high-mileage vehicles and replacing them with new model vehicles. FMIT is being notified in real time of vehicles that are being sent off for auction and those that are to be added to the schedule. The 25.98% increase is attributable to a number of things: 1) procurement of new vehicles, 2) FMIT pool is operating at a loss, caused by a dramatic increase in the cost of new vehicles, equipment, repair costs* and 3) an approximate City 170% loss ratio.

*Affects both automobile property and automobile liability claims.

FY2025-26 Premium: $57,209.00 (Automobile Liability), $36,960.00 (Physical Damage)

FY2026-27 Premium: $77,289.00 (Automobile Liability), $59,158.00 (Physical Damage)

Difference: +$20,080.00, +25.98% (Automobile Liability), +$22,198.00, +37.52% (Physical

Damage)

Property Coverage:

Property coverage includes that for City Hall, Legacy Multipurpose Center, Alachua Police Department, Operations Center, Electric Sub-stations, non-vehicle equipment, facilities such as the Wastewater Treatment Facility and lift stations to name the most obvious.

The City has experienced no large storm losses over the past several years. Claims for other than named storm losses, such as water damage at the Legacy and Hal Brady facilities do not adversely affect the City Property premium. The FY2026-27 premium is reduced 10.98% or $34,323.00.

FY2025-26 Premium: $346,888.00

FY2026-27 Premium: $332,881.00* (-10.98%, -$34,323.00)

*Includes cost of the 5% named storm deductible election.

City staff recommends, based on the City large investment in buildings and structures, that the named storm deductible be reduced from the current 10% to 5% of any named storm loss. For example, the Hal Brady Recreation Center is presently insured for $2.5 million. The damage claim now being processed and estimated at $250,000.00 to $500,000.00 in damage, if incurred during a named storm, would have a deductible of 10% (i.e., $25,000.00 to $50,000.00). Legacy Park Multipurpose Facility is insured for $13,349,600.00. A 10% deductible would be $1,334,960.00 and a 5% deductible would be $667,480.00. Election of the 5% named storm deductible increases the Property premium by $20,316.00. Further, the standard insurance coverage enforced today applies the named storm deductible to each building even if two (2) or more buildings are damaged by the same storm. The renewal quote deductible reduction requires a separate signature on the Renewal Quote for 2026-2027.

Workers Compensation:

For FY2025-26, the City Experience Modification Rating (EMR) is 0.8, resulting in a 25% decrease to the current year premium. The City has experienced a significant Workers Compensation claim resulting in an increase to its EMR. The City EMR will increase to 1.0, the industry average. The 25% EMR increase eliminates the 25% premium credit. The 1.0 increase will affect rates for the next three (3) fiscal years. Similar to General/Professional Liability, Workers Compensation premiums are also tied to payroll (13.00%). The 25% increase, plus the 13.00% generates an increase of 38.00% that was negotiated to 31.41% or an increase of $67,457.00.

The City does receive a 2% premium credit for its Safety program and a 5% premium credit for its Drug-Free Workplace program.

FY2025-26 Premium: $147,287.00

FY2026-27 Premium: $214,744.00 (+31.41%, +$67,457.00)

FINANCIAL IMPACT

Insurance Type	Monthly Premium	Yearly Premium
General/Professional Liability	$18,100.17	$217,202.00
Cyber Liability	$310.25	$3,723.00

Commission Agenda Item

MEETING DATE: August 24, 2026
SUBJECT: City Manager Annual Performance Evaluation
PREPARED BY: Tara L. Malone
RECOMMENDED ACTION:
Approve the City Manager's Annual Performance Evaluation.

Summary

On June 23, 2025, the City Commission entered into a one (1) year contract with Mr. Rodolfo Valladares as Interim City Manager. He was later appointed Permanent City Manager on January 26th, 2026, and entered into a three (3) year contract with the City Commission. In accordance with Section 5. Compensation/Salary/Review, subset "B" – Reviews, of the City Manager's employment contract, the City Commission shall complete a review of the employee's performance as City Manager, no later than August 30th, 2026, and each August 30th thereafter.

The Mayor and City Commissioners were provided with the City Manager's Annual Performance Evaluation packet on August 4th, 2026. The packet included the annual performance evaluation introduction, annual performance evaluation, individual rating sheet and the City Manager's self-evaluation.

City Manager Valladares completed his self-evaluation, detailing his perception of how he met the directives and expectations of the City Commission during the evaluation period. Each commissioner then completed the performance evaluation and individual rating sheet based on their personal assessment of the City Manager's ability to meet the objectives and expectations reflected in the performance factors. The individual rating scores were then averaged together to produce a Total Evaluation Score.

The 2026 Annual Performance Evaluations from each member of the Commission have been completed and attached to this agenda item. The results have been tabulated and appear on the Overall Rating Sheet. The individual results are as follows:

- Mayor Walter Welch 10.0 – Outstanding
- Vice-Mayor Jennifer Ringersen 9.60 – Outstanding
- Commissioner Shirley Green Brown 10.0 – Outstanding

- Commissioner Jacob Fletcher 6.40 – Below Expectations
- Commissioner Jackson Youmas *No response

These results provide an Overall Average Evaluation Rating of 9.0 – Outstanding.

CITY MANAGER
ANNUAL PERFORMANCE EVALUATION

TABLE OF CONTENTS

1. INTRODUCTION

2. PERFORMANCE EVALUATION

3. RATING SHEET

4. AGREEMENT PLAN

CITY MANAGER
ANNUAL PERFORMANCE EVALUATION

INTRODUCTION

The City Manager's Annual Performance Evaluation consists of three sections:

SECTION I: PERFORMANCE EVALUATION
This section will address the City Manager's ability to meet the objectives of the City Commission and overall performance in leading the organization, as reflected by the factors defined at the beginning of the section.

SECTION II: INDIVIDUAL RATING SHEET
The Rating Sheet will provide the total score of all the Commissioner's individual Performance Evaluation ratings. From the total score for each Performance Review Factor, an average score will be calculated. Finally, the average scores for each Performance Review Factor will be added together to produce the Total Evaluation Score.

SECTION III: PERFORMANCE AGREEMENT PLAN
The plan will provide direction for improvement, if any, in the upcoming year. This plan will be mutually agreed upon between the Mayor, acting on behalf of the Commission, and the City Manager.

Annual Performance Evaluation Process:

The City Manager will complete Section I of the Performance Evaluation, detailing his perceptions of how he has met the Commission's expectations. A copy of this self-evaluation will be forwarded to each Commissioner.

Using a copy of the City Manager's self-evaluation, each Commissioner will complete Section I of the Performance Evaluation and the associated Section II Individual Rating Sheet. Once all Commissioners' evaluations are completed, the item will be presented at a Commission meeting, in which the Commissioners and the City Manager will discuss any difference between perceptions of performance. The following scale was approved by the City Commission on Aug. 24, 2015 for merit increase consideration and directed to be made part of the annual evaluation process. The scale correlates the total average evaluation score to the merit increase amount and is awarded consistent with the City Manager's employment contract.

SCALE			RATING	MERIT INCREASE
.00	-	5.99	Unacceptable	0%
6.00	-	6.99	Below Expectations	0%
7.00	-	7.99	Meets Expectations	2%
8.00	-	8.99	Exceeds Expectations	3%
9.00	-	10.00	Outstanding	5%

Finally, if required, the Performance Agreement Plan will then be completed and signed by the Mayor and City Manager.

CITY MANAGER
ANNUAL PERFORMANCE EVALUATION

SECTION I
PERFORMANCE EVALUATION

Following are the Performance Review Factors assigned the City Manager to review/rate organizational management performance. The performance review rating will be based upon how well the expectations of the individual Commissioners, for each factor, are viewed.

SCALE			RATING
.00	-	5.99	Unacceptable
6.00	-	6.99	Below Expectations
7.00	-	7.99	Meets Expectations
8.00	-	8.99	Exceeds Expectations
9.00	-	10.00	Outstanding

1. **Reflects City Values**: The City Manager's performance should reflect the values of integrity, honesty, respect, diversity, innovation, accountability and communication.

2. **Communication:** The City Manager should make himself available to meet and discuss issues with personnel and citizens and maintain open lines of communication.

3. **Team Management**: The Manager should provide sufficient authority, direction and support to teams/departments to enable and encourage them to accomplish their goals.

4. **Fiscal Management:** The Manager will ensure the financial solvency of the City government, while exploring and recommending alternate forms of revenue.

5. **Professional Presentation:** The Manager will present a professional image in dress and action at all times. Any interaction with personnel, citizens, and peers will be conducted in a professional manner that will reaffirm the professionalism of the City.

6. **Organizational Leadership:** The Manager will exhibit strong leadership skills in moving the City operations in the direction that the Commission has chosen. The organization will be well run with high levels of satisfaction among employees and is able to obtain desired results from employees.

7. **Project Management:** The Manager will steer and oversee projects in a manner that results in achievement of goals within established timeframes and budget.

8. **Community Involvement**: The Manager will participate in community events and will foster effective and cooperative working relationships with community leaders.

9. **Goals:** The Manager should meet the objectives associated with the goals and directives of the Commission. It is important to consider external influences beyond the Manager's control.

10. **Commission/Manager Interaction:** The Manager will work with the Commission to develop effective communication practices with each member and in particular, the Mayor. The Manager will keep the Commission informed of issues of concern.

City of Alachua
THE GOOD LIFE COMMUNITY

CITY MANAGER
ANNUAL PERFORMANCE EVALUATION
EVALUATION PERIOD: AUGUST 2025 – JULY 2026

SELF EVALUATION

Honorable Mayor, Vice Mayor, and Members of the City Commission:

It has been my honor to serve the City of Alachua as City Manager. The opportunity to lead this organization and serve our community has been one of the most rewarding experiences of my professional career. I recognize that this position carries a profound responsibility not only to oversee the daily operations of a growing municipality, but also to uphold the public trust, provide sound and objective recommendations, and ensure that every decision advances the long-term interests of the City of Alachua.

The past year has been defined by meaningful progress, growth, and measurable accomplishments across virtually every area of municipal operations. Working collaboratively with the Mayor, Vice Mayor, City Commission, employees, and community partners, the organization continued to advance the Commission's strategic vision through sound fiscal stewardship, effective leadership, employee development, operational efficiency, infrastructure investment, and meaningful public engagement.

These accomplishments reflect the dedication, professionalism, and unwavering commitment of the City's employees, whose service to our community remains one of our greatest strengths. Together, we have cultivated a culture founded on integrity, accountability, collaboration, innovation, and continuous improvement.

It is with gratitude and humility that I respectfully submit this self-assessment, highlighting the progress achieved under the City Commission's leadership and the collective accomplishments of our organization. I remain committed to building upon this momentum and continuing to serve the residents of the City of Alachua with integrity, professionalism, and excellence.

1. Reflects City Values

Since assuming the role of Interim City Manager on June 9, 2025, and subsequently being appointed City Manager on January 26, 2026, I have led the organization with integrity, accountability, professionalism, transparency, respect, and ethical leadership. These principles have guided every initiative, operational decision, and interaction with the City Commission, employees, residents, businesses, and community partners.

One of the organization's most significant accomplishments was the development and implementation of the City's Guiding Principles. Recognizing that a strong culture must be intentionally cultivated, these principles established a shared framework for leadership, decision-making, customer service, and accountability. More importantly, they reinforce the City's core values while empowering employees to exercise sound judgment, promote consistency, and ensure that daily actions remain aligned with the City Commission's strategic vision.

Embedding the City's values throughout the organization requires more than the actions of the City Manager; it requires every employee to understand, embrace, and demonstrate those principles in each interaction with the public. By intentionally cultivating our culture, we have positioned the City to continue delivering exceptional municipal services, earning public trust, and advancing the Commission's vision for the future of the City of Alachua.

2. Communication

Open, honest, and timely communication serves as the foundation of effective governance, informed decision-making, and public confidence in local government. Throughout the year, the City strengthened its communication strategy by improving access to information, increasing transparency, expanding public engagement opportunities, and implementing a more coordinated approach to public outreach.

A notable example was the introduction of interactive community workshops featuring informational stations staffed by subject matter experts. Rather than relying solely on traditional public comment, residents were able to engage directly with City staff, ask detailed questions, and receive information tailored to the issues most important to them, creating a more accessible and meaningful public engagement experience.

The City further enhanced its communications by leveraging the expertise of the Public Information Officer to implement a strategic communications program. During the evaluation period, the City successfully launched a new website, expanded its digital presence across multiple communication platforms, and improved outreach through consistent social media messaging, printed informational materials, and timely public updates. These efforts kept residents informed about municipal services, community events, capital projects, and other important initiatives while promoting transparency, accessibility, and public trust.

Collectively, these initiatives strengthened communication between the City Commission, employees, residents, businesses, and community partners, fostering

collaboration, building public confidence, and reinforcing the City's commitment to open, accessible, and responsive government.

3. Team Management

Exceptional municipal services begin with exceptional employees. My leadership philosophy centers on building a high-performing organization by empowering employees with the resources, training, support, and authority needed to succeed.

During the past year, the organization strengthened internal communication through a consistent cadence of purposeful, value-added meetings focused on information sharing, collaborative problem-solving, and direct communication among the employees best equipped to resolve issues and make decisions. These forums reinforced cross-departmental coordination, clarified organizational priorities, accelerated decision-making, and ensured employees remained aligned with the City Commission's strategic vision.

Investing in employee development remained an organizational priority. Employees earned professional certifications, completed specialized technical and leadership training, and obtained professional licenses that enhanced both their expertise and the City's organizational capacity. Collectively, employees completed 82 professional certifications, over 705 hours of technical and leadership training, and earned 1 professional licenses, reinforcing the City's commitment to continuous learning and professional excellence.

To further strengthen organizational capacity, the City introduced an internal training initiative that empowered supervisors and senior staff to share their expertise by leading training sessions within their areas of responsibility. This initiative expanded learning opportunities, facilitated the transfer of institutional knowledge, encouraged collaboration across departments, and provided experienced employees with additional leadership and mentoring opportunities.

The City also expanded the use of cross-functional teams to address complex organizational challenges through diverse perspectives and collaborative problem-solving. One example was the creation of the Property Tax Impact Working Group, which brought together employees from multiple disciplines to evaluate the potential impacts of proposed property tax changes, assess organizational implications, and develop strategic recommendations. This collaborative approach enhanced organizational readiness and better positioned the City to respond proactively to evolving legislative and operational challenges.

The long-term success of any organization is defined by the strength of its people. By investing in communication, professional development, leadership, and collaboration, we have built a more knowledgeable, resilient, and adaptable workforce that is well positioned to deliver exceptional municipal services while preparing the City for future opportunities and challenges.

4. Fiscal Management

Long-term financial stability remained central to every decision of my administration. Recognizing that public resources are entrusted to the City by its residents, every budget recommendation, capital investment, operational decision, and strategic initiative was guided by integrity, accountability, and responsible fiscal stewardship.

The annual budget was developed through a collaborative and disciplined process that balanced operational needs, infrastructure investment, employee development, and fiscal sustainability while remaining aligned with the City Commission's strategic priorities. Throughout budget development, emphasis was placed on preserving essential public services, investing in critical infrastructure, supporting employee development, and maintaining the City's strong financial position.

One of the most significant improvements implemented this year was restructuring the Strategic Initiatives Retreat to occur earlier in the budget development process. This restructuring moved the Strategic Initiatives Retreat earlier in the budget development process, enabling the Commission's priorities and policy direction to inform departmental requests, capital planning, and budget development from the outset while creating stronger alignment between strategic planning, financial planning, and implementation. As a result, City resources are now more effectively prioritized to implement the Commission's vision while ensuring responsible stewardship of public funds.

The organization also demonstrated a proactive approach to financial planning by evaluating the potential impacts of proposed legislative changes affecting municipal revenues and developing contingency strategies well in advance of any potential fiscal impacts. Rather than reacting to changing circumstances, staff worked collaboratively to identify financial risks, evaluate alternatives, and position the City to remain financially stable regardless of future legislative outcomes.

Effective financial management requires balancing today's operational needs with tomorrow's obligations. Through disciplined budgeting and thoughtful long-range planning, the organization has protected the City's financial stability while continuing to invest in the people, infrastructure, and services that preserve the exceptional quality of life enjoyed by our residents.

These efforts were further demonstrated through the successful acquisition of more than $1.06 million in grant funding during the evaluation period, including:

- $888,798 – Community Development Block Grant (CDBG)
- $69,250 – Florida Department of Environmental Protection (FDEP)
- $66,946 – Florida Department of Law Enforcement (FDLE)
- $14,841 – Florida Department of Law Enforcement (FDLE)
- $11,250 – Visit Gainesville
- $5,000 – Visit Gainesville
- $5,000 – Martin Luther King Jr. Day Celebration Grant

By leveraging external funding, the City advanced strategic initiatives, strengthened public services, and reduced the financial burden on local taxpayers while continuing to invest in the community's long-term success.

5. Professional Presentation

As City Manager, I recognize that every interaction reflects upon the City of Alachua and the organization I represent. I have remained committed to representing the City with professionalism, integrity, and respect while fostering public confidence, building meaningful relationships, and advancing the City Commission's vision.

The City's growing reputation was reflected through increased external recognition during the evaluation period. The City of Alachua was featured in *Business View Magazine* in the article, *Alachua, FL: Small-Town Character with a Mature Vision of the Civic Road Ahead—A Balanced Path to Sustainable Growth.* Additionally, the City was the cover feature of the *Guide to Alachua: Explore, Experience, and Live the Good Life*, further showcasing the community's vision and leadership.

Throughout the year, I maintained strong working relationships with residents, employees, elected officials, business leaders, developers, community organizations, neighboring governments, and state and regional agencies. Whether meeting with residents, participating in legislative discussions, collaborating with regional partners, or working alongside neighboring jurisdictions and state agencies, I remained prepared, responsive, respectful, and focused on identifying practical solutions.

I was honored to represent the City by participating in and speaking at numerous community events, regional forums, ribbon-cutting ceremonies, economic development meetings, and intergovernmental initiatives. Through these efforts, I worked to strengthen the City's credibility, cultivate lasting partnerships, and represent the organization in a manner that reflects our community's values and advances the City Commission's vision.

6. Organizational Leadership

Effective leadership extends beyond managing daily operations; it requires building an organization that is resilient, adaptable, and prepared for future challenges. This is accomplished by implementing sustainable systems that position the organization for long-term success.

The organization successfully responded to significant legislative and regulatory changes, including the implementation of Senate Bill 180 and new state-mandated training requirements, while simultaneously managing operational demands, legal matters, infrastructure initiatives, personnel transitions, and other emerging issues. While managing these responsibilities, the organization remained focused on delivering exceptional municipal services and advancing the City Commission's priorities.

During the past year, we enhanced internal processes, expanded professional development opportunities, improved cross-departmental collaboration, and encouraged employees to identify innovative solutions to challenges. These efforts have created a

more resilient, agile, and forward-thinking organization that is well positioned to meet both current and future community needs.

The impact of these efforts is reflected not only in the City's operational performance but also in the external recognition earned by our employees:

Public Safety

- Police Reaccreditation
- Crime Prevention Unit of the Year Award for Small Agency

Utilities

- Safety Award
- Endurance Award
- Best Tasting Drinking Water People's Choice Award
- Best Tasting Drinking Water Judges' Choice Award

Financial & Organizational Excellence

- Certificate of Achievement for Excellence in Financial Reporting
- Hometown Health Award

These recognitions reflect the collective efforts of our employees and the culture we have intentionally cultivated. They demonstrate that our steadfast approach to continuous improvement, professional excellence, and exceptional public service is producing measurable results while strengthening the City of Alachua's reputation for professional and effective municipal service.

7. Project Management

The City managed a diverse portfolio of capital projects, infrastructure investments, utility initiatives, technology enhancements, planning efforts, and operational improvements. Each project was managed with a focus on fiscal responsibility, regulatory compliance, and accountability while advancing the City Commission's priorities.

Successfully delivering this diverse portfolio required disciplined oversight of schedules, budgets, procurement, permitting, resource allocation, and coordination among multiple departments, consultants, contractors, regulatory agencies, and community stakeholders. During this period, the organization advanced a wide range of infrastructure, utility, parks and recreation, technology, and operational initiatives that directly support the City's long-term strategic objectives. Signature projects such as Theatre Park and the Wellfield Project exemplify the City's continued commitment to investing in infrastructure that enhances community vitality and strengthens the resilience of essential public infrastructure.

The true measure of successful project management is the value delivered to the community. Through disciplined oversight and responsible stewardship of public resources, the organization successfully managed more than $3.6 million in capital and infrastructure projects that improve municipal services and enhance the quality of life for those who live, work, and visit the City of Alachua.

8. Community Involvement

Strong communities are built on trust, accessibility, transparency, and meaningful public engagement. I remained committed to strengthening relationships with residents, businesses, community organizations, educational institutions, regional partners, and governmental agencies by listening, encouraging collaboration, and creating meaningful opportunities for civic participation.

Maintaining an active presence throughout the community provided valuable insight into local priorities while fostering productive partnerships and reinforcing the City's commitment to responsive, accessible, and transparent government. These relationships have enhanced communication, strengthened collaboration, and ensured that community perspectives continue to inform organizational planning and decision-making.

The City also expanded opportunities for public participation by evaluating new approaches to community engagement and improving access to City information. A notable example was the introduction of interactive community workshops featuring informational stations staffed by subject matter experts. Rather than relying solely on traditional public comment, residents were able to engage directly with City staff, ask detailed questions, and receive information tailored to their specific interests and concerns. The overwhelmingly positive response demonstrated that providing multiple opportunities for dialogue increases understanding, encourages participation, and makes local government more accessible.

Beyond these initiatives, I represented the City through participation in community celebrations, civic events, economic development activities, regional organizations, and intergovernmental meetings, including:

- Alachua County Legislative Delegation
- Ribbon Cutting(s):
  - Briarwood
  - Fundora
  - Firestone
  - Chick-fil-A
  - Grace Craze
  - Kirkland Farms
- Martin Luther King, Jr. Day Celebration
- Juneteenth Celebration
- Government Week activities at local schools
- Fourth of July Celebration
- Christmas Tree Lighting
- Christmas Parade
- Alachua Chamber Gala
- Cattleman's Banquet
- Florida League of Cities
- Great American Cleanup
- Alachua Seniors
- St. Matthew Food Drive
- Alachua Chamber of Commerce events

Meaningful community engagement is measured not only by participation, but by the trust it builds. By remaining visible, approachable, and actively engaged throughout the community, I have worked to strengthen public confidence, encourage collaboration, and reinforce the City of Alachua's reputation as a responsive, accessible, and community-focused local government.

9. Goals

The City made significant progress in advancing the priorities established by the City Commission. Through thoughtful planning, disciplined execution, and the dedication of our employees, the organization translated the Commission's vision into measurable accomplishments that strengthened municipal operations and enhanced the quality of life for our residents.

Among the organization's most significant accomplishments was the successful completion of four Strategic Initiatives identified by the City Commission. These initiatives addressed critical priorities related to utility infrastructure, public communication, customer service, and senior housing while demonstrating the organization's ability to translate strategic priorities into measurable results.

- **Strategic Initiative 1.2** – Advanced the City's long-term water supply by completing the additional wellfield initiative.
- **Strategic Initiative 2.1** – Implemented a comprehensive marketing strategy highlighting City services, programs, events, and accomplishments.
- **Strategic Initiative 2.2** – Expanded online access to City services for residents and businesses.
- **Strategic Initiative 4.1** – Advanced opportunities for senior living to address the community's evolving housing needs.

Completing these initiatives demonstrates the organization's ability to establish strategic priorities, coordinate resources across departments, and successfully implement long-term objectives that provide lasting benefits to the community.

While several long-term initiatives remain underway due to permitting requirements, regulatory review, or coordination with outside agencies, the organization has maintained steady progress by adapting to changing circumstances, developing practical solutions, while remaining focused on the City Commission's strategic priorities.

10. Commission/Manager Interaction

A successful Commission-Manager relationship is founded on trust, mutual respect, open communication, and a shared commitment to serving the residents of the City of Alachua. Throughout year, I remained committed to fostering a positive, professional, and collaborative relationship with the Mayor, Vice Mayor, and each Commissioner while respecting the distinct roles established under the Council-Manager form of government. The City Commission establishes policy and provides strategic direction, while the City Manager is responsible for implementing those policies efficiently, professionally, and transparently. Maintaining that balance has strengthened governance, enhanced

organizational effectiveness, and reinforced the integrity of the Council-Manager form of government.

Throughout the year, I maintained open, consistent, and timely communication with the Mayor and each Commissioner through regularly scheduled individual meetings, one-on-one discussions, after-hours phone calls, and other direct communications. I remained readily accessible and responsive to questions, concerns, and emerging issues while providing objective recommendations, well-reasoned analysis, and timely information to support informed policy decisions. This ongoing exchange of information ensured the governing body remained informed of significant issues and emerging developments, strengthened collaboration between the Commission and the administration, reinforced mutual trust, and enhanced our ability to proactively address challenges before they became larger issues.

A significant governance improvement was the establishment of regularly scheduled weekly individual meetings with the Mayor, Vice Mayor, and each Commissioner. These meetings created a consistent forum to discuss projects, review emerging issues, exchange information, answer questions, and improve coordination between elected officials and the administration. The City also enhanced its onboarding process for newly elected Commissioners by implementing a comprehensive orientation covering City operations, strategic initiatives, financial management, governance responsibilities, organizational priorities, and major ongoing projects. Together, these improvements strengthened communication, enhanced institutional knowledge, improved continuity, and enabled newly elected officials to become effective more quickly.

This evaluation reflects a year of meaningful progress, measurable accomplishments, and an unwavering commitment to excellence in public service. Working collaboratively, we strengthened the City's operational effectiveness while advancing the Commission's vision through sound financial stewardship, leadership, infrastructure investment, employee development, project implementation, and public engagement.

This year's accomplishments extend well beyond the successful completion of individual projects. Together, we enhanced organizational systems, improved governance, invested in our employees, expanded community engagement, enhanced strategic planning, and reinforced a culture founded on accountability, professionalism, and continuous improvement. Collectively, these efforts have created a stronger, more resilient organization that is well positioned to meet future opportunities and challenges.

We have established a strong foundation for the future, and I remain committed to building upon that momentum by working alongside the City Commission to preserve and enhance the exceptional quality of life that defines Alachua as **The Good Life Community**.

Respectfully submitted,

Rodolfo Valladares
City Manager

1. Reflects City Values **Rating** 10

Comments/Explanation: Consistently reflects the City's values by being professional, dependable, and working well with everyone. The manager focused on supporting the City's goals and serving the community.

He cares about our community and its youth. I appreciate his efforts to support the community through his work with CareerSource and helping connect residents with opportunities and resources.

2. Communication **Rating** 10

Comments/Explanation: Communicates clearly with the City Commission and the public. He keeps others informed, listens to concerns, and shares important information in a timely manner.

Did a great job with the Hathcock Center workshops by getting the public involved and giving the community an opportunity to share their thoughts and concerns. He listens to the public and values their input.

3. Team Management **Rating** 10

Comments/Explanation: We have a great team of staff who are dedicated to the City. The City Manager has done an excellent job leading the team and encouraging staff to grow through training and professional development opportunities.

We have a great team and I look forward to seeing the continued progress of the City.

4. Fiscal Management **Rating** 10

Comments/Explanation: The City Manager has managed the City's finances responsibly by keeping spending and budget priorities in mind and making good use of the City resources. I appreciate his efforts in securing grants that bring valuable investment to our community, as well as the City's achievements in receiving the Certificate of Achievement for Excellence in Financial Reporting

5. Professional Presentation **Rating** 10

Comments/Explanation: The City Manager presents himself in a professional manner and represents the City well. He communicates clearly, is prepare for meetings and presentations, and maintains a positive and professional presence when working with the City Commission, staff, and the community.

He does an excellent job presenting information. His presentation are clear, informative, and help the Board better

understand the topics being discussed.

6. Organizational Leadership **Rating** 10

Comments/Explanation: The City Manager provides strong leadership by keeping staff focused on the City's goals and priorities. He supports teamwork and works to keep the organization moving forward while responding to the needs of the City Commission and the community.

7. Project Management **Rating** 10

Comments/Explanation: Manages project well by keeping the City Commission's vision, priorities, strategic initiatives, and capital projects at the forefront while staying focused on established priorities. The City Manager's efforts to keep projects on track, address challenges, and move the City's goals forward are greatly appreciated.

8. Community Involvement **Rating** 10

Comments/Explanation: The City Manager stays involved in the community and builds good relationships with the community. I appreciate his participation and speeches at the MLK Day and Juneteenth events, showing his support and commitment to our community.

9. Goals **Rating** 10

Comments/Explanation: The City Manager stays focused on the Commission's goals and priorities and keeps projects moving forward. I appreciate his efforts to following the City Commission's direction and turns its goals and vision into results for the community.

10. Commission/Manager Interaction **Rating** 10

Comments/Explanation: The City Manager maintains a good working relationship and openly listens, and keeps the board informed. I get a lot out of our weekly meetings, which are very informative. I appreciate the City Manager's efforts in working very hard to keep everyone working together and united; because, we are better together.

1. Reflects City Values **Rating 9.5**

Comments/Explanation: Our city manager has consistently exemplified the core values of integrity, honesty, respect, diversity, innovation, accountability, and communication, going above and beyond my expectations. His transparent decision-making, respectful engagement with the community, and commitment to fostering an inclusive environment have greatly enhanced our city's growth and unity. His proactive approach to solving issues and clear communication have truly set a high standard for leadership, and I am impressed by his dedication to serving the community with integrity and innovation.

2. Communication **Rating 9.5**

Comments/Explanation: Rodolfo goes above and beyond in his communication efforts by not only making himself readily available to meet and discuss issues with personnel and citizens but also actively seeking feedback and engaging in meaningful dialogue to build trusting relationship with all. His proactive approach ensures that all voices are heard, fostering a collaborative environment that truly enhances community relations and demonstrates an exceptional commitment to open, accessible communication.

3. Team Management **Rating 9.8**

Comments/Explanation: Rodolfo excels in team management by providing sufficient authority, clear direction, and unwavering support to teams and departments, empowering them to achieve their goals effectively. His leadership fosters a motivating environment where staff feel trusted and encouraged to excel, which has significantly contributed to the successful and efficient functioning of our city's initiatives.

4. Fiscal Management **Rating 9.2**

Comments/Explanation: He demonstrates outstanding fiscal management by ensuring the financial solvency of the city government through diligent budgeting and financial oversight, while actively exploring and recommending innovative and alternative revenue sources. His strategic approach safeguards our city's financial health and supports sustainable growth, exceeding expectations in maintaining fiscal stability. Always looking out for the best interest of the City.

5. Professional Presentation **Rating 10**

Comments/Explanation: Rodolfo consistently presents a highly professional image through his dress and actions at all times. Every interaction with personnel, citizens, and peers is conducted with utmost professionalism, reaffirming the city's integrity and high standards. He is truly one of the best in this area, setting a positive example and enhancing the city's reputation through his conduct.

6. Organizational Leadership **Rating 10**

Comments/Explanation: He demonstrates exemplary leadership by effectively guiding city operations in alignment with the commission's vision, ensuring the organization runs smoothly and fostering high employee satisfaction. His strong leadership skills inspire confidence and motivate staff to achieve desired results, making him a true leader in all aspects of his life. The community is proud to have him at the helm, confident in his ability to steer the city toward continued success.

7. Project Management **Rating 9.2**

Comments/Explanation: Rodolfo excels in project management by skillfully steering and overseeing projects to ensure goals are achieved within set timeframes and budgets. His exceptional time management skills stand out as unparalleled, consistently enabling him to deliver successful outcomes efficiently and effectively.

8. Community Involvement **Rating 9.4**

Comments/Explanation: So proud of Rodolfo that he actively participates in community events and cultivates strong, cooperative relationships with community leaders, demonstrating a genuine commitment to engagement. He takes the time to listen attentively to citizens and diligently follows up on all concerns, consistently showing a willingness to go above and beyond to serve and strengthen the community.

9. Goals **Rating 9.6**

Comments/Explanation: Rodolfo is committed to meeting the objectives set forth by the commission's goals and directives, demonstrating dedication to organizational success. Recognizing the importance of external influences beyond his control, he remains adaptable and focused on achieving results while navigating external challenges effectively.

10. Commission/Manager Interaction **Rating 9.8**

Comments/Explanation: He actively collaborates with the commission, fostering effective communication with each member, especially the mayor, and ensuring the commission stays well-informed about issues of concern. His dedication to strengthening the relationship between the manager and commission has been commendable, and I am proud of the positive progress made in this area. So informative and a true guiding light.

Good afternoon, Mayor & Commissioners,

I hope this note finds you well. In accordance with the City Manager's Employment Contract, Section 5(B) - Reviews; the City Commission shall conduct a review of the Employee's performance as City Manager no later than August 30, 2026, and each August 30th thereafter. The following documents have been attached to this email for your reference and completion:

- City Manager Valladares' self-evaluation.
- City Manager Evaluation Form (Word and pdf). Each of you will complete Section I - Performance, and Section II - Individual Rating Sheet (pages 3-6).

A composite of the scores will be tallied, and the overall score will be calculated as the average rating for each category. Please complete your performance evaluation and submit to Human Resources by ***Tuesday, August 18th, 2026***. The overall rating will be presented to the City Commission for approval during the second regularly scheduled meeting in August (08/24/26). Kindly advise should you have any questions or need additional information.

Warmest regards,
Tara 😊

Commission Agenda Item

MEETING DATE: August 10, 2026

SUBJECT: Ordinance 26-14: An ordinance of the City of Alachua, Florida; Extending the corporate limits of the City of Alachua, Florida to include certain lands lying contiguous to the existing corporate limits of the City (Tax Parcel 03961-000-000); Providing that all existing laws, ordinances, rules and regulations shall apply in said area; Providing the property and inhabitants are subject to existing indebtedness and liable for taxation; providing for severability; and providing an effective date. (Legislative Hearing; First Reading)

PREPARED BY: Parker Stevens

RECOMMENDED ACTION:

Staff recommends that the City Commission approve Ordinance 26-14 upon first reading and schedule second and final reading of Ordinance 26-14 for August 24, 2026.

I move that this Commission (1) adopt Ordinance 26-14 upon first reading and (2) schedule the second and final reading of Ordinance 26-14 for August 24, 2026.

Summary

The review process for Voluntary Annexations is governed by Florida Statute 177.044. In order for an area to be annexed, it must be contiguous to a municipality, be reasonably compact, and not create an enclave.

The ± 39.73-acre subject property is generally located 14062 NW US Highway 441 (tax parcel(s) 03961-000-000),
and has an Alachua County future land use designation of Agricultural / Rural, and Alachua County zoning designation of Agricultural.

In compliance with F.S. 171.044 (5), a copy of the notice, via certified mail, was sent to the Alachua County Board of County Commissioners on April 16, 2026, not fewer than 10 days prior to publishing the ordinance notice. Per F.S. 177.044 (2), the notice was published for two consecutive weeks, July 23 and 30, 2026, in the Alachua County Today newspaper prior to the hearing.

The Alachua County Board of County Commissioners has not provided any comment on the proposed annexation to date.

Section 1.7.7 of the City's Land Development Regulations states that lands being annexed shall retain their current unincorporated zone district classification until an amendment to the Comprehensive Plan is adopted by the City. The landowner may request, or the City Commission or Planning and Zoning Board, in the City's sole discretion, may initiate a zone district classification in accordance with Section 2.4.2, Site-specific amendments to the Official Zoning Atlas, following adoption of the Comprehensive Plan amendment. The zone district classification shall be consistent with the Comprehensive Plan Future Land Use Map Designation. No development, redevelopment, or expansion shall be initiated until the City adopts an amendment to the Comprehensive Plan and Official Zoning Atlas for the area being annexed.

Commission Agenda Item

MEETING DATE: August 24, 2026
SUBJECT: Directional Bore Services - Electric Department
PREPARED BY: Donna Smith
RECOMMENDED ACTION:
1) Authorize the City Manager to issue a Purchase Order to Stanley Utility Contractor, Inc. in the amount of $180,155.00.

Summary

On September 22, 2025, the City Commission adopted the FY 26 (2025-2026) Budget authorizing $1,197,960 in the Public Services - Electric Division to provide for Capital Improvement Underground Distribution Projects.

On March 1, 2023, Stanley Utility Contractor, Inc. was awarded a contract under RFB 2023-02 to provide Horizontal Directional Drilling and Open Cut Method Services to the City.

The Electric Division is ready to move forward with Job #334 OH-UG Conversion Project located at/near 14005 NW US Hwy 441, Alachua, FL and requires the directional bore services performed in order to complete the project.

Staff recommends issuing a purchase order to Stanley Utility Contractor, Inc. for Directional Bore Services based on RFB 2023-02.
