Appendix B

Operation and Maintenance Requirements and
Erosion and Sedimentation Control Requirements

Operation and Maintenance Plan

Proposed operation and maintenance and soil erosion and sediment control practices are outlined in the following paragraphs.

Surface Water Management Facilities

The man-made surface water facilities shall be maintained free of sediments and debris. Areas shall be inspected on a routine basis and nuisance plants shall be removed a minimum of twice annually. Grassed areas shall be mowed a minimum of 6 times per year. The natural systems shall be least disturbed as possible. Minimal maintenance is required for the natural and undisturbed areas. All basins shall be inspected monthly. Monthly documentation shall be noted based upon the inspection findings.

Erosion Control

All erosion damage at spillways, outfall structures, and along basin side slopes shall be repaired (grading and grassing) as conditions occur. All side slopes and other areas disturbed by construction shall be stabilized by sodding, hydro-mulching or other appropriate vegetative or non-vegetative erosion control measures.

Swale/Ditch

All swales, if any, shall be maintained free of debris and sediment. Sediments shall be removed when the depth has been reduced by 20 percent. Sediments removed from swales/ditches should be evenly spread over grassed areas away from the stormwater management facilities.

Culverts, Pipes and Structures

All pipe, if any, shall be inspected bi-annually. Culverts and pipes shall be maintained free of debris and sediment. Sediments removed from culverts and pipes should be evenly spread over grassed areas away from the stormwater management facilities.

The structures and paved flow lines, if any, shall be maintained clear of debris. Remove any debris and silt collected in inlets and pipes as routine inspections dictates.
As means of visually inspecting the underground stormwater systems to ensure appropriate performance, visual inspections should be performed after major storm events by inspecting the structures placed on the system for maintenance purposes.

Inspection Reporting

Annual inspection reports, prepared by a properly licensed professional engineer, should be submitted to the water management district as appropriate. The engineer shall inspect the site and report on the status and function of the system. Noted deficiencies and/or maintenance

requirements shall be reported to the owner with recommendations for repairs. Repairs shall be executed.

Limerock/Sinkhole

If continuous limerock is encountered during excavation of the swales/basin or if a sinkhole forms in the area of a drainage swale/basin the engineer of record shall be notified by either the contractor or the established operation and maintenance entity. The engineer of record shall inspect the repaired area upon completion of the repair.

Where continuous limerock is encountered during excavation of the swales/basins, the limerock shall be over excavated by 2 feet and replaced with Putnamey soils that extend 2 feet beyond the perimeter of the limerock outcropping. The Putnamey soil shall have at least 20% passing the no. 200 sieve, compacted to 95% of standard proctor, and compacted in a wet condition with moisture 2% - 4% above optimum.

All swales/basins shall be inspected monthly for sinkhole occurrence. Should a sinkhole occur, the area shall be repaired as soon as possible. Repair shall include filling (limerock such as road base material, Putnam/sand mixture, or concrete if necessary). A 2-foot deep cap that extends 2 feet beyond the perimeter of the sinkhole shall be constructed with Putnamey soils. The Putnamey soil shall have at least 20% passing the no. 200 sieve, compacted to 95% of standard proctor, and compacted in a wet condition with moisture 2% - 4% above optimum. The Putnam soil cap shall be re-graded to prevent concentration of waters (ponding) and re-vegetated.

Outfall Structures

All outfall and drawdown orifices are to be inspected bi-annually for sediment or debris in the flow line of weirs or orifices. All sediment and debris should be removed and disposed of in an approved manner.

Summary Report of a Peer Review
Proposed Pleasant Solar Project
Alachua, Alachua County, Florida
GSE Project No. 16203

GSE Engineering & Consulting, Inc. (GSE) has performed a peer review of a geotechnical engineering report prepared for the proposed Pleasant Solar Project in Alachua, Alachua County, Florida.

This peer review was performed in accordance with GSE Proposal No. 2023-496 dated July 28, 2023. You authorized our services on July 28, 2023. The remainder of this report summarizes background information, general site observations, review of published data, review of the ANS Geo geotechnical report, and our associated evaluation and opinions.

Background Information

We understand that you propose to develop this site into a solar power generation facility. The site is located on the west side of NW C.R. 235A between NW 138th Avenue and NW C.R. 2054 in Alachua, Alachua County, Florida.

The site contains approximately 279 acres of agricultural or wooded land. You propose to site solar facilities over much of the site, and provide stormwater drainage though existing natural low areas on the site.

You retained ANS Geo to perform a geotechnical site exploration at the site. ANS Geo prepared a *Geotechnical Report* for the Pleasant Solar Project dated July 13, 2023 (Rev.3). You provided this report to GSE for a peer review.

You have requested this peer review to mainly focus on the karst geology of the site, the risk for sinkhole development related to the karst geology and the approach to providing stormwater management at the site. As part of this peer review, we reviewed the ANS Geo report and published regional geology data, groundwater data, soil survey data and historical aerial photographs. Additionally, we performed a site visit to observe certain site features.

General Site Conditions and Observations

Mr. Kenneth L. Hill, P.E. visited the site on July 28, 2023 to observe the site conditions. The majority of the site is in pasture or row-crops. The western portion of the site was recently harvested of timber and is covered in scrub. Some woods remain along the west side of the pasture and at the locations of the two depressional features. The site topography is gently rolling, with a steeper hillside at the north leg of the site.

The site is located in an area of gently rolling hills. A site Topographic Survey provided by CHW Professional Consultants (CHW) indicates the site elevations range from about 72 to 132 feet. The Alachua County GIS Map Genius[1] Lidar topography generally correlates well with the CHW topographic survey. The majority of the site is near elevations 75 to 90 feet. The northeast leg of the site is on a hillside that slopes down to the south. The highest elevation is along this northern property line at elevation 132 feet.

There are many shallow, broad closed depressional features throughout the site. There are two more pronounced depressional features at the southwest corner of the site. One feature is approximately 100 feet across and 10 feet deep. This feature has a top elevation of 85 feet and a bottom elevation of 75 feet. This feature is best described as a broad, bowl-shaped depression with consistent side slopes. This feature is wooded with scattered large trees and sparse underbrush. Our observation of this feature indicates it does not contain standing water for any appreciable amount of time. We observed no limestone in the slopes of this feature, or voids or chimneys in the bottom of this feature.

The second feature is located approximately 200 feet northwest of the first feature, and consists of a steeply sided depression. This feature is oval in shape, and approximately 70 feet wide by 90 feet long. This feature has a top elevation of 85 feet and a bottom elevation of 39 feet. This feature is heavily wooded and covered with brush and vines and is generally not accessible. We were able to access this feature along the east side, and observed the bottom of the feature from approximately half way down the side slope. This feature contains standing water, and review of historical aerials suggests it contains standing water much of the time. We did not observe any limestone in the side slopes of this feature, or open voids or chimneys in this feature.

Photographs of these two features are shown below.

Photograph of Broad Depressional Feature.

Photograph of Steep Sided Depressional Feature.

[1] www.MapGenius.AlachuaCounty.us

A small depressional feature is located along the northern property line in the western portion of the site. The CHW topographic survey indicates this depression is about 20 feet in diameter. The top of this feature is at elevation 80 feet and the bottom is at elevation 70 feet. The topographic contours suggest this is a bowl-shaped depression. We did not observe this depression.

We understand a third depressional feature was located in the south-central portion of the site at the east edge of the wooded area, but was filled by the current property owner a few years ago. A review of historical aerials suggests this feature was about 100 feet in diameter.

There are two low areas surrounded by soil embankments south of the open-air barn. The topographic contours in this area suggest these are man-made, and appear to be the remnants of two in-ground silage storage facilities associated with the farming activities.

Review of Published Soil Information

The Alachua County Soil Survey[2] maps ten soil groups at the site, but approximately two-thirds of the site is mapped as either Arredondo fine sand or Fort Meade fine sand. All of the soil types at the site are described in detail in the ANS Geo report.

The Arredondo soil group typically consists of 62 inches of fine sand overlying loamy fine sand (silty sand) to a depth of 69 inches. Sandy clay (clayey sand) then extends to the maximum mapped depth of 80 inches. Groundwater is typically deeper than 80 inches.

The Fort Meade soil group typically consists of more than 85 inches of fine sand. This soil group has a water table deeper than 85 inches.

Review of Published Regional Geology

Alachua County straddles two physiographic provinces: Northern Highlands and Coastal Lowlands[3]. A broad karst escarpment known as the Cody Scarp separates these two provinces. This site generally lies within the Cody Scarp but is on the edge of the Coastal Lowlands.

The Northern Highlands, which lie north and east of the Cody Scarp, are underlain by a thick sequence of relatively impermeable Miocene to Pleistocene sediments. Because of this thick sequence of sediments, the Northern Highlands Province contains few karst features. This upland plateau is nearly level, sloping gently to the west, north and east. Elevation ranges from about 150 to 200 feet above sea level. The plateau, which originally extended completely across the county, has many swamps. Sinkholes are not common within the plateau, but a few are found near its margin.

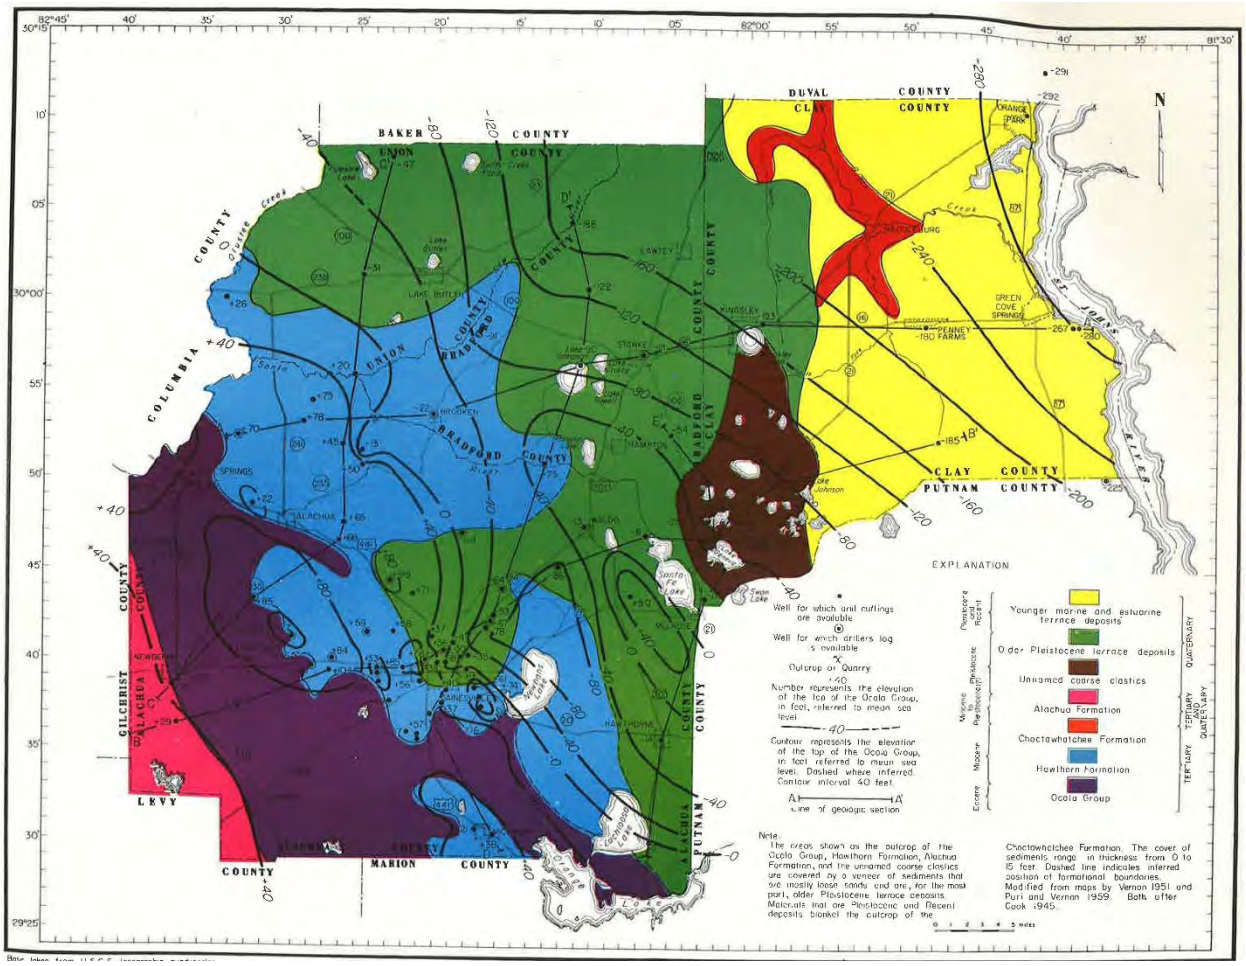
[2] United States Department of Agriculture, Natural Resources Conservation Service, Web Soil Survey.

[3] White, W.A., 1970. The Geomorphology of the Florida Peninsula. Florida Geological Survey, Bulletin 51.

Thin Plio-Pleistocene sediments overlying thin and discontinuous, residual Miocene strata and Eocene limestone characterize the Coastal Lowlands. Karst features are numerous in the Lowlands. The Lowlands region generally has low topographic relief; elevations range from about 50 to 80 feet above sea level. The Lowlands is devoid of stream channels, but it is dotted with sinks and limestone mines. While the Ocala Limestone is essentially near the surface in this region, many of the old sinks have become filled (some to a depth of 250 feet) with sand, clayey sand, and sandy clay. These soil materials come from marine submergence, soil creep and slumping, and stream transport from the Northern Highlands. This sinkhole fill tends to mask many of the karst irregularities of the Ocala surface.

The Cody Scarp, which separates the Northern Highlands from the Coastal Lowlands, contains large sinkholes, sinking streams, and other karst features. The bottoms of the karst features often penetrate to the Ocala Limestone and the depressions are usually filled with organic soils, fluvial and lacustrine sediments, and clay-rich soils. The hills within the scarp contain Miocene sediments similar to the Northern Highlands Province. Many of the large, flat-bottomed lakes and wet prairies are associated with the scarp and represent coalescent sinkholes known as poljes and uvalas. Many of these level prairies and lakes, most of which are near or below 60 feet NGVD, are associated with ground water levels.

Three major geologic formations occur at or near the surface within the county. These formations have influenced soil development. They are, in order of decreasing age, the Ocala Limestone of Eocene age, the Miocene to Pliocene Hawthorn Group, and the Plio-Pleistocene Terrace Deposits.



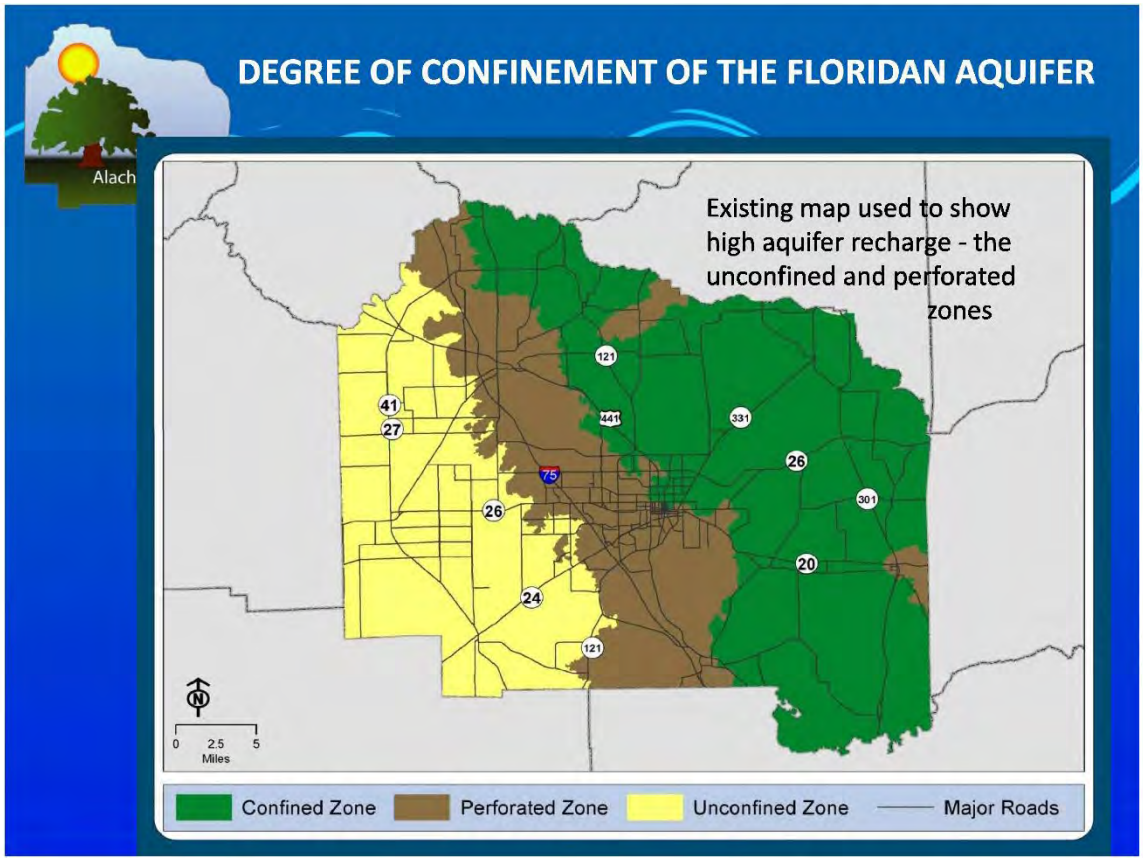
The Ocala Limestone underlies the entire county; exposures are common in the Coastal Lowlands in the southern and western parts of the county. Here a limestone plain is formed which is covered by a veneer of loose sand in most places. Thin and discontinuous beds of clay-rich soils may also occur in this region of the county. The Ocala Limestone consists of soft, white to cream colored, chalky, limestone that is approximately 98 percent calcium carbonate. Boulders and irregular masses of chert are common near the top. In many areas the Ocala is cavernous and fractured.

The Miocene Hawthorn Group includes at least three formations in Alachua County. These are, from bottom to top, the Penny Farms Formation, Marks Head Formation, and Coosawhatchie Formation[4]. All three formations consist of varying proportions of interbedded clay, sand, limestone, and dolostone, all of which are phosphatic. The Hawthorn Group crops out in isolated areas around the town of Micanopy and in an irregular pattern along the Cody Scarp from Lochloosa Lake northwestward through Gainesville and into the north-Northern and northwestern part of the County. Much of the outcrop area is hill and valley terrain created by the formation of karst features at the foot of the escarpment. A thin veneer of loose sands of the older Plio-Pleistocene Terrace deposits covers the Hawthorn Group of sediments in the Cody Scarp and Northern Highlands. The Hawthorn Group lies unconformably on the solution-pitted Ocala Limestone surface.

The most recent formation is a surface mantle of fine to medium sand, silt, and clay that formed as Pliocene and Pleistocene sea levels fluctuated and periodically inundated portions of the county. Primarily, the terrace deposits overlie the Hawthorn Group. They are exposed in the Northern and eastern parts of the county.

[4] Scott, T.M., 1988. The Lithostratigraphy of the Hawthorn Group (Miocene) of Florida. Florida Geological Survey, Bulletin No. 59.

The karst geology of the site is associated with the variability of the Ocala Limestone formation. The surface of the Ocala Limestone commonly approaches elevation 80 feet in the area of the Coastal Lowlands between Newberry and Alachua (south of Alachua). West of Alachua, the surface of the Ocala Limestone dips to elevation 40 feet[5]. Based upon this mapping, the surface of the Ocala Limestone should be in the vicinity of elevations 50 to 60 feet at this site. This mapping is shown below.



Topographic Map of Ocala Limestone Formation.

The site is located within the Cody Scarp geology in the northwestern portion of Alachua County. The primary geology features in this area are the Ocala Group Limestone and the Hawthorne Group sediments. These are described in more detail in the ANS Geo report. The majority of the site is mapped within the Ocala Group Limestone, while the northern portion of the site is within the Hawthorne Group sediments. However, based upon the findings from the soil borings performed at the site, the above map of the surface of the Ocala Limestone and our observation of the depressional features, it is our opinion all of the site is within the Hawthorne Group sediments, and the reasons for this are discussed in further detail where we review the ANS Geo findings.

[5] Florida Geological Survey, Report of Investigations No. 35, Water Resources of Alachua, Bradford, Clay and Union Counties, Florida, 1964.

Alachua County also separates areas of the County into Aquifer Recharge Zones. These zones are Unconfined, Perforated and Confined. The Unconfined Zone generally follows the area of the Coastal Lowlands geology. In the Unconfined Zone, the confining clay-rich soils are absent or sparse, allowing surface water to rapidly recharge the Floridan Aquifer. The Perforated Zone has areas that are unconfined and other areas that are partially to completely confined. Surface waters typically "leak" through the areas of perforation. The Unconfined and Perforated Zones typically do not have a continuous surficial groundwater table; surficial groundwater is typically a transient, perched condition. The Confined Zone is located in the Northern Highlands geology. Here the deep confining soils prevent the surface waters from rapidly infiltrating, resulting in a surficial groundwater table that is commonly present even in drought conditions.

Below is the County Map of the Aquifer Recharge Zones. This site is mapped at the transition from the Unconfined Zone to the Perforated Zone. Based upon the soil borings performed by ANS Geo, the site is in the Perforated Zone.

Map Showing Confinement of the Floridan Aquifer in Alachua County.

Review of the Floridan Aquifer Data

The Floridan Aquifer is the primary drinking water aquifer for most of the State. This aquifer is located within the limestone formation and occurs from recharge of stormwater. The Aquifer is generally confined in the Northern Highlands and most of the Cody Scarp regions, and is unconfined in the Coastal Lowlands.

The State of Florida monitors the potentiometric surface of the Floridan Aquifer and routinely publishes contour maps, similar to topographic maps, showing the potentiometric surface elevation of the Aquifer. This elevation can vary by as much as 10 feet or more, depending upon rainfall conditions. The 1980 contour map[6] shows the potentiometric surface of the Floridan Aquifer to be near elevation 40 in the area southwest of Alachua. The 2005 contour map[7] shows a similar 40 feet elevation.

Review of Historical Aerials

As part of our peer review, we reviewed historical aerials of the site to observe any changes in the site. We observed aerials from 1937, 1949, 1964, 1971, 1982 and 1994 obtained from FDOT or the UF Science Library (attached in the Appendix). Additionally, we reviewed more recent Google aerials.

The 1937 aerial is of low quality, but shows that the majority of the site is open pasture. Woods are present around the step sloped depression and east of this depression. The broad depression is open pasture. The small filled depression appears as a small wooded area. The small depression along the north property line is not apparent, as this is within a wooded area. There is a homestead along the south property line, west of the current entrance drive.

The 1949 aerial is of better quality, and shows no significant change since 1937.

The 1964 aerial shows the western portion of the site has been planted in pine trees. The remainder of the site is generally unchanged.

The 1971 aerial is mostly unchanged from 1964. The planted pine trees at the western portion of the site are more mature. Two barns have been constructed in the center of the site which still exist. The main entrance road has been moved a few hundred feet to the east.

In the 1982 aerial, the planted pine trees at the western portion of the site have been harvested, and new pine trees have been planted, again encompassing the large broad depression. There is ground disturbance southwest of the barns, in the area that is believed to be the abandoned silage storage area. The remainder of the site remains unchanged.

In the 1994 aerial, the planted pine trees are more mature. The area of ground disturbance southwest of the barns is more defined, and shows this is likely a silage storage facility. Three irrigation booms have been added to the eastern portion of the site. Most of the buildings at the homestead have been removed. The remainder of the site remains mostly unchanged.

The recent 2018 aerial shows the site mostly in its current condition. The small depression at the east edge of the woods has been filled and is no longer apparent. The remainder of the buildings around the homestead have been removed. The western portion of the site is in mature planted pines; these pines were recently harvested. The area of the silage storage is mostly abandoned. The irrigation booms are no longer present.

[6] Open File Report 80-1199, Potentiometric Surface Map of the Floridan Aquifer in Alachua County, Florida, 1980.

[7] Potentiometric Surface of the Upper Floridan Aquifer in the Suwannee River Water Management District, May 2005.

Overall, the historical aerials show little significant change in the site, other than what is expected for improvements in agricultural service. The aerials show little change in the appearance of the steep sloped depression in the southwest portion of the site. This is expected, as relic sinkholes typically require hundreds to thousands of years to appreciably change. The aerials do not have indicators of prolonged standing water in the lower elevations, even in the large broad depression in the southwest portion of the site. In fact, pine trees were planted two times through this broad depression which confirms that this low area does not have standing water for any appreciable time.

Review of ANS Geo Report

ANS Geo performed a geotechnical study at the site that included soil borings and geophysical investigation methods, laboratory testing, field in-situ infiltration tests, load testing of typical foundation elements and an evaluation of their findings.

ANS Geo performed a total of thirty-four soil borings at the site. Borings B-01 through B-10 were Standard Penetration Test (SPT) soil borings advanced to a depth of 20 feet. Borings B-BESS-01 and B-SS-01 were SPT borings advanced to depths of 55 and 50 feet, respectively. Borings IB-01 through IB-22 were SPT borings advanced to a depth of 10 feet.

The soil borings performed at the site generally encountered a relatively consistent subsurface profile of sand overlying clayey sand and sandy clay to clay soils. The depth of the surficial sands ranged from about 2 to 17 feet, but at most locations was on the order of 4 to 8 feet deep.

Limestone was encountered only at location B-BESS-01 at a depth of 52.5 feet. Boring B-BESS-01 had three isolated instances of drilling fluid circulation loss at depths of 17, 22 and 40 feet, but circulation returned after an additional one foot of drilling progressed. This is normal drilling conditions in clay-rich soils in Alachua County, and is not an indicator of sinkhole activity. The clay was soft just above the limestone at a depth of 50 feet, but this is common and is related to the epikarst zone. The epikarst zone is the transition from soil to limestone, and is commonly highly weathered and soft. This soft condition also is not an indicator of sinkhole activity.

Groundwater was encountered only at three locations at depths of 12 to 13 feet. The soil borings were performed in April 2023 during the dry season.

ANS Geo performed in situ, field infiltration tests at twenty-two locations. The tests were generally performed at depths of 4.5 to 8 feet. The tests resulted in infiltration rates ranging from 0 to 720 inches per hour, with a median infiltration rate of 22 inches per hour.

ANS Geo performed electrical resistivity imaging (ERI) at three areas at the site. ERI Survey Line 1 was located near the north property line near the northwest portion of the site, ERI Survey Lines 2, 3 and 5 were located along the perimeter or north of the steep sloped depression and ERI Survey Line 6 was located near the infilled depression. ERI survey Line 4 was not performed due to accessibility constraints.

ERI is a geophysical method that uses electrical current, or in this case, the resistance to electrical current flow, to estimate the varying soil and rock layers that are present. Soil type (sand, silt clay and rock) can be estimated based upon the apparent resistivity. The data is used to draw cross-sections of apparent resistivity, which can be interpreted to be the various soil and rock layering. In karst geology, the testing is used to identify possible breaches and dips in the rock formation, as well as possible cavities and zones of soil subsidence. Soil borings are typically performed to confirm (ground truth) the ERI findings.

ANS Geo mapped the various soil and rock layering based upon accepted resistivity values. ERI-1 detected the limestone formation at depths of about 20 to more than 40 feet. ERI-2, 3 and 5 did not detect indicators of limestone within the estimated 120 feet of penetration depth. ERI-6 detected limestone at depths of 20 to more than 40 feet, with a possible breach in the limestone for a lateral distance of about 50 feet. ANS Geo provided a plan with recommended setbacks for three areas of highly karst geology (the three areas of relic sinkholes).

ANS Geo did not perform ground penetrating radar (GPR) at the site. Based upon our review of the soil borings performed at the site, GPR would not likely provide any significant data due to the attenuation (absorption) of the GPR signal by the clay-rich soils.

Evaluations

ANS Geo performed a geotechnical study at the site and our review of the *Geotechnical Report* has found no interpretation that are substantially different than our opinions based upon the conditions encountered. ANS Geo prepared a well-documented discussion of the regional geology, but we are providing additional discussion of the regional geology and risk for sinkhole development based upon our experience in this area. Additionally, we are providing a discussion of the drainage characteristics of the site.

The proposed Pleasant Solar Project is located west of Alachua, Florida in the Cody Scarp transition region between the Coastal Lowlands and Northern Highlands geology. ANS Geo performed thirty-four soil borings at the site to depths of 10 to 55 feet. All but two of the soil borings were terminated at 20 feet deep or less. Only soil boring B-BESS-01 encountered limestone, which was at a depth of 52 feet. Based upon the topographic survey prepared by CHW, the elevation of the limestone formation is estimated to be 58 feet at location B-BESS-01. This corresponds well with the mapping of the Florida Geological Survey, Report of Investigations No. 35, that shows the surface of the Ocala Limestone to on the order of elevations 50 to 60 feet in this area. If this same limestone elevation is applied for the remainder of the site, this indicates limestone is on the order of 25 to 35+ feet below land surface. This correlates well with the remainder of the soil borings, which did not encounter limestone within a depth of 20 feet.

It is our opinion the Ocala Limestone geological region mapping and the Alachua County Unconfined Recharge Zone mapping are not correct for this site. The Ocala Limestone geological region has common soil strata of discontinuous sands and clays overlying a shallow and highly pinnacled limestone formation. Soil borings performed in Coastal Lowlands geology typically encounter limestone within a depth of 20 feet. This did not occur at this site. All of the soil borings, with the exception of boring B-06, have a soil profile of sand overlying continuous clay and silt-rich confining soils. Boring B-06 encountered a sand layer beneath the clay-rich soils, suggesting perforated geology conditions are present. The soil borings suggest the geology is perforated and not unconfined, and is more consistent with the Hawthorne Group of the Cody Scarp and not the Coastal Lowlands geology and Ocala Limestone mapping. Perforated geology occurs where the confining soils are discontinuous. It is our opinion the site is located within the Perforated Zone, and the absence of a surficial groundwater table is likely the result of leakage of the surficial groundwater through the perforated zones.

The soil borings encountered groundwater at three locations at depths of 12 to 13 feet. The geophysical testing performed around the depressions interpreted moist soil conditions typical of groundwater at approximately 15 feet deep. This data suggests there is a perched groundwater table present at the site, which is not consistent with the Coastal Lowlands geology. Groundwater was not determined in the remainder of the soil borings, and this may be due to the mud rotary method of advancing the borings or from seasonal variations in the depth of the groundwater table, but is most likely from the site being perforated. The perched groundwater table is a transient condition related to seasonal rainfall and localized rainfall intensity. The soil borings were performed in April 2023 during the dry season, when a perched groundwater table may not be present.

The risk for sinkhole development in Alachua County varies significantly depending upon the location within the County. The Coastal Lowlands region has the highest risk for sinkhole development. The risk for sinkhole development is less in the Cody Scarp and substantially less in the Northern Highlands. The risk for sinkhole development is entirely related to the depth to the limestone formation and the soil types that overly the limestone.

Sinkholes in Alachua County are commonly the result of stormwater concentration infiltrating into the ground and eroding sandy soils through cracks in the clay and limestone formation, resulting in a sudden cover collapse sinkhole. This risk is the highest where the geology is unconfined, and where limestone is relatively shallow (generally less than 20 feet deep). As the depth to limestone increases, the overlying clay-rich confining soils becomes more uniform, which lessens sinkhole risk. The low permeability of the clay-rich soil reduces rapid infiltration, which reduces the risk for subsurface soil erosion and collapse. In the Coastal Lowlands, surficial water sources may only be 10 feet above the limestone formation. In the Northern Highlands, surficial water sources are commonly more than 100 feet above the limestone formation.

There are three depressions on the site and one filled depression. All of these features are likely relic sinkholes. Relic sinkholes are sinkholes that developed in the geologic past. Most sinkholes in Alachua County are cover collapse sinkholes which suddenly occur. This results in a steep sided depression. Over time, the side slopes erode into the depression creating a bowl-shaped depression. It is generally accepted that steep sided sinkholes are geologically “young” compared to broad, bowl-shaped depressions that are geologically “old”.

Considering this, the broad bowl-shaped depression at the southwestern portion of the site is geologically old, and the adjacent steep sided depression is geologically young. The ERI testing that was performed in this area did not detect limestone within 60 to 120 feet deep. This suggests these two depressions are likely at the location of a very geologically old, infilled relic sinkhole that redeveloped two subsidences in the geologic past.

The ERI testing that was performed at the small depression along the north property line and the location of the filled depression indicates these are relic sinkhole features. The testing suggests there are infilled breaches in the limestone formation. The estimated depth to limestone varies from about 20 to more than 50 feet deep.

ANS Geo provided recommended setback distances from the relic sinkhole features. These recommended setbacks ranged from 35 to 100 feet. We generally do not disagree with these setbacks, but suggest lesser setbacks for the broad depression at the southwest portion of the site and the filled depression.

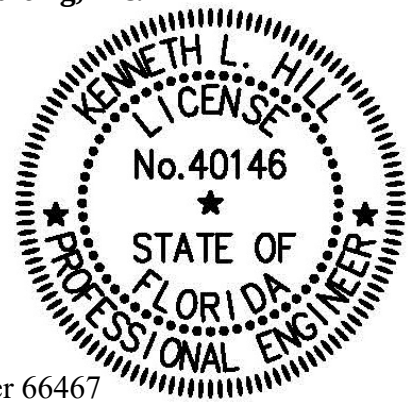
It is our opinion the risk for sinkhole development at this site is lower than what would be expected for the general area of Alachua County, and this is due to the limestone formation being deeper than what is typical of the area. In our opinion, this is due to the localized deepening of the limestone formation as shown by the mapping, and because the limestone is covered with a more uniform confining layer consistent with the Hawthorne Formation geology, compared to what is typical of the Coastal Lowlands geology. Further, the relic depression in the limestone formation filled with clay-rich soil at the southwestern portion of the site as shown by the ERI screening should have an even lower risk for sinkhole development. It is our opinion the risk associated with the relic sinkholes is from the potential for additional erosion to occur, broadening the side slopes of the depressions. In our opinion, the risk for slope erosion is low at the broad depressions and infilled depression, and high at the steep sided depression. We agree the 100 feet setback from the steep sided depression is appropriate. We believe the 100 feet setback for the large broad depression and the filled depression is very conservative, and can be lessened to 50 feet. We believe a setback of 35 is appropriate for the small depression along the north property line.

We understand you propose to use the natural topography of the site to collect and infiltrate stormwater runoff in the natural low areas. It is our opinion this is the best stormwater management practice. Since you will not be excavating any stormwater basins, you will not be changing how stormwater infiltrates into the ground or reducing the separation of the water source and the limestone formation. Further, it is our opinion that the construction of the solar panel structures does not create impervious conditions; the stormwater will runoff onto the ground directly below the panels just as though the panels were not present. Normal infiltration and runoff collection in natural low areas will occur just as though the site was not developed. Therefore, it is our opinion the risk for sinkhole development will be no different post-development than the pre-development conditions.

ANS Geo provided soil and groundwater parameters to assist with the modeling of the stormwater recovery. These conditions consider that the site is in confined geology, with a confining layer on the order of 12 feet deep and a perched seasonal highwater table. It is our opinion considering the site to be in confined geology is extremely conservative, since there is much published data to confirm the site is within the Perforated Zone. If the above parameters are used to model the recovery at the site, we believe the modeling will significantly underestimate the recovery.

As an alternate, we would suggest modeling the recovery considering perforated conditions. For perforated conditions, there is no confining layer (the Floridan Aquifer is vast and hundreds of feet deep) but it is typically set at elevation 0. The seasonal high-water table is the potentiometric surface of the Floridan Aquifer which is on the order of elevation 40 feet (elevation 45 feet should be used to provide some safety factor). The vertical and horizontal hydraulic conductivities should be a weighted average of the sandy soils and the clay-rich soils, and typically are on the order of 2 feet per day or less. The fillable porosity is typically 20 percent. These parameters are more typical of this site and perforated geological conditions for the area.

Limitations



This report has been prepared for our client for his exclusive use, in accordance with generally accepted geotechnical engineering practices, and makes no other warranty either expressed or implied as to the professional advice provided in the report.

Closure

GSE appreciates this opportunity to provide these engineering services to you on this important matter. If you have any questions, or if we can provide any additional information, please contact us.

Sincerely,

GSE Engineering & Consulting, Inc.

MEMORANDUM OF DECOMMISSIONING PLAN

Mail to: Pleasant Solar LLC
c/o Solariant Capital, LLC
301 North Lake Ave., Ste. 950
Pasadena, CA 91101

STATE OF FLORIDA
COUNTY OF ALACHUA

THIS MEMORANDUM OF DECOMMISSIONING PLAN (this "Memorandum") is entered into as of this 3rd day of June, 2024, by and between **PLEASANT SOLAR LLC,** a Florida limited liability company whose mailing address is 301 North Lake Avenue, Suite 950, Pasadena, CA 91101 (herein called "Pleasant Solar"), and the City of Alachua ("City").

WHEREAS, Pleasant Solar is a limited liability company duly organized and existing under the laws of the State of Florida, with its principal place of business in Pasadena, California. Pleasant Solar is organized for the purpose of constructing, maintaining and operating solar facilities; and

WHEREAS, Pleasant Solar has proposed its Pleasant Solar Project as a 74.9MWac solar generation facility with a 20- to 40-year year expected useful life. The Pleasant Solar Project will be located on approximately +/- 350 acres of land situated in the City of Alachua, Florida on CR 235A. The project encompasses multiple parcels that are either owned or will be leased by Pleasant Solar; and

WHEREAS, upon the expiration or early termination of the Lease(s), Pleasant Solar is committed to returning the land occupied by the Pleasant Solar Project to the Owners in substantially the same condition as pre-construction, including removing improvements constructed or installed, unless otherwise agreed upon by the Owners. As part of this project, the City has required that Pleasant Solar record in the public records of Alachua County, Florida, Pleasant Solar's Decommissioning Plan for its proposed Pleasant Solar Project; and

WHEREAS, Pleasant Solar has agreed to memorialize the terms of its Pleasant Solar Project Decommissioning Plan in a memorandum required to be recorded in the public records of Alachua County, Florida.

NOW THEREFORE, Pleasant Solar has executed this Memorandum as evidence of its Pleasant Solar Project Decommissioning Plan so as to provide notice in the public record of the following covenants, conditions and agreements:

I. The above recitals are agreed to be true and correct and are incorporated herein.

2. Pleasant Solar's Pleasant Solar Project Decommissioning Plan is attached hereto and incorporated herein by reference as Exhibit A, which shall govern the decommissioning process of Pleasant Solar's Pleasant Solar Project located in the City of Alachua, Alachua County, Florida.

3. This Memorandum is prepared for purposes of recordation and to provide notice to the public and City of Pleasant Solar's decommissioning plan for its Pleasant Solar Project.

4. This Memorandum is governed by and shall be construed under Florida law.

IN WITNESS WHREOF, Pleasant Solar has executed this Memorandum this 3rd day of June 2024.

Witnesses (2):

Pleasant Solar:

PLEASANT SOLAR LLC, a Florida limited liability company

GENERAL NOTES

1. THE TOPOGRAPHIC AND EXISTING INFORMATION SHOWN HEREON WERE TAKEN FROM A BOUNDARY AND TOPOGRAPHIC SURVEY PREPARED BY CHW, REVISION DATE 6/20/2023.

2. THE LOCATION OF ALL EXISTING UTILITIES SHOWN ON THE PLANS HAS BEEN DETERMINED FROM THE BEST INFORMATION AVAILABLE. THE ENGINEER ASSUMES NO RESPONSIBILITY FOR ACCURACY. IT SHALL BE THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY THE VARIOUS UTILITIES AND TO MAKE NECESSARY ARRANGEMENTS FOR ANY RELOCATION OF THESE UTILITIES WITH THE OWNER OF THE UTILITY. THE CONTRACTOR SHALL EXERCISE CAUTION WHEN CROSSING ANY UNDERGROUND UTILITY, WHETHER SHOWN ON THE PLANS OR LOCATED BY THE UTILITY COMPANY. THE RESPECTIVE UTILITY COMPANIES SHALL RELOCATE ALL UTILITIES THAT INTERFERE WITH THE PROPOSED CONSTRUCTION. THE CONTRACTOR SHALL COOPERATE WITH THE UTILITY COMPANIES DURING THE RELOCATION OPERATIONS. ANY DELAY OR INCONVENIENCE CAUSED TO THE CONTRACTOR BY THE VARIOUS UTILITIES SHALL BE INCIDENTAL TO THE CONTRACT AND NO EXTRA COMPENSATION WILL BE ALLOWED.

3. THE CONTRACTOR SHALL EXERCISE EXTREME CAUTION IN AREAS OF BURIED UTILITIES AND SHALL PROVIDE AT LEAST 48 HOURS NOTICE TO THE APPROPRIATE UTILITY COMPANIES IN ORDER TO ALLOW MARKING OF THE LOCATIONS OF EXISTING UNDERGROUND FACILITIES IN ADVANCE OF CONSTRUCTION BY CALLING THE FLORIDA SUNSHINE STATE ONE-CALL CENTER, INC. AT 1-800-432-4770 OR 811. IT IS THE CONTRACTOR'S RESPONSIBILITY TO NOTIFY "SUNSHINE" 48 HOURS PRIOR TO ANY CLEARING OF CONSTRUCTION TO IDENTIFY ALL UTILITY LOCATIONS. NO CONSTRUCTION ACTIVITY MAY OCCUR UNTIL THE UTILITIES HAVE BEEN PROPERLY MARKED.

4. THE CONTRACTOR SHALL FIELD VERIFY THE HORIZONTAL LOCATION AND VERTICAL LOCATION OF ALL EXISTING UTILITIES WITHIN THE LIMITS OF THE PROJECT ENVELOPE SHOWN PRIOR TO COMMENCING WORK. THE CONTRACTOR SHALL CALL ALL UTILITY COMPANIES TO HAVE THE LOCATIONS OF ALL UTILITIES FIELD MARKED PRIOR TO COMMENCEMENT OF CONSTRUCTION. ANY DISCREPANCIES SHALL BE BROUGHT TO THE ATTENTION OF THE ENGINEER PRIOR TO CONTINUING CONSTRUCTION.

5. THE CONTRACTOR IS RESPONSIBLE FOR REPAIRING ANY DAMAGE TO EXISTING FACILITIES, ABOVE OR BELOW GROUND THAT MAY OCCUR AS A RESULT OF THE WORK PERFORMED BY THE CONTRACTOR.

6. ALL PRIVATE AND PUBLIC PROPERTY AFFECTED BY THIS WORK SHALL BE RESTORED TO A CONDITION EQUAL TO OR BETTER THAN EXISTING CONDITIONS BEFORE COMMENCING CONSTRUCTION WORK, UNLESS SPECIFICALLY EXEMPTED BY THE PLANS. ADDITIONAL COSTS ARE INCIDENTAL TO OTHER CONSTRUCTION AND NO EXTRA COMPENSATION WILL BE ALLOWED.

7. ALL WORK PERFORMED SHALL COMPLY WITH THE REGULATIONS AND ORDINANCES OF THE VARIOUS GOVERNMENTAL AGENCIES HAVING JURISDICTION OVER THE WORK INCLUDING LANDSCAPING.

8. IT IS THE CONTRACTOR'S RESPONSIBILITY TO BECOME FAMILIAR WITH THE PERMIT AND INSPECTION REQUIREMENTS OF THE VARIOUS GOVERNMENTAL AGENCIES. THE CONTRACTOR SHALL OBTAIN ALL NECESSARY PERMITS PRIOR TO CONSTRUCTION AND SCHEDULE INSPECTIONS ACCORDING TO AGENCY AND/OR MUNICIPALITY INSTRUCTIONS.

9. IT SHALL BE THE SOLE RESPONSIBILITY OF THE CONTRACTOR TO COMPLY WITH AND ENFORCE ALL APPLICABLE SAFETY REGULATIONS.

10. THE CONTRACTOR SHALL BE RESPONSIBLE FOR PROTECTING EXCAVATIONS AGAINST COLLAPSE AND SHALL PROVIDE BRACING, SHEETING OR SHORING AS NECESSARY. TRENCHES SHALL BE KEPT DRY WHILE PIPES ARE BEING PLACED. DEWATERING SHALL BE USED AS REQUIRED, AND PERMITTED THROUGH LOCAL GOVERNMENTAL AGENCIES AND WATER MANAGEMENT DISTRICT PER CURRENT REGULATIONS AT THE SOLE COST OF THE CONTRACTOR.

11. CONTRACTOR TO REVIEW GEOTECHNICAL REPORT AND BORINGS PRIOR TO BIDDING THE PROJECT AND FOLLOW OUTLINED CONSTRUCTION TECHNIQUES.

12. THE CONTRACTOR IS RESPONSIBLE FOR COORDINATING APPLICABLE TESTING WITH THE SERVICES OF AN APPROVED TESTING LABORATORY AND/OR SOILS ENGINEER, APPLICABLE REGULATORY AGENCIES, AND AS MAY BE FOUND IN THE ENGINEERING CONSTRUCTION DRAWINGS OR SPECIFICATIONS. CONTRACTOR TO VERIFY ALL TESTING WITH THE OWNER PRIOR TO COMMENCING CONSTRUCTION. UPON COMPLETION OF THE WORK, THE TESTING LABORATORY AND/OR SOILS ENGINEER MUST SUBMIT TO THE OWNER'S ENGINEER CERTIFICATIONS STATING THAT ALL REQUIREMENTS HAVE BEEN MET.

13. INSTALL SILT FENCE PRIOR TO SITE DEMOLITION OR NEW SITE CONSTRUCTION. INSTALL SILT FENCE PER FLORIDA STORMWATER EROSION AND SEDIMENTATION CONTROL INSPECTOR'S MANUAL AND PROVIDE TOE-IN. THE CONTRACTOR SHALL MAINTAIN THE SILT FENCE IN WORKING ORDER THROUGHOUT THE CONSTRUCTION PHASE. THE PROJECT SILT FENCE SHALL BE INSPECTED DAILY AND ANY CORRECTIVE MEASURES SHALL BE COMPLETED WITHIN 24 HOURS.

14. ALL TREE BARRICADES AND SILT FENCING SHALL BE INSTALLED AND INSPECTED BY THE CITY OF ALACHUA AND/OR CHW INSPECTOR PRIOR TO COMMENCEMENT OF ANY DEMOLITION OR CONSTRUCTION ACTIVITIES.

15. THE CONTRACTOR IS TO PREPARE THE SITE PRIOR TO BEGINNING ACTUAL CONSTRUCTION IN ACCORDANCE WITH THE GEOTECHNICAL REPORT.

16. ALL DELETERIOUS MATERIAL (I.E. MUCK, PEAT, BURIED DEBRIS) IS TO BE EXCAVATED IN ACCORDANCE WITH THESE PLANS OR AS DIRECTED BY THE OWNER'S ENGINEER OR OWNER'S SOIL TESTING COMPANY. DELETERIOUS MATERIAL IS TO BE STOCKPILED AND REMOVED FROM THE SITE. EXCAVATED AREAS ARE TO BE BACKFILLED WITH APPROVED MATERIALS AND COMPACTED AS SHOWN ON THESE AREAS.

17. CONTRACTOR SHALL CLEAR AND GRUB ONLY THOSE PORTIONS OF THE SITE NECESSARY FOR CONSTRUCTION. DISTURBED AREAS SHALL BE AS DIRECTED BY THESE PLANS, IMMEDIATELY FOLLOWING CONSTRUCTION PER LOCAL INSPECTOR.

18. WORK BEING PERFORMED UNDER THIS CONTRACT SHALL INTERFACE SMOOTHLY WITH OTHER WORK BEING PERFORMED ON THE SITE BY OTHER CONTRACTORS AND/OR UTILITY COMPANIES. IT WILL BE NECESSARY FOR THE CONTRACTOR TO COORDINATE AND SCHEDULE HIS ACTIVITIES, WHERE NECESSARY, WITH OTHER CONTRACTORS AND UTILITY COMPANIES.

19. ALL PAVEMENT DIMENSIONS SHOWN ARE TO EDGE OF PAVEMENT UNLESS OTHERWISE NOTED.

20. THE GOVERNING STANDARDS AND SPECIFICATIONS, UNLESS STATED OTHERWISE SHALL BE PER FLORIDA DEPARTMENT OF TRANSPORTATION STANDARD PLANS (FY 2023-24 ROAD CONSTRUCTION), AND STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION DATED JULY 2023, AS AMENDED BY CONTRACT DOCUMENTS. ALL MATERIALS AND METHODS SHALL MEET FDOT SPECIFICATIONS AND SHALL BE PRODUCED OR OBTAINED FROM AN FDOT APPROVED SOURCE.

21. ALL NEW TRAFFIC CONTROL DEVICES (SIGNS AND PAVEMENT MARKINGS) SHALL CONFORM TO THE MANUAL ON UNIFORM TRAFFIC CONTROL DEVICES (MUTCD) AND FDOT STANDARDS.

22. ALL STRIPING WITHIN THE RIGHT OF WAY SHALL BE PLACED FIRST AS TEMPORARY STRIPING FOLLOWED BY APPLICATION OF THERMOPLASTIC STRIPING 30 DAYS LATER.

23. CONTRACTOR IS RESPONSIBLE FOR MAINTAINING PROPER BENCHMARKS ON-SITE. EXISTING BENCH MARKS SCHEDULED FOR REMOVAL SHALL BE RELOCATED AT CONTRACTORS EXPENSE AND RE-ESTABLISHED BY A LICENSED SURVEYOR.

24. ALL HANDICAP RAMPS SHALL COMPLY WITH THE FLORIDA ACCESSIBILITY CODE AND AMERICANS WITH DISABILITIES ACT.

25. A PRE-CONSTRUCTION CONFERENCE SHALL BE REQUIRED. THE CONTRACTOR, ENGINEER OF RECORD, AND THE OWNER SHALL MEET WITH THE CITY OF ALACHUA PRIOR TO INITIATION OF SITE CONSTRUCTION.

26. ANY CHANGE ORDER REQUESTS, SITE REVISIONS, AND PAY REQUESTS MUST BE SUBMITTED TO AND APPROVED BY THE ENGINEER OF RECORD.

27. CONTRACTOR IS RESPONSIBLE FOR ALL DEWATERING AS NEEDED THROUGHOUT ALL CONSTRUCTION ACTIVITIES COVERED BY THESE PLANS. DEWATERING SHALL BE DONE IN ACCORDANCE WITH FDOT STANDARD SPECIFICATIONS, 2023-24 EDITION, SECTION 120.

28. THE CONTRACTOR IS RESPONSIBLE FOR THE PERFORMANCE AND COST OF ALL CLEARING AND GRUBBING AND ALL WORK OF REMOVAL, DISPOSAL, AND REPAIR OR REPLACEMENT OF EXISTING IMPROVEMENTS WHERE SHOWN IN THE PLANS, OR ORDERED BY THE ENGINEER TO BE REMOVED, OR WHERE REQUIRED BECAUSE OF THE CONSTRUCTION OPERATIONS, IN ORDER TO CONSTRUCT THE PROPOSED IMPROVEMENTS (THIS INCLUDES BUT IS NOT LIMITED TO PROPOSED PIPING, STRUCTURES, UTILITIES, PAVING, CURBING, ETC.).

29. AN AS-BUILT SURVEY WILL BE REQUIRED BY REGULATORY AGENCIES. CONTRACTOR TO COORDINATE WITH PROJECT OWNER FOR COMPLETION OF AS-BUILT SURVEYS PRIOR TO PROJECT / PERMIT CLOSE-OUT.

MAINTENANCE OF TRAFFIC (MOT) NOTES

1. THE CONTRACTOR IS RESPONSIBLE FOR CREATING A MAINTENANCE OF TRAFFIC (MOT) PLAN FOR CONSTRUCTION ACTIVITY THAT OCCURS WITHIN THE PUBLIC RIGHT-OF-WAY, INCLUDING BUT NOT LIMITED TO SIDEWALK WORK AND ACTIVITIES THAT REQUIRE A LANE (OR ROAD) CLOSURE, SUCH AS CONNECTION TO SEWER MANHOLES AND WATER MAINS. THE MOT PLAN MUST BE CREATED BY A REGISTERED PROFESSIONAL ENGINEER WHO IS CERTIFIED TO DO SO BY THE FDOT MOT CERTIFICATION TRAINING. THE MOT PLAN MUST ALSO BE IN ACCORDANCE WITH FDOT DESIGN STANDARDS AND FDOT STANDARD SPECIFICATIONS REQUIREMENTS AND MUST BE REVIEWED AND APPROVED BY THE CITY OF ALACHUA PUBLIC WORKS.

2. THE CONTRACTOR SHALL SUBMIT THE MOT TO THE APPROPRIATE REGULATORY AUTHORITY PRIOR TO WORK REQUIRING THE MOT FOR APPROVAL. NO WORK IN THE ROW SHALL OCCUR UNTIL THE MOT IS APPROVED.

DEMOLITION GENERAL NOTES

1. THE CONTRACTOR SHALL BE RESPONSIBLE TO DISPOSE OF ALL DEMOLITION MATERIALS IN A SAFE AND LAWFUL MANNER. THE CONTRACTOR SHALL SALVAGE TO THE OWNER ANY ITEM AS DETERMINED BY THE OWNER. ONCE DEMOLISHED, MATERIAL SHALL BE DISPOSED OF PROPERLY AND IMMEDIATELY.

2. REMOVE ALL IMPROVEMENTS DEFINED ON THE DEMOLITION PLAN. SALVAGE ITEMS TO OWNER AS DEFINED BY THE OWNER'S REPRESENTATIVE AND CONSTRUCTION DOCUMENT SPECIFICATIONS.

3. EXISTING PAVEMENT AND SIDEWALK EDGES THAT BORDER NEW CONSTRUCTION OR DEMOLITION ARE TO BE SAW-CUT TO PROVIDE A SMOOTH TRANSITION.

4. ALL EXISTING TREES ARE TO REMAIN UNLESS OTHERWISE NOTED.

5. ROOTS LARGER THAN 1 INCH IN DIAMETER ON TREES TO BE PRESERVED THAT ARE ENCOUNTERED DURING CONSTRUCTION MUST BE CUT CLEANLY AND COVERED OVER WITH SOIL BY THE END OF THE WORKING DAY.

6. ALL ASPHALT AND LIMEROCK WILL BE COMPLETELY REMOVED FROM AREAS THAT WILL BE LANDSCAPED. IN PARTICULAR, AREAS WHERE ASPHALT WILL BE REMOVED MUST HAVE THE TOP HARD SURFACE, LIMEROCK, AND COMPACTED SOIL REMOVED. REPLACEMENT SOIL SHALL BE CLEAN DEEP FILL OF PH 5.5 - 6.5. THE DEPTH OF UNCOMPACTED SOIL PRIOR TO PLANTING MUST BE AT LEAST 3 FEET TO ACCOMMODATE FUTURE TREE ROOT GROWTH. NO LIMEROCK, LARGE STONES, OR OTHER CONSTRUCTION DEBRIS CAN REMAIN IN AREAS TO BE LANDSCAPED.

PAVING, GRADING, AND DRAINAGE GENERAL NOTES

1. THE CONTRACTOR IS RESPONSIBLE FOR EROSION/SEDIMENTATION CONTROL PRACTICES DURING CONSTRUCTION TO MINIMIZE ON-SITE EROSION/SEDIMENTATION AND TO PROTECT AGAINST DAMAGE TO OFF SITE PROPERTY. THE FOLLOWING PRACTICES SHALL BE EMPLOYED:

A. EROSION AND SEDIMENTATION CONTROL SHALL BE THE RESPONSIBILITY OF THE CONTRACTOR. AREAS OF OFF-SITE DISCHARGE DURING CONSTRUCTION SHALL BE PROTECTED WITH A SEDIMENT BARRIER PER FLORIDA STORMWATER EROSION AND SEDIMENTATION CONTROL INSPECTOR'S MANUAL TO PREVENT OFF-SITE DISCHARGE OF SEDIMENTS. A SILT BARRIER SHALL SPECIFICALLY BE REQUIRED, CONSTRUCTED, AND MAINTAINED AS INDICATED ON THIS SHEET. TEMPORARY SEED AND MULCH SHOULD BE USED TO CONTROL ON-SITE EROSION WHEN IT IS NOT PRACTICAL TO ESTABLISH PERMANENT VEGETATION. SOD SHALL BE PLACED AS EARLY AS POSSIBLE ON ALL SLOPES STEEPER THAN 5 (FT) HORIZONTAL TO 1 (FT) VERTICAL. SOD SHALL BE PINNED AS REQUIRED. ALL EROSION AND SEDIMENTATION CONTROL MEASURES SHALL BE MAINTAINED IN WORKING ORDER THROUGHOUT THE CONSTRUCTION PHASE. THE CONTRACTOR SHALL INSPECT AND REPAIR AS NECESSARY THE EROSION/SEDIMENTATION PROTECTION AT THE END OF EACH WORKING DAY.

NOTE: EROSION/SEDIMENTATION CONTROL SHALL BE PLACED PRIOR TO SITE EXCAVATION AND SHALL REMAIN IN PLACE UNTIL SITE VEGETATION AND LANDSCAPING IS COMPLETE.

B. ALL INLET STRUCTURES AND PIPE SHALL BE PROTECTED FROM SILTATION BY CONSTRUCTING INLET PROTECTION AS DEFINED BY THESE PLANS OR IN THE FDOT STANDARDS. IF SILTATION OCCURS, THE CONTRACTOR IS RESPONSIBLE TO REMOVE SILTATION AS PART OF THE BASE CONTRACT AT NO ADDITIONAL COST TO THE OWNER.

C. EXCAVATED STORMWATER FACILITIES SHALL BE CONSTRUCTED AS PART OF THE INITIAL CONSTRUCTION. THE FACILITIES SHALL BE ROUGH GRADED TO THE DESIGN ELEVATIONS. AFTER THE CONTRIBUTING DRAINAGE AREA IS STABILIZED, THE FACILITIES BOTTOM SHALL BE OVER-EXCAVATED BY SIX INCHES, SCARIFIED, BACKFILLED WITH ARCHER FILLE (HAVING NO MORE THAN 5% PASSING NO. 200 SIEVE), AND GRADED TO FINAL DESIGN GRADES. EXCESS AND UNSUITABLE SOILS SHALL BE REMOVED FROM THE BASIN (REMOVE ALL ACCUMULATED SILTS, CLAYS, ORGANIC, AND DEBRIS). FINALLY, SCARIFIED AND RAKE BOTTOM AND VEGETATE.

D. PERMANENT VEGETATIVE STABILIZATION SHALL BE APPLIED ON FINE GRADED SITES AS SOON AS PRACTICAL. TEMPORARY SEEDING SHOULD BE EMPLOYED TO PREVENT EXPOSURE OF BARREN SOILS UNTIL PERMANENT VEGETATION CAN BE APPLIED.

E. ALL SLOPES 1:3 OR STEEPER REQUIRE LAPPED OR PEGGED SOD.

F. EROSION, SEDIMENT AND TURBIDITY CONTROL ARE THE RESPONSIBILITY OF THE CONTRACTOR. THESE DELINEATED MEASURES ARE THE MINIMUM REQUIRED, WITH ADDITIONAL CONTROLS TO BE UTILIZED AS NEEDED, DEPENDENT UPON ACTUAL SITE CONDITIONS AND CONSTRUCTION OPERATION.

G. ALL SYNTHETIC BALES, SILT FENCE, AND OTHER EROSION CONTROL MEASURES SHALL BE REMOVED AT THE COMPLETION OF THE PROJECT.

2. THE CONTRACTOR SHALL MAINTAIN IN HIS POSSESSION A COPY OF THE ENVIRONMENTAL RESOURCE CONSTRUCTION PERMIT. HE SHALL BE RESPONSIBLE FOR ADHERENCE TO ALL CONDITIONS CONTAINED IN THE PERMIT.

3. PROPOSED SPOT ELEVATIONS REPRESENT FINISHED PAVEMENT OR GROUND SURFACE GRADE UNLESS OTHERWISE NOTED ON DRAWINGS.

4. CONTRACTOR SHALL SUBMIT FOR REVIEW TO THE OWNER AND OWNER'S ENGINEER SHOP DRAWINGS ON ALL PRECAST AND MANUFACTURED ITEMS TO BE USED ON THIS SITE. FAILURE TO OBTAIN APPROVAL BEFORE INSTALLATION MAY RESULT IN REMOVAL AND REPLACEMENT AT CONTRACTOR'S EXPENSE. ENGINEER'S APPROVAL OF A SHOP DRAWING DOES NOT RELIEVE THE CONTRACTOR'S RESPONSIBILITY FOR THE PERFORMANCE OF THE ITEM.

5. THE COST OF ALL TESTING OF COMPACTION AND OTHER REQUIRED TESTS SHALL BE PAID BY THE CONTRACTOR AND MADE AVAILABLE TO THE ENGINEER OF RECORD DURING SITE INSPECTIONS.

6. GENERAL CONTRACTOR TO CONTACT ENGINEER OF RECORD AND THE OWNER REPRESENTATIVE 48 HOURS IN ADVANCE PRIOR TO BACKFILLING TRENCHES FOR FIELD INSPECTION AND PRIOR TO LAYING ASPHALT FOR FIELD INSPECTION.

7. CONTRACTOR IS TO SUBMIT FDOT APPROVED ASPHALT DESIGN MIXES TO THE OWNER'S REPRESENTATIVE AND ENGINEER OF RECORD BEFORE ANY WORK IS TO COMMENCE ON PROJECT. THE MIXTURE AT THE PLANT OR ON THE ROAD SHALL NOT EXCEED 335 DEGREES. THE CONTRACTOR SHALL NOTIFY THE OWNER'S REPRESENTATIVE AND PROVIDE TEMPERATURE READINGS PRIOR TO LAYING ASPHALT.

8. AS DETERMINED NECESSARY AND DIRECTED BY CITY OF ALACHUA, OR ENGINEER OF RECORD, THE CONTRACTOR SHALL UNDERCUT ALL UNSUITABLE MATERIAL 24 INCHES BELOW THE BOTTOM OF ANY PROPOSED LIMEROCK BASE, AND SHALL BACKFILL WITH FILL MATERIAL MEETING FDOT STANDARD SPECIFICATIONS FOR ROAD AND BRIDGE CONSTRUCTION. SEE FDOT INDEX NO. 120-001 AND 120-002.

9. PROVIDE LEVEL PLATFORM IN FRONT OF ALL EGRESS DOORS. THE FLOOR SURFACE ON BOTH SIDES OF A DOOR SHALL BE AT THE SAME ELEVATION. THE FLOOR SURFACE OR LANDING ON EACH SIDE OF THE DOOR SHALL EXTEND FROM THE DOOR IN THE CLOSED POSITION A DISTANCE EQUAL TO THE DOOR WIDTH AND SHALL COMPLY WITH SECTION 4.13.6 MANEUVERING CLEARANCES AT DOORS OF THE FLORIDA ACCESSIBILITY CODE FOR BUILDING CONSTRUCTION.

10. RAMPS SHALL HAVE LEVEL LANDINGS AT THE BOTTOM AND TOP OF EACH RAMP RUN. CURB RAMPS ARE NOT REQUIRED TO HAVE LANDINGS. LANDINGS SHALL HAVE THE FOLLOWING FEATURES:

A. THE LANDING SHALL BE AT LEAST AS WIDE AS THE RAMP RUN LEADING TO IT.

B. ALL LANDINGS ON RAMPS SHALL BE NOT LESS THAN 60" CLEAR, AND THE BOTTOM OF EACH RAMP SHALL HAVE NOT LESS THAN 72" OF STRAIGHT AND LEVEL CLEARANCE.

C. IF RAMPS CHANGE DIRECTION AT LANDINGS, THE MINIMUM LANDING SIZE SHALL BE 60"X60". IF A RAMP RUN HAS A RISE GREATER THAN 6" OR A HORIZONTAL PROJECTION GREATER THAN 72" THEN IT SHALL HAVE HANDRAILS ON BOTH SIDES. HANDRAILS ARE NOT REQUIRED ON CURB RAMPS. HANDRAILS SHALL BE SHOWN ON THE SITE PLAN.

11. THE CONTRACTOR SHALL STOCKPILE TOPSOIL AND CONSTRUCTION MATERIALS IN AREAS DESIGNATED BY THE OWNER.

12. THE CONTRACTOR IS RESPONSIBLE FOR PROVIDING RECORD DRAWINGS AS NOTED IN NOTE #29 UNDER SITE GENERAL NOTES.

13. ALL CONCRETE USED SHALL BE 2,500 PSI MINIMUM.

14. ALL WELLS, CLEANOUTS, MANHOLE TOPS, PULL BOX COVERS AND OTHER UTILITY APPURTENANCES IN THE AREA OF REDEVELOPMENT SHALL BE PROTECTED AND TOPS ADJUSTED TO MATCH PROPOSED GRADES.

15. CONTRACTOR SHALL SAW CUT, TACK, AND MATCH EXISTING PAVEMENT AT LOCATIONS WHERE NEW PAVEMENT MEETS ANY EXISTING PAVEMENT.

16. SOD SHALL BE PLACED AROUND ALL STRUCTURES AS DIRECTED BY THE FDOT INDEX NO. 524-001 AND FDOT INDEX 425- AND 430- SERIES AS APPROPRIATE. ALL OTHER DISTURBED AREAS SHALL BE SEEDED AND MULCHED.

17. ALL STORM SEWER CURB AND DITCH BOTTOM INLETS SHALL CONFORM TO THE APPLICABLE FDOT INDEX. ALL DRAINAGE STRUCTURES WITH GRATES THAT ARE LOCATED IN GRASSED AREAS SHALL HAVE THE GRATE CHAINED TO THE STRUCTURE USING AN EYE BOLT AND CHAIN.

18. ALL CONCRETE STRUCTURES SHALL HAVE ALL EXPOSED EDGES CHAMFERED 3/4" AND CLASS I SURFACE FINISH.

19. ALL HDPE FITTINGS AND CONNECTORS SHALL BE WATER TIGHT. SEE SPECIFICATIONS FOR MORE INFORMATION.

20. COMPACTION OF ALL MATERIALS SHALL BE LIMITED TO STATIC MODE ONLY, UNLESS DIRECTED OTHERWISE BY THE ENGINEER OF RECORD.

21. ALL STORMWATER PIPE JOINTS SHALL BE WRAPPED WITH FILTER FABRIC IN ACCORDANCE WITH FDOT STANDARD SPECIFICATION SECTION 430.

MAINTENANCE OF STORMWATER SYSTEM

1. PLEASANT SOLAR, LLC SHALL BE THE ENTITY RESPONSIBLE FOR THE STORMWATER BASINS AND FOR THE STORMWATER CONVEYANCE SYSTEM.

CITY OF ALACHUA NOTES

1. ALL STAGING AREAS FOR CONSTRUCTION EQUIPMENT, VEHICLES, AND MATERIALS FOR INSTALLATION MUST BE INTERNAL TO THE SITE.

2. CONSTRUCTION ACTIVITIES MAY ONLY OCCUR BETWEEN THE HOURS OF 7:00 AM AND 7:00 PM, MONDAY THROUGH FRIDAY AND BETWEEN THE HOURS OF 9:00 AM AND 7:00 PM, SATURDAY AND SUNDAY.

3. DUST AND DEBRIS FROM CONSTRUCTION ACTIVITIES MUST BE MINIMIZED AS TO NOT SPREAD DUST AND DEBRIS OFF-SITE. THIS MAY INCLUDE, BUT IS NOT LIMITED TO, DUST CONTROL ACHIEVED THROUGH WATER TRUCKS, REMOVAL OF MUD/SOIL FROM VEHICLE TIRES BEFORE EXITING THE SITE, AND STREET CLEANING.

4. ANY LIGHTING REQUIRED FOR CONSTRUCTION ACTIVITIES MUST BE SHIELDED AND/OR DIRECTED AS TO NOT SPILL LIGHT TO OFF-SITE AREAS OR ADJACENT PROPERTIES AND RIGHTS-OF-WAY. LIGHTING MAY ONLY BE USED DURING THE RESTRICTED HOURS OF CONSTRUCTION ACTIVITIES, EXCEPT FOR MINIMAL SECURITY LIGHTING, WHICH MAY BE USED OUTSIDE OF THE RESTRICTED HOURS OF CONSTRUCTION ONLY SUCH THAT NO DISTURBANCES OR LIGHT SPILL TO OFF-SITE AREAS OR ADJACENT PROPERTIES AND RIGHTS-OF-WAY OCCUR.

I. INTRODUCTION

THIS DOCUMENT WAS PREPARED IN ORDER TO ILLUSTRATE COMPLIANCE WITH CHAPTER 62-621.300 (4) OF THE FLORIDA ADMINISTRATIVE CODE, WHICH PERTAINS TO THE GENERIC PERMIT FOR STORMWATER DISCHARGE FROM LARGE AND SMALL CONSTRUCTION ACTIVITIES. THE ADMINISTRATIVE CODE GRANTS THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION (FDEP) THE AUTHORITY TO REGULATE POINT SOURCE DISCHARGE OF STORMWATER FROM CONSTRUCTION SITES. THIS DOCUMENT ESTABLISHES A STORMWATER POLLUTION PREVENTION PLAN FOR THE SITE USING STANDARD PRACTICE AND BEST MANAGEMENT PRACTICES (BMPs) AND IS ORGANIZED TO CORRESPOND TO 62-621.300(4)(a) GENERIC PERMIT FOR STORMWATER DISCHARGE FROM LARGE AND SMALL CONSTRUCTION ACTIVITIES FDEP FORM 62-621.300(4)(b) IS TO BE SUBMITTED IN CONJUNCTION WITH THIS DOCUMENT. CONTRACTOR(S) MUST FILL IN THE ACTIVITIES SEQUENCE (SECTION II. B. BELOW) AND SIGN THIS SHEET (REFER TO SIGNATURE TABLE THIS SHEET) AND RETAIN THIS SHEET AND ALL FOLLOWING SWPPP SHEETS ON SITE. ALTERNATIVELY, CONTRACTOR(S) MAY PREPARE AND SIGN THEIR OWN SWPP PLAN MEETING THE REQUIREMENTS. IF THE SITE OR CONTRACTOR ACTIVITIES REQUIRE ANY BMPs THAT ARE NOT DESCRIBED ON THIS SHEET, THE CONTRACTOR MUST PREPARE AN ALTERNATIVE OR ADDITIONAL SWPPP DOCUMENT CONTAINING THE NECESSARY BMPs.

II. SITE DESCRIPTION

COUNTY:	*ALACHUA COUNTY, FLORIDA*
SECTION, TOWNSHIP, RANGE:	*SECTION 17&20, TOWNSHIP 8 SOUTH, RANGE 17 EAST*
COUNTY PARCEL NO.:	*03894-0000-000 & 03898-000-000*
STREET ADDRESS:	*TBD, ALACHUA, FLORIDA*
PROJECT AREA:	*321.49 ACRES*
SITE LOCATION MAP:	*SEE COVER SHEET OF CONSTRUCTION DRAWINGS*

A. NATURE OF CONSTRUCTION ACTIVITY

THE PROPOSED DEVELOPMENT IS THE CONSTRUCTION OF ±320 AC SOLAR ENERGY FACILITY AND ACCESS ROAD. STORMWATER WILL RUNOFF INTO 15 EXISTING DEPRESSIONS LOCATED MOSTLY ONSITE. THE PROJECT SITE IS LOCATED IN THE NORTHWESTERN QUADRANT OF THE COUNTY ROAD 235A AND PEGGY ROAD INTERSECTION IN ALACHUA, FLORIDA

B. SEQUENCE OF MAJOR SOIL DISTURBING ACTIVITIES - CONTRACTOR MUST FILL IN DAYS

DAYS

FROM_____TO_____ PRIOR TO CONSTRUCTION, SILT FENCING AND TREE PROTECTION FENCING SHALL BE INSTALLED AND ALL EXISTING STORM DRAINAGE SWALE AND INLETS SHALL BE PROTECTED IN ACCORDANCE WITH THE STATE OF FLORIDA EROSION AND SEDIMENT CONTROL DESIGNER AND REVIEWER MANUAL, DATED JULY 2013, AND THESE PLANS.

FROM_____TO_____ THE CONSTRUCTION SERVICE ENTRANCE SHALL BE STABILIZED TO MINIMIZE THE CREATION OF DUST AND OFF-SITE TRACKING OF SEDIMENTS.

FROM_____TO_____ ONLY THE AREA COMPRISING THE PROPOSED STORMWATER MANAGEMENT FACILITY(S) SHALL BE CLEARED AND GRUBBED OF UNWANTED VEGETATION.

FROM_____TO_____ THE PROPOSED STORMWATER MANAGEMENT FACILITY(S) SHALL BE CONSTRUCTED.

FROM_____TO_____ IF SUITABLE, THE EXCAVATED SOIL FROM THE FACILITY(S) MAY BE USED AS FILL FOR ON-SITE GRADING THAT IS DEPICTED IN THESE CONSTRUCTION PLANS. THE CONTRACTOR SHALL DISPOSE OF ALL UNSUITABLE MATERIAL ON-SITE OR OFF-SITE TO A PERMITTED LOCATION.

FROM_____TO_____ THE REMAINING PORTION OF THE SITE THAT IS TREATED BY THE CONSTRUCTED STORMWATER MANAGEMENT FACILITY(S) SHALL BE CLEARED AND GRUBBED.

FROM_____TO_____ THE PERMANENT ROADWAYS/DRIVEWAYS SHALL BE ROUGHLY GRADED.

FROM_____TO_____ THE UNDERGROUND UTILITIES INFRASTRUCTURE AND STORMWATER PIPING SYSTEM SHALL BE INSTALLED. ANY DE-WATERING (PUMPED) SHALL BE DIVERTED TO THE ASSOCIATED STORMWATER MANAGEMENT FACILITY(S).

FROM_____TO_____ THE PERMANENT ROADWAY/DRIVEWAY SUBGRADE SHALL BE COMPACTED, A LIMEROCK BASE SHALL BE ESTABLISHED, AND THEN FOLLOWED BY AN OVERLAY OF ASPHALT.

FROM_____TO_____ UPON SIGNIFICANT COMPLETION OF CONSTRUCTION, THE STORMWATER PIPING SYSTEM SHALL BE FLUSHED OUT TO REMOVE ACCUMULATED DEBRIS AND SEDIMENT.

FROM_____TO_____ UPON COMPLETION OF THE DEBRIS AND SEDIMENT REMOVAL FROM THE STORMWATER PIPING SYSTEM, THE PROPOSED STORMWATER MANAGEMENT FACILITY(S) SHALL BE FINE GRADED AND SHALL BE EXCAVATED A MINIMUM OF SIX INCHES BELOW THE DESIGN BOTTOM ELEVATION AND REPLACED WITH FILL HAVING A MINIMUM PERMEABILITY RATE OF 20 FEET/DAY WITH A MAXIMUM OF 5% SOIL FINES PASSING THE NO. 200 SIEVE. THE BOTTOM SHALL BE SCARIFIED AND STABILIZED ACCORDING TO THESE PLANS. ONCE COMPLETED, NO HEAVY MACHINERY SHALL BE ALLOWED WITHIN THE STORMWATER MANAGEMENT FACILITY(S).

FROM_____TO_____ ALL REMAINING DISTURBED AREAS WITHIN THE CONSTRUCTION AREA SHALL BE COMPLETELY GRASSED AND/OR LANDSCAPED ACCORDING TO THESE PLANS. TURF ESTABLISHMENT SHALL BE PER FDOT STANDARD SPECIFICATIONS SECTION 570. EVIDENCE OF GROWTH MUST BE PRESENT PRIOR TO REMOVAL OF SILT FENCING AND OTHER EROSION CONTROL APPLICATIONS.

C. SITE DEVELOPMENT DATA:

TOTAL PROJECT SITE AREA:	*321.49 ACRES*
TOTAL SITE AREA TO BE DISTURBED:	*321.49 ACRES*
TOTAL ONSITE IMPERVIOUS AREA (AS SHOWN IN CONSTRUCTION DRAWINGS):	*5.02 ACRES*
TOTAL DETENTION VOLUME:	*222,838 ACRE-FEET*
TOTAL OPEN AREA:	*315.78 ACRES*

D. SOIL CONDITIONS AND STORMWATER QUALITY

THE NRCS DATA FOR THE SITE REVEALS THAT THE SITE SOILS ARE COMPRISED OF ARREDONDO FINE SAND, MILLHOPPER SAND, FORT MEADE FINE SAND, KENDRICK SAND, BONNEAU FINE SAND, LAKE FINE SAND, BLITCHON SAND, BIVANS SAND, GAINESVILLE SAND AND NORFOLK LOAMY FINE SAND. GSE ENGINEERING & CONSULTING, INC. CONDUCTED A PEER REVIEW OF THE GEOTECHNICAL EXPLORATION OF THE PROPOSED STORMWATER MANAGEMENT FACILITY(S) LOCATION IN JULY OF 2023. THE INVESTIGATION REVEALED THAT THE PROJECT SITE'S SURFACE SOILS HAVE THE FOLLOWING CHARACTERISTICS:

BASE EL. EFFECTIVE OR MOBILIZED AQUIFER:	*0 FEET*
SEASONAL HIGH WATER TABLE:	*45 FEET*
HORIZONTAL HYDRAULIC CONDUCTIVITY:	*1 FEET/DAY (WITH FACTOR OF SAFETY OF 2)*
UNSATURATED VERTICAL INFILTRATION:	*1 FEET/DAY (WITH FACTOR OF SAFETY OF 2)*

DESIGN PERCOLATION RATES FOR THE STORMWATER MANAGEMENT FACILITY(S) WERE DETERMINED BASED ON A PEER REVIEW OF LABORATORY PERMEABILITY TEST RESULTS FROM BORING SAMELES TAKEN WITHIN THE LIMITS OF THE STORMWATER MANAGEMENT FACILITY(S) AND GEOGRAPHICALLY SIGNIFICANT HISTORAL DATA.

THE STORMWATER MANAGEMENT FACILITY(S) WAS DESIGNED TO PROVIDE RATE AND VOLUME CONTROL AND WATER QUALITY TREATMENT OF THE STORMWATER RUNOFF RESULTING FROM THE POST-DEVELOPMENT SITE UNDER 100-YEAR CRITICAL STORM EVENT RAINFALL CONDITIONS. THE STORMWATER POLLUTION PREVENTION PLAN (C0.21) DEPICTS THE POST-DEVELOPMENT WATERSHED(S) LIMITS AND THE TABLE BELOW SUMMARIZES EACH WATERSHED.

WATERSHED ID	*POST DEVELOPMENT AREA (ACRES)*	*POST DEVELOPMENT IMPERVIOUS AREA (ACRES)*	*STORMWATER MANAGEMENT FACILITY TYPE*	*FACILITY DETENTION CAPACITY (ACRE-FEET)*	*100-YEAR 24-HOUR FLOOD ELEVATION (FT)*
1	*11.36*	*0.34*	*DRY RETENTION*	*0.807*	*85.27*
2	*29.96*	*1.86*	*DRY RETENTION*	*11.167*	*68.44*
3	*110.76*	*17.94*	*DRY RETENTION*	*86.783*	*83.22*
4	*34.95*	*3.11*	*DRY RETENTION*	*9.827*	*85.37*
5	*148.33*	*19.52*	*DRY RETENTION*	*24.038*	*88.01*
6	*33.79*	*6.56*	*DRY RETENTION*	*18.795*	*85.12*
7	*82.31*	*10.85*	*DRY RETENTION*	*15.462*	*78.47*
8	*10.03*	*0.61*	*DRY RETENTION*	*1.023*	*86.05*
9	*33.62*	*3.04*	*DRY RETENTION*	*7.675*	*77.64*
10	*53.22*	*8.99*	*DRY RETENTION*	*34.691*	*75.89*
11	*4.23*	*0.19*	*DRY RETENTION*	*0.959*	*82.76*
12	*12.05*	*1.99*	*DRY RETENTION*	*3.811*	*82.95*
13	*13.38*	*0.12*	*DRY RETENTION*	*0.471*	*88.95*
14	*3.44*	*0.36*	*DRY RETENTION*	*3.062*	*77.90*
15	*13.74*	*1.38*	*DRY RETENTION*	*2.194*	*83.84*

E. SITE MAP

PLEASE SEE THE STORMWATER POLLUTION PREVENTION PLAN (C0.21) FOR DETAILS.

F. STORMWATER OUTFALL LOCATION AND RECEIVING WATER BODY

THE PROJECT SITE DRAINS TO 15 EXISTING DEPRESSIONS WHICH ARE MOSTLY CONTAINED ONSITE. NO CHANGES TO THE PRE-DEVELOPMENT DRAINAGE PATTERNS ARE PROPOSED AND THE DEPRESSIONS ARE FULL RETENTION.

III. CONTROLS TO REDUCE POLLUTION

AS OUTLINED IN THE FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION (FDEP) PERMIT, ALL CONSTRUCTION ACTIVITIES SHALL BE CONDUCTED IN A MANNER AS TO NOT VIOLATE STATE WATER QUALITY STANDARDS. PRIOR TO CONSTRUCTION, THE CONTRACTOR SHALL IMPLEMENT AND MAINTAIN ALL EROSION AND SEDIMENT CONTROL MEASURES REQUIRED TO RETAIN SEDIMENT ON-SITE. IF SITE CONDITIONS ARE SUCH THAT ADDITIONAL CONTROL MEASURES ARE REQUIRED OTHER THAN WHAT IS SPECIFIED IN THE EROSION AND SEDIMENTATION CONTROL PLAN, THEN THE CONTRACTOR SHALL IMPLEMENT ADDITIONAL BEST MANAGEMENT PRACTICES. THESE MEASURES MUST BE INSPECTED AND MAINTAINED THROUGHOUT THE CONSTRUCTION PHASE AND UNTIL AS DIRECTED BY THESE PLANS. THE STORMWATER POLLUTION PREVENTION PLAN (C0.21) AND SECTION IV BELOW PROVIDE DETAILS ON THE SPECIFIC CONTROL MEASURES TO REDUCE STORMWATER POLLUTION.

IV. EROSION AND SEDIMENT CONTROLS

A. STABILIZATION PRACTICES

EXISTING TREES AND NATURAL VEGETATION TO REMAIN ON-SITE SHALL BE PROTECTED BY TREE BARRICADE FENCING AS DEPICTED ON THE STORMWATER POLLUTION PREVENTION PLAN (C0.21). TYPE III SILT FENCING SHALL PROTECT ALL DRAINAGE STRUCTURES AND SHALL BUFFER AREAS WITH POTENTIAL TO CONTRIBUTE OFF-SITE RUNOFF AND AS SPECIFICALLY DEPICTED ON THE STORMWATER POLLUTION PREVENTION PLAN (C0.21). STABILIZATION MEASURES SHALL BE INITIATED FOR EROSION AND SEDIMENT CONTROL ON DISTURBED AREAS AS SOON AS PRACTICAL, BUT IN NO CASE MORE THAN 7 DAYS, IN PORTIONS OF THE SITE WHERE CONSTRUCTION HAS TEMPORARILY OR PERMANENTLY CEASED. AS SPECIFIED IN SECTION II.B. ABOVE, UPON COMPLETION OF CONSTRUCTION, ALL STORMWATER MANAGEMENT FACILITIES SHALL BE SCRAPED CLEAN OF ACCUMULATED SEDIMENT AFTER THE COMPLETION OF CONSTRUCTION. ALL TURF ESTABLISHMENT SHALL BE PERFORMED MEETING THE REQUIREMENTS OF SECTION 570 OF THE STANDARD SPECIFICATIONS. EVIDENCE OF GROWTH MUST BE PRESENT PRIOR TO FINAL RELEASE.

B. STRUCTURE PRACTICES

AS DEPICTED IN THE STORMWATER POLLUTION PREVENTION PLAN (C0.21), A STORMWATER MANAGEMENT SYSTEM WILL BE CONSTRUCTED AND WILL BE COMPRISED OF A DRY RETENTION FACILITY. TO PREVENT EROSION DURING CONSTRUCTION, TYPE III SILT FENCING WILL BE INSTALLED IN THE LOCATIONS SHOWN ON THE PLANS. ALL EXISTING AND PROPOSED STORM DRAINS AND DRAINAGE SWALES SHALL BE PROTECTED ACCORDING TO THE STATE OF FLORIDA EROSION AND SEDIMENT CONTROL DESIGNER AND REVIEWER MANUAL, DATED JULY 2013 OR PER DETAILS PROVIDED ON SHEET C0.21 UNTIL CONSTRUCTION IS COMPLETE.

C. DRAINAGE LOCATIONS THAT SERVE AREAS WITH LESS THAN 10 DISTURBED ACRES

NOT APPLICABLE, SEE SECTION D, BELOW.

D. DRAINAGE LOCATIONS THAT SERVE AREAS WITH MORE THAN 10 DISTURBED ACRES

AS SPECIFIED IN THE "SEQUENCE OF MAJOR SOIL DISTURBING ACTIVITIES," THE SMF(S) WILL BE CONSTRUCTED PRIOR TO CLEARING AND GRUBBING OUTSIDE OF THE SMF(S) AREAS AND CONSTRUCTION OF THE PERMANENT PAVED AREAS. THE TOTAL CONTRIBUTING DRAINAGE AREA TO THE STORMWATER MANAGEMENT SYSTEM IS APPROXIMATELY 600 ACRES AND WILL CONSIST OF APPROXIMATELY 325 ACRES OF DISTURBED CONSTRUCTION AREA. THEREFORE, NO ADDITIONAL SEDIMENT TRAP BASINS ARE NECESSARY TO PROVIDE SEDIMENT STORAGE ON-SITE DURING CONSTRUCTION. AS SHOWN ON THE STORMWATER POLLUTION PREVENTION PLAN (C0.21), THE PROPOSED STORMWATER MANAGEMENT SYSTEM WILL PREVENT OFF-SITE EROSION DURING CONSTRUCTION. SILT FENCES OR EQUIVALENT SEDIMENT CONTROLS SHALL BE INSTALLED AT SIDE SLOPE AND DOWN SLOPE BOUNDARIES, INLET LOCATION, OUTLET LOCATIONS, AND OTHER LOCATIONS AS SHOWN ON THE STORMWATER POLLUTION PREVENTION PLAN, AS REQUIRED. BY COMPLETION OF CONSTRUCTION, THE SIDE SLOPES, SWALES, AND ALL DISTURBED AREAS SHALL BE STABILIZED WITH GRASS AND LANDSCAPING AS SPECIFIED ON THE CONSTRUCTION DRAWINGS.

V. STORMWATER MANAGEMENT

A. BEST MANAGEMENT PRACTICES

AFTER CONSTRUCTION, THE STORMWATER MANAGEMENT SYSTEM SHALL BE MAINTAINED IN ACCORDANCE WITH THE SPECIFIED STORMWATER MAINTENANCE NOTES IN THE INCLUDED CONSTRUCTION DRAWINGS AND/OR RESPECTIVE MAINTENANCE REPORTS. SPECIFICALLY, THE PROPOSED SMF(S) SHALL BE MOWED REGULARLY IN THE SPECIFIED AREAS, STORM PIPES AND STRUCTURES WILL BE INSPECTED SEMI-ANNUALLY AND CLEANED ANNUALLY, SMF(S) SIDE SLOPES SHALL BE MAINTAINED TO PREVENT EROSION, AND LANDSCAPING AND GRASS THAT PREVENTS EROSION SHALL BE MAINTAINED. ADDITIONALLY, REMEDIAL ACTIONS SHALL BE TAKEN SHOULD THE SMF(S) NOT PERFORM AS DESIGNED.

B. VEGETATED SWALES

WHEN VEGETATED SWALES ARE UTILIZED, SILT FENCING OR EQUIVALENT SEDIMENT CONTROLS SHALL BE INSTALLED AT ADEQUATE INTERVALS TO COLLECT SEDIMENT ALONG THE SWALE. THE SEDIMENT SHALL BE REMOVED WHEN SEDIMENT REACHES ONE-THIRD OF THE HEIGHT OF THE SILT FENCING. SEE THE STORMWATER POLLUTION PREVENTION PLAN (C0.21) FOR DETAILS AND LOCATIONS, AS REQUIRED.

C. VELOCITY DISSIPATION DEVICES AT DISCHARGE POINTS

WHEN DISCHARGE POINTS ARE NOT LOCATED UNDER WATER, RIP RAP PADS HAVE BEEN PROVIDED AT LOCATIONS WHERE NECESSARY DUE TO ANTICIPATED DISCHARGE VELOCITIES. PLEASE SEE THE CONSTRUCTION PLANS FOR DETAILS AND LOCATIONS, AS NEEDED.

VI. CONTROLS FOR OTHER POTENTIAL POLLUTANTS

A. WASTE DISPOSAL

THE CONTRACTOR SHALL PROVIDE LITTER COLLECTION CONTAINERS WITHIN THE PROJECT BOUNDARIES DURING CONSTRUCTION. CONTRACTOR SHALL DISPOSE OF ALL UNSUITABLE MATERIALS AND CONSTRUCTION DEBRIS IN ACCORDANCE WITH ALL APPLICABLE LOCAL, STATE, AND FEDERAL REQUIREMENTS.

B. DUST CONTROL

TO PREVENT OFF-SITE VEHICULAR TRACKING OF SEDIMENTS AND DUST GENERATION, A STABILIZED CONSTRUCTION ENTRANCE SHALL BE ESTABLISHED BY THE SITE CONTRACTOR. PLEASE SEE THE STORMWATER POLLUTION PREVENTION PLAN (C0.21) FOR DETAILS AND LOCATION(S).

C. EXISTING VERSUS PROPOSED POTABLE AND SANITARY SEWER SYSTEMS

THERE ARE NO EXISTING NOR PROPOSED SANITARY SEWER AND POTABLE WATER SYSTEMS LOCATED ON THE PROJECT SITE. IF TEMPORARY SANITARY SYSTEMS ARE UTILIZED DURING CONSTRUCTION, THE CONTRACTOR SHALL PROPERLY CONTROL AND DISCHARGE ANY SANITARY WASTE IN ACCORDANCE WITH ALL APPLICABLE LOCAL, STATE, AND FEDERAL REGULATIONS.

D. FERTILIZER & PESTICIDES

THE USE OF FERTILIZERS, HERBICIDES, AND PESTICIDES ON THE PROJECT SITE, WILL BE DIRECTED BY THE LANDSCAPE PLAN AND THE FDOT STANDARD SPECIFICATIONS SECTION 570, TO SUPPORT THE GROWTH OF THE PROPOSED VEGETATION. ESTABLISHING THIS VEGETATION WILL AID IN THE STABILIZATION OF THE PROJECT SITE AND REDUCE EROSION. APPLICATION RATES FOR THE FERTILIZERS, HERBICIDES, AND PESTICIDES SHALL BE IN ACCORDANCE WITH THE MANUFACTURER'S RECOMMENDATIONS TO GUARD AGAINST OVER-USE, WHICH CAN LEAD TO VIOLATIONS OF STATE WATER QUALITY STANDARDS.

E. TOXIC MATERIAL

THE CONSTRUCTION SITE WILL BE IN FULL COMPLIANCE WITH STATE AND FEDERAL REQUIREMENTS. A PLASTIC MAT, TAR PAPER, OR OTHER IMPERVIOUS MATERIAL SHALL BE PLACED UNDER AREAS WHERE TOXIC LIQUIDS ARE TO BE OPENED AND STORED.

F. HAZARDOUS MATERIALS

ALL HAZARDOUS MATERIALS SHALL BE STORED IN A SECURE LOCATION, UNDER COVER, AND IN APPROPRIATE TIGHTLY, SEALED CONTAINERS WHEN NOT IN USE. ALL PRODUCTS SHALL BE STORED IN AND USED FROM THE ORIGINAL CONTAINER WITH THE ORIGINAL PRODUCT LABEL. CONTAINERS MUST BE STORED IN A MANNER TO PROTECT THEM FROM THE ELEMENTS AND INCIDENTAL DAMAGE. THE MINIMUM PRACTICAL QUANTITY OF ALL SUCH MATERIALS SHALL BE KEPT ON THE JOB SITE AND SCHEDULED FOR DELIVERY AS CLOSE TO TIME OF USE AS PRACTICAL.

ALL PRODUCTS SHALL BE USED IN STRICT COMPLIANCE WITH THE INSTRUCTIONS ON THE PRODUCT LABEL.

SUFFICIENT EQUIPMENT AND/OR MATERIALS SHALL BE KEPT ONSITE TO CONTAIN AND CLEAN UP SPILLS OF HAZARDOUS MATERIALS IN THE AREAS WHERE THESE MATERIALS ARE STORED OR USED. SPILL CONTROL AND CONTAINMENT KIT SUPPLIES SHALL BE OF SUFFICIENT QUANTITIES AND APPROPRIATE CONTENT TO CONTAIN A SPILL FROM THE LARGEST ANTICIPATED PIECE OF EQUIPMENT AND FROM THE LARGEST ANTICIPATED QUANTITIES OF PRODUCTS STORED ON THE SITE AT ANY GIVEN TIME.

CONTRACTOR TO CONTAIN AND CLEAN UP ANY SPILLS IMMEDIATELY AFTER THEY OCCUR. ANY SPILLS OF PETROLEUM PRODUCTS OR HAZARDOUS MATERIALS IN EXCESS OF REPORTABLE QUANTITIES AS DEFINED BY EPA, STATE, OR LOCAL AGENCY REGULATIONS SHALL BE REPORTED TO THE APPROPRIATE AGENCIES IN THE REQUIRED TIME FRAMES. THE CONTRACTOR SHALL PROVIDE A WRITTEN NOTICE TO THE OWNER IMMEDIATELY UPON IDENTIFICATION OF ANY SPILL.

ALL EXCESS, USED, OR SPILLED PRODUCTS, INCLUDING CONTAMINATED SOIL, SHALL BE DISPOSED OF BY THE CONTRACTOR IN STRICT COMPLIANCE WITH INSTRUCTIONS ON THE PRODUCT LABEL AND ALL APPLICABLE REGULATIONS.

VII. APPROVED STATE AND LOCAL PLANS

THE CONSTRUCTION DRAWINGS FOR THE PROJECT WERE APPROVED AND PERMITTED BY THE FOLLOWING AGENCIES:

- *CITY OF ALACHUA*
- *FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION*

VIII. CONSTRUCTION ACTIVITY DISCHARGES

IN ACCORDANCE WITH THIS PLAN, THERE ARE NO ANTICIPATED DISCHARGES OF STORMWATER ASSOCIATED WITH CONSTRUCTION ACTIVITIES.

IX. CHANGES TO THE POLLUTION PREVENTION PLAN

THIS STORMWATER POLLUTION PREVENTION PLAN SHALL BE AMENDED TO REFLECT ANY APPLICABLE CHANGE IN A STATE, REGIONAL, OR LOCAL PERMIT FOR WHICH THE PERMITTEE RECEIVES WRITTEN NOTICE. WHEN WRITTEN NOTICE IS RECEIVED, THE PERMITTEE SHALL PROVIDE A RE-CERTIFICATION OF THIS POLLUTION PREVENTION PLAN, WHICH HAS BEEN REVISED TO ADDRESS SUCH CHANGES. AMENDMENTS TO THE PLAN SHALL BE PREPARED, SIGNED, DATE, AND KEPT AS ATTACHMENTS TO THE ORIGINAL PLAN.

X. ALTERNATIVE PERMIT REQUIREMENTS

NO ALTERNATIVE PERMIT REQUIREMENTS ARE REQUESTED.

XI. MAINTENANCE

THE CONTRACTOR IS RESPONSIBLE FOR THE MAINTENANCE, INSPECTION SCHEDULE, AND REPAIRS OUTLINED IN THIS PLAN. MAINTENANCE SHALL CONTINUE THROUGHOUT THE PROJECT UNTIL WORK IS COMPLETE. THE CONTRACTOR IS RESPONSIBLE FOR REMOVING ALL TEMPORARY EROSION AND SEDIMENT CONTROL DEVICES AFTER CONSTRUCTION IS COMPLETE. IN ADDITION TO THE TIMES MENTIONED IN THE PREVIOUS SECTIONS, THE CONTRACTOR SHALL INITIATE ANY REPAIRS WITHIN 24 HOURS OF BEING REPORTED. IN THE EVENT THAT THE SMF(S) DO NOT PERFORM PROPERLY OR IF A SINKHOLE DEVELOPS, THE PROJECT ENGINEER SHALL BE NOTIFIED TO ASSIST IN COORDINATING REMEDIAL ACTION. ACCUMULATED SEDIMENT SHALL BE REMOVED FROM SILT FENCING WHEN IT HAS REACHED ONE-THIRD THE HEIGHT OF THE SILT FENCE. UPON FINAL COMPLETION OF CONSTRUCTION AND ACCEPTANCE BY BOTH THE CITY AND OWNER, THE OPERATION AND MAINTENANCE ENTITY WILL BE PLEASANT SOLAR, LLC

XII. INSPECTIONS

THE CONTRACTOR SHALL INSPECT ALL POINTS OF POTENTIAL DISCHARGE FROM THE PROJECT SITE FOR ALL DISTURBED AREAS ON THE CONSTRUCTION SITE AT LEAST ONCE EVERY SEVEN CALENDAR DAYS AND WITHIN 24 HOURS OF THE END OF A STORM THAT IS 0.50 INCHES OR GREATER. FOR POINTS OF DISCHARGE INTO SURFACE WATERS OF THE STATE OR AN MS4, A QUALIFIED INSPECTOR (PROVIDED BY THE OPERATOR) SHALL PERFORM THE REQUIRED INSPECTIONS. THE CONTRACTOR SHALL INSTALL A RAIN GAUGE AT THE SITE TO MONITOR AND DOCUMENT RAINFALL EVENTS 0.50 INCHES OR GREATER. LOCATIONS WHERE THE SITE IS COMPLETELY CONSTRUCTED AND STABILIZED, SUCH INSPECTIONS SHALL BE CONDUCTED AT LEAST ONCE A MONTH. ALL INSPECTIONS SHALL BE RECORDED ON THE CONSTRUCTION INSPECTION FORM. THE CONTRACTOR MAY USE THEIR OWN FORM (MEETING FDEP SWPPP REQUIREMENTS) OR A SAMPLE FORM FROM FDEP. A SAMPLE CONSTRUCTION FORM IS AVAILABLE AT: "HTTPS://FLORIDADEP.GOV/WATER/STORMWATER/DOCUMENTS/CONSTRUCTION-SWPPP". MORE SPECIFICALLY, THE INSPECTION SHALL ENSURE THE FOLLOWING CATEGORIES.

A. DISTURBED AREAS

ALL DISTURBED AREAS AND AREAS USED FOR MATERIAL STORAGE SHALL BE INSPECTED FOR POLLUTANTS ENTERING THE STORMWATER SYSTEM. THE STORMWATER MANAGEMENT SYSTEM AND EROSION AND SEDIMENT CONTROL MEASURES IDENTIFIED IN THE PLAN SHALL BE INSPECTED TO ENSURE THEY ARE OPERATING CORRECTLY. LOCATIONS WHERE VEHICLES ENTER AND EXIT THE SITE SHALL BE INSPECTED FOR EVIDENCE OF OFF-SITE SEDIMENT TRACKING.

B. MAINTENANCE PERFORMANCE

BASED ON THE RESULTS OF THE INSPECTION, ALL MAINTENANCE OPERATIONS NEEDED TO ASSURE PROPER COMPLIANCE WITH THIS PLAN SHALL BE DONE IN A TIMELY MANNER, BUT IN NO CASE LATER THAN 7 DAYS FOLLOWING THE INSPECTION.

C. REPORTING REQUIREMENTS

ALL INSPECTIONS SHALL BE RECORDED ON THE CONSTRUCTION INSPECTION FORM. THIS FORM IS CREATED TO SUMMARIZE THE SCOPE OF THE INSPECTION, THE NAME(S) AND QUALIFICATIONS OF THE INSPECTOR(S), THE DATE OF INSPECTION, RAINFALL DATA, OBSERVATIONS, THE ACTIONS TAKEN TO CORRECT INCIDENTS OF NON-COMPLIANCE WITH THE PROVISIONS OF THIS PLAN. IF NO INCIDENTS OF NON-COMPLIANTS ARE OBSERVED, THE REPORT SHALL CONTAIN A CERTIFICATION THAT THE FACILITY IS IN COMPLIANCE WITH THE STORMWATER POLLUTION PREVENTION PLAN AND THE ASSOCIATED PERMIT.

XIII. NON-STORMWATER DISCHARGES

IN ADDITION TO STORMWATER RUNOFF, THIS PLAN APPLIES TO RUNOFF FROM IRRIGATION OPERATIONS AND CONSTRUCTION PRACTICES. THIS PLAN DOES NOT PERTAIN TO DISCHARGES FROM FIRE FIGHTING ACTIVITIES.

XIV. CONTRACTORS CERTIFICATION

THE CONTRACTORS OR SUB-CONTRACTORS SHALL PHOTOCOPY AND COMPLETE THE FORM ON THIS PAGE. IT SHALL BE PROVIDED TO THE OWNER AND KEPT ON FILE PURSUANT TO SECTION XV REGARDING PROJECT RECORDS.

XV. RETENTION OF RECORDS

THE PERMITTEE SHALL RETAIN COPIES OF STORMWATER POLLUTION PREVENTION PLANS AND ALL REPORTS REQUIRED BY THIS PERMIT, AND RECORDS OF ALL DATA USED TO COMPLETE THE NOTICE OF INTENT TO BE COVERED BY THIS PERMIT, FOR A PERIOD OF AT LEAST THREE YEARS FROM THE DATE THAT THE SITE IS FINALLY STABILIZED.

THE PERMITTEE SHALL RETAIN A COPY OF THE STORMWATER POLLUTION PREVENTION PLAN AND ALL REPORTS, RECORDS, AND DOCUMENTATION REQUIRED BY THIS PERMIT AT THE CONSTRUCTION SITE, OR AN APPROPRIATE ALTERNATIVE LOCATION AS SPECIFIED IN THE NOTICE OF INTENT, FROM THE DATE OF PROJECT INITIATION TO THE DATE OF FINAL STABILIZATION.

XVI. NOTICE OF TERMINATION

NOTICE OF TERMINATION:

1. *WHERE A SITE HAS BEEN FINALLY STABILIZED AND ALL STORMWATER DISCHARGES AUTHORIZED BY THIS PERMIT ARE ELIMINATED, THE PERMITTEE SHALL SUBMIT A NOTICE OF TERMINATION (DEP FORM 62-621.300(6)), SIGNED IN ACCORDANCE WITH PART VII.C OF DEP DOCUMENT NO. 62-621.300(4)(a), WITHIN 14 DAYS OF FINAL STABILIZATION OF THE SITE TO TERMINATE COVERAGE UNDER THIS PERMIT.*
2. *ELIMINATION OF STORMWATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY MEANS THAT ALL DISTURBED SOILS AT THE SITE HAVE BEEN FINALLY STABILIZED AND TEMPORARY EROSION AND SEDIMENT CONTROL MEASURES HAVE BEEN REMOVED OR WILL BE REMOVED AT AN APPROPRIATE TIME, OR THAT ALL STORMWATER DISCHARGES ASSOCIATED WITH CONSTRUCTION ACTIVITY FROM THE SITE THAT ARE AUTHORIZED BY THIS GENERIC PERMIT HAVE OTHERWISE BEEN ELIMINATED.*
3. *FOR CONSTRUCTION ACTIVITIES WHERE THE OPERATOR CHANGES, THE EXISTING OPERATOR SHALL FILE AN N.O.T. IN ACCORDANCE WITH THIS PART WITHIN 14 DAYS OF RELINQUISHING CONTROL OF THE PROJECT TO A NEW OPERATOR.*

THE PERMITTEE SHALL SUBMIT A NOTICE OF TERMINATION TO THE FOLLOWING ADDRESS:

NPDES STORMWATER NOTICES CENTER, MS# 2510
FLORIDA DEPARTMENT OF ENVIRONMENTAL PROTECTION
2600 BLAIR STONE ROAD
TALLAHASSEE, FLORIDA 32399-2400

PROJECTS THAT DISCHARGED STORMWATER ASSOCIATED WITH CONSTRUCTION ACTIVITY TO A MUNICIPAL SEPARATE STORM SEWER SYSTEM (MS4) SHALL SUBMIT A COPY OF THE N.O.T. TO THE OPERATOR OF THE MS4.

Contractor/Subcontractor Certification Statement
Stormwater Pollution Prevention Plan

Site Name: PLEASANT SOLAR
Site Location: TBD (Northwest Quadrant of the intersection of CR 235A and Peggy Road)
Alachua County, Florida

THE CONTRACTOR(S) OR SUB-CONTRACTOR(S) RESPONSIBLE FOR COMPLYING WITH THIS STORMWATER POLLUTION PREVENTION PLAN SHALL SIGN THE CERTIFICATION STATEMENT BELOW. MULTIPLE COPIES OF THIS CERTIFICATION STATEMENT MAY BE NECESSARY DEPENDING ON THE NUMBER OF SUB-CONTRACTORS ASSOCIATED WITH THE PROJECT

I CERTIFY UNDER PENALTY OF LAW THAT I UNDERSTAND, AND SHALL COMPLY WITH, THE TERMS AND CONDITIONS OF THE STATE OF FLORIDA GENERIC PERMIT FOR STORMWATER DISCHARGE FROM LARGE AND SMALL CONSTRUCTION ACTIVITIES AND THIS STORMWATER POLLUTION PREVENTION PLAN PREPARED THEREUNDER.

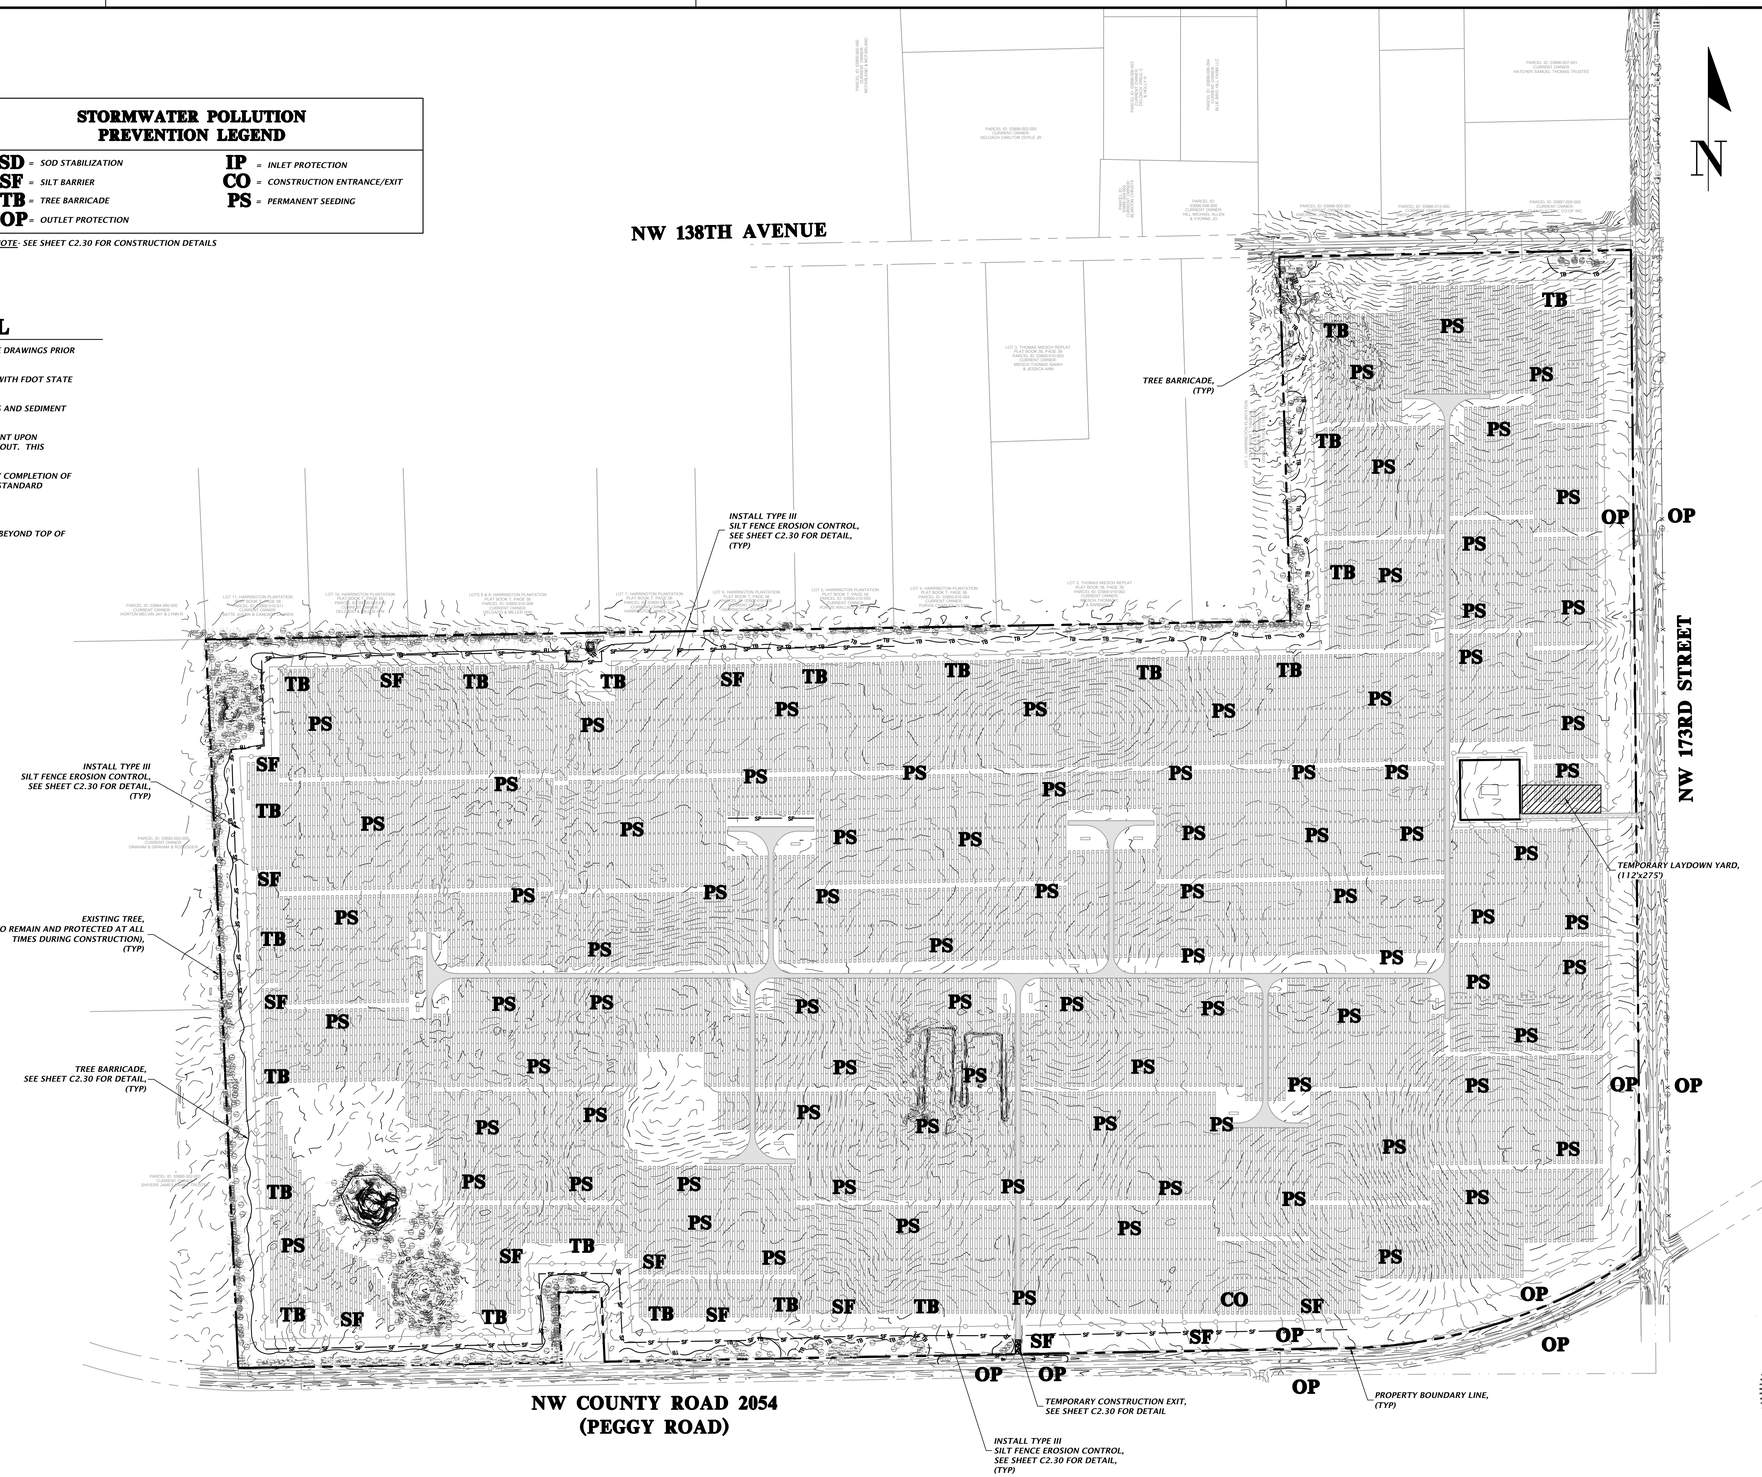
BASIN EROSION AND SEDIMENTATION CONTROL

1. SILT FENCING AND/OR STAKED HAYBALES SHALL BE CONSTRUCTED WHERE SHOWN ON THE DRAWINGS PRIOR TO STARTING CONSTRUCTION.

2 ALL STORMDRAIN INLETS SHALL BE PROTECTED DURING CONSTRUCTION IN ACCORDANCE WITH FDOT STATE OF FLORIDA EROSION AND SEDIMENT CONTROL DESIGNER AND REVIEWER MANUAL.



3. THE STORMDRAIN SYSTEM SHALL BE FLUSHED OUT TO REMOVE ALL ACCUMULATED DEBRIS AND SEDIMENT UPON COMPLETION OF CONSTRUCTION.

4. THE DRAINAGE BASIN BOTTOM SHALL BE SCRAPED CLEAN OF ALL ACCUMMULATED SEDIMENT UPON COMPLETION OF CONSTRUCTION AFTER THE STORMDRAIN SYSTEM IS COMPLETELY FLUSHED OUT. THIS ACTIVITY SHALL ONLY OCURR IN A DRY STATE.

5. ALL DISTURBED AREAS IN THE CONSTRUCTION AREA SHALL BE COMPLETELY STABILIZED BY COMPLETION OF CONSTRUCTION. GRASS SEEDING RATES AND MIXTURES SHALL BE PER SECTION 570 OF THE STANDARD SPECIFICATIONS. EVIDENCE OF GROWTH MUST BE PRESENT PRIOR TO FINAL RELEASE.

6. REFER TO THE SWPPP PLAN FOR COMPLETE EROSION CONTROL MEASURES.

7. WHERE POND TOP OF BANK IS IN CUT TO EXISTING GRADE, CONTRACTOR SHALL SOD 5-FT BEYOND TOP OF BANK FOR EROSION PROTECTION.

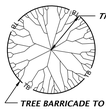
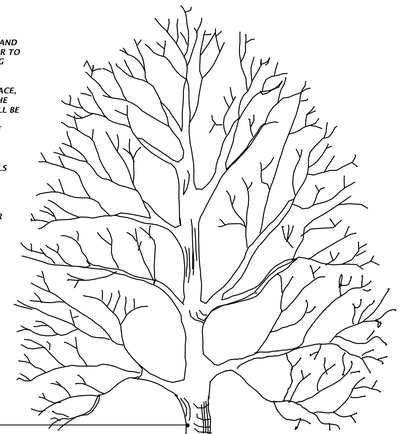
TYPICAL GRASS SWALE DETAIL

NTS

NOTE: REFER TO C2.00 SERIES SHEETS FOR LENGTH AND LOCATION.

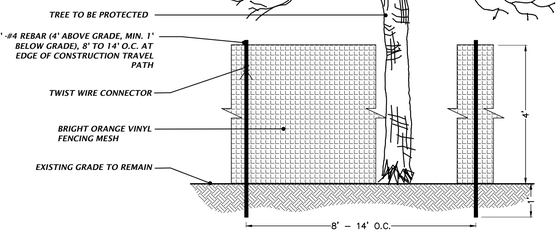


NOTE:



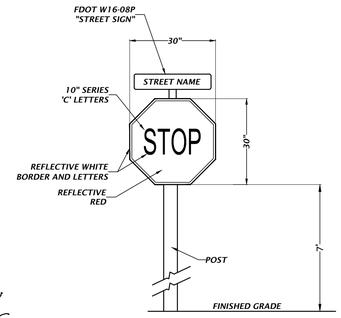
1. TREE BARRICADES MUST BE INSPECTED AND APPROVED BY THE CITY OF ALACHUA PRIOR TO ANY CLEARING, DEMOLITION, OR GRUBBING WORK BEGINS.

2. TREE BARRICADES SHALL REMAIN IN-PLACE, AND IN WORKING ORDER THROUGHOUT THE CONSTRUCTION PHASE. BARRICADES SHALL BE REMOVED ONCE MAJOR CONSTRUCTION IS COMPLETE AND PRIOR TO COMPLETION OF LANDSCAPE INSTALLATION.



3. NO CONSTRUCTION EQUIPMENT, MATERIALS, SUPPLIES, FUELS OR CHEMICALS SHALL BE STORED WITHIN THE TREE BARRICADE LIMITS.

4. HERITAGE TREES (GREATER THAN 20" DIAMETER) ARE TO BE ENCLOSED TO THEIR ENTIRE DRIPLINE WHERE POSSIBLE.



REGULATED TREE PLAN VIEW

TREE BARRICADE STAKING

NTS

MUTCD R1-1 (30"x30") STOP SIGN DETAIL

NTS

BASIN OPERATION AND MAINTENACE REQUIREMENTS

SURFACEWATER MANAGEMENT FACILITIES (SMF'S)

ALL SMF'S PERMITTED BY THE DISTRICT SHALL BE OPERATED AND MAINTAINED IN ACCORDANCE WITH THE DESIGNS, PLANS CALCULATIONS, AND OTHER SPECIFICATIONS THAT ARE SUBMITTED WITH AN APPLICATION, APPROVED BY THE DISTRICT, AND INCORPORATED BY REFERENCE INTO ANY PERMIT ISSUED. SMF'S SHALL BE KEPT FREE OF DEBRIS, TRASH, GARBAGE, OILS AND GREASES, AND OTHER REFUSE THROUGH REGULAR INSPECTION AND MAINTENANCE BY THE PERMITTEE.

EROSION CONTROL

THE SYSTEM SHALL BE REGULARLY INSPECTED AND MAINTAINED BY THE PERMITTEE TO INSURE THAT ALL EROSION IS CONTROLLED AND SOIL IS STABILIZED TO PREVENT SEDIMENT DISCHARGE TO WATERS IN THE STATE. ANY VEGETATION ESTABLISHED FOR EROSION CONTROL SHALL BE PROPERLY MAINTAINED FOR FUNCTION.

CULVERTS, PIPES AND STRUCTURES

ALL STRUCTURES WITHIN THE SYSTEM SHALL BE REGULARLY INSPECTED AND MAINTAINED ON A REGULAR BASIS BY THE PERMITTEE TO INSURE THAT THEY DO NOT BECOME CLOGGED OR CHOKED WITH VEGETATIVE OR AQUATIC GROWTH TO SUCH AN EXTENT AS TO RENDER THEM INOPERABLE.

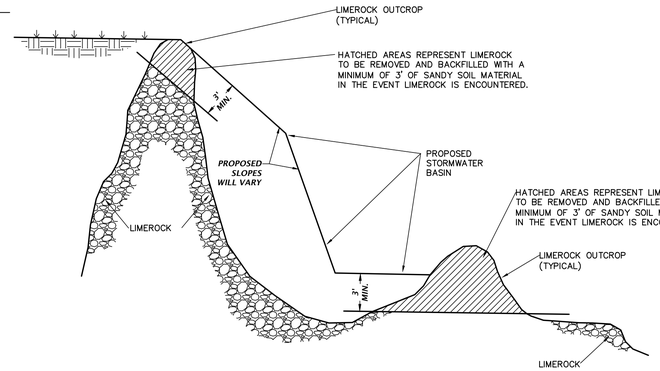
MAINTENANCE

THE BASIN SHALL BE REGULARLY MOWED TO AVOID EXCESSIVE VEGETATION GROWTH. THE MOWING RATE SHALL BE AT A MINIMUM OF 12 TIMES PER YEAR, WITH MORE FREQUENT MOWING IN THE SUMMER MONTHS. BASIN SIDE SLOPES SHALL INITIALLY BE SODDED AND THE SOD MAINTAINED.

FUNCTION

BASINS THAT DO NOT DRAWDOWN PROPERLY AND MAINTAIN STANDING WATER FOR AN EXTENDED PERIOD OF TIME MAY REQUIRE REMEDIAL ACTION. THE ENGINEER SHALL BE NOTIFIED TO HELP COORDINATE REMEDIAL ACTION IN THE EVENT IMPROPER RECOVERY IS NOTED.

LIMEROCK/SINKHOLE



IF A CONTINUOUS LIMEROCK FORMATION IS ENCOUNTERED DURING EXCAVATION OF THE SWALES/BASIN OR IF A SINKHOLE FORMS IN THE AREA OF A DRAINAGE SWALE/BASIN THE ENGINEER OF RECORD SHALL BE NOTIFIED BY EITHER THE CONTRACTOR OR THE ESTABLISHED OPERATION AND MAINTENANCE ENTITY. THE ENGINEER OF RECORD SHALL INSPECT THE REPAIRED AREA UPON COMPLETION OF THE REPAIR.

WHERE A CONTINUOUS LIMEROCK FORMATION IS ENCOUNTERED DURING EXCAVATION OF THE SWALES/BASINS, THE LIMEROCK SHALL BE OVER EXCAVATED BY 3 FEET ,AN APPROVED GEO TEXTILE FABRIC SHALL BE PLACED IN THE EXCAVATION AND BACKFILLED WITH SANDY SOILS IN A LOOSE CONDITION.

ALL SWALES/BASINS SHALL BE INSPECTED MONTHLY FOR SINKHOLE OCCURRENCE. SHOULD A SINKHOLE OCCUR, THE AREA SHALL BE REPAIRED AS SOON AS POSSIBLE. REPAIR SHALL INCLUDE FILLING (LIMEROCK SUCH AS ROAD BASE MATERIAL, CLAY/SAND MIXTURE, OR CONCRETE IF NECESSARY). A 3-FOOT DEEP CAP THAT EXTENDS 3 FEET BEYOND THE PERIMETER OF THE SINKHOLE SHALL BE CONSTRUCTED WITH CLAYEY SOILS. THE CLAYEY SOIL SHALL HAVE AT LEAST 20% PASSING THE NO. 200 SIEVE, COMPACTED TO 95% OF STANDARD PROCTOR, AND COMPACTED IN A WET CONDITION WITH MOISTURE 2% - 4% ABOVE OPTIMUM. THE CLAY SOIL CAP SHALL BE RE-GRADED TO PREVENT CONCENTRATION OF WATERS (PONDING) AND RE-VEGETATED.

202211

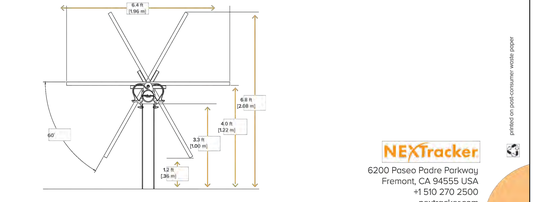
Our most amazing tracker yet.

In our mission to make solar a mainstream energy source, NEXTracker has engineered the most intelligent and flexible tracking technology yet. Using sustainable design methods with outcomes that benefit people and the planet, we bring you: NX Horizon™.

NX Horizon (formerly referred to as the Self-Powered Tracker or SPT), brings self-contained motor power to each row, eliminating power wiring and trenching. Our advanced horizontal tracker ihas the widest rotational range available, lowest O&M costs, and requires far less power to operate than other trackers. By offering more powerful systems at a greater value, NEXTracker enables greater deployment of renewable energy worldwide.

NX Horizon key features and benefits include:

– Self-powered system with smart performance communications: Self-contained units on each row include a dedicated PV panel toprovide power to the controller which drives themotor and hosts intelligent control electronics to position each tracker. With smart communications built in, NX Horizon systems can be accessed remotely, providing customers with a granular view to optimize tracker performance, operations and maintenance.



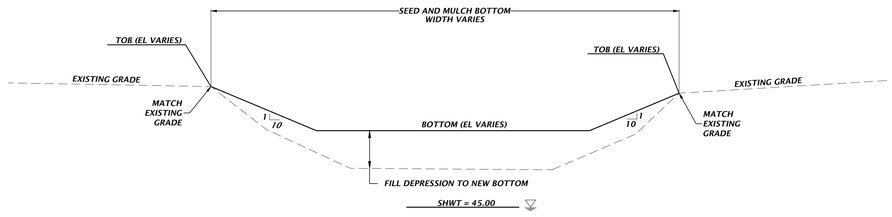
– Independent balanced rows with 120 degree rotational range: Each NX Horizon row has its own controlled motor with rotational range that delivers up to 2% more energy than typical linked row trackers. These agile, independent rows stow in less than 90 seconds to reduce wind forces on the array, protecting the PV modules in harsh environments. NX Horizon solar trackers also have a mechanically balanced row design that align PV panels with the tracker's axis of rotation – which greatly reduces row torque, using less energy from the motor to track throughout the day.

– Self-grounded system with theft-proof fasteners: NX Horizon is the world's first horizontal tracker with an entirely self-grounded design. This means no separate bonding hardware is required. You save on material and associated costs by eliminating grounding washers, braided straps, bare copper wire, and grounding rods. What's more, we've designed our own fasteners that can only be removed with special tools – deterring PV theft.

NX Horizon Specifications

Tracking Technology	Horizontal single-axis balanced-mass tracker with independently-driven rows
Tracking Range	Up to 120° (± 60°)
Control System	1 Self-Powered Controller (SPC) per tracker; 1 Network Control Unit (NCU) per 100 SPCs
Communications	Wireless ZigBee® mesh network/SCADA; no communication wiring required
Drive System	One slew gear, 24 VDC motor and self-powered controller widedicated solar panel per row
DC Capacity	23-35kWp per tracker row, depending on panel type. Row length up to 90 panels.
System Voltage	1,500 volt or 1,500 volt
Power Consumption	No grid power required
Ground Coverage Ratio	Fully configurable by customer; typical range 33%-50%
Installation Method	Rapid field assembly, no welding required
Foundation Types	Compatible with all major foundation types (driven pier, concrete foundation, ground screw)
Standard Wind Design	100 mph/161 kph, 3 second gust per ASCE7-10; configurable for higher wind speeds
Safety Stowing	Automated wind and snow stowing with self-contained backup power; no external power required
Torsional Limiter	Included at each foundation/bearing for additional wind and snow load protection
Principal Materials	Galvanized and stainless steel
Grounding Method	Self-grounding structure; separate materials and labor not required
Compliance	Grounding/bonding, UL2703; structural design: ASCE7-10
Other Available Options	Snow and flood sensors
Warranty	10 years on structural components; 5 years on drive and control systems
Typical Dimensions	Height 2.1 m/6.8 ft (@ 60°). Width 2.0 m/6.4 ft, Length 85 m/283 ft

Typical 72-cell c-Si configuration: 85 m row with 80 panels mounted in portrait:



printed on post-consumer waste paper

ALTA / NSPS SURVEY

LOCATED IN SECTIONS 17 AND 20, TOWNSHIP 8 SOUTH, RANGE 17 EAST, ALACHUA COUNTY, FLORIDA

PARCEL 1 DESCRIPTION:
(PER FIDELITY TITLE INSURANCE COMPANY TITLE COMMITMENT NUMBER 36523532, DATED MARCH 1, 2022)

A TRACT OF LAND SITUATED IN THE SOUTH 1/2 OF SECTION 20, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, SAID TRACT OF LAND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCE AT THE SOUTHWEST CORNER OF THE AFOREMENTIONED SECTION 20 FOR A POINT OF REFERENCE AND RUN N.01°43'30"W., ALONG THE WEST LINE OF SAID SECTION 20, A DISTANCE OF 40.32 FEET TO A CONCRETE MONUMENT AT THE INTERSECTION OF SAID WEST LINE OF SECTION 20 WITH THE NORTHERLY RIGHT OF WAY LINE OF COUNTY ROAD 2054 (80 FOOT RIGHT OF WAY) AND THE TRUE POINT OF BEGINNING; THENCE CONTINUE N.01°43'30"W., ALONG SAID WEST LINE OF SECTION 20, A DISTANCE OF 2547.72 FEET TO A CONCRETE MONUMENT AT THE NORTHWEST CORNER OF THE AFOREMENTIONED SOUTH ½ OF SECTION 20; THENCE RUN N.89°48'16"E., ALONG THE NORTH LINE OF SAID SOUTH 1/2 , A DISTANCE OF 4989.78 FEET TO A CONCRETE MONUMENT AT THE INTERSECTION OF SAID NORTH LINE WITH THE WESTERLY RIGHT OF WAY LINE OF COUNTY ROAD 235A (100 FOOT RIGHT OF WAY); THENCE RUN S.00°14'05"W., ALONG SAID WESTERLY RIGHT OF WAY LINE, A DISTANCE OF 2239.68 FEET TO A CONCRETE MONUMENT AT THE INTERSECTION OF SAID WESTERLY RIGHT OF WAY LINE WITH THE AFOREMENTIONED NORTHERLY RIGHT OF WAY LINE OF COUNTY ROAD 2054; THENCE RUN S.59°24;55"W., ALONG SAID NORTHERLY RIGHT OF WAY LINE, A DISTANCE OF 100.58 FEET TO A CONCRETE MONUMENT AT THE BEGINNING OF A CURVE CONCAVE NORTHWESTERLY, SAID CURVE HAVING A RADIUS OF 1869.86 FEET; THENCE RUN SOUTHWESTERLY, ALONG SAID RIGHT OF WAY LINE AND WITH SAID CURVE, THROUGH AN ARC ANGLE OF 30°23'36", AN ARC DISTANCE OF 991.89 FEET (CHORD BEARING AND DISTANCE OF S.74°36'43"W., 980.30 FEET RESPECTIVELY) TO A CONCRETE MONUMENT AT THE END OF SAID CURVE; THENCE RUN S.89°48'31"W., ALONG SAID NORTHERLY RIGHT OF WAY LINE, A DISTANCE OF 2591.89 FEET TO A CONCRETE MONUMENT AT THE INTERSECTION OF SAID NORTHERLY RIGHT OF WAY LINE WITH THE EAST LINE OF THE WEST ½ OF THE SOUTHWEST ¼ OF SAID SECTION 20; THENCE RUN N.01°58'22"W., ALONG SAID EAST LINE, A DISTANCE OF 243.48 FEET TO A CONCRETE MONUMENT LOCATED 300.00 FEET NORTH OF THE SOUTH LINE OF SAID SECTION 20; THENCE RUN N.89°27'14"W., PARALLEL WITH SAID SOUTH LINE OF SECTION 20, A DISTANCE OF 150.00 FEET; THENCE RUN S.01°58'22"E., PARALLEL WITH SAID EAST LINE, A DISTANCE OF 245.42 FEET TO SAID NORTHERLY RIGHT OF WAY LINE OF COUNTY ROAD 2054; THENCE RUN S.89°48'31"W., ALONG SAID NORTHERLY RIGHT OF WAY LINE, A DISTANCE OF 1096.30 FEET TO A STEEL ROD AND CAP AT THE BEGINNING OF A CURVE CONCAVE NORTHERLY, SAID CURVE HAVING A RADIUS OF 1869.86 FEET; THENCE RUN WESTERLY, ALONG SAID RIGHT OF WAY LINE AND WITH SAID CURVE, THROUGH AN ARC ANGLE OF 01°02'35", AN ARC DISTANCE OF 34.04 FEET (CHORD BEARING AND DISTANCE OF N.89°40'12"W., 34.04 FEET RESPECTIVELY) TO THE TRUE POINT OF BEGINNING, LESS AND EXCEPT ONE ACRE RESERVED THEREIN FOR GRAVEYARD.

SAID ONE ACRE RESERVED FOR GRAVEYARD BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:
COMMENCE AT THE SOUTHWEST CORNER OF THE AFOREMENTIONED SECTION 20 FOR A POINT OF REFERENCE AND RUN N.01°43'30"W., ALONG THE WEST LINE OF SAID SECTION 20, A DISTANCE OF 2588.04 FEET TO A CONCRETE MONUMENT AT THE NORTHWEST CORNER OF THE AFOREMENTIONED SOUTH ½ OF SECTION 20, THENCE RUN N.89°48'16"E., ALONG THE NORTH LINE OF SAID SOUTH 1/2 , A DISTANCE OF 4989.78 FEET TO A CONCRETE MONUMENT AT THE INTERSECTION OF SAID NORTH LINE WITH THE WESTERLY RIGHT OF WAY LINE OF COUNTY ROAD 235A (100 FOOT RIGHT OF WAY); THENCE RUN S.00°14'05"W., ALONG SAID WESTERLY RIGHT OF WAY LINE, A DISTANCE OF 501.38 FEET; THENCE RUN N.89°45'54"W., A DISTANCE OF 405.49 FEET TO A STEEL ROD AND CAP AT THE TRUE POINT OF BEGINNING OF GRAVEYARD PARCEL; THENCE RUN S.00°14'06"W., A DISTANCE OF 208.71 FEET TO A STEEL ROD AND CAP; THENCE RUN N.89°45'54"W., A DISTANCE OF 208.71 FEET TO A STEEL ROD AND CAP; THENCE RUN N.00°14'06"E., A DISTANCE OF 208.71 FEET TO A STEEL ROD AND CAP; THENCE RUN S.89°45'54"E., A DISTANCE OF 208.71 FEET TO THE TRUE POINT OF BEGINNING.

AND BEING THE SAME PROPERTY CONVEYED TO WACO, INC., QUALIFIED TO DO BUSINESS IN FLORIDA AS WACO OF ALABAMA, INC., AN ALABAMA CORPORATION FROM INTERNATIONAL BUSINESS MACHINES CORPORATION, A NEW YORK CORPORATION BY SPECIAL WARRANTY DEED DATED NOVEMBER 10, 1997 AND RECORDED NOVEMBER 18, 1997 IN DEED BOOK 2140, PAGE 1837.; SAID WACO, INC, AN ALABAMA CORPORATION MERGED INTO WADE ALABAMA CORPORATION, A FLORIDA CORPORATION; AND SAID WACO OF ALABAMA, INC, AN ALABAMA CORPORATION MERGED INTO WADE ALABAMA CORPORATION, AN ALABAMA CORPORATION, AND SAID WADE ALABAMA CORPORATION, AN ALABAMA CORPORATION CHANGED ITS NAME TO WACO OF ALABAMA, INC., A FLORIDA CORPORATION, AND SAID WACO OF ALABAMA, INC, A FLORIDA CORPORATION CHANGED ITS NAME TO WACO PROPERTIES, INC, A FLORIDA CORPORATION.

TAX PARCEL NO. 03894-000-000

PARCEL 2 DESCRIPTION:
(PER FIDELITY TITLE INSURANCE COMPANY TITLE COMMITMENT NUMBER 36523532, DATED MARCH 1, 2022)

THE SOUTHEAST QUARTER (SE 1/4) OF THE NORTHEAST QUARTER (NE 1/4) IN SECTION 20, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA. LESS ROAD RIGHT-OF-WAY AS PER DEED RECORDED IN OFFICIAL RECORDS BOOK 103, PAGE 432 OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA. ALSO LESS THE NORTH 40 FEET FOR COUNTY ROAD RIGHT-OF-WAY PER OFFICIAL RECORDS BOOK 880, PAGE 168, PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA.

AND BEING THE SAME PROPERTY CONVEYED TO GARY D. BROWN, AS TRUSTEE OF THE GARY D. BROWN REVOCABLE TRUST DATED JANUARY 23, 2004, AS TO AN UNDIVIDED 25% INTEREST AND LINDA WEIDNER, AS TO AN UNDIVIDED 25% INTEREST AND JOANNE ALSPAUGH, AS TO AN UNDIVIDED 25% INTEREST; AND HENDERSON BROTHERS, INC., AS TO AN UNDIVIDED 25% INTEREST, AS TENANTS IN COMMON FROM WILLIAM R. SABIS BY WARRANTY DEED DATED MAY 17, 2005 AND RECORDED MAY 27, 2005 IN DEED BOOK 3133, PAGE 24.

TAX PARCEL NO. 03898-000-000

PARCEL 3 DESCRIPTION: (NAMED BY THIS SURVEYOR)
(PER OFFICIAL RECORDS BOOK 5052, PAGES 1905 THROUGH 1908)

THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA.

LESS AND EXCEPT THE RIGHT OF WAY FOR COUNTY ROAD 235-A (NW 173RD STREET) (100 FOOT RIGHT OF WAY).

ALSO LESS AND EXCEPT THE FOLLOWING DESCRIBED LANDS:

COMMENCE AT THE SOUTHEAST CORNER OF THE AFOREMENTIONED SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST FOR THE POINT OF REFERENCE AND RUN N 88°31'04" W, A DISTANCE OF 50.01 FEET TO A 6" X 6" CONCRETE MONUMENT (R/W SRD) AT THE NORTHEAST CORNER OF THAT CERTAIN PARCEL OF LANDS DESCRIBED IN OFFICIAL RECORDS BOOK 2847, PAGE 248 OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA; SAID PARCEL OF LAND BEING HEREINAFTER REFERRED TO AS THE "HURST" PARCEL, AND THE TRUE POINT OF BEGINNING OF THIS EXCEPTION PARCEL; THENCE RUN N 88°32'30" W, A DISTANCE OF 249.77 FEET TO A CONCRETE MONUMENT (NO IDENTIFICATION) AT THE N.W. CORNER OF SAID "HURST" PARCEL; THENCE RUN S 00°01'50" W, ALONG THE WEST LINE OF SAID "HURST" PARCEL, A DISTANCE OF 9.59 FEET TO THE SOUTH LINE OF SAID SECTION 17; THENCE RUN S 89°29'03" W, ALONG THE SOUTH LINE OF SAID SECTION 17, A DISTANCE OF 249.69 FEET TO THE WEST RIGHT OF WAY LINE OF THE AFOREMENTIONED COUNTY ROAD 235-A; THENCE RUN N00°14'48" E, ALONG SAID WEST RIGHT OF WAY LINE, A DISTANCE OF 1.00 FEET TO THE TRUE POINT OF BEGINNING.

PARCEL 4 DESCRIPTION: (NAMED BY THIS SURVEYOR)
(PER OFFICIAL RECORDS BOOK 5052, PAGES 1905 THROUGH 1908)

THAT PART OF THE NORTHEAST QUARTER (1/4) OF THE SOUTHEAST QUARTER (1/4) OF THE SOUTHEAST QUARTER (1/4) OF SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, LYING WEST OF THE RIGHT OF WAY FOR STATE ROAD NO. S-235-A.

LESS:
THAT PART OF THE NORTH 495.15 FEET OF THE SOUTH 1787.40 FEET OF THE EAST 345.15 FEET OF THE SOUTHEAST QUARTER (SE 1/4) OF SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, LYING WITHIN THE SOUTH 1/2 OF THE SOUTHEAST 1/4.

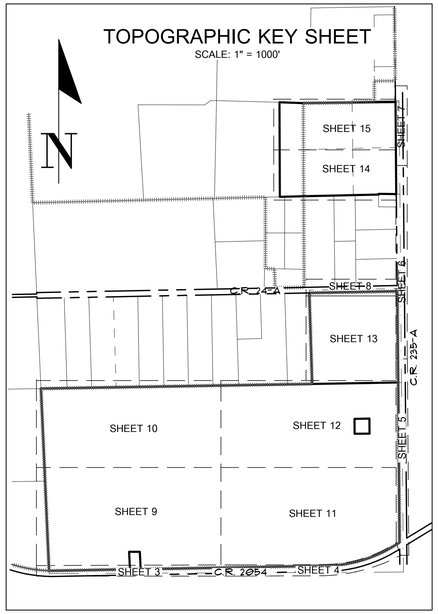
ALSO LESS: (BY THIS SURVEYOR)
THE LANDS DESCRIBED IN OFFICIAL RECORDS BOOK 1570, PAGE 2803, OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA.

PARCEL 5 DESCRIPTION: (NAMED BY THIS SURVEYOR)
(PER OFFICIAL RECORDS BOOK 5052, PAGES 1905 THROUGH 1908)

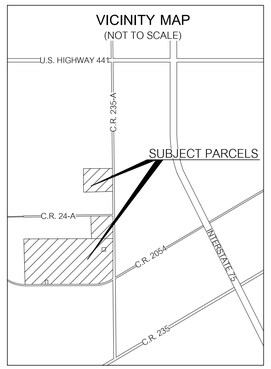
A TRACT OF LAND SITUATED IN SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, SAID TRACT OF LAND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCE AT A NAIL AND DISK AT THE SOUTHEAST CORNER OF THE AFOREMENTIONED SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST FOR THE POINT OF REFERENCE AND RUN N. 00°14'56" E., ALONG THE EAST LINE OF SAID SECTION 17, A DISTANCE OF 1288.06 FEET; THENCE RUN N. 89°52'40" E., A DISTANCE OF 654.41 FEET TO A POINT ON THE WEST LINE OF THE NORTHEAST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF SAID SECTION 17, SAID POINT BEING 16.18 FEET SOUTH OF THE NORTHWEST CORNER OF SAID NORTHEAST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF SECTION 17, SAID POINT ALSO BEING, THE TRUE POINT OF BEGINNING OF THE LANDS HEREIN DESCRIBED; THENCE RUN S. 00°12'08" W., ALONG SAID WEST LINE, A DISTANCE OF 639.35 FEET TO THE SOUTHWEST CORNER OF SAID NORTHEAST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF SAID SECTION 17; THENCE RUN S. 89°30'54" W., ALONG THE SOUTH LINE OF THE NORTHWEST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF SAID SECTION 17 AND A WESTERLY PROJECTION THEREOF, A DISTANCE OF 688.36 FEET; THENCE RUN N. 00°34'12" E., A DISTANCE OF 646.67 FEET TO A CONCRETE MONUMENT; THENCE RUN S. 89°52'40" E., A DISTANCE OF 684.17 FEET TO THE TRUE POINT OF BEGINNING, CONTAINING 10.130 ACRES MORE OR LESS.

PARCEL 6 DESCRIPTION: (NAMED BY THIS SURVEYOR)
(PER OFFICIAL RECORDS BOOK 5052, PAGES 1905 THROUGH 1908)



A TRACT OF LAND SITUATED IN SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, SAID TRACT OF LAND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:



COMMENCE AT A NAIL AND DISK AT THE SOUTHEAST CORNER OF THE AFOREMENTIONED SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST FOR THE POINT OF REFERENCE AND RUN S. 89°31'27" W., ALONG THE SOUTH LINE OF SAID SECTION 17, A DISTANCE OF 653.41 FEET TO THE SOUTHEAST CORNER OF THE SOUTHWEST 1/4 OF THE SOUTHEAST 1/4 OF SAID SECTION 17 AND THE TRUE POINT OF BEGINNING; THENCE CONTINUE S. 89°31'27" W., ALONG SAID SOUTH LINE, A DISTANCE OF 692.57 FEET TO A CONCRETE MONUMENT; THENCE RUN N. 00°34'12" E., A DISTANCE OF 655.48 FEET TO THE INTERSECTION WITH THE WESTERLY PROJECTION OF THE NORTH LINE OF THE SAID SOUTHWEST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF SECTION 17; THENCE RUN N.89°30'54" E., ALONG SAID WESTERLY PROJECTION AND ALONG SAID NORTH LINE, A DISTANCE OF 688.36 FEET TO THE NORTHEAST CORNER OF SAID SOUTHWEST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4; THENCE RUN S. 00°12'08" W., ALONG THE EAST LINE OF SAID SOUTHWEST 1/4 OF THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4, A DISTANCE OF 655.53 FEET TO THE TRUE POINT OF BEGINNING, CONTAINING 10.389 ACRES MORE OR LESS.

PARCEL 7 DESCRIPTION: (NAMED BY THIS SURVEYOR)
(PER OFFICIAL RECORDS BOOK 5052, PAGES 1903 THROUGH 1904)

A TRACT OF LAND SITUATED IN SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, SAID TRACT OF LAND BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCE AT THE SOUTHWEST CORNER OF THE AFOREMENTIONED SECTION 17, TOWNSHIP 8 SOUTH, RANGE 18 EAST FOR THE POINT OF REFERENCE AND RUN N. 89°31'27" E., ALONG THE SOUTH LINE OF SAID SECTION 17, A DISTANCE OF 3452.43 FEET TO THE SOUTHEAST CORNER OF THE LANDS DESCRIBED IN OFFICIAL RECORDS BOOK 2436, PAGE 263 OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA AND THE TRUE POINT OF BEGINNING; THENCE RUN N. 00°34'12" E., A DISTANCE OF 1320.48 FEET TO THE NORTHEAST CORNER OF SAID LANDS DESCRIBED IN OFFICIAL RECORDS BOOK 2436, PAGE 263, SAID NORTHEAST CORNER IS LOCATED ON THE SOUTH LINE OF THE 46.712 ACRE TRACT OF LAND DESCRIBED IN OFFICIAL RECORD BOOK 2228, PAGE 1974 OF SAID PUBLIC RECORDS; THENCE RUN S. 87°18'58" E., ALONG SAID SOUTH LINE, A DISTANCE OF 332.45 FEET TO THE NORTHWEST CORNER OF LANDS DESCRIBED IN OFFICIAL RECORD BOOK 1570, PAGE 2801 OF SAID PUBLIC RECORDS; THENCE RUN S. 00°34'12" W., A DISTANCE OF 1302.15 FEET TO THE SOUTHWEST CORNER OF LANDS DESCRIBED IN OFFICIAL RECORD BOOK 1619, PAGE 273 OF SAID PUBLIC RECORDS, SAID SOUTHWEST CORNER IS LOCATED ON THE SOUTH LINE OF AFOREMENTIONED SECTION 17; THENCE RUN S. 89°31'27" W., ALONG SAID SOUTH LINE OF SECTION 17, A DISTANCE OF 332.27 FEET TO THE TRUE POINT OF BEGINNING, CONTAINING 10.001 ACRES MORE OR LESS.

ACREAGE TABLE	
PARCEL(S) #	ACRES ±
1	285.939
2	35.556
3 - 7 (COMBINED)	48.389
ALL	369.884

ZONING RESTRICTIONS:
PARCEL 1
ZONE: RSF-4 (RESIDENTIAL SINGLE FAMILY - 4)

BUILDING SETBACKS:
FRONT = 15 FEET
GARAGE FRONT = 20 FEET
SIDE (STREET) = 10 FEET
REAR = 15 FEET

MAXIMUM BUILDING HEIGHT: 35 FEET

PARCELS 2 - 7
ZONE: A (AGRICULTURE)

BUILDING SETBACKS:
FRONT = 40 FEET
SIDE (STREET) = 40 FEET
SIDE (INTERIOR) = 20 FEET
REAR = 40 FEET

MAXIMUM BUILDING HEIGHT: UNLIMITED

FLOOD ZONE:
THIS PROPERTY IS LOCATED IN FEDERAL FLOOD ZONE "X", AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOODPLAIN, AS INTERPOLATED FROM F.I.R.M. PANEL NO. 12001C0120D, EFFECTIVE DATE: JUNE 16, 2006.

SCHEDULE B-II EXCEPTIONS:
(PER FIDELITY TITLE INSURANCE COMPANY TITLE COMMITMENT NUMBER 36523532, DATED MARCH 1, 2022)

ITEM # 8: PARCEL 1 IS NOT SUBJECT TO THE EASEMENT IN FAVOR OF STATE OF FLORIDA, RECORDED ON OCTOBER 17, 1960 IN DEED BOOK 114, PAGE 427. (EASEMENT IS OFFSITE AND DOES BENEFIT THE SUBJECT PARCEL. NOT SHOWN HEREON)

ITEM # 9: PARCEL 1 IS NOT SUBJECT TO THE 80 FOOT WIDE STRIP OF LAND CONVEYED IN WARRANTY DEED FROM W. D. POPE, JR. AND JAMES A. LEWIS TO ALACHUA COUNTY, RECORDED ON OCTOBER 14, 1977 IN DEED BOOK 1096, PAGE 575. (THE STRIP FALLS INSIDE THE RIGHT OF WAY FOR COUNTY ROAD 2054 ALSO KNOWN AS PEGGY ROAD, AS SHOWN HEREON)

ITEM # 10: PARCEL 1 MAY NOT BE SUBJECT TO THE MINERAL DEED TO W. H. WELLBORN AND HILLARY WELLBORN, DATED NOVEMBER 21, 1996 AND RECORDED JANUARY 6, 1997 IN DEED BOOK 2094, PAGE 476. (WACO PROPERTIES, INC. PURCHASING W.H. WELLBORN AND HILLARY WELLBORN'S INTEREST IN SAID LANDS. RECORDED IN O.R.B. 3433, PG. 1149.)

TEM # 11: PARCEL 1 IS SUBJECT TO THE EASEMENT GRANTED TO CLAY ELECTRIC COOPERATIVE, INC. BY INSTRUMENT RECORDED IN BOOK 2277, PAGE 757. (AS SHOWN HEREON)

ITEM # 12: PARCEL 2 IS NOT SUBJECT TO THE EASEMENT IN FAVOR OF CLAY ELECTRIC COOPERATIVE, INC. RECORDED IN BOOK 2277, PAGE 760. (EASEMENT WAS RELEASED. THERE POWER POLES ALONG THE EASTERN SIDE OF PARCEL 2. SEE SURVEYOR'S NOTE 19)

ITEM # 13: PARCEL 2 IS SUBJECT TO THE EASEMENT IN FAVOR OF THE STATE OF FLORIDA RECORDED IN BOOK 103, PAGE 414. (AS SHOWN HEREON)

ITEM # 14: PARCEL 2 IS PARTIALLY SUBJECT TO THE EASEMENT IN FAVOR OF STATE OF FLORIDA, RECORDED ON JULY 12, 1960 IN DEED BOOK 103, PAGE 432. (AS SHOWN HEREON)

ITEM # 15: PARCEL 1 IS NOT SUBJECT TO THE RIGHT OF WAY, 100 FEET IN WIDTH, IN FAVOR OF INTERNATIONAL BUSINESS MACHINES CORPORATION, A NEW YORK CORPORATION SET FORTH IN INSTRUMENT RECORDED ON MAY 15, 1981 IN DEED BOOK 1346, PAGE 680. (100' RIGHT OF WAY FALLS SOUTH OF PEGGY ROAD. NOT SHOWN HEREON)

ITEM # 18: PARCEL 1 IS SUBJECT TO THE RESERVATION OF ONE ACRE IN NE 1/4 OF SW 1/4 AND N 1/2 OF SE 1/4 OF SECTION 20-8-18 FOR CATHGART GRAVEYARD, RECORDED IN DEED BOOK 68, PAGE 632, OF THE PUBLIC RECORDS OF ALACHUA COUNY, FLORIDA. (AS SHOWN HEREON)

ITEM # 19: PARCEL 1 MAY NOT BE SUBJECT TO THE MINERAL RIGHT AND ROYALTY TRANSFER OF UNDIVIDED ONE-HALF INTEREST BY J.H. DAVIS AND ALLIE L. DAVIS, HIS WIFE, TO W.R. MOSELY, DATED SEPTEMBER 13, 1944, RECORDED IN MISCELLANEOUS BOOK 32, PAGE 94, OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA. (WACO PROPERTIES, INC. MADE SEVERAL PURCHASES FOR THE RIGHTS AND INTEREST IN SAID LANDS. RECORDED IN O.R.B. 3433, PG. 1148, O.R.B. 3433, PG. 1150.)

SURVEYOR'S NOTES:
1. BEARINGS SHOWN HEREON ARE BASED ON STATE PLANE FLORIDA NORTH ZONE 83/86 DATUM PROJECTED FROM ALACHUA COUNTY DENSIFICATION SURVEY 1988 - RECOVERED TRAVERSE CONTROL POINTS #4602 & 4603.
2. THERE IS A BEARING DIFFERENCE BETWEEN PARCEL ONE (1) AND THE MEASURED BEARINGS SHOWN HEREON. ROTATE THE DEED BEARINGS 00°46'48" COUNTER CLOCKWISE TO MATCH MEASURED BEARINGS. THERE IS A BEARING DIFFERENCE BETWEEN PARCELS 3, 4, 5, 6, AND 7 AND THE MEASURED BEARINGS SHOWN HEREON. ROTATE THE DEED BEARINGS 00°32'13" COUNTER CLOCKWISE TO MATCH MEASURED BEARINGS.
3. NO UNDERGROUND INSTALLATION OF UTILITIES OR IMPROVEMENTS HAVE BEEN LOCATED EXCEPT AS SHOWN. THE SURVEYOR MAKES NO GUARANTEE THAT THE UNDERGROUND UTILITIES SHOWN COMPRISE ALL SUCH UTILITIES IN THE AREA, EITHER IN SERVICE OR ABANDONED. THE SURVEYOR FURTHER DOES NOT WARRANT THAT THE UNDERGROUND UTILITIES SHOWN ARE IN THE EXACT LOCATION INDICATED ALTHOUGH HE DOES CERTIFY THAT THEY ARE LOCATED AS ACCURATELY AS POSSIBLE FROM INFORMATION AVAILABLE. THE SURVEYOR HAS NOT PHYSICALLY LOCATED THE UNDERGROUND UTILITIES.
4. THE SURVEYOR HAS NO KNOWLEDGE OF UNDERGROUND FOUNDATIONS WHICH MAY ENCROACH.
5. INSTRUMENTS OF RECORD REFLECTING EASEMENTS, RIGHTS-OF-WAY, AND OR OWNERSHIP WERE FURNISHED TO THIS SURVEYOR FOR PARCEL 1 & PARCEL 2, PER FIDELITY NATIONAL TITLE INSURANCE COMPANY TITLE COMMITMENT NUMBER 36523532, DATED MARCH 1, 2022, FIRST AMERICAN TITLE INSURANCE COMPANY TITLE COMMITMENT NUMBER 21-0351.7 KNQ, DATED APRIL 6, 2021. SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN DONE BY THE SURVEYOR.
5. INSTRUMENTS OF RECORD REFLECTING EASEMENTS, RIGHTS-OF-WAY, AND OR OWNERSHIP WERE NOT FURNISHED TO THIS SURVEYOR FOR PARCELS 3, 4, 5, 6, & 7. SEARCH OF THE PUBLIC RECORDS HAS NOT BEEN DONE BY THE SURVEYOR.
6. IT IS IN THE OPINION OF THIS SURVEYOR THAT PARCEL 4 LEGAL DESCRIPTION SHOULD INCLUDE ALSO LESS THE LANDS DESCRIBED IN OFFICIAL RECORDS BOOK 1570, PAGE 2803, OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA.
7. INFORMATION FROM FEDERAL EMERGENCY MANAGEMENT AGENCY, (F.E.M.A.) FLOOD INSURANCE RATE MAP(S), SHOWN ON THIS MAP WAS CURRENT AS OF THE REFERENCED DATE. MAP REVISIONS AND AMENDMENTS ARE PERIODICALLY MADE BY LETTER AND MAY NOT BE REFLECTED ON THE MOST CURRENT MAP.
8. FENCES, SYMBOLS, MONUMENTATION AND UTILITIES SHOWN HEREON MAY BE EXAGGERATED FOR PICTORIAL PURPOSES ONLY AND MAY NOT BE SHOWN TO SCALE.
9. IN THE OPINION OF THIS SURVEYOR, THE PERIMETER LINES AS SHOWN HEREON REPRESENT THE LOCATION OF THE BOUNDARY LINES OF THE SUBJECT PARCEL IN RELATION TO THE DESCRIPTION OF RECORD AND THOSE EXISTING LAND CORNERS FOUND TO BE ACCEPTABLE BY THIS SURVEYOR. ALL FEATURES SHOWN HEREON WERE LOCATED AND MAPPED UNDER THE RESPONSIBLE CHARGE OF THIS SURVEYOR.
10. VERTICAL INFORMATION SHOWN HEREON IS REFERENCED TO NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD). ELEVATIONS SHOWN HEREON WERE DERIVED FROM NATIONAL GEODETIC SURVEY BENCHMARK NUMBER C 51 (PID AR0286), BEING A STANDARD COAST AND GEODETIC SURVEY DISK IN CONCRETE POST LOCATED IN THE VICINITY OF ALACHUA COUNTY ROAD 2054, AND MAIN STREET, WITH A PUBLISHED ELEVATION OF 75.14 FEET (NAVD 88).
11. ADDITIONAL POINTS MAY BE FOUND BY TURNING ON THE SV - NODE* LAYERS IN THE SUPPLIED DIGITAL FILE.
12. THERE ARE ZERO STRIPED PARKING SPACES ON THE SUBJECT PARCEL.
13. THERE WAS NO OBSERVED RECENT EARTH MOVING WORK, BUILDING CONSTRUCTION OR BUILDING ADDITIONS DURING THE PROCESS OF CONDUCTING THE FIELDWORK.
14. A ZONING REPORT WAS NOT FURNISHED TO THIS SURVEYOR. ZONING INFORMATION SHOWN HEREON IS BASED ALACHUA COUNTY MUNICODE DATED: JANUARY 9TH, 2023.
15. THERE ARE NO KNOWN PROPOSED CHANGES IN STREET RIGHT OF WAYS. THERE WAS NO OBSERVED EVIDENCE OF RECENT STREET OR SIDEWALK CONSTRUCTION OR REPAIRS DURING THE PROCESS OF CONDUCTING THE FIELD WORK.
16. IT IS THIS SURVEYOR'S OPINION THAT THERE IS A SCRIVENERS ERROR FOR PARCEL 3 (NAMED BY THIS SURVEYOR) IN OFFICIAL RECORDS BOOK 5052, PAGES 1905 THROUGH 1908, OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA. SAID SCRIVENERS ERROR BEING THE FOURTH BEARING CALL OF "S 89°29'03" W". THE CORRECT BEARING SHOULD READ "N 89°29'03" E".
17. TREES SHOWN HEREON WERE MEASURED BY DIAMETER AT BREAST HEIGHT (DBH). TREES WITHIN THE CITY OF ALACHUA MUNICIPAL BOUNDARY AND WITHIN PUBLIC RIGHT OF WAYS ARE LABELED BY DBH AND COMMON NAME ABBREVIATION. FULL NAMES COMMON NAME ABBREVIATIONS CAN BE FOUND IN THE LEGEND. TREES OUTSIDE OF THE CITY OF ALACHUA MUNICIPAL BOUNDARY AND PUBLIC RIGHT OF WAYS ARE LABELED BY THE POINT NUMBER THAT SAID TREE WAS TAGGED WITH. INFORMATION OF THE TREES LABELED BY POINT NUMBER CAN BE FOUND IN THE TREE TABLE CHART ON SHEET SIXTEEN (16).
18. THE EASEMENT TO THE FLORIDA POWER CORPORATION RECORDED IN DEED BOOK 333, PAGE 282 OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA ONLY COVERS THAT PORTION OF THE SUBJECT PROPERTY CONTAINED WITHIN THE SOUTHEAST 1/4 OF THE SOUTHEAST 1/4 OF SECTION 17.
19. THE OVERHEAD UTILITY LINE ALONG THE EASTERN EDGE OF PARCEL 2 IS ENCROACHING. THERE WAS NO EASEMENT FOR THIS OVERHEAD UTILITY FURNISHED TO THIS SURVEYOR.
20. THIS SURVEY CONSISTS OF NINETEEN (19) SHEETS AND IS NOT COMPLETE WITHOUT ALL SHEETS. SEE SHEET ONE (1) FOR DESCRIPTIONS, SCHEDULE B-II EXCEPTIONS, VICINITY MAP, TOPOGRAPHIC KEY SHEET, LEGEND, FLOOD ZONE INFORMATION, ZONING INFORMATION, SURVEYOR'S CERTIFICATE AND COMPLETE SURVEYOR'S NOTES. SEE SHEET TWO (2) FOR DETAILED BOUNDARY INFORMATION. SEE SHEETS THREE (3) THROUGH FIFTEEN (15) FOR DETAILED TOPOGRAPHIC INFORMATION. SEE SHEETS SIXTEEN (16) THROUGH NINETEEN (19) FOR TREE TABLE CHART.

VO	1,774	VIBURNUM ODORATISSIMUM	SWEET VIBURNUM	3 GAL., 24" HT. X 12" SPR.
VOS	1,093	VIBURNUM OBOVATUM 'MRS. SHILLER'S DELIGHT'	MRS. SHILLERS DELIGHT VIBURNUM	3 GAL., 18" HT., 18"SPR.
CODE	QTY	BOTANICAL NAME	COMMON NAME	SIZE
SOD/SEED				
SOD		PASPALUM NOTATUM 'ARGENTINE'	BAHIA GRASS	WEED FREE AND SAND GROWN SOD

GENERAL NOTES

ALL ASPHALT, LIMEROCK, AND CONSTRUCTION DEBRIS SHALL BE REMOVED FROM PLANTING BEDS AND SOD AREAS PRIOR TO LANDSCAPE INSTALLATION. IF ENCOUNTERED DURING CONSTRUCTION OR INSTALLATION, THESE SHALL BE EXCAVATED AND REMOVED FROM THE SITE. PLANTING DEPTH OF SOIL IN SUCH AREAS SHOULD BE AT LEAST 3'. IF FILL MUST BE ADDED, IT MUST BE FLORIDA CLEAN DEEP FILL (FREE OF WEED SEEDS) WITH pH 6.0 – 7.5.

ALL LANDSCAPED AREAS SHALL BE MULCHED WITH 3" THICKNESS OF MULCH. PINE BARK MULCH SHALL BE USED IN ALL AREAS, EXCEPT RETENTION AREAS. PINE STRAW MULCH SHALL BE USED IN RETENTION AREAS.

NEW TREES OUTSIDE OF MULCHED LANDSCAPED BEDS WILL BE PROTECTED FROM MOWER AND STRING TRIMMER DAMAGE WITH 10" OF PLASTIC DRAIN TUBING.

LEADER SHOOTS AND MAIN STRUCTURAL LIMBS OF TREES SHALL NOT BE TOPPED OR PRUNED. TREES WILL BE STAKED AS NEEDED. GUYLINES WILL BE OF NON-SYNTHETIC BIODEGRADABLE MATERIAL.

REFER TO CIVIL PLANS FOR TREE BARRICADE DETAILS AND INFORMATION.

ALL VEGETATIVE MATERIALS IDENTIFIED IN THE FLORIDA EXOTIC PEST PLANT COUNCIL'S LIST OF INVASIVE PLANT SPECIES, AS AMENDED, SHALL BE REMOVED AT TIME OF DEVELOPMENT.

PLANT SELECTION FOR THIS PROJECT HAS BEEN DESIGNED TO UTILIZE FLORIDA FRIENDLY PLANT MATERIALS, AS OUTLINED BY THE UNIVERSITY OF FLORIDA IFAS EXTENSION.

GRASSING

ALL DISTURBED AND UNPAVED AREAS TO BE GRASSED WITH SOD THAT IS FREE OF NOXIOUS WEEDS INCLUDING TROPICAL SODA APPLE OR SHALL BE SEEDED AND MULCHED. SEE CIVIL SITE PLANS FOR ADDITIONAL RELATED INFORMATION.

PLANT MATERIAL

ALL PLANT MATERIAL TO BE FLORIDA NO.1 OR BETTER, GRADED IN ACCORDANCE WITH THE STATE OF FLORIDA DEPARTMENT OF AGRICULTURE, DIVISION OF PLANT INDUSTRY'S 'GRADES AND STANDARDS FOR NURSERY PLANTS'. CURRENT EDITION AT THE TIME PLANS ARE ISSUED. CALL THE LANDSCAPE ARCHITECT PRIOR TO PURCHASING ANY PLANT MATERIAL FOR AN ON SITE INSPECTION AND REVIEW OF LANDSCAPE PLAN.

PLANT QUANTITIES SHOWN ARE FOR PERMITTING PURPOSES ONLY. IT IS THE RESPONSIBILITY OF THE CONTRACTOR TO CONFIRM ALL QUANTITIES SHOWN ON THE PLAN.

10% OPEN SPACE REQUIREMENT

AS PER CITY OF ALACHUA LDR SECTION 6.7.3 (A), THE MINIMUM OPEN SPACE SET ASIDE SHALL BE 10% OF THE DEVELOPMENT SITE. REFER TO CIVIL PLANS FOR OPEN SPACE CALCULATIONS.

IRRIGATION

THE IRRIGATION SYSTEM USED FOR LANDSCAPE SHALL BE DESIGNED TO CORRELATE TO THE WATER USE PLANT ZONES ESTABLISHED IN THE LANDSCAPE DESIGN. IRRIGATION SYSTEM DESIGN STANDARDS SHALL BE IN ACCORDANCE WITH CITY OF ALACHUA LDR SECTION 6.2.2(D)(7)(b)(vi).

A TEMPORARY OR PERMANENT AUTOMATIC IRRIGATION SYSTEM IS REQUIRED FOR ALL NEW REQUIRED LANDSCAPING INSTALLED [ALACHUA COUNTY LDC SEC. 407.46(A)]. TEMPORARY IRRIGATION SYSTEMS MUST BE REMOVED ONCE THE PLANTS ARE ESTABLISHED OR WITHIN TWO YEARS, WHICHEVER OCCURS FIRST. PRIOR TO THE INSTALLATION OF A NEW PERMANENT IRRIGATION SYSTEM OR SUBSTANTIAL MODIFICATION TO AN EXISTING SYSTEM, AN IRRIGATION PLAN MUST BE SUBMITTED TO AND APPROVED BY THE ALACHUA COUNTY ENVIRONMENTAL PROTECTION DEPARTMENT THROUGH THE ONLINE ALACHUA COUNTY IRRIGATION PROFESSIONAL PORTAL. THE CONTRACTOR SHALL BE RESPONSIBLE FOR SUBMITTING THE IRRIGATION PLAN THROUGH THE IRRIGATION PROFESSIONAL PORTAL. THE IRRIGATION SYSTEM SHALL COMPLY WITH THE LANDSCAPE IRRIGATION DESIGN AND MAINTENANCE STANDARDS FOUND IN ARTICLE II OF PART II, TITLE 7, CHAPTER 79 OF THE ALACHUA COUNTY CODE, WHICH, AMONG ADDITIONAL DESIGN STANDARDS, LIMITS HIGH VOLUME IRRIGATION TO 60% OF THE LANDSCAPED AREA. FOR MORE INFORMATION, CONTACT THE ALACHUA COUNTY ENVIRONMENTAL PROTECTION DEPARTMENT AT 352-264-6800.

ALL NEWLY PLANTED TREES SHALL HAVE INDIVIDUAL LOW FLOW OR MICRO-IRRIGATION SUPPLIES [ALACHUA COUNTY LDC 407.46(A)3]. ALL IRRIGATION SYSTEMS ARE REQUIRED TO HAVE A MOISTURE SENSOR/AUTOMATIC RAINFALL SHUTOFF DEVICE [ALACHUA COUNTY LDC 407.46(A)4].

NOTE:
THE TREES LISTED ABOVE ARE BEING USED TO PARTIALLY FULFILL LANDSCAPE BUFFER REQUIREMENTS IN THE AREAS THEY ARE LOCATED ON A 1:1 BASIS. NO ADDITIONAL CREDITS ARE BEING UTILIZED.

ALL OF THE ABOVE TREES WEE EVALUATED ONSITE TO CONFIRM SPECIES AND REVIEW HEALTH AND CONDITION. ACCORDINGLY, GRADES OF 0-5 HAVE BEEN ASSIGNED TO EACH TREE BASED ON THE ASSESSED CONDITION AT THE TIME OF THE SITE WALK-THROUGH IN APRIL 2024. ANY TREES GRADED AT A 2 OR ABOVE HAVE BEEN DEEMED OF A CONDITION CONSISTENT WITH THE STANDARDS OF CITY OF ALACHUA CODE TO MEET THE 1:1 LANDSCAPE BUFFER REQUIREMENTS. THESE TREES HAD NO OBVIOUS SIGNS OF IMMEDIATE FAILURE, CONTRIBUTE TO THE OVERALL FORESTED CONDITION OF THE BUFFER, AND ARE OF A SPECIES NATIVE TO THIS AREA. ANY TREES GRADED A 1 OR A 0 WERE IN POOR HEALTH, HAD SIGNS OF POTENTIAL FAILURE, AND/OR WERE DEAD. THESE TREES ARE NOT PROPOSED TO COUNT TOWARDS THE BUFFER REQUIREMENTS.

REF: Rezoning Parcels 03894-000-000, 03898-000-000

Dear Sir,

I have discovered that the rezoning of the referenced property to allow a Solar Farm to be located on the 321+ acres located north of Peggy Rd (CR2054) and west of 173rd Street (CR235A).

I am a retired Registered Professional Engineer and spent most of my 54 year career involved in the design and construction of $100-800 million dollar industrial facilities mostly in the United States with a sprinkling of international countries. The Solar Farm industry is a relatively new concept that I was too late to participate in. However, I have extensive experience in this type of development and have been outspoken about shortcomings in the design and creation of these "farms". The biggest oversight is the destruction of potential use of the land below the solar panels. I would highly recommend a requirement that the solar panels be mounted on a structural support system that will provide a **minimum** of 10 feet absolute clearance under the system with support posts placed far enough apart to allow other use for the land beneath the solar panel and support system. Other uses could include a myriad of possibilities...raise livestock, farm crops, this location would allow lease of small individual family owned/leased raised planter flower/crop, county/city park, hiking trails, maybe a city of mini-homes for senior citizens, etc.. the developer will scream at the added cost of additional engineering design, site prep, materials, labor, and other small increases. Some may also comment that shading the land under would not allow growth of anything. I would point to shade tobacco vs. bright tobacco...tobacco grown under a cotton cloth vs. tobacco grown in bright sunlight...practices that dominated southern agriculture for at least a hundred years. Shade tobacco was always higher quality. Newer research is proving that "shade" crops of various types are higher quality. Lastly, if climate change increases surface temperatures, perhaps "shade" farms will be the saving grace to allow us to continue to feed ourselves. The supporting culture could be used to gather and store rain water and be used more efficiently...when needed, where needed instead of allowing it to drain off or evaporate, then suffer when drought conditions occur.

These are general concepts that will add to cost. I would make a wild guess of 20-25%. That is a considerable increase but this complex will be there for generations, perhaps hundreds of years if solar becomes what some believe to be the replacement of the Deerhaven power generation plant. All I ask is that the developer be required to think and plan long term. Think Detroit and the Automotive industry. If

Solar proves to be the panacea many see, this facility, located where it is, will be there for a vey long time, and will be modified and retooled every time new technology proves to be profitable enough. In the not too distant future this facility will be based in the middle of a major residential/commercial area of our city...and it will be there forever. This, based on construction efforts exploding as they are now.

Thank you,

John McCanless PE

THE GOOD LIFE COMMUNITY

Board/Committee Agenda Item

MEETING DATE: 6/11/2024
SUBJECT: Special Exception Permit - Tara Forest West Stormwater Facilities: A request by Christopher Potts, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC, property owner, for consideration of a Special Exception Permit to allow stormwater facilities in a less intense zone district, generally located north of US 441, west of NW 147th Drive, Tara Baywood and Tara Forest East Subdivisions; Consisting of portions of Tax Parcel Number 03067-001-000 and 03008-000-000; FLUM: Recreation; Zoning: Agricultural (A). (Quasi-Judicial Hearing)

PREPARED BY: Adam Hall, AICP, Principal Planner

RECOMMENDED ACTION:
Staff recommends that the Planning & Zoning Board approve the Special Exception Permit to allow stormwater retention and detention facilities on portions of Tax Parcel numbers 03067-001-000 and 03008-000-000, subject to the 10 conditions provided in Exhibit "A" and located on page 14 of the June 11, 2024 Staff Report to the Planning and Zoning Board, upon making the following motion:

Based upon the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, this Board finds the application to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and approves the Special Exception Permit to allow stormwater retention and detention facilities on portions of Tax Parcel numbers 03067-001-000 and 03008-000-000, subject to the 10 conditions provided in Exhibit "A" and located on page 14 of the June 11, 2024 Staff Report to the Planning and Zoning Board.

Summary

The proposed Special Exception Permit is a request by Christopher Potts, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC, property owner, for consideration of a Special Exception Permit to allow stormwater retention and detention facilities on property with less intense zoning for the Tara Forest West subdivision. The Tara Forest West subdivision preliminary plat, which is being considered concurrently with this application, proposes placing stormwater retention and detention facilities associated with the subdivision on property that has a less intense zoning designation than the principal development activity. The 523 single family lots and associated roadways and utilities are proposed to be placed with the RSF-4 (Residential Single Family -4) zone district. The stormwater facilities associated with this development are proposed to be placed on property with an A (Agricultural) zoning designation.

Section 4.3.2 (I)(4) provides use-specific standards for minor utilities, which include stormwater ponds.
"Location. Be located within reasonable proximity of the area to be served. Stormwater detention and retention facilities may

be permitted by special exception permit on properties with less intense zoning district designations under common ownership, subject to the following requirements:(i)The zoning designation of the location of the stormwater detention and retention facility allows minor utilities; and,(ii)The stormwater detention and retention facility meets the compatibility requirements as set forth in Subsection 4.3.2(I)(4)(b); and(iii)The stormwater detention and retention facility provides an enhanced natural (e.g., increased topographic relief, vegetative diversity, etc.) or recreational (e.g., perimeter trail, boardwalk, interpretive kiosk, etc.) functional use". The proposed stormwater ponds are served by recreational amenities that include a

pool, multi-purpose athletic fields, trails, and courts.

Section 2.4.4(A) of the City's LDRs states that uses that require a Special Exception Permit are those which are, "... *generally compatible with the other uses permitted in a zone district, but require individual review of their location, design, configuration, density, intensity, and public facility impact to determine the appropriateness of the use on any particular site in the district and their compatibility with adjacent uses.*" Once a Special Exception is granted, the approval shall run with the land and shall not be affected by a change in ownership, unless specifically conditioned as part of the approval.

This Special Exception Permit application is a companion application to an application for Tara Forest West Preliminary Plat application.

SUMMARY

The proposed Special Exception Permit is a request by Christopher Potts, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC, property owner, for consideration of a Special Exception Permit to allow stormwater retention and detention facilities on property with less intense zoning for the Tara Forest West subdivision. The Tara Forest West subdivision preliminary plat, which is being considered concurrently with this application, proposes placing stormwater retention and detention facilities associated with the subdivision on property that has a less intense zoning designation than the principal development activity. The 523 single family lots and associated roadways and utilities are proposed to be placed with the RSF-4 (Residential Single Family -4) zone district. The stormwater facilities associated with this development are proposed to be placed on property with an A (Agricultural) zoning designation.

Section 4.3.2 (I)(4) provides use-specific standards for minor utilities, which include stormwater ponds. "Location. Be located within reasonable proximity of the area to be served. Stormwater detention and retention facilities may be permitted by special exception permit on properties with less intense zoning district designations under common ownership, subject to the following requirements:(i)The zoning designation of the location of the stormwater detention and retention facility allows minor utilities; and,(ii)The stormwater detention and retention facility meets the compatibility requirements as set forth in Subsection 4.3.2(I)(4)(b); and(iii)The stormwater detention and retention facility provides an enhanced natural (e.g., increased topographic relief, vegetative diversity, etc.) or recreational (e.g., perimeter trail, boardwalk, interpretive kiosk, etc.) functional use". The proposed stormwater ponds are served by recreational amenities that include a pool, multi-purpose athletic fields, trails, and courts.

Section 2.4.4(A) of the City's LDRs states that uses that require a Special Exception Permit are those which are, "*...generally compatible with the other uses permitted in a zone district, but require individual review of their location, design, configuration, density, intensity, and public facility impact to determine the appropriateness of the use on any particular site in the district and their compatibility with adjacent uses.*" Once a Special Exception is granted, the approval shall run with the land and shall not be affected by a change in ownership, unless specifically conditioned as part of the approval.

This Special Exception Permit application is a companion application to an application for Tara Forest West Preliminary Plat application.

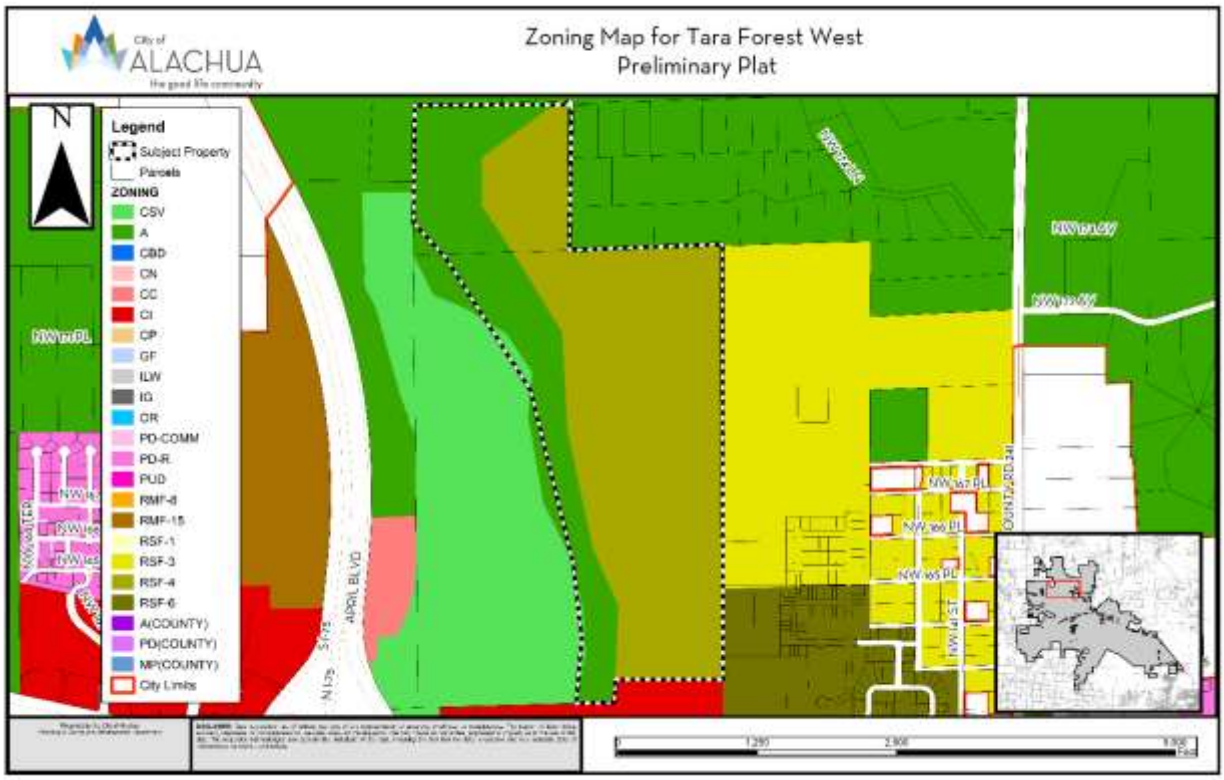

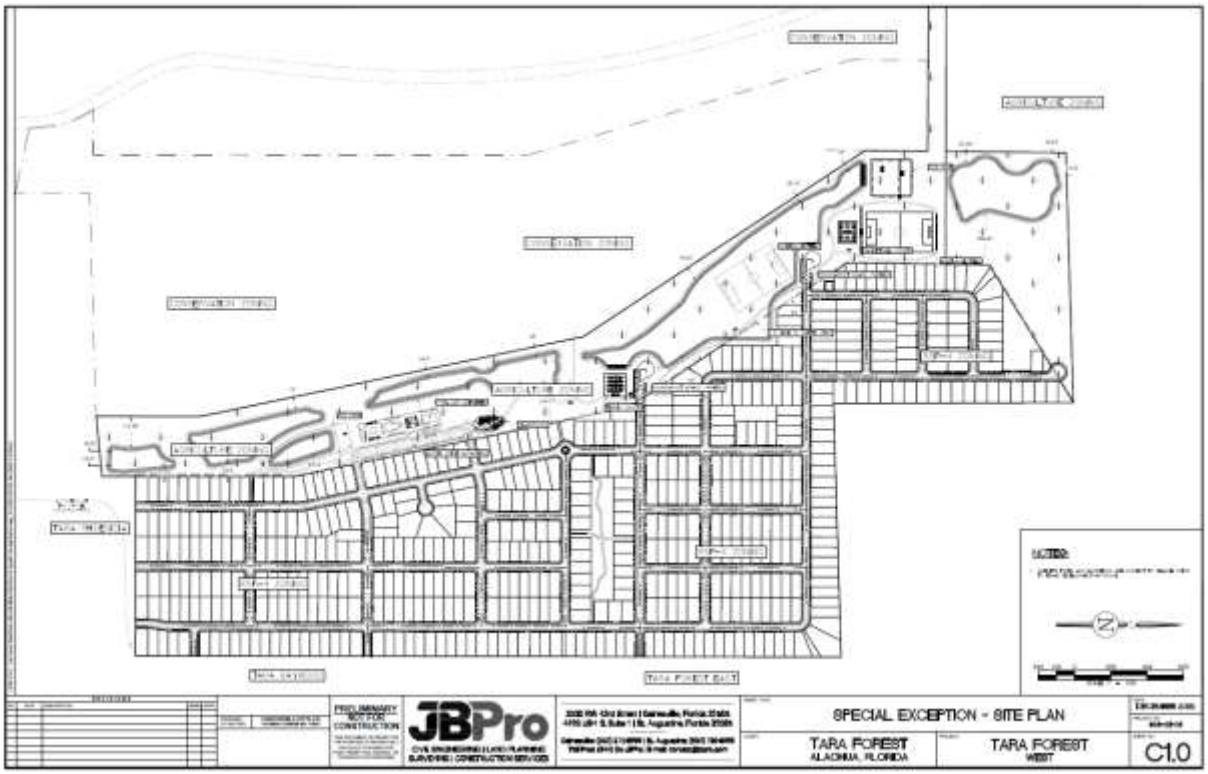

Illustration 1. Tara Forest West Enhanced Recreational Facilities Proposed Site Plan

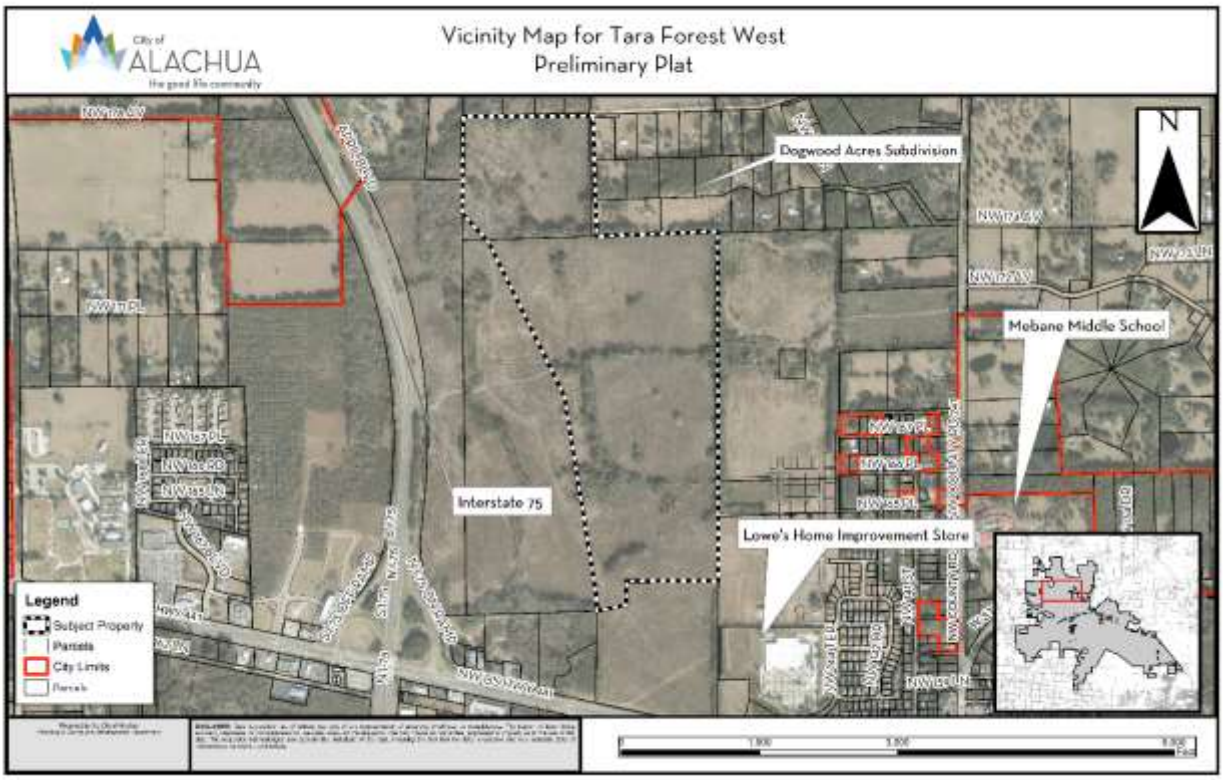

SURROUNDING USES

The existing uses, Future Land Use Map (FLUM) Designations, and zoning districts of the surrounding area are identified in Table 1. Map 1 provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. It is not intended to be all-inclusive, and may not identify all existing uses, FLUM Designations, and/or zoning districts surrounding the subject property.)

Table 1. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Dogwood Acres	Moderate Density Residential	A (Agricultural)
East	Tara Forest East / Tara Baywood	Moderate Density Residential /Medium Density Residential	Residential Single Family – 3 (RSF-3)/ Residential Single Family – 6 (RSF-6)
West	Vacant / Conservation	Conservation	Conservation (CSV)
South	Vacant Commercial	Commercial	Commercial Intensive (CI)

Map 1. Vicinity Map

NEIGHBORHOOD MEETING

The purpose of a Neighborhood Meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. As required by Section 2.2.4 of the LDRs, all property owners within 400 feet of the subject property were notified of the meeting and notice of the meeting was published in a newspaper of general circulation.

A Neighborhood Meeting was held on August 18th, 2021, at the Swick House. The applicant was present and available to answer questions. Materials submitted by the applicant indicate that the meeting was attended by approximately 15 persons. A summary of the discussion which occurred at the Neighborhood Meeting has been provided by the applicant and is included within the application materials.

CONSISTENCY WITH THE COMPREHENSIVE PLAN

The Goals, Objectives, and Policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

The property currently has a Future Land Use Map Designation of Moderate Density Residential, which permits up to 4 units per acre and Recreation. The following Comprehensive Plan Elements have Goals, Objectives, and Policies (GOPs) that support the proposed amendment to the Future Land Use Map of the City of Alachua's Comprehensive Plan:

- Future Land Use Element
- Transportation Element
- Housing Element
- Recreation Element
- Community Facilities Natural Groundwater Aquifer Recharge Element
- Conservation and Open Space Element

The applicant has provided an analysis of the proposed amendment's consistency with the Comprehensive Plan. Based upon the applicant's Comprehensive Plan Consistency Analysis and information presented below, staff finds the application consistent with the Comprehensive Plan and the Goals, Objectives, and Policies (GOPs) therein.

Future Land Use Element

Objective 1.7: Recreation

The City shall designate a Recreation land use category for all publicly or privately owned recreational lands. In order to provide the opportunity for recreation activities, and recreational uses may be allowed in any land use category provided such uses are compatible with adjacent land uses and are consistent with this Comprehensive Plan.

Policy 1.7.c: Recreation uses, such as neighborhood parks or commercial recreation, shall be allowed in other land use categories other than the Recreation land use category when compatible with adjacent land uses and land use categories.

Policy 1.7.d: Publicly owned recreation uses shall be limited to an intensity of less than or equal to 0.25 floor area ratio while privately owned recreation uses within this land use category shall be limited to less than or equal to 0.05 floor area ratio.

Analysis of Consistency with Objective 1.7 and Policies 1.7.c and 1.7.d: The subject property has a Future Land Use Designation of Recreation, which allows for recreation uses such as neighborhood parks. The floor area ratio maximum would be .05 FAR, as the proposed recreational features associated with the stormwater facilities are private.

Objective 5.1: Natural features: The City shall coordinate Future Land Use designations with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.a: Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Policy 5.1.b: Soils: The City shall ensure soil protection and intervention measures are included in the development review process.

Policy 5.1.c: Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d: Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Policy 5.1.e: Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for

properties required to complete the inventory shall be established in the City's Land Development Regulations.

Analysis of Consistency with Objective 5.1 and Policies 5.1.a – e: The subject property has historically been used agricultural operations such as silviculture. The subject property includes an approximate .64 acre wetland area. Other than gopher tortoises there are no known listed plant or animal species located on the property. If any regulated plant or animal species is identified during development, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and the Land Development Regulations.

Objective 5.2: Availability of facilities and services: All new development shall be planned and constructed concurrently with the availability of facilities and services necessary for the development.

Analysis of Consistency with Objective 5.2: The proposed preliminary plat has been reviewed for its impacts to all public facilities monitored for concurrency, including parks and education facilities. A complete analysis of these impacts can be found in the "Public Facilities Impact" section of this Report.

GOAL 9: Water and Wastewater Service:

The City will ensure that new development within the corporate limits, where potable water and wastewater service are available, as defined in Policy 1.2.a and Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the Comprehensive Plan, shall connect to the City of Alachua's potable water and wastewater system.

Policy 9.2: Any new residential subdivision within the corporate limits, where potable water service is available, as defined in Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within either a Residential or Agriculture Future Land Use Map Designation shall connect to the City of Alachua's potable water system. Any new residential subdivision within the corporate limits, where wastewater service is available, as defined in Policy 1.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within a Residential Future Land Use Map Designation shall connect to the City of Alachua's wastewater system.

Analysis of Consistency with Goal 9 and Policy 9.2: Potable water is available to the site, as defined in Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan.

Housing Element

Policy 1.1.a: The City shall encourage development of a variety of housing types including conventional single family homes, accessory dwelling units, multi-family units, group homes, assisted living facilities, foster care facilities, mobile homes and manufactured housing, and shall ensure that appropriate land use designations and zoning districts exist to accommodate each type.

Analysis of Consistency with Policy 1.1.a: This project would support additional housing within the City, thereby furthering Policy 1.1.a.

Recreation Element

Policy 1.2.b: The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

Analysis of Consistency with Policy 1.2.b: An analysis of the impacts to recreation facilities has been provided within this report.

Transportation Element

Objective 1.1: Level of Service: The City shall establish a safe, convenient and efficient level of service standard for all motorized and non-motorized transportation systems.

Analysis of Consistency with Objective 1.1: An analysis of the impacts to transportation facilities has been provided within this report. There are no transportation facilities that would be deficient as a result of this application.

Policy 1.4.b The City shall require any commercial, industrial, or residential development which must obtain site plan or subdivision approval to provide a sidewalk along the frontage of any collector street or arterial street when a sidewalk is not present along the frontage of the street. A sidewalk shall not be required if a sidewalk does not exist within 2,640 feet of the property on the same side of the collector or arterial street.

Analysis of Consistency with Policy 1.4.b: The proposed preliminary plat associated with this special exception shows connections to the proposed Tara Baywood and Tara Forest East projects. There are no collector or arterial streets associated with this plat.

Community Facilities Element

Policy 1.2.a: The City shall establish a Community Wastewater Service Area, which includes all areas where wastewater service is available. Wastewater

service shall be deemed available if:

1. A gravity water main exists within 100 feet of the property line of any lot with a residential land use category or an existing single family residence and wastewater service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. Gravity wastewater main exists with 500 feet of the property line of any proposed residential subdivision consisting of 5 units or less and the gravity wastewater system is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A gravity wastewater main, wastewater pumping station, or force main exists within 2,640 feet of the property line of any proposed residential subdivision comprised of more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and the gravity wastewater system, wastewater pumping station, or force main is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 1.2.a: The subject property is located within the wastewater service area, and any future development on the subject property will be required to connect to a wastewater system. The proposed preliminary plat includes an area for a future lift station.

Policy 2.1.a: The City hereby establishes the following level of service standards for solid waste disposal facilities:

FACILITY TYPE	LEVEL OF SERVICE STANDARD
Solid Waste Landfill	.73 tons per capita per year

Analysis of Consistency with Objective 2.1.a: An analysis of the impacts to solid waste facilities has been provided within this report.

Policy 4.1.b: The City shall establish a Community Potable Water Service Area, which includes all areas where potable water service is available. Water service shall be deemed available if:

1. A water main exists within 100 feet of any lot within a residential land use category or an existing single family residence water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the

infrastructure along public utility easements and right of ways.

2. A water main exists within 500 feet of any proposed residential subdivision consisting of 5 units or less and water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A water main exists within 2,640 feet of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 4.1.b: The subject property is located within the potable water service area, and any future development on the subject property will be required to connect to a potable water system.

Conservation and Open Space Element

OBJECTIVE 1.3: Listed Species

The City shall protect species listed by State and Federal agencies as endangered, threatened or of special concern, and their habitats.

Policy 1.3.a: The City shall ensure that its ordinances, regulations and policies protect listed species and their habitats.

Policy 1.3.b: The City shall utilize the development review process, land acquisition programs, environmental regulatory partnerships, stewardship programs and public education to protect listed species and their habitat, and prevent extinction of or reduction in populations of listed species.

Policy 1.3.c: The City shall obtain data from the Florida Fish and Wildlife Conservation Commission, Alachua County Environmental Protection Department, Florida Department of Environmental Protection, to maintain a periodically updated inventory of listed species and habitats located within City limits or immediately adjacent to City limits. The City will use the Florida Natural Areas Inventory as a base inventory.

Policy 1.3.d: The City shall require prior to development approval, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The inventory shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. De minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Policy 1.3.e: The City's land use designations shall provide for the protection of threatened and endangered species.

Analysis of Consistency with Objective 1.3 and Policies 1.3.a – e:

An environmental conditions and site suitability analysis has been provided separately in this report. Future development of the site must comply with the environmental protections established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Objective 1.10: Wetlands

The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.

Analysis of Consistency with Objective 1.10:

There is an approximate .64-acre area of wetlands located on the subject property. Wetland separation requirements as outlined in Goals, Objectives, and Policies of the City's Comprehensive Plan have been adhered to. The applicant will be required to meet the applicable requirements of Alachua County as well.

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

SECTION 2.4.4(D), SPECIAL EXCEPTION STANDARDS

Section 2.4.4(D) of the City's Land Development Regulations (LDRs) establishes the standards with which all applications for a Special Exception Permit must be found to be compliant. The application has been reviewed for compliance with the standards of Section 2.4.4(D). An evaluation and findings of the application's compliance with the standards of Section 2.4.4(D) is provided below. The applicant has also provided an analysis of the application's compliance with Section 2.4.4(D) in the supporting application materials.

(D) *Special exception standards.* A special exception permit shall be approved only upon a finding the applicant demonstrates all the following standards are met:

(1) *Complies with use specific regulations.* The proposed special exception complies with all relevant standards in Section 4.3, Use specific standards.

Evaluation & Findings: Section 4.3.2 (I)(4) provides use-specific standards for minor utilities, which include stormwater ponds. "Location. Be located within reasonable proximity of the area to be served. Stormwater detention and retention facilities may be permitted by special exception permit on properties with less intense zoning district designations under common ownership, subject to the following requirements:(i)The zoning designation of the location of the stormwater detention and retention facility allows minor utilities; and,(ii)The stormwater detention and retention facility meets the compatibility requirements as set forth in Subsection 4.3.2(I)(4)(b);

and(iii)The stormwater detention and retention facility provides an enhanced natural (e.g., increased topographic relief, vegetative diversity, etc.) or recreational (e.g., perimeter trail, boardwalk, interpretive kiosk, etc.) functional use". The proposed stormwater ponds are served by recreational amenities that include a pool, multi-purpose athletic fields, trails, and courts. These meet the standards for "enhanced recreational functional use".

(2) *Compatibility.* The proposed special exception is appropriate for its location and compatible with the character of surrounding lands and the uses permitted in the zone district.

Evaluation & Findings: Compatibility is defined by the City's Comprehensive Plan as, "*a condition in which land uses or conditions can coexist in relative proximity to each other in a stable fashion over time such that no use or condition is unduly negatively impacted directly or indirectly by another use or condition.*"

When then the Future Land Use Map and Rezoning of the property was adopted by the City Commission, the Staff Report at that time noted that the defense of the Recreation future land use designation and Agriculture zoning designation was to provide for a transition and buffering between the residential uses in the Moderate Density Future Land Use Designation and the natural features in the Conservation Future Land Use Designation.

(3) *Design minimizes adverse impact.* The design of the proposed special exception minimizes adverse effects, including visual impacts of the proposed use on adjacent lands; furthermore, the proposed special exception avoids significant adverse impact on surrounding lands regarding service delivery, parking and loading, odors, noise, glare, and vibration, and does not create a nuisance.

Evaluation & Findings: The proposed stormwater facilities will be adjacent to conservation land use areas and future residential development. The facilities will have limited impacts on adjacent land uses. The applicant states that the proposed stormwater facilities will provide water quality improvements for stormwater runoff before it enters into the Conservation future land use areas.

(4) *Design minimizes environmental impact.* The proposed special exception minimizes environmental impacts and does not cause significant deterioration of light, water and air resources, wildlife habitat, stormwater management, scenic resources, and other natural resources.

Evaluation & Findings: The proposed stormwater facilities will be adjacent to conservation land use areas and future residential development. The facilities will have limited impacts on adjacent land uses. The applicant states that the proposed stormwater facilities will provide water quality improvements for stormwater runoff before it enters into the Conservation future land use areas.

(5) *Roads and other public facilities.* There is adequate public facility capacity available to serve the proposed special exception, and the proposed special exception use is designed to ensure safe ingress and egress onto the site and safe road conditions around the site.

Evaluation & Findings: Proposed facilities will be accessed through public right of way or means of other public access. As needed, proposed facilities will connect to the City's water and wastewater facilities.

(6) *Not injure neighboring land or property values.* The proposed special exception will not substantially injure the use of neighboring land for those uses that are permitted in the zone district, or reduce land values.

Evaluation & Findings: The proposed use is not anticipated to substantially injure neighboring land or property values. The adjacent properties are future residential which will not be in place until after stormwater facilities, conservation lands or commercial lands

(7) *Site plan.* A site plan (Subsection 2.4.9 of this section) has been prepared that demonstrates how the proposed special exception use complies with the other standards of this subsection.

Evaluation & Findings: A Site Plan has been submitted and reviewed concurrently with this Special Exception Permit application. The Site Plan demonstrates that the proposed use complies with the applicable requirements of the LDRs, including the standards of Section 2.4.4(D).

(8) *Complies with all other relevant laws and ordinances.* The proposed special exception use complies with all other relevant City laws and ordinances, State and Federal laws, and regulations.

Evaluation & Findings: The application is found to comply with all other applicable City laws and ordinances, State and Federal laws, and regulations.

EXHIBIT "A"
TO
TARA FOREST WEST STORMWATER FACILITIES
SPECIAL EXCEPTION
STAFF REPORT

CONDITIONS:

1. Prior to the Issuance of a Certificate of Completion of Improvements for Phase 1 of the Tara Forest West subdivision, the swimming pool and associated structures and improvements, including any parking lot, a playground area, trail connection to west property line (adjacent with the project currently known as Tara April) and dog park shall be completed as depicted on the approved special exception site plan for Tara Forest West. The pool shall have a minimum of 1,400 square feet surface area/ 32,000 gallons. The playground area shall consist of at least 7,500 square feet of fenced/useable area. The Plat for Phase 1 shall not be released or recorded until this condition is met.
2. Prior to the Issuance of a Certificate of Completion of Improvements for Phase 4 of the Tara Forest West subdivision a minimum of two sports courts, one multi-use field and any structures and improvements, including any parking lot shall be completed as depicted on the approved special exception site plan. The Plat for Phase 4 shall not be released or recorded until this condition is met.
3. Prior to the Issuance of Completion of Improvements within Phase 6 of the Tara Forest West Preliminary Plat, a minimum of two additional sports courts (total of four for entire recreation area) and associated structures and improvements, including any parking lot, one additional multi-use field (total of two for entire recreation area) and the remainder of the trail system within the recreation area shall be completed as depicted on the approved special exception site plan for Tara Forest West. The Plat for Phase 6 shall not be released or recorded until this condition is met.
4. The 7.5' Type B buffer shall be completed and installed along the boundary between the recreational area and any lots prior to any approval of any improvements within any Phase adjacent to the recreational area.
5. The total floor area of all buildings within the recreational area shall be a maximum of 13,000 square feet.
6. The total impervious surface area allowed within the recreational area shall be 260,000 square feet.
7. These conditions will be incorporated into any subdividers agreement for any final plat, as applicable.
8. Applicant agrees that it must obtain all other local, state and federal permits.
9. The applicant acknowledges and agrees that the applicant and owner will obtain all other applicable local, state, and federal permits before the commencement of site work.
10. The applicant acknowledges and agrees that Conditions 1-9 as stated above do not inordinately burden the land and shall be binding upon the property owners, including any subsequent property owners, successors, or assigns.

RE: Project Assistance Team (PAT) Comments for Tara Forest West Special Exception

Dear Mr Potts:

On April 15, 2024, the City of Alachua received your revised application for the Special Exception related to Tara Forest West, which proposes to place stormwater management facilities within a zoning district different from the proposed residential uses for the Tara Forest West preliminary plat.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 12:00 PM on Thursday, May 30, 2024. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time.

Please address the following insufficiencies (begins on next page):

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

2. *Use Specific Standards*
    a. Section 4.3.2 (I) (4)(a) requires that the stormwater detention and retention facility provides enhanced natural or recreational functional use. The proposed preliminary plat indicates a variety of proposed recreational amenities, but the site plan submitted with the special exception only shows the stormwater facilities. The site plan and preliminary plat must be the same and indicate the recreational (or enhanced natural) elements that will be provided through provision of the stormwater facilities in that location.

NEW COMMENT: The revised site plan does show the enhanced recreation facilities that meet this section. As a condition of the special exception approval, language must be drafted that would require such improvements to be made. The language below is tentative and subject to change.

1. Prior to the Issuance of a Certificate of Completion of Improvements for Phase 1 of the Tara Forest West subdivision, the swimming pool and associated structures and improvements, including any parking lot, a playground area, trail connection to west property line (adjacent with the project currently known as Tara April) and dog park shall be completed as depicted on the approved special exception site plan for Tara Forest West. The pool shall have a minimum of 1,400 square feet surface area/ 32,000 gallons. The playground area shall consist of at least 7,500 square feet of fenced/useable area.
2. Prior to the Issuance of Completion of Improvements for Phase 4 of the Tara Forest West subdivision a minimum of two sports courts, one multi-use field and any structures and improvements, including any parking lot shall be completed as depicted on the approved special exception site plan.
3. Prior to the Issuance of Completion of Improvements within Phase 6 of the Tara Forest West Preliminary Plat, a minimum of two additional sports courts (total of four for entire recreation area) and associated structures and improvements, including any parking lot, one additional multi-use field (total of two for entire recreation area) and the remainder of the trail system within the recreation area shall be completed as depicted on the approved special exception site plan for Tara Forest West.
4. The 7.5' Type B buffer shall be completed and installed along the boundary between the recreational area and any lots prior to any approval of any improvements within any Phase adjacent to the recreational area.
5. The total floor area of all buildings within the recreational area shall be a maximum of 13,000 square feet.
6. The total impervious allowed within the recreational area shall be 160,000 square feet.
7. Construction of the amenities and amenity structures may begin prior to the approval of a final plat upon the provision of a surety device in the amount of 120% of the cost of construction of the amenity or amenity structure. No final inspection for any amenity structure requiring a building permit shall be scheduled until the Certificate of Completion of Improvements for the Phase has been issued.
8. These conditions will be incorporated into any subdividers agreement for any final plat, as applicable.
9. Applicant agrees that it must obtain all other local, state and federal permits.

NEW COMMENT: The trail connection to the west property line must be depicted in the site plan. Further, the site plan for the special exception must include the phasing lines.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

RE: Project Assistance Team (PAT) Comments for Tara Forest West Special Exception

Dear Mr Potts:

On April 26, 2023, the City of Alachua received your revised application for the Special Exception related to Tara Forest West, which proposes to place stormwater management facilities within a zoning district different from the proposed residential uses for the Tara Forest West preliminary plat.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Thursday, July 13, 2023. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time. Additionally, please note that the related Preliminary Plat requires connection to US 441 and staff does not anticipate forwarding the preliminary plat application or this special exception application to the Planning and Zoning Board until such time as the Tara Phoenicia Infrastructure Plan is forwarded to the City Commission.

Please address the following insufficiencies (begins on next page):

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

2. *Use Specific Standards*
    a. Section 4.3.2 (I) (4)(a) requires that the stormwater detention and retention facility provides enhanced natural or recreational functional use. The proposed preliminary plat indicates a variety of proposed recreational amenities, but the site plan submitted with the special exception only shows the stormwater facilities. The site plan and preliminary plat must be the same and indicate the recreational (or enhanced natural) elements that will be provided through provision of the stormwater facilities in that location.

NEW COMMENT: The revised site plan does show the enhanced recreation facilities that meet this section. As a condition of the special exception approval, language must be drafted that would require such improvements to be made. The language below is tentative and subject to change.

- **Prior to the application for any building permit within Phase 3 of the Tara Forest West Preliminary Plat, the pool and associated structures and improvements, including any parking lot, shall be completed as depicted on the approved special exception site plan for Tara Forest West. The pool shall be a minimum of 1,400 square feet surface area/ 32,000 gallons.**
- **Prior to the application for any building permit within Phase 4 of the Tara Forest West Preliminary Plat, a playground area of at least 7,500 fenced/ usable area shall be completed as depicted on the approved special exception site plan for Tara Forest West.**
- **Prior to the application for any building permit within Phase 5 of the Tara Forest West Preliminary Plat, a minimum of two tennis courts and associated structures and improvements, including any parking lot, shall be completed as depicted on the approved special exception site plan for Tara Forest West.**
- **Prior to the application for of any building permit within Phase 6 of the Tara Forest West Preliminary Plat, a minimum of two basketball courts and two multi-use fields and any associated structures and improvements, including any parking lot, shall be completed as depicted on the approved special exception site plan for Tara Forest West. The trail as depicted on the approved special exception site plan for Tara Forest West shall also be completed prior to any issuance of building permit within Phase 6 of the Tara Forest West Preliminary Plat.**
- **The 7.5' Type B buffer shall be completed and installed along the boundary between the recreational area and any lots prior to any approval of any improvements within any Phase adjacent to the recreational area.**
- **The total floor area of all buildings within the recreational area shall be 13,000 square feet.**
- **The total impervious allowed within the recreational area shall be 160,000 square feet.**
- **These conditions will be incorporated into any subdividers agreement for any final plat, as applicable.**

RE: Project Assistance Team (PAT) Comments for Tara Forest West Special Exception

Dear Mr Potts:

On June 8, 2022, the City of Alachua received your revised application for the Special Exception related to Tara Forest West, which proposes to place stormwater management facilities within a zoning district different from the proposed residential uses for the Tara Forest West preliminary plat.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Thursday, December 1, 2022. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time.

Please address the following insufficiencies (begins on next page):

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

1. *Special Exception Standards*
    a. Section 2.4.4 (D)(7) requires that a site plan or preliminary plat to be submitted that demonstrates compliance with Section 2.4.4. Section 2.4.4 (D)(1) requires that the proposed special exception complies with the relevant use specific standards. Please see comment 2.a. below.
    b. The provided response found within the Statement and Analysis of Compliance for the Special Exception for Section 2.4.4 (D)(1) states that the stormwater facilities will be located within lands zoned Conservation (CSV) and Agricultural (A). Please verify. Minor Utilities are not permitted within lands zoned Conservation (CSV).
    c. The provided response found within the Statement and Analysis of Compliance for the Special Exception for Section 2.4.4 (D)(1) does not explicitly address compliance with Section 4.3.2 (I)(4)(a)(iii). Please see comment 2.a below.
    d. The provided response found within the Statement and Analysis of Compliance for the Special Exception for Section 2.4.4 (D)(2) states that the facilities are compatible with recreation zoned lands. This must be clarified. There do not appear to be any recreation zoned lands adjacent to location of stormwater ponds. The ponds are being placed on lands with the Recreation Future Land Use, but the lands adjacent to the west are zoned Conservation (CSV). Please provide further analysis of compatibility with CSV zoning district.
    e. The provided response found within the Statement and Analysis of Compliance for the Special Exception for Section 2.4.4 (D)(3) states that the project will improve quality of water reaching the conservation land. Please provide additional analysis or data to support this statement. Are there sources upstream currently existing that are degrading the quality of water reaching the conservation land?
    f. The provided response found within the Statement and Analysis of Compliance for the Special Exception for Section 2.4.4 (D)(4) states that the project will improve quality of water reaching the conservation land. Please provide additional analysis or data to support this statement. Are there sources upstream currently existing that are degrading the quality of water reaching the conservation land?
    g. The provided response found within the Statement and Analysis of Compliance for the Special Exception for Section 2.4.4 (D)(5) states that the project will not require road or other public facilities. If recreation facilities are being proposed, then site plan/preliminary plat will be required to show how they will be accessed, configuration of parking, and maintenance access considerations.
    h. The provided response found within the Statement and Analysis of Compliance for the Special Exception for Section 2.4.4 (D)(8) must address compliance with Section 6.2.2 (D)(3)(c). Please see comment 3.a below.

2. *Use Specific Standards*
    a. Section 4.3.2 (I) (4)(a) requires that the stormwater detention and retention facility provides enhanced natural or recreational functional use. The proposed preliminary plat indicates a variety of proposed recreational amenities, but the site plan submitted with the special exception only shows the stormwater facilities. The site plan and preliminary plat must be the same and indicate the recreational (or enhanced natural) elements that will be provided through provision of the stormwater facilities in that location.

3. All Other Relevant Laws and Ordinances
    a. Section 6.2.2 (D)(3)(c) requires a 7.5' Type B buffer between single family detached uses and Parks and Open Areas. The Conservation (CSV) zoned lands are considered open areas. The proposed site plan/preliminary plat should indicate this buffer. Existing trees may be used to meet the requirement, where possible.
4. Miscellaneous/ General Comments
    a. Provided site plan indicates that the proposed stormwater facilities are located on "Recreation Zoning". This must be revised. The City of Alachua does not have a Recreation zoning district. The stormwater ponds appear to be located on lands zoned Agricultural (A). Please verify.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

RE: Completeness Review of Tara Forest West Special Exception Permit for Stormwater Pond located on properties with less intense zoning district designation

Dear Mr Potts:

On January 27, 2022, the City of Alachua received your application for the Special Exception to permit stormwater ponds related to the Tara Forest West residential subdivision, as permitted under Section 4.3.2 (I)(4).

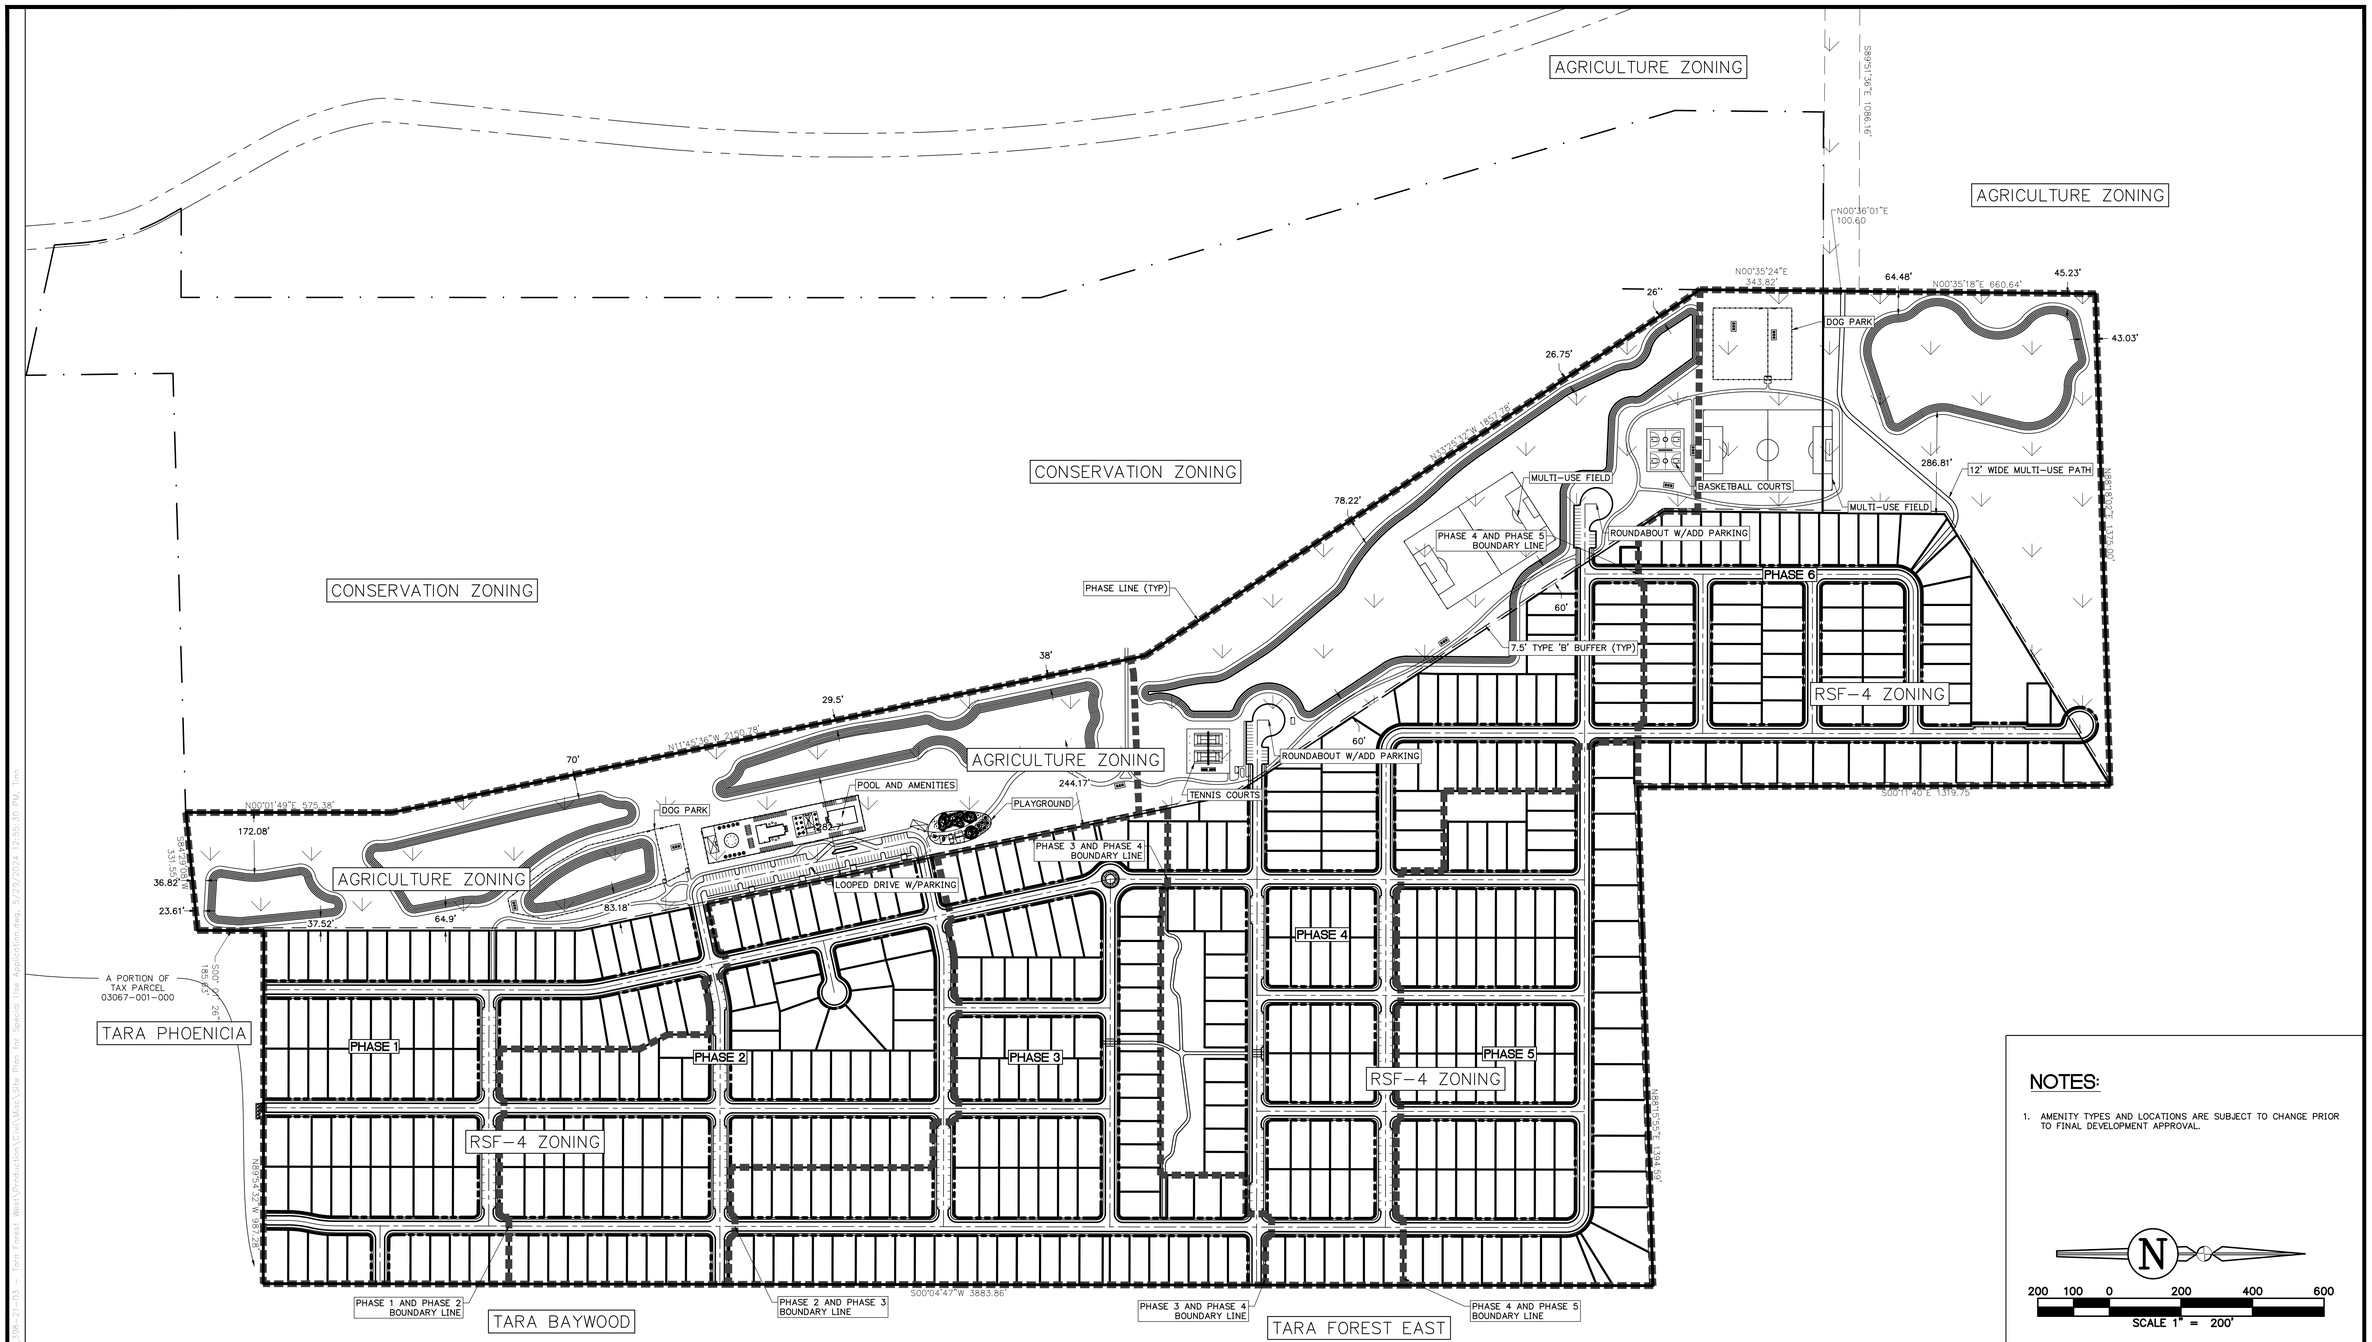
According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is incomplete.

The comments below are based solely on a preliminary review of your application for completeness. An in-depth review of the content of the application will be performed, and the findings of the in-depth review will be discussed at a Project Assistance Team (PAT) Meeting, which will be scheduled after the application is determined to be complete.

In order to provide a complete application, you must address the following:

1. **Special Exception Application, Response D.2, Analysis of Compliance with Special Exception Standards:**
   Submitted materials do not explicitly address each of the Special Exception standards identified on the application materials and items D.2.a through h, of the Special Exception Permit application.
2. **Special Exception Application, Response D.5, Neighborhood Meeting Materials:**
   Submitted materials appear to be for preliminary plat for Tara Forest West and not for the Special Exception Permit. Please provide materials for the neighborhood meeting materials as required by Section 2.2.4 of the City's Land Development Regulations (LDRs).
3. **Special Exception Application, Response D.10, Fee:**
   Special Exception Application fee does not appear to have been submitted. Please submit fee.

Per Section 2.2.6 (B), failure to address the deficiencies noted above within 45 calendar days will result in administrative withdrawal of the application. Three hard copies of submitted application are available for retrieval from the Building Department at City Hall. If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com.



Sincerely,

Adam Hall, AICP
Principal Planner

A. PROJECT

1. Project Name: Tara Forest West
2. Address of Subject Property: 15845 NW US Hwy 441 Alachua, FL
3. Parcel ID Number(s): 03067-001-000 and 03008-000-000
4. Existing Use of Property: Timberland
5. Future Land Use Map Designation : Moderate Density Residential, Conservation, Commercial
6. Zoning Designation: RSF-4, CI
7. Acreage: 335.63

B. APPLICANT

1. Applicant's Status ☐ Owner (title holder) ☒ Agent
2. Name of Applicant(s) or Contact Person(s): Christopher A. Potts, PE Title: Director of Engineering
   Company (if applicable): JBrown Professional Group Inc.
   Mailing address: 3530 NW 43rd Street
   City: Gainesville State: FL ZIP: 32606
   Telephone: (352) 375-8999 FAX: (352) 375-0833 e-mail: chris.potts@jbpro.com
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): Tara Forest, LLC.; Sayed Moukhtara
   Mailing Address: 7717 NW 20th Lane
   City: Gainesville State: FL ZIP: 32605

   * Must provide executed Property Owner Affidavit authorizing the agent to act on behalf of the property owner.

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☐ Yes ■ No
   If yes, list names of all parties involved: _____
   If yes, is the contract/option contingent or absolute? ☐ Contingent ☐ Absolute

D. ATTACHMENTS

1. Statement of proposed special exception including the identification of the provision of the Land Development Regulations under which the special exception permit is sought, and stating the grounds on which it is requested.

2. Analysis of compliance with the Standards for a Special Exception, as defined in Section 2.4.4 of the Land Development Regulations (LDRs), and listed below:
   a. Complies with Use Specific Regulations
   b. Compatibility
   c. Design Minimizes Adverse Impact
   d. Design Minimizes Environmental Impact
   e. Roads and Other Public Facilities
   f. Not Injure Neighboring Land or Property Values
   g. Site Plan
   h. Complies will All Other Relevant Laws and Ordinances

3. Materials which demonstrate that the special exception permit would promote the public health, safety, morals, order, comfort, convenience, appearance, prosperity or the general welfare, which shall include (at a minimum):

a. A site plan showing the proposed placement of structures on the property; provisions for ingress and egress, off-street parking and off-street loading areas, and refuse and service areas; and required yards and other open spaces;
b. Access and points of connection to utilities (electric, potable water, sanitary sewer, gas, etc.)
c. Plans for screening and buffering with reference to type, character and dimensions;
d. Proposed landscaping, signs and lighting, including type, dimensions and character;
e. Any specific requirements of the zoning district.

4. Two (2) sets of labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits. (Obtain from the Alachua County Property Appraiser).

5. Neighborhood Meeting Materials, including:
   i. Copy of the required published notice (advertisement) – must be published a newspaper of general circulation, as defined in Article 10 of the City's Land Development Regulations
   ii. Copy of written notice (letter) sent to all property owners within 400 feet, and mailing labels or list of those who received written notice
   iii. Written summary of meeting – must include (1) those in attendance; (2) a summary of the issues related to the development proposal discussed; (3) comments by those in attendance about the development proposal; and, (4) any other information deemed appropriate.

6. Map of the subject property and surrounding area with zoning.

7. Legal description with tax parcel number.

8. Proof of ownership.

9. Proof of payment of taxes.

10. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any necessary technical review will be billed to the applicant at the rate of the reviewing entity. The invoice shall be paid in full prior to any legislative and/or quasi-judicial action of any kind on the petition, appeal, or development application.

All 10 attachments are required for a complete application. A completeness review of the application will be conducted within 5 business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

I/We certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

Special Exception Statement and Analysis of Compliance

(1) *Complies with use specific regulations. The proposed special exception complies with all relevant standards in Section 4.3, Use specific standards, or Section 5.2.3(B), as applicable.*

Response: Stormwater retention facilities are classified as a minor utility as identified in Section 4.3.I(4). Per table 4.1.1 – permitted uses, minor utilities are a permitted use within a zoning district of conservation and agriculture which complies with the zoning designation of the location of the stormwater detention or retention facility allows minor utilities. The stormwater retention facilities will be placed within the recreation zoned lands which do not require screening or buffering from the adjacent conservation zoned lands or the RSF-4 zoned lands. The proposed location as shown in the preliminary plat master drainage plan will assist with the topographic relief. The existing topography has significant slope and slopes from the east to west. For the RSF-4 zoned lands stormwater runoff to be collected and treated, the stormwater retention facilities need to be placed downstream which is the recreational lands and under one common ownership. The stormwater retention facilities will improve the water quality of the stormwater runoff that enters the conservation and flood plain to the west. This improves the environmental quality of the water and reduces adverse impacts to the surrounding developments. The proposed location of the stormwater retention facilities is shown on the preliminary plat plan sheets which meets the requirements of Section 2.4.4(D)(7).

(2) *Compatibility. The proposed special exception is appropriate for its location and compatible with the character of surrounding lands and the uses permitted in the zone district.*

Response: The stormwater retention facilities are proposed within the less intense zoning district. The facilities are placed downstream of the proposed development and are compatible with the recreation zoned lands.

(3) *Design minimizes adverse impact. The design of the proposed special exception minimizes adverse effects, including visual impacts of the proposed use on adjacent lands; furthermore, the proposed special exception avoids significant adverse impact on surrounding lands regarding service delivery, parking and loading, odors, noise, glare, and vibration, and does not create a nuisance.*

Response: The proposed special exception request is for the placement of stormwater retention facilities to be constructed within less intense zoning district under common ownership. The proposed locations will not adversely impact the

surrounding lands. The facilities will provide water quality and quantity improving the quality of water reaching the conservation lands.

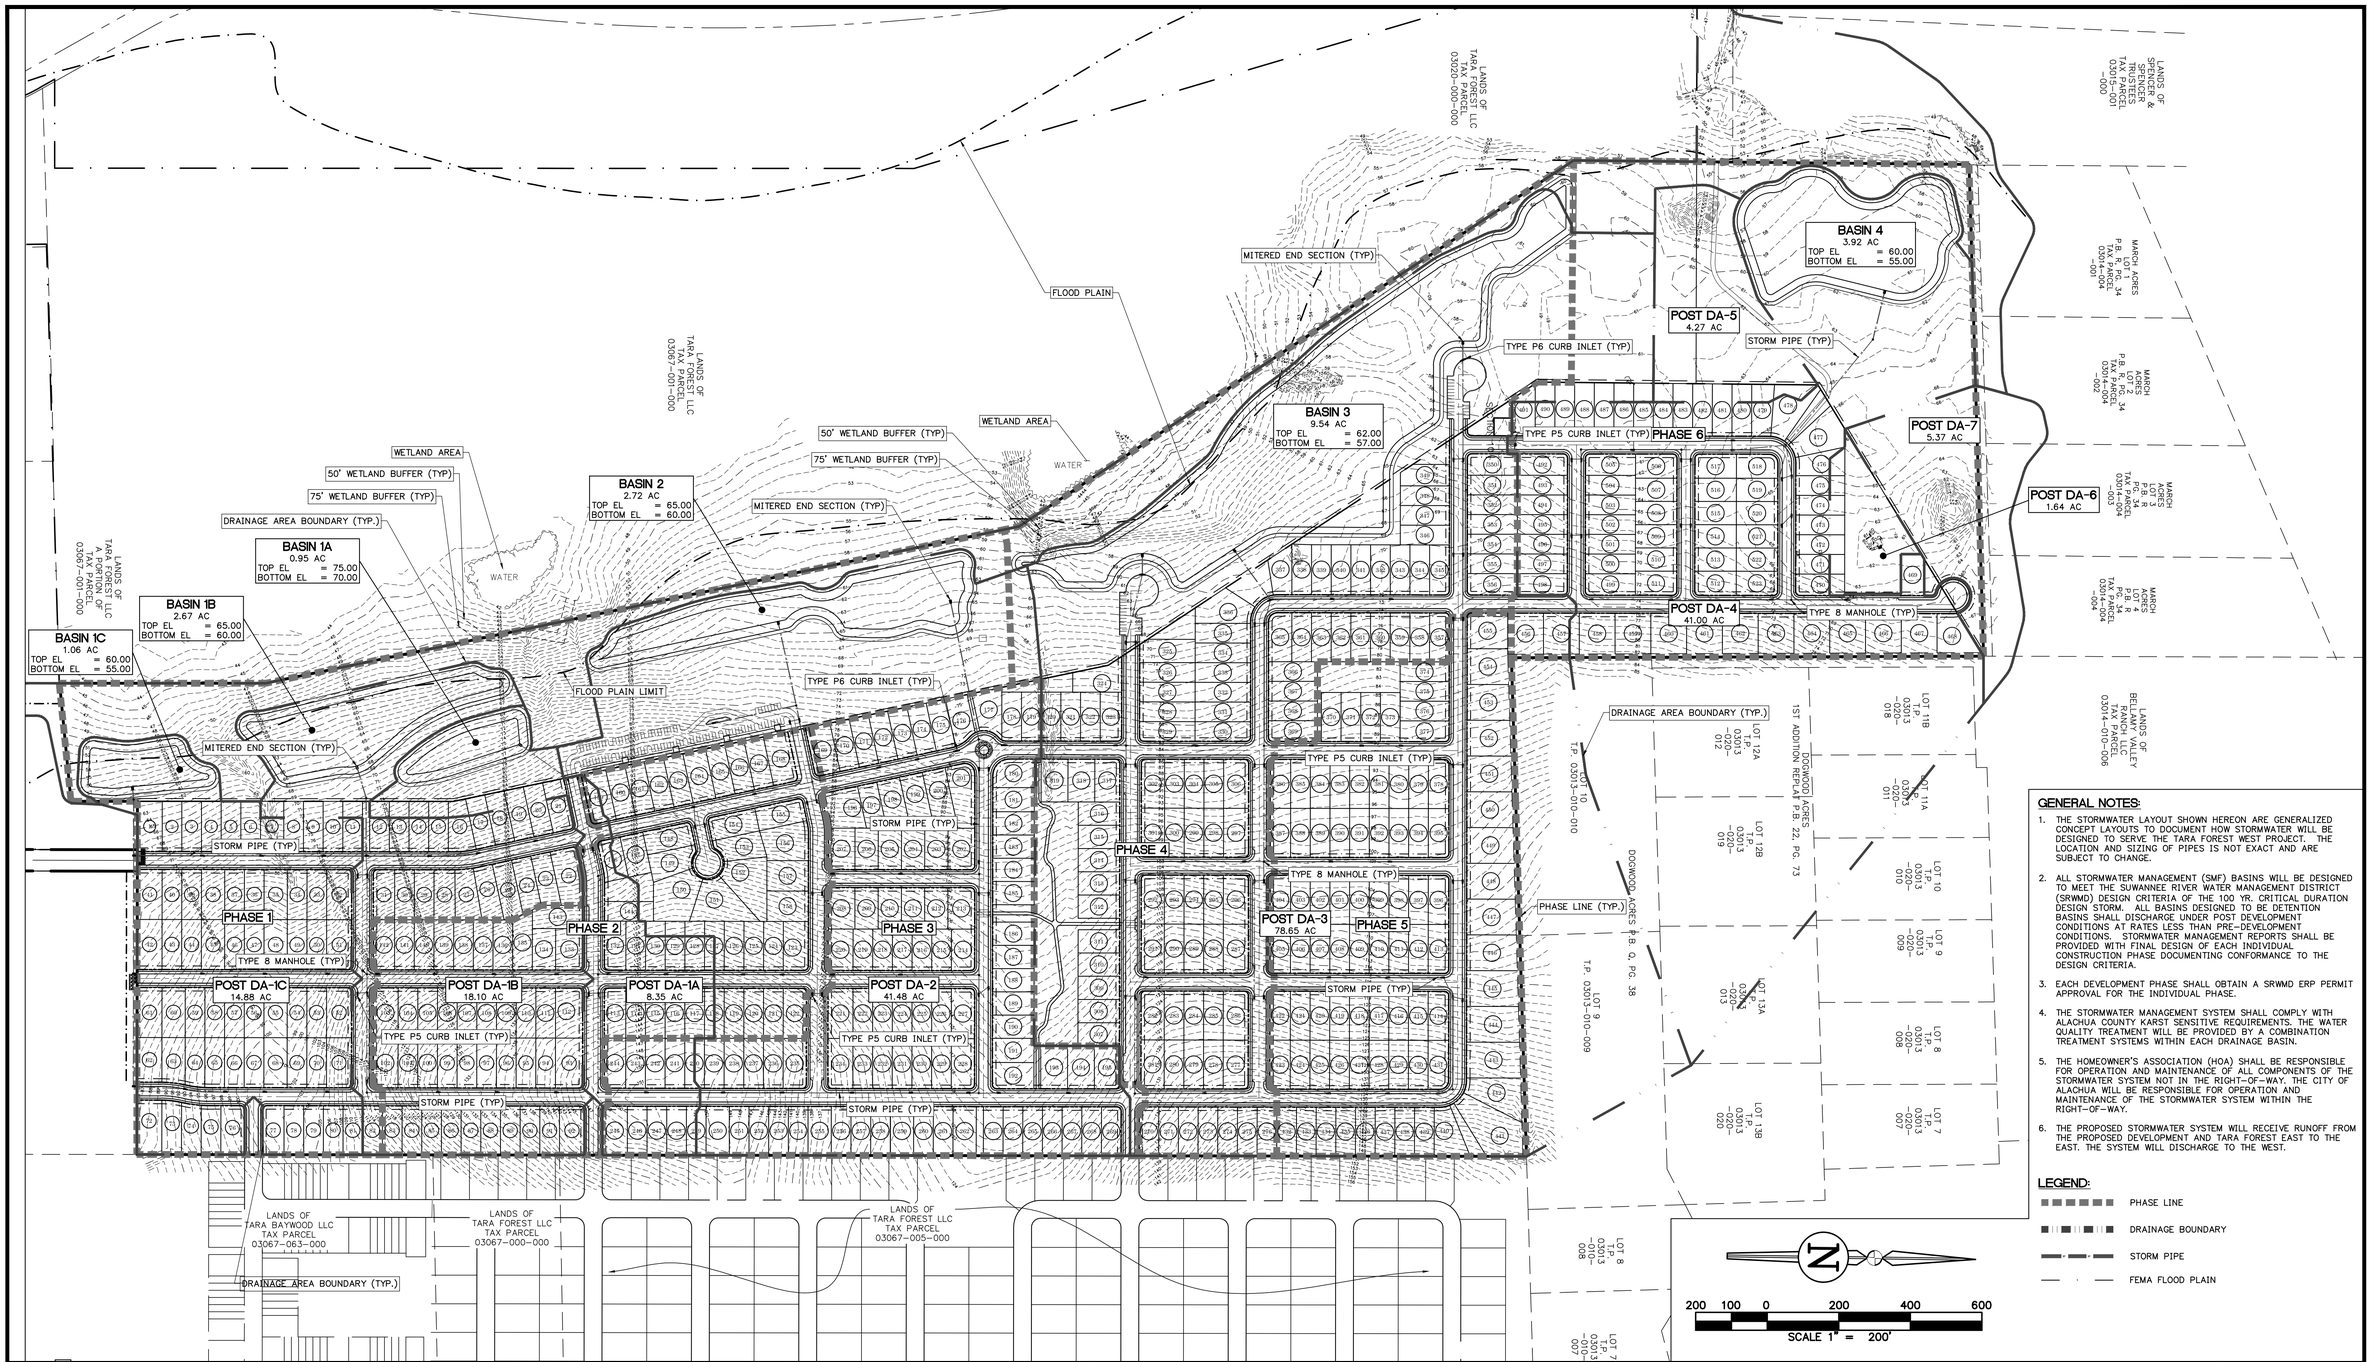
(4) *Design minimizes environmental impact. The proposed special exception minimizes environmental impacts and does not cause significant deterioration of light, water and air resources, wildlife habitat, stormwater management, scenic resources, and other natural resources.*

Response: The proposed locations of the stormwater retention facilities will not adversely impact the environment. The facilities will provide water quality and quantity improving the quality of water reaching the environmental sensitive lands.

(5) *Roads and other public facilities. There is adequate public facility capacity available to serve the proposed special exception, and the proposed special exception use is designed to ensure safe ingress and egress onto the site and safe road conditions around the site.*

Response: The proposed special exception request is for the placement of stormwater retention facilities to be constructed within less intense zoning district under common ownership. This request will not require road or other public facilities.

(6) *Not injure neighboring land or property values. The proposed special exception will not substantially injure the use of neighboring land for those uses that are permitted in the zone district, or reduce land values.*



Response: The proposed special exception request is for the placement of stormwater retention facilities to be constructed within less intense zoning district under common ownership. This request will not impact the value of adjacent lands but provide the necessary water retention.

(7) *Drawings. A site plan (Subsection 2.4.9 of this section) or preliminary plat (Subsection 2.4.10(G)(3) of this section) has been prepared that demonstrates how the proposed special exception use complies with the other standards of this subsection.*

Response: A site plan is enclosed in the submittal package.

(8) *Complies with all other relevant laws and ordinances. The proposed special exception use complies with all other relevant City laws and ordinances, State and Federal laws, and regulations*

Response: The proposed special exception will still obtain all necessary local, state and federal permits that are applicable.

GENERAL NOTES:

1. THE STORMWATER LAYOUT SHOWN HEREON ARE GENERALIZED CONCEPT LAYOUTS TO DOCUMENT HOW STORMWATER WILL BE DESIGNED TO SERVE THE TARA FOREST WEST PROJECT. THE LOCATION AND SIZING OF PIPES IS NOT EXACT AND ARE SUBJECT TO CHANGE.
2. ALL STORMWATER MANAGEMENT (SMF) BASINS WILL BE DESIGNED TO MEET THE SUWANNEE RIVER WATER MANAGEMENT DISTRICT (SRWMD) DESIGN CRITERIA OF THE 100 YR. CRITICAL DURATION DESIGN STORM. ALL BASINS DESIGNED TO BE DETENTION BASINS SHALL DISCHARGE UNDER POST DEVELOPMENT CONDITIONS AT RATES LESS THAN PRE-DEVELOPMENT CONDITIONS. STORMWATER MANAGEMENT REPORTS SHALL BE PROVIDED WITH FINAL DESIGN OF EACH INDIVIDUAL CONSTRUCTION PHASE DOCUMENTING CONFORMANCE TO THE DESIGN CRITERIA.
3. EACH DEVELOPMENT PHASE SHALL OBTAIN A SRWMD ERP PERMIT APPROVAL FOR THE INDIVIDUAL PHASE.
4. THE STORMWATER MANAGEMENT SYSTEM SHALL COMPLY WITH ALACHUA COUNTY KARST SENSITIVE REQUIREMENTS. THE WATER QUALITY TREATMENT WILL BE PROVIDED BY A COMBINATION TREATMENT SYSTEMS WITHIN EACH DRAINAGE BASIN.
5. THE HOMEOWNER'S ASSOCIATION (HOA) SHALL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF ALL COMPONENTS OF THE STORMWATER SYSTEM NOT IN THE RIGHT-OF-WAY. THE CITY OF ALACHUA WILL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF THE STORMWATER SYSTEM WITHIN THE RIGHT-OF-WAY.
6. THE PROPOSED STORMWATER SYSTEM WILL RECEIVE RUNOFF FROM THE PROPOSED DEVELOPMENT AND TARA FOREST EAST TO THE EAST. THE SYSTEM WILL DISCHARGE TO THE WEST.

Tara Forest West – Special Exception Neighborhood Workshop Summary

Meeting Location: Swick House Cedar Room
Meeting Date and Time: June 2nd at 6pm
Meeting Presenter: Kyle Willems, PE, JBPro & Logan Peters, PE, JBPro

The neighborhood meeting began on time, with approximately 7 neighbors in attendance. Mr. Willems gave a PowerPoint presentation which described the nature of the application for a Special Exception and provided a visual representation of the stormwater design for the development at this stage of the permitting and review process. Many questions were asked and sparked a good discussion on topics like environmental and flooding impacts to adjacent properties. The timeline to final buildout was also briefly discussed. Specific questions are listed below, with responses.

1. What would stormwater look like without the Special Exception?
   Response: Mr. Willems explained that the first goal of stormwater design is to place the basins in the lowest possible location topographically. With that in mind, if the basins could not be placed in the recreation zoned portion of the parcel, they would have to be located in the lowest topographical area of the residentially zoned portion of the parcel. It was discussed that designing the basins within the residential area would decrease the number of lots for the development.

2. How will stormwater be routed away from Dogwood Acres?
   Response: Mr. Willems explained that the overall grading for the proposed subdivision routes most of the runoff to the basins via sheet flow and storm pipes. If there is any land that remains undeveloped, which also naturally flows offsite, that runoff will flow as it does in existing conditions. Mrs. Peters elaborated by stating the design criteria ensures that post-development conditions must provide equal to or less runoff volume and runoff rates that what is naturally occurring in pre-development conditions.

3. What are the impacts to wildlife? Specifically, gopher tortoises and deer.
   Response: Mr. Willems and Mrs. Peters agreed there will be impacts to wildlife with the proposed subdivision, as there is with all developments. It was also stated that the recreation zoned portion of the property, which was the subject of the neighborhood workshop, would include minimal improvements and that impacts would also be minimal. The protocol surrounding gopher tortoise permitting with FWC was discussed as well.

4. What happens if the current developer sells the property?
   Response: Neighbors were concerned about changes in the proposed development should the ownership change. Mr. Willems and Mrs. Peters assured the neighbors that the developer has no intention of selling the property while it is still under design and permitting. It was also mentioned that in the rare and unlikely event that the property does get sold, the new owner would have the option to continue with the currently proposed subdivision design or begin with a new concept.

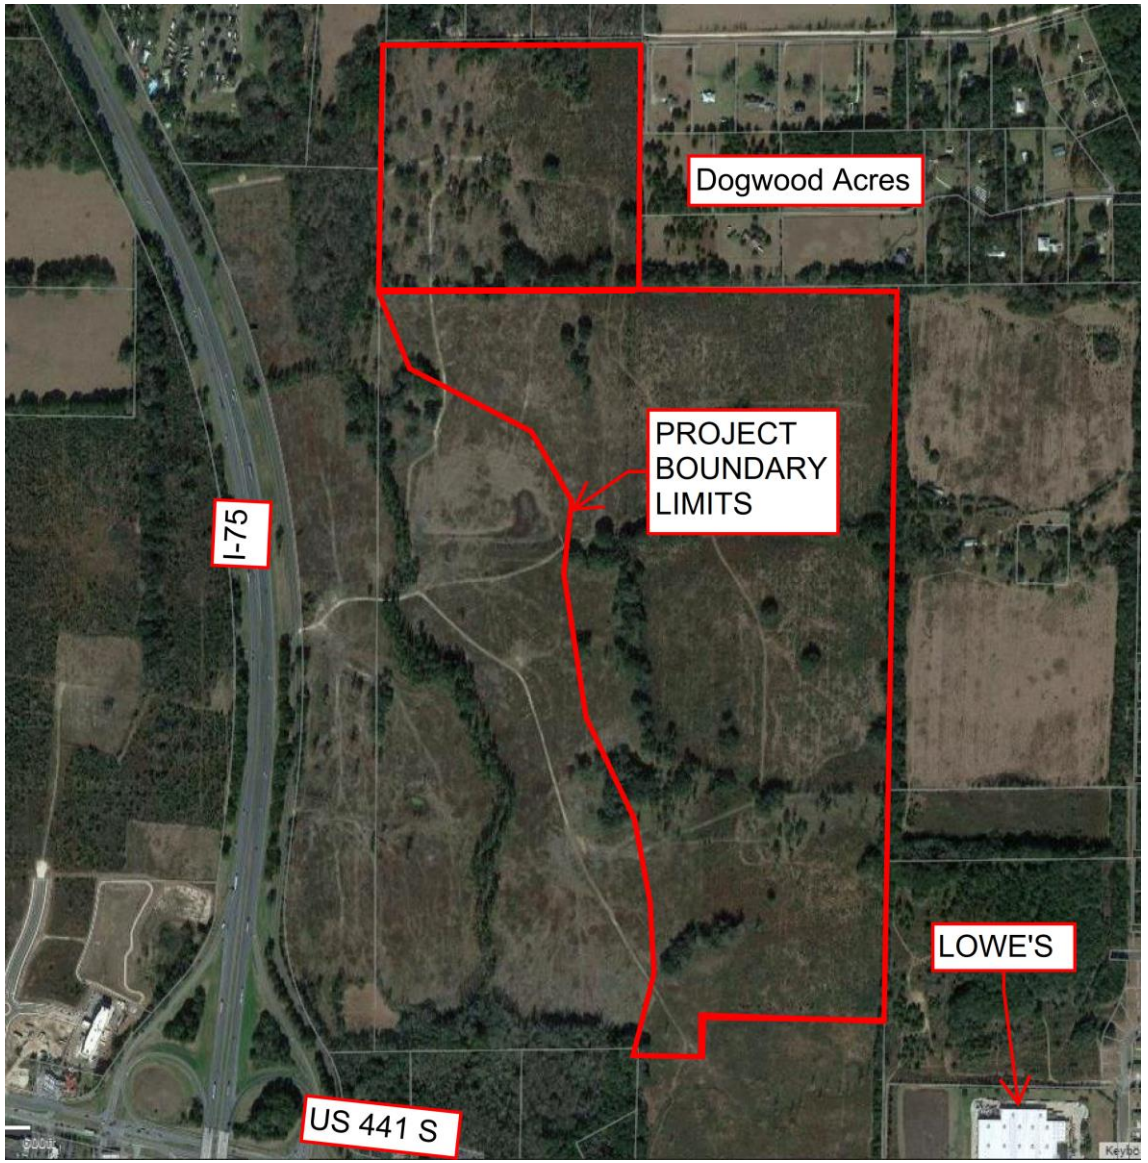
Presentation Outline

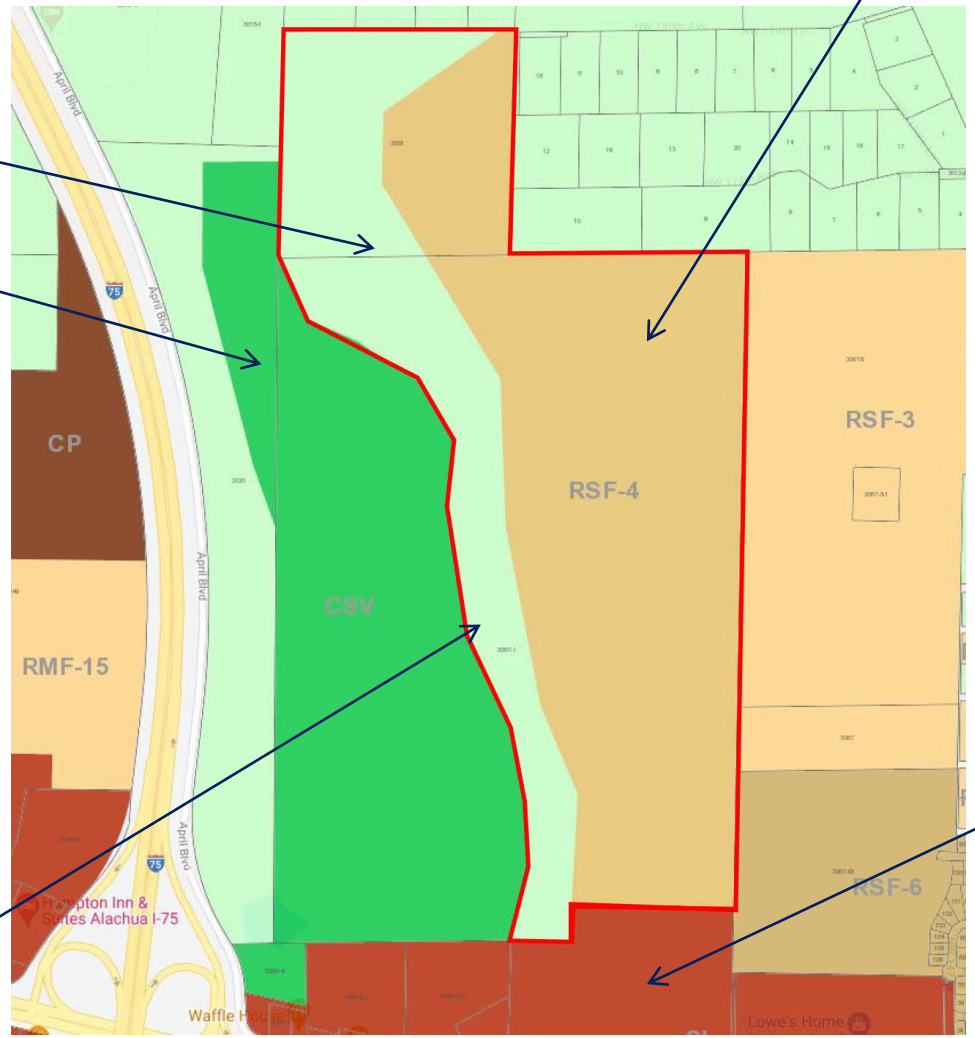
1. Project Location
2. Project Zoning
3. Special Exception
4. Questions & Comments



Project Location

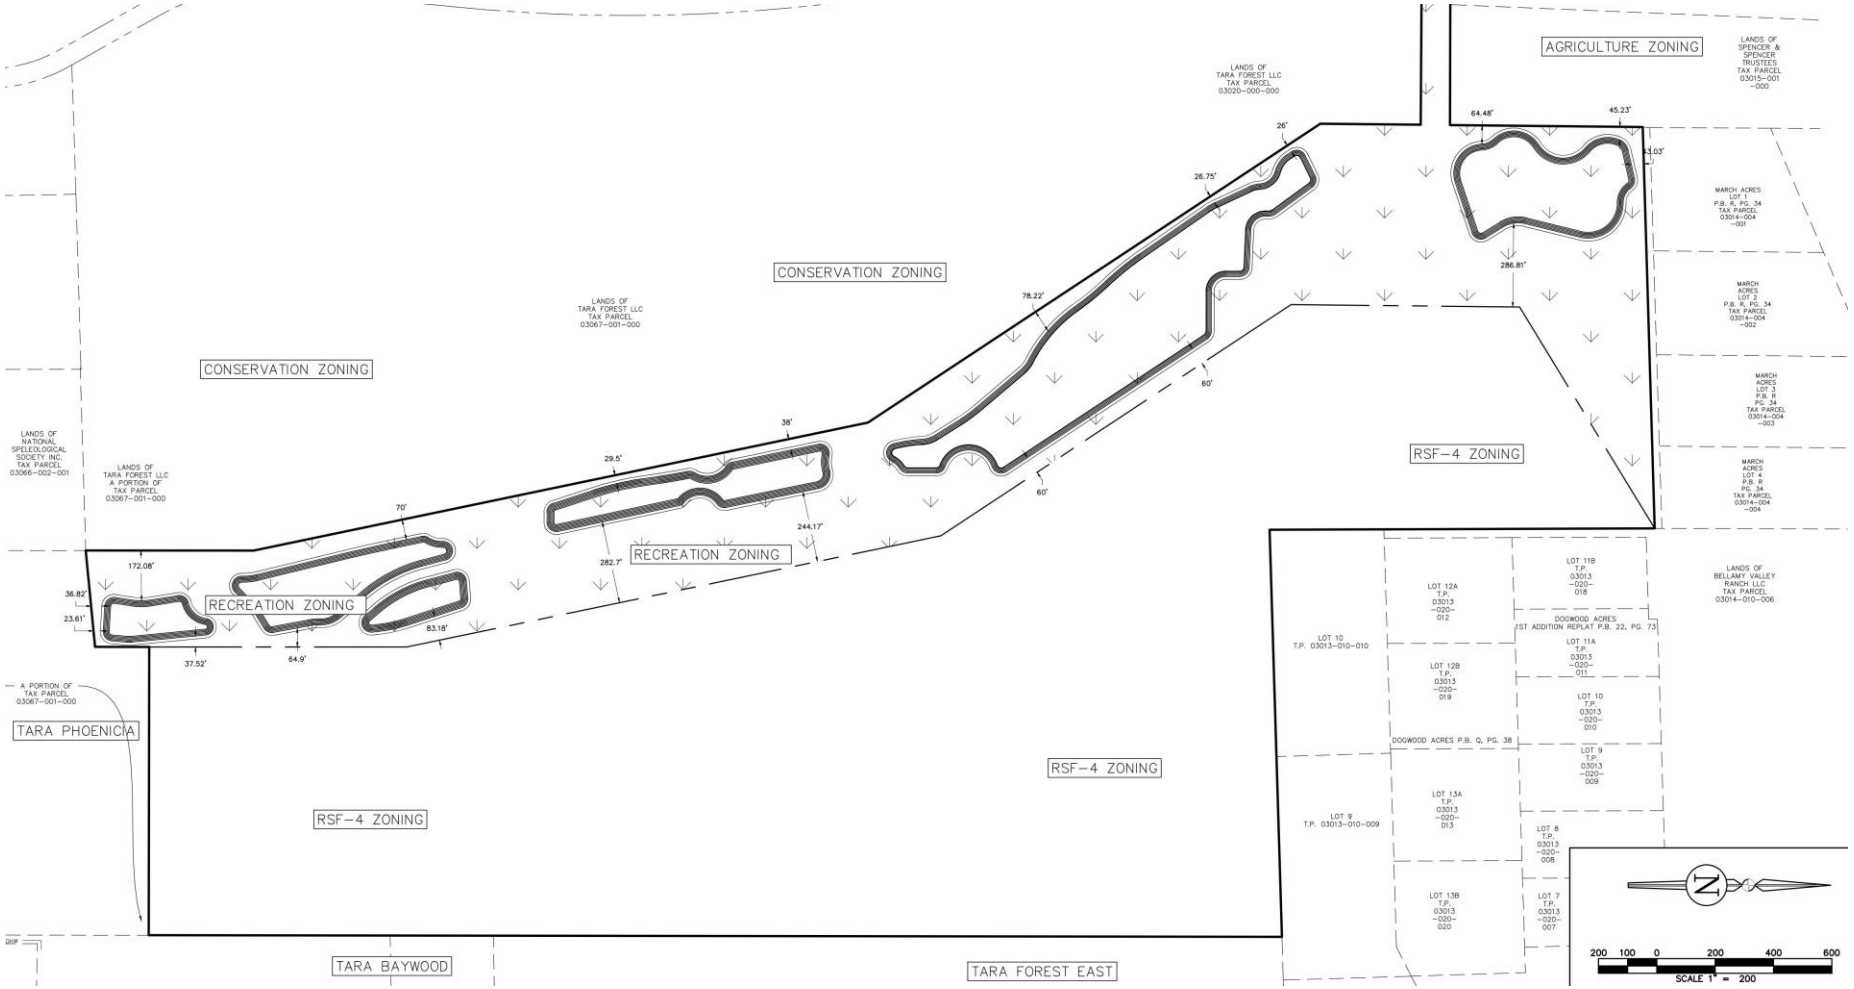
General Information

- Parcel's 03008-000-000 & a portion of 03067-001-000
- 200.68 total acres



Surrounding Properties

- Lowe's
- Baywood Center
- Baywood Subdivision
- Dogwood Acres



Project Zoning

- Recreation lands located on the lower elevation.
- Stormwater retention systems are proposed within the Recreation lands to serve the proposed Residential Development to the east.

Site Plan

- Stormwater systems are considered Minor Utilities per Section 4.3.2(I)(4)(a)
- A Special Exception permit application is required for placement of stormwater systems within a less intense zoned parcel that is under common ownership.
- Proposed uses within the Recreation lands are:
  - Stormwater Systems
  - Playgrounds
  - Multi-Purpose Fields
  - Trails
  - Community Pool

Proposed Next Steps

- **Public Comments and Discussion**
- **City Staff Review of Special Exception Application**
- **Planning & Zoning Board (Public Hearing)**
- **City Commission Meeting (Public Hearing)**

ORDINANCE 10-23

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS; AMENDING THE OFFICIAL ZONING ATLAS FROM AGRICULTURE (A) AND COMMERCIAL INTENSIVE (CI) TO CONSERVATION (CSV), AGRICULTURE (A), RESIDENTIAL SINGLE FAMILY – 4 (RSF-4), RESIDENTIAL MULTIPLE FAMILY – 8 (RMF-8), AND COMMERCIAL INTENSIVE (CI) ON APPROXIMATELY 523 ACRES; LOCATED NORTH OF U.S. HIGHWAY 441 AND ADJACENT TO AND ON THE EAST AND WEST SIDE OF INTERSTATE HIGHWAY 75 (I-75); ALACHUA, FLORIDA. TAX PARCEL NUMBERS 03008-000-000, 03020-000-000, 03049-000-000, 03066-004-000, AND 03067-001-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

RECITALS

WHEREAS, an application for a Site-Specific Amendment to the Official Zoning Atlas (rezoning), as described below, has been filed with the City; and,

WHEREAS, a duly advertised public hearing was conducted on the proposed amendment on August 10, 2010 by the Planning and Zoning Board, sitting as the Local Planning Agency (LPA) and the LPA reviewed and considered all comments received during the public hearing concerning the application and made its recommendation to the City Commission; and,

WHEREAS, the City Commission held a duly advertised public hearing on September 13, 2010 and October 11, 2010 on the proposed amendment and provided for and received public participation; and,

WHEREAS, the City Commission has determined and found said application for the amendment, to be consistent with the City of Alachua Comprehensive Plan and Land Development Regulations; and,

WHEREAS, for reasons set forth in this Ordinance that is hereby adopted and incorporated as findings of fact, that the Alachua City Commission finds and declares that the enactment of this amendment is in the furtherance of the public health, safety, morals, order, comfort, convenience, appearance, prosperity, or general welfare.

NOW, THEREFORE, BE IT ORDAINED BY THE PEOPLE OF THE CITY OF ALACHUA, FLORIDA:

Section 1. Official Zoning Atlas Amended

The Official Zoning Atlas is hereby amended from Agriculture (A) (±483 acres) and Commercial Intensive (CI) (±40 acres) to Conservation (CSV) (±115 acres), Agriculture (A) (±107 acres), Residential Single Family – 4 (RSF-4) (±174.5 acres), Residential Multiple Family – 8 (RMF-8) (±36.1 acres), and Commercial Intensive (CI) (±90 acres) for Tax Parcel Numbers 03008-000-000, 03020-000-000, 03049-000-000, 03066-004-000, and 03067-001-000, in accordance with the legal description found in Exhibit A attached hereto.

Section 2. Findings of Fact and Conclusions of Law

1. The above recitals are true and correct and incorporated herein by reference.
2. The proposed Rezoning is in compliance with the Land Development Regulations.
3. The amendment will not cause a reduction in the adopted level of service standards for roads, water, sewer, waste, stormwater, and recreation.

Section 3. Ordinance to be Construed Liberally

This ordinance shall be liberally construed in order to effectively carry out the purposes hereof which are deemed to be in the best interest of the public health, safety and welfare of the citizens and residents of Alachua, Florida.

Section 4. Repealing Clause

All ordinance or parts of ordinances in conflict herewith are, to the extent of the conflict, hereby repealed.

Section 5. Severability

It is the declared intent of the City Commission of the City of Alachua that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by any court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance, and the remainder of the ordinance after the exclusions of such part or parts shall be deemed to be valid.

Section 6. **Effective Date**

This ordinance shall take effect immediately after its passage and adoption.

PASSED on first reading the 13th day of September, 2010.

PASSED and **ADOPTED,** in regular session, with a quorum present and voting, by the City Commission, upon second and final reading this 11th day of October, 2010.

CITY COMMISSION OF THE
CITY OF ALACHUA, FLORIDA

Gib Coerper, Mayor

SEAL

NOTE TO CLERK: CONSIDERATION ON THIS TRANSFER IS IN THE AMOUNT OF $2,963,090.51. DOCUMENTARY STAMP TAX IN THE AMOUNT OF $20,741.70 IS BEING PAID ON THIS TRANSFER.

SPECIAL WARRANTY DEED

THIS SPECIAL WARRANTY DEED, made and entered into as of the 5th day of December, 2019, by LUTHER ACQUISITIONS, LLC, a Florida limited liability company, and MEGAHEE ENTERPRISES, LTD., LLLP, a Florida limited liability limited partnership, successor by conversion to Megahee Enterprises, Ltd., a Florida limited partnership, the address for which is 2513 S.W. 50th Boulevard, Gainesville, Florida 32608 (collectively, the "Grantors"), to TARA FOREST, LLC, a Florida limited liability company, the address for which is 7717 N.W. 20th Lane, Gainesville, Florida 32605 (the "Grantee").

W I T N E S S E T H:

THAT, for and in consideration of the sum of Ten and No/100 Dollars ($10.00), and other good and valuable consideration, the receipt and sufficiency of which are acknowledged by Grantors, Grantors hereby grant, bargain, sell, convey and confirm unto Grantee all that certain real property together with the improvements thereon (collectively, the "Real Property") in Alachua County, Florida, and more particularly described as follows:

SEE EXHIBIT "A" ATTACHED HERETO AND BY THIS REFERENCE MADE A PART HEREOF.

RE Nos.: 03067-001-000, 03008-000-000, 03066-002-000 and 03020-000-000

TOGETHER WITH all the tenements, hereditaments and appurtenances thereto belonging or in any way appertaining.

TO HAVE AND TO HOLD the same unto Grantee in fee simple, forever.

Subject to conditions, covenants, restrictions, reservations, easements, rights-of-way, taxes assessed subsequent to December 31, 2019, and all applicable zoning ordinances; provided, however, this reference will not serve to reimpose any such conditions, covenants, restrictions, reservations or easements.

And Grantors do hereby fully warrant the title to said land, and will defend the same against the lawful claims of all persons whomsoever, claiming by, through or under Grantors, but not otherwise.

IN WITNESS WHEREOF, Grantors have caused this Special Warranty Deed to be executed on their behalf as of the day and year first above written.

EXHIBIT "A"

Parcel One & Part of Parcel 7:

That part of the East ½ of Section 9, Township 8 South, Range 18 East, lying North of the North right of way of U.S. Highway 441,

Less and except the North ¼ of Government Lot 2; and

Less and Except the right of way of State Road 93 a/k/a Interstate I-75; and

Less and Except that part of Government Lot 7 lying East of the East right of way of State Road 93 a/k/a Interstate I-75;

Also Less and Except the following described property:

Commence at the Southeast corner of Section 9, Township 8 South, Range 18 East, and run North 3° 37' 28" West 286.74 feet to the North right of way of Old State Road No. 25; thence North 79°23'05" West along said right of way 1055.3 feet to its intersection with the West right of way of Interstate No. 75, thence run North 4°26'55" East along said Interstate Road right of way 212.91 feet to its intersection with the South right of way of State Road No. 25 (U.S. No. 441), thence run North 79°06'35" West along said State Road right of way 306.92 feet, thence run North 1°48' 35" West 205.01 feet, thence run North 79°06'35" West 355.34 feet to the North right of way of State Road No. 24 (U.S. No. 441) and the Point of Beginning, thence run North 79° 06'35" West along said right of way 175.00 feet, thence run North 10°53'25" East 175.00 feet, thence South 79°06'35" East 349.10 feet to the Westerly right of way of Interstate Road No. 75, thence South 27°21'25" West along said right of way 38.71 feet to the p.c. of a 34° 11'20" curve, having a radius of 170.10 feet, an internal angle of 73°32' and being concave to a Northwesterly direction, thence run in a Southwesterly direction along the arc of said right of way curve a distance of 215.08 feet to the P.T. of said curve, thence South 10° 53'25" West 16.00 feet to the Point of Beginning. All being and lying in Section 9, Township 8 South, Range 18 East, Alachua County, Florida.

Also Less and Except:

Commence at the Northeast corner of Government Lot Seven (7), Section Nine (9), Township Eight (8) South, Range Eighteen (18) East, and run South 01°48'22" East, along the East line of said Government Lot Seven (7), 1677.39 feet; thence run North 79°06'35" West, 351.65 feet to the intersection with the West right of way line of Interstate Highway No. 75 and the North right of way line of U.S. Highway 441; thence run North 79°06'35" West, along said North right of way line 175.00 feet to the Point of Beginning; thence continue North 79°06'35" West along said North right of way line, 175.00 feet; thence run North 10°53'25" East, 175.00 feet; thence run South 79°06'35" East, 175.00 feet; thence run South 10°53'25" West, 175.00 feet; to the Point of Beginning.

Together with the following described lands:

The East Sixty-four and 79/100 (64.79) feet of that part of Government Lot Three (3), in Section Fifteen (15), Township Eight (8) South, Range Eighteen (18) East, lying North and East of State Roads Nos. 20 and 25, Alachua County, Florida.
And That part of Government Lot Three (3), in Section Fifteen (15), Township Eight (8) South, Range Eighteen (18) East, lying North and East of U.S. Highway 441 less the East Sixty-four and 79/100 (64.79) feet, Alachua County, Florida.
Less and Except therefrom the lands described in Official Records Book 4334, Page 1074 in favor of the City of Alachua, of the Public Records of Alachua County, Florida.

Together with the following described parcel:

The West ½ of Section 10, Township 8 South, Range 18 East, lying North of the North right of way of U.S. Highway 441, Alachua County, Florida. Less and Except the Southwest ¼ of the Southwest ¼, but including that part of the Southwest ¼ of the Southwest ¼ lying within the following described property:

Commence at the Southwest corner of Section 10, Township 8 South, Range 18 East and run North 1°48'58" West along the West line of said Section 1352.21 feet to the Point of Beginning; thence continue North 01°48'58" West along said West Section line 562.78 feet; thence run South 36°22'41" East 524.13 feet; thence run North 89°12'27" East 1039.09 feet; thence run South 38°29'43" East 109 feet, thence run South 87°09'17" West, 1401.60 feet to the West line of Section 10, Township 8 South, Range 18 East and the Point of Beginning. All being and lying in the Southwest ¼ of Section 10, Township 8 South, Range 18 East, Alachua County, Florida.

Parcel Two:

The Southwest ¼ of the Southwest ¼ of the West ½ of Lot 4, all lying and being in Section 3, Township 8 South, Range 18 East, Alachua County, Florida.

Parcel Three:

A tract of land situated in Section 10, Township 8 South, Range 18 East, Alachua County, Florida, said tract of land being more particularly described as follows:
Commence at a concrete monument at the Southwest corner of aforementioned Section 10, Township 8 South, Range 18 East for a point of reference and run North 88°24'02"East, along the South line of said Section 10, a distance of 792.27 feet; thence run North 00° 39'21" West, along the East line of the West 792.16 feet of the Southwest ¼ of the Southwest ¼ of said Section 10, a distance of 508.06 feet to a concrete monument (LS#3456) on the Northerly right of way line of State Road 20-25 a/k/a U.S. Highway 441 (200 foot right of way); thence run South 77°51'07"East, along said Northerly right of way line, a distance of 143.86 feet to a concrete monument (LS#3456) and the True Point of Beginning; thence run North 12°08'53" East, a distance of 200.00 feet to a concrete monument (LS#3456); thence run South 77°51'07"East, a distance of 59.81 feet to a concrete monument (LS#3456); thence run North 60°49'36" East, a distance of 101.29 feet to a concrete monument (LS#3456); thence run North 07°01'30" East, a distance of 70.52 feet to a concrete monument (LS#3456); thence run North 28°08'16"West, a distance of 91.36 feet to a concrete monument (LS#3456); thence run North 60°43'36" East, a distance of 367.96 feet to a concrete monument (LS#3456) on the East line of the aforementioned Southwest ¼ of the Southwest ¼ of Section 10; thence run South 00°00'26" East, along said East line, a distance of 665.16 feet to a concrete monument (LS#940) on the aforementioned Northerly right of way line; thence run North 77°51'07" West, along said Northerly right of way line, a distance of 486.49 feet to the True Point of Beginning.

Balance of Parcel 7:

The South ½ of the East ½ of Government Lot 7, in Section 4, Township 8 South, Range 18 East, Alachua County, Florida. Less and Except the right of way of State Road No. 93 a/k/a Interstate 75, and Less and Except the 66-foot access road.

RE: 378± Acre Tara Forest, Tara Phoenicia, and Tara Baywood Site, Alachua County Environmental Resources Assessment

Dear Christopher:

This letter report and attachments are Creative Environmental Solutions, Inc. (CES) Environmental Resources Assessment of the 378± Acre Tara Forest, Tara Phoenicia, and Tara Baywood site. The study site is in Alachua County, Florida in Sections 3 and 10, Township 8 South, Range 18 East.

The following are attachments to this report:

Figure 1: Vicinity Aerial
Figure 2: Quad Map
Figure 3: Habitat Map
Figure 4: Listed Species Map
Figure 5: Soil Map
Figures 6 and 6B: Historical Aerials
Figure 7: Wetland Delineation Map
Figure 8: Flood Map
Figure 9: Topo Map
Figure 10: Parcels Map
Figure 11: Site Photos
Figure 12: FNAI Report
Table 1: Probability of Occurrence of Listed Wildlife Species
Alachua County Environmental Resources Assessment Checklist
Literature Reviewed

CES completed the assessment of the referenced site in accordance with Alachua County Environmental Resources Assessment Checklist requirements, a copy of which is attached. Our study identified and mapped habitat communities, and the use and/or likely presence of fauna or flora species listed as endangered, threatened, or species of special concern by either federal or state agencies. The listed species study was preliminary and an overview, and was not a complete study for any one listed fauna or flora species. The report provides confirmation of the presence of listed fauna or flora species encountered and/or the likelihood of fauna and flora species occurring on the site at the time of the inspection(s), based on known habitat preferences and geographical distribution.

The site inspections were conducted on May 5, 2021, June 11, 2021 and July 12, 2021.

The following outlines the checklist and provides discussion on each issue:

HABITAT CHARACTERIZATION

Site Overview

The site abuts silvercultural property to the west, rural residential to the north, NW 140th Street (CR 241) and residential developments to the east, and US 441 and commercial developments to the south. Based on Figures 6 and 6B and the site inspections, the site has been historically used for silvercultural and agricultural uses for many years (80 year at least). A habitable house and two old barns exist on the site. Most of the site was in planted pines before timbering took place between 2014 and 2019.

Land Covers

Eight (8) land covers were identified within the study site in accordance with the Florida Land Cover Classification System (FLCCS), (Sept. 2018). These land covers are delineated on Figure 3.

These land covers were:

CLC Class[1]	Habitat Type	Ac.
1110	Upland Hardwood Forest	32.0
1400	Mixed Hardwood-Pine	21.0
1831	Rural Open	14.0
1832	Rural Structure (Driveway, House, Barn)	12.0
1870	Extractive (Clay Pit)	3.8
2123	Floodplain Marsh	0.2
183312	Former Hay Field (Old-field Successive)	70.0
183332	Coniferous Plantations (Clear-cut)	225.0
	Total	378.0

Surface Waters (ponds, lakes, streams, springs, etc.)

No surface waters exist on the site, although a small (0.2± acre) floodplain marsh (see Photo 6) encroaches the site along its west boundary. This marsh is further discussed in the Wetlands portion of the report below.

Wetlands

2123: Floodplain Marsh

A small portion (0.2± acre) of a floodplain marsh (see Photo 6) encroaches the site along its west boundary. This area was disturbed from recent logging activities. This area is a portion of a larger marsh system created by tail-waters from a nearby creek (Mill Creek) west of the site.

Dominant vegetation in the onsite and offsite portions of this area consisted of Bahiagrass (*Paspalum notatum*) stressed from recent water inundation, buttonweed *(Diodia virginiana*), flatsedge (*Cyperus haspan*), smartweed (*Polygonum punctatum*), maidencane (*Panicum hemitomon*), dog fennel (*Eupatorium spp.*) and soft-rush (*Juncus effusus*). CES flagged the wetland lines on the project site per Chapter 62-340, Florida Administrative Code. Onsite and adjacent wetland delineations are shown on Figure 7.

Uplands

1110: Upland Hardwood Forest

Dominant trees in this area consisted of laurel oak (*Quercus laurifolia*), live oak (*Quercus virginiana*), sweet gum (*Liquidambar styraciflua*), black cherry(*Prunus serotina*), water oak (*Quercus nigra*), and

magnolia (*Magnolia grandifolia*). Green briar (*Smilax spp*.), grapevine (*Vitis spp.*), and beautybush (*Callicarpa americana*), Carolina cherry laurel (*Prunus caroliniana*), and hog plum (*Prunus umbellata*) were dominant ground and shrub cover species.

1400: Mixed Hardwood-Pine
Dominant trees in this area consisted of loblolly pine (*Pinus taeda*), laurel oak, live oak, sweet gum, black cherry, water oak and magnolia. Green briar, grapevine, and beautybush were dominant ground and shrub cover species.

1831: Rural Open
This area was disturbed from past land uses. The vegetation was dense ground cover mainly consisting of Bahiagrass, blackberry, grapevine, hairy indigo (*Indigofera hirsuta*), showy rattlebox (*Crotalaria spectabilis*), ragweed (*Ambrosia artemisiifolia*), beggarticks (*Bidens alba*) and broomsedge (*Andropogon spp.*).

1832: Rural Structure (Driveway, House, Barn)
A house and an old barn are in this area. Vegetation in the open areas mainly consisted of laurel oak, live oak and Bahiagrass. A potable well and septic system are within this area.

1870: Extractive (Clay Pit)
A 3.8± acre apparent clay pit was observed in the southeast portion of the site. Based on Figures 6 and 6B, the pit was excavated in 2007 for construction material for adjacent residential and commercial (Lowes) developments.

434: Upland Hardwood-Pine Mixed
Dominant trees in this area consisted of sweet gum, laurel oak, water oak, live oak, loblolly pine and magnolia (*Magnolia grandifolia*). Saw palmetto (*Serenoa repens*), green briar (*Smilax spp*.), grapevine, and beautybush (*Callicarpa americana*) were dominant ground and shrub cover species.

183312: Former Hay Field (Old-field Successive)
Two former apparent hay field areas were noted on the site. It appeared, based on Figures 6 and 6B and the site inspections, these areas have been out of use since approximately 2018. Dominant vegetation in this area consisted of Bahiagrass, Bernudagrass, dog fennel, blackberry, and beggertick.

183332: Coniferous Plantations (Clear-cut)
This land cover made up the major portion of the site. Based on Figures 6 and 6B and the site inspections, clear-cutting of this land cover type occurred between 2014 and 2019. This area is very disturbed with a dense dominant vegetative cover of catbriar, dog fennel, grapevine, and groundsel tree (*Baccharis halimifolia*) as well as sweet gum, laurel oak, blackcherry, Chinese tallow (*Sapium sebiferum*), and Chinaberry (*Melia azedarach*) saplings.

Non-native Invasive Species
Our inspection included identifying and estimating percent coverage non-native invasive plants species listed by the Florida Exotic Pest Plant Council (FLEPPC). A copy of the list can be found at:

http://www.fleppc.org/list/list.htm

The following defines Categories I and II per FLEPPC:

CATEGORY I
Invasive exotics that are altering native plant communities by displacing native species, changing community structures or ecological functions, or hybridizing with natives.

CATEGORY II
Invasive exotics that have increased in abundance or frequency but have not yet altered Florida plant communities to the extent shown by Category I species.

The following is a list of non-native plants observed on the site and FLEPPC Category designation:

Non-native Invasive Plants Observed on the Site			
Common Name	**Latin Name**	**Listed**	**Comment**
Chinaberry	*Melia azedarach*	II	Found scattered within clear-cut area. Estimated Coverage: <2%)
Air-potato	*Dioscorea bulbifera*	I	Found scattered throughout the site. Estimated Coverage: <3%)
Silktree	*Albizia julibrissin*	I	Found scattered throughout the site. Estimated Coverage: <1%)
Chinese tallow	*Sapium sebiferum*	I	Found scattered within clear-cut area. Estimated Coverage: <1%)
*Listed by the FLEPPC I = Category I, II Category II, NL = Not Listed			

Surface Water or Wetland Buffers
Surface water and wetland buffers will be established in accordance with county and state regulations.

Floodplains (100-year)
According to a Alachua County Department of Growth Management Wetlands and Floodplains map (Figure 8), floodplain exist along the western boundary of the site and in the souther portion of the site.

Special Area Study Resource Protection Areas (Cross Creek, Idylwild/Serenola, etc)
The site is not within or near a Special Area Study Resource Protection Area.

Strategic Ecosystems (within or adjacent to mapped areas)
The site is not within or adjacent to a Strategic Ecosystem.

Significant Habitat (biologically diverse natural areas)
The site is not within or adjacent to Significant Habitat (biologically diverse natural areas).

Listed Species/Listed Species Habitats (FNAI S1, S2, & S3; State or Federally E, T, SSC)

No listed species except gopher tortoises (GT) were observed on the site. Based on our sample survey of potential onsite GT habitats, we estimate 6.8 (7) GTs inhabit the site. Figure 4 summarizes the gopher tortoise survey on the site. A copy of a FNAI report is attached. A table listing the estimated probability of occurrence with comments of the listed fauna species is attached as Table 1.

Recreation/Conservation/Preservation Lands
The site is not within or adjacent to Recreation/Conservation/Preservation Lands.

Significant Geological Features (caves, springs, sinkholes, etc.)
No Significant Geological Features (caves, springs, sinkholes, etc.) were observed on the site. A sinkhole was observed adjacent to the southwest corner of the site. Figure 3 shows the location of the sinkhole.

High Aquifer Recharge Areas
According to a Alachua County Aquifer Recharge Area map, the site is within a "Perforated" zone. No surface features indicating a direct connection to the Floridan aquifer were observed on the site during the inspections.

Wellfield Protection Areas
The site is not within a Wellfield Protection Area.

Wells
A residential or private well exists on the site adjacent to the house. A septic system also exists in this area.

Soils
The following table summarizes onsite soil series, acreage and percentage of each soils series on the site, and their descriptions:

Soil I.D.	Name	Ac.	Description
3	Arredondo fine sand, 0 to 5% slopes	108.3	Well Drained, WT: >80"
5	Ft Meade fine sand, 0 to 5% slopes	31.5	Well Drained, WT: >80"
8	Millhopper sand, 0 to 5% slopes	27.8	Moderately Well Drained, WT: 42-72"
29	Lochloosa fine sand, 2 to 5% slopes	21.2	Somewhat Well Drained, WT: 18-42"
30	Kendrick sand, 2 to 5% slopes	15.7	Well Drained, WT: >80"
33	Norfolk loamy fs, 2 to 5% slopes	14.9	Well Drained, WT: 42-72"
35	Gainesville sand, 0 to 2% slopes	24.0	Well Drained, WT: >80"
38	Pits and Dumps	19.9	NA
69	Arredondo fine sand, 5 to 8% slopes	15.9	Well Drained, WT: >80"
72	Lochloosa fine sand, 2 to 5% slopes	25.1	Somewhat Well Drained, WT: 18-42"
73	Kendrick sand, 5 to 8% slopes	40.2	Well Drained, Water Table: >80"
74	Blichton sand, 2 to 5% slopes	0.8	Well Drained, Water Table: >80"
76	Bivans sand, 5 to 8% slopes	9.4	Somewhat Well Drained, WT: 18-42"
78	Norfolk loamy fs, 5 to 8% slopes	23.3	Well Drained, WT: 42-72"

A soil map is attached as Figure 5.

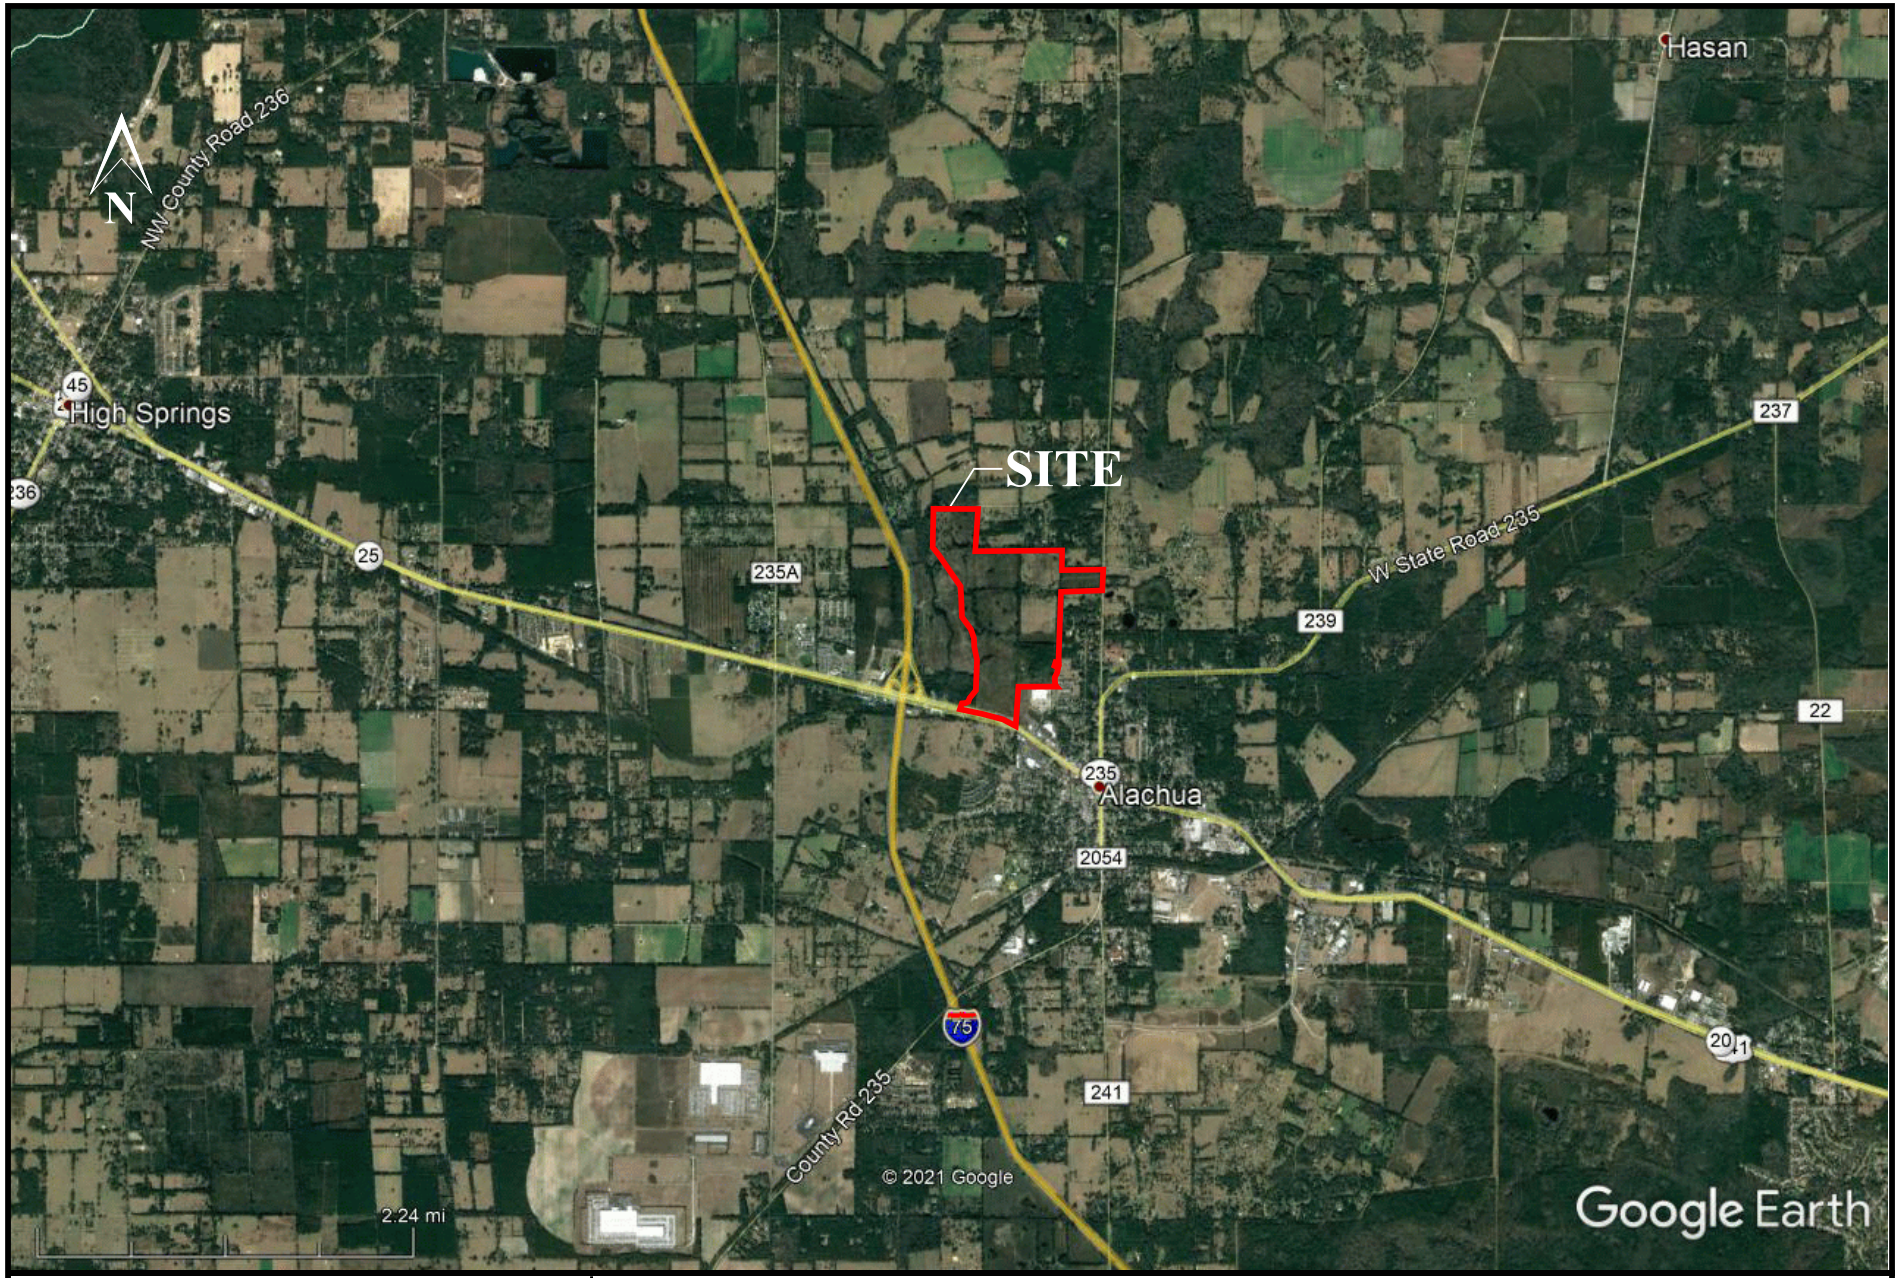
Mineral Resource Areas
According to Alachua County Comprehensive Plan, the site is not within a mineral resource area.

Topography/Steep Slopes
According to a Alachua County Department of Growth Management topographical map (Figure 9) at 2 foot intervals, elevations on the site range from approximately 162 feet in the northeastern portion of the site to 45 feet in the southwestern portion of the site. Based on Figure 9, the general flow of surface waters on the site would be to the west and southwest towards Mill Creek.

Historical and Paleontological Resources
No cultural sites or other historical/archaeological resources are recorded on or immediately adjacent to this property. No evidence was observed of human burials, middens, old building sites or other evidence that historical or archaeological sites exist on the site.

Hazardous Materials Storage Facilities and Contamination (soil, surface water, ground water)
No evidence was observed of hazardous material storage or facilities exist or existed on the site. Based on historical aerial review, no red-flag warnings of the site being used for hazardous material storage, production, or use was discerned. Copies of historical aerials is attached as Figures 6 and 6B. No evidence of contaminated soils, surface water, or groundwater was observed during the site inspection.

We appreciate the opportunity to provide our services. If you have any questions, please contact me.



Sincerely,

George Foster
President

Survey Summary:
The site was inspected on 5/521, 6/11/21, and 7/12/21. No listed species except gopher tortoises (GT) were observed on the site. Based on our sample survey (see table) of potential onsite GT habitat, we estimate 6.8 (≈7) GTs inhabit the site.

Table Footnotes:
1. The Florida Cooperative Land Cover Map, (Sept. 2018)
2. Potentially Occupied Burrow (Active and Inactive Burrows)
3. PO Burrows X 0.5 = Estimated GTs
4. Estimated Number of GTs Extrapolated Over Habitat

Table 1: Probability of Occurrence of Listed Wildlife Species

Common Name	Scientific Name	Status FWC/USFWS[1]	Estimated Probability of Occurrence			Comments
			Observed	Possible	Unlikely	
BIRDS						
Little Blue Heron	*Egretta caerulea*	SSC/---		X		Feeding habitat present in wetlands. Not typical nesting habitat (estuarine)
Tricolored Heron	*Egretta tricolor*	SSC/---		X		Feeding habitat present in wetlands. Nesting usually occurs February through April. No shrub wetlands onsite, preferred nesting habitat.
FL. Sandhill Crane	*Grus canadensis pratensis*	T/--		X		Feeding habitat present in wetlands. Nesting usually occurs January through May. No nests observed. No marsh onsite, preferred nesting habitat. Lake Lona water levels probably fluctuates too much for nesting.
Wood Stork	*Mycteria americanca*	E/E		X		Feeding habitat present in wetlands. Wetland areas not for nesting, prefer cypress and mangrove. Nesting usually occurs November through April.
Southeastern Amer. Kestrel	*Falco sparverius paulus*	T/--		X		The open areas (hay field and timbered pine areas) could provide habitat for this species. No kestrels or potential nest sites were observed on or adjacent the site.
Bald Eagle	*Haliaeetus leucocephalus*	NL/NL		X		Potential nesting and feeding habitat present. No nest observed. Closest recorded eagle nest is over 3 miles from the site.
MAMMALS						
Sherman's Fox Squirrel	*Sciurus niger shermani*	SSC/--		X		Somewhat preferred habitat present. None observed.
REPTILES						
Eastern Indigo Snake	*Drymarchon corais couperi*	T/T		X		Potential habitat present, gopher tortoise burrows present, a known retreat. Reclusive.
Gopher Tortoise	*Gopherus polyphemus*	T/--	X			Tortoise burrows noted onsite.
Florida Pine Snake	*Pituophis melanoleucus m.*	SSC/--		X		Marginal onsite habitat. Pocket gopher activity noted onsite, a preferred prey.
Short-tailed Snake	*Stilosoma extenuatum*	T/--		X		Possible habitat present. Reclusive and little known snake.
AMPHIBIANS						
Florida Gopher Frog	*Rana capito aesopus*	SSC/--		X		Tortoise burrows onsite, known preferred dwelling. None seen at entrances.

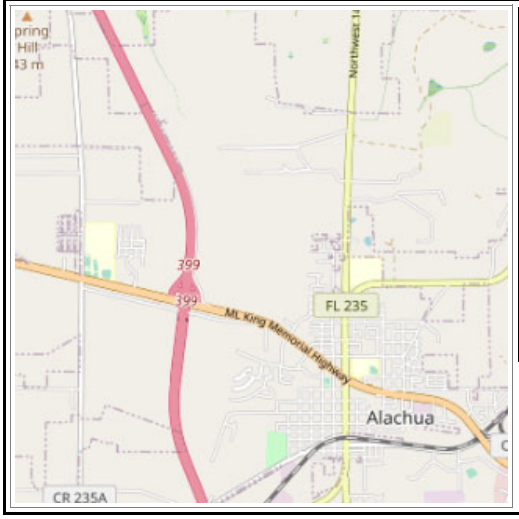
Biodiversity Matrix Query Results



UNOFFICIAL REPORT

Created 7/18/2021

(Contact the FNAI Data Services Coordinator at 850.224.8207 or kbrinegar@fnai.fsu.edu for information on an official Standard Data Report)

NOTE: The Biodiversity Matrix includes only rare species and natural communities tracked by FNAI.

Report for 2 Matrix Units: 24587 , 24588

Descriptions

DOCUMENTED - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit.

DOCUMENTED-HISTORIC - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit; however the occurrence has not been observed/reported within the last twenty years.

LIKELY - The species or community is *known* to occur in this vicinity, and is considered likely within this Matrix Unit because:

1. documented occurrence overlaps this and adjacent Matrix Units, but the documentation isn't precise enough to indicate which of those Units the species or community is actually located in; *or*
2. there is a documented occurrence in the vicinity and there is suitable habitat for that species or community within this Matrix Unit.

POTENTIAL - This Matrix Unit lies within the known or predicted range of the species or community based on expert knowledge and environmental variables such as climate, soils, topography, and landcover.

Matrix Unit ID: 24587

Disclaimer

The data maintained by the Florida Natural Areas Inventory represent the single most comprehensive source of information available on the locations of rare species and other significant ecological resources statewide. However, the data are not always based on comprehensive or site-specific field surveys. Therefore, this information should not be regarded as a final statement on the biological resources of the site being considered, nor should it be substituted for on-site surveys. FNAI shall not be held liable for the accuracy and completeness of these data, or opinions or conclusions drawn from these data. FNAI is not inviting reliance on these data. Inventory data are designed for the purposes of conservation planning and scientific research and are not intended for use as the primary criteria for regulatory decisions.

Unofficial Report

These results are considered unofficial. FNAI offers a Standard Data Request option for those needing certifiable data.

Email: developmentreview@alachuacounty.us

ENVIRONMENTAL RESOURCES ASSESSMENT CHECKLIST

Pursuant to Alachua County Comprehensive Plan 2002, as amended, Conservation Open Space Element Policy 3.4.1, applications for land use change, zoning change, and development approval shall be required to submit an inventory of natural resource information. The inventory shall include site specific identification, analysis and mapping of each resource present on or adjacent to the site. The identification and analysis shall indicate information sources consulted.

Natural Resources Checklist:
Check "Yes" for each resource or resource characteristic identified and discuss and provide supporting material.
Check "N/A" for each resource or resource characteristic not present or otherwise relevant to the application.

Yes	☐	N/A	☒	Surface Waters (ponds, lakes, streams, springs, etc.)
Yes	☒	N/A	☐	Wetlands
Yes	☒	N/A	☐	Surface Water or Wetland Buffers
Yes	☒	N/A	☐	Floodplains (100-year)
Yes	☐	N/A	☒	Special Area Study Resource Protection Areas (Cross Creek, Idylwild/Serenola, etc.)
Yes	☐	N/A	☒	Strategic Ecosystems (within or adjacent to mapped areas)
Yes	☐	N/A	☒	Significant Habitat (biologically diverse natural areas)
Yes	☒	N/A	☐	Listed Species/Listed Species Habitats (FNAI S1, S2, & S3; State or Federally E, T, SSC)
Yes	☒	N/A	☐	Non-native Invasive Species
Yes	☐	N/A	☒	Recreation/Conservation/Preservation Lands
Yes	☐	N/A	☒	Significant Geological Features (caves, springs, sinkholes, etc.)
Yes	☒	N/A	☐	High Aquifer Recharge Areas
Yes	☐	N/A	☒	Wellfield Protection Areas
Yes	☒	N/A	☐	Wells
Yes	☒	N/A	☐	Soils
Yes	☐	N/A	☒	Mineral Resources Areas

RE: Tara Forest West Special Exception Application

Tara Forest West is a project consisting of 538 lots subdivision on 200+/- acres. JBPro is proposing six (6) separate stormwater basins to properly attenuate the stormwater runoff from the proposed impervious areas, which will consist of lot, roadway, infrastructure, and utility improvements.

The proposed subdivision falls under several different jurisdictions including the City of Alachua, Alachua County, and Suwannee River Water Management District. All three entities have their own rules and regulations governing the water quantity and water quality of all runoff created from the development of this site. Specifically, these regulations call for stormwater discharge facilities to be designed so as not to lower the receiving water quality below the minimum conditions necessary to assure the suitability of water for the designated use of its classification as established in F.A.C. Chapter 62-302.

JBPro's design will meet all the requirements presented by these governing entities to allow continued conservation of this land. Our design looks at not only the proposed development, but also at the existing conditions to ensure nothing is missed. Environmental assessments are performed on the property, to allow us to design around existing constraints and minimize the impact of the development, see **Attachment A**. The main source of water quantity and quality treatment are through the proposed stormwater basins. As seen in **Attachment B** the location of the six (6) proposed stormwater basins have been selected based on the existing topography to be on the low end of the property just east of the conservation land to best allow stormwater runoff collection and facilitate treatment.

If you have questions or require additional information, please contact myself at logan.peters@jbpro.com or Chris Potts at chris.potts@jbpro.com. We can be reached by phone at (352) 375-8999. Thank you for your help with this project.

Sincerely,

Logan Peters

RE: Tara Forest West Special Exception

Hello Adam,

Please find attached a resubmittal package for Tara Forest West Preliminary Plat. The property consists of Alachua County Parcel Numbers 03067-001-000, 0320-000-000 and 03008-000-00, and is 200.68 acres total. This resubmittal package is provided to address comments provided by the City of Alachua via email on May 23, 2024. Included in this submittal package are hard copies of the following:

- Comment Response Letter
- Revised Site Plan for Special Use Application (7 copies)
- Complete Application Package (2 copies)

Please find below responses to the comments for the above referenced project. The comments have been replicated below followed by responses in bold.

Deficiencies to be addressed:

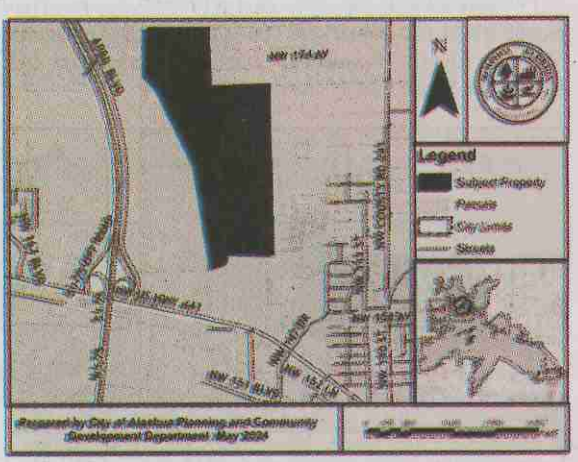
1. Use Specific Standards
   a. Section 4.3.2 (I) (4)(a) requires that the stormwater detention and retention facility provide enhanced natural or recreational functional use. The proposed preliminary plat indicates a variety of proposed recreational amenities, but the site plan submitted with the special exception only shows the stormwater facilities. The site plan and preliminary plat must be the same and indicate the recreational (or enhanced natural) elements that will be provided through provision of the stormwater facilities in that location. The revised site plan does show the enhanced recreation facilities that meet this section. As a condition of the special exception approval, language must be drafted that would require such improvements to be made. The language below is tentative and subject to change.
      i. Prior to the Issuance of a Certificate of Completion of Improvements for Phase 3 of the Tara Forest West Preliminary Plat, the swimming pool and associated structures and improvements, including any parking lot, a playground area, trail connection to west property line (adjacent with the project currently known as Tara April) and dog park, shall be completed as depicted on the approved special exception site plan for Tara Forest West. The pool shall have a minimum of 1,400 square feet surface area/ 32,000 gallons. The playground area shall consist of at least 7,500 square feet of fenced/usable area.

ii. Prior to the Issuance of a Certificate of Completion of Improvements for Phase 4 of the Tara Forest West Preliminary Plat, a minimum of two sports courts, one multi-use field, and any structures and improvements, including any parking lot, shall be completed as depicted on the approved special exception site plan for Tara Forest West.
iii. Prior to the Issuance of a Certificate of Completion of Improvements for Phase 6 of the Tara Forest West Preliminary Plat, a minimum of two additional sports courts (total of four for the entire Tara Forest West Preliminary Plat) and associated structures and improvements, including any parking lot, and one additional multi-use field (total of two for entire recreation area), and the remainder of the trail system within the recreation area shall be completed as depicted on the approved special exception site plan for Tara Forest West.
iv. The 7.5' Type B buffer shall be completed and installed along the boundary between the recreational area and any lots prior to any approval of any improvements within any Phase adjacent to the recreational area.
v. The maximum total floor area of all buildings within the recreational area shall be 13,000 square feet.
vi. The total impervious allowed within the recreational area shall be a maximum of 160,000 square feet.
vii. Construction of the amenities and amenity structures may begin prior to the approval of a final plat upon the provision of a surety device in the amount of 120% of the cost of construction of the amenity or amenity structure. No final inspection for any amenity structure requiring a building permit shall be scheduled until the Certificate of Completion of Improvements for the Phase has been issued.
viii. These conditions will be incorporated into any subdivider's agreement for any final plat, as applicable.
ix. Applicant agrees that it must obtain all other local, state and federal permits.

NEW COMMENT: The trail connection to the west property line must be depicted in the site plan. Further, the site plan for the special exception must include the phasing lines.
Response: So noted. The proposed trail has been included and labeled as "12' Multi-Use Path" on the revised Site Plan for Special Use Application. Phase lines and labels indicating the phase number have also been included. Additionally, we accept all of the above conditions, but would like to request a modification to the total impervious area allowed within the recreational area from 160,000 sf to 300,000 sf.

If you have any questions or need additional information, please feel free to contact me or Logan Peters.

Sincerely,



Christopher Potts

Christopher Potts, PE
Director of Engineering, JBPro

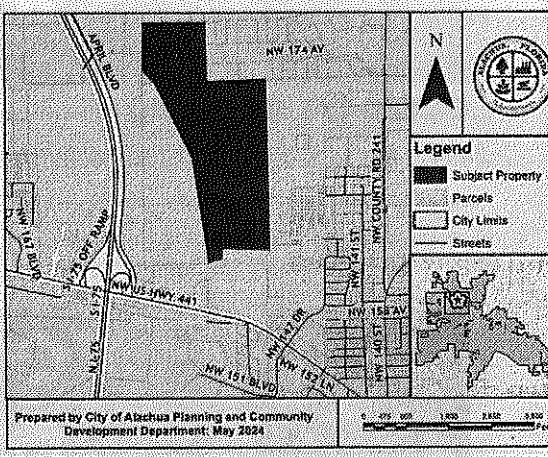
NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning and Zoning Board of the City of Alachua will hold a public hearing on June 11, 2024 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located at 15100 NW 142nd Terrace, Alachua, Florida, to consider the following: A request by Christopher Potts, P.E. of JBrown Professional Group, Inc., applicant, on behalf of Tara Forest, LLC, property owner, for consideration of a Special Exception Permit to allow stormwater retention and detention facilities on a portion of a ±198.39 acre subject property. The subject property is generally located north of US 441 and west of NW 147th Drive; Portions of Tax Parcel Numbers 03008-000-000 and 03067-001-000; Future Land Use Map (FLUM) Designations: Moderate Density Residential, and Recreation; Zoning: Residential Single Family -4 (RSF-4), and Agricultural (A).



At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

City of Alachua
THE GOOD LIFE COMMUNITY

Board/Committee Agenda Item

MEETING DATE: 6/11/2024
SUBJECT: Preliminary Plat – Tara Forest West: A request by Logan Peters, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC, property owner, for consideration of the Preliminary Plat of the Tara Forest West Subdivision, which proposes the subdivision of a ±198.39 acre subject property into a total of 523 single family lots, with associated common areas and right-of-way, generally located north of US 441,west of NW 147th Drive, Tara Baywood and Tara Forest East Subdivisions; Portions of Tax Parcel Numbers 03067-001-000 and 03008-000-000 (Quasi-Judicial Hearing).

PREPARED BY: Adam Hall, AICP, Principal Planner

RECOMMENDED ACTION:
Staff recommends that the Planning & Zoning Board transmit the preliminary plat of Tara Forest West Subdivision to the City Commission with a recommendation to approve subject to the 12 conditions provided in Exhibit "A" and located on page 21 of the Staff Report, upon making the following motion:

Based upon the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, this Board finds the application to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and transmits the Preliminary Plat of the Tara Forest West Subdivision to the City Commission, with a recommendation to approve, subject to the 12 conditions provided in Exhibit "A" and located on page 21 of the Staff Report.

Summary

This application is a request by Logan Peters, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC., property owner, for consideration of the preliminary plat for the Tara Forest West subdivision project, which proposes the subdivision of a ±198.39 acre subject property into a total of 523 lots with associated common areas and road right-of-way. The preliminary plat indicates the development will be constructed in six phases. The subject property consists of portions of Tax Parcels 03067-001-000 and 03008-000-000, and is located east of the Tara Forest East and Tara Baywood Subdivisions, north of US 441 and south of the Dogwood Acres subdivision.

The subject property was subject to Large Scale Comprehensive Plan Amendment (Ordinance 09-14) that amended the Future Land Use Map Designation for the property from Agriculture to Moderate Density Residential and Recreation. The zoning designations for the subject property were amended by Ordinance 10-23. The adopted zoning designations for the subject property were A (Agricultural) and RSF-4 (Residential Single Family – 4).

The proposed Tara Forest West subdivision will consist of lots ranging size from ±7,294 square feet to ±19,841 square feet, with the majority of lots being ±7,500 square feet. The preliminary plat proposes 523 single family residential lots. The preliminary plat proposes 13 common areas located throughout project. The largest common areas located on the west side of the project will serve as stormwater retention and detention for the project as well as house the proposed amenities for the development. The stormwater facilities are located in the Agricultural (A) zoned area of the project and will therefore require a special exception permit. This application has been reviewed concurrently with this preliminary plat application. The proposed lots (except for Lot 468) located along the property boundary with the Dogwood Acres residential subdivision are a minimum of 10,000 square feet in size and a minimum of 100' in width.

One (1) access connection to US 441 will be completed as part of Phase 1 of the project. An additional connection to US 441 will be required with or before Phase 4. Additional interconnections will be made as the project is developed and as other adjacent projects are developed to the east (Tara Forest East and Tara Baywood) and to the south (Tara Phoenicia). No connection to April Boulevard is contemplated by this preliminary plat. Development within the proposed subdivision will connect to potable water and wastewater facilities. An analysis of the development's impact on other public facilities, including transportation, potable water, sanitary sewer, solid waste, and public schools, is provided within this report.

Section 2.4.10(G)(3) of the City's Land Development Regulations (LDRs) establishes the requirements for a preliminary plat. An analysis of the application's compliance with the applicable standards of this section has been provided within this report.

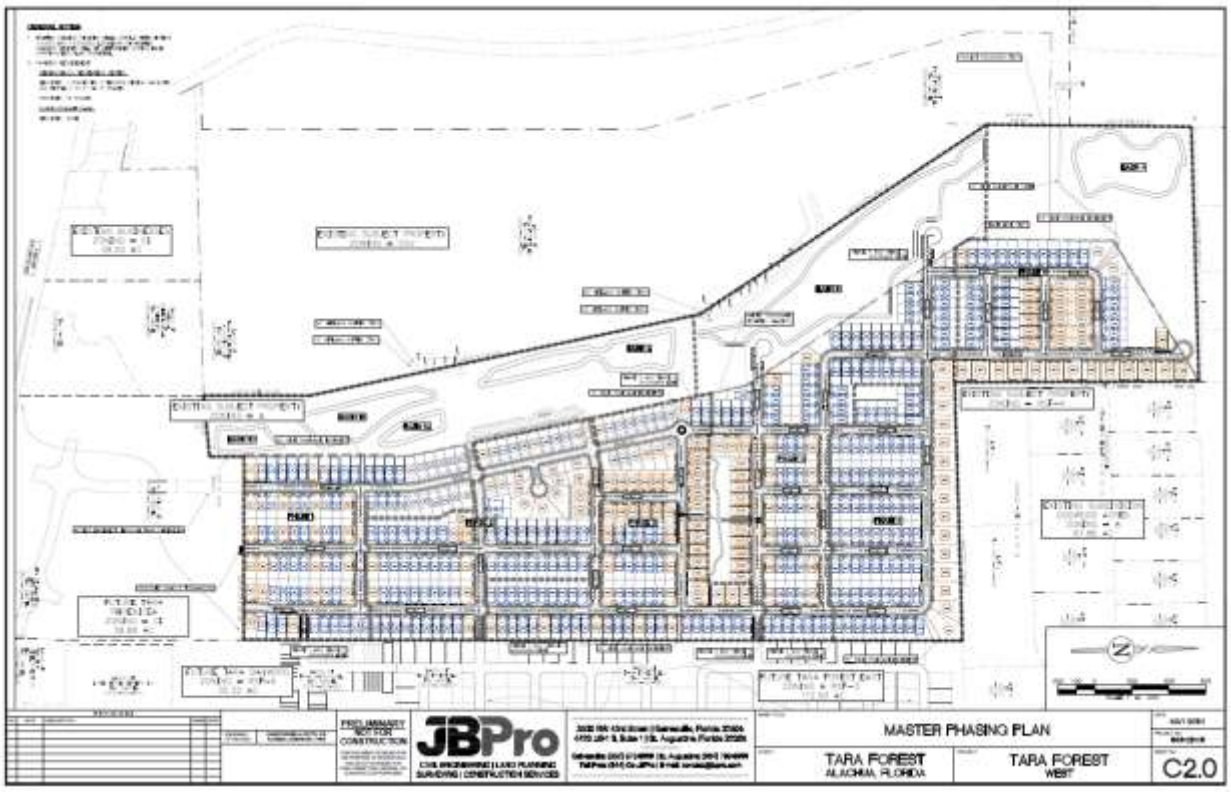
Staff Report

Planning & Zoning Board Hearing Date: June 11, 2024

Quasi-Judicial Hearing **Application: PPP21-0005**

SUBJECT:	A request for consideration of the preliminary plat of the Tara Forest West Subdivision, which proposes the subdivision of a ±198.39 acre subject property into a total of 523 single family lots with associated common areas and road right-of-way
APPLICANT/AGENT:	Logan Peters, P.E., JBrown Professional Group, Inc.
PROPERTY OWNER:	Tara Forest, LLC
PARCEL ID NUMBER:	Portions of 03067-001-000 and 03008-000-000
FLUM DESIGNATION:	Moderate Density Residential and Recreation
ZONING:	RSF-4 and Agriculture
OVERLAY:	N/A
ACREAGE:	±198.39
PROJECT PLANNER:	Adam Hall, AICP
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board transmit the preliminary plat of Tara Forest West Subdivision to the City Commission with a recommendation to approve subject to the 12 conditions provided in Exhibit "A" and located on page 21 of the Staff Report.
RECOMMENDED MOTION:	*Based upon the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, this Board finds the application to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and transmits the Preliminary Plat of the Tara Forest West Subdivision to the City Commission, with a recommendation to approve, subject to the 12 conditions provided in Exhibit "A" and located on page 21 of the Staff Report.*

SUMMARY & BACKGROUND



This application is a request by Logan Peters, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC., property owner, for consideration of the preliminary plat for the Tara Forest West subdivision project, which proposes the subdivision of a ±198.39 acre subject property into a total of 523 lots with associated common areas and road right-of-way. The preliminary plat indicates the development will be constructed in six phases. The subject property consists of portions of Tax Parcels 03067-001-000 and 03008-000-000, and is located east of the Tara Forest East and Tara Baywood Subdivisions, north of US 441 and south of the Dogwood Acres subdivision.

The subject property was subject to Large Scale Comprehensive Plan Amendment (Ordinance 09-14) that amended the Future Land Use Map Designation for the property from Agriculture to Moderate Density Residential and Recreation. The zoning designations for the subject property were amended by Ordinance 10-23. The adopted zoning designations for the subject property were A (Agricultural) and RSF-4 (Residential Single Family – 4).

The proposed Tara Forest West subdivision will consist of lots ranging size from ±7,294 square feet to ±19,841 square feet, with the majority of lots being ±7,500 square feet. The preliminary plat proposes 523 single family residential lots. The preliminary plat proposes 13 common areas located throughout project. The largest common areas located on the west side of the project will serve as stormwater retention and detention for the project as well as house the proposed amenities for the development. The stormwater facilities are located in the Agricultural (A) zoned area of the project and will therefore require a special exception permit. This application has been reviewed concurrently with this preliminary plat application. The proposed lots (except for Lot 468) located along the property boundary with the Dogwood Acres residential subdivision are a minimum of 10,000 square feet in size and a minimum of 100' in width.

One (1) access connection to US 441 will be completed as part of Phase 1 of the project. An additional connection to US 441 will be required with or before Phase 4. Additional interconnections will be made as the project is developed and as other adjacent projects are developed to the east (Tara Forest East and Tara Baywood) and to the south (Tara Phoenicia). No connection to April Boulevard is contemplated by this preliminary plat. Development within the proposed subdivision will connect to potable water and wastewater facilities. An analysis of the development's impact on other public facilities, including transportation, potable water, sanitary sewer, solid waste, and public schools, is provided within this report.

Section 2.4.10(G)(3) of the City's Land Development Regulations (LDRs) establishes the requirements for a preliminary plat. An analysis of the application's compliance with the applicable standards of this section has been provided within this report.

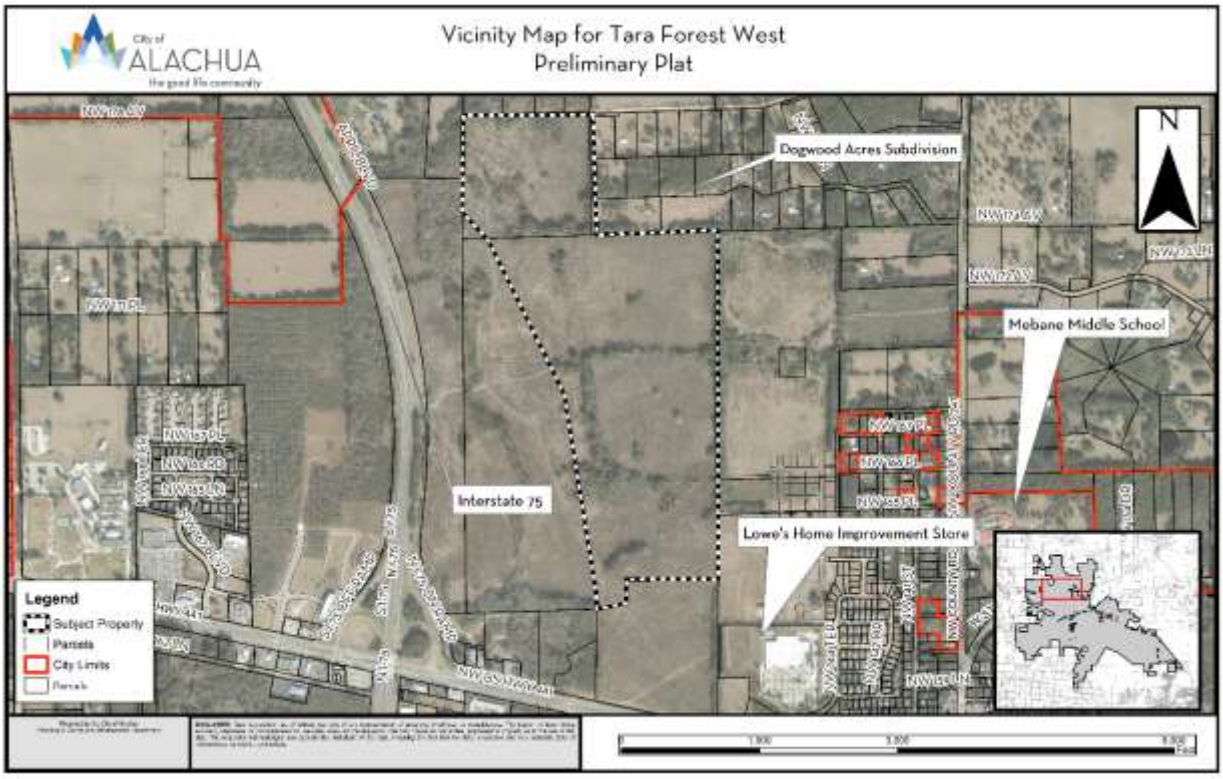
SURROUNDING USES

The existing uses, Future Land Use Map (FLUM) Designations, and zoning districts of the surrounding area are identified in Table 1. Map 1 provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. It is not intended to be all-inclusive, and may not identify all existing uses, FLUM Designations, and/or zoning districts surrounding the subject property.)

Table 1. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Dogwood Acres	Moderate Density Residential	A (Agricultural)
East	Tara Forest East / Tara Baywood	Moderate Density Residential /Medium Density Residential	Residential Single Family – 3 (RSF-3)/ Residential Single Family – 6 (RSF-6)
West	Vacant / Conservation	Conservation	Conservation (CSV)
South	Vacant Commercial	Commercial	Commercial Intensive (CI)

Map 1. Vicinity Map



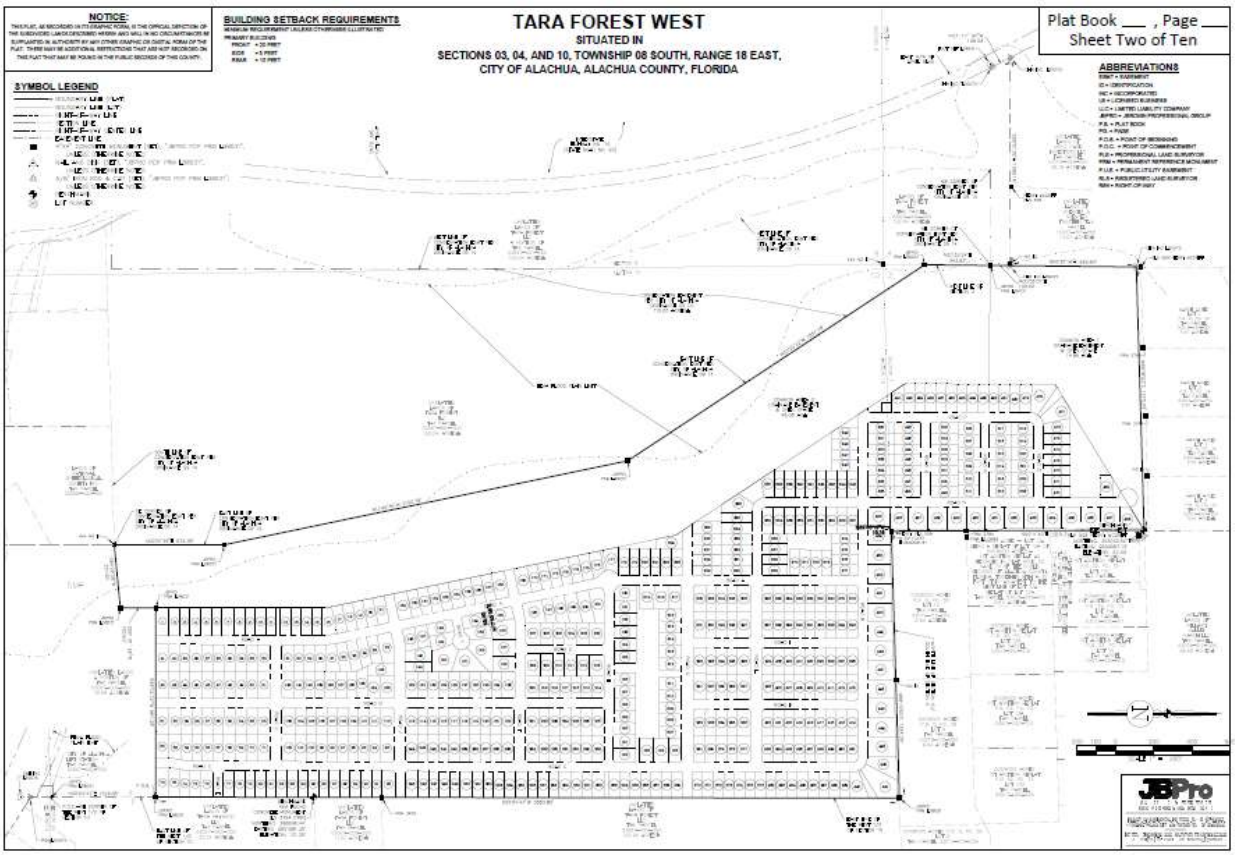


Illustration 1. Overall Site Plan for Tara Forest West

NEIGHBORHOOD MEETING

The purpose of a Neighborhood Meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. As required by Section 2.2.4 of the LDRs, all property owners within 400 feet of the subject property were notified of the meeting and notice of the meeting was published in a newspaper of general circulation.

A Neighborhood Meeting was held on August 18th, 2021, at the Swick House. The applicant was present and available to answer questions. Materials submitted by the applicant indicate that the meeting was attended by approximately 15 persons. A summary of the discussion which occurred at the Neighborhood Meeting has been provided by the applicant and is included within the application materials.

CONSISTENCY WITH THE COMPREHENSIVE PLAN

The Goals, Objectives, and Policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

The property currently has a Future Land Use Map Designation of Moderate Density Residential, which permits up to 4 units per acre and Recreation. The following Comprehensive Plan Elements have Goals, Objectives, and Policies (GOPs) that support the proposed amendment to the Future Land Use Map of the City of Alachua's Comprehensive Plan:

- Future Land Use Element
- Transportation Element
- Housing Element
- Recreation Element
- Community Facilities Natural Groundwater Aquifer Recharge Element
- Conservation and Open Space Element

The applicant has provided an analysis of the proposed amendment's consistency with the Comprehensive Plan. Based upon the applicant's Comprehensive Plan Consistency Analysis and information presented below, staff finds the application consistent with the Comprehensive Plan and the Goals, Objectives, and Policies (GOPs) therein.

Future Land Use Element

Policy 1.2b: *Moderate Density Residential* (0 to 4 dwelling units per acre): The Moderate Density Residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the Moderate Density Residential land use category:

1. **Single family detached dwelling units;**

2. Accessory dwelling units;
3. Manufactured or modular homes meeting certain design criteria;
4. Mobile homes only within mobile home parks;
5. Duplexes and quadplexes;
6. Townhomes;
7. Residential Planned Developments; and,
8. Supporting community services such as schools, houses of worship, parks, and community centers.

Analysis of Consistency with Policy 1.2.c: The proposed preliminary plat includes lots for single family detached residential units which are a permitted use within the Moderate Density Future Land Use Designation.

Objective 1.7: Recreation

The City shall designate a Recreation land use category for all publicly or privately owned recreational lands. In order to provide the opportunity for recreation activities, and recreational uses may be allowed in any land use category provided such uses are compatible with adjacent land uses and are consistent with this Comprehensive Plan.

Policy 1.7.c: Recreation uses, such as neighborhood parks or commercial recreation, shall be allowed in other land use categories other than the Recreation land use category when compatible with adjacent land uses and land use categories.

Policy 1.7.d: Publicly owned recreation uses shall be limited to an intensity of less than or equal to 0.25 floor area ratio while privately owned recreation uses within this land use category shall be limited to less than or equal to 0.05 floor area ratio.

Analysis of Consistency with Objective 1.7 and Policies 1.7.c and 1.7.d: A portion of the subject property has a Future Land Use Designation of Recreation, which allows for recreation uses such as neighborhood parks. The floor area ratio maximum would be .05 FAR, as the proposed recreational features associated with the stormwater facilities are private.

Objective 5.1: Natural features: The City shall coordinate Future Land Use designations with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.a: Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Policy 5.1.b: Soils: The City shall ensure soil protection and intervention measures are included in the development review process.

Policy 5.1.c: Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d: Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Policy 5.1.e: Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Analysis of Consistency with Objective 5.1 and Policies 5.1.a – e: The subject property has historically been used agricultural operations such as silviculture. The subject property includes an approximate .64 acre wetland area. Other than gopher tortoises there are no known listed plant or animal species located on the property. If any regulated plant or animal species is identified during development, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and the Land Development Regulations.

Objective 5.2: Availability of facilities and services: All new development shall be planned and constructed concurrently with the availability of facilities and services necessary for the development.

Analysis of Consistency with Objective 5.2: The proposed preliminary plat has been reviewed for its impacts to all public facilities monitored for concurrency, including parks and education facilities. A complete analysis of these impacts can be found in the "Public Facilities Impact" section of this Report.

GOAL 9: Water and Wastewater Service:

The City will ensure that new development within the corporate limits, where potable water and wastewater service are available, as defined in Policy 1.2.a and Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the Comprehensive Plan, shall connect to the City of Alachua's potable water and wastewater system.

Policy 9.2: Any new residential subdivision within the corporate limits, where potable water service is available, as defined in Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within either a Residential or Agriculture Future Land Use Map Designation shall connect to the City of Alachua's potable water system. Any new residential subdivision within the corporate limits, where wastewater service is available, as defined in Policy 1.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within a Residential Future Land Use Map Designation shall connect to the City of Alachua's wastewater system.

Analysis of Consistency with Goal 9 and Policy 9.2: Potable water is available to the site, as defined in Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan.

Housing Element

Policy 1.1.a: The City shall encourage development of a variety of housing types including conventional single family homes, accessory dwelling units, multi-family units, group homes, assisted living facilities, foster care facilities, mobile homes and manufactured housing, and shall ensure that appropriate land use designations and zoning districts exist to accommodate each type.

Analysis of Consistency with Policy 1.1.a: This project would support additional housing within the City, thereby furthering Policy 1.1.a.

Recreation Element

Policy 1.2.b: The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

Analysis of Consistency with Policy 1.2.b: An analysis of the impacts to recreation facilities has been provided within this report.

Transportation Element

Objective 1.1: Level of Service: The City shall establish a safe, convenient and efficient level of service standard for all motorized and non-motorized transportation systems.

Analysis of Consistency with Objective 1.1: An analysis of the impacts to transportation facilities has been provided within this report. There are no transportation facilities that

would be deficient as a result of this application.

Policy 1.4.b The City shall require any commercial, industrial, or residential development which must obtain site plan or subdivision approval to provide a sidewalk along the frontage of any collector street or arterial street when a sidewalk is not present along the frontage of the street. A sidewalk shall not be required if a sidewalk does not exist within 2,640 feet of the property on the same side of the collector or arterial street.

Analysis of Consistency with Policy 1.4.b: The proposed preliminary plat shows connections to the proposed Tara Baywood and Tara Forest East projects. There are no collector or arterial streets associated with this plat.

Community Facilities Element

Policy 1.2.a: The City shall establish a Community Wastewater Service Area, which includes all areas where wastewater service is available. Wastewater service shall be deemed available if:

1. A gravity water main exists within 100 feet of the property line of any lot with a residential land use category or an existing single family residence and wastewater service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. Gravity wastewater main exists with 500 feet of the property line of any proposed residential subdivision consisting of 5 units or less and the gravity wastewater system is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A gravity wastewater main, wastewater pumping station, or force main exists within 2,640 feet of the property line of any proposed residential subdivision comprised of more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and the gravity wastewater system, wastewater pumping station, or force main is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 1.2.a: The subject property is located within the wastewater service area, and any future development on the subject property will be required to connect to a wastewater system. The proposed preliminary plat includes an area for a future lift station.

Policy 2.1.a: The City hereby establishes the following level of service standards for solid waste disposal facilities:

FACILITY TYPE	LEVEL OF SERVICE STANDARD
Solid Waste Landfill	.73 tons per capita per year

Analysis of Consistency with Objective 2.1.a: An analysis of the impacts to solid waste facilities has been provided within this report.

Policy 4.1.b: The City shall establish a Community Potable Water Service Area, which includes all areas where potable water service is available. Water service shall be deemed available if:

1. A water main exists within 100 feet of any lot within a residential land use category or an existing single family residence water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. A water main exists within 500 feet of any proposed residential subdivision consisting of 5 units or less and water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A water main exists within 2,640 feet of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 4.1.b: The subject property is located within the potable water service area, and any future development on the subject property will be required to connect to a potable water system.

Conservation and Open Space Element

OBJECTIVE 1.3: Listed Species

The City shall protect species listed by State and Federal agencies as endangered, threatened or of special concern, and their habitats.

Policy 1.3.a: The City shall ensure that its ordinances, regulations and policies protect listed species and their habitats.

Policy 1.3.b: The City shall utilize the development review process, land acquisition programs, environmental regulatory partnerships, stewardship programs and public education to protect listed species

and their habitat, and prevent extinction of or reduction in populations of listed species.

Policy 1.3.c: The City shall obtain data from the Florida Fish and Wildlife Conservation Commission, Alachua County Environmental Protection Department, Florida Department of Environmental Protection, to maintain a periodically updated inventory of listed species and habitats located within City limits or immediately adjacent to City limits. The City will use the Florida Natural Areas Inventory as a base inventory.

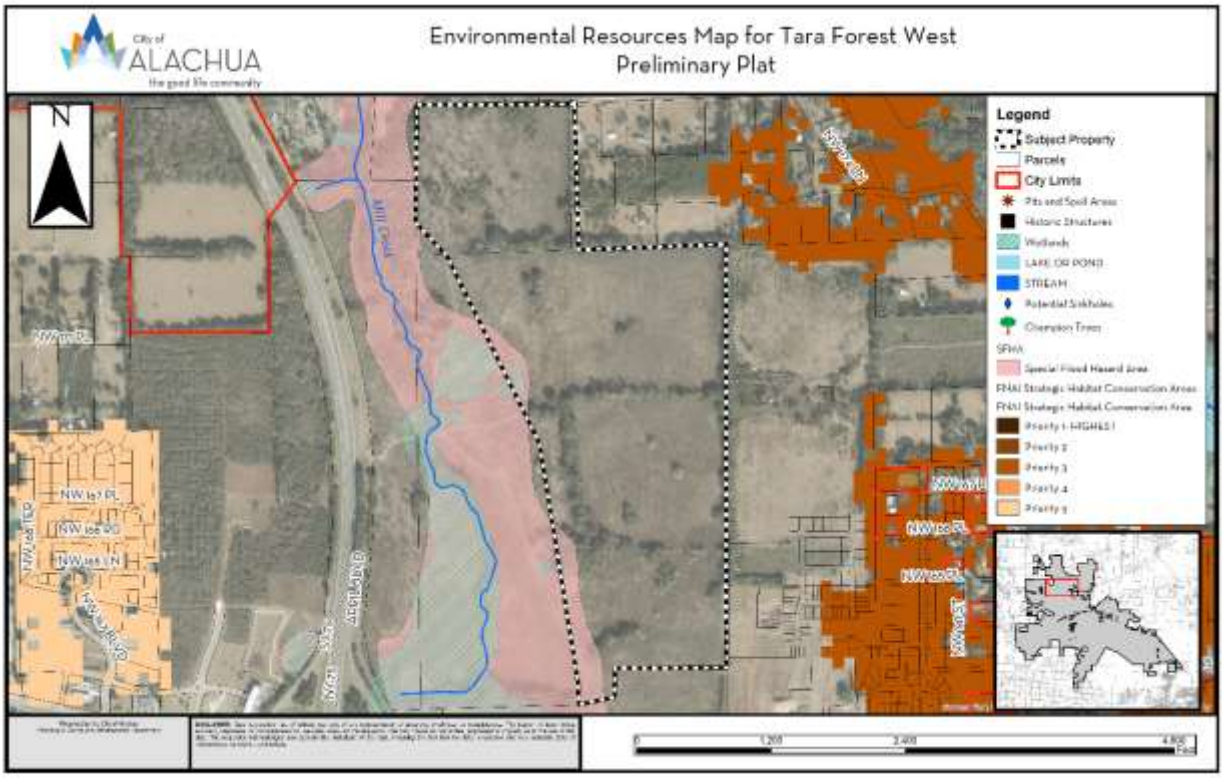
Policy 1.3.d: The City shall require prior to development approval, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The inventory shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. De minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Policy 1.3.e: The City's land use designations shall provide for the protection of threatened and endangered species.

Analysis of Consistency with Objective 1.3 and Policies 1.3.a – e:

An environmental conditions and site suitability analysis has been provided separately in this report. Future development of the site must comply with the environmental protections established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Objective 1.10: Wetlands



The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.

Analysis of Consistency with Objective 1.10:

There is an approximate .64-acre area of wetlands located on the subject property. Wetland separation requirements as outlined in Goals, Objectives, and Policies of the City's Comprehensive Plan have been adhered to. The applicant will be required to meet the applicable requirements of Alachua County as well.

ENVIRONMENTAL CONDITIONS & SITE SUITIBILITY ANALYSIS

Map 2. Environmental Features

Wetlands

According to the best available data, there are wetland areas located near the western boundary of the subject property.

Evaluation: Applicable standards in the City's Comprehensive Plan, Land Development Regulations, and Suwannee River Water Management District (SRWMD) regulations would apply to those areas identified as wetlands. The applicant will be required to obtain all applicable permits required related to wetlands and wetland buffers. The preliminary plat shows separation requirements from these wetland areas that meet the City of Alachua Comprehensive Plan Standards.

Strategic Ecosystems

Strategic Ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation: The subject property is not located within or adjacent to a Strategic Ecosystem, therefore, the development will have no impact upon any Strategic Ecosystem(s) identified within the ecological inventory report.

Regulated Plant & Animal Species

The subject property is not known to contain any species identified as endangered, threatened, or of special concern, other than those described below. The Florida Natural Areas Inventory (FNAI) has identified areas throughout the State of Florida which may contain good quality natural communities. This data layer is known as the Potential Natural Areas (PNA) data layer, and identifies privately owned lands that are not managed or listed for conservation purposes. These areas were delineated by FNAI scientific staff through interpretation of natural vegetation from 1988-1993 FDOT aerial photographs and from input received during Regional Ecological Workshops held for each regional planning council. These workshops were attended by experts familiar with natural areas in the region. Potential Natural Areas were assigned ranks of Priority 1 through Priority 5 based on size, perceived quality, and type of natural community present. The areas included in Priority 5 are exceptions to the above criteria. These areas were identified through the same process of aerial photographic interpretation and regional workshops as the PNA 1 through 4 ranked sites, but do not meet the standard criteria.

Evaluation: An environmental assessment completed by Creative Environmental Solutions, Inc was submitted with the preliminary plat application. The only listed plant or animal species identified on site were gopher tortoises. The report indicates that there are approximately 7 gopher tortoise burrows on site. A condition has been added that will require 100% gopher tortoise surveys for any final plat submitted for this project.

Soil Survey

Each soil type found on the subject property is identified below. The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff). There are four hydrologic groups: A, B, C, and D. “Group A” soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. “Group D” soils have very lower infiltration rates and therefore a higher runoff potential.

There are 14 soil types found on the subject property:

Soil Type	Hydrologic Group	Drainage Class	Dwellings without basements	% of Subject Property (may not total to 100% due to rounding)
Arredondo fine sand, 0 to 5 percent slopes	A	Well drained	Not limited	60.7
Fort Meade fine sand, 0 to 5 percent slopes	A	Well drained	Not limited	6.9
Millhopper sand, 0 to 5 percent slopes	A	Moderately well drained	Not limited	12.3
Lochloosa fine sand, 2 to 5 percent slopes	A	Somewhat poorly drained	Not limited	6.9
Kendrick sand, 2 to 5 percent slopes	B	Well drained	Not limited	4.9
Norfolk loamy fine sand, 2 to 5 percent slopes	B	Well drained	Not limited	7.5
Gainesville sand, 0 to 5 percent slopes	A	Well drained	Not limited	14.8
Pits and Dumps	NA	NA	Not rated	16.7
Arredondo fine sand, 5 to 8 percent slopes	A	Well drained	Not limited	12.7
Lochloosa fine sand, 5 to 8 percent slopes	B	Somewhat poorly drained	Not limited	8.2
Kendrick sand, 5 to 8 percent slopes	B	Well drained	Not limited	28.5
Blichton sand, 2 to 5 percent slopes	C/D	Poorly drained	Very limited	1.4
Bivans sand, 5 to 8 percent slopes	C/D	Poorly drained	Very limited	2.1
Norfolk loamy fine sand, 5 to 8 percent slopes	B	Well drained	Not limited	14.2

Evaluation: The majority of the area proposed for single family lots do not pose significant limitations for construction of single-family homes without basements. There is one small area (2.1 acres) that does pose significant limitations and will require further assessment at time of Construction Plan submittal for this phase.

Flood Potential

Panels 12001C0120D of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated June 16, 2006 indicates that the subject property contains areas with Flood Zone "X" (areas determined to be outside of the 500-year floodplain) and Flood Zone "A" (areas determined to be inside the 500-year floodplain with no base flood elevations provided) designations.

Evaluation: The floodplain hazard areas (Zone "A") are located along the western boundary of the subject property. Any development within the floodplain hazard area will be required to meet the standards set forth in Section 6.9 of the City's LDRs.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations. The subject property is located within an area where sinkholes may potentially allow hydrologic access to the Floridan Aquifer System, however, best available data indicates that no sinkholes or known indicators of sinkhole activity are located on the subject property.

Evaluation: GIS data available from Alachua County indicated one potential karst sensitive area on site. Further geotechnical investigation by GSE Engineering & Consulting, Inc. on behalf of the applicant indicates that this area had sinkholes in the past, but that there is no active ground loss in other areas of the site.

Wellfield Protection Zone

Policy 7.2.1 of the Future Land Use Element of the Comprehensive Plan establishes a 500 foot radial buffer around city-owned potable water well.

Evaluation: The subject property is not currently located within a City of Alachua wellhead protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the Comprehensive Plan, therefore, there are no issues related to wellfield protection.

Historic Structures and Markers

The subject property does not contain any historic structures or markers as determined by the State of Florida and the Alachua County Historic Resources Inventory.

Evaluation: The subject property does not contain any historic structures or markers as determined by the State of Florida and the Alachua County Historic Resources Inventor, therefore, no issues related to historic structures or markers.

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

SECTION 2.4.10(G)(3)(e), PRELIMINARY PLAT STANDARDS

Section 2.4.10(G)(3)(e) of the City's Land Development Regulations (LDRs) establishes the standards with which all major subdivision preliminary plats must be found to be compliant. The application has been reviewed for compliance with the standards of Section 2.4.10(G) (3) (e.) An evaluation and findings of the application's compliance with the applicable standards of Section 2.4.10(G)(3)(e) is provided below.

2.4.10(G)(3)(e) Subdivision preliminary plat standards. A subdivision preliminary plat shall be approved upon a finding the application complies with the standards in Article 7, Subdivision

Standards, all other relevant provisions of these LDRs, and all other relevant City ordinances and regulations.

Evaluation & Findings: The application has been reviewed for and is found to be in compliance with the applicable standards of Article 7, Subdivision Standards, including standards related to block length, lot arrangement, dimensions and design, and street arrangement.

PUBLIC FACILITIES IMPACT

The analysis of each public facility provided below represents an analysis of the impacts generated by the proposed Preliminary Plat- 523 single family dwelling units.

At present, the total impacts generated by the amendment are acceptable and are not anticipated to degrade the Level of Service (LOS) of any public facility. If development is proposed in the future, the applicant will be required to provide a comprehensive analysis of the impacts generated by such development upon public facilities. Facility capacity must be available to support the proposed development prior to the issuance of a final development order.

Per Section 2.4.14, preliminary plats are not preliminary development orders. Prior to any preliminary development order, the applicant will need to demonstrate how any deficiencies will be addressed. No final development order can be issued if the development would result in a deficiency for any public facility monitored for concurrency.

Traffic Impact

Table 3. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2,3]	Segment Description	Lanes	Functional Classification	Area Type	LOS
5 (107)	US 441 (from SR 235 to I-75)	4/D	Principle Arterial	Urban Trans	D

1 *Source: City of Alachua Comprehensive Plan, Traffic Circulation Element.*

2 *For developments generating 1,000 trips or greater, affected roadway segments are identified as all those wholly or partially located within · mile of the development's ingress/egress, or to the nearest intersecting major street, whichever is greater, and all roadway segments for which the proposed development's impacts are 5% or greater on the Maximum Service Volume (MSV) of the roadway [Section 2.4.14(H)(2)(b) of the LDRs].*

3 *FDOT roadway segment number shown in parenthesis. For the purposes of concurrency management, COA Comprehensive Plan segments that make up a portion of a larger FDOT roadway segment will be evaluated together when determining post development roadway capacity*

Table 4. Potential Trip Generation

	Land Use	AADT (Enter/Exit)	AM Peak Hour (Enter/Exit)	PM Peak Hour (Enter/Exit)
Tara Forest East 4 S/D Preliminary Plat	Residential [1]	4,932 (2,466/2,466)	397 (103/294)	492 (314/178)
Potential Trips		**4,932 (2,466/2,466)**	**397 (103/294)**	**492 (314/178)**

1 ITE Code 210: AADDT= 9.43 trips/ unit = 523 x 9.43 (50% enter/ 50% exit); PM Peak = .94 trips/ unit = 523 x .94 (64% enter / 36% exit); AM Peak = .76 trips/ unit = 523 x .76 = 87 (26% enter/ 74 % exit)

Table 5. Potential Impact of Affected Comprehensive Plan Roadway Segments

Traffic System Category	US 441 (from SR 235 to I-75)[1]
Maximum Service Volume[2]	39,000
Existing Traffic[3]	25,096
Reserved Trips[4]	3,107
Available Capacity[4]	10,797
Potential Impact Generated by Proposed Preliminary Plat[5]	4,932
Residual Capacity after Proposed Preliminary Plat[6]	**5,865**
PM Peak Hour Traffic Analysis	**US 441 (from SR 235 to I-75)[1]**
Maximum Service Volume[2]	3,510
Existing Traffic[3]	2,198
Reserved Trips[4]	268
Available Capacity[4]	1,044
Potential Impact Generated by Proposed Preliminary Plat[5]	492
Residual Capacity after Proposed Preliminary Plat[6]	**552**

1 FDOT roadway segment number shown in parenthesis. For the purposes of concurrency management, COA Comprehensive Plan segments that make up a portion of a larger FDOT roadway segment will be evaluated together when determining post development roadway capacity.
2 AADT & Peak Hour MSVs calculated using LOSPLAN 2012. County Facilities reflect a 10 percent reduction in the MSV calculated within LOSPLAN 2012 as set forth in the Generalized Tables for AADT / Peak Hour Volumes, FDOT 2018 Q/LOS Handbook.
3 Florida Department of Transportation, District Two, Level of Service Reporting Tool , accessed April 14, 2022
4 Source: City of Alachua May 2024 Development Monitoring Report.
5 ITE Code 210: AADDT= 9.43 trips/ unit = 523 x 9.43 (50% enter/ 50% exit); PM Peak = .94 trips/ unit = 523 x .94 (64% enter / 36% exit); AM Peak = .76 trips/ unit = 523 x .76 (26% enter/ 74 % exit)
6 The application is for a PRELIMINARY Development Order. Concurrency will NOT be reserved.

Evaluation: As shown in Table 5, affected segment 5 will not be deficient after the proposed preliminary plat. Concurrency and impacts to the City's transportation network will be reevaluated when any application for a final development order (final plat).

Potable Water Impacts

Table 6. Potable Water Impacts

System Category	Gallons Per Day
Current Permitted Capacity*	2,300,000
Less Actual Potable Water Flows*	1,548,250
Reserved Capacity*	401,945
Potential Potable Water Demand from Proposed Amendment **	143,825
Residual Capacity	**205,980**
Percentage of Permitted Design Capacity Utilized	**91.04%**

Sources:
** City of Alachua September 2023 Development Monitoring Report*
***City of Alachua Comprehensive Plan Potable Water Level of Service of 275 gallons/du/ day x 523 units*

Evaluation: The proposed preliminary plat would increase the maximum potential demand from the development of the subject property by 143,825 gallons per day at build out. This analysis is based on the practicable development potential of 523 residential dwellings that would be permitted by the proposed preliminary plat. Concurrency and impacts to the City's utility systems will be reevaluated at the final plat review stage. Policy 4.1.c.3, of the Community Facilities Element of the City's Comprehensive Plan requires that no development orders be issued until additional capacity becomes available or funds to increase facility capacity are committed. The City is currently working on a new well-field project that has been funded and has initiated the process to increase permitted design capacity. It is anticipated that the proposed development will not adversely affect the Level of Service ("LOS") for potable water facilities, and the impacts are therefore acceptable.

Sanitary Sewer Impacts

Table 7. Sanitary Sewer Impacts

System Category	Gallons Per Day
Treatment Plant Current Permitted Capacity*	1,500,000
Less Actual Treatment Plant Flows*	764,000
Reserved Capacity*	376,009
Projected Potential Wastewater Demand from Proposed Amendment **	130,750
Residual Capacity	**441,276**
Percentage of Permitted Design Capacity Utilized	**84.71%**

Sources:
** City of Alachua May 2024 Development Monitoring Report*
***City of Alachua Comprehensive Plan Potable Water Level of Service of 250 gallons/du/ day x 523 units*

Evaluation: The proposed preliminary plat would increase the maximum potential demand from the development of the subject property by 130,750 gallons per day. This analysis is based on the practicable development potential of 523 residential dwellings that would be permitted by the proposed preliminary plat. Concurrency and impacts to the City's utility systems will be reevaluated at the final plat review stage. It is anticipated that the proposed development will not adversely

affect the Level of Service ("LOS") for sanitary sewer facilities, and the impacts are therefore acceptable.

Recreational Impacts

Table 8a. Recreational Impacts

System Category	Acreage
Existing City of Alachua Recreation Acreage[1]	135.48
Acreage Required to Serve Existing Population[2]	55.08
Reserved Capacity[1]	10.83
Potential Demand Generated by Development[3]	6.75
Residual Recreational Capacity After Impacts	**62.83**

Sources:
1 *City of Alachua May 2024 Development Monitoring Report.*
2 *Bureau of Economic & Business Research, University of Florida, Estimates of Population (2021); Policy 1.2.b, Recreation Element; Policy 1.2.b, Recreation Element (Formula: 10,756 persons / [5 acres/1,000 persons])*
3 *US Census Bureau; Policy 1.2.b, Recreation Element (Formula: 2.5 persons per dwelling x 523 dwellings / [5 acres/1,000 persons])*

Table 8b. Improved Passive Park Space Analysis

Minimum Improved Passive Park Space Required to Serve Existing Population & Reserved Capacity[1]	13.18 acres
Acreage Required to Serve Demand Generated by Development[2]	1.35 acres
Total Area Required to Serve Existing Population, Reserved Capacity, & Demand Generated by Development	14.53 acres
Existing Improved Passive Park Space[1]	34.82 acres
Improved, Passive Park Space Utilized by Existing Population, Reserved Capacity, & Demand Generated by Development[3]	**41.73 %**

1 *Source: City of Alachua May 2024 Development Monitoring Report.*
2 *Formula: Recreation Demand Generated by Development (6.75 acres) x 20%.*
3 *Formula: Total Improved Passive Park Space / (Acreage Required to Serve Existing Population + Reserved Capacity + Acreage Required to Serve Demand Generated by Development.)*

Evaluation: The proposed preliminary plat would increase the maximum potential demand from the development of the subject property by 6.75 recreational acres, and for improved passive park space by 1.35 acres. Concurrency and impacts to the City's recreation system will be reevaluated at the final plat review stage. It is anticipated that the proposed development will not adversely affect the Level of Service ("LOS") of recreational facilities; therefore, the impacts are acceptable.

Solid Waste Impacts

Table 9. Solid Waste Impacts

System Category	Lbs Per Day	Tons Per Year
Existing Demand[1]	44,060.00	8,040.95
Reserved Capacity[2]	47,884.21	8,738.87
Projected Solid Waste Demand from Application[3]	5,397.36	985.02
New River Solid Waste Facility Capacity[4]	**50 years**	

Sources:
1 *University of Florida, Bureau of Economic & Business Research, Estimates of Population by County and City in Florida, April 1, 2023; Policy 2.1.a, CFNGAR Element (Formula: 10,756 persons x 0.73 tons per year)*
2 *City of Alachua May 2024 Development Monitoring Report*
3 *Policy 2.1.a, CFNGAR Element (Formula: .73 tons x 523 dwellings/yr per capita)*
4 *New River Solid Waste Facility, April 2024*

Evaluation: The proposed preliminary plat would increase the maximum potential demand from the development of the subject property by 985.02 tons per year. Concurrency and impacts to the solid waste system will be reevaluated at the final plat review stage. It is anticipated that the proposed amendment will not adversely affect the Level of Service ("LOS") of solid waste facilities; therefore, the impacts are acceptable.

Public School Impact

The School Board of Alachua County (SBAC) Final determination is required prior to issuance of any final development order in accordance with the City's Comprehensive Plan, specifically Policies 1.1.b, 1.1.c, 1.1.e, and 1.1.f of the Public School Facilities Element. A preliminary capacity determination was issued by SBAC that indicated that capacity was available to meet student station demand created by this development. At this time, it is anticipated that the proposed preliminary plat will result in a demand of 141 total student stations (63 for elementary, 31 for middle, and 47 for high school).

Any future determination must find that the students generated by the proposed preliminary plat can be reasonably accommodated for the five, ten, and twenty year planning periods at the elementary, middle, and high school levels.

Upon submittal of any final subdivision plat, the development will be subject to a concurrency review and determination of the availability of school capacity at the time of such review.

TARA FOREST, LLC
(TARA FOREST WEST SUBDIVISION)
PRELIMINARY PLAT
STAFF REPORT

CONDITIONS:

1. If any development is proposed to take place within a Special Flood Hazard Area, base flood elevations will be required to be established in accordance with Section 6.9.4 (E)(1)(b) at time of Construction Plan or building permit application.
2. Prior to the Issuance of a Certificate of Completion for Improvements or release of the Plat for Phase 1 of the Tara Forest West subdivision, an improved roadway connection to US Highway 441 through the project currently known as Tara Phoenicia shall be completed and approved by the City. The Plat for Phase 1 shall not be released or recorded until improved roadway connection to US Highway 441 has been completed.
3. Concurrent with the submittal of a final plat application for Phase 3 of the Tara Forest West subdivision, the applicant shall provide an intermediate traffic impact study which is approved by the City and that analyses the operations and safety of the existing traffic pattern. The developer shall make any improvements required by the City, at the City's sole discretion, at Developer's expense, associated with the proportionate share of any deficiencies identified in the revised traffic impact analysis. The Final Plat for Phase 3 shall not be released or recorded until any improvements noted in the intermediate traffic impact study have been completed and approved by the appropriate jurisdiction.
4. Concurrent with the submittal of any application for construction plans that include Phase 4 of the Tara Forest West subdivision, a revised traffic impact analysis report shall be provided to and accepted by the City for review. This study must include the second connection to US 441 for the project and include an intersection control evaluation (ICE) for the proposed connection. The developer shall make any improvements required by the City, at the City's sole discretion, at Developer's expense, associated with the proportionate share of any deficiencies identified in the revised traffic impact analysis.
5. Prior to the Issuance of a Certificate of Completion for Improvements or release of the Plat for Phase 4 of the Tara Forest West subdivision, a second connection to US Highway 441 through the project currently known as Tara Phoenicia shall be completed. The Plat for Phase 4 shall not be released or recorded until the second improved roadway connection to US Highway 441 has been completed.
6. Traffic calming measures shall be provided approximately every 500 feet and at connections to existing subdivisions. Traffic calming measures shall also be provided at connections to subdivisions for which a preliminary plat has been approved. Traffic calming measures include, but are not limited to traffic islands, speed humps, speed bumps, speed tables, or 4 way controlled intersections.
7. A 100% gopher tortoise survey shall be completed for any area subject to development in any final plat submitted. The survey shall be valid for a period of three years from date of report and must include a list of all local, state, and federal permits required for relocation of any gopher tortoises encountered on site.

8. Construction Plans that include any area found to have Blichton sand (2 to 5 percent slopes) or Bivans sand (5 to 8 percent slopes) shall address remediation and design considerations for these soils.
9. Modifications to these conditions shall require the approvals necessary for the approval of preliminary plats, including recommendation by the Planning and Zoning Board and approval by the City Commission.
10. The applicant acknowledges and agrees that the applicant and owner will obtain all other applicable local, state, and federal permits before the commencement of site work.
11. A recorded access easement as described in the submitted sketch shall be provided prior to any Planning and Zoning hearing.
12. The applicant acknowledges and agrees that Conditions 1-11 as stated above do not inordinately burden the land and shall be binding upon the property owners, including any subsequent property owners, successors, or assigns.

PRELIMINARY PLAT
STAFF REPORT

SUPPORTING APPLICATION MATERIALS SUBMITTED BY CITY STAFF TO THE PLANNING AND ZONING BOARD

Independent Review of the Traffic Impact Study Update for the Tara Forest West & Tara Phoenicia Stage 1 Development Project for the City of Alachua, Florida; Prepared by Volkert, Inc., May 2024

At the request of the City of Alachua, FL, Planning and Community Development Department, Volkert, Inc., conducted an independent review of the Traffic Impact Study Update for the Tara Forest West & Tara Phoenicia Stage 1 Development Project. This project is located on the north side of US 441 (Florida Department of Transportation State Highway) and west NW 147th Drive (City of Alachua Road). The Traffic Impact Study Update was prepared by Hagen Consulting Services, LLC in May 2024.

The Tara Forest West & Tara Phoenicia Stage 1 Development Traffic Impact Study Update is an update of the original traffic study for this project that was prepared by Buckholz Traffic in 2021. The Buckholz Traffic Study had the vast majority of project traffic accessing US 441 via the existing traffic signal at US 441/NW 147th Drive and at a median opening on US 441 that is west of NW 147th Drive. Traffic from Tara Forest West & Tara Phoenicia (TFWTP) would access NW 147th Drive via NW 157th Lane. This access management plan was very efficient and did not require any additional traffic signalization on US 441 for project traffic. Between the completion of the Buckholz Traffic Study in 2021 and the updated traffic impact study in 2024, property ownership along NW 157th Lane had changed. This change in ownership made it no longer practical for the TFWTP project to use NW 157th Lane to access NW 147th Drive and the existing traffic signal on US 441. In addition, the City of Alachua, in its long-range transportation plan, anticipates construction of the Peggy Road Connector project. This project will construct a new traffic signalized intersection on US 441 just west of the TFWTP project, at the location that was planned for the never constructed Super Walmart project access road on the south side of US 441. These changes resulted in a significant challenge for the access management plan for the TFWTP project and will require significant coordination with the Florida Department of Transportation (FDOT) District 2 Office.

The Tara Forest West portion of the project is residential, and the Tara Phoenicia portion of the project is commercial. In order to proceed with the TFWTP project, the developer decided to break the TFWTP project into two stages. Stage 1 will consist of only the first three residential phases planned for completion in 2025, 2027 and 2029 in Tara Forest West. Stage 2 will construct the remaining residential phases in Tara Forest West and the commercial development in Tara Phoenicia. Stage 1 will have one street at a median opening on US 441 that aligns with the east portion of Tara Forest West (east connection). This median opening on US 441 will be a directional median opening (allows right in/right out/left in and prohibits left out). Traffic in Stage 1 that exits onto US 441 and is headed east will have to travel a short distance west on US 441 to the next median opening and make a U-Turn to head east. A new traffic study will be required in conjunction with Stage 2. This new traffic study will address the issue with the concept of having the proposed Peggy Road/US 441 traffic signal also provide access to the TFWTP project. The Stage 1 TFWTP project contains 269 residential lots that will generate 2,508 daily trips with 183

AM peak hour trips (46 entering, 137 exiting) and 252 PM peak hour trips (159 entering, 93 exiting). The Stage 1 TFWTP project buildout year is 2029.

The independent review of the Traffic Impact Study Update (Study) will include the following:

- Review of the Introduction.
- Review of the Background of this Report.
- Review of the Existing Conditions.
- Review of Trip Generation.
- Review of Access Changes.
- Review of Phasing of the Development.
- Review of Intersection Level of Service (LOS) Analysis.
- Review of Stage 1 – Analysis of Operations.
- Review of Conclusions and Recommendations.
- Listing of any additional Volkert Comments/Recommendations.

Review of the TFWTP Stage 1 Development Project Traffic Impact Study Update

Introduction

This section of the Study provides a description of the project, its location (shown on Figure 1) and states the three purposes of the Study. The three purposes of the Study are:

1. Update the trip generation estimates for the project from the original Buckholz Study in 2021 (utilized the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 10th Edition)* to the new ITE *Trip Generation Manual, 11th Edition.*
2. Address changes in the proposed access management (ingress/egress to/from US 441) for the project.
3. Present a plan for development of the project.

Volkert Comments/Suggestions:

1. For reference, the previous Buckholz Traffic Study should be included in the Study Appendix.
2. At the end of this section, it references that the Master Phasing Plan drawing for Tara Forest West is included in Appendix A. On this master plan drawing are three streets that head south to US 441. However, the drawing does not show how these three streets become one street that becomes the direct connection to US 441 (east connection). Changes to this drawing, or an additional drawing, are needed to clarify how these three streets become one street and access US 441.

Background of this Report

This section of the Study describes how the Study proceeded to its current status. An updated Study was submitted to the City in December 2023. The City of Alachua and the Florida Department of Transportation requested the following modifications to the submitted Study:

1. Provide a higher level of commercial development in Tara Phoenicia that would increase the number of trips generated (provide higher intensity land uses that would be anticipated).
2. Recommend that the new traffic signal that was originally proposed on US 441 for the later stages of the TFWTP project (west connection) be located at the proposed Peggy Road connector intersection on US 441 that the City of Alachua and FDOT are proposing.

Given that the Peggy Road connector project will require several years to become a reality, the developer of TFWTP decided to separate the project into two Stages. Stage 1 will consist of just the first three phases of Tara Forest West (buildout year of 2029). Stage 2 will consist of the final three phases of Tara Forest West and Tara Phoenicia. This staged approach will allow the project to start development while the details of the Peggy Road connector intersection on US 441 are finalized. An additional traffic study will be required before Stage 2 of the project can proceed. Volkert concurs with the information in this section and has no comments or suggestions.

Existing Conditions

This section of the Study describes the existing conditions on US 441 in the vicinity of the TFWTP project. Volkert concurs with the information in this section and has no comments or suggestions.

Trip Generation

This section of the Study documents the trip generation for the Tara Forest West residential portion of the project at full buildout (538 units). The trip generation was calculated based on the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition.* This document is accepted by transportation engineering and planning agencies nationwide as the reliable source for estimating trips generated by various types of land uses. ITE Land Use Code 210, Single Family Detached Housing, was utilized to calculate the trip generation. The trip generation for the Tara Phoenicia portion of the project was not calculated because the type of commercial land use has not been determined at this point in the development of the project.

At full buildout, the Tara Forest West residential portion of the project will generate approximately 4,745 daily trips. The AM peak hour trip generation is estimated to be 344 AM peak hour trips (86 inbound/258 outbound). The PM peak hour trip generation is estimated to be 483 PM peak hour trips (304 inbound/179 outbound). The trip generation was correctly calculated and is shown in Table 1. Volkert concurs with the information in this section and has no comments or suggestions.

Access Changes

This section of the Study describes the access/roadway changes on US 441 needed to accommodate the TFWTP project. As was stated previously, the original access plan in the Buckholz Study was to utilize the existing traffic signal at US 441/NW 147th Drive via NW 157th Lane and a stop-controlled access at an existing median opening on US 441. This median opening on US 441 would be converted to a directional median opening. Since it was no longer feasible for the project to access NW 157th Lane, the access plan for the originally submitted TFWTP Updated Traffic Study was to utilize two direct connections onto US 441. As was previously stated, this concept was modified to (1) a direct connection onto US 441 for Stage 1 (east

connection), and (2) incorporate the planned US 441/Peggy Road connector traffic signal as the second access point for Stage 2. In addition, indirect minor connections will be available through the approved Tara Forest East and Tara Baywood developments.

Volkert Comments/Suggestions:

1. The following need to be clearly stated in the Study:
    a. All traffic that exits the east connection and is headed east on US 441 has to first travel west on US 441 to the next median opening and then make a U-turn at that median opening to travel east on US 441.
    b. The existing median opening on US 441 just west of the proposed east connection will be closed.
    c. The U-turn maneuver will occur at the second existing median opening that is west of the proposed east connection. This median opening is also the general location of the proposed Peggy Road signalized intersection of US 441.
2. At the median opening where the U-turn maneuver will take place, perform the following:
    a. For the AM peak hour, determine the length of the left turn lane and the standard deceleration taper (the AM peak hour is the longest anticipated queue for this left turn lane).
    b. Will the existing left turn lane at this median opening have to be extended? If yes, by how much?
    c. If the left turn lane must be extended, the design has to satisfy the appropriate FDOT design standards.
    d. State how the traffic distribution for the AM peak hour was estimated.
3. A discussion on FDOT access management median opening spacing standards on US 441 for Stage 1 should be included in the Study. Does the access management plan for Stage 1 satisfy FDOT access management standards?
4. A right turn lane on US 441 at the east connection should be constructed. This right turn lane will improve traffic safety and capacity. The length of the right turn lane and the deceleration taper need to be determined using the FDOT Multimodal Access Management Guidebook.
5. Volkert highly recommends that an additional drawing(s) be added to the Study to clarify the proposed access management for the TFWTP project. This drawing(s) needs to show the following.
    a. The section of US 441 from NW 147th Drive (access to Lowes) to April Blvd.
    b. The existing median openings and the distances between the median openings along this section of US 441.
    c. Where NW 149th Terrace and NW 158th Lane intersect US 441. When reading the Study, it is assumed that the Stage 1 east connection from Tara Forest West to US 441 aligns with the existing median opening on US 441. This median opening will align with NW 149th Terrace and NW 158th Lane on the south side of US 441. Is this alignment correct? If yes, it needs be stated in the Study that the directional median opening on US 441 at the Tara Forest West east connection will need to be designed to accommodate (1) eastbound traffic on US 441 turning left into the Tara Forest West east connection, and (2) westbound traffic on US 441 turning left

into NW 149th Terrace and NW 158th Lane. If the proposed directional median opening on US 441 does not align with NW 149th Terrace and NW 158th Lane, this needs to be stated in the Study along with how these two streets will be accessed by westbound traffic on US 441.

d. Where the Stage 1 east connection from Tara Forest West is to be located on US 441.
e. The location on US 441 for the proposed Peggy Road/US 441 traffic signalized intersection.

6. A list of all the intersections and/or roadway modifications on US 441 for Stage 1 should be included in this section.
7. All drawings in the Study should be 8.5 x 11 inches.

Phasing of the Development

This section of the Study describes the proposed phasing of the Tara Forest West residential portion of the project. It needs to be noted that the incorporation of the US 441/Peggy Road connector traffic signal may change the phasing and/or access management of the project for later stages of development. Volkert concurs with the information in this section and has no comments or suggestions.

Intersection Level of Service (LOS) Analysis

This section of the Study documents the LOS for the PM peak hour at the intersection of the east connection from Tara Forest West at the directional median opening on US 441. The LOS was computed using the procedures outlined in the Transportation Research Board's *Highway Capacity Manual (HCM).* The 2025 traffic from the Buckholz traffic study was used along with the trips generated from Tara Forest West. In addition, a two percent annual traffic growth rate was utilized for traffic on US 441. The LOS was computed for the six development phases of the Tara Forest West project. All traffic from Tara Forest West was assumed to use this one direct connection.

The LOS analysis showed that the one direct connection to US 441 can satisfactorily accommodate the Tara Forest West Traffic for the first three phases of development. The LOS starts to break down (unacceptable LOS) with phase 4 and an additional connection from Tara Forest West to US 441 would be needed. However, by dividing the TFWTP project into two phases, only the first three phases are being considered for approval at this time. Therefore, the Stage 1 portion of the TFWTP project has acceptable LOS at the one direct connection onto US 441 at the directional median opening.

Volkert Comments/Suggestions:

1. An AM peak hour LOS analysis should be performed for this intersection.
2. Determine the length of the left turn lanes at the directional median opening. Turn lane lengths should be based on the expected queue length and standard deceleration taper length.

Stage 1 – Analysis of Operations

This section of the Study documents the Highway Capacity Analysis Summary for the PM peak hour for the east connection from Tara Forest West at the directional median opening on US 441. This is a stop-controlled intersection (no traffic signal). The HCM for stop controlled intersections is pessimistic in providing LOS for this type of intersection. The HCM analysis shows that the first three phases of the Tara Forest Development will operate at a satisfactory LOS.

Volkert Comments/Suggestions:

1. The results of the AM peak hour LOS analysis need to be added to this section.

Conclusions and Recommendations

This section of the Study lists the conclusions and recommendations for Stage 1 of the Tara Forest West project. These are as follows.

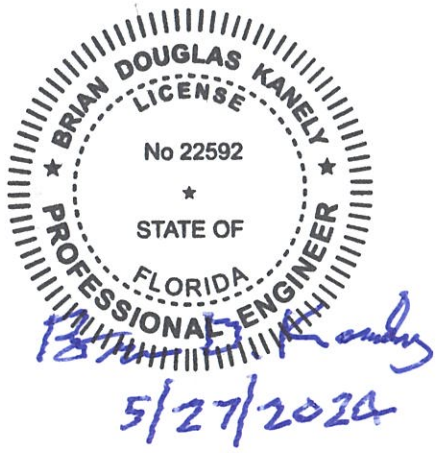
1. At ultimate buildout, the Tara Forest West residential project will generate 4,745 total trips. The AM peak hour will generate 344 trips; the PM peak hour will generate 483 trips.
2. For Stage 1, the Tara Forest West residential project will generate 2,508 total trips. The AM peak hour will generate 183 trips; the PM peak hour will generate 252 trips.
3. For Stage 1, the stop sign controlled directional median opening on US 441 at the east connection to Tara Forest West can accommodate project traffic.
4. The Study recommendation is to construct the first three phases of the Tara Forest West residential project with the east connection located at the directional median opening on US 441.

Volkert Comments/Suggestions:

1. A list of all the intersection and/or roadway modifications on US 441 for Stage 1 should be included in this section.

Additional Volkert Comments/Recommendations

1. It should be stated in the Study that US 441 has been field reviewed to guarantee that all the recommended intersection and roadway modifications can be constructed.
2. After an FDOT roadway connection permit has been approved and constructed, it can be difficult to modify it at a future time. The total access management plan for this project, Stage 1 and 2, should be conceptually described in the Study.
3. It should be stated in the Study that it is possible that at some time in the future, the U-turn maneuver on US 441 at the median opening west of the east connection may become problematic with respect to traffic safety and/or capacity. Stage 2 may be required to construct innovative intersection and/or roadway designs on US 441 to address this situation. An Intersection Control Evaluation (ICE) would be required and included in any future traffic studies.
4. The City of Alachua needs to closely coordinate this project with Alachua County to ensure neither agency is responsible for improvements associated with this project.
5. It Is important to keep in mind that this Study only impacts Stage 1 of the TFWTP project. It is essential that a new traffic study be prepared before any additional phases/Stage 2



of this project are approved. More than one additional traffic study for this project may be required as this project progresses to completion.

6. The future west connection for this project may be required to coordinate with and/or connect to the future Peggy Road Connector signalized intersection on US 441.
7. US 441 is an FDOT highway. It also serves as an alternate route for I-75 traffic when an incident closes a portion of I-75. The City of Alachua needs to closely coordinate with FDOT on any development projects that impact US 441 in the City of Alachua city limits.
8. Volkert has had the opportunity to perform independent reviews on numerous projects for the City of Alachua. All of these projects impact sections of US 441 from the south city limits (near the intersection of US 441/NW 43rd Street) to the north city limits (NW 188th Street). The TFWTP project discussed in this review impacts the section of US 441 between CR 235 by Alachua Elementary School to I-75. Eventually this section of US 441 will need modifications to address the traffic impacts from annual traffic growth on US 441 and from city approved developments along this section of US 441. Volkert recommends that the City of Alachua request FDOT to conduct a corridor study of US 441 through the City of Alachua. Numerous approved development projects will be impacting US 441 over the upcoming decade. Also, the planned Peggy Road connection at the old Walmart Super Center site will have significant impacts on US 441. A comprehensive approach to the US 441 corridor would be valuable to addressing traffic capacity and safety along US 441.

Volkert, Inc. appreciates the opportunity to assist the City of Alachua with this independent review of the Tara Forest West Tara Phoenicia project. Please contact me if you have any questions or need additional information.

RE: Project Assistance Team (PAT) Comments for Tara Forest West Preliminary Plat (PPP21-0005)

Dear Ms Peters:

On May 2, 2024, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Thursday, May 30, 2024. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time.

Please address the following insufficiencies:

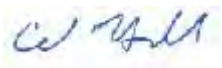
Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

E. Outside Review

a. Address all comments issued by Brian Kanely, P.E., of Volkert, Inc in his letter submitted May 12, 2024 and attached to this letter. These comments have also been provided to Hagen Consulting Services, LLC separately.

G. Informational



a. If any development is proposed to take place within a Special Flood Hazard Area, base flood elevations will be required to be established in accordance with Section 6.9.4 (E)(1)(b) at time of Construction Plan application.

b. Conditions will be proposed as part of any recommended approval. Subject to change, draft conditions can be found below:
    i. Prior to the Issuance of a Certificate of Completion for Improvements for Phase 1 of the Tara Forest subdivision, an improved roadway connection to US Highway 441 through the project currently known as Tara Phoenicia shall be completed.
    ii. Concurrent with the submittal of any application for construction plans that include Phase 4, a revised traffic impact analysis report shall be provided to the City for review. The developer shall make any improvements required, at Developer's expense, associated with the proportionate share of any deficiencies identified in the revised traffic impact analysis.
    iii. Prior to the Issuance of a Certificate of Completion for Improvements for Phase 4 of the Tara Forest subdivision, a second connection to US Highway 441 through the project currently known as Tara Phoenicia shall be made.
    iv. Traffic calming measures shall be provided approximately every 500 feet and at connections to existing or approved subdivisions. Traffic calming measures include, but are not limited to traffic islands, speed humps, speed bumps, speed tables, or 4 way controlled intersections.
    v. A 100% gopher tortoise survey shall be completed for any area subject to development in any final plat submitted. The survey shall be valid for a period of three years from date of report and must include a list of all local, state, and federal permits required for relocation of any gopher tortoises encountered on site.
    vi. Modifications to these conditions shall only be done in accordance with the original preliminary plat approval process.

New Comment: Zoning Exhibit cites Future Land Use Amendment Ordinance and displays Future Land Use Designations. Please see attached Ordinance and revise zoning exhibit accordingly.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

RE: Project Assistance Team (PAT) Comments for Tara Forest West Preliminary Plat (PPP21-0005)

Dear Ms Peters:

On May 2, 2024, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Tuesday, May 28, 2024. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time.

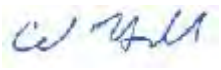
Please address the following insufficiencies:

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

E. Outside Review

a. Address all comments issued by Brian Kanely, P.E., of Volkert, Inc in his letter submitted May 12, 2024 and attached to this letter. These comments have also been provided to Hagen Consulting Services, LLC separately.



G. Informational

a. If any development is proposed to take place within a Special Flood Hazard Area, base flood elevations will be required to be established in accordance with Section 6.9.4 (E)(1)(b) at time of Construction Plan application.

b. Conditions will be proposed as part of any recommended approval. Subject to change, draft conditions can be found below:
    i. Prior to the Issuance of a Certificate of Completion for Improvements for Phase 1 of the Tara Forest subdivision, an improved roadway connection to US Highway 441 through the project currently known as Tara Phoenicia shall be completed. A sketch and legal description of this access area shall be provided with Construction Plans for Phase 1.
    ii. Concurrent with the submittal of any application for construction plans that include Phase 4, a revised traffic impact analysis report shall be provided to the City for review. The developer shall make any improvements required, at Developer's expense, associated with the proportionate share of any deficiencies identified in the revised traffic impact analysis.
    iii. Prior to the Issuance of a Certificate of Completion for Improvements for Phase 4 of the Tara Forest subdivision, a second connection to US Highway 441 through the project currently known as Tara Phoenicia shall be made.
    iv. Traffic calming measures shall be provided approximately every 500 feet and at connections to existing or approved subdivisions. Traffic calming measures include, but are not limited to traffic islands, speed humps, speed bumps, speed tables, or 4 way controlled intersections.
    v. A 100% gopher tortoise survey shall be completed for any area subject to development in any final plat submitted. The survey shall be valid for a period of three years from date of report and must include a list of all local, state, and federal permits required for relocation of any gopher tortoises encountered on site.
    vi. Modifications to these conditions shall only be done in accordance with the original preliminary plat approval process.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

DRAFT

Independent Review of the Traffic Impact Study Update for the Tara Forest West & Tara Phoenicia Stage 1 Development Project for the City of Alachua, Florida; Prepared by Volkert, Inc., May 2024

At the request of the City of Alachua, FL, Planning and Community Development Department, Volkert, Inc., conducted an independent review of the Traffic Impact Study Update for the Tara Forest West & Tara Phoenicia Stage 1 Development Project. This project is located on the north side of US 441 (Florida Department of Transportation State Highway) and west NW 147th Drive (City of Alachua Road). The Traffic Impact Study Update was prepared by Hagen Consulting Services, LLC in May 2024.

The Tara Forest West & Tara Phoenicia Stage 1 Development Traffic Impact Study Update is an update of the original traffic study for this project that was prepared by Buckholz Traffic in 2021. The Buckholz Traffic Study had the vast majority of project traffic accessing US 441 via the existing traffic signal at US 441/NW 147th Drive and at a median opening on US 441 that is west of NW 147th Drive. Traffic from Tara Forest West & Tara Phoenicia (TFWTP) would access NW 147th Drive via NW 157th Lane. This access management plan was very efficient and did not require any additional traffic signalization on US 441 for project traffic. Between the completion of the Buckholz Traffic Study in 2021 and the updated traffic impact study in 2024, property ownership along NW 157th Lane had changed. This change in ownership made it no longer practical for the TFWTP project to use NW 157th Lane to access NW 147th Drive and the existing traffic signal on US 441. In addition, the City of Alachua, in its long-range transportation plan, anticipates construction of the Peggy Road Connector project. This project will construct a new traffic signalized intersection on US 441 just west of the TFWTP project, at the location that was planned for the never constructed Super Walmart project access road on the south side of US 441. These changes resulted in a significant challenge for the access management plan for the TFWTP project and will require significant coordination with the Florida Department of Transportation (FDOT) District 2 Office.

The Tara Forest West portion of the project is residential, and the Tara Phoenicia portion of the project is commercial. In order to proceed with the TFWTP project, the developer decided to break the TFWTP project into two stages. Stage 1 will consist of only the first three residential phases planned for completion in 2025, 2027 and 2029 in Tara Forest West. Stage 2 will construct the remaining residential phases in Tara Forest West and the commercial development in Tara Phoenicia. Stage 1 will have one street at a median opening on US 441 that aligns with the east portion of Tara Forest West (east connection). This median opening on US 441 will be a directional median opening (allows right in/right out/left in and prohibits left out). Traffic in Stage 1 that exits onto US 441 and is headed east will have to travel a short distance west on US 441 to the next median opening and make a U-Turn to head east. A new traffic study will be required in conjunction with Stage 2. This new traffic study will address the issue with the concept of having the proposed Peggy Road/US 441 traffic signal also provide access to the TFWTP project. The Stage 1 TFWTP project contains 269 residential lots that will generate 2,508 daily trips with 183

AM peak hour trips (46 entering, 137 exiting) and 252 PM peak hour trips (159 entering, 93 exiting). The Stage 1 TFWTP project buildout year is 2029.

The independent review of the Traffic Impact Study Update will include the following:

- Review of the Introduction.
- Review of the Background of this Report.
- Review of the Existing Conditions.
- Review of Trip Generation.
- Review of Access Changes.
- Review of Phasing of the Development.
- Review of Intersection Level of Service (LOS) Analysis.
- Review of Stage 1 – Analysis of Operations.
- Review of Conclusions and Recommendations.
- Listing of any additional Volkert Comments/Recommendations.

Review of the TFWTP Stage 1 Development Project Traffic Impact Study Update

Introduction

This section of the Study provides a description of the project, its location (shown on Figure 1) and states the three purposes of the Traffic Study. The three purposes of the Traffic Study are:

1. Update the trip generation estimates for the project from the original Buckholz Study in 2021 (utilized the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 10th Edition)* to the new ITE *Trip Generation Manual, 11th Edition.*
2. Address changes in the proposed access management (ingress/egress to/from US 441) for the project.
3. Present a plan for development of the project.

Volkert Comments/Suggestions:

1. At the end of this section, it references that the Master Phasing Plan drawing for Tara Forest West is included in Appendix A. On this master plan drawing are three streets that head south to US 441. However, the drawing does not show how these three streets become one street that becomes the direct connection to US 441 (east connection). Changes to this drawing, or an additional drawing, is needed to clarify how these three streets become one street and access US 441.

Background of this Report

This section of the Study describes how the Study proceeded to its current status. An updated Study was submitted to the City in December 2023. The City of Alachua and the Florida Department of Transportation requested the following modifications to the submitted Study:

1. Provide a higher level of commercial development in Tara Phoenicia that would increase the number of trips generated (provide higher intensity land uses that would be anticipated).

2. Recommend that the new traffic signal that was originally proposed on US 441 for the later stages of the TFWTP project (west connection) be located at the proposed Peggy Road connector intersection on US 441 that the City of Alachua and FDOT are proposing.

Given that the Peggy Road connector project will require several years to become a reality, the developer of TFWTP decided to separate the project into two Stages. Stage 1 will consist of just the first three phases of Tara Forest West (buildout year of 2029). Stage 2 will consist of the final three phases of Tara Forest West and Tara Phoenicia. This staged approach will allow the project to start development while the details of the Peggy Road connector intersection on US 441 are finalized. An additional traffic study will be required before Stage 2 of the project can proceed. Volkert concurs with the information in this section and has no comments or suggestions.

Existing Conditions

This section of the Study describes the existing conditions on US 441 in the vicinity of the TFWTP project. Volkert concurs with the information in this section and has no comments or suggestions.

Trip Generation

This section of the Study documents the trip generation for the Tara Forest West residential portion of the project at full buildout (538 units). The trip generation was calculated based on the Institute of Transportation Engineers (ITE) *Trip Generation Manual, 11th Edition.* This document is accepted by transportation engineering and planning agencies nationwide as the reliable source for estimating trips generated by various types of land uses. ITE Land Use Code 210, Single Family Detached Housing, was utilized to calculate the trip generation. The trip generation for the Tara Phoenicia portion of the project was not calculated because the type of commercial land use has not been estimated at this point in the development of the project.

At full buildout, the Tara Forest West residential portion of the project will generate approximately 4,745 daily trips. The AM peak hour trip generation is estimated to be 344 AM peak hour trips (86 inbound/258 outbound). The PM peak hour trip generation is estimated to be 483 PM peak hour trips (304 inbound/179 outbound). The trip generation was correctly calculated and is shown in Table 1. Volkert concurs with the information in this section and has no comments or suggestions.

Access Changes

This section of the Study describes the access/roadway changes on US 441 needed to accommodate the TFWTP project. As was stated previously, the original access plan in the Buckholz Study was to utilize the existing traffic signal at US 441/NW 147th Drive via NW 157th Lane and a stop-controlled access at an existing median opening on US 441. This median opening on US 441 would be converted to a directional median opening. The access plan for the originally submitted TFWTP Updated Traffic Study was to utilize two direct connections onto US 441. As was previously stated, this concept was modified to (1) a direct connection onto US 441 for Stage 1 (east connection), and (2) incorporate the planned US 441/Peggy Road connector traffic signal as the second access point for Stage 2. In addition, indirect minor connections will be available through the approved Tara Forest East and Tara Baywood developments.

Volkert Comments/Suggestions:

1. Volkert highly recommends that an additional drawing(s) be added to the Study to clarify the proposed access management for the TFWTP project. This drawing(s) needs to show the following.
    a. The section of US 441 from NW 147th Drive (access to Lowes) to April Blvd.
    b. The existing median openings and the distances between the median openings along this section of US 441.
    c. Where NW 149th Terrace and NW 158th Lane intersect US 441.
    d. Where the Stage 1 east connection from Tara Forest West is to be located on US 441.
    e. The location on US 441 for the proposed Peggy Road/US 441 traffic signal.
2. When reading the Study, it is assumed that the Stage 1 east connection from Tara Forest West to US 441 aligns with the existing median opening on US 441 that aligns with NW 149th Terrace and NW 158th Lane on the south side of US 441. Is this alignment correct? If yes, it needs be stated in the Study that the directional median opening on US 441 at the Tara Forest West east connection will need to be designed to accommodate (1) eastbound traffic on US 441 turning left into the Tara Forest West east connection, and (2) westbound traffic on US 441 turning left into NW 149th Terrace and NW 158th Lane. If the proposed directional median opening on US 441 does not align with NW 149th Terrace and NW 158th Lane, this needs to be stated in the Study along with how these two streets will be accessed by westbound traffic on US 441.
3. When southbound Tara Forest West traffic from the east connection makes the right turn onto US 441 at the directional median opening, that traffic has to go west on US 441 and make a U-Turn at the next median opening. Also, a westbound left turn lane on US 441 will be needed for the traffic making the U-Turn. This needs to be stated in the Study. There is approximately seven hundred feet between the two existing median openings. This should be sufficient linear distance to accommodate the left turn lane for the westbound U-Turn traffic on US 441 and the eastbound traffic on US 441 that is making the left turn at the direction median opening to access the Tara Forest West east connection. It should be verified in the Study that this access management plan on US 441 is feasible from a roadway design perspective. If for some design reason this access management plan on US 441 is not feasible, that needs to be stated in the Study and an alternate plan provided. Ultimately, the access management plan on US 441 for Stage 1 is under the purview of FDOT.

Phasing of the Development

This section of the Study describes the proposed phasing of the Tara Forest West residential portion of the project. It needs to be noted that the incorporation of the US 441/Peggy Road connector traffic signal may change the phasing and/or access management of the project for later stages of development. Volkert concurs with the information in this section and has no comments or suggestions.

Intersection Level of Service (LOS) Analysis

This section of the Study documents the LOS at the intersection of the east connection from Tara Forest West at the directional median opening on US 441. The LOS was computed using the procedures outlined in the Transportation Research Board's *Highway Capacity Manual (HCM).* The 2025 traffic from the Buckholz traffic study was used along with the trips generated from Tara Forest West. In addition, a two percent annual traffic growth rate was utilized for traffic on US 441. The LOS was computed for the six development phases of the Tara Forest West project. All traffic from Tara Forest West was assumed to use this one direct connection.

The LOS analysis showed that the one direct connection to US 441 can satisfactorily accommodate the Tara Forest West Traffic for the first three phases of development. The LOS starts to break down (unacceptable LOS) with phase 4 and an additional connection from Tara Forest West to US 441 would be needed. However, by dividing the TFWTP project into two phases, only the first three phases are being considered for approval at this time. Therefore, the Stage 1 portion of the TFWTP project has acceptable LOS at the one direct connection onto US 441 at the directional median opening. Volert concurs with the information in this section and has no comments or suggestions.

Stage 1 – Analysis of Operations

This section of the Study documents the Highway Capacity Analysis Summary for the east connection from Tara Forest West at the directional median opening on US 441. This is a stop-controlled intersection (no traffic signal). The HCM for stop controlled intersections is pessimistic in providing LOS for this type of intersection. The HCM analysis shows that the first three phases of the Tara Forest Development will operate at a satisfactory LOS. Volkert concurs with the information in this section has no comments or suggestions.

Conclusions and Recommendations

This section of the Study lists the conclusions and recommendations for Stage 1 of the Tara Forest West project. These are as follows.

1. At ultimate buildout, the Tara Forest West residential project will generate 4,745 total trips. The AM peak hour will generate 344 trips; the PM peak hour will generate 483 trips.
2. For Stage 1, the Tara Forest West residential project will generate 2,508 total trips. The AM peak hour will generate 183 trips; the PM peak hour will generate 252 trips.
3. For Stage 1, the stop sign controlled directional median opening on US 441 at the east connection to Tara Forest West can accommodate project traffic.
4. The Study recommendation is to construct the first three phases of the Tara Forest West residential project with the east connection located at the directional median opening on US 441.

Volert concurs with the information in this section and has no comments or suggestions.

Additional Volkert Comments/Recommendations

1. It Is important to keep in mind that this Study only impacts Stage 1 of the TFWTP project. It is essential that a new traffic study be prepared before any additional phases/Stage 2 of this project are approved.

2. US 441 is an FDOT highway. It also serves as an alternate route for I-75 traffic when an incident closes a portion of I-75. The City of Alachua needs to closely coordinate with FDOT on any development projects that impact US 441 in the City of Alachua city limits.
3. Volkert has had the opportunity to perform independent reviews on numerous projects for the City of Alachua. All of these projects impact sections of US 441 from the south city limits (near the intersection of US 441/NW 43rd Street) to the north city limits (NW 188th Street). The TFWTP project discussed in this review impacts the section of US 441 between CR 235 by Alachua Elementary School to I-75. Eventually this section of US 441 will need modifications to address the traffic impacts from annual traffic growth on US 441 and from city approved developments along this section of US 441. Volkert recommends that the City of Alachua request FDOT to conduct a corridor study of US 441 through the City of Alachua. Numerous approved development projects will be impacting US 441 over the upcoming decade. Also, the planned Peggy Road connection at the old Walmart Super Center site will have significant impacts on US 441. A comprehensive approach to the US 441 corridor would be valuable to addressing traffic capacity and safety along US 441.

Volkert, Inc. appreciates the opportunity to assist the City of Alachua with this independent review of the Tara Forest West Tara Phoenicia project. Please contact me if you have any questions or need additional information.

ORDINANCE 10-23

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS; AMENDING THE OFFICIAL ZONING ATLAS FROM AGRICULTURE (A) AND COMMERCIAL INTENSIVE (CI) TO CONSERVATION (CSV), AGRICULTURE (A), RESIDENTIAL SINGLE FAMILY – 4 (RSF-4), RESIDENTIAL MULTIPLE FAMILY – 8 (RMF-8), AND COMMERCIAL INTENSIVE (CI) ON APPROXIMATELY 523 ACRES; LOCATED NORTH OF U.S. HIGHWAY 441 AND ADJACENT TO AND ON THE EAST AND WEST SIDE OF INTERSTATE HIGHWAY 75 (I-75); ALACHUA, FLORIDA. TAX PARCEL NUMBERS 03008-000-000, 03020-000-000, 03049-000-000, 03066-004-000, AND 03067-001-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

RECITALS

WHEREAS, an application for a Site-Specific Amendment to the Official Zoning Atlas (rezoning), as described below, has been filed with the City; and,

WHEREAS, a duly advertised public hearing was conducted on the proposed amendment on August 10, 2010 by the Planning and Zoning Board, sitting as the Local Planning Agency (LPA) and the LPA reviewed and considered all comments received during the public hearing concerning the application and made its recommendation to the City Commission; and,

WHEREAS, the City Commission held a duly advertised public hearing on September 13, 2010 and October 11, 2010 on the proposed amendment and provided for and received public participation; and,

WHEREAS, the City Commission has determined and found said application for the amendment, to be consistent with the City of Alachua Comprehensive Plan and Land Development Regulations; and,

WHEREAS, for reasons set forth in this Ordinance that is hereby adopted and incorporated as findings of fact, that the Alachua City Commission finds and declares that the enactment of this amendment is in the furtherance of the public health, safety, morals, order, comfort, convenience, appearance, prosperity, or general welfare.

NOW, THEREFORE, BE IT ORDAINED BY THE PEOPLE OF THE CITY OF ALACHUA, FLORIDA:

Section 1. Official Zoning Atlas Amended

The Official Zoning Atlas is hereby amended from Agriculture (A) (±483 acres) and Commercial Intensive (CI) (±40 acres) to Conservation (CSV) (±115 acres), Agriculture (A) (±107 acres), Residential Single Family – 4 (RSF-4) (±174.5 acres), Residential Multiple Family – 8 (RMF-8) (±36.1 acres), and Commercial Intensive (CI) (±90 acres) for Tax Parcel Numbers 03008-000-000, 03020-000-000, 03049-000-000, 03066-004-000, and 03067-001-000, in accordance with the legal description found in Exhibit A attached hereto.

Section 2. Findings of Fact and Conclusions of Law

1. The above recitals are true and correct and incorporated herein by reference.
2. The proposed Rezoning is in compliance with the Land Development Regulations.
3. The amendment will not cause a reduction in the adopted level of service standards for roads, water, sewer, waste, stormwater, and recreation.

Section 3. Ordinance to be Construed Liberally

This ordinance shall be liberally construed in order to effectively carry out the purposes hereof which are deemed to be in the best interest of the public health, safety and welfare of the citizens and residents of Alachua, Florida.

Section 4. Repealing Clause

All ordinance or parts of ordinances in conflict herewith are, to the extent of the conflict, hereby repealed.

Section 5. Severability

It is the declared intent of the City Commission of the City of Alachua that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by any court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance, and the remainder of the ordinance after the exclusions of such part or parts shall be deemed to be valid.

Section 6. **Effective Date**

This ordinance shall take effect immediately after its passage and adoption.

PASSED on first reading the 13th day of September, 2010.

PASSED and **ADOPTED,** in regular session, with a quorum present and voting, by the City Commission, upon second and final reading this 11th day of October, 2010.

Planning & Community Development Director

FROM: **Michael Carrillo, P.E.**
Public Services Director
Tom Ridgik, P.E.
Engineering Supervisor
TR 5/21/2024

RE: **Tara Forest West Preliminary Plat**

Public Services has reviewed the subject project (May Submittal) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
A.	**Meaning of Conditional Approval** Please address the following comments. Rather than submitting a complete hard copy set, the design engineer has the option of (1) to instead forward to Public Services and Planning by email the revised pdf of this sheet. (Public Services contact is Tom Ridgik, th_ridgik@cityofalachua. org) or (2) to provide a link so Public Services and Planning can download the complete PDF set. Public Services would then review this sheet, presumably approve it and so notify the Planning Department.)
1.	**Comment on March Submittal** **Sheets C4.0. C4.1, C4.2 as applicable.** Please show a Typical Roadway section for the segment of Road M that includes the private force main. **Conditional Approval** **Comment on May Submittal** **Approved**

NO.	COMMENTS
2	**Comment on March Submittal** **Sheet C5.0** Please change General Note 3 to: "3. ALL POTABLE WATER MAINS NOT UNDER ROADS SHALL BE AWWA C900 PVC DR-18. ALL POTABLE WATER MAINS UNDER ROADS SHALL BE DUCTILE IRON CEMENT-LINED." **Conditional Approval** **Comment on May Submittal** **Approved**
3	**Comment on March Submittal** **Sheet C5.0** Both lift station and force main shall be private. Thus change the following two callouts to: "FORCE MAIN" to "**PRIVATE** FORCE MAIN" "FORCE MAIN POINT OF DISCHARGE" to "**PRIVATE** FORCE MAIN POINT OF DISCHARGE" **Conditional Approval** **Comment on May Submittal** **Approved**

RE: Project Assistance Team (PAT) Comments for Tara Forest West Preliminary Plat (PPP21-0005)

Dear Ms Peters:

On March 28, 2024, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Thursday, May 2, 2024. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time. Additionally, please note that this project requires connection to US 441 and staff does not anticipate forwarding any final plat for this project to the City Commission until such time as the Tara Phoenicia Infrastructure Plan is forwarded to the City Commission.

Please address the following insufficiencies:

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

B. Concurrency Impact Analysis

a. Provided concurrency analysis provides overall traffic impacts generated by the proposed development, but does not provide impacts to all impacted transportation facilities. Please provide analysis showing adequate capacity on all impacted transportation segments.

New Comment: Confirm number of units. Solid waste and recreation state 538 units, but traffic states 523 units. Percentage of permitted design capacity utilized for water and wastewater appear to be incorrect and not considering reserved capacity.

E. Outside Review
   a. Address all comments issued by Daniel Young, P.E, of CHW, Inc. in a letter dated April 16, 2024 and attached to this letter.
   b. Outside traffic review of submitted traffic study currently being completed. Review comments from outside reviewer will be forwarded when received.
   c. Address all comments issued by the City of Alachua Public Services Department in the attached memo from Michael Carrillo, P.E., Public Services Director and Tom Ridgik, P.E., Engineering Supervisor, dated April 15, 2024.

F. New Comments
   a. Per Fee Resolution 20-13, application fee covers 1 completeness review and 2 PAT Comment reviews. An additional PAT review will be needed to review responses to the items listed above, therefore a resubmittal fee equal to 25% of the original application fee shall be required upon resubmittal. The original application fee for the preliminary plat was $6,400 therefore the resubmittal fee shall be $1,600.
   b. Basins 1A-1C, 2, and 3 have all shifted into the lands designated as Conservation on the Future Land Use Map and zoned CSV on the Official Zoning Atlas. Minor utilities are not permitted in the CSV zone district per Table 4.1-1 of Article 4. Stormwater ponds must be moved outside of those areas.

New Comment: Please see GIS imagery attached. Based on this, it appears that Basins 1-B and 3 are within the Conservation FLUM. Provide exhibit demonstrating that the ponds are not located within this area or revise pond locations.

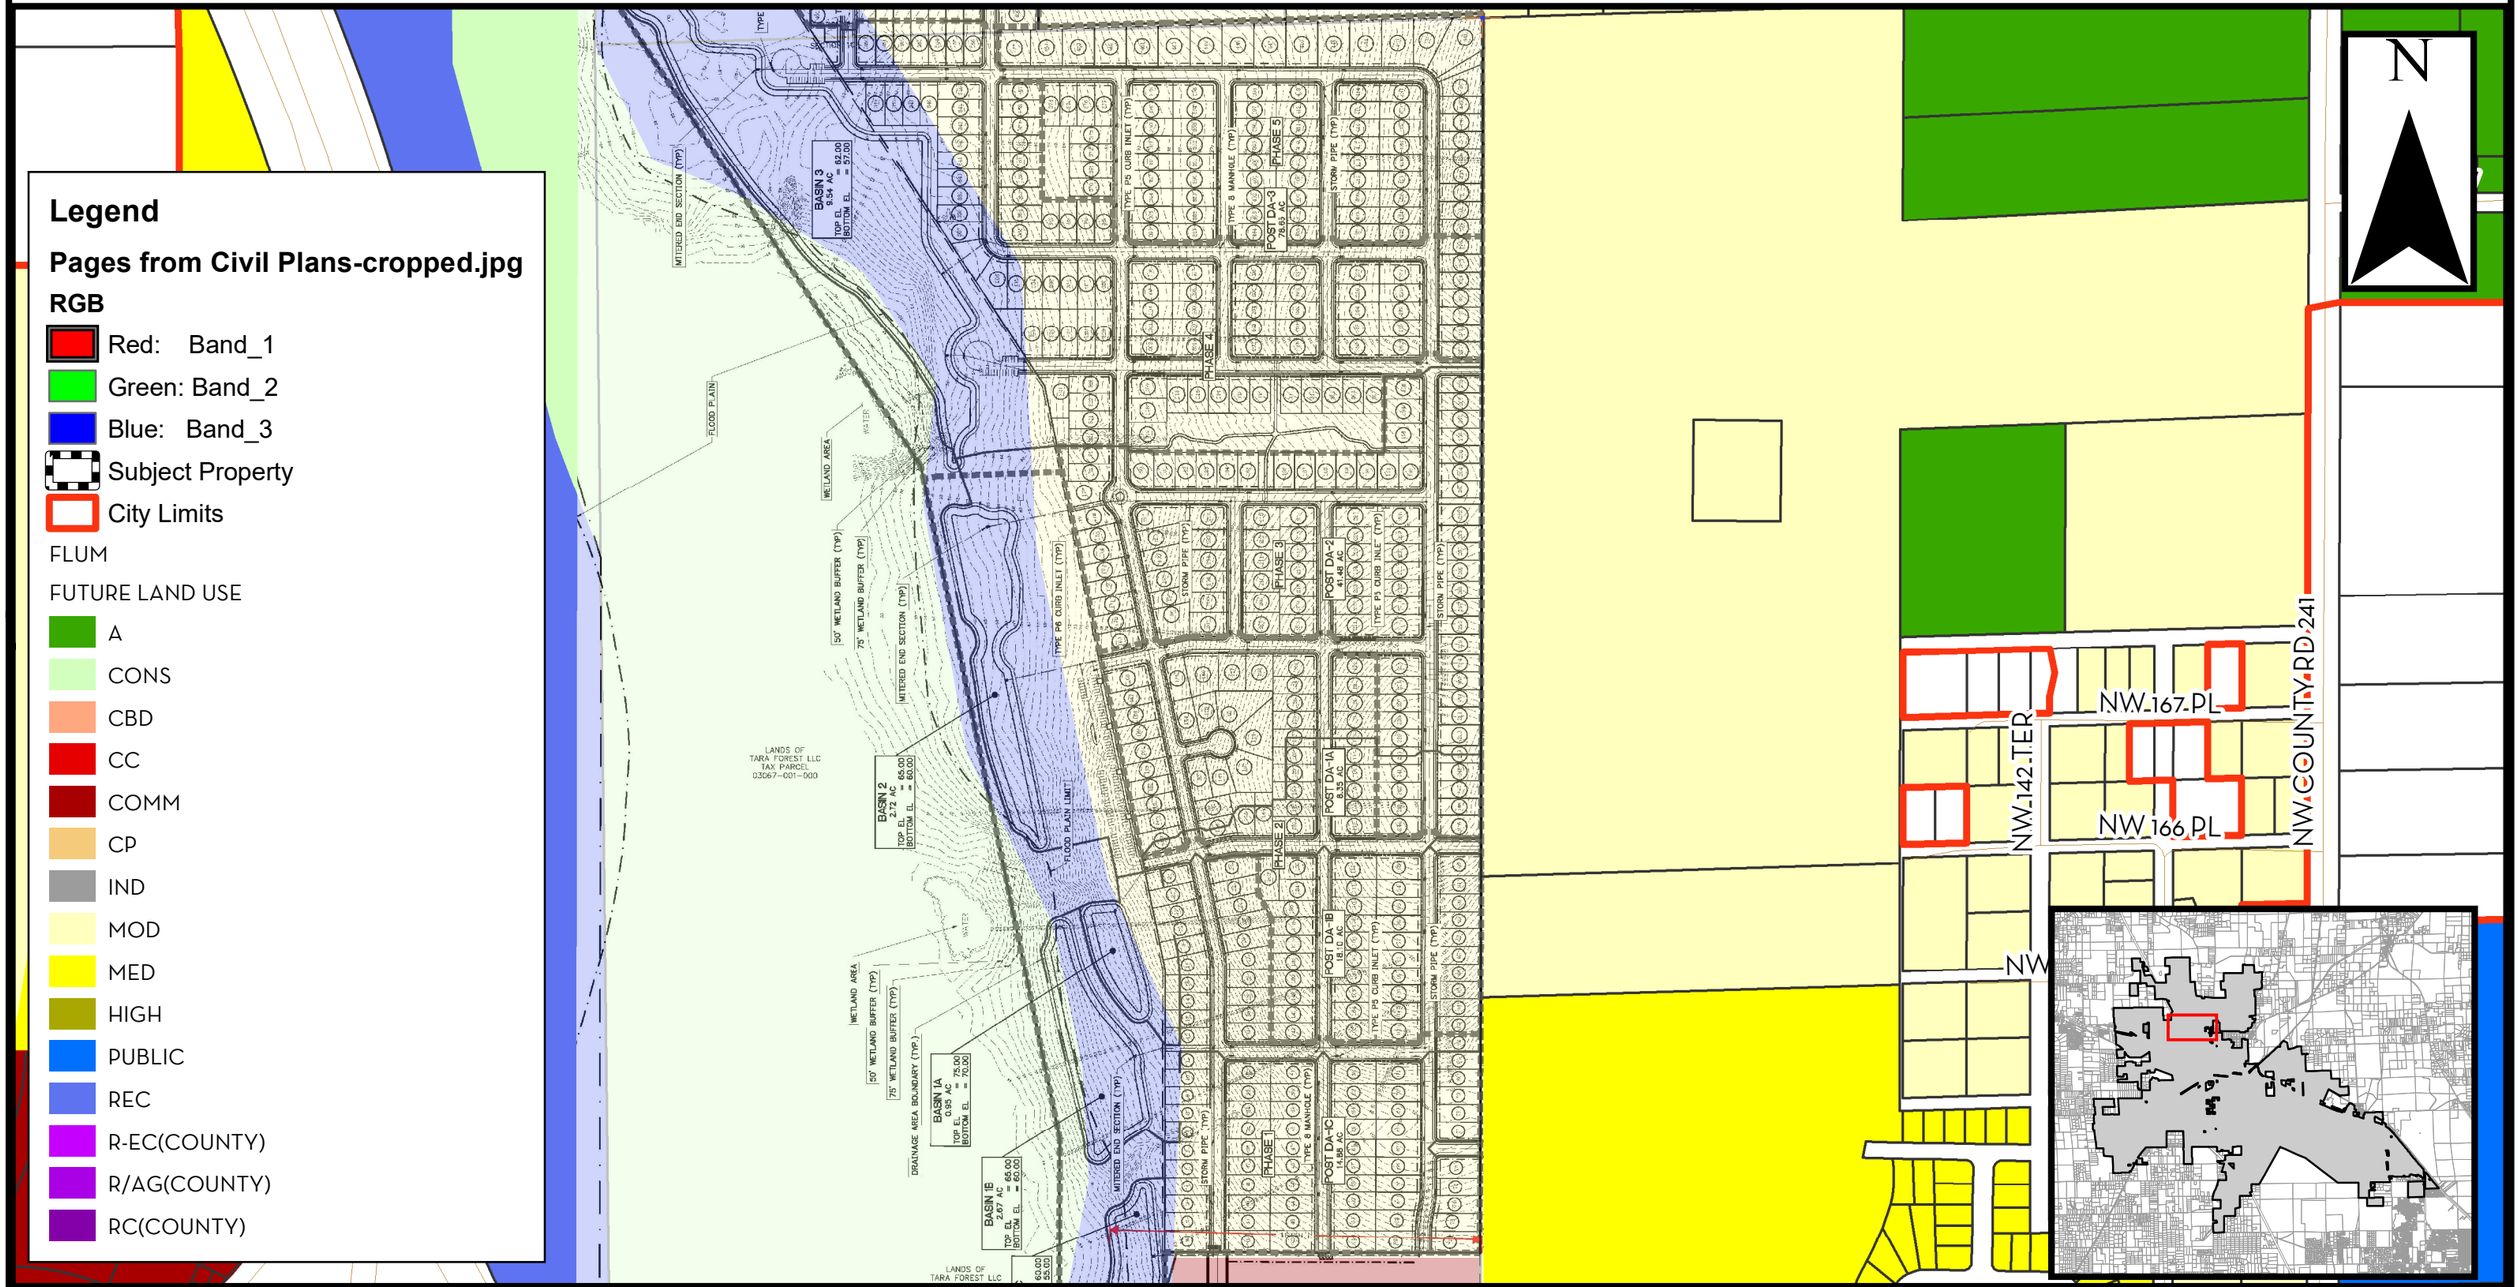
   c. The southern terminus of Road B does not connect to any future or planned roads and would therefore need to be designed as a T or L stub or a roundabout, per Section 7.2.5 (D). Section 7.2.5 (G) prohibits dead-end streets.

New Comment: This turnaround will be required to be paved surface and to accommodate large vehicle turn movement. This can be shown via note and design provided at time of Construction Plans submittal.

G. Informational
   a. If any development is proposed to take place within a Special Flood Hazard Area, base flood elevations will be required to be established in accordance with Section 6.9.4 (E)(1)(b) at time of Construction Plan application.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,



Adam Hall, AICP

RE: **Tara Forest West Preliminary Plat**

Public Services has reviewed the subject project (March Submittal) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
A.	**Meaning of Conditional Approval** Please address the following comments. Rather than submitting a complete hard copy set, the design engineer has the option of (1) to instead forward to Public Services and Planning by email the revised pdf of this sheet. (Public Services contact is Tom Ridgik, th_ridgik@cityofalachua. org) or (2) to provide a link so Public Services and Planning can download the complete PDF set. Public Services would then review this sheet, presumably approve it and so notify the Planning Department.)
1.	**Comment on March Submittal** **Sheets C4.0. C4.1, C4.2 as applicable.** Please show a Typical Roadway section for the segment of Road M that includes the private force main. **Conditional Approval**

NO.	COMMENTS
2	**Comment on March Submittal** **Sheet C5.0** Please change General Note 3 to: "3. ALL POTABLE WATER MAINS NOT UNDER ROADS SHALL BE AWWA C900 PVC DR-18. ALL POTABLE WATER MAINS UNDER ROADS SHALL BE DUCTILE IRON CEMENT-LINED." **Conditional Approval**
3	**Comment on March Submittal** **Sheet C5.0** Both lift station and force main shall be private. Thus change the following two callouts to: "FORCE MAIN" to "**PRIVATE** FORCE MAIN" "FORCE MAIN POINT OF DISCHARGE" to "**PRIVATE** FORCE MAIN POINT OF DISCHARGE" **Conditional Approval**

32. Comment cleared.

Fifth Review Comments

1. Based on previous submittals for adjacent projects, the flood plain shown in these plans is at el. 52 and the provided plans show flood plain impacts. Please provide some information or assurance that said impact will be addressed during the construction plan approval process.
   Sixth Review: Please provide information on the flood plain compensating storage in the concurrency impact analysis. Please be aware that there are concerns about the flood plain compensating storage for Tara Phoenicia, Tara Forest West, and Tara April and CHW recommends to the City that the approval of Tara Forest West Final Development Plans/Construction Plans be contingent on the demonstration, construction, and final City acceptance of appropriate flood plain compensating storage.
2. Per City's requirement, please show all wetlands and wetland setbacks. The City requires all wetlands and wetland setbacks within a project area to be shown in order to assure that no wetlands impacts are missed.
   Sixth Review: Please note that all wetlands and wetland setbacks do not appear to be shown. Please revise as appropriate. Specific areas of concern include the wetlands adjacent to Basin 3.
3. Comment cleared.
4. Comment cleared.
5. Comment cleared.
6. Comment cleared.

Sixth Review Comments

1. Please demonstrate access and utility connections to existing infrastructure.
2. Please clarify proposed access and utility connection point to Tara Baywood in Phase 1. Per the Baywood construction plans, the water main and roadway end prior to the shared property line.
3. Please show the water main located along the project boundary between Tara Phoenicia and Tara Forest West. Please clarify if a connection to said water main is proposed.
4. In the preliminary plat set, please number all of the lots on the overall sheet.

RE: Project Assistance Team (PAT) Comments for Tara Forest West Preliminary Plat (PPP21-0005)

Dear Ms Peters:

On December 14, 2023, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Thursday, March 7, 2024. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time. Additionally, please note that this project requires connection to US 441 and staff does not anticipate forwarding any final plat for this project to the City Commission until such time as the Tara Phoenicia Infrastructure Plan is forwarded to the City Commission.

Please address the following insufficiencies:

Deficiencies to be Addressed
** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

B. Concurrency Impact Analysis

a. Provided concurrency analysis provides overall traffic impacts generated by the proposed development, but does not provide impacts to all impacted transportation facilities. Please provide analysis showing adequate capacity on all impacted transportation segments.

New Comment: Revised concurrency analysis not found. Submit revised concurrency analysis.

E. Outside Review
   a. Please address all comments issued by Daniel Young, P.E, of CHW, Inc. in a letter dated January 11, 2024 and attached to this letter.
   b. Outside traffic review of submitted traffic study currently being completed. Review comments from outside reviewer will be forwarded when received.

F. New Comments
   a. Per Fee Resolution 20-13, application fee covers 1 completeness review and 2 PAT Comment reviews. An additional PAT review will be needed to review responses to the items listed above, therefore a resubmittal fee equal to 25% of the original application fee shall be required upon resubmittal. The original application fee for the preliminary plat was $6,400 therefore the resubmittal fee shall be $1,600.
   b. Basins 1A-1C, 2, and 3 have all shifted into the lands designated as Conservation on the Future Land Use Map and zoned CSV on the Official Zoning Atlas. Minor utilities are not permitted in the CSV zone district per Table 4.1-1 of Article 4. Stormwater ponds must be moved outside of those areas.
   c. The southern terminus of Road B does not connect to any future or planned roads and would therefore need to be designed as a T or L stub or a roundabout, per Section 7.2.5 (D). Section 7.2.5 (G) prohibits dead-end streets.
   d. Lots 441 through 483 do not meet the Note 5 of Table 5.1-2 as recently amended by Ordinance 24-01. Note 5 reads: Proposed platted lots within 100 feet of an existing residential platted subdivision in the Agriculture & RSF-1 zoning districts are limited to the 'Dwelling, single-family detached' unit type and shall have a minimum lot size of 10,000 square feet, minimum width of 100 feet, and a 10-foot wide Type D landscape buffer along the project perimeter. Proposed platted lots within 100 feet of an existing residential platted subdivision in the RSF-3 zoning district are limited to the 'Dwelling, single-family detached' unit type and shall have a minimum lot size of 7,500 square feet and a minimum width of 75 feet.
   e. Provide sketch of access through Tara Phoenicia and include with plans.
   f. Cover sheet references "Planned Development Amendment" under Building Setback requirements. This project is not part of a Planned Development.
   g. Please address presence and planned treatment of Bivans Sand 5 to 8% slopes (Map Unit Number 76). This area is approximately 2.5 acres in size.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

RE: Project Assistance Team (PAT) Comments for Tara Forest West Preliminary Plat

Dear Ms Peters:

On April 26, 2023, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Thursday, July 13, 2023. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time. Additionally, please note that this project requires connection to US 441 and staff does not anticipate forwarding the preliminary plat application or the related special exception application to the Planning and Zoning Board until such time as the Tara Phoenicia Infrastructure Plan is forwarded to the City Commission.

Please address the following insufficiencies (begins on next page):

Deficiencies to be Addressed
** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

B. Concurrency Impact Analysis

a. Provided concurrency analysis provides overall traffic impacts generated by the proposed development, but does not provide impacts to all impacted transportation facilities. Please provide analysis showing adequate capacity on all impacted transportation segments.

New Comment: Provide revised concurrency impact analysis memo that includes all impacted transportation segments and demonstrate adequate capacity is available on all segments.

E. Outside Review

a. Please address all comments issued by Daniel Young, P.E, of CHW, Inc. in a letter dated May 10, 2023 and attached to this letter.
b. Please address all comments issued by Rodolfo Valladares, P.E., Public Services Director, and Tom Ridgik, P.E., Engineering Supervisor in a memo dated May 11, 2023 and attached to this letter.

F. New Comments

a. Per Fee Resolution 20-13, application fee covers 1 completeness review and 2 PAT Comment reviews. An additional PAT review will be needed to review responses to the items listed above, therefore a resubmittal fee equal to 25% of the original application fee shall be required upon resubmittal. The original application fee for the preliminary plat was $6,400 therefore the resubmittal fee shall be $1,600.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

TR 5/10/2023

RE: **Tara Forest West Preliminary Plat**

Public Services has reviewed the subject project (September 2022 Submittal) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
1.	**Comments on Oct 14th Submittal** **Sheet C3.0** Under General Notes, please add the following (or equivalent): "THE HOMEOWNER'S ASSOCIATION (HOA) SHALL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF ALL COMPONENTS OF THE STORMWATER SYSTEM NOT IN THE RIGHT-OF-WAY. THE CITY OF ALACHUA WILL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF THE STORMWATER SYSTEM WITHIN THE RIGHT-OF-WAY." Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** **Approved**
2.	**Comments on Oct 14th Submittal** **Sheet C3.0** Stormwater piping is shown entering stormwater Basins 2 & 3.

NO.	COMMENTS
	Please review stormwater Basin 1. Should stormwater piping also enter this basin? Please evaluate & **resubmit** if necessary. **Comments on Feb 2nd Submittal** **Approved**
3	**Comments on Oct 14th Submittal** **Sheet C4.0** **Typical Utility Allocation** The wastewater cleanout is shown at the PUE boundary. COA now prefers that the cleanout be located in the middle of the PUE. Thus, please add a note similar to: "For clarity, the wastewater cleanout is shown at the PUE boundary. As per CoA, install cleanouts in the middle of the PUE." Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** **Approved**
4	**Comments on Oct 14th Submittal** **Sheet C4.0** **Typical Utility Allocation** Please increase the distance from the tree to the water main from 9 feet to 10 feet. To compensate, decrease the distance from TEL cable to the PE/SE from 3 feet to 2 feet. Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** Trees are no longer shown on any of the Typical Allocations so this comment no longer is applicable. **No Exceptions Noted**
5	**Comments on Oct 14th Submittal** **Sheet C5.1** General Note 3: Please add "DR-18" to this note. Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** **Approved**
6	**Comments on Oct 14th Submittal**

NO.	COMMENTS
	In preparing the Construction Documents, please keep in mind the following CoA requirements: • Wastewater laterals enter at lot corners, not the lot centerline. In case there are obstructions such as P-Inlets and electrical transformer, route laterals a suitable distance from such obstructions. • Minimum distance of 10 feet between trees and water mains. Suggest that the landscape architect be notified of this requirement ASAP. **FYI**
7	**Comment on Feb 2nd Submittal** **Sheet C4.0** Typical Roadway Section 1 What is the purpose of the very narrow 2.5-foot PUE? Please **submit** response. **Comment on June 8th Submittal** This section is now Section 5, C4.2 **Approved**
8	**Comment on Feb 2nd Submittal** **Sheets C4.0 through C4.3 and various other sheets.** The major assumption is that the PUEs along roadways are 7.5 feet, which is very unusual. Please change the width of such PUEs to 10 feet, which is the traditional PUE width. The City needs a 10-foot PUE width to perform various maintenance activities. Note that Sheet 3 of the Plat Book calls out a front setback requirement of 20-feet. A 10-foot PUE is compatible with this front setback requirement. Please **submit** response and the modified affected sheets. **Comment on June 8th Submittal** The Engineer's response is duly noted. Nevertheless, please provide PUEs along roadways at 10 feet. **Revise** and **Resubmit** applicable sheets. **Comments on September 2022 Documents** **Sheet C4.2** Typical Roadway Section 6 (Road N) The PUE on the left is only 5 ft. What utilities will be installed in it? Is width sufficient for utility access and maintenance? Please **submit** response & revised sheet, as applicable.

NO.	COMMENTS
9	**Comment on Feb 2nd Submittal** **Sheet C4.1** Typical Roadway Section 3 calls out concrete truck aprons. What is their purpose? Thickness of the concrete truck aprons is not called out. Is the required thickness greater than 4-inches? Please **submit** response and the modified sheet. **Comment on June 8th Submittal** This section is now Section 7, C4.3 **Approved**
10	**Comment on Feb 2nd Submittal** **Sheet C5.0** General Note 4: Although SDR 35 thickness is suitable in most applications, there are certain applications where SDR 26 is required. Thus suggest this note be changed to: "4. ALL WASTEWATER MAINS SHALL BE ASTM D-1785, SDCR 35, PVC, UNLESS OTHERWISE NOTED OR SHOWN". **Comment on June 8th Submittal** **Approved**
11	**Comment on Feb 2nd Submittal** **Sheets C2.0, C3.0, C5.0** Is a lift station adjacent to Lot 497? If so, please call it out as a "PRIVATE LIFT STATION". What is the proposed discharge point of this lift station? Please **submit** response and the modified affected sheets. **Comment on June 8th Submittal** **Approved**
12	**Comment on Feb 2nd Submittal**

NO.	COMMENTS
	Sheet C5.0 West of lot 519, either a wastewater main or lateral is shown. What is its purpose? Please **submit** response. **Comment on June 8th Submittal** **Approved**
13	**Comment on Feb 2nd Submittal** **Sheet C4.2** Typical Roadway Section 5 shows an inverted crown. Where does the collected stormwater discharge? Please **submit** response. **Comment on June 8th Submittal** **Approved**
14	**Comment on Feb 2nd Submittal** **Sheet C5.0** Certain segments of wastewater mains are shown as 10-inch. Please change to 12-inch as 10-inch is an uncommon size and the City has few stocked parts. Please **submit** response and the modified affected sheet. **Comment on June 8th Submittal** **Approved**
15	**New Comment on September 2022 Documents** **Sheets C4.3 and C5.0** The force main from the private lift station will be installed in the PUE/ROW along Road N. The Typical Utility Allocation shown on C4.3 does not show the force main, perhaps simply because the force main is not typical. Please confirm that the force main routed along Road N will be not interfered with by other utilities such as a water main. Please **submit** response and applicable sheet(s), as necessary. **Conditional Approval** Please address the above comments. Rather than submitting a complete set, the design

NO.	COMMENTS
	engineer has the option to instead forward to Public Services by email the revised pdf of this sheet. (Public Services contact is Tom Ridgik, th_ridgik@cityofalachua. org). Public Services would then review this sheet, presumably approve it and so notify the Planning Department.)
16	**New Comment on September 2022 Documents** **Plat Book, Sheet One of Ten** Under Certificate of Subdivider's Engineer, please confirm that PE License 43879 is appropriate. Please **submit** response and applicable sheet(s), as necessary. **Conditional Approval** Please address the above comments. Rather than submitting a complete set, the design engineer has the option to instead forward to Public Services by email the revised pdf of this sheet. (Public Services contact is Tom Ridgik, th_ridgik@cityofalachua. org). Public Services would then review this sheet, presumably approve it and so notify the Planning Department.)
17	**New Comment on September 2022 Documents** **Sheet C3.0** General Note 6: Consider modifying this note to take into account the drainage to/from Tara Forest East. Please **submit** response and applicable sheet(s), as necessary **Conditional Approval** Please address the above comments. Rather than submitting a complete set, the design engineer has the option to instead forward to Public Services by email the revised pdf of this sheet. (Public Services contact is Tom Ridgik, th_ridgik@cityofalachua. org). Public Services would then review this sheet, presumably approve it and so notify the Planning Department.)

Second Review Comments

25. Comment cleared.
26. Comment cleared.

27. Comment cleared.

28. Comment cleared.

29. On sheet C5.0, please note that the easement provided for the wastewater main between lots 510 and 511 is not sufficient.
    Third Review: Please revise either the location of the wastewater main or bottom width of the proposed PUE so that the proposed main is located entirely within the easement.

    Fourth Review: Please note that the lot numbers have changed to 493 and 492. Please expand the easement or move the wastewater main so that the wastewater main does not encroach onto lot 493.

30. Comment cleared.

31. Comment cleared.

Third Review Comments

32. Please provide phasing for all proposed improvements in Common Area 1, especially the stormwater management facilities.

    Fourth Review: Please clarify which phase Basin 3 and Basin 4 will be constructed with and if they will be constructed with multiple phases as is indicated for Basin 3.

Subject: RE: Reviews for Tara Forest West and Schmidt Farms

I apologize Adam,
I had reviewed and sent my comments to Glen, and somehow it slipped through the cracks.

My review of the GSW report is that they have done further review and have made a conclusion/recommendation that active ground loss is not occurring in the portion of the site < 75 feet.
Which they have signed and sealed.
Therefore, I feel like they have addressed the concerns we brought up in our initial review.

Please let me know if you want to chat, or need additional information.

Thank you

Shannon McMorrow

RE: Project Assistance Team (PAT) Comments for Tara Forest West Preliminary Plat

Dear Mrs Peters:

On June 8, 2022, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Thursday, March 10, 2022. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time.

Please address the following insufficiencies (begins on next page):

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

A. Land Use

a. Under Ordinance 21-07 (adopted June 14, 2021, but not yet codified) a Special Exception permit is required for stormwater facilities in the A (Agricultural) zoning district. The special exception must be approved prior to the consideration of the preliminary plat.

New Comment: Special Exception permit application has been received. PAT Comments have been issued concurrently with this letter.

B. Concurrency Impact Analysis

a. Provided concurrency analysis provides overall traffic impacts generated by the proposed development, but does not provide impacts to all impacted transportation facilities. Please provide analysis showing adequate capacity on all impacted transportation segments.
b. Please provide AADT for east driveway connection.

Revised information not identified. Trip generation numbers have been provided but impacted segments, as defined in Section 2.4.14 of the City's LDRs have not been analyzed for available capacity.

New Comment: Referenced Concurrency Study not identified in submittal material.

C. Article 5- Dimensional Standards

m. Block containing Lots 247 – 280 appears to exceed maximum block length.
New Comment: Subdivision variance application not yet received.

E. Outside Review

a. Please address all comments issued by Daniel Young, P.E, of CHW, Inc. in a letter dated June 27, 2022 and attached to this letter.
b. Please address all comments issued by Rodolfo Valladares, P.E., Public Services Director, and Tom Ridgik, P.E., Engineering Supervisor in a memo dated June 29, 2022 and attached to this letter.
d. Environmental review has been completed by Wood Environment and Infrastructure Solutions, Inc.
Additional analysis provided October 24, 2022 and currently under review by the City's outside environmental consultant.

F. New Comments

a. Submitted traffic study states there will be connection to US 441, however, this is not shown on the preliminary plat. Additionally, the preliminary plat shows connection to Tara Baywood and Tara Forest East, however, Construction Plans have not yet been reviewed or submitted for those connections. Additionally, the traffic study does not appear to consider the connection to Tara Baywood and trips being routed to the intersection of US 441/NW 147th Drive. Without connections in place to US 441 and NW 147th Drive, Staff cannot make a recommendation of approval for the Preliminary Plat for Tara Forest West. The Traffic Study must be updated to address the connection to US 441 and NW 147th Drive.
b. Figure 6 of Archeological Resources report appears to show high incidence of artifacts in vicinity of Basin 1-C. Provide further analysis and study as recommended on Page 27 of the report provided to the City. Phase 2 analysis of 8AL7459 is required as well. See Objective 3.11, Archeological Preservation, of the Future Land Use Element in the City of Alachua Comprehensive Plan. Staff also recommends contacting the Florida

Division of Historical Resources to ensure all appropriate permitting processes are being pursued.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

Adam Hall, AICP

RE: **Tara Forest West Preliminary Plat**

Public Services has reviewed the subject project (June 08 Submittal) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
1.	**Comments on Oct 14th Submittal** **Sheet C3.0** Under General Notes, please add the following (or equivalent): "THE HOMEOWNER'S ASSOCIATION (HOA) SHALL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF ALL COMPONENTS OF THE STORMWATER SYSTEM NOT IN THE RIGHT-OF-WAY. THE CITY OF ALACHUA WILL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF THE STORMWATER SYSTEM WITHIN THE RIGHT-OF-WAY." Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** **Approved**
2.	**Comments on Oct 14th Submittal** **Sheet C3.0** Stormwater piping is shown entering stormwater Basins 2 & 3.

NO.	COMMENTS
	Please review stormwater Basin 1. Should stormwater piping also enter this basin? Please evaluate & **resubmit** if necessary. **Comments on Feb 2nd Submittal** **Approved**
3	**Comments on Oct 14th Submittal** **Sheet C4.0** **Typical Utility Allocation** The wastewater cleanout is shown at the PUE boundary. COA now prefers that the cleanout be located in the middle of the PUE. Thus, please add a note similar to: "For clarity, the wastewater cleanout is shown at the PUE boundary. As per CoA, install cleanouts in the middle of the PUE." Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** **Approved**
4	**Comments on Oct 14th Submittal** **Sheet C4.0** **Typical Utility Allocation** Please increase the distance from the tree to the water main from 9 feet to 10 feet. To compensate, decrease the distance from TEL cable to the PE/SE from 3 feet to 2 feet. Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** Trees are no longer shown on any of the Typical Allocations so this comment no longer is applicable. **No Exceptions Noted**
5	**Comments on Oct 14th Submittal** **Sheet C5.1** General Note 3: Please add "DR-18" to this note. Please **resubmit** this sheet. **Comments on Feb 2nd Submittal** **Approved**
6	**Comments on Oct 14th Submittal**

NO.	COMMENTS
	In preparing the Construction Documents, please keep in mind the following CoA requirements: • Wastewater laterals enter at lot corners, not the lot centerline. In case there are obstructions such as P-Inlets and electrical transformer, route laterals a suitable distance from such obstructions. • Minimum distance of 10 feet between trees and water mains. Suggest that the landscape architect be notified of this requirement ASAP. **FYI**
7	**Comment on Feb 2nd Submittal** **Sheet C4.0** Typical Roadway Section 1 What is the purpose of the very narrow 2.5-foot PUE? Please **submit** response. **Comment on June 8th Submittal** This section is now Section 5, C4.2 **Approved**
8	**Comment on Feb 2nd Submittal** **Sheets C4.0 through C4.3 and various other sheets.** The major assumption is that the PUEs along roadways are 7.5 feet, which is very unusual. Please change the width of such PUEs to 10 feet, which is the traditional PUE width. The City needs a 10-foot PUE width to perform various maintenance activities. Note that Sheet 3 of the Plat Book calls out a front setback requirement of 20-feet. A 10-foot PUE is compatible with this front setback requirement. Please **submit** response and the modified affected sheets. **Comment on June 8th Submittal** The Engineer's response is duly noted. Nevertheless, please provide PUEs along roadways at 10 feet. **Revise** and **Resubmit** applicable sheets.
9	**Comment on Feb 2nd Submittal** **Sheet C4.1** Typical Roadway Section 3 calls out concrete truck aprons. What is their purpose? Thickness of the concrete truck aprons is not called out. Is the required thickness greater than 4-inches?

NO.	COMMENTS
	Please **submit** response and the modified sheet. **Comment on June 8th Submittal** This section is now Section 7, C4.3 **Approved**
10	**Comment on Feb 2nd Submittal** **Sheet C5.0** General Note 4: Although SDR 35 thickness is suitable in most applications, there are certain applications where SDR 26 is required. Thus suggest this note be changed to: "4. ALL WASTEWATER MAINS SHALL BE ASTM D-1785, SDCR 35, PVC, UNLESS OTHERWISE NOTED OR SHOWN". **Comment on June 8th Submittal** **Approved**
11	**Comment on Feb 2nd Submittal** **Sheets C2.0, C3.0, C5.0** Is a lift station adjacent to Lot 497? If so, please call it out as a "PRIVATE LIFT STATION". What is the proposed discharge point of this lift station? Please **submit** response and the modified affected sheets. **Comment on June 8th Submittal** **Approved**
12	**Comment on Feb 2nd Submittal** **Sheet C5.0** West of lot 519, either a wastewater main or lateral is shown. What is its purpose? Please **submit** response. **Comment on June 8th Submittal** **Approved**

NO.	COMMENTS
13	**Comment on Feb 2nd Submittal** **Sheet C4.2** Typical Roadway Section 5 shows an inverted crown. Where does the collected stormwater discharge? Please **submit** response. **Comment on June 8th Submittal** **Approved**
14	**Comment on Feb 2nd Submittal** **Sheet C5.0** Certain segments of wastewater mains are shown as 10-inch. Please change to 12-inch as 10-inch is an uncommon size and the City has few stocked parts. Please **submit** response and the modified affected sheet. **Comment on June 8th Submittal** **Approved**

PUBLIC SCHOOL STUDENT GENERATION CALCULATION FORM

PROJECT # Tara Forest West **APPLICATION DATE** 10/20/21

NAME & DESCRIPTION OF PROJECT Tara Forest West Preliminary Plat Subdivision of 540 single family detached dwellings

PROJECT ADDRESS (Contact 911 Addressing @ 352.338.7361) 15845 NW US HWY 441

Tax Parcel Numbers 03067-001-000, 03020-000-000, 03008-000-000

Acreage 393.95

DEVELOPMENT DATA (check all that apply)

- [x] Single Family — Number of Units: 540
- [ ] Multi Family — Number of Units:
- [ ] Exempt (See exemptions on page 2)

Level of Review

- [ ] Pre-Application Conference
- [x] Preliminary
- [ ] Final
- [ ] Revised
- [ ] Staff Administrative Review

A determination that there is adequate school capacity for a specific project will satisfy requirements for review for school concurrency for the periods of time consistent with the Interlocal Agreement and specified in local government land development regulations; an agreement by the School Board with the developer and local government is required to extend the period for approvals for phased projects beyond the generally applicable time period

EXPLANATION OF STUDENT GENERATION CALCULATION

Student Generation is calculated based on the type of residential development and the type of schools. The number of student stations (by school type - Elementary, Middle and High School) used for calculating the school concurrency impacts is equal to the number of dwelling units by housing type multiplied by the student generation multiplier (for housing type & school type) established by the School Board. Calculations are rounded to the nearest whole number. Student Generation for each school type is calculated individually to assess the impact on the **School Concurrency Service Area (SCSA)** for each school type (Elementary, Middle and High School).

SCHOOL CONCURRENCY SERVICE AREAS (SCSA) FOR PROJECT LOCATION

Based on the project location, please identify the corresponding School Concurrency Service Areas for each school type. Maps of the SCSAs may be viewed on the Alachua County Public Schools website.

SCHOOL CONCURRENCY SERVICE AREAS (SCSA)

Elementary Northwest Alachua **Middle** Mebane **High** Santa Fe

SINGLE FAMILY RESIDENTIAL DEVELOPMENT STUDENT GENERATION CALCULATIONS

ELEMENTARY	540	**units X 0.14 Elementary School Multiplier**	76	**Student Stations**
MIDDLE	540	**units X 0.06 Middle School Multiplier**	32	**Student Stations**
HIGH	540	**units X 0.08 High School Multiplier**	43	**Student Stations**

MULTI FAMILY RESIDENTIAL DEVELOPMENT STUDENT GENERATION CALCULATIONS

ELEMENTARY		**units X 0.09 Elementary School Multiplier**		**Student Stations**
MIDDLE		**units X 0.03 Middle School Multiplier**		**Student Stations**
HIGH		**units X 0.03 High School Multiplier**		**Student Stations**

EXEMPT DEVELOPMENTS (click all that apply)

☐ *Existing legal lots eligible for a building permit*

☐ *Development that includes residential uses that has received final development plan approval prior to the effective date for public school concurrency, or has received development plan approval prior to June 24, 2008, provided the development approval has not expired*

☐ *Amendments to final development orders for residential development approved prior to the effective date for public school concurrency, and which do not increase the number of students generated by the development*

☐ *Age-restricted developments that prohibit permanent occupancy by persons of school age, provided this condition is satisfied in accordance with the standards of the Public School Facilities Element or the ILA*

☐ *Group quarters that do not generate public school students, as described in the ILA*

Summary Report of a Geological Review and Active Ground Loss Evaluation
Tara Forest West, Tara Phoenicia, Tara April
Alachua, Alachua County, Florida
GSE Project No. 14759B

GSE Engineering & Consulting, Inc. (GSE) has performed a geological review to provide an opinion on the locations of active ground loss at the Tara Forest West, Tara Phoenicia and Tara April projects in Alachua, Florida. This review and report have been prepared at your request.

Background Information

We understand that you propose to develop these properties into residential and commercial developments. The sites are generally located at the northeast quadrant of the U.S. Highway 441 and I-75 intersection in Alachua, Florida and contains approximately 555 +/- acres. Figure 1 indicates the project location.

GSE has performed geotechnical explorations at these sites to assist with stormwater management facility and infrastructure design. Please refer to reports under GSE Project Numbers 14759, 14759A, 14891 and 15138 previously submitted.

We understand the City of Alachua retained Wood Environment & Infrastructure Solutions, Inc. (Wood) to assist with the development review process. As part of this review, Wood had concerns that active ground loss may be occurring below ground elevations of 75 feet. Wood recommended that the portion of the site lower than elevation 75 feet be analyzed further with engineering and geologic studies to identify if there is actual active ground loss occurring.

This geologic review has been performed to evaluate whether active ground loss is occurring at the site.

Regional Geology

In order to understand the mechanisms of ground loss, the regional geology of the site must be reviewed and considered. Ground loss in Alachua County typically occurs from soil erosion and sinkhole development. Ground loss from soil consolidation typically does not occur, as the majority of the soils in Alachua County are over consolidated from prior land form changes (sea level rise/recession and soil deposition) that occurred in the geologic past (millions of years ago).

Alachua County straddles two physiographic provinces: Northern Highlands and Coastal Lowlands[1]. A broad karst escarpment known as the Cody Scarp separates these two provinces.

The Northern Highlands, which lie north and east of the Cody Scarp, are underlain by a thick sequence of relatively impermeable Miocene to Pleistocene sediments. Because of this thick sequence of sediments, the Northern Highlands Province contains few karst features. This upland plateau is nearly level, sloping gently to the west, north and east. Elevation ranges from about 150 to 200 feet above sea level. The plateau, which originally extended completely across the county, has many swamps. Sinkholes are not common within the plateau, but a few are found near its margin.

Thin Plio-Pleistocene sediments overlying thin and discontinuous, residual Miocene strata and Eocene limestone characterize the Lowlands. Karst features are numerous in the Lowlands. The western plains region has low relief. Elevation ranges from about 50 to 80 feet above sea level. The plain is devoid of stream channels, but it is dotted with sinks and limestone mines. While the Ocala Limestone is essentially near the surface in this region, many of the old sinks have become filled (some to a depth of 250 feet) with sand, clayey sand, and sandy clay. These soil materials come from marine submergence, soil creep and slumping, and stream transport from the Northern Highlands. This sinkhole fill tends to mask many of the karst irregularities of the Ocala surface.

The Cody Scarp, which separates the Northern Highlands from the Coastal Lowlands, contains large sinkholes, sinking streams, and other karst features. The bottoms of the karst features often penetrate to the Ocala Limestone and the depressions are usually filled with organic soils, fluvial and lacustrine sediments, and clay-rich soils. The hills within the scarp contain Miocene sediments similar to the Northern Highlands Province. Many of the large, flat-bottomed lakes and wet prairies are associated with the scarp and represent coalescent sinkholes known as poljes and uvalas. Many of these level prairies and lakes, most of which are near or below 60 feet NGVD, are associated with ground water levels.

Three major geologic formations occur at or near the surface within the county. These formations have influenced soil development. They are, in order of decreasing age, the Ocala Limestone of Eocene age, the Miocene to Pliocene Hawthorn Group, and the Plio-Pleistocene Terrace Deposits.

The Ocala Limestone underlies the entire county; exposures are common in the Coastal Lowlands in the southern and western parts of the county. Here a limestone plain is formed which is covered by a veneer of loose sand in most places. Thin and discontinuous beds of clay-rich soils may also occur in this region of the county. The Ocala Limestone consists of soft, white to cream colored, chalky, limestone that is approximately 98 percent calcium carbonate. Boulders and irregular masses of chert are common near the top. In many areas the Ocala is cavernous and fractured.

The Miocene Hawthorn Group includes at least three formations in Alachua County. These are, from bottom to top, the Penny Farms Formation, Marks Head Formation, and Coosawhatchie Formation[2]. All three formations consist of varying proportions of interbedded clay, sand, limestone, and dolostone, all of which are phosphatic.

---

1 White, W.A., 1970. The Geomorphology of the Florida Peninsula. Florida Geological Survey, Bulletin 51.

2 Scott, T.M., 1988. The Lithostratigraphy of the Hawthorn Group (Miocene) of Florida. Florida Geological Survey, Bulletin No. 59.

The Hawthorn Group crops out in isolated areas around the town of Micanopy and in an irregular pattern along the Cody Scarp from Lochloosa Lake northwestward through Gainesville and into the north-Northern and northwestern part of the county. Much of the outcrop area is hill and valley terrain created by the formation of karst features at the foot of the escarpment. A thin veneer of loose sands of the older Plio-Pleistocene Terrace deposits covers the Hawthorn Group of sediments in the Cody Scarp and Northern Highlands. The Hawthorn Group lies unconformably on the solution-pitted Ocala Limestone surface.

The most recent formation is a surface mantle of fine to medium sand, silt, and clay that formed as Pliocene and Pleistocene sea levels fluctuated and periodically inundated portions of the county. Primarily, the terrace deposits overlie the Hawthorn Group. They are exposed in the Northern and eastern parts of the county.

The site is located in the rolling hills topography of Alachua County that lies within the Cody Scarp geology. Site elevations range from about 45 feet to more than 150 feet. The site is located just northeast of the Mill Creek Sink Cave. The Mill Creek Sink Cave is a well-documented sinkhole that is connected to an underground cavern system that is commonly used for cave diving. The Wood report identifies the approximate location of the cave system, which runs to the south across U.S. Highway 441 and to the east along the northern edge of U.S. Highway 441. Cave divers have documented that the cave system to the north has collapsed and is infilled with soil. The cave system is generally on the order of 100 to 200+ feet below land surface.

General Site Observations and Historic Site Use

Mr. Kenneth L. Hill, P.E. and Mr. Jason E. Gowland, P.E. with GSE have visited the site on numerous occasions to observe the site conditions. In addition, we have reviewed historical aerials of the site to observe the changes in the surface conditions of the site.

The site is currently mostly open land that is grown up in tall weeds. There are tree lines and wooded areas scattered throughout the site. Mill Creek is wooded along its banks. The majority of the site below elevation 75 feet is a valley along Mill Creek, with moderate to steep topography sloping up to the east and west from the creek.

From approximately 2004 to 2020, the site was planted in pine trees. The pine trees were harvested around 2020. Prior to 2004, the site was mostly open pasture with scattered tree lines and wooded areas dating back to 1964.

The 1964 aerial, attached as Figure 4, indicates that some of the site had been disturbed. The northern portion of the site and an area along the north side of U.S. Highway 441 appear disturbed, and possibly used as borrow areas or construction staging. This aerial is from the time period when the I-75 construction was nearing completion (there are no autos on I-75 but autos are present on U.S Highway 441). Ponds and wetland areas are easily identifiable on the aerial, along with the meandering Mill Creek. Mill Creek appears to be dry in this aerial, as this creek primarily transports stormwater runoff. A wet weather pond in the central portion of the site east of Mill Creek appears to be man made and from the land disturbance.

The 1971 aerial, attached as Figure 5, indicates the site is mostly pasture with scattered tree lines and woods. The majority of Mill Creek is located in open pasture and appears wet. Wetlands and ponds are identifiable. The disturbed areas are somewhat overgrown with pasture, but appear to have poor coverage.

The 1982 aerial, attached as Figure 6, shows that the site has remained pasture with no significant change since 1971. The poor established pasture in the northern disturbed area is more established. The site appears dry, with no water in Mill Creek and the ponds and wet weather pond areas showing less standing water. The most obvious change is the presence of a "black dot" in the northern portion of the site. The dot is believed to be a small chimney sinkhole, as this dot is at the location of a cluster of chimney sinkholes that are present on the site. These sinkholes were previously evaluated by GSE in our Project No. 14759A.

The 1994 aerial, attached as Figure 7, shows that the site is essentially in the same condition as prior years. Mill Creek appears wet. There is no vegetation along the majority of the creek. The location of the "black dot" now has two or three dots, indicating additional chimney sinkholes have developed. A 1999 aerial, not shown, indicates a fence has been constructed around the area of the "black dots" in a square shape. Remnants of this fence remain on the site today and surround the cluster of chimney sinkholes. This confirms the black dots on the aerial are chimney sinkholes which developed from about 1982 to 1999. The 2004 aerial shows the site is planted in pine trees, and remained in this condition until their harvest around 2020.

Evaluation and Discussion of Active Ground Loss

Wood has concerns with the potential of active ground loss in the lower elevations of the site. Based upon our observation of the site and review of historical data, we agree that active ground loss is occurring at the north end of the site at the location of the cluster of chimney sinkholes (see GSE Project No. 14759A). It is our opinion that active ground loss, other than normal surface erosion, is not occurring over the remainder of the site.

Wood specifically is concerned with two features they believe are swallets. The Wood report describes the locations of these features as *immediately adjacent to the western boundary of the property (in the lower 1/3 of the property boundary) and the other on the western side of Mill Creek immediately south of the first one.* The Wood Figure 5 shows the location of one swallet. The locations of both swallets described by Wood are not within the property boundaries (they are off site) and it is our opinion they have no impact on the Tara properties.

During a telephone conference with Wood, they believed that slow ground subsidence has occurred in the lower elevations along Mill Creek over the years. This opinion was based upon comparison of USGS Topographic Maps (digitizing the elevations and overlaying them). It is our opinion this conclusion cannot be made based upon the quality of the data. USGS Map Accuracy Standards[3] states the accuracy of 1:24,0000 USGS Topographic Maps is 5 feet vertically and 40 feet horizontally. This means that any point on the map may have an elevation that is 5 feet higher or lower than what is shown. Further, any point may be 40 feet in any direction away from where it is shown.

As a comparison of the accuracy of the USGS Topographic Maps, we overlayed the USGS topographic maps from 1963 and 1999 (Figures 2 and 3) onto the site topographic surveys. The topographic surveys were provided by eda and JBPro. These overlays show that the horizontal and vertical accuracy is reasonably within this range for the portion of the site above elevation 75 feet. Below elevation 75 feet, the horizontal accuracy is far less than 40 feet (the 50 feet contour lines are approximately 175 apart) and the vertical accuracy is generally beyond 5 feet. This is shown on Figures 2 and 3.

---

3 USGS Fact Sheet 171-99, November 1999

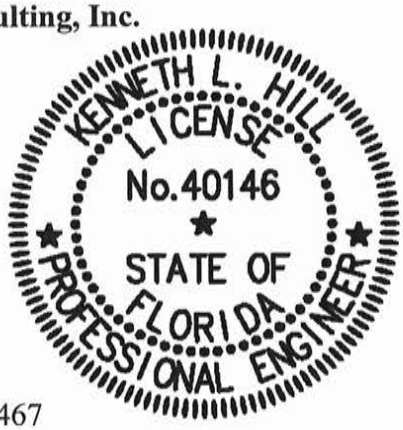
An opinion that a few feet of ground subsidence has occurred cannot be supported by data with this accuracy. Further, there are other sites nearby and that border this site that have improvements that are below elevation 75 feet, including portions of U.S Highway 441. If slow ground subsidence was actively occurring below elevation 75 feet, there would be reported damage to existing facilities. We are not aware of slow ground subsidence damage to nearby properties. We are aware of sudden ground subsidence caused by collapse type sinkholes.

GSE agrees that ground subsidence related to soil erosion is and can continue to occur at this site. This is entirely related to the quality of ground cover and rainfall intensity. Soil erosion is occurring along Mill Creek and in natural and man-made drainage swales where ground cover is poor. It is our opinion that slow ground subsidence related to karst geology is not occurring.

Sinkholes in Alachua County are typically sudden collapse type features. The typical geology of the Cody Scarp is a thin sand layer covering clay-rich soils. A pinnacled limestone formation is below the clay-rich soil at varying depths. A surficial groundwater table is typically not present or is a transient perched condition on the clays. Sinkholes develop from the sudden erosion or collapse of soil into cracks, crevices and voids in the upper portion of the limestone formation and the development of sinkholes is commonly related to high intensity rain events. These sinkholes typically vary from a few feet in diameter to 10 to 20 feet in diameter. The cluster of sinkholes at the north end of the site are typical sinkholes for the Cody Scarp geology. GSE is not aware of a slow ground subsidence type sinkhole occurring in the Cody Scarp geology of Alachua County.

Slow ground subsidence related to karst geology is common in the Central Florida region where the geology is different. The geology in Central Florida typically consists of 40+ feet of sandy soil that overlies confining clay-rich soils. Limestone is typically at depths of 100+ feet. A surficial groundwater table is typically present within 10 feet of land surface. Slow ground subsidence occurs from the raveling (erosion) of the sandy soils through breaches in the clay confining layer into voids in the limestone formation from the infiltration of the surficial water table into the Floridan Aquifer (groundwater recharge). This type of ground subsidence can take days or years to develop. This area of Alachua County does not have this type of geology (there is no persistent surficial groundwater table to slowly infiltrate and induce raveling), and therefore, does not have slow ground subsidence related to karst geology.

Summary



GSE has performed additional analysis and evaluations of the Tara project sites in Alachua, Florida to evaluate the potential for active ground loss. It is GSE's opinion that one isolated area at the northern portion of the site has active ground loss in the form of a cluster of chimney sinkholes that developed from approximately 1982 through 1999. These features were evaluated in GSE Project Number 14759A. It is GSE's opinion that active ground loss is not occurring in the portions of the site lower than elevation 75 feet over the remainder of the site. The two swallets identified by Wood are located off site and in our opinion have no impact on these sites. It is GSE's opinion that requiring further geological or geotechnical studies to evaluate active ground loss is an unnecessary requirement that is not warranted by the regional geology.

Closure

GSE appreciates this opportunity to provide these engineering services to you on this important matter. If you have any questions, or if we can provide any additional information, please contact us.

Sincerely,

GSE Engineering & Consulting, Inc.

RE: ACPS – School Capacity and Comprehensive Zoning

Alachua County Public Schools ("ACPS") has received notification of a proposed residential development project to be located in unincorporated or incorporated Alachua County. Pursuant to Chapter 1003, Florida Statutes, the School Board is charged with the operation and control of public K-12 education and its responsibilities include school facility planning, maintenance and student zoning.

This letter is being sent as a response to the impact that will be created by proposed development. First, please be advised that the School Board will be launching a district wide comprehensive school rezoning. This will involve a comprehensive review of all public schools, including their attendance zones and the educational programs offered. As a result of this rezoning, areas of the County and the towns/cities currently zoned for a school – may no longer be zoned for the same school when the rezoning process is completed. Any new residential development that is an existing school zoning district is not guaranteed to remain in that same zoning district after the rezoning process is completed. It is anticipated that a new rezoning plan will be in place for the start of the 2022-2023 school year.

Additionally, please advise that many of ACPS do not have adequate space for additional students. The school board evaluates if there is available school capacity for each school type in the affected school concurrency service area to accommodate the impacts of the residential development. However, available school capacity based on concurrency service areas, may not be realistic to the actual ability to place additional students in a school. Due to existing or possible facility overcrowding, even if a proposed development meets school concurrency requirements, there is no guarantee from the School District that students who reside in the development will be zoned to a specific school. Attached please find supporting documentation, including a chart of school capacity v. enrollment. The School District is evaluating it measures and processes to address these overcrowding concerns. If you have additional question please contact our District office. Thank you for your understanding.

Sincerely,

Carlee Simon, PhD

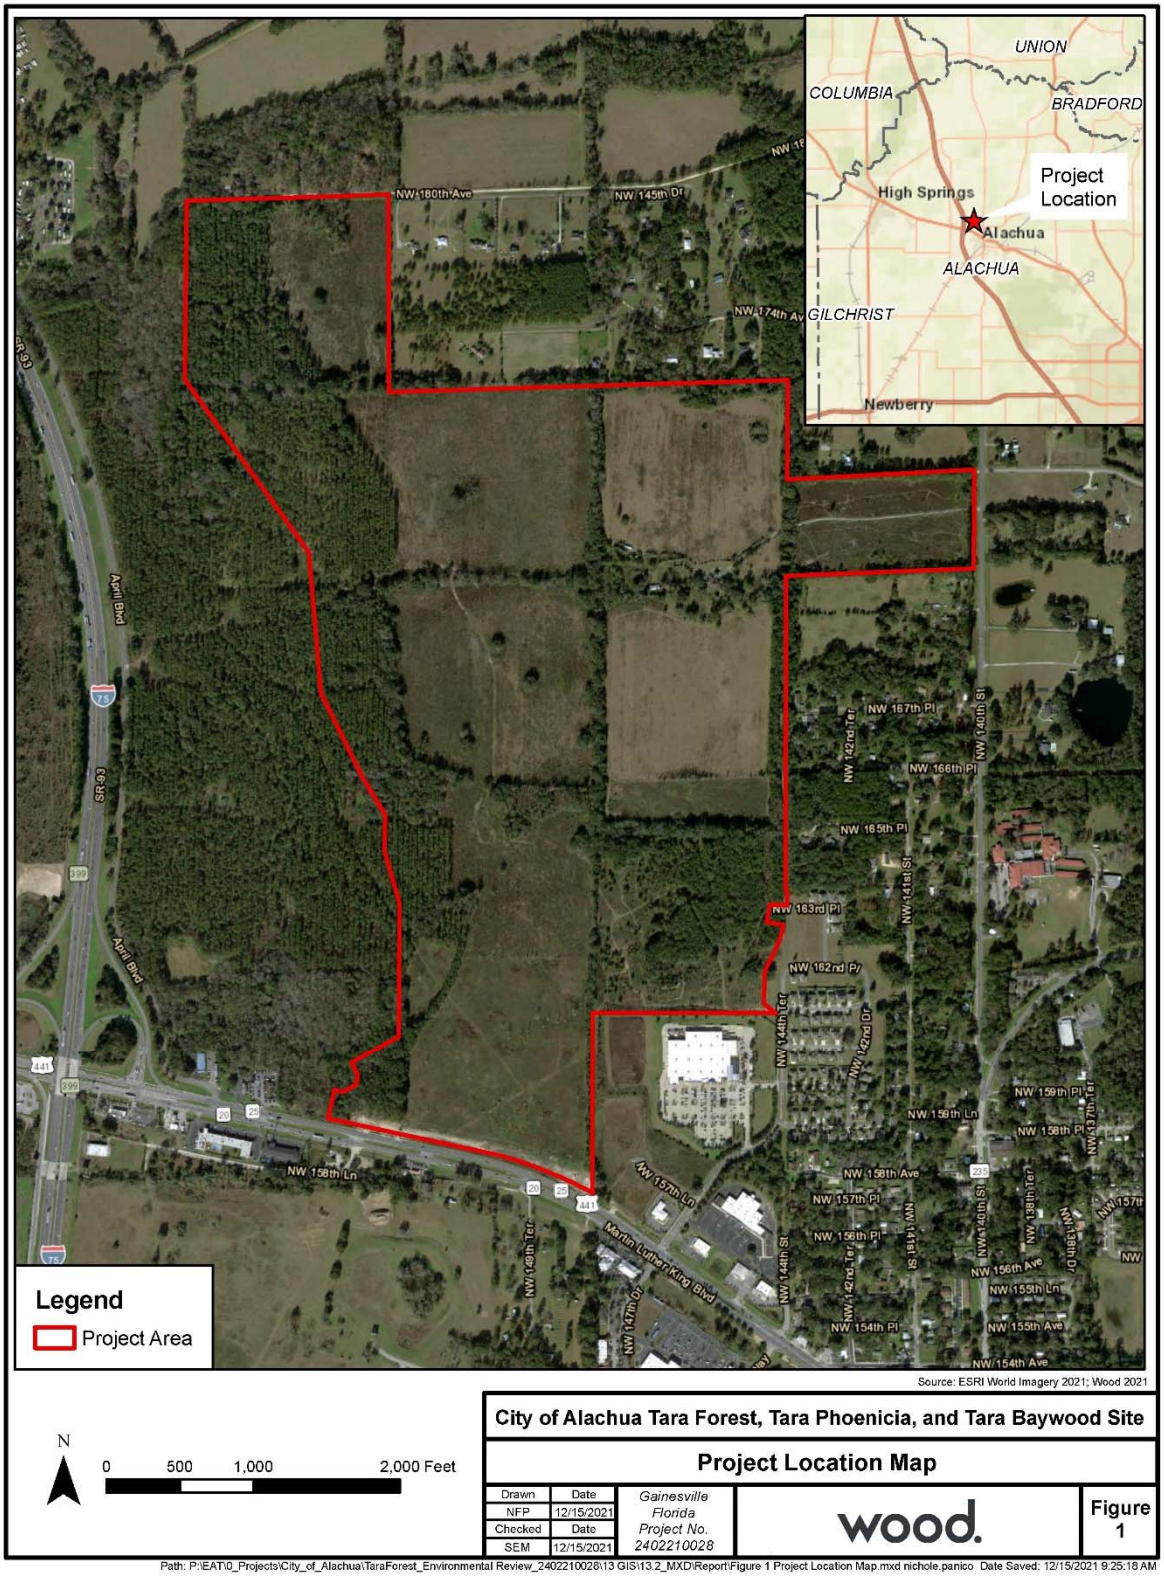
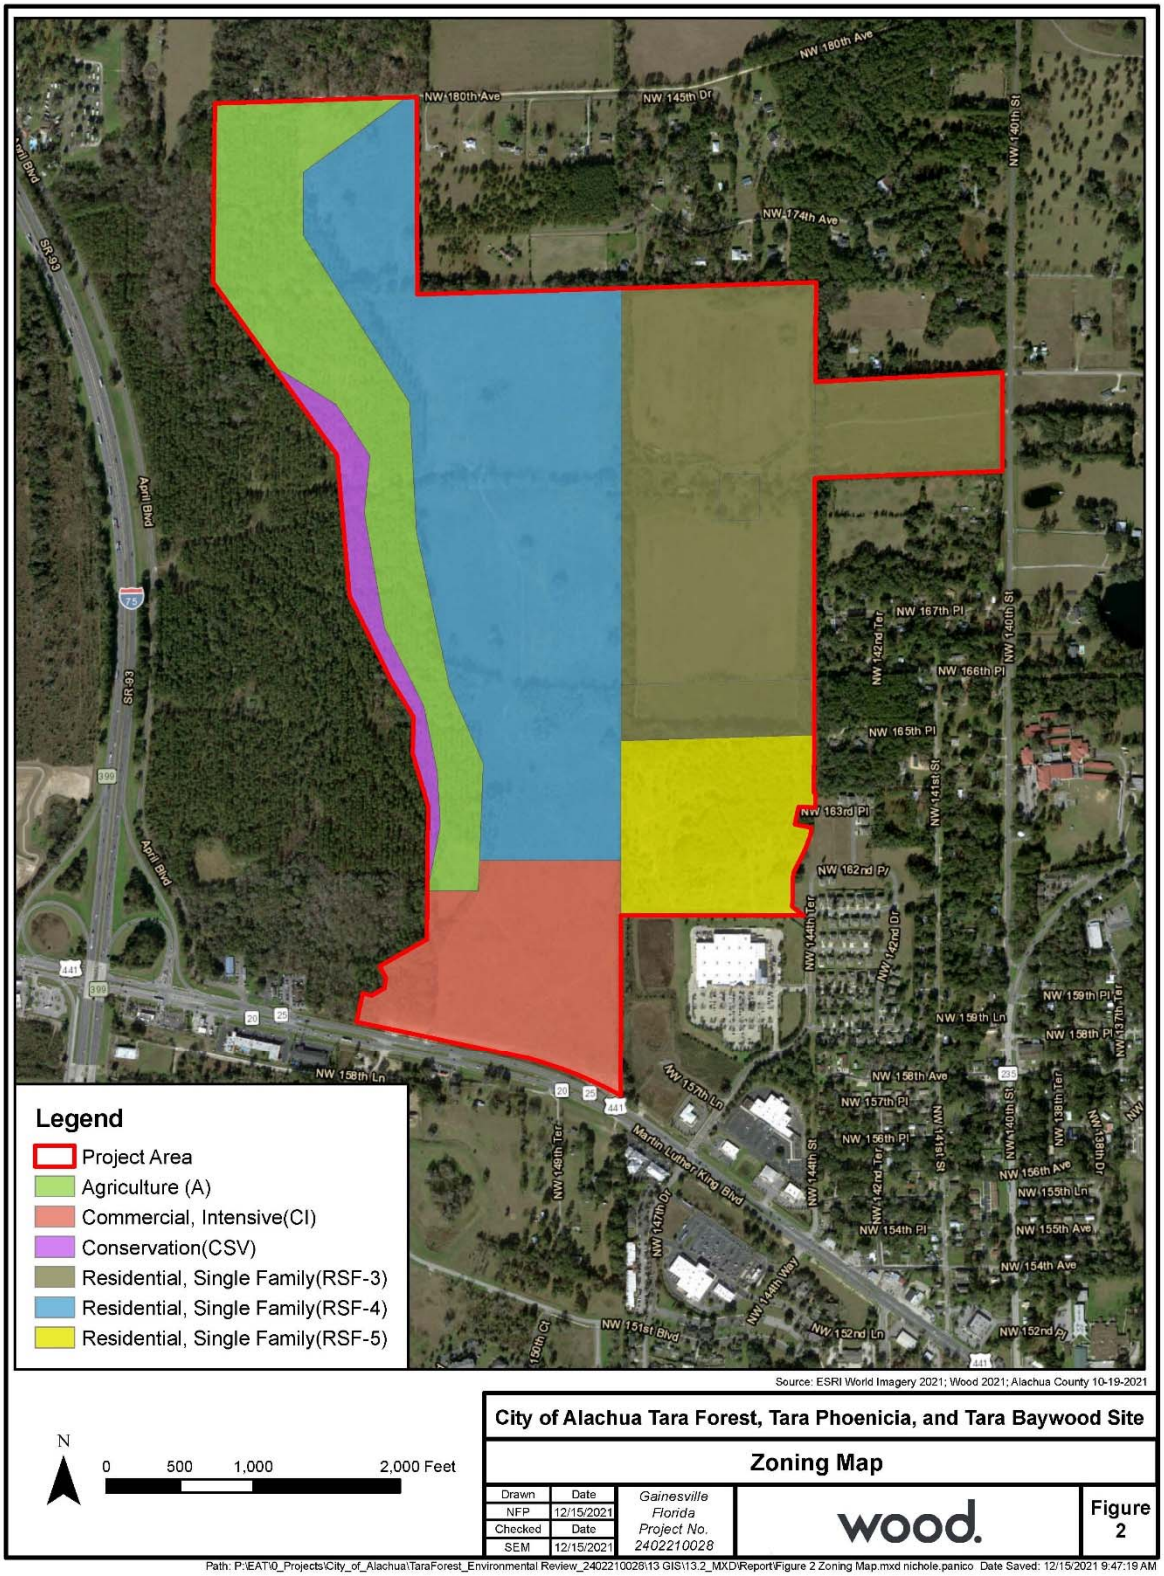
1.0 Introduction

1.1 Purpose



Wood Environment & Infrastructure Solutions, Inc. (Wood) was authorized by the City of Alachua (the City) to perform technical review of the Environmental Resource Assessment Report prepared by Creative Environmental Solutions, Inc (July 2021) for the Tara Forest, Tara Phoenicia, and Tara Baywood Site.



1.2 Background

Tara Forest, LLC. submitted an Environmental Resource Assessment Report to the City for the Tara Forest, Tara Phoenicia, and Tara Baywood Site prepared by Creative Environmental Solutions, Inc. (dated July 2021). The City has requested Wood review the report because the subject parcel is east of and upgradient from Mill Creek and Mill Creek Sink. Due to the Karst environment and presence of sink holes in the vicinity of the Project Site, the City requested a review of readily available information on underground caves, and potential design considerations and/or avoidance areas.

The applicant (Tara Forest, LLC) is seeking to develop a portion of Tara Forest, Tara Phoenicia and Tara Baywood Site (**Figure 1**). The 378 +/- acre property is located northeast of the intersection of Interstate 75 and US Highway 441 and is currently zoned as Agriculture, Commercial, Conservation, and Residential (**Figure 2**).

Wood scientists have reviewed the Environmental Resource Assessment Report to verify if the report findings are professionally acceptable. The findings of the review of the Environmental Resource Assessment are presented in Section 2 and 3.

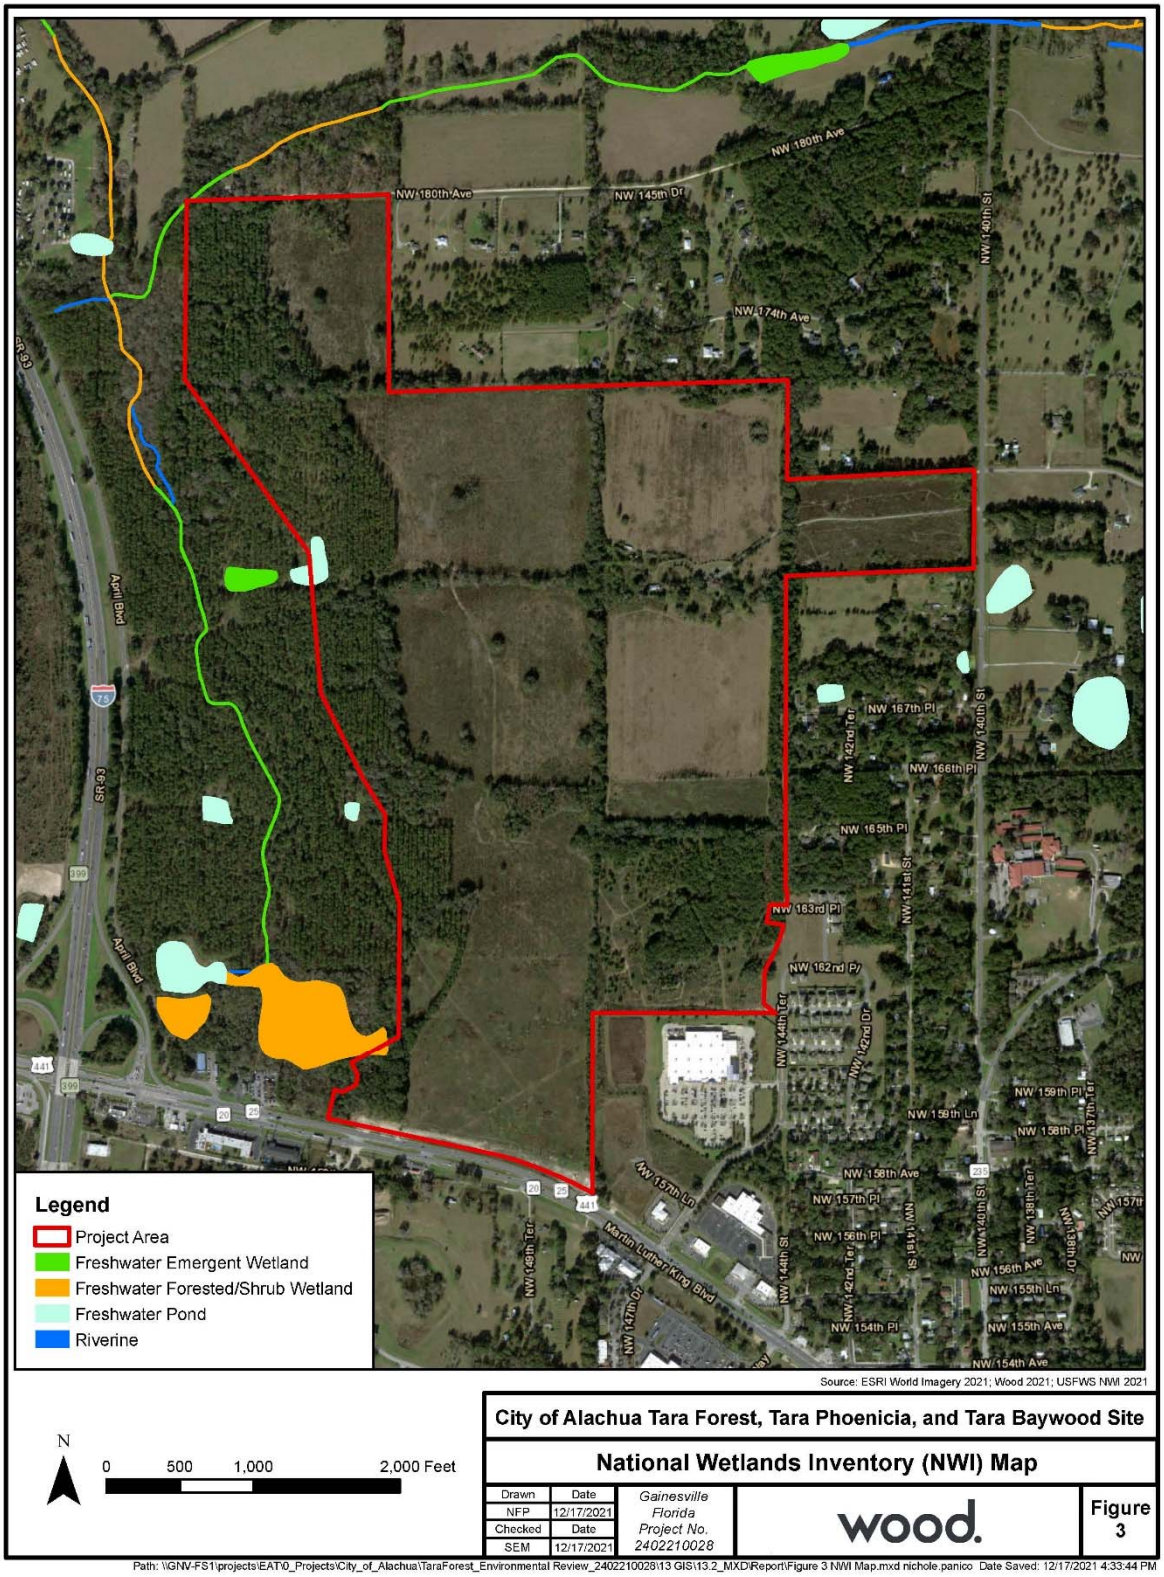
2.0 Environmental Assessment and Listed Species Survey Review

Wood environmental scientists conducted a desktop review and site assessment to confirm or deny the findings of the Environmental Resource Assessment report. The site assessment included review of wetland delineation lines for consistency with 1987 United States Army Corps of Engineers (USACE) "Corps of Engineers Wetlands Delineation Manual" and the Florida wetland delineation method, "Delineation of the Landward Extent of Wetlands and Surface Waters" (Chapter 62-340). In addition, the site was reviewed for potential presence of protected species or their habitat.



2.1 Wetland Delineation Review

Creative Environmental Solutions scientists delineated the wetland habitat on and adjacent to the subject property on June 11, 2021.

Wood scientist reviewed the USFWS National Wetland Inventory and NRCS soils (provided in the Environmental Resource Assessment report) to aid in identification of wetlands. The USFWS NWI map is shown as **Figure 3**.

On December 14, 2021, Wood scientists reviewed the wetland delineation and agreed with the general location of the wetland boundary lines. Prior to development, the wetland delineation will need to be verified by Alachua County and Suwannee River Water Management District (SRWMD).

Creative Environmental Solutions, Inc. also mapped upland habitats throughout the property as upland hardwood forest, mixed hardwood-pine, floodplain marsh, and coniferous plantation. Wood scientists reviewed the property and generally agreed with Creative Environmental Solutions assessment.

2.2 Threatened & Endangered Species Review

Creative Environmental Solutions scientists performed a desktop survey for the potential presence of threatened and endangered species using Florida Natural Areas Inventory (FNAI) and performed a site investigation for evidence of listed species and their habitat. Wood scientists reviewed the Creative Environmental Solutions assessment. The methods used by Creative Environmental Solutions are consistent with methods that Wood scientists follow for listed species evaluations. However, we also use the USFWS Information for Planning and Consultation (IPaC) Resource List Report (USFWS, 2021a). The IPaC resources list report includes an informal list of endangered species, critical habitat, migratory birds, wildlife refuges, and wetlands (collectively referred to as trust resources) under the USFWS jurisdiction that are known or expected to be on or near the project area (**Appendix A**).

The IPaC resources list included three species not included in the FNAI species list for the project site. These included the eastern black rail (*Laterallus jamaicensis ssp. jamaicensis*), the frosted flatwoods salamander (*Ambystoma cingulatum),* and Monarch Butterfly (*Danaus plexippus*). **Table 1** outlines the species listed in the IPaC resource lists, their preferred habitat, and if that preferred habitat is found on the subject property. Foraging habitat for the eastern black rail (freshwater marshes) is noted as being present in the wetlands of the subject property. Although the frosted flatwoods salamander was listed by IPAC for the subject property, the current range for this species does not overlap with the subject property (USFWS, 2021b). The monarch butterfly was recently announced as a candidate species by USFWS, but it is not yet listed or proposed for listing, and there are no Section 7 of the Endangered Species Act requirements at this time (USFWS, 2021b). Creative Environmental Solutions also did not discuss several state listed wildlife species that were listed by FNAI as potentially occurring on the subject site. These species include the burrowing owl and the Florida mouse. These species, their preferred habitat, and if that preferred habitat is found on the subject property is included in **Table 1**.

On December 14, 2021 Wood scientists evaluated the onsite habitat compared with preferred habitats for the listed species identified by FNAI and IPaC. Wood scientists agreed with the habitat assessments made by Creative Environmental Solutions scientists. Creative Environmental Solutions observed 2 gopher tortoise burrows, and Wood scientists observed a third burrow on December 14, 2021 (**Figure 4**). Based on Creative Environmental Solutions assessment, they anticipate 6.8 (7) gopher tortoises inhabit the site. Prior to development, a Florida Fish and Wildlife Conservation Commission (FWC) compliant gopher tortoise survey would be required.

Creative Environmental Solutions did not discuss the state listed plant species that may occur on the subject property. **Table 1** includes the listed plants identified in the FNAI species report. No listed plant species are anticipated to occur on the subject property, and were not observed during Wood's site assessment on December 14, 2021.

No threatened or endangered wildlife or plant species were observed during Wood's site assessment.

2.3 Tree Protection

The Creative Environmental Solutions report did not discuss tree protection. Wood scientists observed many large trees on the property. If large trees are to be removed as part of the development, a City of Alachua Tree Removal Permit will be required.

Table 1. Threatened and Endangered Species with Potential for Occurrence on the Project Area

Scientific Name[a]	Common Name[a]	Listing Status [a]	Preferred Habitat [b]	Habitat Present on Project Site[d]
Laterallus jamaicensis ssp. *jamaicensis*	Eastern Black Rail	PT	Salt, brackish, and freshwater marshes[c]	Yes
Ambystoma cingulatum	Frosted Flatwoods Salamander	FT	Slash and longleaf pine flatwoods with a wiregrass floor and scattered wetlands	No, subject property outside current range of species.
Danaus plexippus	Monarch Butterfly	FC	Milkweed host plant (primarily *Asclepias spp.*) [c]	No
Athene cunicularia floridana	Florida Burrowing Owl	ST	Open prairies with little understory vegetation	No, subject property outside current range
Podomys floridanus	Florida Mouse	SSC	Xeric uplands with sandy soils, such as sandhill and scrub	No
Agrimonia incisa	Incised Groove-bur	ST	Fire maintained longleaf pine forest [f]	No
Calopogon multiflorus	Many-flowered Grass-pink	ST	Dry to moist flatwoods with longleaf pine, wiregrass, saw palmetto [e]	No
Hartwrightia floridana	Hartwrightia floridana	ST	Seepage slopes, edge of baygalls and springheads, wet prairies, and wet flatwoods [e]	No
Litsea aestivalis	Pondspice	SE	Peaty soils in edges of baygalls, flatwoods ponds, and cypress domes [e]	No
Matelea floridana	Florida Spiny-pod	SE	Upland hardwood forests [f]	Yes
Pycnanthemum floridanum	Florida Mountain Mint	ST	Wet swales/depressions in pine flatwoods, wet prairies, floodplain forest [f]	No
Salix floridana	Florida Willow	SE	Very wet, calcareous soils usually in dense floodplain forest [f]	No
Sideroxylon alachuense	Silver Buckthorn	SE	Upland hardwood forests around lime sinks and on shell mounds [e]	No

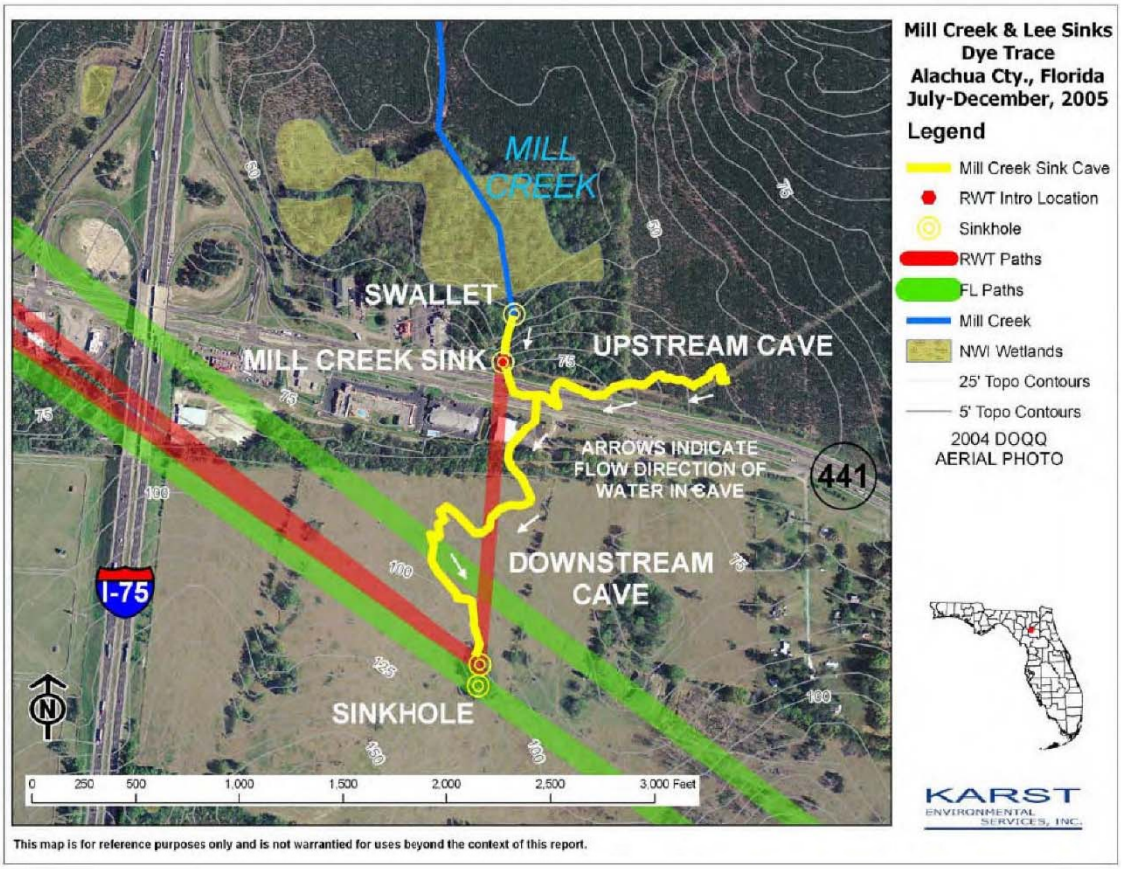
3.0 Geological Assessment

Creative Environmental Solutions' report indicated "No significant Geological Features (caves, springs, sinkholes, etc.) were observed on the site". They also indicated there were no surface features observed that indicated a direct connection to the Floridan aquifer.

According to Butt et al. (2006), the Mill Creek Sink Cave is located along the southern perimeter of the project site (**Figure 5**) and is a direct connection to the Floridan Aquifer.

The entire study area is known to be underlain with an extensive cave network and to have active karst features such as sinkholes, swallets (sinking streams), and areas that have experienced substantial subsidence. The sink noted just off the southwest corner of the property in the Creative Environmental Solutions report and shown in (**Figure 5**) is the Mill Creek Sink and is a very large water-filled sinkhole providing direct diver access to a large tunnel network in the upper Florida Aquifer.

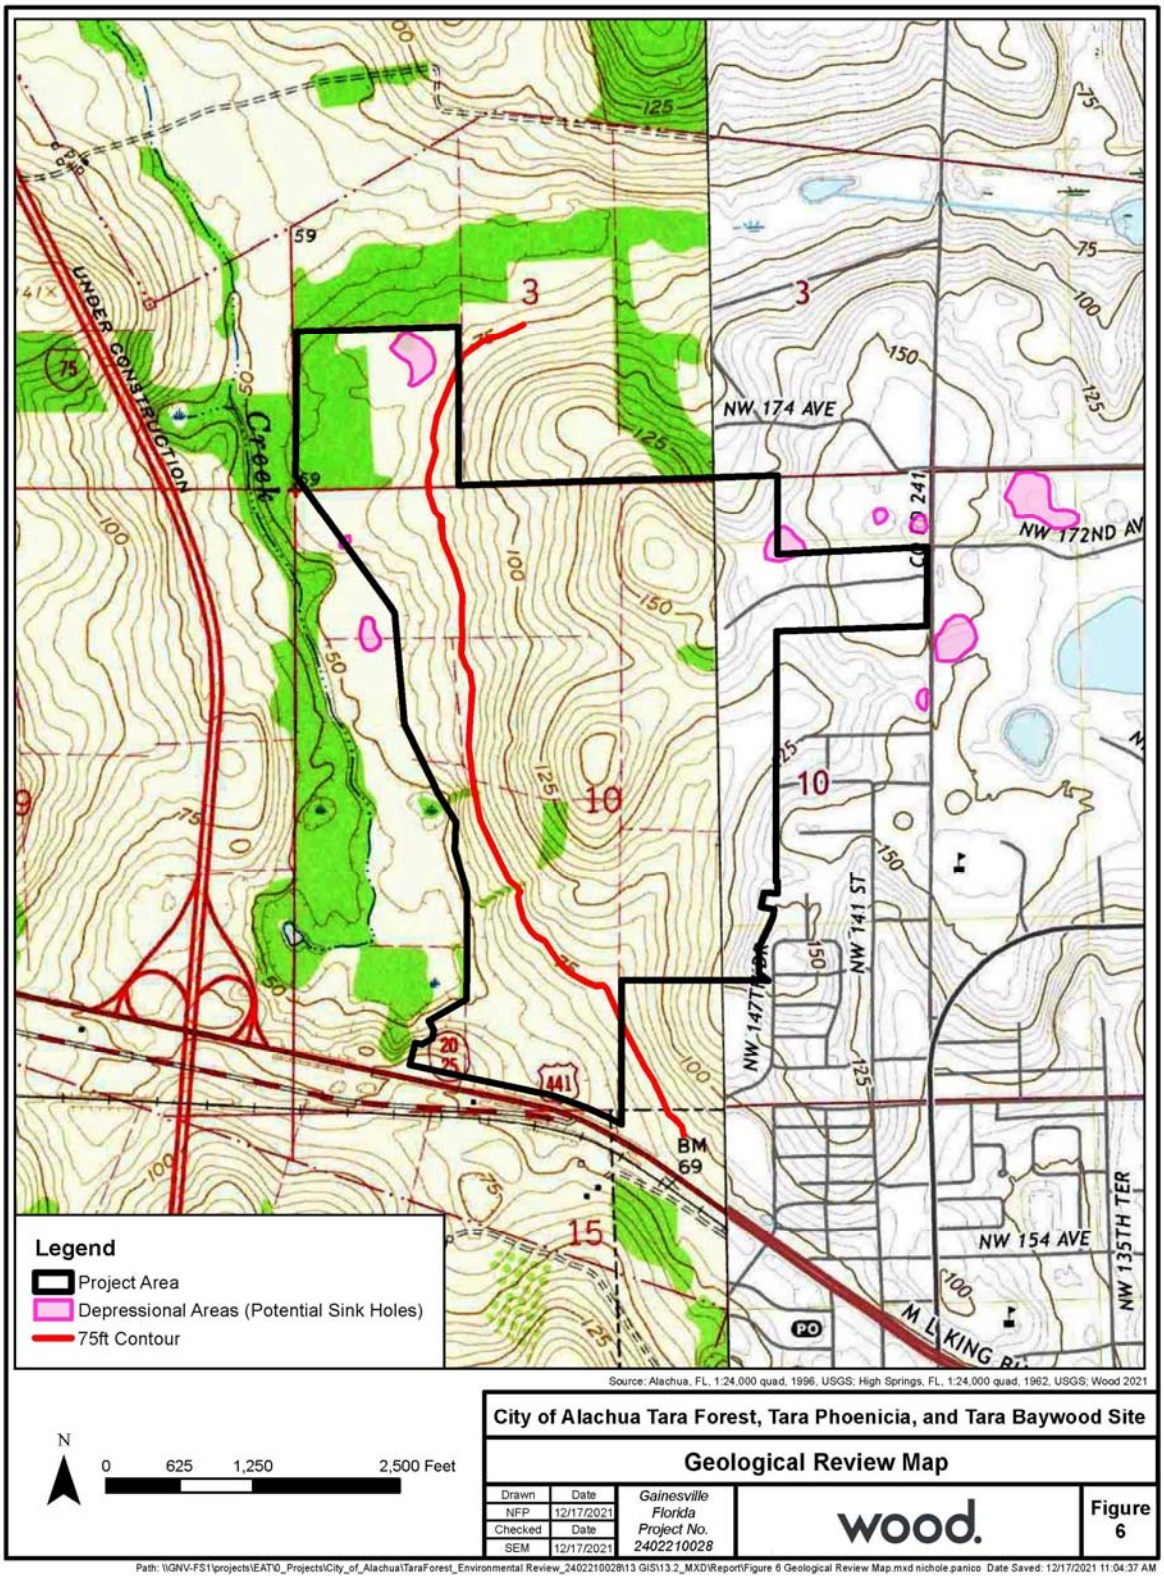


Based on a comparison of the site topographic information since 1962 (USGS), the entire western boundary of the property (<75ft elevation) appears to be an area potentially experiencing active ground subsidence. Based on the 1962 topographic map there are sinkholes present at multiple locations along this western boundary. The historical topographic maps (USGS), also indicate the presence of a sinkhole in the northwestern portion of the site and in the general vicinity of the northern portion of the eastern boundary (**Figure 6**).

The Mill Creek Sink is directly connected to the Upper Floridan Aquifer and there at least two features shown on the 1962 topographic map along Mill Creek stream valley that appear to be swallets; one immediately adjacent to the western boundary of the property (in the lower 1/3rd of the property boundary) and the other on the western side of Mill Creek immediately south and west of the first one) (**Figure 6**). There are isolated locations along the northern and eastern portion of the property and in at least one stream valley cutting diagonally across the property that appear to be exhibiting ground subsidence consistent with the formation and development of sinkholes. Whether or not these types of features are directly connected to the Floridan Aquifer would need to be demonstrated in the field.

3.1 Avoidance Areas and Recommendations

In general, within the lower Mill Creek Valley (elevation < 75 ft contour, western portion of the property), may be susceptible to subsidence, and development in these areas should consider the possibility of subsidence or sinkhole formation. Further, the depressional areas and stream valleys identified in **Figure 6**, and the Mill Creek Sink Cave shown in **Figure 5**, may experience more settlement over time, with potential for sink hole formation.



Wood recommends evaluating the likelihood of ground loss due to karst by performing site-specific engineering and geological studies. Following additional investigation, Wood recommends avoiding development in areas that have shown ground loss between the 1960's and today and selecting areas for development at higher elevations.

4.0 Summary and Conclusions

Wood scientists generally agree with the Environmental Resource Assessment Report for the Tara Forest, Tara Phoenicia, and Tara Baywood Site prepared by Creative Environmental Solutions. Although, the report did not address some of the listed species with the potential to occur on the site, species on the IPAC resources list and state listed plant species, impact to listed species are not anticipated.

Wetlands are protected under Rule 62-330.020 Environmental Resource Permitting of the Florida Administrative Code (F.A.C.), Section 404 of the Clean Water Act [United States Environmental Protection Agency (USEPA)], and Alachua County Code of Ordinances (Part II, Title 7, Chapter 77). If future development includes impacts to these wetlands or the wetland buffer (as defined by Alachua County and SRWMD) Environmental Resource Permit (ERP) and Alachua County development permits will be required.

The assessment of geologic features within the subject site did not include a thorough review of historical topographic maps or published reports about the karst nature of the surrounding landscape. Section 3 of this report outlines concerns and recommendations associated with the geology of the subject site. Additional site-specific engineering and geological studies are recommended.

Appendix A
USFWS Information for Planning and Consultation (IPaC) Resource List Report

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Location

Alachua County, Florida

Local office

North Florida Ecological Services Field Office

(904) 731-3336
(904) 731-3045

7915 Baymeadows Way, Suite 200
Jacksonville, FL 32256-7517

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

---

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Birds

NOT FOR CONSULTATION

NAME	STATUS
Eastern Black Rail Laterallus jamaicensis ssp. jamaicensis Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/10477	Threatened
Wood Stork Mycteria americana No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8477	Threatened

Reptiles

NAME	STATUS
Eastern Indigo Snake Drymarchon corais couperi Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/646	Threatened
Gopher Tortoise Gopherus polyphemus No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6994	Candidate

Amphibians

NAME	STATUS
Frosted Flatwoods Salamander Ambystoma cingulatum Wherever found There is **final** critical habitat for this species. The location of the critical habitat is not available. https://ecos.fws.gov/ecp/species/4981	Threatened

Insects

NAME	STATUS
Monarch Butterfly Danaus plexippus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/9743	Candidate

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

NOT FOR CONSULTATION

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN

NOT FOR CONSULTATION

	THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)
American Kestrel Falco sparverius paulus This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31
Great Blue Heron Ardea herodias occidentalis This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Jan 1 to Dec 31
Lesser Yellowlegs Tringa flavipes This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds elsewhere
Magnificent Frigatebird Fregata magnificens This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Oct 1 to Apr 30
Prairie Warbler Dendroica discolor This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
Red-headed Woodpecker Melanerpes erythrocephalus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
Swallow-tailed Kite Elanoides forficatus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8938	Breeds Mar 10 to Jun 30

NOT FOR CONSULTATION

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (▪)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

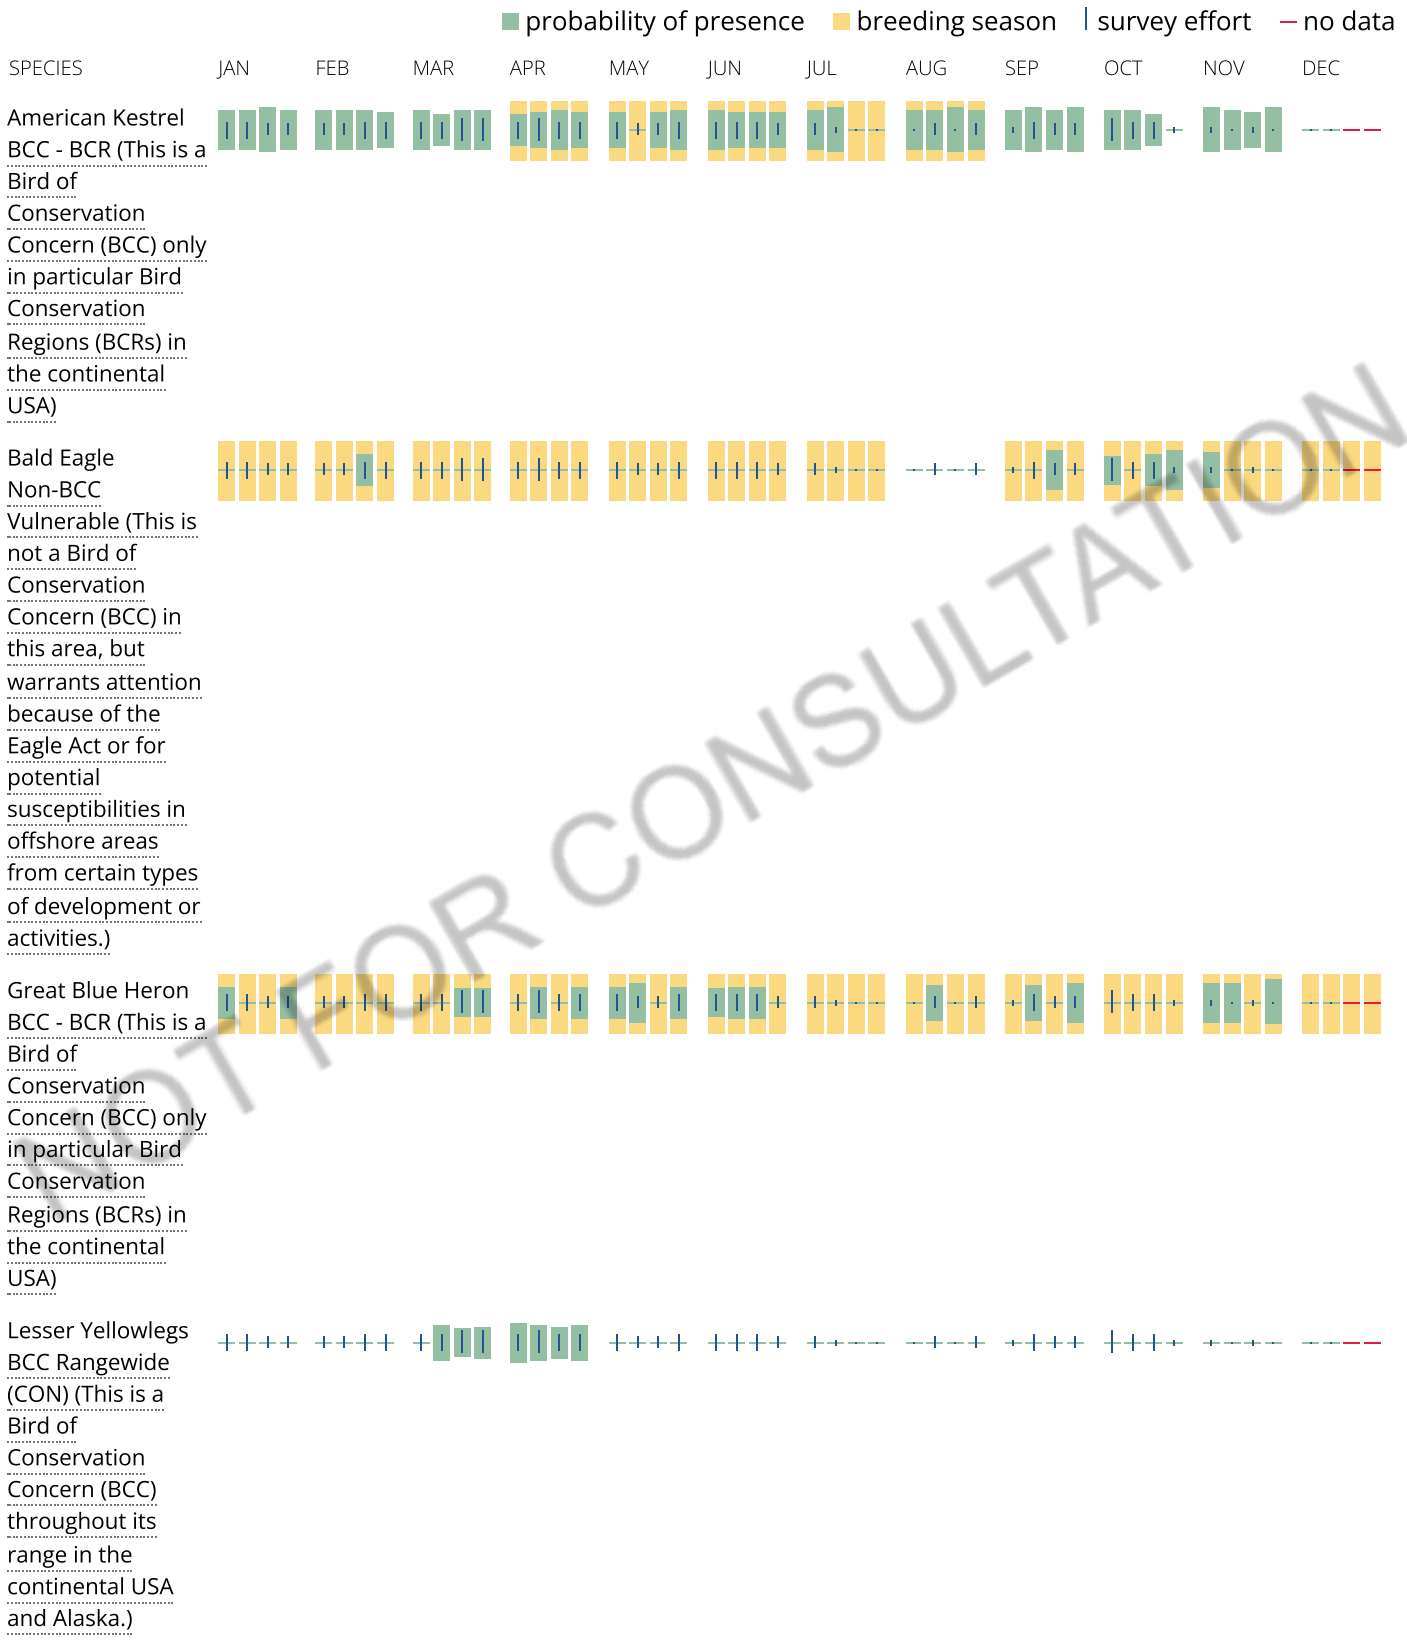
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

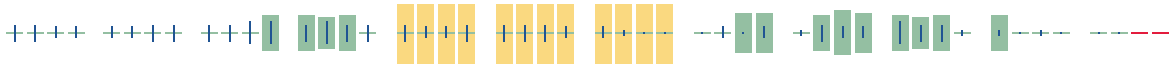


To see a bar's survey effort range, simply hover your mouse cursor over the bar.

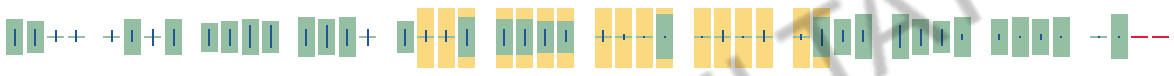
No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe

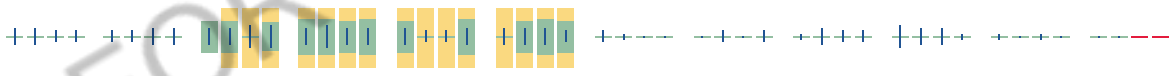
NOT FOR CONSULTATION



Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.



DRAFT FOR CONSULTATION



Magnificent Frigatebird BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Prairie Warbler BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Red-headed Woodpecker BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Swallow-tailed Kite BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

NOT FOR CONSULTATION

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

NOT FOR CONSULTATION

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

NOT FOR CONSULTATION

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

WETLAND INFORMATION IS NOT AVAILABLE AT THIS TIME

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

NOT FOR CONSULTATION

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in

activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

RE: TARA FOREST WEST, TARA APRIL & TARA PHOENICIA

Dear Mr. Moukhtara:

This letter is in regards to the above referenced projects.

It has come to the attention of City staff ("Staff") during the review of development applications involving the above three referenced projects that were submitted at various times, that numerous aspects and requirements for them are inextricably intertwined or dependent on other prerequisites before they can be considered for final approval. In other words, none of the above projects stands on their own merit, but instead, they are dependent on the approval of the other applications.

As such, Staff, including Planning & Community Development and Public Services, will not be proceeding with further review of each of these projects in their current form, as it does not appear that any of them can receive ultimate final approval standing individually on their own merit. As Staff has been reviewing the viability of the above referenced projects, the interdependency of one project on the other or on other applications has become readily apparent. Staff does not wish to mislead any applicant regarding the success of an application.

If you wish to discuss the above, a meeting with City staff can be arranged.

Regards,

Mike DaRoza
City Manager

RE: Project Assistance Team (PAT) Comments for Tara Forest West Preliminary Plat

Dear Mrs Peters:

On October 14, 2021, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

The revised application has been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the application before it may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). A meeting is scheduled to be held on November 8, 2021 to discuss the needed revisions to the submitted application. Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 4:00 PM on Monday, December 6, 2021. A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time.

Please address the following insufficiencies (begins on next page):

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

A. Land Use

a. Proposed preliminary plat appear to show a structure that could be defined as a neighborhood recreation center. Please note that this use is not permitted with the A (Agricultural) zoning district.
b. Please provide parking calculations for proposed structures and uses in common area/ open space.
c. Under Ordinance 21-07 (adopted June 14, 2021, but not yet codified) a Special Exception permit is required for stormwater facilities in the A (Agricultural) zoning district. The special exception must be approved prior to the consideration of the preliminary plat.
d. Traffic study discusses connection to US 441 and NW 157th Lane, but these connections are not shown in the preliminary plat. These should be included with the preliminary plat or a separate infrastructure plan should be submitted. The proposal for 538 single family homes accessing US 441 through Baywood or Tara Forest East would not be acceptable.
e. Please verify if any stormwater runoff from this project will be directed towards proposed stormwater management facilities in Tara Baywood or Tara Forest East.

B. Comprehensive Plan Consistency

a. Policy 1.2.a of the Future Land Use Element response states that the development will consist of single family attached and detached units. Please verify. Single family attached units not permitted in RSF-4 zoning district.
b. Please identify amount of open space proposed in acreage and % of subject property to demonstrate compliance with Policy 2.5.a of the Future Land Use Element.

C. Concurrency Impact Analysis

a. Provided concurrency analysis provides overall traffic impacts generated by the proposed development, but does not provide impacts to all impacted transportation facilities. Please provide analysis showing adequate capacity on all impacted transportation segments.
b. Please provide AADT for east driveway connection.

D. Article 5- Dimensional Standards

a. Provide acreages for all common areas.
b. Depict setback lines for Lot 496.
c. Sheet 4 – Lot 502 references Curve C363, but this curve not identified in curve table.
d. Sheet 4 – Lot 335 references Curve C453, but this curve not identified in curve table.
e. Sheet 4 – Lots 497 and 498 appear to exceed a depth of three times the width.
f. Depict setback lines for Lot 437.
g. Sheet 8 – Lots 150 – 163 do not depict rear lot line dimensions.
h. Sheet 9 – Identify area to west of Lot 76. Common area?
i. Sheet 9 – Identify area to west of Lot 197. Common area?
j. Depict building setbacks for Lot 198. Please evaluate buildability of lot given limited envelope.
k. Sheet 10. Identify area to west of Lots 77 and 96. Common area?
l. Sheet 4 – Lot 98 does not appear to meet minimum width of 50'.

E. Article 7- Subdivision Standards

a. Block with Lots 371-375/ 402-404 does not appear to meet minimum block length per Section 7.2.3 (B)(2).
b. Block with Lots 405, 406, and 433 does not appear to meet minimum block length per Section 7.2.3 (B)(2).
c. Block with Lots 77-80/ 93-96 does not appear to meet minimum block length per Section 7.2.3 (B)(2).

d. Block with Lots 37-41/ 53-56 does not appear to meet minimum block length per Section 7.2.3 (B)(2).
e. Block with Lots 57-60/ 73-76 does not appear to meet minimum block length per Section 7.2.3 (B)(2).
f. Block with Lots 268-284 appears to exceed maximum block length per Section 7.2.3(B)(2).
g. Block with Lots 6-14/97-105 appears to exceed maximum block length per Section 7.2.3(B)(2).
h. Lot 497 exceeds maximum depth to width ratio of 3:1 per Section 7.2.4 (B)(2). Width calculated 58.54'. Depth calculated 190'.
i. Lot 498 exceeds maximum depth to width ratio of 3:1 per Section 7.2.4(B)(2). Width calculated 43.37'. Depth calculated 210'.
j. Lot 433 is a double frontage lot, which is prohibited per Section 7.2.4 (C).
k. Western termini of Roads R, Q, P may not meet intersection angle requirements per Section 7.2.5 (I)(1)(c). Please provide angle of approach for each intersection.
l. Southern terminus of Road I does not meet intersection angle requirement per Section 7.2.5. (I)(1)(c). Please revise.
m. Provide fire protection information to demonstrate compliance with Section 7.3.9.
n. Northern terminus of Road A appears to be dead end, which is prohibited under Section 7.2.5 (G). Adjacent property is developed so no street stub is required.
o. The following lots appear to not meet the minimum radii per Section 7.2.5 (I)(3):

i. 481
ii. 482
iii. 495
iv. 503
v. 33
vi. 304
vii. 270
viii. 254
ix. 281
x. 285
xi. 255

F. Outside Review
a. Please address all comments issued by Daniel Young, P.E, of CHW, Inc. in a letter dated November 2, 2021 and attached to this letter.

b. Please address all comments issued by Rodolfo Valladares, P.E., Public Services Director, and Tom Ridgik, P.E., Engineering Supervisor in a memo dated November 1, 2021 and attached to this letter.
c. Traffic review is currently underway by Brian Kanley of Volkert, Inc. Comments are anticipated by November 22, 2021. Once received, these will be forwarded.
d. Environmental review is currently underway by Wood Environment and Infrastructure Solutions, Inc. Comments are anticipated by November 29, 2021. Once received, these will be forwarded.

G. Miscellaneous/ General Comments
a. Alachua County Environmental Protection Department (EPD) requires the review and approval of stormwater management systems, unless otherwise exempt. It is recommended that the applicant contact Alachua County EPD to coordinate this review and approval. Additional information is available at: https://library.municode.com/fl/alachua_county/codes/code_of_ordinances?nodeId=PTIIADCO_TIT7HESA_CH77WAQUSTMAPR_ARTIIISTTRCO
b. Alachua County Environmental Protection Department (EPD) requires review of potential impacts to wetlands, surface water bodies and other natural resources. It is recommend that the applicant contact Alachua County EPD to coordinate this review. Additional information is available at: https://alachuacounty.us/Depts/epd/Pages/countywideresources.aspx
c. Provide Block labels for all blocks.
d. Please provide key for symbols shown on soils map sheet.
e. Phase lines shown appear to transect lots. Please address.
f. Lot 474 does not appear to be shown on Sheet C2.0 Master Phasing Plan.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

Adam Hall, AICP
Principal Planner

TO: **Kathy Winburn, AICP**
Planning & Community Development Director

FROM: **Rodolfo Valladares, P.E.**
Public Services Director
Tom Ridgik, P.E.
Engineering Supervisor

TR 11/1/2021

RE: **Tara Forest West Preliminary Plat**

Public Services has reviewed the subject project (October 14 Submittal) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
1.	**Comments on Oct 14th Submittal** **Sheet C3.0** Under General Notes, please add the following (or equivalent): "THE HOMEOWNER'S ASSOCIATION (HOA) SHALL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF ALL COMPONENTS OF THE STORMWATER SYSTEM NOT IN THE RIGHT-OF-WAY. THE CITY OF ALACHUA WILL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF THE STORMWATER SYSTEM WITHIN THE RIGHT-OF-WAY." Please **resubmi**t this sheet.
2.	**Comments on Oct 14th Submittal** **Sheet C3.0** Stormwater piping is shown entering stormwater Basins 2 & 3. Please review stormwater Basin 1. Should stormwater piping also enter this basin?

NO.	COMMENTS
	Please evaluate & **resubmit** if necessary.
3	**Comments on Oct 14th Submittal** **Sheet C4.0** **Typical Utility Allocation** The wastewater cleanout is shown at the PUE boundary. COA now prefers that the cleanout be located in the middle of the PUE. Thus, please add a note similar to: "For clarity, the wastewater cleanout is shown at the PUE boundary. As per CoA, install cleanouts in the middle of the PUE." Please **resubmit** this sheet.
4	**Comments on Oct 14th Submittal** **Sheet C4.0** **Typical Utility Allocation** Please increase the distance from the tree to the water main from 9 feet to 10 feet. To compensate, decrease the distance from TEL cable to the PE/SE from 3 feet to 2 feet. Please **resubmit** this sheet.
5	**Comments on Oct 14th Submittal** **Sheet C5.1** General Note 3: Please add "DR-18" to this note. Please **resubmit** this sheet.
6	**Comments on Oct 14th Submittal** In preparing the Construction Documents, please keep in mind the following CoA requirements: • Wastewater laterals enter at lot corners, not the lot centerline. In case there are obstructions such as P-Inlets and electrical transformer, route laterals a suitable distance from such obstructions. • Minimum distance of 10 feet between trees and water mains. Suggest that the landscape architect be notified of this requirement ASAP. **FYI**
	END OF COMMENTS

Please advise if you have any questions or require additional information.

MEMORANDUM

Tara Forest West Preliminary Plat

November 2, 2021

Professional Consultants

To: Mr. Justin Tabor

From: Daniel Young, PE

Date: November 2, 2021

RE: Tara Forest West Preliminary Plat

CHW has reviewed the plans submitted for the Tara Forest West Preliminary Plat and have the following comments:

1. Please provide sheet C5.0, Utility Allocations. If this sheet no longer exists, please remove it from the sheet index.
2. Please label the project boundary.
3. Please clarify the scale on sheet C3.0; the shown scale is 1" = 20' but the scale on sheets with similar layouts is 1" = 200'.
4. Per item "i" of the plans criteria, please provide the zoning of all adjacent properties.
5. Per item "j" of the plans criteria, please provide the acreage of all adjacent land.
6. Pursuant to comments 2 and 3, please clarify if the property to the west with the multi-use paths is within the project area.
7. Per item "k" of the plans criteria, please show building setbacks on lots with approximate dimensions.
8. Per item "k" of the plans criteria, please show and dimension all proposed easements, including public utility easements. Please note that this includes easements for potable water and sanitary sewer.
9. Pursuant to comment 7, please clarify the fact that the typical roadway sections on sheet C4.0 show a 10 ft PUE on both sides of the right-of-way but the PUE is not shown on any of the plans sheets.
10. Per item "k" of the plans criteria, please provide the acreage for the common areas shown on sheets RP-1 to RP-10.
11. Per item "l" of the plans criteria, please provide lot numbers on sheets C2.0, C3.0, and C5.1.
12. Per item "m" of the plans criteria, thank you for providing general note 7 on sheet C5.1. Please provide on the plan where the connection points for water and sewer will be located and please provide information on the electrical service.
13. Per item "m" of the plans criteria, please note that at the current scale, sheet C5.1 is illegible. Please provide detail sheets for utility layout.
14. Per item "n" of the plans layout, please clarify the FEMA flood zone for the project area. Sheet C0.0 shows a flood zone of "A" and sheet C3.0 shows the limit of a FEMA flood plain. Please clarify if the flood plain shown on C3.0 is the flood zone referenced on C0.0 and clarify the flood zone for the remaining area.
15. Please either label or remove the flood plain limits from sheet C5.1.
16. Per item "n" of the plans criteria, please show the limits of wetlands shown on C3.0.
17. Pursuant to comment 16, please note that impacts to wetlands will need to be mitigated.
18. Per item "o" of the plans criteria, please provide drainage divides.
19. Per item "o" of the plans criteria, please provide information on drainage direction.

20. Please note that at the provided scale, C3.0 is illegible. Please provide detailed drainage sheets.
21. Per item “p”, please label all preliminary plat sheets with “NOT FOR FINAL RECORDING”.
22. Please clarify which phase each of the proposed SMFs will be built in, as several of the SMFs cross phase lines.
23. Please provide dimensions ROWs and easements on preliminary plat sheets, including PUEs for lots.
24. CHW recommends hatching the project area on sheet C0.0 for clarity. No response required.

RE: Completeness Review of Tara Forest West Preliminary Plat

Dear Ms Peters:

On October 14, 2021, the City of Alachua received your revised application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±200.68 acre subject property into a total of 538 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is complete.

An in-depth review of the content of the application will now be performed, and the findings of the in-depth review will be discussed at a Project Assistance Team (PAT) Meeting, which will be scheduled at a later date.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com.

Sincerely,

Adam Hall, AICP

RE: Completeness Review of Tara Forest West Preliminary Plat

Dear Ms Peters:

On August 23, 2021, the City of Alachua received your application for the Preliminary Plat of Tara Forest West, which proposes to subdivide a ±393.95 acre subject property into a total of 540 lots (consisting of Tax Parcel Numbers 03067-001-000 and 03008-000-000), with associated common areas, open space, stormwater management facilities, and right-of-way.

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is incomplete.

The comments below are based solely on a preliminary review of your application for completeness. An in-depth review of the content of the application will be performed, and the findings of the in-depth review will be discussed at a Project Assistance Team (PAT) Meeting, which will be scheduled after the application is determined to be complete.

In order to provide a complete application, you must address the following:

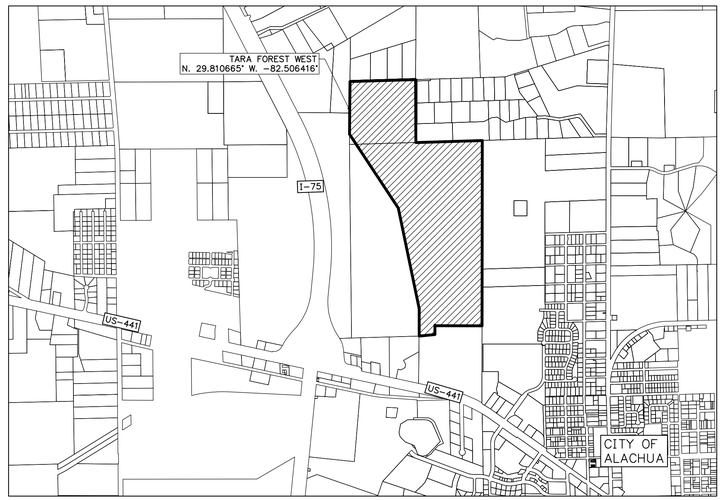
1. **Major Subdivision Preliminary Plat Application, Response A.5, Number of Proposed Lots:** Proposed number of lots is 540. The total amount of land in Moderate Density Residential, however, appears to be 134.50 acres, per Ordinance 09-14. This would result in a maximum residential density of 538 units (134.50 acres x 4 du/acre). Please address. Concurrency calculations and traffic study may need to be revised to reflect new total amount.
2. **Major Subdivision Preliminary Plat Application, Response A.12, Acreage:** Cover sheet of plans and application state acreage is 335.63 acres, while legal description and provided survey show area as 200.68 acres. Provided comprehensive plan consistency analysis states overall acreage is 393.95 acres. Please verify acreage and ensure consistency throughout application.
3. **Subdivision Application, Preliminary Plat Attachment #1 – Plans:**
   a. **Attachment #1.i: Zoning of Adjacent Properties:** Provided vicinity map does not show zoning designations of adjacent properties.

   b. **Attachment #1.n: Natural Features:** Provided plans do not include environmental features of the subject property including wetlands, streams, water courses, special flood hazard areas, etc.

4. **Major Subdivision Preliminary Plat Application, Attachment #2. – Concurrency Impact Analysis:**
   a. Concurrency Analysis for Transportation refers to the provided traffic study entitled "Tara Phoenicia/ Tara West Phase I Traffic Study" completed by Buckholz Traffic and dated March 2021. This traffic study does not contemplate full build out of Tara Forest West, and does not provide analysis of impacts to the affected traffic segments as required by Section 2.4.14 (H)(2)(b), of the City of Alachua Land Development Regulations. A revised concurrency analysis and traffic study showing transportation impacts by the complete Tara Forest West project to the affected traffic segments must be provided.
5. **Major Subdivision Preliminary Plat Application, Attachment #3. – Comprehensive Plan Consistency Analysis:**
   a. Response to Policy 1.2.a of the Future Land Use Element indicates that this development is a part of a new overall Planned Development – Residential zoned project. Subject property is zoned Commercial Intensive (CI), Agricultural (A), and Residential Single Family- 4 (RSF-4). If intent is that the property or properties will be zoned to Planned Development – Residential (PD-R), this rezoning should occur prior to submission of preliminary plat.
   b. Response to Policy 1.10.g of the Conservation and Open Space Element indicates that there are no wetlands on the subject property, however, Figure 7 of the provided environmental assessment shows flagged wetlands within the project area. The response also indicates that this project is part of a larger development to be known as "Tolosa". Please address.
   c. Response to Objective 1.12 and Policy 1.12.d of the Conservation and Open Space Element indicates that there are no wetlands or surface water bodies within the project area. However, Figure 7 of the provided environmental assessment shows flagged wetlands within the project area. Additional, various figures from the provided environmental assessment show Mill Creek to be located in the area where a roadway connection from the residential lots to April Boulevard is proposed. Response also references "Tolosa". Please address.
6. **Major Subdivision Preliminary Plat Application, Attachment #4. – Mailing Labels:**
   a. Provided mailing labels did not include all person and organizations registered with the City to receive notice of development applications. Please find this list here:
   b. Only one set of incomplete mailing labels included with submittal. Please provide additional set of complete mailing labels.
7. **Major Subdivision Preliminary Plat Application, Attachment #10 – Traffic Impact Analysis:**
   a. Provided traffic study entitled "Tara Phoenicia/ Tara West Phase I Traffic Study" completed by Buckholz Traffic and dated March 202 does not contemplate full build out of Tara Forest West, and does not provide analysis of impacts to the affected traffic segments as required by Section 2.4.14 (H)(2)(b), of the City of Alachua Land Development Regulations.
   b. Traffic study states there will be, among other connections, an unsignalized connection to US 441, however the submitted preliminary plat does not show this connection. Plans also show connection from residential lots to April Boulevard through a new roadway connection, but this connection is not contemplated by the submitted traffic study.
8. **Major Subdivision Preliminary Plat Application, Attachment #11 – Environmental Assessment:**
   a. Submitted preliminary plat includes connection between residential lots and April Boulevard, which appears to potentially impact environmentally sensitive lands including surface water and/or wetlands. This connection does not appear to have been contemplated in the environmental assessment entitled "378± Acre Tara Forest, Tara Phoenicia, and Tara Baywood Site, Alachua County Environmental Resources Assessment" completed by Creative Environmental Solutions, Inc, and dated July 18, 2021.

Per Section 2.2.6 (B), failure to address the deficiencies noted above within 45 calendar days will result in administrative withdrawal of the application. Three hard copies of submitted application are available for retrieval from the Building Department at City Hall. If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com.

Sincerely,



Adam Hall, AICP

DATE: MAY 2024

PROJECT NO: 398-21-03

CLIENT: TARA FOREST ALACHUA, FLORIDA

PROJECT: TARA FOREST WEST

SHEET NO: C2.0

GENERAL NOTES:

1. THE STORMWATER LAYOUT SHOWN HEREON ARE GENERALIZED CONCEPT LAYOUTS TO DOCUMENT HOW STORMWATER WILL BE DESIGNED TO SERVE THE TARA FOREST WEST PROJECT. THE LOCATION AND SIZING OF PIPES IS NOT EXACT AND ARE SUBJECT TO CHANGE.
2. ALL STORMWATER MANAGEMENT (SMF) BASINS WILL BE DESIGNED TO MEET THE SUWANNEE RIVER WATER MANAGEMENT DISTRICT (SRWMD) DESIGN CRITERIA OF THE 100 YR. CRITICAL DURATION DESIGN STORM. ALL BASINS DESIGNED TO BE DETENTION BASINS SHALL DISCHARGE UNDER POST DEVELOPMENT CONDITIONS AT RATES LESS THAN PRE-DEVELOPMENT CONDITIONS. STORMWATER MANAGEMENT REPORTS SHALL BE PROVIDED WITH FINAL DESIGN OF EACH INDIVIDUAL CONSTRUCTION PHASE DOCUMENTING CONFORMANCE TO THE DESIGN CRITERIA.
3. EACH DEVELOPMENT PHASE SHALL OBTAIN A SRWMD ERP PERMIT APPROVAL FOR THE INDIVIDUAL PHASE.
4. THE STORMWATER MANAGEMENT SYSTEM SHALL COMPLY WITH ALACHUA COUNTY KARST SENSITIVE REQUIREMENTS. THE WATER QUALITY TREATMENT WILL BE PROVIDED BY A COMBINATION TREATMENT SYSTEMS WITHIN EACH DRAINAGE BASIN.
5. THE HOMEOWNER'S ASSOCIATION (HOA) SHALL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF ALL COMPONENTS OF THE STORMWATER SYSTEM NOT IN THE RIGHT-OF-WAY. THE CITY OF ALACHUA WILL BE RESPONSIBLE FOR OPERATION AND MAINTENANCE OF THE STORMWATER SYSTEM WITHIN THE RIGHT-OF-WAY.
6. THE PROPOSED STORMWATER SYSTEM WILL RECEIVE RUNOFF FROM THE PROPOSED DEVELOPMENT AND TARA FOREST EAST TO THE EAST. THE SYSTEM WILL DISCHARGE TO THE WEST.

BUILDING SETBACK REQUIREMENTS

MINIMUM REQUIREMENT UNLESS OTHERWISE ILLUSTRATED
PRIMARY BUILDING:
FRONT = 20 FEET
SIDE = 5 FEET
REAR = 15 FEET

NOTES

1. BEARINGS ARE BASED ON AN ASSUMED BEARING OF S00°04'47"W FOR THE EAST LINE OF THE WEST 1/2 OF SECTION 10, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA.
2. ELEVATIONS ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND BASED ON THE U.S. NATIONAL GEODETIC SURVEY CONTINUOUSLY OPERATING REFERENCE STATION "GNVL" (DE6005), WITH A PUBLISHED ELEVATION OF 170.03 FEET.
3. STATE PLANE COORDINATES ARE REFERENCED TO THE NORTH AMERICAN DATUM ON 1983, 2011 ADJUSTMENT AND BASED ON THE U.S. NATIONAL GEODETIC SURVEY CONTINUOUSLY OPERATING REFERENCE STATION "GNVL" (DE6005), WITH A PUBLISHED POSITION IN U.S. SURVEY FEET OF:
   NORTHING = 256,559.510
   EASTING = 2,674,388.152
4. THE ERROR OF CLOSURE OF THIS PLAT DOES NOT EXCEED 1:5,000
5. ALL PERMANENT REFERENCE MONUMENTS, PERMANENT CONTROL POINTS AND LOT CORNERS WILL BE PER FLORIDA STATUTE 177 PART 1 PLATTING.
4. THIS PLAT IS BASED ON A BOUNDARY SURVEY BY THIS FIRM COMPLETED ON JANUARY 20, 2022.
7. THE MAJORITY OF THE PROPERTY (190.73 ACRES OR 95%) IS WITHIN AN AREA OF MINIMAL FLOOD HAZARD "ZONE X." PORTIONS ON THE WEST SIDE OF THE PROPERTY (9.95 ACRES OR 5%) LIE WITHIN FLOOD HAZARD "ZONE A." AREAS ARE APPROXIMATE BASED ON THE FEDERAL EMERGENCY MANAGEMENT AGENCY UNPRINTED FLOOD INSURANCE RATE MAP PANEL 12001C0120D. ALL LOTS LOTS LIE WITHIN MINIMAL FLOOD HAZARD "ZONE X."
8. ALL PLATTED UTILITY EASEMENTS SHALL PROVIDE THAT SUCH EASEMENTS SHALL ALSO BE EASEMENTS FOR THE CONSTRUCTION, INSTALLATION, MAINTENANCE, AND OPERATION OF CABLE TELEVISION SERVICES; PROVIDED, HOWEVER, NO SUCH CONSTRUCTION, INSTALLATION, MAINTENANCE, AND OPERATION OF CABLE TELEVISION SERVICES SHALL INTERFERE WITH THE FACILITIES AND SERVICES OF AN ELECTRIC, TELEPHONE, GAS, OR OTHER PUBLIC UTILITY. IN THE EVENT A CABLE TELEVISION COMPANY DAMAGES THE FACILITIES OF A PUBLIC UTILITY, IT SHALL BE SOLELY RESPONSIBLE FOR THE DAMAGES. THIS SECTION SHALL NOT APPLY TO THOSE PRIVATE EASEMENTS GRANTED TO OR OBTAINED BY A PARTICULAR ELECTRIC, TELEPHONE, GAS, OR OTHER PUBLIC UTILITY. SUCH CONSTRUCTION, INSTALLATION, MAINTENANCE, AND OPERATION SHALL COMPLY WITH THE NATIONAL ELECTRICAL SAFETY CODE AS ADOPTED BY THE FLORIDA PUBLIC SERVICE COMMISSION.
9. REPRODUCED COPIES THAT ARE NOT AT 24"X36" MAY NOT BE TO SCALE.
10. THIS PLAT IS COMPRISED OF 10 SHEETS, AND IS MEANT TO BE USED AS A SET. NO ONE SHEET IS VALID BY ITSELF. SHEET 2 IS AN OVERVIEW OF THE ENTIRE PROPERTY. SHEETS 3 THRU 10 ARE LOT DETAIL SHEETS.

LEGAL DESCRIPTION BY THIS FIRM

A PARCEL OF LAND SITUATED IN SECTIONS 3, 4 AND 10, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCE AT THE SOUTHEAST CORNER OF THE WEST 1/2 OF SAID SECTION 10; THENCE RUN NORTH 00°04'47" EAST, ALONG THE EAST LINE OF SAID WEST 1/2, A DISTANCE OF 1529.95 FEET TO THE POINT OF BEGINNING. THENCE RUN NORTH 89°54'32" WEST, A DISTANCE OF 987.28 FEET; THENCE RUN SOUTH 00°01'26" WEST, A DISTANCE OF 185.63 FEET; THENCE RUN SOUTH 84°29'08" WEST, A DISTANCE OF 331.55 FEET TO THE SOUTHEAST CORNER OF A CONSERVATION EASEMENT PER CITY OF ALACHUA ORDINANCE 10 23, PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA; THENCE RUN NORTH 00°01'49" EAST, ALONG THE EAST LINE OF SAID EASEMENT, A DISTANCE OF 575.38 FEET; THENCE RUN NORTH 11°45'36" WEST, A DISTANCE OF 2150.78 FEET; THENCE RUN NORTH 33°25'32" WEST, A DISTANCE OF 1857.78 FEET TO THE WEST LINE OF SECTION 3, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA; THENCE RUN NORTH 00°35'24" EAST ALONG SAID WEST LINE OF SECTION 3, A DISTANCE OF 343.82 FEET TO THE NORTHEAST CORNER OF SAID CONSERVATION EASEMENT; THENCE CONTINUE ALONG THE WEST LINE OF SAID SECTION THREE NORTH 00°36'01" EAST, A DISTANCE OF 100.60 FEET TO THE SOUTHEAST CORNER OF LANDS DESCRIBED IN OFFICIAL RECORDS BOOK 5141, PAGE 2294, OF THE OFFICIAL RECORDS OF ALACHUA COUNTY, FLORIDA; THENCE CONTINUE NORTH 00°35'18" EAST ALONG SAID WEST LINE OF SECTION 3, A DISTANCE OF 660.64 FEET; THENCE RUN NORTH 88°18'02" EAST, A DISTANCE OF 1375.00 FEET; THENCE RUN SOUTH 00°11'40" EAST, A DISTANCE OF 1319.75 FEET TO THE SOUTH LINE OF THE AFOREMENTIONED SECTION 3, ALSO BEING THE NORTH LINE OF SECTION 10, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA; THENCE RUN NORTH 88°15'55" EAST ALONG SAID SOUTH LINE OF SECTION 3, A DISTANCE OF 1394.59 FEET TO THE EAST LINE OF THE WEST 1/2 OF SECTION 10; THENCE RUN SOUTH 00°04'47" WEST ALONG SAID EAST LINE, A DISTANCE OF 3883.86 FEET TO THE POINT OF BEGINNING.

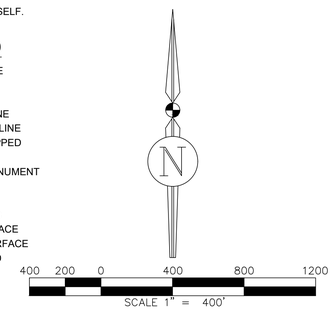
LEGAL DESCRIPTION BY THIS FIRM

A PARCEL OF LAND SITUATED IN SECTIONS 3, 4 AND 10, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA, BEING MORE PARTICULARLY DESCRIBED AS FOLLOWS:

COMMENCE AT THE SOUTHEAST CORNER OF THE WEST 1/2 OF SAID SECTION 10; THENCE RUN NORTH 00°04'47" EAST, ALONG THE EAST LINE OF SAID WEST 1/2, A DISTANCE OF 1534.37 FEET TO THE POINT OF BEGINNING. THENCE RUN SOUTH 89°57'58" EAST, A DISTANCE OF 988.73 FEET; THENCE RUN SOUTH 00°01'19" EAST, A DISTANCE OF 187.15 FEET; THENCE RUN SOUTH 84°08'02" WEST, A DISTANCE OF 330.46 FEET TO THE SOUTHEAST CORNER OF A CONSERVATION EASEMENT PER CITY OF ALACHUA ORDINANCE 10 23, PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA; THENCE RUN NORTH 00°01'49" EAST, ALONG THE EAST LINE OF SAID EASEMENT, A DISTANCE OF 575.38 FEET; THENCE RUN NORTH 11°45'36" WEST, A DISTANCE OF 2150.78 FEET; THENCE RUN NORTH 33°25'32" WEST, A DISTANCE OF 1857.78 FEET TO THE WEST LINE OF SECTION 3, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA; THENCE RUN NORTH 00°35'24" EAST ALONG SAID WEST LINE OF SECTION 3, A DISTANCE OF 343.82 FEET; THENCE RUN NORTH 89°35'59" WEST, A DISTANCE OF 1035.60 FEET TO THE EAST RIGHT-OF-WAY OF APRIL BOULEVARD; THENCE RUN NORTH 27°17'04" WEST ALONG SAID EAST RIGHT-OF-WAY, A DISTANCE OF 108.03 FEET; THENCE DEPARTING SAID EAST RIGHT-OF-WAY, RUN SOUTH 89°51'36" EAST, A DISTANCE OF 1086.16 FEET TO THE AFOREMENTIONED WEST LINE OF SECTION 3; THENCE RUN NORTH 00°35'18" EAST ALONG SAID WEST LINE OF SECTION 3, A DISTANCE OF 660.64 FEET; THENCE RUN NORTH 88°18'02" EAST, A DISTANCE OF 1375.00 FEET; THENCE RUN SOUTH 00°11'40" EAST, A DISTANCE OF 1319.75 FEET TO THE SOUTH LINE OF THE AFOREMENTIONED SECTION 3, ALSO BEING THE NORTH LINE OF SECTION 10, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA; THENCE RUN NORTH 88°15'55" EAST ALONG SAID SOUTH LINE OF SECTION 3, A DISTANCE OF 1394.59 FEET TO THE EAST LINE OF THE WEST 1/2 OF SECTION 10; THENCE RUN SOUTH 00°04'47" WEST ALONG SAID EAST LINE, A DISTANCE OF 3879.44 FEET TO THE POINT OF BEGINNING.

CONTAINING 200.68 ACRES, MORE OR LESS.

SURVEYOR'S NOTES



1. BEARINGS ARE BASED ON AN ASSUMED BEARING OF S00°04'47"W FOR THE EAST LINE OF THE WEST 1/2 OF SECTION 10, TOWNSHIP 8 SOUTH, RANGE 18 EAST, ALACHUA COUNTY, FLORIDA.
2. ELEVATIONS ARE REFERENCED TO THE NORTH AMERICAN VERTICAL DATUM OF 1988 (NAVD88) AND BASED ON THE U.S. NATIONAL GEODETIC SURVEY CONTINUOUSLY OPERATING REFERENCE STATION "GNVL" (DE6005), WITH A PUBLISHED ELEVATION OF 170.03 FEET.
3. STATE PLANE COORDINATES ARE REFERENCED TO THE NORTH AMERICAN DATUM ON 1983, 2011 ADJUSTMENT AND BASED ON THE U.S. NATIONAL GEODETIC SURVEY CONTINUOUSLY OPERATING REFERENCE STATION "GNVL" (DE6005), WITH A PUBLISHED POSITION IN U.S. SURVEY FEET OF:
   NORTHING = 256,559.510
   EASTING = 2,674,388.152
4. THIS SURVEY IS BASED ON MEASUREMENTS CONDUCTED ON APRIL 29, 2021.
5. NO UNDERGROUND UTILITIES WERE LOCATED IN THE COURSE OF THIS SURVEY. UNDERGROUND UTILITY LINE LOCATIONS ARE APPROXIMATE.
6. ADDITIONAL ENCUMBRANCES MAY AFFECT THE SUBJECT PARCEL THAT DO NOT APPEAR ON THIS MAP.
7. EASEMENTS DEPICTED ON THIS SURVEY WERE PROVIDED BY THE CLIENT OR ARE RECORDED IN AN ASSOCIATED PLAT. NO EASEMENT RESEARCH WAS CONDUCTED DURING THE COURSE OF THIS SURVEY.
8. REPRODUCED COPIES THAT ARE NOT AT 24"X36" MAY NOT BE TO SCALE.
9. SHEETS V-01 THRU V-18 MUST BE USED AS A SET. NO ONE SHEET IS VALID BY ITSELF.

RE: Tara Forest West Preliminary Plat

Hello Adam,

Please find attached a resubmittal package for Tara Forest West Preliminary Plat. The property consists of Alachua County Parcel Numbers 03067-001-000, 0320-000-000 and 03008-000-00, and is 198.39 acres total. This resubmittal package is provided to address comments provided by the City of Alachua via email on May 23, 2024. Included in this submittal package are hard copies of the following:

- Revised Preliminary Plat (7 copies)
- Zoning Districts Exhibit
- Complete Application Package (2 copies)

Please find below responses to the comments for the above referenced project. The comments have been replicated below followed by responses in bold.

Deficiencies to be addressed:

E. Outside Review
   a. Address all comments issued by Brian Kanely, PE of Volkert, Inc. in his letter submitted May 12, 2024 and attached to this letter. These comments have also been provided to Hagen Consulting Services, LLC separately.
   Response: So noted.

G. Informational
   a. If any development is proposed to take place within a Special Flood Hazard Area, base flood elevations will be required to be established in accordance with Section 6.9.4(E)(1)(b) at time of Construction Plan application.
   Response: So noted.

   b. Conditions will be proposed as part of any recommended approval. Subject to change, draft conditions can be found below:
      i. Prior to Issuance of a Certificate of Completion for Improvements for Phase 1 of the Tara Forest West subdivision, an improved roadway connection to US Highway 441 through the project currently known as Tara Phoenicia shall be completed.
      ii. Concurrent with the submittal of any application for construction plans that include Phase 4, a revised traffic impact analysis report shall be provided to the City for review. The developer shall make any improvements required, at Developer's expense, associated with the proportionate share of any deficiencies identified in the revised traffic impact analysis.
      iii. Prior to the Issuance of a Certificate of Completion for Improvements for Phase 4 of the Tara Forest West subdivision, a second connection to US Highway 441 through the project currently known as Tara Phoenicia shall be made.
      iv. Traffic calming measures shall be provided approximately every 500 feet and at connections to existing or approved subdivisions. Traffic calming measures include, but

are not limited to, traffic islands, speed humps, speed bumps, speed tables, or 4 way controlled intersections.

v. A 100% gopher tortoise survey shall be completed for any area subject to development in any final plat submitted. The survey shall be valid for a period of three years from date of report and must include a list of all local, state and federal permits required for relocation of any gopher tortoises encountered on site.

vi. Modifications to these conditions shall only be done in accordance with the original preliminary plat approval process.

NEW COMMENT: Zoning Exhibit cites Future Land Use Amendment Ordinance and displays Future Land Use Designations. Please see attached Ordinance and revise zoning exhibit accordingly.
Response: So noted. The Zoning Districts Exhibit has been revised according to the information provided in the City of Alachua Ordinance 10-23.

Volkert, Inc. Comments

Traffic Impact Study Items

1. Include the necessary statements and drawings in the Study that document the following:
   a. All traffic that exits the project east connection and is headed east on US 441 has to first travel west on US 441 to the next available median opening and then make a U turn at that median opening to head east.
   b. The existing median opening on US 441 just west of the proposed east connection will be closed.
   c. The U-turn maneuver will occur at the second existing median opening that is west of the proposed east connection. This median opening is also the general location of the proposed Peggy Road signalized intersection on US 441.
   Response: All the requested statements are now included in the report. The drawings also have been updated to reflect these statements.

2. Perform an analysis of the AM peak hour traffic conditions for Stage 1.
   a. Determine the AM peak hour Level of Service at the proposed directional median opening on US 441 that aligns with the project east connection.
   b. Determine the length of the left turn lanes at the proposed directional median opening on US 441 at the project east connection. Turn lane lengths should be based on the expected queue length and standard deceleration taper length.
   Response: AM Peak Hour analysis is included in the report. Left turn and right turn lengths have been identified in accordance with FDOT standards.

3. At the median opening on US 441 where project traffic that has exited the east connection and has to make a U-turn to head east on US 441 (toward Gainesville) perform the following:
   a. Determine the length of the left turn lane needed to accommodate the U-turn maneuver in the AM peak hour {this is the longest queue anticipated for this left turn lane). Will this require that the existing left turn lane be extended, and if yes, by how much?
   b. What is the length of the left turn lane and standard deceleration taper?
   c. The left turn lane design has to satisfy the appropriate FDOT design standards.
   d. How was the traffic distribution determined for the AM and PM U-turn traffic at the median opening west of the east connection? To be conservative, all project traffic is assumed to use the east connection.
   Response: For the U-turn location the length of left turn lane needed is identified in the report. The existing left turn lane is adequate to accommodate the expected demands for Stage 1. The traffic distribution was determined based on the projected US 441 traffic demands in both the AM and PM periods. The proportion of U-turning traffic that exits Tara Forest West is based on the proportion of EB traffic to total (EB + WB) traffic. Thus the AM Peak has a higher proportion

of U-turns than the PM Peak since the AM Peak traffic is heavier EB and the PM Peak traffic is heavier WB.

4. A discussion is required on FDOT access management median opening spacing standards on US 441 for Stage 1. Does the project access management plan satisfy the appropriate FDOT design standards?
   Response: Access Management discussion is now added to the TIS. The project access management plan does not meet the appropriate FDOT design standards, but is close. It is assumed that as this area develops and becomes more urbanized that the access classification may change from Class 3 to Class 5.

5. For the proposed westbound right turn lane on US 441 at the east connection, what is the length of the right turn lane and deceleration taper. Use the criteria from the FDOT Multimodal Access Management Guidebook.
   Response: The length of the right turn lane is now identified in the report. The taper would use the FDOT standard 50' taper. The right turn lane justification was conducted using the NCHRP procedures identified in the FDOT Multimodal Access Management Guidebook.

6. For reference, include the previous Buckholz Traffic Study in the Study Appendix.
   Response: The previous Buckholz Traffic Study is included in the Appendix.

<u>Information to be Included in Drawings added to the Traffic Impact Study Update</u>

1. A drawing showing how the three project roads at the south end of the project become one road and form the single project road at the east connection.
   Response: The Master Phasing Plan has been updated to show the three project roads coming together to form the single project connection at the east connection location for Stage 1.

2. Project drawing(s) that includes the following:
   a. The section of US 441 between NW 147th Drive and April Blvd showing the existing median openings and distances between the median openings.
   b. Where the Stage 1 east connection intersects with US 441.
   c. Where NW 149th Terrace and NW 158th Lane intersect US 441, do these two streets align with the proposed directional median opening at the project east connection?
   d. The location on US 441 for the proposed Peggy Road Connector signalized intersection.
   Response: An Access Management drawing that shows these items has been added as Appendix D.

3. All drawings in the Study to be 8.5 x 11 inches.
   Response: The drawings in the study are 8.5 x 11 with the exception of the Master Phasing Plan which would be illegible at that size.

<u>Additional Information to be Included in the Study</u>

1. A list of the intersection and roadway modifications on US 441 should be included in the Conclusions and Recommendations section of the Study.
   Response: The intersection and roadway modifications on US 441 are included in the Conclusions and Recommendations section of the study.

2. US 441 has been field reviewed to guarantee that the roadway design modifications recommended in the Study can be constructed.
   Response: US 441 has been field reviewed and all of the identified design modifications should be constructable.

3. After an FDOT roadway connection permit has been approved and constructed, *it* can be difficult to modify it at a future time. The total access management plan for this project needs to be conceptually described for this project even though only Stage 1 *is* being reviewed for approval at this time.
   Response: Acknowledged. This is only for Stage 1, and the access management figure shows the anticipated access.

4. As the project is constructed in phases, *it* is possible that the U-turn movement at the median opening west of the east connection may become problematic with respect to traffic safety and/or capacity. Stage 2 may be required to construct innovative intersection and/or roadway designs on US 441 to address this situation. Innovative intersection and/or roadway designs may be more restrictive than a standard traffic signalized intersection. An Intersection Control Evaluation {ICE) would be required and would have to be included in any future traffic studies related to this project.
   Response: Acknowledged. Text has been added to the report reflecting potential for innovative intersection design for Stage 2 and the need for ICE analysis at that time.

5. The City of Alachua needs to closely coordinate this project with Alachua County to ensure neither agency is responsible for improvements warranted by this development.
   Response: Acknowledged. It is not anticipated that either the City of Alachua or Alachua County would be responsible for improvements required by this development.

6. The future west connection for this project may be required to coordinate with and/or connect to the future Peggy Road Connector signalized intersection on US 441.
   Response: The future connection will be coordinated with the City of Alachua and FDOT.

7. Stage 2 will require an updated traffic impact study and more than one future traffic impact study may be required as this project proceeds to completion.
   Response: Acknowledged. Text has been added indicating the anticipation of a second TIS for Stage 2 and need for ICE analysis. Additional studies to be performed as required.

If you have any questions or need additional information, please feel free to contact me.

Sincerely,

Christopher Potts

A. PROJECT

1. Project Name: Tara Forest West
2. Pre-Application Conference Date: 08/27/2020
3. Neighborhood Meeting Date: 08/18/2021
4. Phase/Unit Number (if applicable): N/A
5. Number of proposed lots/dwelling units: 540 Lots
6. Housing Type (i.e., attached/detached units): Single family detached
7. Address of Subject Property: 15845 NW US Hwy 441 Alachua, FL
8. Parcel ID Number(s): 03067-001-000, 03008-000-000
9. Existing Use of Property: Timberland
10. Future Land Use Map Designation: Moderate Density Residential, Conservation, Commercial
11. Zoning Designation: RSF-4, CI
12. Acreage: 335.63

B. APPLICANT

1. Applicant's Status ☐ Owner (title holder) ■ Agent
2. Name of Applicant(s) or Contact Person(s): Logan B. Peters, P.E. Title: Project Manager
   Company (if applicable): JBrown Professional Group Inc.
   Mailing address: 3530 NW 43rd Street
   City: Gainesville State: Fl ZIP: 32606
   Telephone: 352-375-8999 FAX: 352-375-0833 e-mail: logan.peters@jbpro.com
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): Tara Forest, LLC; Sayed Moukhtara
   Mailing Address: 7717 NW 20th Lane
   City: Gainesville State: Fl ZIP: 32605

   ** Must provide executed Authorized Agent Affidavit or other acceptable documentation (as deemed acceptable by the City in its sole discretion) which authorizes the agent to act on behalf of the property owner.*

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☐ Yes ■ No
   If yes, list names of all parties involved: _____
2. Has the applicant discussed possible utility/infrastructure fees with the Public Services Department?
   If no, contact the Public Services Department at 386-418-6140. ☐ Yes ■ No

D. ATTACHMENTS

1. Plans, to include the following information and be prepared in accordance with the following criteria:
   a. Sheet Size: 24" X 36" with 3" left margin and ½" top, bottom, and right margins.
   b. Graphic scale, not to exceed one (1) inch equal to 200 feet and one (1) inch equal to 50 feet for detailed plan sheets.
   c. Proposed name of subdivision.
   d. Name, address, telephone number, and email address of the property owner, agent (if applicable), and developer.
   e. Name, address, telephone number, email address, and registration numbers of surveyor of record and professional engineer of record.
   f. Boundary and topographic survey. Survey shall be signed and sealed by the surveyor, and shall be no older than two (2) years.
   g. Vicinity map - indicating general location of the site and major adjacent streets and all adjacent properties, section lines and quarter section lines. The vicinity map shall be drawn to show clearly the information required, but not less than one (1) inch to 2,000 feet.
   h. Legal description of the property to be subdivided.
   i. Zoning of all adjacent property.
   j. Acreage of adjacent land. If adjacent land is within a subdivision, identify the subdivision name, and recording information.
   k. Preliminary layout of subdivision including, at a minimum, the location of streets, easements, lot lines with approximate dimensions, building setbacks for all lots, and land to be reserved or dedicated for public or common uses.
   l. Lot numbers. Additional phases of existing subdivisions shall continue numbering from previous phases.
   m. Proposed method of water supply, sanitary sewer disposal, and electric service.
   n. Natural features, including streams; lakes; wetlands; water courses; and required buffers from such features dimensioned on the preliminary plat; wooded areas; and land designated as a special flood hazard area on FEMA FIRM panels.
   o. Surface drainage and direction of flow and method of detention and retention.
   p. Inscription stating "NOT FOR FINAL RECORDING".

2. Concurrency Impact Analysis showing the impact on public facilities, including potable water, sanitary sewer, transportation, solid waste, recreation (for residential development), stormwater, and public schools (for residential development) in accordance with Section 2.4.14 of the LDRs.

3. Analysis of Consistency with the City of Alachua Comprehensive Plan (analysis must identify specific Goals, Objectives, and Policies and describe in detail how the application complies with the noted Goal, Objective, or Policy).

4. Two (2) sets of mailing labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits (obtain from the Alachua County Property Appraiser's web site) – and all persons/organizations registered to receive notice of development applications (current list may be obtained from the Planning & Community Development Department).

5. Neighborhood Meeting Materials, including:
   i. Copy of the required published notice (advertisement) – must be published a newspaper of general circulation, as defined in Article 10 of the City's Land Development Regulations;
   ii. Copy of written notice (letter) sent to all property owners within 400 feet and to all persons/organizations registered with the City to receive notice, and a copy of the mailing labels or list of those who received written notice; and,
   iii. Written summary of meeting – must include (1) those in attendance; (2) a summary of the issues related to the development proposal discussed; (3) comments by those in attendance about the development proposal; and, (4) any other information deemed appropriate.

6. If the development will include single family or multifamily residential uses, City of Alachua Public School Student Generation Form.

7. Legal description with tax parcel number: (1) on 8.5" x 11" paper; and (2) electronic file in Word format.

8. Proof of ownership (i.e., copy of deed).

9. Proof of payment of taxes.

10. Traffic Impact Analysis or Statement, as deemed applicable to the project by the City of Alachua in its sole discretion.

11. Environmental Assessment or Study, as deemed applicable to the project by the City of Alachua in its sole discretion.

12. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any costs associated with outside professional consulting services deemed necessary by the City in its sole discretion will be billed to the applicant at the rate of the consultant. The invoice for such services shall be paid in full prior to any public hearings on the application.

All applicable attachments are required for a complete application. A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

Under penalty of perjury, I/we certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

TARA FOREST WEST
CITY OF ALACHUA MUNICIPAL SYSTEM - CONCURRENCY IMPACT ANALYSIS

This Concurrency Impact Analysis considers the impact of the proposed development on public facilities including potable water, sanitary sewer, transportation, solid waste, recreation, stormwater, and public schools in accordance with Article 2.4.14 of the Land Development Regulations for the overall Major Subdivision Preliminary Plat.

A. Potable Water:

Policy 4.1.c of the Community Facilities and Natural Groundwater Aquifer Recharge (CFNGAR) Element of the Comprehensive Plan establishes a potable water LOS Standard of 275 gallons per day per equivalent residential dwelling unit on an average annual basis. Policy 4.1.c of the CFNGAR Element state that when the City's potable water facility reaches 85% of the permitted design capacity, no further development orders or permits will be issued until additional capacity becomes available. Table 3a was provided by the City's 2024 Annual Concurrency Status Report, showing the City's current utilization rate is 78.98% and current residual rate is 483,479 gallons per day. The City has not established a level of service for commercial uses.

Table 3a. Potable Water Impacts - Final Development Orders

System Category	Gallons Per Day
Current Permitted Capacity[1]	2,300,000
Less Actual Potable Water Flows[1]	1,390,833
Reserved Capacity[2]	425,691
Residual Capacity	**483,476**
Percentage of Permitted Design Capacity Utilized	**78.98%**

Sources:
1. City of Alachua Public Services Department, April 2022
2. Table 1

Potable Water Project Impact

Below is Table 1 that utilizes 275 gallons per day for residential potable water. The proposed development will utilize 275 gallons per day for each residential unit, with a total of 523 residential units. The total gallons per day for residential development of potable water will be 143,825 gallons per day. 143,825 gallons per day is 29.75% of the residual capacity of potable water, leaving 339,651 gallons per day of residual capacity remaining.

Table 1 – Potable Water	Residential Units	Gallons Per Day
Single Family Detached	523	143,825
Totals	523	143,825
Based off a LOS of 275 gallons per day		

Sources:
1. City of Alachua March 2024 Development Monitoring Report
2. City of Alachua Comprehensive Plan CFNGAR
3. F.A.C. Ch. 64E-6

B. Wastewater

Policy 1.1.d of the CFNGAR Element of the Comprehensive Plan establishes a sanitary sewer LOS Standard of 250 gallons per day per equivalent residential dwelling unit on an average annual basis. Table 4a indicates that when the sanitary sewer capacity reaches 85% of the permitted design capacity, no further development orders or permits will be issued until additional capacity becomes available. Table 4a below shows capacity at 74.43%, therefore there 383,590 gallons per day or 25.57% are available. The City has not established a level of service for commercial uses.

Table 4a. Sanitary Sewer Impacts - Final Development Orders

System Category	Gallons Per Day
Treatment Plant Current Permitted Capacity	1,500,000
Less Actual Treatment Plant Flows[1]	719,250
Reserved Capacity[2]	397,160
Residual Capacity	**383,590**
Percentage of Permitted Design Capacity Utilized	**74.43%**

Sources:
1. City of Alachua Public Services Department, April 2022
2. Table 1

Wastewater Project Impact

Table 2 utilizes 250 gallons per day for residential wastewater. The proposed development will utilize 250 gallons per day for each residential unit, with a total of 523 residential units. The total gallons per day for residential development of potable water will be 130,750 gallons per day. 130,750 gallons per day is 34.09% of the residual capacity of potable water, leaving 252,840 gallons per day of residual capacity remaining.

Table 2 – Wastewater	Residential Units	Gallons Per Day
Single Family Detached & Attached	523	130,750
Totals	523	130,750
Based off a LOS of 250 gallons per day		

Sources:
4. City of Alachua March 2024 Development Monitoring Report
5. City of Alachua Comprehensive Plan CFNGAR
6. F.A.C. Ch. 64E-6

C. Solid Waste

Policy 2.1.a of the CFNGAR Element of the Comprehensive Plan establishes a LOS Standard for solid waste facilities of 0.73 tons per capita per year for residential development. The demand generated by nonresidential uses can vary substantially between different use types, therefore a LOS Standard for nonresidential uses is not adopted in the Comprehensive Plan.

Table 6a. Solid Waste Impacts - Final Development Orders		
System Category	**Lbs Per Day**	**Tons Per Year**
Existing Demand[1]	43,376.00	7,916.12
Reserved Capacity[2]	**48,570.93**	**8,864.19**
New River Solid Waste Facility Capacity[3]	**50 years**	

1. Bureau of Economic & Business Research, University of Florida, Estimates of Population (2021); Policy 2.1.a, CFNGAR Element

Formula: 10,844 persons x 0.73 tons per year

2. Table 1

3. New River Solid Waste Association, April 2022

Solid Waste Project Impact

Table 3 utilizes a level of service of .73 tons per capita per year for residential solid waste. The proposed development will utilize 985 tons per year for each residential unit, with a total of 523 residential units. 523 DU * 2.58 Persons/DU *0 .73 tons/person/year = 985 tons/yr = 5,397 lbs/day. 5,397 lbs/day is 11.11% of the Reserved Capacity, leaving 43,173.57 lbs/day of Reserved Capacity remaining.

Table 3 – Solid Waste	Residential Units	Pounds Per Day
Single Family Detached	523	5,397.36
Totals	523	5,397.36
Based off a LOS of .73 tons per capita per year		

D. Stormwater

The project shall comply with all City of Alachua stormwater design criteria and regulations, the permitting requirements of the Suwannee River Water Management District (SRWMD), the requirements of the Florida Department of Environmental Protection, and the requirements of the Alachua County Environmental Protection Department. Stormwater management facilities will be designed for the 100-year critical duration storm event and will ensure that post-development runoff levels do not exceed pre-development runoff levels. Any flood plains will be analyzed at each development stage, and compensation will be provided as necessary. A complete stormwater management design report will be provided for each development phase.

E. Recreation

SYSTEM CATEGORY	**Acreage**
Existing City of Alachua Recreation Acreage	135.48
Acreage required to serve existing population	54.22
Proposed Demand	6.75
Available Recreation Acreage[1]	69.09

Usage Calculations by proposed uses within the development
523 DU * 2.58 Persons/DU[2] * 5 acres/1,000 Person[3] = 6.75 Acres

Result: Adequate recreation space exists for the proposed project.

JBPro
Civil Engineering | Land Planning
Surveying | Construction Services

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

F. Transportation

The development is proposing 523 single family units.

Average Annual Daily Traffic Generator Average Rate = 9.44 per dwelling unit.
523 units * 9.44 = 4,937.12 = ***4,938 Average Trips Per Day.***

PM Peak Hour Generator Average Rate = .99 per dwelling unit. 63% entering and 37% exiting. 523 units * .99 = 517.77 = ***518 PM Peak Hour Trips Per Day***

Table 2a. Traffic Impacts

Roadway Segment (FDOT Segment #, CoA Comp Plan #)	Segment Description	AADT/Peak Hour	Comp Plan MSV^^	Existing Traffic*^	Reserved Trips	Available Capacity**	Percentage of Capacity Utilized
State Roads	Min LOS Std: D						
U.S. Hwy 441 (107, 5)	From SR 235 to I-75	AADT	39,000	25,096	3,107	10,797	72.32%
		Peak Hour	3,510	2,198	268	1,044	70.26%

Trip generation calculations were carried out using the 10th edition of ITE's Trip Generation Manual and referencing land use codes 210 (Single Family Housing), 820 (Shopping Center) and 151 (Mini-Warehouse). The complete traffic study is included in the submittal.

TARA FOREST WEST
ANALYSIS OF CONSISTENCY WITH THE CITY OF ALACHUA COMPREHENSIVE PLAN

I. FUTURE LAND USE ELEMENT:

Policy 1.2.a: Moderate density residential (0 to 4 dwelling units per acre): The moderate density residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the moderate density residential land use category:
1. Single family, conventional dwelling units;
2. Accessory dwelling units;
3. Manufactured or modular homes meeting certain design criteria
4. Mobile homes only within mobile home parks;
5. Duplexes and quadplexes;
6. Townhomes;
7. Residential Planned Developments;
8. Supporting community services, such as schools, houses of worship, parks, and community centers

Response: The proposed density of the subject parcel will not exceed 4 units/acre. Under the moderate density, the allowed density is 2,160 units. The subject property is proposed to be part of a new overall Planned Development Residential, which consists of 538 units on 393.95 acres. The proposed density is 1.37 units per acre, which is well below the maximum allowed density of 4 dwelling units per acre. The development will consist of single family detached units. Therefore, the proposed plat is it is consistent with Future Land Use Element Policy 1.2.a.

Policy 2.4.c: Tree Protection: The City shall require the preservation of heritage trees and champion trees when possible. Standards shall be set for determining the health and safety risks associated with heritage and champion trees both on individual residential lots, and existing and proposed developments.

Response: All Heritage and Champion trees will be protected in accordance with City of Alachua Land Development Regulations section 6.2.1- Tree Protection Landscaping Standards,

Policy 2.4.d: Tree Protection: The City shall establish standards for the preservation of regulated trees. Particular attention shall be given to preserving specimen and preferred species of regulated trees, where feasible.

JBPro
Civil Engineering | Land Planning
Surveying | Construction Services

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

Response: Tree protection will follow and be in compliance City of Alachua Land Development Regulations Section 6.2.1-Tree protection landscaping standards.

Policy 2.5.a: There shall be a minimum of 10% percent open space required. The City shall establish incentives for the provision of open space beyond minimum requirements.

Response: The proposed development plan will conform to the Cities of Alachua Land Development Regulations Section 6.7 Open Space Standards. The open space proposed is 115 acres which is 29.2% of the development acreage.

Policy 2.5.b: Open space shall not be limited to unusable portions of project sites. A portion of open space shall be usable and functional.

Response: The proposed development plan will conform to the City's Open Space Standards of the City of Alachua Land Development Regulations Section 6.7.4.

Objective 5.1: Natural features: The City shall coordinate Future Land Use designations with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Response: On the west side of the property, the proposed development does have Zone "A" flood areas on it, but they do not contain a finished floor elevation. On the west side ther4e does appear to a flagged wetland line. In addition, the property does have some large trees, which will follow the City of Alachua Land Development Regulations Section 6.2.1- Tree Protection Landscaping Standards.

Policy 5.1.d: Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Response: There are no active or inactive wetlands on the property. However, 2123: Floodplain Marsh A small portion (0.2± acre) of a floodplain marsh (see Photo 6) encroaches the site along its west boundary.
This area was disturbed from recent logging activities. This area is a portion of a larger marsh system created by tail-waters from a nearby creek (Mill Creek) west of the site.

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

Policy 5.2.a: All new development shall meet level of service requirements for roadways, potable water and sanitary sewer, stormwater, solid waste, public schools, and improved recreation in accordance with LOS standards adopted in the elements addressing these facilities.

Response: Concurrency Analysis is provided is provided as Attachment E. The proposed development does not have a significant impact on the level of service for roadways, potable water, sanitary sewer, stormwater, solid waste, public schools, or recreation below an acceptable level. Therefore, the development meets the level of service required for FLUE Policy 5.2.a.

Policy 7.1.a: The City shall require utility easements as part of the development review process.

Response: Utility easements will be granted in accordance with Future Land Use Element Policy 7.1.a.

Policy 8.1.a: The area along CR 235 to the east of CR 241 and west of CR 237 is historically and environmentally sensitive. Special consideration must be given to this area to preserve its historic and environmentally sensitive characteristics. Future land uses within this area may also take into account long term preservation objectives, such as creation of the San Felasco Conservation Corridor.

Response: The site is not an environmentally sensitive area and is not located near the San Felasco Conservation Corridor.

Policy 9.2: Any new residential subdivision within the corporate limits, where potable water service is available, as defined in Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within either a Residential or Agriculture Future Land Use Map Designation shall connect to the City of Alachua's potable water system. Any new residential subdivision within the corporate limits, where wastewater service is available, as defined in Policy 1.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within a Residential Future Land Use Map Designation shall connect to the City of Alachua's wastewater system.

Response: The proposed development will connect to the City's potable water and wastewater system. Therefore, it is consistent with FLUE Policy 9.2.

Surveying | Construction Services

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

II. TRANSPORTATION ELEMENT:

Policy 1.4.a: The City shall require any development which must obtain site plan or subdivision approval to provide additional right-of-way width for bicycle and pedestrian ways along all proposed collector and arterial streets.

Response: There are no new collectors or arterial roadways planned as part of this amendment. US 441, which is classified as a Major Collector has ample right- of-way for bicycle and pedestrian facilities. Therefore it is consistent with Transportation Policy 1.4.a.

Policy 1.4.c: The City shall require pedestrian paths within subdivisions and within new developments to be connected to paths outside the development.

Response: The future development will include pedestrian paths that connect to lands outside of the development.

Policy 1.5.c: To the extent feasible, the City shall require new developments which are compatible with adjacent existing development to interconnect with one another through one of the following methods:

1. Through the extension of a public street from one project to another;
2. Through the extension of a sidewalk from one project to another;
3.Through the extension of a multi-purpose trail from one project to another.

Response: The proposed development will comply with this requirement.

Surveying | Construction Services

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

III. COMMUNITY FACILITIES AND NATURAL GROUNDWATER RECHARGE ELEMENT:

Objective 1.2: Wastewater service will be made available to new development in a manner to promote compact urban growth, promoting development where wastewater service is available, and discouraging urban sprawl. For purposes of this objective, new development does not included remodeling of existing developments or additions of less than 33% to existing developments.

Response: The proposed e development will connect to the City's wastewater facilities. Therefore, it is consistent with Community Facilities and Natural Groundwater Recharge Element Objective 1.2.

Policy 1.2.a: The City shall establish a Community Wastewater Service Area, which includes all areas where wastewater service is available. Wastewater service shall be deemed available if:

1. *A gravity water system exists within 100 ft. of the property line of any residential subdivision lot or single family residence and wastewater service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.*

2. *A gravity wastewater system exists with 500 ft. of the property line of any residential subdivision consisting of 5 units or less and the gravity wastewater system can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.*

3. *A gravity wastewater system, wastewater pumping station, or force main exists within ¼ mile of the property line of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and the gravity wastewater system, wastewater pumping station, or force main can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.*

Response: The proposed future development will connect to the City's wastewater facilities. Therefore, it is consistent with Community Facilities and Natural Groundwater Recharge Element Policy 1.2.a.

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

Policy 3.1.b: The City shall require the construction of roads within new plats or replats to be arranged so that the grades of the streets shall conform as closely as possible to the original topography to prevent the interruption of natural drainage flows, including sheet flow and flow to isolated wetland systems.

Response: Any proposed roadways within the future development will be designed in accordance with Community Facilities and Natural Groundwater Recharge Element Policy 3.1.b.

Policy 4.1.b: The City shall establish a Community Potable Water Service Area, which includes all areas where potable water service is available. Water service shall be deemed available if:

1. A water main exists within 100 ft. of any residential subdivision lot or single family residence water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

2. A water main exists within 500 ft. of any residential subdivision consisting of 5 units or less and water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

3. A water main exists within ¼ mile of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Response: The proposed development will connect to the City's potable water facilities. Therefore, it is consistent with Community Facilities and Natural Groundwater Recharge Element Policy 4.1.b.

Policy 4.2.a: New urban development will only occur within areas where potable water services are available concurrent with development. For purposes of this policy, new development does not included remodeling of existing developments or additions of less than 33% to existing developments.

Response: The proposed development will connect to the City's potable water facilities. Therefore, it is consistent with Community Facilities and Natural Groundwater Recharge Element Policy 4.2.a.

JBPro
Civil Engineering | Land Planning
Surveying | Construction Services

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

Policy 4.2.b: The City will continue to require necessary on-site water system improvements to be completed at the expense of the property owner.

Response: The proposed development will connect to the City's potable water facilities at the expense of the owner / developer. Therefore, it is consistent with Community Facilities and Natural Groundwater Recharge Element Policy 4.2.b.

Policy 5.2.b: The City shall require demonstration from engineering results that post development recharge volumes will equal predevelopment recharge volumes to the Florida aquifer.

Response: The stormwater management design calculations for the proposed development will document the stormwater system design for pre-development flow vs. post-development flow.

Policy 5.2.c: Applicants for new development, expansions, or redevelopment shall employ one or more of the following techniques to address potential groundwater quality and quantity impacts:

1. Construction and maintenance of shallow, landscaped retention basins
2. Decreasing the amount of stormwater runoff through the use of pervious surfaces or increased open space
3. Development of a stormwater pollution prevention plan
4. Development of a sinkhole remediation plan
5. Development of a groundwater monitoring plan

Response: The proposed future development will implement one or more of the techniques required by Community Facilities and Natural Groundwater Recharge Element Policy 5.2.c

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

IV. CONSERVATION AND OPEN SPACE ELEMENT:

Policy 1.2.j: The City shall require all new development to be oriented in a fashion that reduces habitat fragmentation and preserves the largest possible contiguous area of undisturbed habitat, to the extent practicable.

Response: Future development of the property will address open space locations and contiguity per Policy 1.2.j

Policy 1.2.l: The City shall protect regulated, heritage, and champion trees. The City may continue to participate in the Florida Champion Tree Program. Additionally the City will require tree removal permits to protect regulated, heritage, and champion trees from accidental removal and other development related disturbances.

Response: Heritage and Champion trees will be protected in accordance with the City of Alachua Land Development Regulations.

Policy 1.3.d: The City shall require prior to development approval, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The inventory shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. De minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Response: An environmental assessment of the property including an inventory of listed species has been performed and is included as Attachment H.

Policy 1.10.g: The City shall require natural vegetative buffers around wetlands to protect the fragile ecosystems they sustain. Buffers, measured from the outer edge of the wetland, shall be created as established in the following table.

Resource Addressed	***Required Buffer (feet)***
Wetlands less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	*50' average* *35' minimum*
Wetlands greater than 0.5 acre that do not support the animal species described above.	*75' average* *50' minimum*
Areas where the animal species described above have been documented within 300 feet of a wetland.	*100' average* *75' minimum*

JBPro
Civil Engineering | Land Planning
Surveying | Construction Services

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

Response: Wetlands do not exist on the subject property. This property is planned to be a part of a larger PD-R development to be known as Tolosa. The PD-R property to the south of the subject property does contain wetlands. The required wetland buffer per Policy 1.10.g will be adhered to with the future development.

OBJECTIVE 1.12: Water Resources

The City shall protect and conserve the quantity and quality of water resources, not only for the benefit of residents of the City, but for all in North Florida who depend on the Florida Aquifer for drinking water, and for the benefit of all connected springs, streams, and rivers which may be impacted by the City's land use and development practices.

Response: Wetlands do not exist on the subject property, however, this property is planned to be a part of a bigger PD-R development to be known as Tolosa. The PD-R property to the south of the subject property does contain wetlands and will be protected per Community Facilities and Natural Groundwater Recharge Element Objective 1.12.

Policy 1.12.d: The City shall require the following buffers for development along surface water bodies. Buffers shall be measured from the outer edge of the water body, and created as established in the following table.

Resource Addressed	***Required Buffer (feet)***
Surface waters less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	*50' average* *35' minimum*
Surface waters greater than 0.5 acre that do not support the animal species described above.	*75' average* *50' minimum*
Areas where the animal species described above have been documented within 300 feet of a surface water	*100' average* *75' minimum*

Response: The subject property does not contain surface waters.

Neighborhood Meeting
Advertisement For
Tara Forest West –
Major Subdivision –
Preliminary Plat

As a property owner located within the required 400-foot radius of a proposed development, you are hereby being notified of a proposal for a Major Subdivision Preliminary Plat as required by, Section 2.2.4 Neighborhood Meetings, of the City of Alachua Land Development Regulations. Tara Forest, LLC, is proposing Major Subdivision Preliminary Plat to develop 540 single family homes on 393.95 acres, in the City of Alachua, FL. The property is located at 15845 NW US Hwy 441 Alachua, FL. The proposed Major Subdivision Preliminary Plat will encompass, parcels numbers 0 3 0 0 8 - 0 0 0 - 0 0 0 , 03020-000-000, and 03067-001-000. The property is zoned Residential Single Family 4 (RSF-4), Conservation (CSV) and Commercial Intensive (CI).

The Neighborhood Meeting will discuss the proposed Major Subdivision Preliminary Plat, share a copy the plat, and receive comments from the public and adjacent property owners. The neighborhood meeting will be held at on August 18th, 2021, at the Swick House Conference Room, located at 15100

NW 142 Terrace, Alachua, FL 32615, between the hours of 6:00PM and 7:00PM. You may also submit your comments electronically to the Representative for the Developer of the project, JBPro, Chris Potts, Director Engineering, 3530 NW 43rd Street Gainesville FL 32606, 352-375-8999 or by email at Chris.Potts@jbpro.com.

Tara Forest West – Preliminary Plat Neighborhood Workshop Summary

Meeting Location: Swick House Cedar Room
Meeting Date and Time: August 18th at 6pm
Meeting Presenter: Chris Potts, PE, JBPro

The neighborhood meeting began on time, with approximately 15 neighbors in attendance. Mr. Potts gave a PowerPoint presentation which described the nature of the application for a preliminary plat and provided a visual representation of the Preliminary Plat for the development at this stage of the permitting and review process. Many questions were asked, and sparked a good discussion on topics like noise and traffic concerns, and environmental and flooding impacts to adjacent properties. The timeline to final buildout was also discussed. Specific questions are listed below, with responses.

1. What is the breakdown of the size and price of the proposed homes? Are there any buffers proposed? What is the overall timeline for this proposed development?
   Response: Mr. Potts explained the proposed minimum lot size of 7,500 sf, estimated home size of 1,200 sf to 2,500 sf one-story and two-story homes, that will likely be priced between $250,000 and $400,000. He explained the recreational zoned parcel that is provided as a buffer between the proposed residential lots and the conservation area, and that no buffer was required or provided between the two residential uses. Mr. Potts mentioned that a 6-foot tall privacy fence would likely be proposed as a way to separate the proposed development from existing residential lots. Several neighbors voiced their opinion of the inadequacy of a 6-foot tall fence, saying they preferred a taller masonry style wall to separate and protect them from noise and light pollution. The option of providing larger lots along the property boundary was discussed. Lastly, Mr. Potts explained the review process and timeframe for the proposed project and mentioned construction for Phase 1 would likely start in approximately 2 years.

2. Who decided the zoning breakdown of the subject parcels?
   Response: Mr. Potts explained the history of the zoning breakdown and that the City made the decision to dedicate the conservation land as the western portion of the property.

3. Is it possible to expand the radius for notifications of future meetings?
   Response: Mr. Potts explained that City of Alachua has a criterion of a 400-foot radius for which to provide notification of public meetings and hearings. He agreed to expand the radius in order to encompass a larger area for future meetings.

4. Discussion was brought up regarding the existing sink holes on site, whether additional pines would be planted on the property during the permitting process, and the occurrence of a helicopter spraying the property.
   Response: Mr. Potts explained that environmental assessments are a required aspect of all proposed developments and we are aware of the sink holes on the property. He mentioned that as JBPro does not own the property, we are unaware of any activities regarding spraying and planting but would be happy to inquire. Concerns regarding what was being sprayed and how it would affect the aquifer were discussed. Mr. Potts explained the stormwater treatment requirements and methods and ensured that no adverse effects from the development would impact the aquifer.

5. The topography of the development and surrounding areas was discussed, as well as flooding concerns.
   Response: Mr. Potts explained that while some fill for the site will be required, it is the intent of the design to follow the natural topography of the land. Flooding concerns were alleviated through discussions of stormwater requirements.

6. Many neighbors voiced concerns regarding the additional traffic load this development will generate, and expressed a lack of faith in the ability to calm traffic and mitigate for the additional volume.
   Response: Mr. Potts explained that this development will undergo review by FDOT as it connects to roads falling within that jurisdiction, and that any improvements will be approved by FDOT in accordance with their standards for design and safety. Neighbors requested a traffic light at the connection to US 441, and Mr. Potts explained that traffic lights are not typically desired by FDOT, but more discussions will be had prior to final approval.

Public School Student Generation Form for Residential Development in the City of Alachua

A. APPLICANT

1. Applicant's Status (check one):

   □ Owner (title holder) ■ Agent

2. Name of Applicant(s) or Contact Person(s): Logan B. Peters, P.E. Title: Project Manager

   Company (if applicable): JBrown Professional Group Inc.

   Mailing address: 3530 NW 43rd Street

   City: Gainesville State: Fl ZIP: 32606

   Telephone: 352-375-8999 FAX: 352-375-0833 e-mail: logan.peters@jbpro.com

3. If the applicant is agent for the property owner*:

   Name of Owner (title holder): Tara Forest, LLC

   Mailing Address: 7717 NW 20th Lane

   City: Gainesville State: Fl ZIP: 32605

   * Must provide executed Property Owner Affidavit authorizing the agent to act on behalf of the property owner.

B. PROJECT

1. Project Name: Tara Forest West
2. Address of Subject Property: 15845 NW US Hwy 441 Alachua, FL
3. Parcel ID Number(s): 03067-001-000, 03020-000-000, 03008-000-000
4. Section 10 Township 08S Range 18E Grant N/A Acreage: 393.95
5. Existing Use of Property: Timberland
6. Future Land Use Map Designation: Moderate Density Residential, Conservation, Commercial
7. Zoning Designation: RSF-4, CSV, CI
8. Development Data (check all that apply):

   ■ Single Family Residential Number of Units 540

   □ Multi-Family Residential Number of Units _____

   □ Exempt (*see exempt developments on page 2*)

9. Review Type:

Preliminary Development Order	***Final Development Order***
□ Comprehensive Plan Amendment	■ Preliminary Plat
□ Large Scale	□ Final Plat
□ Small Scale	□ Site Plan
□ Site Specific Amendment to the Official Zoning Atlas (Rezoning)	
□ *Revised*	

10. School Concurrency Service Areas (SCSA): Based on the project location, identify the corresponding SCSA for each school type. Maps of the SCSAs can be obtained from the Alachua County Growth Management Department Map Gallery by clicking on the "Public Schools" tab: http://growth-management.alachuacounty.us/gis_services/map_gallery/

    Elementary: Irby & Alachua

    Middle: Mebane

    High: Santa Fe

Explanation of Student Generation Calculation: Student Generation is calculated based on the type of residential development and the type of schools. The number of students stations (by school type – Elementary, Middle and High School) used for calculating the school concurrency impacts is equal to the number of dwelling units by housing type multiplied by the student generation multiplier (for housing type & school type) established by the School Board. **Calculations are rounded to the nearest whole number.** Student Generation for each school type is calculated individually, in order to correctly assess the impact on the School Concurrency Service Area (SCSA) for each school type (Elementary, Middle and High School).

# of Elementary School Student Stations = # of housing units x Elementary school student generation multiplier
# of Middle School Student Stations = # of housing units x Middle school student generation multiplier
# of High School Student Stations = # of housing units x High school student generation multiplier

Student Generation Calculations: Single Family Residential Development

Elementary School	540	units	x	0.14	Elementary School Multiplier*	75.6	Student Stations**
Middle School	540	units	x	0.06	Middle School Multiplier*	32.4	Student Stations**
High School	540	units	x	0.08	High School Multiplier*	43.2	Student Stations**

Student Generation Calculations: Multi-Family Residential Development

Elementary School		units	x		Elementary School Multiplier*		Student Stations**
Middle School		units	x		Middle School Multiplier*		Student Stations**
High School		units	x		High School Multiplier*		Student Stations**

** Student generation multipliers may be obtained from SBAC at:*
http://www.sbac.edu/pages/ACPS/Departments_Programs/DepartmentsAF/D_thru_F/FacilitiesMainConstr/Local_Certification_Packets/City_of_Alachua
*** Round to the nearest whole number*

EXEMPT DEVELOPMENTS (check all that apply):

- ☐ Existing legal lots eligible for a building permit.
- ☐ Development that includes residential uses that has received final development plan approval prior to the effective date for public school concurrency, or has received development plan approval prior to June 24, 2008, provided the development approval has not expired.
- ☐ Amendments to final development orders for residential development approved prior to the effective date of public school concurrency, and which do not increase the number of students generated by the development.
- ☐ Age-restricted developments that prohibit permanent occupancy by persons of school age, provided this condition is satisfied in accordance with the standards of the Public Schools Facilities Element or the ILA.
- ☐ Group quarters that do not generate public school students, as described in the ILA.

A completeness review of the application will be conducted within 5 business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

I/We certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

SPECIAL WARRANTY DEED

THIS SPECIAL WARRANTY DEED, made and entered into as of the 5th day of December, 2019, by LUTHER ACQUISITIONS, LLC, a Florida limited liability company, and MEGAHEE ENTERPRISES, LTD., LLLP, a Florida limited liability limited partnership, successor by conversion to Megahee Enterprises, Ltd., a Florida limited partnership, the address for which is 2513 S.W. 50th Boulevard, Gainesville, Florida 32608 (collectively, the "Grantors"), to TARA FOREST, LLC, a Florida limited liability company, the address for which is 7717 N.W. 20th Lane, Gainesville, Florida 32605 (the "Grantee").

W I T N E S S E T H:

THAT, for and in consideration of the sum of Ten and No/100 Dollars ($10.00), and other good and valuable consideration, the receipt and sufficiency of which are acknowledged by Grantors, Grantors hereby grant, bargain, sell, convey and confirm unto Grantee all that certain real property together with the improvements thereon (collectively, the "Real Property") in Alachua County, Florida, and more particularly described as follows:

SEE EXHIBIT "A" ATTACHED HERETO AND BY THIS REFERENCE MADE A PART HEREOF.

RE Nos.: 03067-001-000, 03008-000-000, 03066-002-000 and 03020-000-000

TOGETHER WITH all the tenements, hereditaments and appurtenances thereto belonging or in any way appertaining.

TO HAVE AND TO HOLD the same unto Grantee in fee simple, forever.

Subject to conditions, covenants, restrictions, reservations, easements, rights-of-way, taxes assessed subsequent to December 31, 2019, and all applicable zoning ordinances; provided, however, this reference will not serve to reimpose any such conditions, covenants, restrictions, reservations or easements.

And Grantors do hereby fully warrant the title to said land, and will defend the same against the lawful claims of all persons whomsoever, claiming by, through or under Grantors, but not otherwise.

IN WITNESS WHEREOF, Grantors have caused this Special Warranty Deed to be executed on their behalf as of the day and year first above written.

EXHIBIT "A"

Parcel One & Part of Parcel 7:

That part of the East ½ of Section 9, Township 8 South, Range 18 East, lying North of the North right of way of U.S. Highway 441,

Less and except the North ¼ of Government Lot 2; and

Less and Except the right of way of State Road 93 a/k/a Interstate I-75; and

Less and Except that part of Government Lot 7 lying East of the East right of way of State Road 93 a/k/a Interstate I-75;

Also Less and Except the following described property:

Commence at the Southeast corner of Section 9, Township 8 South, Range 18 East, and run North 3° 37' 28" West 286.74 feet to the North right of way of Old State Road No. 25; thence North 79°23'05" West along said right of way 1055.3 feet to its intersection with the West right of way of Interstate No. 75, thence run North 4°26'55" East along said Interstate Road right of way 212.91 feet to its intersection with the South right of way of State Road No. 25 (U.S. No. 441), thence run North 79°06'35" West along said State Road right of way 306.92 feet, thence run North 1°48' 35" West 205.01 feet, thence run North 79°06'35" West 355.34 feet to the North right of way of State Road No. 24 (U.S. No. 441) and the Point of Beginning, thence run North 79° 06'35" West along said right of way 175.00 feet, thence run North 10°53'25" East 175.00 feet, thence South 79°06'35" East 349.10 feet to the Westerly right of way of Interstate Road No. 75, thence South 27°21'25" West along said right of way 38.71 feet to the p.c. of a 34° 11'20" curve, having a radius of 170.10 feet, an internal angle of 73°32' and being concave to a Northwesterly direction, thence run in a Southwesterly direction along the arc of said right of way curve a distance of 215.08 feet to the P.T. of said curve, thence South 10° 53'25" West 16.00 feet to the Point of Beginning. All being and lying in Section 9, Township 8 South, Range 18 East, Alachua County, Florida.

Also Less and Except:

Commence at the Northeast corner of Government Lot Seven (7), Section Nine (9), Township Eight (8) South, Range Eighteen (18) East, and run South 01°48'22" East, along the East line of said Government Lot Seven (7), 1677.39 feet; thence run North 79°06'35" West, 351.65 feet to the intersection with the West right of way line of Interstate Highway No. 75 and the North right of way line of U.S. Highway 441; thence run North 79°06'35" West, along said North right of way line 175.00 feet to the Point of Beginning; thence continue North 79°06'35" West along said North right of way line, 175.00 feet; thence run North 10°53'25" East, 175.00 feet; thence run South 79°06'35" East, 175.00 feet; thence run South 10°53'25" West, 175.00 feet; to the Point of Beginning.

Together with the following described lands:

The East Sixty-four and 79/100 (64.79) feet of that part of Government Lot Three (3), in Section Fifteen (15), Township Eight (8) South, Range Eighteen (18) East, lying North and East of State Roads Nos. 20 and 25, Alachua County, Florida.
And That part of Government Lot Three (3), in Section Fifteen (15), Township Eight (8) South, Range Eighteen (18) East, lying North and East of U.S. Highway 441 less the East Sixty-four and 79/100 (64.79) feet, Alachua County, Florida.
Less and Except therefrom the lands described in Official Records Book 4334, Page 1074 in favor of the City of Alachua, of the Public Records of Alachua County, Florida.

Together with the following described parcel:

The West ½ of Section 10, Township 8 South, Range 18 East, lying North of the North right of way of U.S. Highway 441, Alachua County, Florida. Less and Except the Southwest ¼ of the Southwest ¼, but including that part of the Southwest ¼ of the Southwest ¼ lying within the following described property:

Commence at the Southwest corner of Section 10, Township 8 South, Range 18 East and run North 1°48'58" West along the West line of said Section 1352.21 feet to the Point of Beginning; thence continue North 01°48'58" West along said West Section line 562.78 feet; thence run South 36°22'41" East 524.13 feet; thence run North 89°12'27" East 1039.09 feet; thence run South 38°29'43" East 109 feet, thence run South 87°09'17" West, 1401.60 feet to the West line of Section 10, Township 8 South, Range 18 East and the Point of Beginning. All being and lying in the Southwest ¼ of Section 10, Township 8 South, Range 18 East, Alachua County, Florida.

Parcel Two:

The Southwest ¼ of the Southwest ¼ of the West ½ of Lot 4, all lying and being in Section 3, Township 8 South, Range 18 East, Alachua County, Florida.

Parcel Three:

A tract of land situated in Section 10, Township 8 South, Range 18 East, Alachua County, Florida, said tract of land being more particularly described as follows:
Commence at a concrete monument at the Southwest corner of aforementioned Section 10, Township 8 South, Range 18 East for a point of reference and run North 88°24'02"East, along the South line of said Section 10, a distance of 792.27 feet; thence run North 00° 39'21" West, along the East line of the West 792.16 feet of the Southwest ¼ of the Southwest ¼ of said Section 10, a distance of 508.06 feet to a concrete monument (LS#3456) on the Northerly right of way line of State Road 20-25 a/k/a U.S. Highway 441 (200 foot right of way); thence run South 77°51'07"East, along said Northerly right of way line, a distance of 143.86 feet to a concrete monument (LS#3456) and the True Point of Beginning; thence run North 12°08'53" East, a distance of 200.00 feet to a concrete monument (LS#3456); thence run South 77°51'07"East, a distance of 59.81 feet to a concrete monument (LS#3456); thence run North 60°49'36" East, a distance of 101.29 feet to a concrete monument (LS#3456); thence run North 07°01'30" East, a distance of 70.52 feet to a concrete monument (LS#3456); thence run North 28°08'16"West, a distance of 91.36 feet to a concrete monument (LS#3456); thence run North 60°43'36" East, a distance of 367.96 feet to a concrete monument (LS#3456) on the East line of the aforementioned Southwest ¼ of the Southwest ¼ of Section 10; thence run South 00°00'26" East, along said East line, a distance of 665.16 feet to a concrete monument (LS#940) on the aforementioned Northerly right of way line; thence run North 77°51'07" West, along said Northerly right of way line, a distance of 486.49 feet to the True Point of Beginning.

Balance of Parcel 7:

The South ½ of the East ½ of Government Lot 7, in Section 4, Township 8 South, Range 18 East, Alachua County, Florida. Less and Except the right of way of State Road No. 93 a/k/a Interstate 75, and Less and Except the 66-foot access road.

RE Phase II Archaeological Investigations
The Tara Phoenicia Site (8AL07459)
The Tara Forest Mound Site (8AL7466)
Alachua County, Florida
AEC Project No.: 0065-0010

Dear Mr. Moukhtara:

Alpha Environmental Consulting, Inc. (AEC) has completed a Phase II Archaeological Investigations of the above referenced sites. The assessment was conducted in accordance with the Section 106 of the National Historic Preservation Act of 1966 (Public Law 89-665) as amended, 36 CFR Part 800: Protection of Historic Properties, and Chapter 267, Florida Statutes, any client specific scope of work provided, and generally accepted industry standards.

This report was prepared solely for the use of Tara Forest, LLC (hereinafter "Client" or "User") and JBPro. No other party shall have the right to rely on this report or the findings herein, without the prior written consent of AEC.

Sincerely,

Alpha Envirotech Consulting, Inc.

1.0 INTRODUCTION

From May through August of 2022, Advanced Archaeology, Inc., conducted Phase I cultural resource assessment surveys of the 44.40-acre Tara Phoenicia, the abutting 200-acre Tara Forest West and the adjacent 100-acre Tara Forest Additional Project Areas properties in Alachua, Florida (Mankowski 2022). During these three separate archaeological surveys, seven prehistoric sites were identified, including the Alachua Field site (8AL00166) that was originally recorded in the 1950s. Based on all field data and testing, Advanced Archaeology, Inc., determined (and recommended to the State Historic Preservation Office (SHPO) that sites 8AL07452, 8AL07461, 8AL07462, and 8AL07463, as well as 8AL00166, were not eligible for listing in the *National Register of Historic Places*. The consultant also identified, recorded, and delineated the general boundaries of the Tara Phoenicia site (8AL07459), an Archaic period to late prehistoric period (ca. 7,000 B.C. – A.D. 1,000) site characterized by deposits of prehistoric lithics and ceramics in varying frequencies, and the Tara Forest Mound Site (8AL07466), described as a low-lying prehistoric "sand mound." Advanced Archaeology, Inc. recommended to the SHPO that both sites were potentially NR eligible and due to the diversity of the artifact assemblage and research potential, as well as the unknown nature and vertical extent of the sites, recommended that Phase II archaeological investigations be conducted at 8AL07459 and 8AL07466 to determine their condition, integrity, and *National Register* eligibility status. The Tara Forest Mound Site (8AL07466) was suggested to be potentially eligible for listing in the *National Register of Historic Places* under Criteria D. The Tara Phoenicia site (8AL07459) and the Tara Forest Mound Site (8AL07466) are located within the city limits of Alachua, Alachua County, just north of Highway 441 and east of the I-75 interchange with U.S. 441; Section 10, Township 8 South, Range 18 East (see Figures 1 & 2).

This document reports the findings of Phase II archaeological investigations of 8AL07459 and 8AL7466 conducted in February and March 2023 by Alpha Envirotech Consulting, Inc., to address the requirements of the Florida Division of Historical Resources (DHR)/State Historic Preservation Office (SHPO) pursuant to State cultural resource provisions contained in Section 380.06, Chapters 267 and 373, *Florida Statutes*. The authority for this procedure is Section 106 of the National Historic Preservation Act of 1966 (Public Law 89-665 amended), and 36 CFR Part 800: Protection of Historic Properties. The State Historic Preservation Office (SHPO) advises agencies as they identify historic properties (listed or eligible for listing in the *National Register of Historic Places*), assess effects upon them, and consider alternatives to avoid or minimize adverse effects. This report will also address the requirements of the City of Alachua and Alachua County Land Development Codes.

This report address Phase II archaeological investigations of 8AL07459 and 8AL07466. For background research, including the regional cultural prehistory and history, environmental overview, previous archaeological investigations, and a summary of the other sites identified one and in the immediate proximity of the project area, the reader (and reviewer) is referred to the Phase I CRAS reports generated for the Tara Phoenicia properties (Mankowski 2022a, 2022b & 2022c).

2.0 ALACHUA COUNTY PREHISTORY

Alachua County is located within the Florida's North Central region defined by Milanich (1994). Although archaeology across the county has been limited, indigenous groups spanning the early Weeden Island through Modern periods have been documented within the area's archeological record.

Present-day Florida's earliest occupation occurred during the Paleoindian period, which began some 15,000 years ago. The Florida climate during this period was cooler and drier than today, and freshwater was more difficult to find due to lower sea levels. As a result of the drier climate, many archaeologists believe that these early Floridians relied, in part, on waterholes, sinkholes, and lakes for drinkable water and, along with coastal areas, subsistence and other resources. Similarly, the distribution of recorded Paleoindian sites in Florida suggests that the presence of high-grade chert or limestone outcroppings, which were necessary for tool production, including Suwannee and Simpson projectile points, influenced migration and settlement patterns.

Recent research on Paleoindian sites, such as the Harney Flats site, located in Hillsborough County, has changed the thinking on early prehistoric peoples in Florida and the Southeast (Dunbar 2012; Halligan 2012; Webb 2006). Paleoindian settlement is believed to have been more specialized and sedentary than once thought, particularly in how Pleistocene megafauna such as mastodons were hunted and processed. Data recovered from excavations at Harney Flats site suggests that Paleoindian groups seasonally inhabited areas near freshwater and also demonstrates the need for the continued identification and investigation of terrestrial Paleoindian sites in Florida (Daniel and Wisenbaker 1987).

Climatic changes in Florida during the end of the Pleistocene period correspond with distinct cultural changes that mark the beginning of the Archaic period (7,500 to 1000 B.C.). A warmer climate and wetter conditions due to higher sea levels allowed for a wide variety of new food resources and shifts in settlement patterns and site types. As mesic oak-hickory forests emerged on the landscape and the megafauna of the preceding Pleistocene gradually became extinct, Florida's occupants during this time heavily relied on a diverse variety of small game, fish wild nuts and plants, and freshwater snails for subsistence (Milanich and Fairbanks 1980).

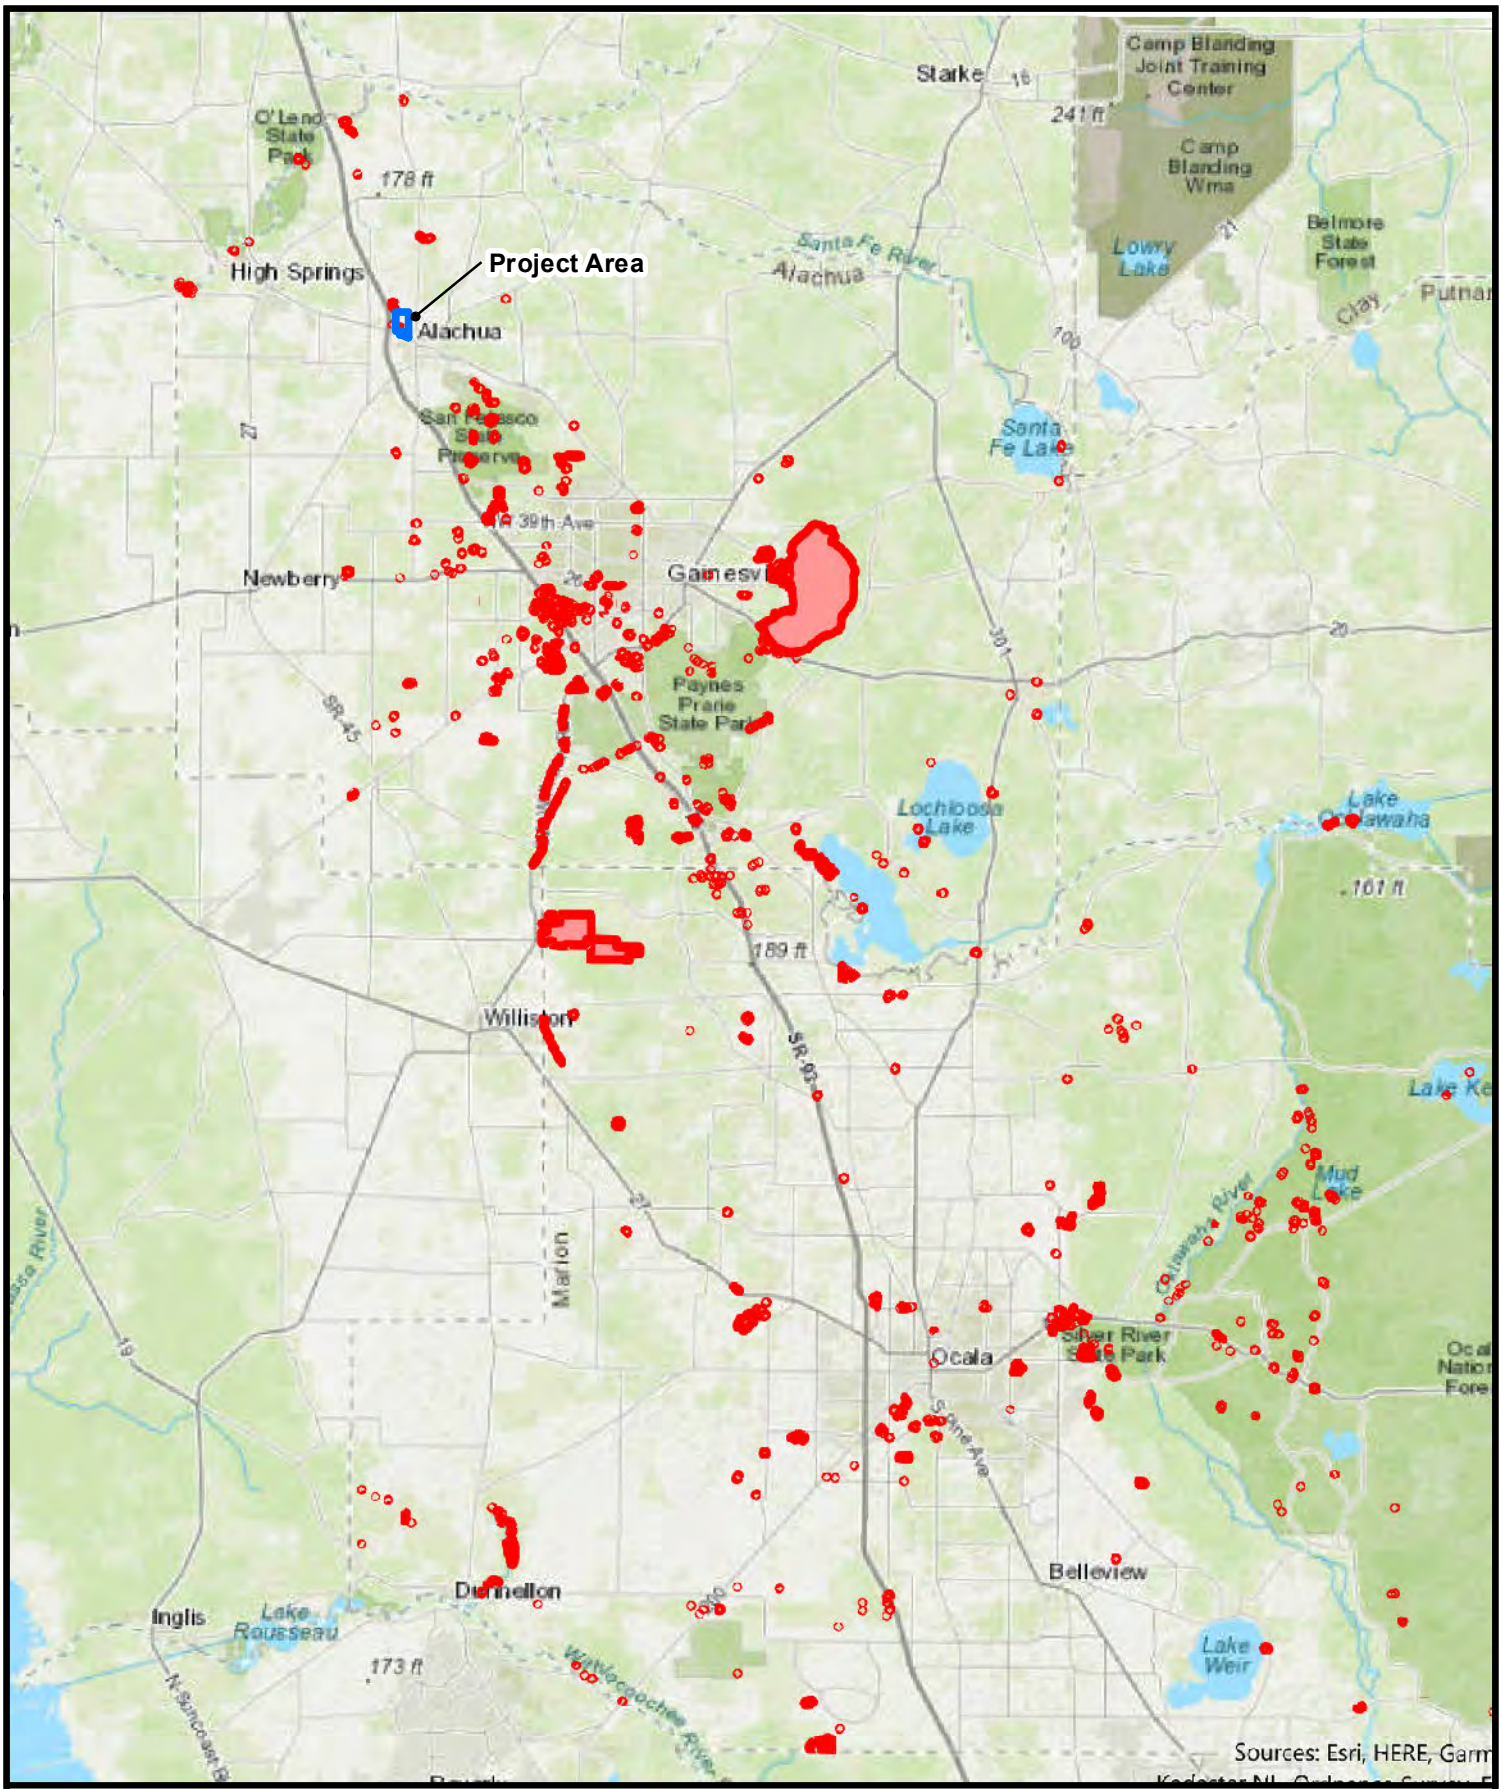
Changes in subsistence also coincided with changes in tool production, as the stone tools once used for hunting and processing megafauna and large game were no longer required. The most common artifacts of the Archaic consist of large, stemmed spear point types that include several variations (Hillsborough, Newnan, Alachua, Putnam, and Marion types). Unlike the highly specialized tools of the Paleoindian period, Archaic stone tools appear to have been used for a variety of purposes and discarded more frequently. Populations also became increasingly more sedentary during this time, resulting in a variety of new site types emerging, such as base camps, short-term camps, procurement camps, and cemeteries. During the Late Archaic, indigenous groups also began making the earliest pottery. These crude fiber-tempered ceramics, known as Orange wares, were constructed using slab techniques and include incised, punctated, and simple stamped designs.

The Deptford cultural tradition is primarily associated by a shift in ceramic technology as sand- or grit-tempered pottery created using coil construction gradually replaced Orange fiber-tempered pottery. During this transitional period, which extended from 1,000 to 500 B.C., coastal regions became more heavily populated, while interior locations served primarily for short-term use. By 500 B.C., two primary cultural traditions dominated the region: Deptford and St. Johns.

The Deptford tradition (500 B.C. to A.D. 200), which is not well represented in North Central Florida, is primarily a coastal tradition. Subsistence practices focused most heavily on marine and coastal resources. Deptford groups relied on wild game and plants to supplement their diets. Ceramics include grit- and sand-tempered pottery with paddle-stamped designs.

Similarly, the St. Johns tradition (500 B.C. to 1565 A.D.) is also primarily concentration within coastal regions. The heaviest concentrations of St. Johns sites have been recorded in North Florida and North, North Central Florida along the St. Johns River and its tributaries. Like the Deptford groups, St. Johns populations heavily exploited coastal and marine resources, especially oysters and fish. St. Johns ceramics are distinct in the presence of a chalky paste containing sponge spicules. Pottery decoration includes check-stamped, incised, and some red filmed.

Beginning circa 200 A.D., two new cultural traditions emerged in the region: Cades Pond and Weeden Island. Weeden Island sites, which include village sites with associated burial mounds and mound complexes, are generally found along the bays, the Gulf of Mexico, and along inland rivers or streams. Weeden Island ceramics are sand-tempered and include a variety of decorations and surface treatments including burnished, punctated, incised, red-filmed, and stamped (Willey 1949).



The Cades Pond dominated North Central Florida during this time. Cades Pond populations are noteworthy for their harvest economy in which marsh and aquatic environments were heavily exploited. Cades Pond pottery consists primarily of plain, undecorated ceramics. Weeden Island and St. Johns types are often recovered from Cades Pond sites. Site types include ceremonial complexes with ponds, earthworks, villages, and mounds and villages with or without mounds (Hemmings 1978).

The period between AD 800 to 1700 is associated with the Alachua tradition, which is subdivided into four subperiods: Hickory Pond, Alachua, Potano I, and Potano II. The peoples associated with Hickory Pond are believed to have migrated into the area from southeastern Georgia after A.D. 600. Hickory Pond groups relied on extensive horticulture, and sites are primarily positioned along high grounds with well-drained soils and nearby freshwater sources. Hickory Pond ceramics are sand tempered. Decorations include punctations, cord marking, and net impressing. The most prevalent types are Alachua Net Impressed, Prairie Cord Marked, and Lochloosa Punctated.

3.0 ARCHAIC PERIOD LITHIC RESOURCE SITES IN ALACHUA AND MARION COUNTIES

The Tara Phoenicia sites occupy a prominent position in a geologic landform known as the Ocala Uplift, a region characterized by extensive chert outcrops that were utilized by prehistoric Native Americans for thousands of years, particularly by Archaic period people (see Figure 3, Archaic site distribution map in Alachua and Marion Counties). Because of this occurrence, an overview of Archaic settlement and lithic resource extraction patterns in the Central Highlands region is important in understanding Tara Phoenicia in a broader cultural context and settlement model. The Archaic period in Florida is defined by lithic technologies and cultural practices that correspond with human adaption to warmer, wetter environmental and climatic conditions of the Holocene. These conditions over many generations resulted in increasing population and changes visible in the archaeological record after 8,000 BC (Milanich 1994: 62-63). The changing environmental conditions during the early Archaic periods resulted in increased surface water flow and erosion as temperatures and sea levels rose, exposing new lithic sources. A notable increase in reliance of these local, coarse-grained raw materials can be seen archaeologically. The previously available fine-grained lithic sources utilized during the Paleoindian period may have been inundated by rising sea levels or exhausted by over-exploitation. In consequence, new lithic technologies were practiced by exploiting and manipulating the available coarser-grained lithic resources (Goodyear 1979:10; Ste. Claire 1987:206). This study focuses on the type sites in Alachua and Marion counties associated with the Archaic period.

Around 7,500 B.C., the lanceolate points that define the Paleoindian points and knives were no longer made and instead replaced by a variety of stemmed tools such as Kirk, Wacissa, Hamilton, and Arredondo types (Bullen 1975; Milanich 1994: 63). Additionally, the changing environment also led to the extinction of some of the larger Pleistocene animal species, resulting in the reliance of smaller game and new ecosystems. These changes correspond with the smaller size points and knives produced to adapt to the changing environment. Early Archaic people had access to more fresh water in areas that were previously cold and dry and not suitable for Paleoindian hunters. This allowed early Archaic people to hunt and collect in new site locations based around these new-found resources which transformed from a nomadic Paleoindian subsistence pattern into growing, more sedentary lifestyles along coastal and riverine environments observed during the later Middle Archaic Period (Milanich 1994: 63-64). Studies discerning Early Archaic Bolen spatial and temporal distribution in north central Florida have also been conducted examining the transition from lanceolate-shaped points from the Late Paleoindian period to notched points from the Early Archaic (Thulman 2018: 257, 273). Their interpretations suggested the variation in Bolen hafts is likely made by distinct social groups carrying on point-making traditions, since basal measurements did not reflect functional differences due to environment or resource availability and point types were not evenly distributed in regions (Thulman 2018: 273). Other sites with Paleoindian and Early Archaic components are the Newnan site (8AL356), Payne's Town (8AL366), San Felasco Hammock (8AL461), Rainbow Springs 3 (8MR208), and the Oak Hammock Site (8MR1920) (FMSF).

Archaic Site Distribution Map
Tara Phoenicia (8AL07459)
Tara Forest Mound (8AL07466)

Project: 0065-0010	Alachua County, FL	Date: Apr 24 2023	Figure: 3

Archaeological evidence for these settlement changes exists from the Early Archaic material found with Paleoindian material from other sites such as Page/Ladson, Little Salt Springs, and Warm Mineral Springs (Milanich 1994:64). Archaic sites also appear more distributed on land while Paleoindian sites are usually inundated with water. Both Paleoindian and Early Archaic peoples established camps around water sources, but the new climatic conditions and fresh water allowed people to sustain larger populations, occupy sites for longer, and perform certain occupation at specific locations. Archaeologically this can be noted by the increase in sites, locations, larger population size, a greater range of tools, and sites with significant number of burials compared to the previous period (Milanich 1994: 67,70). The areas around northern Florida, such as Payne's Prairie and Orange Lake in Alachua and Marion counties provided perched water sources that today yield large quantities of Early Archaic points on the surface, while Paleoindian artifacts are few if not present at all. This pattern was largely documented from collections in Alachua and Marion counties that furthered Archaic period studies throughout the rest of northern Florida (Milanich 1994: 63-64).

The early Archaic period was dryer than present, but by about 3,000 B.C. environmental and climatic conditions became progressively more like the present (Milanich 1994:75). During this era, Middle Archaic sites are found in a variety of locations such as the freshwater shell middens on the St. Johns River and the Atlantic lagoon, the marine shell middens along the Hillsborough River drainage, and the forest of the interior of northern Florida (Milanich 1994:76). Around 5,000 years ago, two basic patterns appear to have developed in peninsular Florida. One pattern emphasizes subsistence on hunting in the upland areas such as the central highlands while the other focuses on fishing and collecting mollusks in lowland aquatic zones such as the St. Johns valley (Goggin 1949; Hemmings and Kohler 1974:45). Lowland sites contain numerous refuse heaps and shell middens that preserved evidence of food remains such as fish, shellfish, mammals both large and small, birds, reptiles and wild plants. In contrast, the uplands consist largely of scattered lithic sites or concentrations of stone tools and toolmaking debris, with little else preserved in the sandy upland soils. The knowledge of the relationship between these site patterns is continually growing as more archaeological research is conducted. The orientation of sites around aquatic areas, and the discovery of Archaic canoes in the area suggest an importance of water travel (Hemmings and Kohler 1974:45; Wheeler et al. 2003). Mounting evidence indicates Archaic groups moved between the uplands and lowlands to take advantage of specific resources.

Small special-use Middle Archaic sites are frequent in the central highlands and appear as lithic scatters. The evidence of the process of extracting lithic material such as chert can be found at quarry sites. Quarry sites are evident by the types of lithic debitage, or waste flakes, left behind when chert is mined and roughly shaped before being transported to another location to be worked into tools (Milanich 1994:78). Special-use camp sites are characterized by lithic debitage and tools such as points, knives, scrapers, and a few larger chopping or hammering tools. Floral and faunal remains are rarely found preserved at these sites because unfavorable soil conditions. These small, camp-size sites were probably used for hunting and collecting on a seasonal basis (Milanich 1994: 78). Larger sites are less common but likely represent central-base settlements occupied by larger groups of people. These sites may cover a large area and contain tens of thousands of chert flakes and tools. The large quantities of lithic flakes and tools found at larger sites contrast sharply with the small quantities at special-use sites (Milanich 1994: 78).

One of the larger, most well-known pre-pottery Archaic type sites, The Newnan site (8AL356) lay east of Gainesville on the high ground separating Newnan's Lake from Payne's Prairie (Milanich 1994: 79). Clausen (1964:8-12) reported the site consisted of a Middle Archaic artifact assemblage of Florida Archaic stemmed, broad-blade lithic projectile points including the Newnan point which is the most distinctive and widespread (Bullen 1975:31; Milanich 1994:76; Wheeler et al 2003:534). The 8AL356 artifact assemblage contained 186 Middle Archaic stemmed projectile points, 95% of these are Newnan points (Clausen 1964; Milanich 1994:80). Other tools include ovate blanks that were probably brought from quarry sites to make points, bifacial knives with rounded or squared bases, sandstone hones, hammerstones, and cruciform drills. The high quantity of flakes, cores, blades, and utilized blades are associated with the well-developed blade industry that makes the 8AL356 site unique considering only a small portion of the site was excavated (Milanich 1994:80). Evidence of thermal alteration, or heat-treated lithics also appeared in 94% of the Newnan projectile points from the type site (Ste. Claire 1987: 206).

Thermal alteration is the slow heating and cooling of the lithic raw material to facilitate flaking to strengthen the coarse-grained lithic material which may cause the product to change colors such as red, become glassy or lustrous, and easier to work (Dickinson and Wayne 2012:27-30; Milanich 1994:76; Purdy 1971; Rick and Chappell 1983; Ste. Claire 1987). Purdy (1971) believed thermal alteration began in the Early Archaic period and continued through the remaining prehistoric periods, but further research by Ste. Claire (1987) confirms practice began in the Early archaic, peaked in the Middle Archaic, and declined during the Transitional Period. Considering the reuse and salvage of lithics by later generations, Ste. Claire also speculated that even though there was a slight increase of thermal alteration after the Transitional period, overall the practice gradually decreased through time. Thus, site 8AL356 and other sites with large quantities of thermally altered materials may indicate a Middle Archaic occupation (Dickinson and Wayne 2012: 27-30; Ste. Claire 1987)

Other point types associated with the Middle Archaic in the area are the Hillsborough, Putnam, Levy, Marion, and Alachua types (Bullen 1975:32; Milanich 1994:76). Clausen (1964:20-21,38-39) noted the distribution of stemmed points and lithic artifacts and suggested there was a relationship between the pre-pottery culture of the Newnan's Lake area and the Mount Taylor culture to the east on the St. Johns River basin (Wheeler et al 2003:534). The relationship between these two areas continues into the subsequent Late Archaic Orange culture indicated by the presence of fiber temper pottery post 2000 B.C. (Milanich 1994: 88; Wheeler et al 2003:534).

On the north side of Lake Newnan, 55 canoes were discovered in 2000 during a drought. The Florida Bureau of Archaeological Research radiocarbon dated 41 of the specimens from The Lake Pithlachocco Canoe site (8AL4792) yielding date ranges from 2300 to 5000 B.P. (Wheeler et al. 2003: 533, 546). The results demonstrate canoes were part of the Archaic adaption to the interconnected aquatic environments. The craftmanship also implies the canoe making traditions during the Archaic period persisted into European contact. The continuity of this watercraft tradition is so persistent it is difficult to distinguish between earlier and later periods (Wheeler et al 2003:546, 548). As of 2003, 16 Archaic period sites were known in the vicinity of Newnan's Lake, most are southwest of the lake, including site 8AL356 (Wheeler et al. 2003: 534). Some sites lay directly on the lake shore, while others lay upland on hills overlooking the lake or other

small ponds and marshes. At least six of these sites have Orange Plain and Orange Incised fiber tempered pottery, indicating Lake Newnan was occupied throughout the Middle and Late Archaic (Wheeler et al. 2003: 534).

The Lake Kanapaha site (8AL172) is also representative of the upland Archaic tradition and lay along the western shoreline of Lake Kanapaha in central Alachua County. The name of the Lake Kanapaha derives from the Timucua word for "palmetto leaves" and "house," referring to the thatched dwellings built by historic Indians from the Province of Potano, this area aligns with much of Alachua County (Hemmings and Kohler 1974:46-47; Simpson 1956:66-67). The site consists of buried concentrations of Archaic stone tools and debris as well as Woodland ceramics. Site 8AL172 and other similar sites in the vicinity contain evidence of quarrying chert and stone tool production. Quarrying chert activity occurs widespread in this region with little evidence of continual utilization and occupation of these sites. The local chert appears to have been used expediently in archaic and later occupation sites (Hemmings and Kohler 1974:45-6).

Hemmings and Kohler (1974) encountered three general zones; the top foot of the site contained the ceramic zone, interpreted as small intermittent camps along the shoreline dating to the Deptford period (500 B.C. to 200 A.D.); from Levy zone from 1 foot to 2.5 feet the Levy zone contained Florida Archaic Stemmed types such as Levy, as well as scrapers, bifaces, cores, planes, and other tools dating to the Late Archaic Period between 5000 and 2000 BC; and the Pre-Levy zone between 2.5 to 6.5 feet indicated evidence of knapping bifaces and cores of local chert (Dickinson and Wayne 2012:32; Hemmings and Kohler 1974). They interpreted the sites as special use camps, specific to restricted resources, marked by areas of compact occupation, and tool reduction inventories (Dickinson and Wayne 2012:33; Hemmings and Kohler 1974:62). They further conclude that the generalized late archaic tool kit reflects dependence on hunting and collecting, processing of animal and plants, work in wood, bone, antler, hides, plant fibers and other raw materials, and the preparation of stone tools associated with these activities.

Additional assessments of the Lake Kanapaha Site (8AL172) were performed by SouthArc, Inc., in 2001 and 2012. They confirmed the site is a large Archaic lithic quarry and workshop with little evidence of habitation (Dickinson and Wayne 2001:1-3). Their study classified flakes based on the degree of external cortex remaining and the flake form (Dickinson and Wayne 2001; 2012: 27,30). Three categories of cortex were defined: primary, more than 50% of dorsal surface covered by cortex, produced during blank preparation or early stages of core reduction; secondary, less than 50% of dorsal surface cortex covered, occurring during bifacial preform or blank production; and tertiary, flakes with no cortex on the dorsal side which are often smaller, generated during the final stages of tool manufacture or maintenance (Dickinson and Wayne 2001; 2012: 30). They further defined flake types as complete, proximal, distal, medial, and unidentifiable. The cultural material consisted of shatter and flakes with no tool or utilized flakes present They thoroughly examined the debitage based on the degree of external cortex remaining and the flake form. Ideally, sites dominated by shatter, primary and secondary flakes, and few completed tools or preforms indicate the presence of a quarry or workshop. Sites with completed or partial tools, preforms, blanks, and an abundance of non-decortication, tertiary flakes suggest a final production area or a maintenance/campsite. Their research also examined evidence of thermal alteration, suggesting a Middle Archaic component. The 2001 study recorded 33% of the debitage was thermally altered and 80% suggest final stage tool production (Dickinson and

Wayne 2001; 2012: 33-34). The 2012 artifact assemblage suggested the final stage of tool making or maintenance with 46% of the debitage being thermally altered and no tools or expediently utilized flakes present (Dickinson and Wayne 2012:33-34). Since comparatively few lithic tools displayed evidence of usage it is likely the site represents a lithic workshop rather than an occupation or campsite.

Another outcrop of chert quarried in central Florida is the Senator Edwards site (8MR122), located in Marion County. Purdy (1975) interpreted the site as a chipped stone workshop occupied during the Archaic period. The site contained projectile points averaging 6-8 cm long with stemmed bases, Bolen points, and side-notched points, some beveled. Large number of broken projectile tips, broken unstemmed bases, broken stemmed bases, unifacial scrapers, bifacial scrapers, preforms, hammerstones, and large anvils were also present. Stemmed drills, common in Archaic Florida, are notably not present. Previous studies by Witthoft (1969:13) interpret drills as knives that have been sharpened over and over and show no rotary wear (Purdy 1975:182). Since no stemmed scrapers or drills were recovered, Purdy (1975) suggested it would not be necessary to use an implement so long since chert was readily available. The quantity of lithic debris and tools found at larger sites like Senator Edwards contrasts sharply with smaller special-use sites with smaller quantities (Milanich 1994: 78-79). Milanich implied that middle Archaic people performed the same types of activities at their villages and camps as their early Archaic ancestors, but as life became more sedentary central-base settlements such as 8MR122 produced a variety of specialized tools in the process. Milanich also suggested the appearance of the easily transportable tools may imply woodworking connected with building more permanent houses (Milanich 1994: 78-79). Other large workshops sites that possibly functioned as central base settlements are the Johnson Lake site in Marion County and the Haufler site 8AL28 in Alachua County (Milanich 1994:79).

The Golden Hills Archaic Complex represents a series of lithic production sites west of the city of Ocala that date to the Middle to Late Archaic (circa 5000-1000 B.C.) (Austin 2006; Ste. Claire 1983). An archaeological survey by Willis (1983) in Golden Hills recorded a cluster of prehistoric sites, including the Golden Hills aboriginal 2 site (8MR507) a prehistoric chert quarry and the Golden Hills Aboriginal 5 site (8MR510) a lithic scatter suggesting a campsite (Austin 2006: 5-6). Additional excavations by Florida Archaeological Services, Inc. (FAS) mitigated 8MR507 and 8MR510, concluding both sites were part of a single lithic tool production complex from the Middle Archaic (Austin 2006:6; Ste. Claire 1984). Their data indicates all lithic reduction stages, from early to late, were performed at the sites. Activity areas relating to various stages of reduction are spatially defined in clusters of associated stone debitage (Austin 2006; Ste. Claire 1983). Site 8MR507 consisted of hammerstones, hammerstone frags, cores, anvils, stone blanks, and primary and secondary debitage located in distinct areas along the margins of a sink hole, suggesting early reduction activity areas. Site 8MR510 contained Newnan, Levy, and Pinellas points as well as some ceramics, hammerstones, anvils, bifacial blanks, preforms, chert nodules, and waste flakes (Austin 2006: 17; Ste. Claire 1984). High percentages of thermally altered materials were also present at both sites. Ste. Claire (1983) suggested the Golden Hills complex may be associated with an extensive Middle Archaic occupation that lay underneath the Golden Hills Academy area less than 3 miles northeast. Substantial amounts of projectile points, finished tools, and used tools were recovered from the Academy site, but it is not known if this

site functioned as the base camp component of the lithic production complex to the southeast (Austin 2006; Ste. Claire 1983).

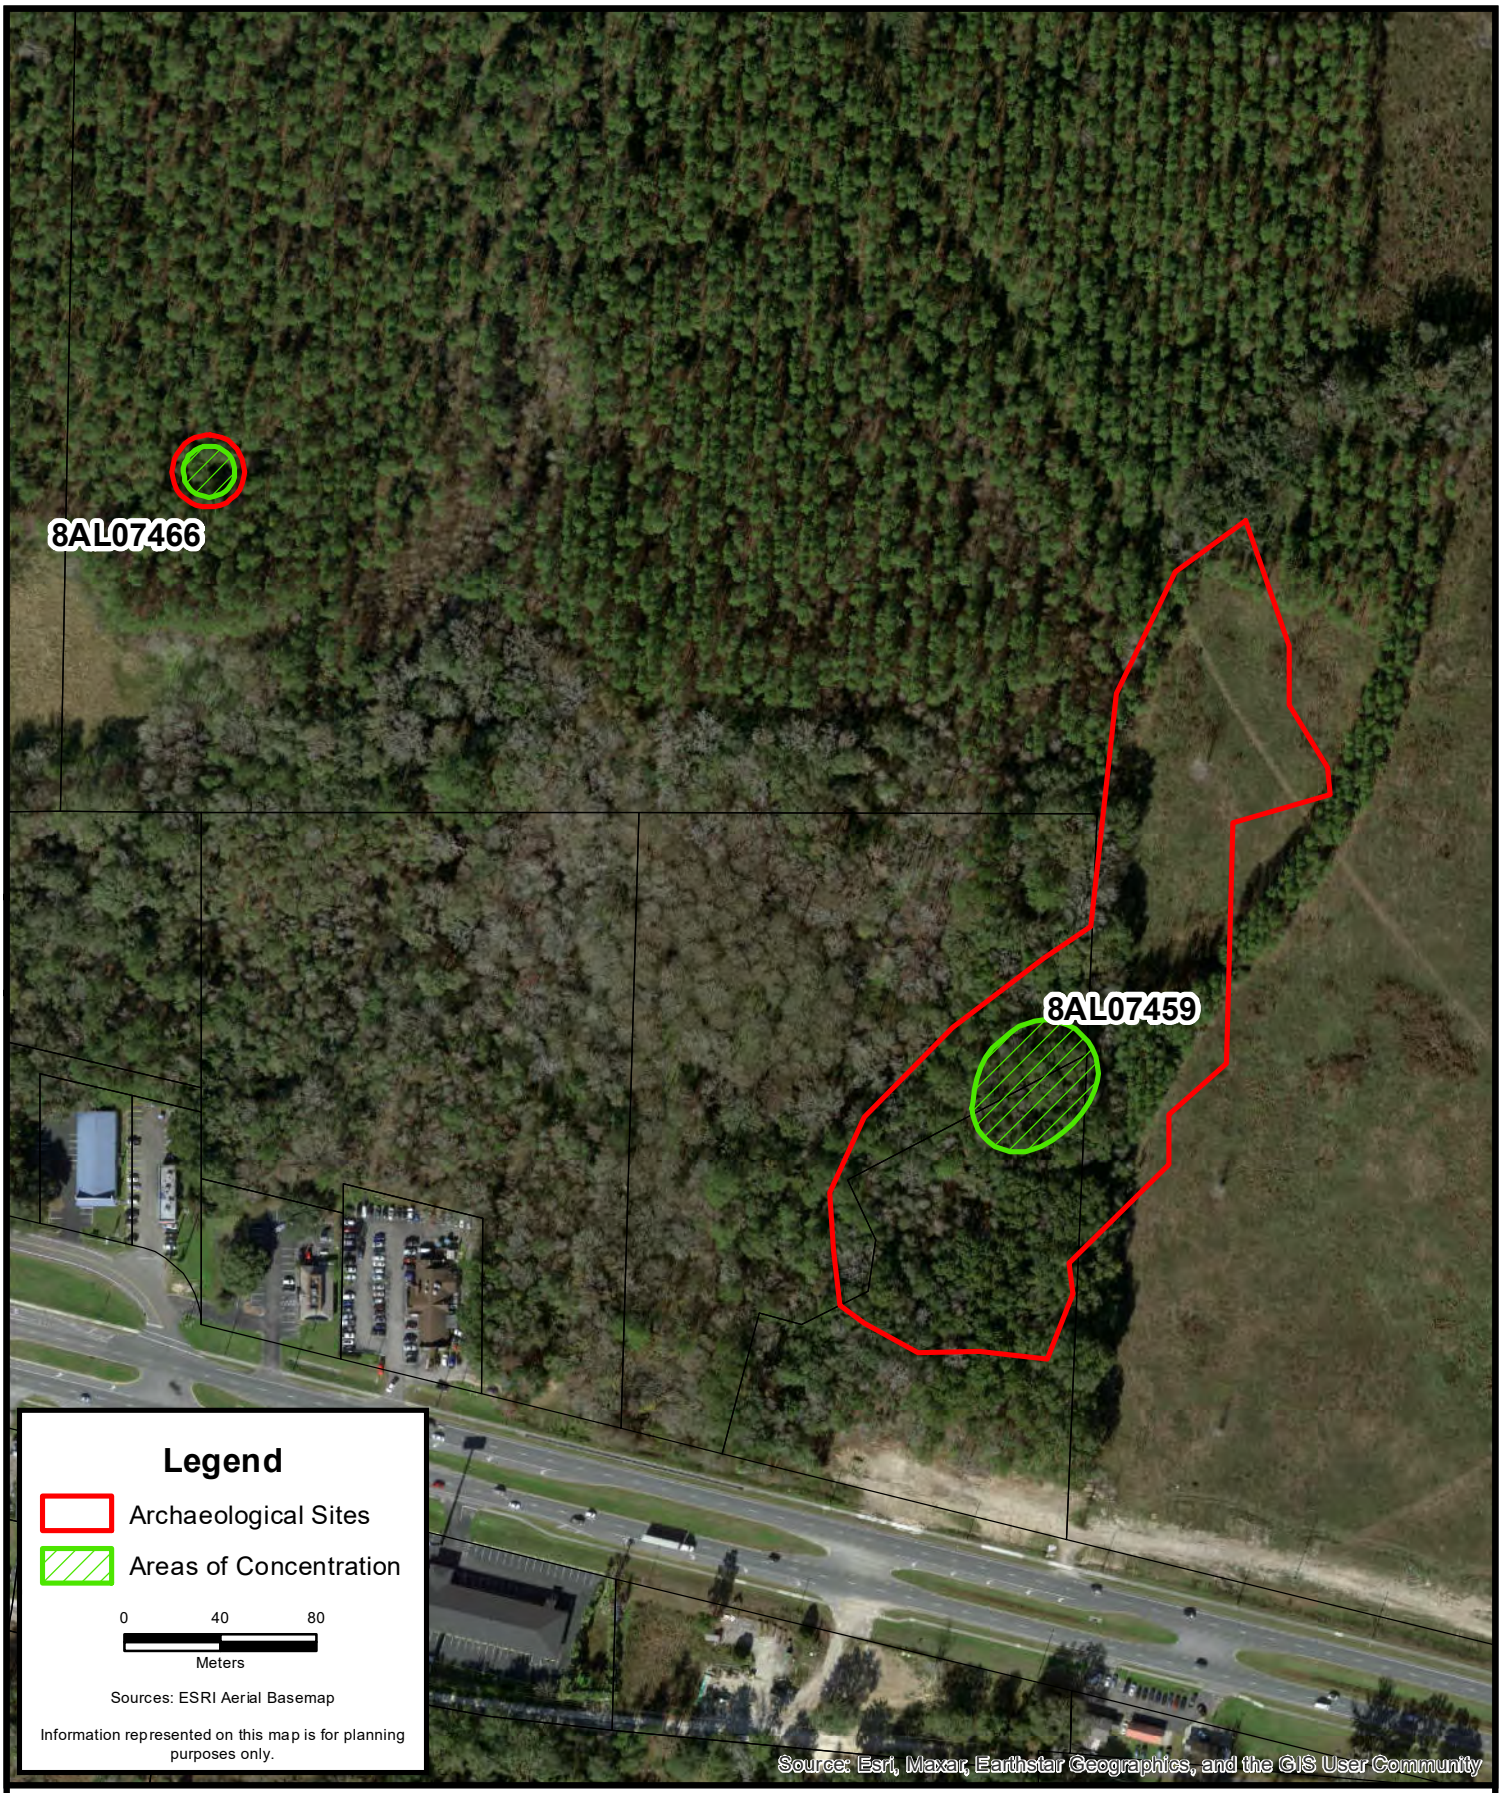
Southeastern Archaeological Research, Inc. (SEARCH) excavated 8MR510 in 2006 and expanded the boundaries of the large site and reported artifacts distributed over several topographic highs located southwest of a large wetland (Austin 2006:17-19). Their excavations found areas of high artifact concentration separated by areas of moderate to low artifact concentrations of waste flakes made from the Ocala Limestone formation. The large number of medial-distal fragments combined with a high representation of non-orientable fragments suggested a mix of core-reduction and early state tool production with some mid-to-late-stage reduction activity. Interpretation of the site includes short-term habitation campsites, chert procurement, and stone tool workshops evident by high densities areas. Thermal Alteration was also practiced on 75% of the 1193 artifacts uncovered, supporting the site dates to the Middle to Late Archaic, even with the absence of temporally diagnostic artifacts (Austin 2006:17-19; Ste. Claire 1987). The research conducted by SEARCH duplicated the materials recovered and concurred on the interpretations by FAS (Austin 2006:19).

SEARCH also documented 4 other sites with significantly lower densities of material situated on ridges overlooking wetland features (Austin 2006: 19-22). Thermal alteration was present in over half of the assemblages at the Golden Hills Aboriginal #6 site (8MR511), Golden Ocala #2 site (8MR3261), and Golden Ocala #3 site (8MR3262). Each site has less than 13 waste flakes present. The FMSF lists the sites function as lithic scatters, but the debitage present from 8MR511 suggest tool production activity while 8MR3261 and 8MR3262 suggest late-stage tool production. The Golden Ocala #1 site (8MR3260) contained 38 waste flakes showing signs of quarrying activity, core reduction, and early-stage tool reduction. Compared to the other percentages of thermally altered material at the previously mentioned sites, 8MR3260 only had 8 heat treated flakes. SEARCH determined these four sites have limited research potential due to their small size and limited artifact content (Austin 2006: 19-22).

Northwest of Alachua another series of Middle (5000-3000 BC) to Late Archaic (3000-500 BC) sites were uncovered in 2022 by Advanced Archaeology, Inc. (Mankowski 2022a; 2022b; 2022c; 2022d). The Tara April Scatter site (8AL7452) consists of a sparse prehistoric chert scatter interpreted as a lithic reduction and tool manufacturing encampment (Mankowski 2022d:2, 25). The Tara Forest West Scatter site (8AL7436) is an extensive, but sparse prehistoric chert surface scatter dating to the Middle Archaic and Late Archaic. The site represents a limited-use lithic reduction and tool manufacturing encampment (Mankowski 2022c:25). The Tara Phoenicia site (8AL7459) consists of sparse to dense prehistoric chert and ceramic deposits and extensive scatters that represents a lithic reduction and tool manufacturing encampment (Mankowski 2022a; 2022b; 2022c:25). The Tara Forest Mound (8AL7466) was inaccurately interpreted as a constructed sand mound, with moderate to dense prehistoric chert and ceramic artifact deposits that represents a lithic reduction and tool manufacturing encampment (Mankowski 2022d:3,25). Specimen logs show that primary, secondary, and tertiary flakes are present, with evidence of thermal alteration in many of the assemblages (Mankowski 2022c). The current undertaking includes Phase II excavations and interpretations of The Tara Phoenicia site (8AL7459) and the Tara Forest Mound (8AL7466).

Other examples of Archaic sites that consist of variable to dense scatters representing tool manufacturing encampments include the Dudley Farm Quarry Site (8MR2545), 92-34 Ocala, Scrambletown A (8MR2104), Oak Hammock (8MR1920), White Ranch (8MR3538), Site # 3 (8AL2910), San Felasco Hammock (8AL461), and Paynes Town (8AL366). Diffuse scatters include the Inferno site (8MR2343), Coliseum (8MR2321), USFS OCA15-06/Scrambletown Angel (8MR3915), USFS 92-33, Ocala (8MR2103), Rainbow Springs 3 (8MR208), Rainbow Springs State Park (MR2397), Mare Haven, (8MR152), and Mill Creek site (8AL4821) (Boyer 2016; Boyer et al. 2022; FMSF).

4.0 RESEARCH DESIGN AND FIELD METHODOLOGY



Phase I archaeological survey work defined the general boundaries of the Tara Phoenicia site (8AL07459) and the Tara Forest Mound Site (8AL07466) (Mankowski 2022). Within these parameters - defined by the presence or absence of cultural materials in an extended range - areas of artifact concentration were identified and mapped (in a series of red dots showing positive test pits), particularly for the Tara Phoenicia site. During the current Phase II investigations, archaeologists excavated a series of shovel test pits within these areas and generally across the sites to identify core site areas, or areas of highest artifact density and, consequently, prehistoric activity. These areas of concentration were the focus of Phase II investigations (see Figure 4). Historic aerial maps of the project area show a long history of agricultural impact including timbering, clearcutting, land leveling, row crop farming and silviculture (planted pine). It is highly probable that the areal extent of both sites, particularly the Tara Phoenicia site, was artificially expanded during plowing, tilling, and bulldozing related to these agricultural activities. Phase I CRAS shovel tests that produced singular or low-density artifacts likely reflect this occurrence and pattern of displace cultural materials.

Initial reconnaissance of 8AL07459 and 8AL0766 revealed that both sites were impacted by amateur artifact hunters (site looters), particularly the Tara Forest Mound site which was determined to be completely destroyed (see photographic plates in discussion of 8AL07466). Finding undisturbed ground was a challenge and in the case of 8AL07466, was unfortunately deemed futile. To identify intact (unimpacted) ground, archaeological crews used square-nose shovels to scrape back leaves and topsoil to reveal surface patterns of contiguous pothunter holes. Eventually a backhoe (operated by an archaeologist) was employed to scrape back and expose a wider area of patterned disturbance.

Once presumed undisturbed ground was identified at the Tara Phoenicia site, 17 units were laid out and excavated in the area of concentration to maximize yield of cultural materials and to determine if cultural stratigraphy was present. Five 1 x 1-meter excavation units, four 1 x 2-meter excavation units, three 1 x 3-meter exploratory trenches (excavated in layers by a backhoe), and six .50-meter exploratory units (to determine the extent of the site, depth of deposits, and nature of disturbance) were completed over a month and half period (see Figure 5, site excavation plan). All controlled units were excavated in 10-centimeter levels to depths of a meter and in some cases 110 centimeters below ground surface. Artifacts were bagged and labeled with provenience data (site number, unit number, level, date, etc.).

4,046 artifacts, mostly lithic debitage (96%), were recovered during excavations at the Tara Phoenicia site (8AL07459). Each artifact was cleaned, analyzed, categorized and charted (see artifact vertical distribution tables in Appendix A). The cultural materials were processed at archaeological laboratories in St. Augustine and Dunnellon, with initial organization taking place in the field at Alachua. The results of the lithic analysis are interpreted in the following section. All records of the Tara Phoenicia archaeological investigations, including field notes, research notes, photographs, maps, forms, and manuscripts are stored at the AEC/HCS repositories in St. Augustine and Dunnellon. All archaeological materials were analyzed and curated by professional archaeologists specializing in prehistoric lithic technology.

During Phase II archaeological investigations, any unmarked human burials and human skeletal remains discovered would have been brought to the attention of a District Medical Examiner if it was determined that the burial(s) represent an individual or individuals who have been dead less than 75 years, or to the attention of the State Archaeologist in the case that the remains were determined to be older than 75 years. Archaeological and development activities would cease immediately until proper authorities, the District Medical Examiner or the State Archaeologist, made a determination and authorized the continuance of work through their respective jurisdiction as defined by Florida Statutes. Procedures outlined in Chapter 872.05, Florida Statutes, would be followed regarding site preservation and protection, or mitigation, and reporting, this through the authority and direction of the District Medical Examiner and/or the State Archaeologist. In the event of other types of unexpected archaeological finds occurring during subsequent development of the property, this same procedure will be followed.

5.0 PHASE II ARCHAEOLOGICAL INVESTIGATIONS RESULTS

Phase II archaeological investigations of the Tara Phoenicia site (8AL07459) and the Tara Forest Mound site (8AL7466) were conducted by Alpha Envirotech Consulting, Inc., to address the statutory requirements of the Florida Division of Historical Resources (DHR)/State Historic Preservation Office (SHPO), as well as the City of Alachua. In particular, archaeological work was conducted to determine if these two prehistoric cultural resources were eligible for listing in the *National Register of Historic Places*. A discussion of these sites and management recommendations regarding *National Register* eligibility is as follows:

5.1 Tara Phoenicia Site - 8AL07459

Plate 1 - Chert nodule in adjacent swamp

The core of 8AL07459, the Tara Phoenicia site, was identified based on Phase I CRAS survey data, Phase II preliminary test pits and in an unorthodox manner, by the location and concentration of potholes dug by site looters. These initial investigations determined that artifact hunters had impacted the site substantially, but that testable areas remained. Relatively intact areas were revealed by scraping back the ground cover with shovels to expose areas and patterns of disturbance. Eventually, heavy equipment operators (archaeologists) used a backhoe to scrape the surface of the site to expose soil mottling (disturbance from pothunting) as well as identify intact ground. Archaeologists focused excavations within these "clean" site areas rather than

digging through disturbed potholes. Excavation units - 1 x 1-meter, 1 x 2-meter units and 1 x 3-meter units - were placed in undisturbed areas using this method. Based on initial testing, it was estimated that over 70% of the concentrated area of the site had been impacted by artifact collectors (pothunters), thus significantly compromising site integrity. Soils in undisturbed areas were principally beige, loamy sands, homogenous in composition and color, that extended from below topsoil to ca. 100 centimeters below ground surface. Excavation units produced artifacts in varying frequencies, predominantly lithic debitage, in all levels.

Artifacts produced from all units numbered 4,046, most of which was classified as lithic debitage (N = 3,890 or 96.14%). The lithic debitage artifact category includes cores, core fragments, primary and secondary decortication flakes, and secondary non-decortication and tertiary flakes. Primary and secondary flakes were classified based on the amount of cortex present on the exterior face of the flake (complete coverage vs partial coverage).

Based on the type of lithic artifacts recovered, particularly the large quantity of debitage, it is evident that the Tara Phoenicia site functioned as a secondary lithic reduction station. Here, prehistoric people used the site to extract chert stone from outcroppings exposed in a nearby geologic depression and swamp to fashion the early stages of stone tools. The artifact assemblage is characterized by core fragments, decortication flakes, core shatter, lithic debitage, heat-treated chert, stone blanks and preforms, fractured unfinished projectile points and bifaces – all cultural materials that indicate lithic procurement and reduction as a principal site function.

The core and immediate extended area of the Tara Phoenicia site occupies an approximately 40 x 40-meter place on an upland ridge that slopes into an adjacent swamp. The site represents a secondary station (stage) in the lithic extraction and manufacturing process. The primary stage took place at the source of the stone (quarry) where cores and blanks were knocked off large chert nodules exposed in the walls of the depression or along the banks of the swamp. This stone was carried to a higher and drier area for secondary reduction into forms that could be later finished as formal tools. Mosquitos and other insects would be less of a nuisance in these higher elevations at certain times of year, particularly the summertime (if stone was gathered during this season at all). The final lithic manufacturing stage, the completion of project points and other forma tools, most often took place at an associated village site, the location of which is unknown. There is little evidence of final projectile point manufacturing at Tara Phoenicia.

Primary debitage, mainly decortication flakes and large worked nodule and core fragments (Plate 2), are believed to be mostly buried in an adjacent depression. The quantity of debitage in and around this quarry area is probably substantial. Conversely, primary and secondary decortication flakes represent less than 9% of the upland debitage assemblage. This low frequency of decortication material supports the hypothesis that Tara Phoenicia was an intermediary lithic reduction station. The concomitant absence of final tertiary debitage such as small pressure flakes (an 1/8-inch mesh screen was employed at several units in an effort to recover any minute debitage) and finished tools such as final-stage projectile points suggest that stone shaped in the form of blanks and preforms were carried offsite to be finished elsewhere, probably at a village site. This lithic procurement and reduction process representing archaeologically delineated manufacturing stages and stations has been recognized at other sites such as the Golden Hills site to south in Marion County (Ste.Claire 1983) and in other areas of Florida such as the Tampa

Palms sites, particularly the Rock Hammock site, a Hernando projectile point manufacturing complex (Austin and Ste.Claire 1982; Ste.Claire 1982, 1996).

Subsistence related artifacts, mainly a relatively low quantity of ceramics, indicate that prehistoric people were using the Tara Phoenicia site as a short-term, seasonal encampment to procure and shape stone rather than as a permanent occupation.

Two broken Bolen-like project points (one a manufacturing failure and the other a base fractured by impact), a Marianna point, and a turtleback scraper suggest that stone was extracted from the quarry as early as the Early Archaic period (9,500 - 7000 B.C.) A small assemblage of ceramics (105 sherds or 2.6% of the artifact assemblage) and Pinellas points (N = 4) (Plates 3 and 4) indicate that later prehistoric people were using the site for the same purpose. This would indicate that the quarry was a known and desirable source of chert for stone tool manufacture for over 10,000 years. The Middle Archaic period (6,000 - 3,000 B.C) is prominently represented in the artifact assemblage based on the higher frequency of Archaic-Stemmed project point preforms, late-stage manufacturing failures, and nearly finished implements found (Plate 5). These materials were mostly recovered from levels 5 - 10 (50 – 100 centimeters below surface).

Plate 2 – Tara Phoenicia core & core fragment

Plate 3 – Examples of Tara Phoenicia ceramics including cord and fabric-marked pottery

Plate 4 – Tara Phoenicia, Marianna Point and Pinellas Points

Plate 5 - Archaic stemmed projectile point manufacturing sequence (blanks and preforms)

While most of the cultural materials found at Tara Phoenicia evidence a lithic reduction station and encampment, a small number of atypical artifacts represent specialized functions that bear mentioning. An unusual early prehistoric dimple stone (see Plate 6) was recovered from level 7 (60 – 70 cms b.s.) of excavation unit D-2. (1 x 2 meter). Dimple stones have been described as totems and atlatl weights, among other functions (Brawner 2012; Gerrell 1990; Rachels & Knight 2004). The enigmatic stones are often associated with Early Archaic and PaleoIndian period contexts. Three small fragments of clear quartzite were also recovered. The crystal quartz is not native to the region and was likely transported in from areas north of Florida, possibly in trade. The function of the stones is unknown.

One final note about Tara Phoenicia artifacts should be conveyed. A single, clearly identifiable flake knife (with recognizable cutting use wear) was recovered from level 5 of Unit I. In identifying utilized flakes and use wear at stone tool manufacturing sites, lithic analysts should be aware that large quantities of debitage resulting from multiple flintknapping episodes will invariably produce artificial flake "wear" through stone-on-stone contact and by prehistoric technicians and others walking across piles of stone flakes, a "modification" known as trampling wear. The identification of large assemblages of "utilized flakes" such as those described for the Senator Edwards site in Alachua County (Purdy 1975) can significantly skew an interpretation of site function.

Regarding evaluation of the Tara Phoenicia site (8AL07459), certain conditions and data should be considered:

1) The vertical distribution tables (see Appendix A) illustrate substantial "mixing" of early prehistoric materials with later prehistoric artifacts. For example, late period Pinellas points and pottery were recovered from lower excavation levels and early lithic artifacts such as Archaic period projectile points were found in upper levels. In another notable example, a completed Marianna projectile point normally associated with the Early Archaic period was recovered from level 3 of Unit H in the same upper-level zone where St. Johns Check-Stamped pottery and a Pinellas point were found (see Plate 1; Table 1 – Unit H artifact vertical distribution). Prehistoric curation behavior (later period collection of earlier artifacts) may explain some of this condition, but there are too many examples of cultural mixing to ignore.

2) On a related matter, after excavating multiple units across the Tara Phoenicia site, no discernable cultural stratigraphy was identified in the homogenous sandy soils. Moreover, no cultural features such as hearths, post molds, fire pits, individual flintknapping stations, artifact caches, etc. were found.

3) Research of the historic landscapes of the Tara Phoenicia properties through an examination of a historic aerial chronology and other maps reveals extensive impact from early to mid-20th century silviculture (planted pine agriculture) and row crop farming (see Figures 6 – 9). A 19th century survey, historic aerials, and topographic maps were sourced and examined to demonstrate this condition. It is evident most areas of the extended project area have suffered bioturbation or mixing of stratigraphic levels. The entire Tara Phoenicia site area was entirely clearcut and impacted by agricultural activities in the

early 1900s. This likely explains the stratigraphic disturbance observed at Tara Phoenicia. Coniferous plantation (planted pine) agriculture documented for the project area causes extensive disturbance of ground surfaces and subsurface soils due to successive episodes of timbering, plowing, furrowing, and planting. This disturbance can often extend to a half meter in depth.

4) Tara Phoenicia is a secondary lithic reduction site, a site type that is relatively common in the region, particularly during the Archaic period.

5) While 4,046 artifacts were recovered from formal excavations, artifact density cannot be described as high. These artifacts were collected from 11 formal units at depths of at least one meter; some 742 cubic feet of earth was excavated.

6) With the exception of the dimple stone, the artifacts recovered from 8AL07459 are not unique or unusual. They are characteristic of many lithic assemblages known for the region (see Archaic Period Lithic Sites in Alachua and Marion Counties section).

While site disturbance is evident at Tara Phoenicia, a representative assemblage of lithic materials from a secondary lithic reduction site was collected, analyzed, documented, and preserved for future studies. Samples of Tara Phoenicia stone will be submitted to Dr. Robert Austin and Dr. Sam Upchurch for their current Florida chert sources research, a study that will result in a formal publication (Upchurch et al, n.d.). It is suggested that the amount of cultural materials collected in controlled contexts represents a more than adequate lithic assemblage that will be preserved prior to development.

Finally, investigations of the areas surrounding the core site area at Tara Phoenicia revealed substantial outcroppings of chert in the adjacent swamp and a geologic depression, most likely a remnant sinkhole which are common for the area. This quarry area was once an important stage of the stone procurement and lithic reduction process.

In conclusion, because of all these conditions and circumstances, it is the opinion and recommendation that the **Tara Phoenicia site (8AL07459) is ineligible for listing in the *National Register of Historic Places***, and that development of the Tara Phoenicia site will not adversely impact any cultural resources eligible for listing in the *National Register*. The formal and controlled extraction of a large representative assemblage of artifacts from the site is recommended as a viable mitigation of impact plan for 8AL07459. No further archaeological work is recommended.

Figure: 9

5.2 Tara Forest Mound site - 8AL07466

Plate 7 - 8AL07466 destruction

Initial investigations of the Tara Forest Mound immediately revealed that 8AL07466 had been destroyed by artifact collectors (pothunters) and prior to this, greatly impacted by agricultural activities (field cultivation) (see Figures 6 - 9). Site destruction is extensive and has occurred over a long period of time.

Two formal 1 x 1-meter units were excavated at 8AL07466 in an effort to discern any surviving cultural deposition in natural stratigraphy, but none was found. The units produced small quantities of lithic (stone) artifacts in disturbed, shallow deposition (the units terminated between 50 - 60 centimeters below surface at hardpan). Any cultural stratigraphy once present is now gone.

Research potential for 8AL07466 is severely limited, if any exists at all, and along with its high degree of disturbance, renders the resource ineligible for listing in the *National Register of Historic Places*. Mankowski (2022) at the Phase I CRAS level of study determined that the Tara Forest Mound site, while extensively disturbed, was eligible for listing in the

National Register of Historic Places under Criteria D which applies to resources, generally archaeological sites, that have yielded or may be likely to yield information important to prehistory or history. The site completely lacks cultural context and consequently retains no research potential. **8AL07466 is not eligible for listing in the *National Register of Historic Places* at any level.** Salvage archaeology was conducted in an effort to retrieve a sample of artifacts, albeit from a disturbed context, to document the site and its cultural material. Representative artifacts were mostly collected from the disturbed backfill.

One final note regarding site function: 8AL07466 is not a mound in the formal archaeological and cultural sense. It is a natural low-lying point of land near an inundated depression as shown on early maps, particularly historic topographic maps (see Figures 6 - 9). It is not a prehistoric habitational or ceremonial mound. In fact, the function of 8AL07466 is nearly identical to that of 8AL07459, the Tara Phoenicia site. The spatially isolated site (ca. 30 x 30 meters) functioned as secondary lithic reduction site where chert, extracted from the same adjacent quarry known for 8AL07459, was shaped into pre-tool forms (blanks and preforms) to be carried back to a village for final production. The two sites are located ca. 300 meters apart on the same wetland (swamp) and extended creek basin, although materials at 8AL07466 were also gathered from an adjacent depression, now a pond. 8AL07459 and 8AL07466 are likely contemporaneous sites.

OPINION OF RESOURCE SIGNIFICANCE

Potentially eligible individually for National Register of Historic Places? ☐yes ☒no ☐insufficient information
Potentially eligible as contributor to a National Register district? ☐yes ☒no ☐insufficient information

Explanation of Evaluation (required if evaluated; use separate sheet if needed)

Secondary lithic reduction site adjacent to a prehistoric quarry (adjacent swamp). 96.14% of artifacts are lithic debitage. Vertical position of cultural materials indicate stratigraphic mixing. Historic aerials show extensive disturbance of land.

Recommendations for Owner or SHPO Action

Archaeological monitoring of development of site area.

☒remote sensing	☒unscreened shovel	☐screened shovel-1/16"	☐informant report	☐auger tests	☐estimate or guess

Other methods; number, size, depth, pattern of units; screen size (attach site plan)

Formal 1 x 1 meter and 1 x 2 meter units excavated to ca. one meter below ground surface.

SITE DESCRIPTION

Extent/Size (m^2) 2,000 Depth/stratigraphy of cultural deposit (describe below)

Humic soil 0-20 cm; beige/pale brown sand 0-110 cm b.s. (artifact bearing zone). Concentration of lithic materials occur in a 40 x 40 meter area. Adjacent quarry (swamp) dimensions unknown.

Temporal Interpretation - Components (check one): ☐single component ☒multiple component ☐uncertain

Describe each occupation in plan (refer to attached large scale map) and stratigraphically. Discuss temporal and functional interpretations:

Principally Archaic Period, Early through Late Archaic; Orange, Transitional, Deptford, Weeden Island, St. Johns I, St. Johns II, Alachua.

Integrity - Overall disturbance: ☐none seen ☐minor ☒substantial ☐major ☐redeposited ☐destroyed-document! ☐unknown

Disturbances / threats / protective measures

Site has been impacted by a century of agricultural activities including row crops and silviculture; mixing of cultural materials observed. Development planned for property.

OPINION OF RESOURCE SIGNIFICANCE

Potentially eligible individually for National Register of Historic Places? ☐yes ☒no ☐insufficient information
Potentially eligible as contributor to a National Register district? ☐yes ☒no ☐insufficient information
Explanation of Evaluation (required if evaluated; use separate sheet if needed)

Site has been completely destroyed by artifact collectors. No discernible cultural stratigraphy due to extensive disturbance of deposits. Site integrity has been greatly compromised. Site was once a spatially-isolated secondary lithic reduction area.

Recommendations for Owner or SHPO Action

Site is not a mound, it is a natural topographic feature, an elevated (dry) point of land where prehistoric technicians worked stone. No additional arch. work.

DHR USE ONLY	OFFICIAL EVALUATION	DHR USE ONLY

☐remote sensing	☒unscreened shovel	☐screened shovel-1/16"	☐informant report	☐auger tests	☐estimate or guess

Other methods; number, size, depth, pattern of units; screen size (attach site plan)

Initial test pits to discern level of disturbance in that site was extensively disturbed by artifact hunters. No intact ground could be found. Formal units were excavated to determine if cultural stratigraphy was present. It was not.

SITE DESCRIPTION

Extent/Size (m^2) 1,600 Depth/stratigraphy of cultural deposit (describe below)

Disturbed very dark grayish brown sand at a depth of 0-35 cm. Surface collections from looter holes determines horizontal extent. Core site area measures 40 x 40 meters.

Temporal Interpretation - Components (check one): ☐single component ☒multiple component ☐uncertain

Describe each occupation in plan (refer to attached large scale map) and stratigraphically. Discuss temporal and functional interpretations:

Probable Archaic, Transitional, St. Johns, and possibly later prehistoric use of site.

Integrity - Overall disturbance: ☐none seen ☐minor ☒substantial ☐major ☐redeposited ☐destroyed-document! ☐unknown

Disturbances / threats / protective measures

Recent looting of site evidenced by large holes - SHPO is advised to provide any site protection possible.

CONSULTANT SUMMARY

In April and May 2022, Advanced Archaeology, Inc. conducted a Phase 1 Cultural Resources Assessment Survey of the Tara Phoenicia project area for Mr. Sayed Moukhtara. The property is located in the City of Alachua, Alachua County, Florida, and comprises a portion of one parcel (Parcel ID: 03067-001-000), which is being proposed for the construction of a commercial center. The objective of this investigation was to locate and assess any prehistoric or historic cultural resources that may be present within the project area boundaries, and to determine the effects upon any potential resources found.

This assessment was conducted to fulfill historic resource requirements in response to the Alachua County Land Development Code, and as part of the review by the State of Florida's Division of Historical Resources (DHR Project File No.: 2022-1807), in response to Chapters 267.061 and 373.414, *Florida Statutes*, and in accordance with Section 106 of the National Historic Preservation Act of 1966 (Public Law 89-665), as amended in 1992, and 36 C.F.R., Part 800: Protection of Historic Properties. The work and the report conform to the specifications set forth in Chapter 1A-46, *Florida Administrative Code*, and also in accordance with the requirements of the Florida Division of Historical Resources *Module Three Guidelines for Use by Historic Preservation Professionals*. The Principal Investigator is an SOI-qualified archaeologist and architectural historian that meets the U.S. Secretary of the Interior's (SOI) Standards and Guidelines for Archaeology and Historic Preservation.

The project area is located in Section 10, Township 8 South and Range 18 East, as depicted on the USGS High Springs Quadrangle map (Figure 1). The project area is approximately 17.96 hectares (44.40 acres) in size; it's irregularly-shaped, and is bounded by US Highway 441 on its south side, and private properties on all other sides. The upper subsoils across the entire property, at an average depth of 0-20 cm, have been disturbed by historic clearing and farming activities as well as by modern logging as indicated by vintage and modern aerial photographs, pedestrian survey, and disturbed shovel test contexts. The project area currently contains a regenerated growth of understory plants that primarily consists of briar, and there are no structures within the project area (Figures 4 & 5).

Investigations were accomplished by reviewing archival literature, maps, aerial photographs, LIDAR, and conducting fieldwork. A review with the Florida Master Site File (FMSF) indicated that no previously recorded cultural resources or previous cultural resource investigations occur within the project boundaries. A portion of a historic trail (Ray's Trail) is depicted on an 1826 plat map of the project area (Figure 2), which may have once crossed through the project area on an alignment from the northwest corner of the project area and through to its south-central area. This trail could possibly be the same trail that Hernando de Soto used during his march with the Spanish army through this area in AD 1539 (Johnson 1987, Simpson 1930). No evidence of this trail was found within the project area as a result of the fieldwork investigation.

It was determined that the west side of the project area contained a High Probability Zone (HPZ) for prehistoric sites to occur that consisted of elevated and undulating hills and slopes near a wetlands sinkhole. The remaining area of the property that was outside of the High Probability

Zone was determined to be a Moderate Probability Zone (MPZ), characterized as elevated undulating hills and slopes, but with no freshwater sources. A pedestrian survey was conducted across the entire property, and a total of 105 shovel tests were excavated across the project area (Figures 6 & 7) at 25-meter intervals or less on a grid within the High Probability Zone. Shovel tests were excavated at 50-meter intervals within the Moderate Probability Zone.

This archaeological assessment resulted in the documentation of one newly recorded prehistoric site, 8AL7459 (Tara Phoenicia), which is characterized as a sparse to dense prehistoric chert and ceramic artifact deposit that likely represents a lithic reduction and tool manufacturing encampment and scatter. The documented moderate to dense cultural material deposits within shovel tests, resulted in defining a significant area of the site. The associated prehistoric periods for this site are likely Middle Archaic (5000-3000 BC) and Late Archaic (3000-500 BC) based on diagnostic artifacts consisting of chert projectile points and semi-fiber tempered ceramics. The majority of recovered artifacts consisted of tertiary chert flakes with other lesser quantities of recovered artifacts and ecofacts that included chert shatter, chert projectile points, semi-fiber tempered ceramics, sand tempered plain ceramics, red ochre, charcoal, and one snake vertebra (see Appendix I. Field Specimen Log). A total of twenty-nine shovel tests (Shovel Tests 1, 2, 4, 5, 10, 13-17, 19-23, 25, 27, 32-38, 41, 42, & 56-58) were found to be positive for cultural material, which were found at depths that ranged from 0-130 cm; however, the cultural deposit continued to greater depths below 130 cm in some shovel tests, but could not be feasibly accessed and documented by shovel testing methods. Subsoils within positive shovel tests were generally characterized as disturbed dark grayish brown (Munsell: 10YR-4/2) sand at a depth of 0-20 cm, and intact pale brown (10YR-6/3) sand at a depth of 20-110 cm.

The documented site area of 8AL7459 measures approximately 275 meters (902 feet) north to south by 125 meters (410 feet) east to west; however, the site does extend beyond the project area limits. The exact temporal periods of site 8AL7459, its function, and its overall significance is not fully understood; therefore, it has been determined that there is insufficient information at this time to conclude the site's *National Register of Historic Places* (NRHP) eligibility. A full understanding and definition of the site would require further archaeological investigations.

In conclusion, one newly recorded site, 8AL7459, was documented as a result of this Phase 1 Cultural Resources Assessment Survey. It is the consultant’s opinion, based on the available data that site 8AL7459, is determined to have insufficient information to conclude the site's NRHP eligibility; therefore, it is recommended that a Phase 2 Archaeological Assessment be conducted within the significant area of the site, if preservation is not feasible, in order to determine the site’s NRHP eligibility. If human remains are discovered during future construction activities, then the provisions of *Florida Statutes* 872.05 (Offenses Concerning Dead Bodies and Graves) will apply.

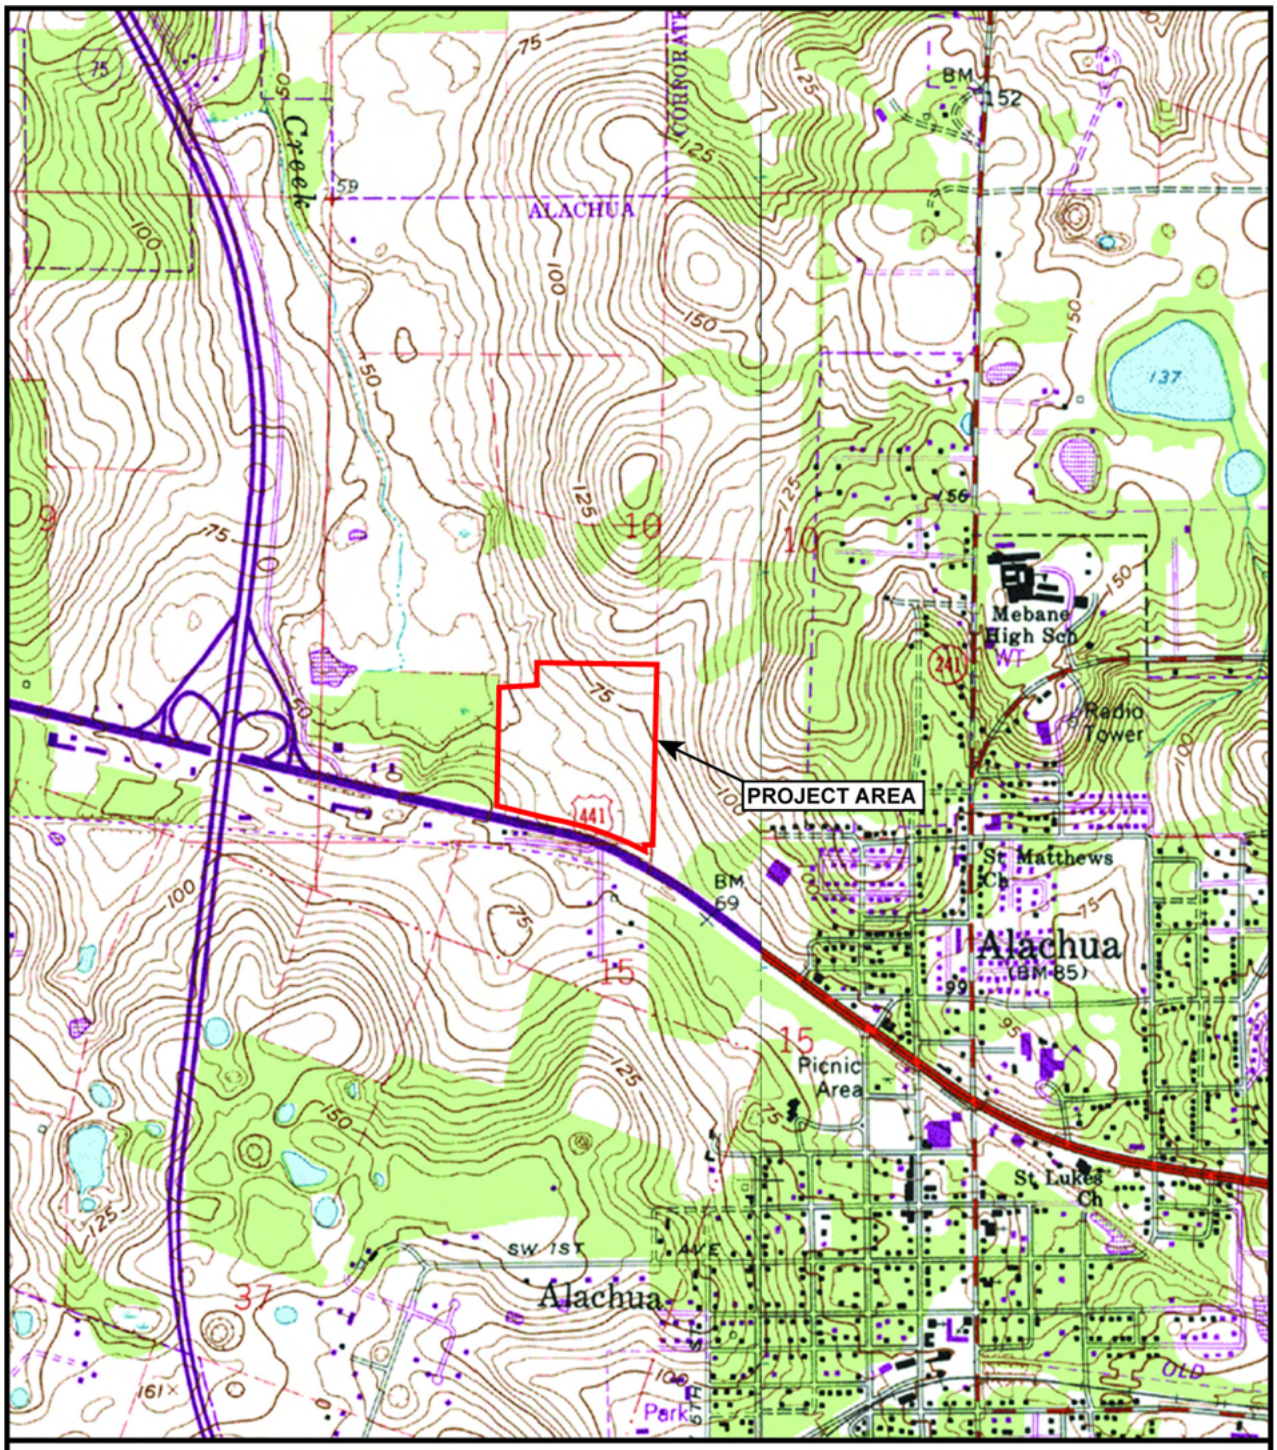

Figure 1. USGS map of the Tara Phoenicia project area.

PROJECT SETTING

The project area is located in Section 10, Township 8 South and Range 18 East, as depicted on the USGS High Springs Quadrangle map (Figure 1). The project area is approximately 17.96 hectares (44.40 acres) in size; it's irregularly-shaped, and is bounded by US Highway 441 on its south side, and private properties on all other sides. The upper subsoils across the entire property, at an average depth of 0-20 cm, have been disturbed by historic clearing and farming activities as well as by modern logging as indicated by vintage and modern aerial photographs, pedestrian survey, and disturbed shovel test contexts. The project area currently contains a regenerated growth of understory plants that primarily consists of briar, and there are no structures within the project area (Figures 4 & 5).

A portion of a historic trail (Ray's Trail) is depicted on an 1826 plat map of the project area (Figure 2), which may have once crossed through the project area on an alignment from the northwest corner of the project area and through to its south-central area. This trail could possibly be the same trail that Hernando de Soto used during his march with the Spanish army through this area in AD 1539 (Johnson 1987, Simpson 1930). The 1826 map also depicts a portion of a pioneer farmstead (map depicts the property owner's name as GeoWalson) at the east side of the project area. A 1937 aerial photograph of the property depicts it as entirely cleared and farmed (Figure 3).

The property lies within the San Felasco Hammock subarea of the Northern Peninsula Slopes in the Ocala Uplift physiographic district. The San Felasco Hammock is characterized as a broad scarp and karst terrain with many high hills that originally supported hardwood forests. The Ocala Uplift District of Florida, which was referred to as the "Lime Sink Region" by the early pioneers, is defined by its low rolling limestone plains that were created by a broad uplift during the Middle and Late Tertiary period. Early Tertiary limestones are found close to the surface in most locations (Brooks 1981). The project area contains undulating hills and slopes with elevations that range primarily from 15 meters to 27 meters amsl (50 feet to 90 feet). Mill Creek is located approximately 280 meters (919 feet) west of the project area, which is the dominant freshwater feature of the area that appears to drain into karst sinkholes and a marsh that is found to the west of the project area.

The project area contains seven soil types according to the USDA Soil Survey of Alachua County, Florida (USDA 1985). These soil types are defined as follows:

- Arredondo fine sand, 0 to 5 percent slopes. This nearly level to gently sloping, well drained soil is in both small and large areas of uplands. Slopes are smooth to convex.

- Arredondo fine sand, 5 to 8 percent slopes. This sloping, well drained soil is in small areas on sharp breaking slopes and in relatively large areas on long slopes of the uplands.

- Blichton sand, 2 to 5 percent slopes. This gently sloping, poorly drained soil is on gently rolling uplands. Slopes are slightly convex.

- Kendrick sand, 5 to 8 percent slopes: This sloping, well drained soil is usually in elongated areas on long slopes of uplands

· Fort Meade fine sand, 0 to 5 percent slopes. This nearly level to gently sloping, well drained soil is in both small and large areas on the gently rolling uplands.

· Norfolk loamy fine sand, 2 to 5 percent slopes. This gently sloping, well drained soil is in relatively small areas on the rolling uplands. Slopes are slightly convex.

· Lochloosa fine sand, 5 to 8 percent slopes. This sloping, somewhat poorly drained soil is in relatively small areas on sharp breaking slopes and along long, narrow slopes of the upland.

Shovel test subsoils across the project area were generally characterized as disturbed dark grayish brown (Munsell: 10YR-4/2) sand at a depth of 0-20 cm, and intact pale brown (10YR-6/3) sand at a depth of 20-110 cm.

CULTURAL CONTEXT

Paleoindian Period (12,000-6,500 BC)

The Paleo-Indian period of Florida prehistory begins with the arrival of the first humans to the area at about 11,000-12,000 BC and lasted to about 6500 BC (Milanich and Fairbanks 1980). Once considered nomadic hunters by archaeologists, the Paleo-Indian are now believed to have engaged in settlement and subsistence strategies and not have solely depended on hunting now extinct Pleistocene mammals and gathering wild plants.

A widely accepted model for Paleo-Indian subsistence is the oasis hypothesis by James S. Dunbar and S. David Webb (Dunbar 1991). The oasis model suggests that watering holes were crucial to animals for drinking at a time when Florida was arid and cold and drinking supplies were scarce. In addition to these watering holes attracting the animals for drinking, they also provided the Paleo-Indians with a place to hunt and eat the animals that frequented the locales and as a water supply for themselves (Milanich 1994). This model is supported by the distribution of camps at former watering holes and other perched water sources, including shallow lakes and prairies and sinks in the karstic, Tertiary regions of Florida and other sites just outside the karst regions such as the St. Johns River drainage (Dunbar, Webb and Cring 1989).

Due to preservation biases in the archaeological record, lithic tools generally associated with past hunting and butchering activities are the most frequently recovered artifacts at Paleoindian sites. The most commonly recognized Paleoindian stone implement is the fluted lanceolate projectile point. Diagnostic spear point types found in Florida include Clovis, Simpson, and Suwannee (Bullen 1975). Archaeological evidence also suggests that bone pins, stone knives, lithic scrapers, and atlatls were also used by Paleoindian hunters (Milanich 1994).

Archaic (6,500-500 BC)

The Archaic period of cultural development in Florida is generally believed to have begun at around 6500 BC and lasted to about 1000 BC. Following dramatic changes in climate and the dying out of the Pleistocene megafauna the Archaic period is characterized by a change in adaptive strategies and is marked in the archaeological record by a change in the size and shape of projectile points, changes probably reflecting environmental changes leading to the gradual alteration in subsistence patterns some 5000 years ago at the onset of environmental conditions similar to those of the present. This period is further characterized by the efficient, seasonal exploitation of a wider range of food resources including deer and small game, hardwood nuts, mollusks, and a larger but less carefully worked stone tool assemblage. Some Archaic groups are also believed to have led a semi-sedentary existence (Milanich and Fairbanks 1980). Archaic site types include hunting camps, base camps, butchering sites, quarries and cemeteries.

The environment of the Archaic period was characterized by warmer climatic conditions and higher sea levels, resulting in the emergence of a mesic oak-hickory forest (Milanich and Fairbanks 1980). The Pleistocene megafauna were unable to adapt to the more arid Holocene environment. As a result, Archaic period Indians focused their subsistence strategies on the procurement of

smaller game, fish, wild plant foods, and in some cases, shellfish. Thus, the period seems to have been characterized by changes in human subsistence patterns, tool manufacturing techniques, and the surrounding environment itself. As the population became more sedentary, a variety of site types evolved, including base camps, short-term camps, procurement camps, and cemeteries. By about 6500 BC, the Florida populace had developed a sedentary, or semi-sedentary, settlement system wherein groups seem to have established permanent habitation sites of larger size than had been utilized previously. However, small groups continued to roam the interior, periodically aggregating at large centralized settlements within the central highlands of North Florida (Hemmings and Kohler 1974). While many small lithic scatter sites potentially dating to the Archaic period in Florida have been recorded, only a few large Archaic sites have been investigated archaeologically.

Archaic groups produced a tool assemblage that was not as well executed as those of the Paleoindian period. Qualitatively, Archaic period stone tools are quite different from those of the earlier Paleo era in that, with some prominent exceptions, they appear to have been much more expediently produced. Observable wear patterns indicate varied uses of individual tools, and the degree of attrition is comparatively minimal in many cases, suggesting that tools were used sparingly before being discarded. Paleoindian tools, on the other hand, were manufactured for specific tasks, and were repeatedly used until they were lost, broken or worn out. The most well-known artifacts of the Archaic Period in Florida belong to a family of large, stemmed spear point types that are variations of a basic design, and include Hillsborough, Newnan, Alachua, Putnam and Marion types (Bullen 1975).

Deptford Period (500 BC-AD 500)

Milanich and Fairbanks (1980:66) describe the Deptford people as primarily a "coastal dwelling culture" which relied heavily on maritime subsistence strategies. Deptford culture flourished between circa 500 BC and AD 500. Many Deptford sites include large linear shell middens that contain plain pottery or ceramics with checked patterns stamped on the exterior of the pot (Milanich and Fairbanks 1980). These exterior patterns were produced by impressing or stamping the vessel with carved wooden paddles before firing. These paddled designs have been incorporated into the name of the wares by archaeologists; Deptford Checked-Stamped is an example. The Deptford period is also marked by the gradual change from fiber-tempering to sand and grit-tempering. Besides check-stamping, surface treatments can be plain, cord-wrapped, brushed, punctated, or malleated (Milanich and Fairbanks 1980). Lithic tools are extremely rare in Deptford sites, with only small triangular points occurring in small numbers (SEARCH 2007).

Although the majority of Deptford sites are located on the coast, inland sites have been recorded in the interior forests and inland riverways. Deptford sites are poorly represented in north-central Florida, but these coastal people were apparently coming inland to procure raw materials and seasonal resources. The sites are primarily short-term occupations by small groups likely traveling the inland waterways in search of nuts, berries, and other terrestrial resources. These sites are often found along lakes and streams where hickory and oak are present. In Alachua County, a Deptford component was found at the base of the Law School Mound (8AL297) (Fradkin and Milanich 1977), with a hearth containing the charred fragment of a hickory nut. A few large Deptford sites are found in this region,

mostly dating to post-AD 100; one example is the Big Fanning Springs village site (8LV505) (Weisman and Newman 1995).

St. Johns Culture (500 BC - AD 1565)

St. Johns is characterized by chalky pottery produced between 500 BC and AD 1565, increased population and settlement numbers compared to the Archaic period, construction of sand burial mounds, continued economic dependence on aquatic resources, and greater emphasis on plant cultivation (Goggin 1952:40; Milanich 1994:243-274). While St. Johns ceramics are found across the peninsula, the St. Johns River drainage in central and northeastern Florida was the core area of the St. Johns culture. In eastern and central Florida, the St. Johns culture grew directly out of the Orange culture. This is evidenced by the carryover of late Orange period designs to early St. Johns period pottery. Within the St. Johns period there are two major subdivisions (I and II).

St. Johns I

The St. Johns I period is divided into three subperiods (I, Ia, and Ib) on the basis of observable changes in material culture, most notably ceramics (Goggin 1952:40; Milanich 1994:247). People of the St. Johns I culture (500 BC to AD 100) were foragers who relied primarily upon hunting, fishing and wild plant collecting. During this time, the resources found near freshwater wetlands, swamps, and the coastal zones were typically the most heavily exploited. St. Johns I sites are typically shell middens in coastal zones that contain St. Johns Plain and St. Johns Incised pottery. At St. Johns Ia sites (AD 100 to 500), St. Johns Plain and Incised pottery continued to be produced and a red-painted St. Johns variant called Dunns Creek Red was also made. Exotic Hopewellian artifacts also occur in burial mounds. Weeden Island pottery (a primarily Gulf coast ware) has been recovered from late St. Johns Ia sites, apparently acquired as a trade ware. The St. Johns Ib period (AD 500 to 750) is similar to the Ia period, with the carryover of St. Johns Plain and Incised wares and Dunns Creek Red, but Weeden Island pottery becomes more common. However, the majority of everyday ceramics are plain. As the St. Johns culture progressed, sand mounds continued to be constructed and became larger through time.

St. Johns II

St. Johns II period is further divided into three subperiods (IIa, IIb, and IIc). As populations grew, the number and size of mounds and villages increased. The emergence of check stamping marks the beginning of the St. Johns II period around AD 750 and, along with plain pottery, dominates the assemblages throughout the period. During St. Johns IIa (AD 750-1050), incised and punctated wares, possibly a reflection of Gulf coast influences, occur with some frequency in mounds and middens. Late Weeden Island pottery continued to be traded into the St. Johns region and is recovered in sand burial mounds.

The St. Johns II culture reached its apex in terms of social, political, and ceremonial complexity during the St. Johns IIb period (AD 1050-1513). Classic Mississippian traits such as the construction of large truncated mounds and the presence of Southern Ceremonial Complex burial paraphernalia in association with perceived elite burials are evident (Milanich 1994; Smith 1986), indicating influence from northwest Florida. Some sand burial mounds were quite large and

ceremonially complex, including truncated pyramidal mounds with ramps or causeways leading up to their summits (Milanich 1994:269-270). The rise in the number of St. Johns village and mound sites implies greater cultural complexity compared to that of the earlier St. Johns I period (Milanich 1994:267-274; Miller 1991). Shell and bone ornaments, worked copper, and other exotic materials and artifacts occur with some frequency in burial mounds (Goggin 1952; Milanich 1994).

In addition to the exploitation of aquatic resources for subsistence, it has been suggested that there was an increased dependence on horticulture during St. Johns II times (Goggin 1952; Milanich 1994:263-264). In fact, sixteenth-century French and Spanish documents allege that beans, squash, and maize were heavily cultivated by the Timucua of northern Florida (Bennett 1964, 1975; Lawson 1992), although direct evidence of prehistoric horticulture is lacking for the St. Johns region.

Cades Pond Period (AD 100-600)

A Weeden Island-related culture, exclusive to north-central Florida, is the Cades Pond culture (AD 100-600). Sites associated with this culture are restricted to the region between the Santa Fe River and Orange Lake and occur primarily on the wetter, east side of Alachua County. They are especially common around Paynes Prairie and Orange Lake. Cades Pond was initially defined by Goggin (1949), who noted a resemblance in the ceramics found in burial mounds to the St. Johns culture on the northeast coast and to Weeden Island cultures on the Golf coast (AD 300 to 600). Burial mounds and village sites are found in combination, but each contains distinctive ceramic assemblages. At Cades Pond villages, sand-tempered plain ceramics comprise up to 95 percent of the ceramic assemblage. In contrast, the ceramics found in the burial mounds are dominated by Deptford, Dunns Creek Red, and St. Johns Plain ceramics (Milanich 1994:228). Later period mounds contain early Weeden Island decorated ceramics (Smith 1972). Point types associated with Cades Pond sites include Columbia, Jackson, and Bradford types (Bullen 1975) along with small triangular points.

Alachua Tradition Period (AD 600-1539)

Cades Pond was replaced by the Alachua Tradition about AD 600. This culture is marked by the introduction of an agricultural way of life. The Alachua Tradition was initially defined by Goggin based on survey and excavations he and his students conducted in the late 1940s (Goggin 1947, 1949). Based on these excavations, Goggin concluded that the Alachua Tradition was a sedentary, agricultural way of life with people living in extensive villages. Their pottery was mostly cord-marked or cob-marked. Burial mounds were rare. He noted that this complex did not resemble the surrounding Florida cultures (Goggin 1949:39).

Current evidence indicates that the Alachua Tradition did not evolve from the preceding Cades Pond culture. Instead, it is postulated that Cades Pond people were displaced by the migration of new people into the area, who carried with them a distinct material culture. In the 1970s, Jerald Milanich published several papers on the Alachua Tradition in north-central Florida (Milanich 1971; Milanich et al. 1976). He noted mutually exclusive settlement patterns between the Cades Pond and Alachua peoples. Alachua sites are located on good agricultural soils especially at higher elevations with good drainage along the Hammock Belt (Milanich 1994:334), whereas Cades Pond sites are located adjacent to wetlands. Milanich (1994) postulates that the Alachua Tradition represented a migration of Ocmulgee

social groups from inland southern Georgia, which is evidenced by an artifact assemblage and environmental adaptive strategy similar to that area. However, ceramics resembling the Alachua Tradition also occur on Florida's Gulf coast and the Ocmulgee were not an agricultural people (Milanich 1994).

Based on ceramic seriation, the pre-contact Alachua culture can be subdivided into two main temporal periods: Hickory Pond (AD 600 to AD 1250), and the Alachua (AD 1250 to European contact in 1539). The Hickory Pond ceramic assemblage is dominated by cord- marked vessels that were decorated with paddles or dowels wrapped in cordage. During the Alachua period, cord marking was replaced by cob marking, which is achieved by applying a dried corncob to the wet clay to leave a distinctive cob-marked appearance (Milanich 1994:338). The emergence of cob-marked pottery is assumed to have coincided with the development of maize agriculture. Kohler and Johnson (1986) further defined Alachua series ceramics as including Alachua Cob-Marked, Prairie Cord-Marked, fabric-marked and net-marked (both very rare), punctated over cord-marked (rare), and Lochloosa Punctated.

Ceramic traits may have changed over time in the Alachua Tradition but other cultural traits remained constant. Alachua culture assemblages are dominated by midden deposits, which lack shell but are packed with pottery, bone tools, and lithic artifacts. The small, triangular Pinellas Point is the typical flaked arrow point throughout the Alachua Tradition (Bullen 1975).

Historic Period

Hernando de Soto Expedition

Hernando de Soto was given the title Governor of Cuba by the king of Spain, Carlos V, in 1536. He was also given "La Florida," the area previously given to Pánfilo de Narváez. De Soto chose to use Cuba as a home base for his supplies and for planning his expeditions. He spent his fortune recruiting, arming, and transporting his own army. When he left Spain in 1538, he was heavily in debt. He believed, however, that he would regain his fortune by finding gold in "La Florida." De Soto sent guides ahead to locate and chart a course for his army. The expedition set sail for Florida on the 18th of May 1539, with five large vessels and four smaller ones. On these vessels were de Soto's army as well as priests, women, horses, mules, war dogs, and pigs. On May 25th, they made landfall in the Tampa Bay area. De Soto's expedition initially landed at Piney Point. They made camp at Uzita, which was a native village on the northern shore of the Little Manatee River. Amazingly, a cavalry patrol found a Spanish survivor from an earlier expedition. He had been searching for gold along with Narváez eleven years earlier. The Spanish survivor's name was Juan Ortiz and he had been living as an Indian. Ortiz's rescue was a great find for de Soto since Ortiz could communicate in Spanish and many of the native languages. He could also function as a guide for the area. As de Soto's expedition moved inland, however, they met different native groups whose languages were unfamiliar to Ortiz (University of South Florida 2022).

De Soto's march inland began July 15, 1539, and entered previously unexplored areas of Florida's forests, rivers, bogs, and sand hills. In the vicinity of Zephyrhills and Lumberton, they found no water and several people on the journey almost died of thirst. When they finally came to the Alafia River, they constructed a bridge and crossed successfully. Hernando de Soto and his men trudged through

the wetland areas at the Cove of the Withlacoochee River. One of de Soto's challenges was crossing the Withlacoochee River because it had such strong currents. The army stretched a rope from one side to the other and managed to cross successfully. On July 29th, de Soto occupied the Timucuan Indian province of Ocali (near present-day Ocala). There, de Soto left the main part of his army and led a smaller group through present-day Levy and Alachua counties. When they reached the Santa Fe River, they crossed it and camped at a village named Aguacaleyquen. Hernando de Soto then sent a small group of men back to lead his main group northward to be reunited with them. De Soto and his army decided to head north out of Florida into Georgia. Later, he explored areas of North and South Carolina, as well as Tennessee and Alabama. By the early 1540s, he headed across the Mississippi River to look for gold and silver in what is now Arkansas. In 1542, he became ill and died of a fever (University of South Florida 2022).

Potano

The people of the Alachua culture inhabited north Florida when European explorers arrived. The Potano people are the historic descendants of the Alachua culture mixed with Spanish influence. In order to convert the local Potano Indians to Christianity, the Spanish established Franciscan missions in the region. The Mission San Francisco de Potano (Fox Pond site; 8AL272) was established northwest of modern-day Gainesville in 1603 (Milanich and Hudson 1993). Excavations at some early contact period sites have provided insight into the acculturated Potano peoples (Johnson 1991; Milanich 1972; Weisman 1992).

Cattle ranches were established in this region as a way of supporting the missions and the colonists in St. Augustine. Cattle roamed Paynes Prairie from at least 1650 on (Arnade 1961). Alachua County's name dates to the 1680s when a ranch named "Allachua" was established here (Dunn 1998:14). After the destruction of the mission system by the British in 1702, north- central Florida was essentially abandoned, as the few remaining Indians fled to St. Augustine for safety (Milanich 1995). Seminoles began to occupy the area around Paynes Prairie around 1750 (Fairbanks 1975), utilizing some of the feral cattle abandoned by the Spanish 50 years before.

Seminoles

The people who became known as the Seminoles migrated into Florida from Georgia and Alabama. The Oconee Creeks of central Georgia, led by Cowkeeper (so named because of his large cattle herd), migrated into the Alachua region between 1739 and 1750, eventually becoming the nucleus of the Seminole band (Mahon 1985). Around the same time, a group of Lower Creeks and their Yamassee slaves from southeastern Georgia were led into north Florida by their leader, Secofee. Later, factions of the Upper Creeks from the Alabama Territory also migrated into north Florida as a result of the Creek War of 1813-1814. This conflict was a civil war between the Upper and Lower Creeks. Andrew Jackson, angry that this battle had spilled over into American territory and taken Euro-American lives, formed an alliance between the U.S. Army and the Lower Creek forces and defeated the Upper Creeks, also known as the Red Sticks. The Red Sticks migrated to Florida after their loss, and though they joined the Lower Creek bands already in Florida because they had little choice, they remained bitter toward the Lower Creeks. By 1770, the migration of these various Indian groups into Florida was complete and they began to identify themselves separately from the Creek Confederacy.

The Seminoles were divided into bands, and each band lived in a separate autonomous town. Cuscowilla, one of the largest Seminole towns in Florida during the 1770s is reported to have been located in Alachua County between Payne's Prairie and Lake Tuscawilla near the present-day town of Micanopy. The village was supposedly located along the northwestern shore of Lake Tuscawilla; however, the exact location of Cuscowilla has not been documented archaeologically. Cuscowilla is described by Covington (1993:13) as consisting of some thirty dwellings, several hundred Seminoles, and a "considerable number of Yamassee slaves," cattle and horses, and farm fields. It was the capital village of the region and was governed by Cowkeeper. Covington records two other pre-1770 Seminole towns in Alachua County-Alachua and Santa Fe. Weisman (1989) notes four additional towns- Payne's Town (8AL366), Latchaway, Zetrouer (8AL67) and Lasnick-Sears (8AL67). As Spanish trade during this time was limited, traditional pottery manufacture methods were still employed by the Seminole. In addition, they supplemented flintlock guns with bows and arrows.

William Bartram passed through this area of Florida in 1774 and described the Seminoles in his book *Travels of William Bartram*. Bartram stayed at the town Cuscowilla, and noted that Cowkeeper was dressed simply, ornamented with Creek goods, and had several slaves, who were permitted to marry free Indians. Several "Seminoles" had been baptized and wore silver crosses and understood Spanish. Cowkeeper served a feast of venison, hominy, and water mixed with honey. Arriving at the Alachua savanna (modem-day Payne's Prairie), Bartram witnessed herds of cattle and Seminole horses (Bartram 1928).

Prior to the First Seminole War, the Seminole people prospered in Florida, raising cattle and growing their traditional crops of com, beans, squash, and tobacco (Fairbanks 1973). The British set up several trading posts in Florida and the Seminoles traded deer, wild cattle and furs in exchange for guns, iron tools, cloth and a variety of ornamental jewelry (Fairbanks 1973). This trade brought prosperity to some Seminole individuals.

Alachua County History

Shortly after the United States acquired Florida, Alachua County was created in 1824, encompassing 16 separate present-day counties (Morris 1995:2). Micanopy was the county seat until four years later it was moved to Newnansville (Opdyke 1974). Despite its size, only 2,204 people lived in Alachua in 1830 (Dietrich 1978:13). In an effort to increase the territory's White population, the government sought to remove the Seminoles, resulting in the Second Seminole War (1835-1842). The military erected over 24 forts in the county (Opdyke 1974). The war ended, but the lack of transportation stymied development. The City of Newnansville served as the Alachua County seat until 1854 when a railroad was constructed from Fernandina to Cedar Key. The railroad bypassed the town to the east, and so, to be nearer the railroad the U.S. Land Office relocated there and the Alachua County seat was moved to the new railroad town of Gainesville. Gainesville was founded in 1854 and had a population of 223 residents and an unknown number of slaves (Johns 1963). The Florida Railroad, which connected Fernandina and Cedar Key, came to Gainesville in 1860 and brought about an economic boom (Hildreth and Cox 1981:2). In 1884, when the Savannah, Florida and Western Railroad bypassed Newnansville about a mile to the south, the settlers moved their businesses to a new town called Alachua, which began as a shipping point. Newnansville slowly became a town of the past as it gave way to the new town of Alachua, which was incorporated in 1905 as the City of Alachua that had a population of 526 at the time (Alachua Historical Society 2022).

County growth was stopped by war in 1861. Although no major Civil War battles occurred in Florida, county residents witnessed two skirmishes in 1864. The war ended and sharecropping replaced slavery as the predominant agricultural production strategy. Sea Island cotton became the most popular crop in 1866. However, heavy rains in 1867 ruined the cotton, forcing growers to diversify their crops (Hildreth and Cox 1981:71-73). Destroyed during the war, the railroad was rebuilt by 1867 (Hildreth and Cox 1981:56-57). As railroads crisscrossed the county, they gave birth to towns including Waldo and Archer, High Springs, and Newberry. Agriculture constituted the county's primary industry during the 1870s and 1880s with farmer growing vegetables, citrus, and cotton (Robinson 1882:83-84; Webber 1883). During Reconstruction, the county had a population of 3,767 whites and 4,465 blacks (Opdyke 1974).

PREVIOUS RESEARCH

The general area near the project area has been subjected to very few archaeological investigations, and only a few documented archaeological sites are known to occur, such as site 8AL166 (Alachua Field), which was first documented in 1920 by James Clarence Simpson. Simpson was a self-taught expert in the fields of paleontology, archaeology, zoology, and in various aspects of geology. He was born in 1910 in Micanopy and raised in High Springs, Alachua County. Simpson was hired by the Geological Survey in 1930 (Mitchem 2019). His descriptions of site 8AL166, characterize it as two constructed low sand mounds (at least one of which was 3 feet high and 40 feet in diameter) and a prehistoric village site, which was heavily disturbed or destroyed by historic farming activities. He collected lithic artifacts and pottery from the site (Simpson 1930). Later researchers have suggested that the site is related to the Late Alachua Tradition Period, and has a possible Hernando de Soto contact (AD 1539) association, and also a possible Spanish Period mission site. However, the exact location of this site is no longer known, and is now defined by a general vicinity. A portion of a historic trail (Ray's Trail) is depicted on an 1826 plat map of the area (Figure 2), which may have connected to the site (and once crossed through the subject project area), and also could possibly be the same trail that Hernando de Soto used during his march with the Spanish army through this area of Alachua County (Johnson 1987).

Other notable prehistoric sites in the general area of the project area include sites 8AL3423, 8AL3424,and 8AL3425. These sites were documented as part of the C.A.R.L. archaeological survey in 1997, which are primarily characterized as lithic chert flake scatters of an indeterminate prehistoric period.

FMSF Literature Review

As part of the literature review, a search was conducted with the Florida Division of Historical Resources for relevant archives and literature. As a result of this review, the Florida Master Site File (FMSF) compiled a roster of 126 previously recorded cultural resources (Table 1) and 5 previous cultural resource investigations (Table 2) within a 1.6-kilometer (1.0 mile) radius of the project area. None of these previously recorded cultural resources or previous cultural resource investigations occur within the project area boundaries.

Table 1. Previously Recorded Cultural Resources within a 1.6-Kilometer Radius of the Project Area (Not including structures)

8936	2003	Environmental Resources Management	"Request for Technical Consultation, Tower Replacement, FL-Alachua County
5986	2000	QUATREFOIL/ANDERSON CONSULTING	Historic Structures Survey of Unincorporated Alachua County
5669	1999	MURRAY D. LAURIE	City of Alachua Downtown Redevelopment District, A Survey of Architectural and Historical Resources
1717	1988	Florida Department of Transportation, Tallahassee.	Proposed addition of two (two) traffic lanes in the existing median of I75 (one travel lane in each direction), from SR222 in Alachua County northward to the Georgia State Line.

METHODOLOGY

Prior to conducting fieldwork, relevant archives were consulted and literature was reviewed. This included, but was not limited to, site forms and surveys from the Florida Master Site File (FMSF) in Tallahassee concerning previously recorded sites and investigations located within a 1.6-kilometer (1-mile) radius of the project area, USGS maps, USDA soil maps, LIDAR, historical maps and various historic/modern aerial photographs.

RESEARCH DESIGN

This Phase 1 Cultural Resources Assessment Survey of the Tara Phoenicia project area incorporated the use of certain predictive archaeological site models. These models are based on topographic and vegetative attributes that are associated with prehistoric and historic sites in Alachua County. These models postulate that elevated ridges, xeric sandhills, or upland hardwoods in close proximity to lakes, rivers, sloughs, or sinkholes are high probability areas for prehistoric archaeological sites to occur. Aerial photography and USGS maps aided in revealing anthropogenic changes to the topography and vegetative communities, which defined areas of probability within the project area.

It was determined that the west side of the project area contained a High Probability Zone (HPZ) for prehistoric sites to occur that consisted of elevated and undulating hills and slopes near a wetlands sinkhole. The remaining area of the property that was outside of the High Probability Zone was determined to be a Moderate Probability Zone (MPZ), characterized as elevated undulating hills and slopes, but with no freshwater sources.

FIELDWORK METHODS

A pedestrian survey was conducted across the entire property, and a total of 105 shovel tests were excavated across the project area (Figures 6 & 7) at 25-meter intervals or less on a grid within the High Probability Zone. Shovel tests were excavated at 50-meter intervals within the Moderate Probability Zone. Shovel tests measured 50 cm in diameter and were excavated to the depth of at least 100 cm. All sediments excavated were sifted through a 6.35 mm hardware mesh screen. The location of each shovel test was recorded along with information concerning stratigraphy. Following the recordation process, all shovel tests were backfilled. Photographs were taken to document field conditions, probability zones, shovel tests, and artifacts.

COLLECTIONS

A total of thirty-one field specimens (FS #1-31) were collected as a result of this assessment (see Appendix I. Field Specimen Log).

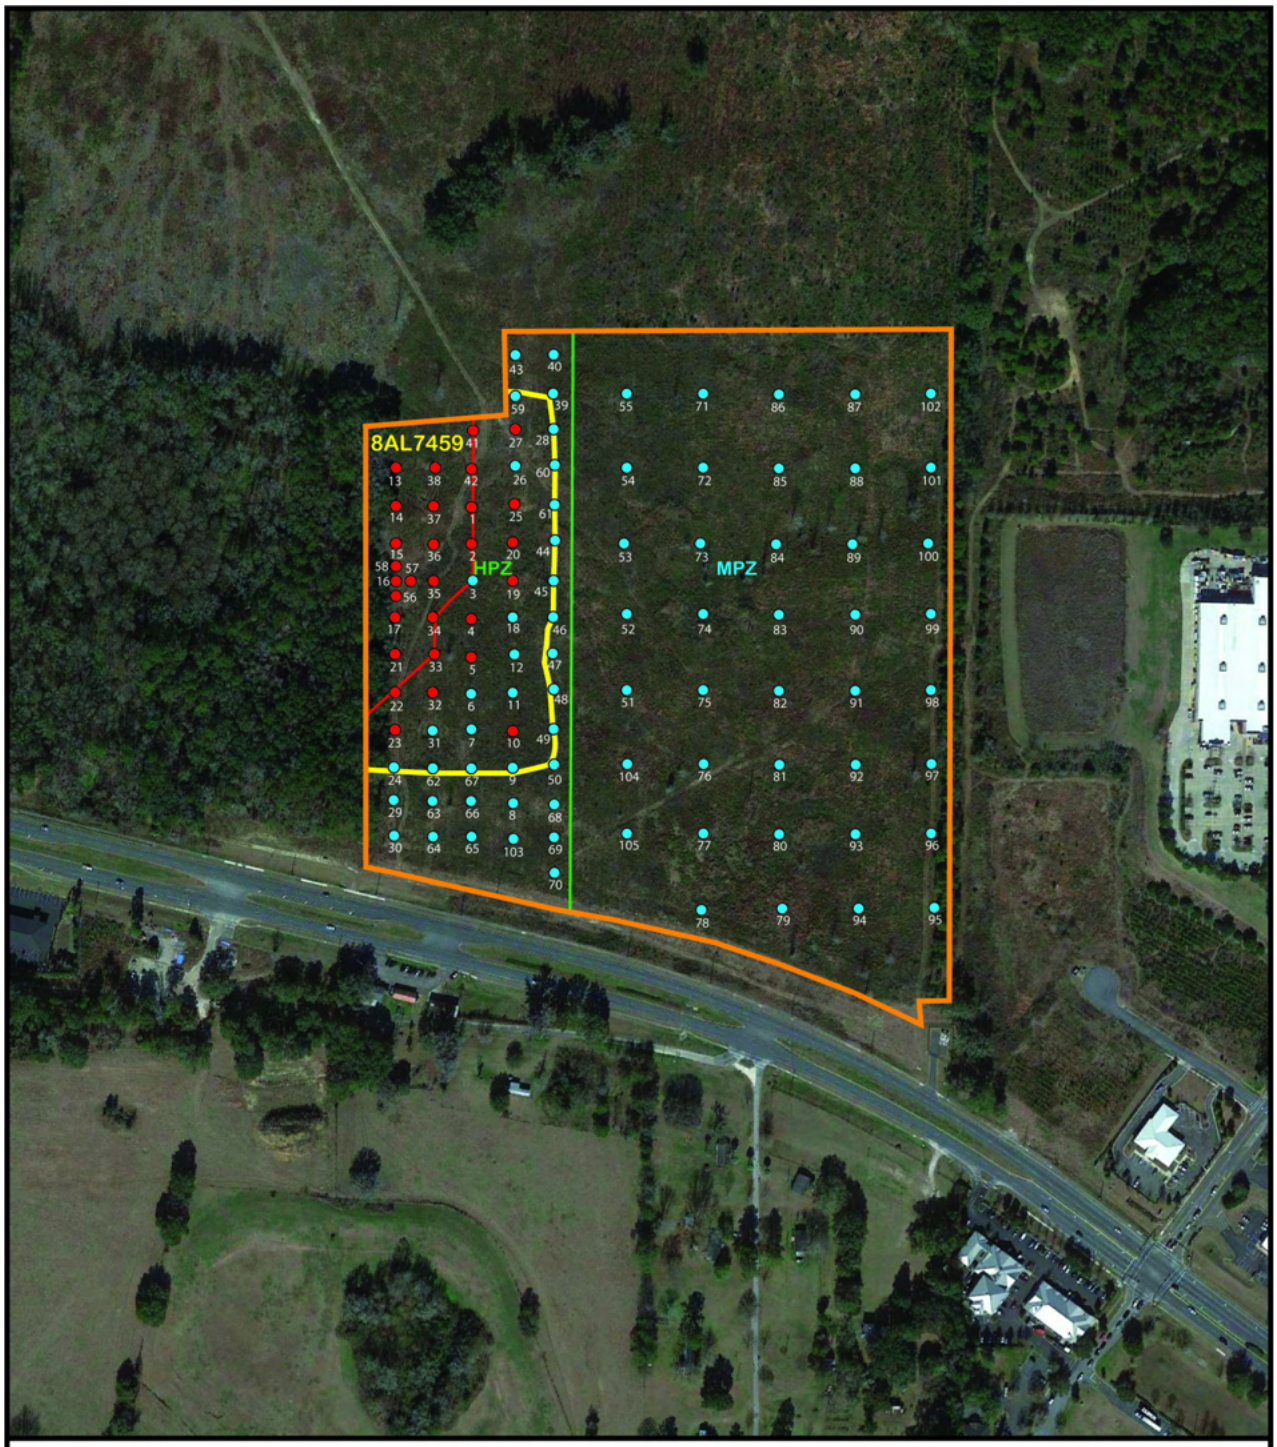

Figure 6. 2021 aerial photograph of the Tara Phoenicia project area, shovel tests, and site 8AL7459.

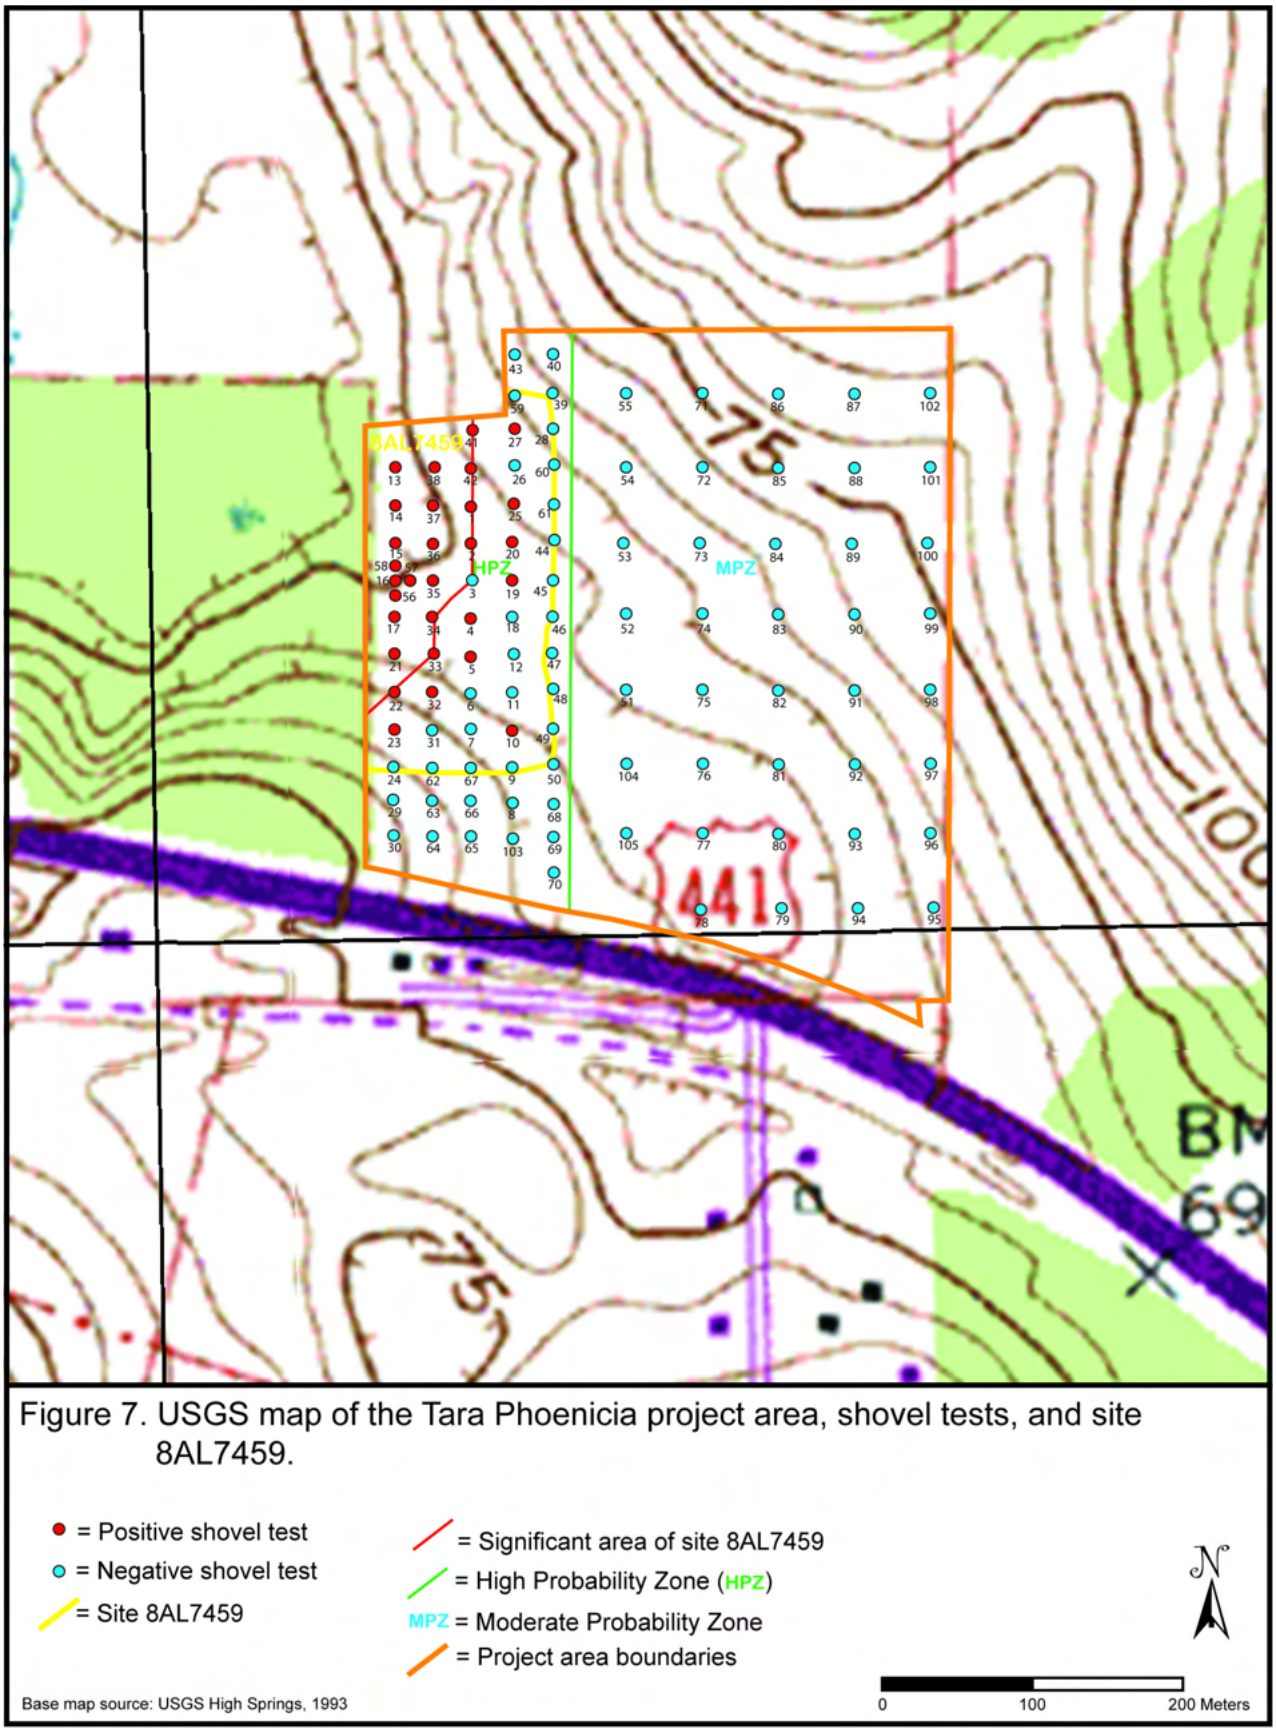

Figure 7. USGS map of the Tara Phoenicia project area, shovel tests, and site 8AL7459.

RESULTS

A review with the Florida Master Site File (FMSF) indicated that no previously recorded cultural resources or previous cultural resource investigations occur within the project boundaries. A portion of a historic trail (Ray's Trail) is depicted on an 1826 plat map of the project area (Figure 2), which may have once crossed through the project area on an alignment from the northwest corner of the project area and through to its south-central area. This trail could possibly be the same trail that Hernando de Soto used during his march with the Spanish army through this area in AD 1539 (Johnson 1987, Simpson 1930). No evidence of this trail was found within the project area as a result of the fieldwork investigation.

This archaeological assessment resulted in the documentation of one newly recorded prehistoric site, 8AL7459 (Tara Phoenicia), which is characterized as a sparse to dense prehistoric chert and ceramic artifact deposit that likely represents a lithic reduction and tool manufacturing encampment and scatter. The documented moderate to dense cultural material deposits within shovel tests, resulted in defining a significant area of the site (Figures 6 & 7). The associated prehistoric periods for this site are likely Middle Archaic (5000-3000 BC) and Late Archaic (3000-500 BC) based on diagnostic artifacts consisting of chert projectile points and semi-fiber tempered ceramics. The majority of recovered artifacts consisted of tertiary chert flakes with other lesser quantities of recovered artifacts and ecofacts that included chert shatter, chert projectile points, semi-fiber tempered ceramics, sand tempered plain ceramics, red ochre, charcoal, and one snake vertebra (see Appendix I. Field Specimen Log). A total of twenty-nine shovel tests (Shovel Tests 1, 2, 4, 5, 10, 13-17, 19-23, 25, 27, 32-38, 41, 42, & 56-58) were found to be positive for cultural material, which were found at depths that ranged from 0-130 cm; however, the cultural deposit continued to greater depths below 130 cm in some shovel tests, but could not be feasibly accessed and documented by shovel testing methods. Subsoils within positive shovel tests were generally characterized as disturbed dark grayish brown (Munsell: 10YR-4/2) sand at a depth of 0-20 cm, and intact pale brown (10YR-6/3) sand at a depth of 20-110 cm.

The documented site area of 8AL7459 measures approximately 275 meters (902 feet) north to south by 125 meters (410 feet) east to west; however, the site does extend beyond the project area limits. The exact temporal periods of site 8AL7459, its function, and its overall significance is not fully understood; therefore, it has been determined that there is insufficient information at this time to conclude the site's *National Register of Historic Places* (NRHP) eligibility. A full understanding and definition of the site would require further archaeological investigations.

Figure 8. Photograph view south at site 8AL7459.

Figure 10. Photograph of chert projectile points from site 8AL7459 (A: FS1; B: FS12).

Figure 11. Photograph of selective tertiary chert flakes from site 8AL7459 (A, B: FS12; C: FS15; D, E, F: FS16; G, H: FS19).

Figure 12. Photograph of selective chert shatter from site 8AL7459 (A: FS12; B: FS11; C: FS19).

Figure 13. Photograph of selective prehistoric ceramics from site 8AL7459 (A: FS11; B, C: FS13; D: FS15; E: FS14).

Figure 14. Photograph of red ochre from site 8AL7459 (A: FS12; B, C: FS13).

CONCLUSIONS AND RECOMMENDATIONS

In conclusion, one newly recorded site, 8AL7459, was documented as a result of this Phase 1 Cultural Resources Assessment Survey of the Tara Phoenicia project area. It is the consultant's opinion, based on the available data that site 8AL7459, is determined to have insufficient information at this time to conclude the site's NRHP eligibility; therefore, it is recommended that a Phase 2 Archaeological Assessment be conducted within the significant area of the site, if preservation is not feasible, in order to determine the site's NRHP eligibility. If human remains are discovered during future construction activities, then the provisions of *Florida Statutes* 872.05 (Offenses Concerning Dead Bodies and Graves) will apply.

APPENDIX A: Tara Forest West – Stage 1 Master Phasing Plan
APPENDIX B: Buckholz Traffic 2021 Traffic Study
APPENDIX C: Highway Capacity Analyses
APPENDIX D: Access Management

INTRODUCTION

Hagen Consulting Services, LLC is assisting Tara Forest, LLC with an update to the transportation impacts for the proposed new Tara Forest West residential development. The proposed Tara Forest West residential development will ultimately contain 538 single family homes and will be located north of US Highway 441, east of I-75 in Alachua County, Florida. Access to the development will be provided to US 441 via two direct connections through the Tara Phoenicia commercial development. Additional internal connections are also provided through Tara Baywood and Tara Forest East. US 441 in the vicinity of the site is a four-lane divided roadway with a functional classification of "rural principal arterial other" with a posted speed limit of 45 mph. The site is currently vacant and mostly cleared. The project location is shown in **Figure 1** below.

Figure 1 - Project Location Map

The "Stage 1 Master Phasing Plan" for Tara Forest West is included as **Appendix A** to this report.

The purpose of this update to the traffic impact study for Tara Forest West is threefold:

- To update the trip generation estimates from the previous study from the 10th Edition of the Institute of Transportation Engineers (ITE) *Trip Generation* to the 11th Edition of ITE *Trip Generation*
- To address changes in the access connections for the development
- To present a plan for the development of the project.

ITE's *Trip Generation* is the recognized authoritative source for estimating the trips generated by developments such as the proposed Tara Forest West residential and Tara Phoenicia commercial developments. Since the previously approved version of the study for the project prepared by Buckholz Traffic and dated 12-28-2021 (Buckholz 2021 – attached as **Appendix B**), *Trip Generation* has been updated to the 11th Edition. According to *Trip Generation*, a residential development such as proposed with Tara Forest West falls under ITE Land Use Code 210 – Single-Family Detached Housing. In Buckholz 2021, Tara Phoenicia was modeled to include 30,000 square feet of shopping center (ITE Land Use Code 820) and 100,000 square feet of mini-warehouse space (ITE Land Use Code 151).

BACKGROUND OF THIS REPORT

An updated report reflecting the changes identified above was submitted to the City of Alachua to review in December of 2023. The City has responded indicating that they desire to see a higher level of commercial development for Tara Phoenicia and also have the proposed future signalized connection to US 441 located in conjunction with the proposed future Peggy Road connection that the City and FDOT have reviewed and are pursuing. In an April 18, 2024 Zoom meeting it was agreed to separate this into two studies: one for the first three phases of Tara Forest West, one for the remaining three phases of Tara Forest West plus the development of Tara Phoenicia, in order to allow the initial construction of Tara Forest West to proceed while the details of the future signalized connection to Peggy Road and Tara Phoenicia are finalized in the subsequent study. This report will just cover Stage 1, the first three phases of Tara Forest West. Stage 2 of the development will require a separate traffic impact study that will be submitted at a future date.

EXISTING CONDITIONS

US 441 is a four-lane divided roadway with a posted speed limit of 45 mph in the vicinity of the proposed Tara Forest West development. The typical cross-section is a four-lane rural section with flush grass medians, flush grass shoulders, and open drainage. There are existing sidewalks on both sides of the roadway. The 2023 AADT on US 441 is 26,000 vehicles per day, per FDOT's Florida Traffic Online website.

TRIP GENERATION

The Institute of Transportation Engineers (ITE) *Trip Generation* 11th Edition was used to calculate the project trip estimates for the new land uses at the project site. Trip generation estimates are shown in terms of daily traffic, as well as the AM and PM peak hours. The proposed Tara Forest West development falls under ITE Land Use Code 210 – Single-Family Detached Housing. The trip generation information for the complete build-out of the proposed Tara Forest West residential development is shown in **Table 1** below:

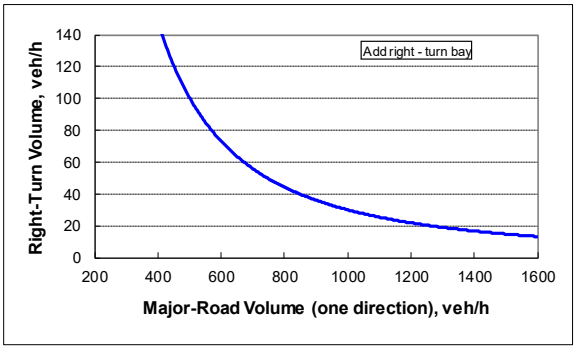
TABLE 1: Trip Generation
Single-Family Detached Housing – ITE Land Use 210 – 538 Units

	Equation	Units	Trips	Enter	Exit	In	Out
Weekday	Ln(T) = 0.92 Ln(X) + 2.68	538	4745	50%	50%	2372	2372
AM Peak	Ln(T) = 0.91 Ln(X) + 0.12	538	344	25%	75%	86	258
PM Peak	Ln(T) = 0.94 Ln(X) + 0.27	538	483	63%	37%	304	179

ACCESS CHANGES

The previously submitted traffic study by Buckholz Traffic for Tara Forest West and Tara Phoenicia featured two direct connections onto US 441 and a shared connection through the adjoining Baywood Center property to the east via NW 157th Lane to the existing traffic signal at US 441 and NW 147th Drive. However, the ownership of that property has changed from one single owner to multiple owners with different and varied interests related to that private street. Furthermore, the demands requested originally by the previous owner changed to more onerous and involved conditions that would result in delays to the development of both Tara Forest West and Tara Phoenicia. Therefore, the planned development of the properties will utilize the two direct connections onto US 441 at the southern limits of the Tara Phoenicia property without the previously planned connection to NW 157th Lane and NW 147th Drive. In addition to these direct connections, additional indirect minor connections to the roadway network will be available through the approved Tara Forest East and Tara Baywood developments.

INTERSECTION CONFIGURATION



The proposed connection to US 441 for Tara Forest West Stage 1 will be located opposite the existing median opening at NW 149th Terrace/NW 158th Lane. It is intended to be converted to a bi-directional channelized median opening allowing left turns into the side streets but prohibiting left turns or through movements out. NCHRP Report 457 – *Evaluating Intersection Improvements: An Engineering Study Guide* was used to determine if a WB right turn would be needed at the intersection. Based on the existing speed and the PM Peak Hour opening day traffic volumes, a right turn lane into Tara Forest West is justified. The analysis from the NCHRP Report 457 spreadsheet is shown below.

INPUT

Roadway geometry:	4-lane roadway
Variable	Value
Major-road speed, mph:	45
Major-road volume (one direction), veh/h:	1799
Right-turn volume, veh/h:	33

OUTPUT

Variable	Value
Limiting right-turn volume, veh/h:	11
Guidance for determining the need for a major-road right-turn bay for a 4-lane roadway:	
Add right-turn bay.	

PHASING OF DEVELOPMENT

Stage 1 of the Tara Forest West residential development is being planned to be developed in three phases. The first phase consists of the construction of the first 82 residential units. The second phase consists of the next 87 units. Phase three consists of 100 units. The Trip Generation for each phase of Stage 1 of Tara Forest West is shown in **Table 2**, **Table 3**, and **Table 4** below:

TABLE 2: Trip Generation by Phase – Daily Trips

Phase	Lots	Total	Daily Trips	% In	% Out	# In	# Out
TFW-1	82	82	841	50%	50%	420	420
TFW-2	87	169	1635	50%	50%	818	818
TFW-3	100	269	2508	50%	50%	1254	1254

TABLE 3: Trip Generation by Phase – AM Peak Trips

Phase	Lots	Total	AM Trips	% In	% Out	# In	# Out
TFW-1	82	82	62	25%	75%	16	47
TFW-2	87	169	120	25%	75%	30	90
TFW-3	100	269	183	25%	75%	46	137

TABLE 4: Trip Generation by Phase – PM Peak Trips

Phase	Lots	Total	PM Trips	% In	% Out	# In	# Out
TFW-1	82	82	82	63%	37%	52	31
TFW-2	87	169	163	63%	37%	103	60
TFW-3	100	269	252	63%	37%	159	93

It is anticipated that phase 1 of Tara Forest West would be constructed by 2025, with subsequent phases completed every two years. In the initial phases of construction, just the eastern direct connection to US 441 (east driveway) would be constructed. The east driveway connection to US 441 is presumed to be a directional median opening, allowing eastbound left turns into Tara Forest West and only right turns out of Tara Forest West. When the development traffic approaches a level where it is more than this one connection can handle, the western connection onto US 441 (west driveway) would be constructed.

INTERSECTION LEVEL OF SERVICE (LOS) ANALYSIS

The roadway Level Of Service (LOS) analysis is conducted using the procedures outlined in the Transportation Research Board's *Highway Capacity Manual* (HCM). The HCM procedures represent the state-of-the-practice for the analysis of transportation facilities.

To examine the expected operations of the proposed connection in the AM and PM Peak Hours, the 2025 traffic from the previously approved Buckholz 2021 traffic study was used along with the generated trips from Tara Forest West. A two percent annual background traffic growth rate is used to develop the background traffic for subsequent phases of development. The sum of the background traffic and the generated residential traffic for Tara Forest West result in the Traffic Volumes for Analysis shown for the AM and PM Peak Hours in **Table 5** and **Table 6** below:

TABLE 5: AM Peak Hour Traffic Volumes for Analysis

Phase	Year	EB L	EB T	WB T	WB R	SB R
TFW-1	2025	9	1336	937	6	47
TFW-2	2027	18	1390	975	12	90
TFW-3	2029	27	1446	1015	19	137

TABLE 6: PM Peak Hour Traffic Volumes for Analysis

Phase	Year	EB L	EB T	WB T	WB R	SB R
TFW-1	2025	19	1052	1799	33	31
TFW-2	2027	38	1095	1872	65	60
TFW-3	2029	59	1139	1947	100	93

To be conservative in the initial analyses, all of the Tara Forest West traffic is presumed to use the one connection onto US 441. The project trip distribution was determined based on splitting the traffic in and out of the development in proportion to the background traffic on US 441. The Two-Way STOP-Controlled module of the Highway Capacity Software is utilized to perform the Level of Service analysis of the connection. The results are summarized in **Table 7** and **Table 8** below. The Highway Capacity Software reports are attached as **Appendix C**.

TABLE 7: AM Peak Highway Capacity Analyses

	Eastbound Left		Southbound Right	
Year	Delay	LOS	Delay	LOS
2025	10.4	B	12.7	B
2027	10.7	B	13.9	B
2029	11.0	B	15.6	C

TABLE 8: PM Peak Highway Capacity Analyses

	Eastbound Left		Southbound Right	
Year	Delay	LOS	Delay	LOS
2025	18.8	C	21.8	C
2027	21.9	C	26.3	D
2029	26.9	D	34.8	D

For the unsignalized intersection analysis, the major street through movements (US 441 through traffic) experiences no delay and therefore no reported Level of Service. The only movements that would experience delay at this directional intersection would be the EB left turn into the site and the SB right turn out of the site. What the analyses show is that the one connection can handle up through the third phase of the Tara Forest West development (Stage 1). However, it would start to break down when we add the traffic of Phase 4 of the development. This would also be when the commercial traffic from Tara Phoenicia would start to be added, so the second connection would need to be built concurrent with the development of the fourth phase of Tara Forest West and with the development of Tara Phoenicia. FDOT has indicated that the future connection to be analyzed in the future traffic study for Stage 2 may be an innovative intersection concept and will require an Intersection Control Evaluation (ICE) to be performed.

DOWNSTREAM U-TURN LEVEL OF SERVICE (LOS) ANALYSIS

All of the traffic exiting Tara Forest West via the Stage 1 connection to US 441 will be forced to turn right onto US 441 to head to the west. However, some residents will certainly have destinations to the east. They will be forced to travel to the existing median opening at the proposed Peggy Road connection site and make a U-turn. There is another existing full median opening that is approximately 480' to the east of the proposed Peggy Road connection that should be closed concurrent with the construction of the Stage 1 connection. For this analysis, it is presumed that the U-turning proportion of the exiting traffic would be proportional to the directional volumes on US 441. This results in a presumed 58.8 percent U-turning traffic volume in the AM Peak Hour, and a 36.9 percent U-turning traffic volume in the PM Peak Hour. This means that of the SB right turning traffic at the Stage 1 connection, 58.8 percent will make a downstream U-turn in the AM Peak Hour, and 36.9 percent will make a downstream U-turn in the PM Peak Hour. The resulting turning movement volumes at the location of the downstream U-turn are shown in **Table 9** and **Table 10** below.

TABLE 9: AM Peak Hour Downstream Traffic Volumes

Phase	Year	EB T	WB U	WB T
TFW-1	2025	1345	27	957
TFW-2	2027	1408	53	1012
TFW-3	2029	1473	81	1071

TABLE 10: PM Peak Hour Downstream Traffic Volumes

Phase	Year	EB T	WB U	WB T
TFW-1	2025	1071	11	1818
TFW-2	2027	1133	22	1910
TFW-3	2029	1197	34	2006

The Highway Capacity Software two-way STOP-controlled methodology was used to analyze the anticipated operation of the downstream U-turning movement. The results are shown in **Table 11** and **Table 12** below.

TABLE 11: AM Peak Hour U-turn LOS

		Westbound U-turn			
Phase	Year	Delay	LOS	v/c	Queue
TFW-1	2025	29.9	D	0.17	0.6
TFW-2	2027	40.4	E	0.36	1.5
TFW-3	2029	64.1	F	0.61	3.2

TABLE 12: PM Peak Hour U-turn LOS

		Westbound U-turn			
Phase	Year	Delay	LOS	v/c	Queue
TFW-1	2025	19.1	C	0.04	0.1
TFW-2	2027	21.4	C	0.10	0.3
TFW-3	2029	24.6	C	0.17	0.6

Although Table 11 shows LOS E in 2027 and LOS F in 2029, these values are misleading. The HCS methodology is widely known to be overly pessimistic in its delay estimates, and thus its LOS determination. Also, it does not take into account the effect of the downstream traffic signal at I-75 that will create additional gaps for these U-turns at this location. In all cases the v/c ratio is not critical and the 95th percentile queue length is less than 4 vehicles. Also, an average delay of just over one minute for an uncontrolled movement is not an unreasonable expected operation on this heavily-traveled corridor in the morning peak hour. This condition is expected to be completely mitigated when Phase 4 of Tara Forest West is constructed as the intersection where the U-turns are occurring is anticipated to be the location of a traffic signal that will be installed at that time.

ACCESS MANAGEMENT

According to FDOT's straight line diagram for US 441 (Roadway ID 26020000) the access classification for the roadway in the vicinity of the proposed connections serving Tara Forest West is Access Class 3 and the posted speed limit is 45 mph. This access class has median opening spacing standards of 1,320 feet for directional openings, and 2,640 feet for full openings.

The proposed Stage 1 connection to US 441 is located at the existing full median opening at NW 149th Terrace/NW 158th Lane which is at mile post 18.676. The existing signalized intersection at NW 147th Drive is located at mile post 18.481 which puts it 0.195 miles, or 1,030 feet away from this existing full median opening. Although this location is less than the 1,320 feet standard spacing for a directional median opening, discussions with the City of Alachua during the planning of Tara Forest West indicated that this location would be preferred for the proposed connection so that it would align with the existing roadways on the south side of US 441 and that they would continue to be served by this intersection. However, as a part of the construction of the Stage 1 connection, the existing full median opening would be converted to a directional median opening to allow left turns into properties to the north and south, but only right turns out. Additionally, the existing full median opening approximately 725 feet west of the proposed Stage 1 connection should be closed with the construction of the connection.

For the proposed Stage 1 connection to Tara Forest West the EB left turn lane has a 95th percentile queue length of 1.1 vehicles (28.2 feet) in the PM and 0.1 vehicles (2.6 feet) in the AM per the 2029 HCS analysis. A minimum of 50' of storage should be provided in addition to the total deceleration distance of 180' for 45 mph speed from FDOT Design Manual Exhibit 212-1. This results in a 230' left turn storage length for the EB left turn lane. The WB left turn lane should be a similar 230' in length. The WB right turn lane into Tara Forest West should similarly be constructed with a length of 230'. The existing left turn lane into the future Peggy Road location is 315' in length, which provides adequately for the 2029 anticipated 95th percentile U-turn queue with the required 180' deceleration distance. A drawing of the anticipated access management is attached as **Appendix D**.

CONCLUSIONS AND RECOMMENDATIONS

Based on the foregoing data and analyses provided, the following conclusions and recommendations are offered:

Conclusions:

- For Stage 1 of the development, the first three phases of the residential Tara Forest West will be constructed, with a total of 269 residential units. This results in 183 trips in the AM Peak Hour and 252 trips in the PM Peak Hour.
- One unsignalized directional connection to US 441 will be sufficient to accommodate up through Stage 1 – the first three phases (269 lots) of the Tara Forest West development. Although the HCS analysis shows the SB right turn to be operating at LOS D at the full development and build-out of Stage 1, the average delay per vehicle for that movement is just 34.8 seconds, and the movement operates at a v/c ratio of 0.46 and has a 95th percentile queue length of 2.2 vehicles. This is a very conservative analysis of the operation, presuming that all of the traffic from Tara Forest West uses this connection. Other minor connections through Tara Baywood and Tara Forest East will be available and are expected to reduce the traffic volumes at this intersection to be less than what is analyzed.
- The connection serving Tara Forest West will be a directional median opening with left turn lanes of 230' in both the EB and WB directions and a right turn lane of 230' in the WB direction.
- The existing left turn lane at the future Peggy Road connection location is of adequate length to accommodate the U-turning demand from Tara Forest West in the AM Peak Hour.
- The existing transportation network has the available capacity to accommodate the trips generated by Stage 1 of the Tara Forest West development.

Recommendation:

- Approve the construction of the first three phases of Tara Forest West with one unsignalized directional intersection connection onto US 441 at the proposed east driveway location which aligns with the existing median opening at NW 149th Terrace/NW 158th Lane.

APPENDIX A: Tara Forest West - Stage 1 Master Phasing Plan

GENERAL NOTES:

1. TRAFFIC CALMING DEVICES SHALL COMPLY WITH SECTION 7.2.5(C) AND 7.2.5(D)(2). LOCATIONS OF TRAFFIC CALMING DEVICES WILL BE DETERMINED DURING EACH CONSTRUCTION PLAN SUBMITTAL.
2. PARKING REQUIREMENT:

   NEIGHBORHOOD RECREATION CENTER:

   REQUIRED: 1 SPACE PER 3 PERSONS DESIGN CAPACITY (50 PEOPLE / 3) X 1 = 17 SPACES

   PROVIDED: 19 SPACES

   PUBLIC/PRIVATE PARK:

   REQUIRED: NONE

Re: **Tara Phoenicia/Tara Forest West Phase I Traffic Study**

Dear Mr. Moukhtara:

Attached is the new revised Phase I traffic study. If there are any questions or comments regarding this study, please contact me.

Sincerely,

Jeffrey W. Buckholz, P.E., PTOE
Principal

This item has been digitally signed and sealed by Jeffrey W. Buckholz, P.E. on 1/3/22. Printed copies of this document are not considered signed and sealed and the signature must be verified on any electronic copies.

INTRODUCTION

Phase I of the proposed Tara Phoenicia mixed-use development and the adjacent Tara Forest West residential development will be constructed on the north side of US 441 approximately 1/2 mile east of I-75 in northern Alachua County, Florida. The development will have direct access to US 441 and NW 157th Lane and indirect access to both CR 241 and NW 147th Drive through the previously approved Tara Forest East and Tara Baywood residential developments. Current access plans call for three internal connections to Tara Forest East, one connection to the end of NW 157th Lane, and one unsignalized limited access point on US 441 (East Driveway).

US 441 is a four lane divided rural principal arterial with left turn lanes accommodated within a grass median. It has a posted speed limit of 45 mph in the vicinity of the site and an FDOT access management classification of 3. CR 241 in the vicinity of the site is a two-lane undivided rural major collector with a posted speed limit of 55 mph. NW 147th Drive and April Boulevard are both two-lane undivided local roads with NW 147th drive having a posted speed limit of 20 mph and April Boulevard having a 25 mph posted speed limit.

Phase I of the Tara Forest West development will contain 539 single family homes while Phase I of the Tara Phoenicia development will contain 30,000 sf of retail space and a 100,000 sf storage facility. Figure 1 shows the site location and surrounding road network while Figure 2 provides the intersection layout and control for various intersections of interest. Appendix A contains the proposed site plan. This Phase I development is expected to be complete by the end of 2025 therefore 2025 was chosen as the design year for this study. The lengthening of all 4 left turn lanes to 300 feet at the US 441/NW 140th Street intersection is assumed to be in place by the 2025 design year.

EXISTING TRAFFIC VOLUMES

Manual turning movement counts (see Appendix B) were conducted by Buckholz Traffic personnel at intersections of interest near the proposed development. The counts were conducted at 15-minute intervals during weekday AM and PM peak periods and include a separate tabulation for trucks. Figures 3 and 4 provide a visual summary of existing weekday peak hour traffic counts at the various intersections. Also shown in Figures 3 and 4 are directional percentages for interstate traffic as derived from these traffic counts. The percentages are a good indicator of the expected trip distribution for site traffic using I-75.

Appendix C provides daily traffic volumes from two nearby FDOT traffic counting stations on US 441 and for the FDOT counting station located on each of the five I-75 ramps. The current Average Daily Traffic (ADT) on the portion of US 441 in the vicinity of the site is estimated at about 27,000 vehicles per day. A linear regression analysis of recent daily traffic counts along US 441 and on the I-75 ramps is also provided in Appendix C. A review of Tables C-1 and C-2 reveal that recent traffic volumes along this stretch of US 441 have been growing at 4% per year.

TRIP GENERATION

Trip generation calculations were carried out using the 10th edition of ITE's Trip Generation Manual and referencing land use codes 210 (Single Family Housing), 820 (Shopping Center) and 151 (Mini-Warehouse). Tables 1 through 3 contain the daily, AM peak hour, and PM peak hour trip generation calculations for the development. Since this is a mixed-use development a certain level of internal trip-making can be expected. Tables 4 through 6 contain the internal trip capture calculations for the average weekday, the AM peak hour, and the PM peak hour. Tables 7 through 9 summarize the trip generation calculations. During an average weekday this Phase I development is expected to generate 6752 **external** trips (3376 entering and 3376 exiting) with 552 external trips (200 entering and 352 exiting) occurring during the AM peak hour and 664 external trips (390 entering and 274 exiting) occurring during the PM peak hour.

SITE TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT

Weekday AM and PM peak hour site trips were directionally distributed as documented in Appendix D. 30% of site traffic was assigned to Interstate 75 with the remaining 70% assigned to local roads. Interstate traffic was assigned to the ramps based on current ramp traffic volumes. The resulting weekday peak hour traffic assignments for the development are provided in Figures 5 and 6.

TRIP DISTRIBUTION AND TRAFFIC ASSIGNMENT FOR OTHER DEVELOPMENTS

The 551 unit Tara Forest East/Tara Baywood residential development is currently planned immediately to the east of our site. Using traffic data from the December 2019 Tara Forest East Subdivision Traffic Study completed by Buckholz Traffic, site traffic for this background development was assigned to CR 241, NW 147th Drive and US 441 as shown in Figure 7. Traffic oriented towards the west was further assigned to the interstate based on ramp traffic counts under the assumption that 50% is local and 50% uses the Interstate. The resulting weekday peak hour traffic assignments for Tara Forest East are provided in Figures 8 and 9.

2025 BUILD TRAFFIC VOLUMES

The expected weekday AM peak hour and PM peak hour background traffic volumes and Build traffic volumes at various intersections of interest near the site are graphically depicted in Figures 10 through 21. The 2025 background traffic volumes were obtained by multiplying the existing traffic volumes by the appropriate FDOT seasonal adjustment factor and then by a corresponding growth factor.

A 1.11 growth factor from 2020 to 2025 for US 441 intersections was determined by averaging the growth factors obtained from three sources: 1. The FDOT count station 4% annual growth rate (Growth Factor = 1.24), 2. Population projections for 2020 and 2030 obtained from the City of Alachua's 2036 Long Range Transportation Plan (Growth Factor = 1.08 for 2030 and 1.04 for 2025), and 3. US 441 Peak Hour Traffic Volumes for 2015 and 2036 obtained from Table 1 of the City of Alachua's 2036 Long Range Transportation Plan (Growth Factor = 1.13 for 2036 and 1.07 for 2025). The 2025 Build traffic volumes were then obtained by adding the traffic generated by Tara Forest East and the expected site traffic to the 2025 background traffic volumes.

UNSIGNALIZED INTERSECTION CAPACITY ANALYSIS

The unsignalized CR 241/Tara Forest East Driveway intersection and the future unsignalized US 441/East Driveway intersection were analyzed using the two-way stop control methodology contained in Chapter 19 of the Sixth Edition of the Highway Capacity Manual. Tables 10 and 11 contain the capacity analysis results with the supporting calculations provided in Appendix E.

Under 2025 Build conditions both minor movements at the US 441/East Site Driveway intersection are expected to operate at level of service D or better during the weekday AM peak hour with moderate queuing and a volume-to-capacity ratio of less than one. During the weekday PM peak hour, both minor movements are expected to operate at level of service E or better with moderate queuing and a volume-to-capacity ratio of less than one.

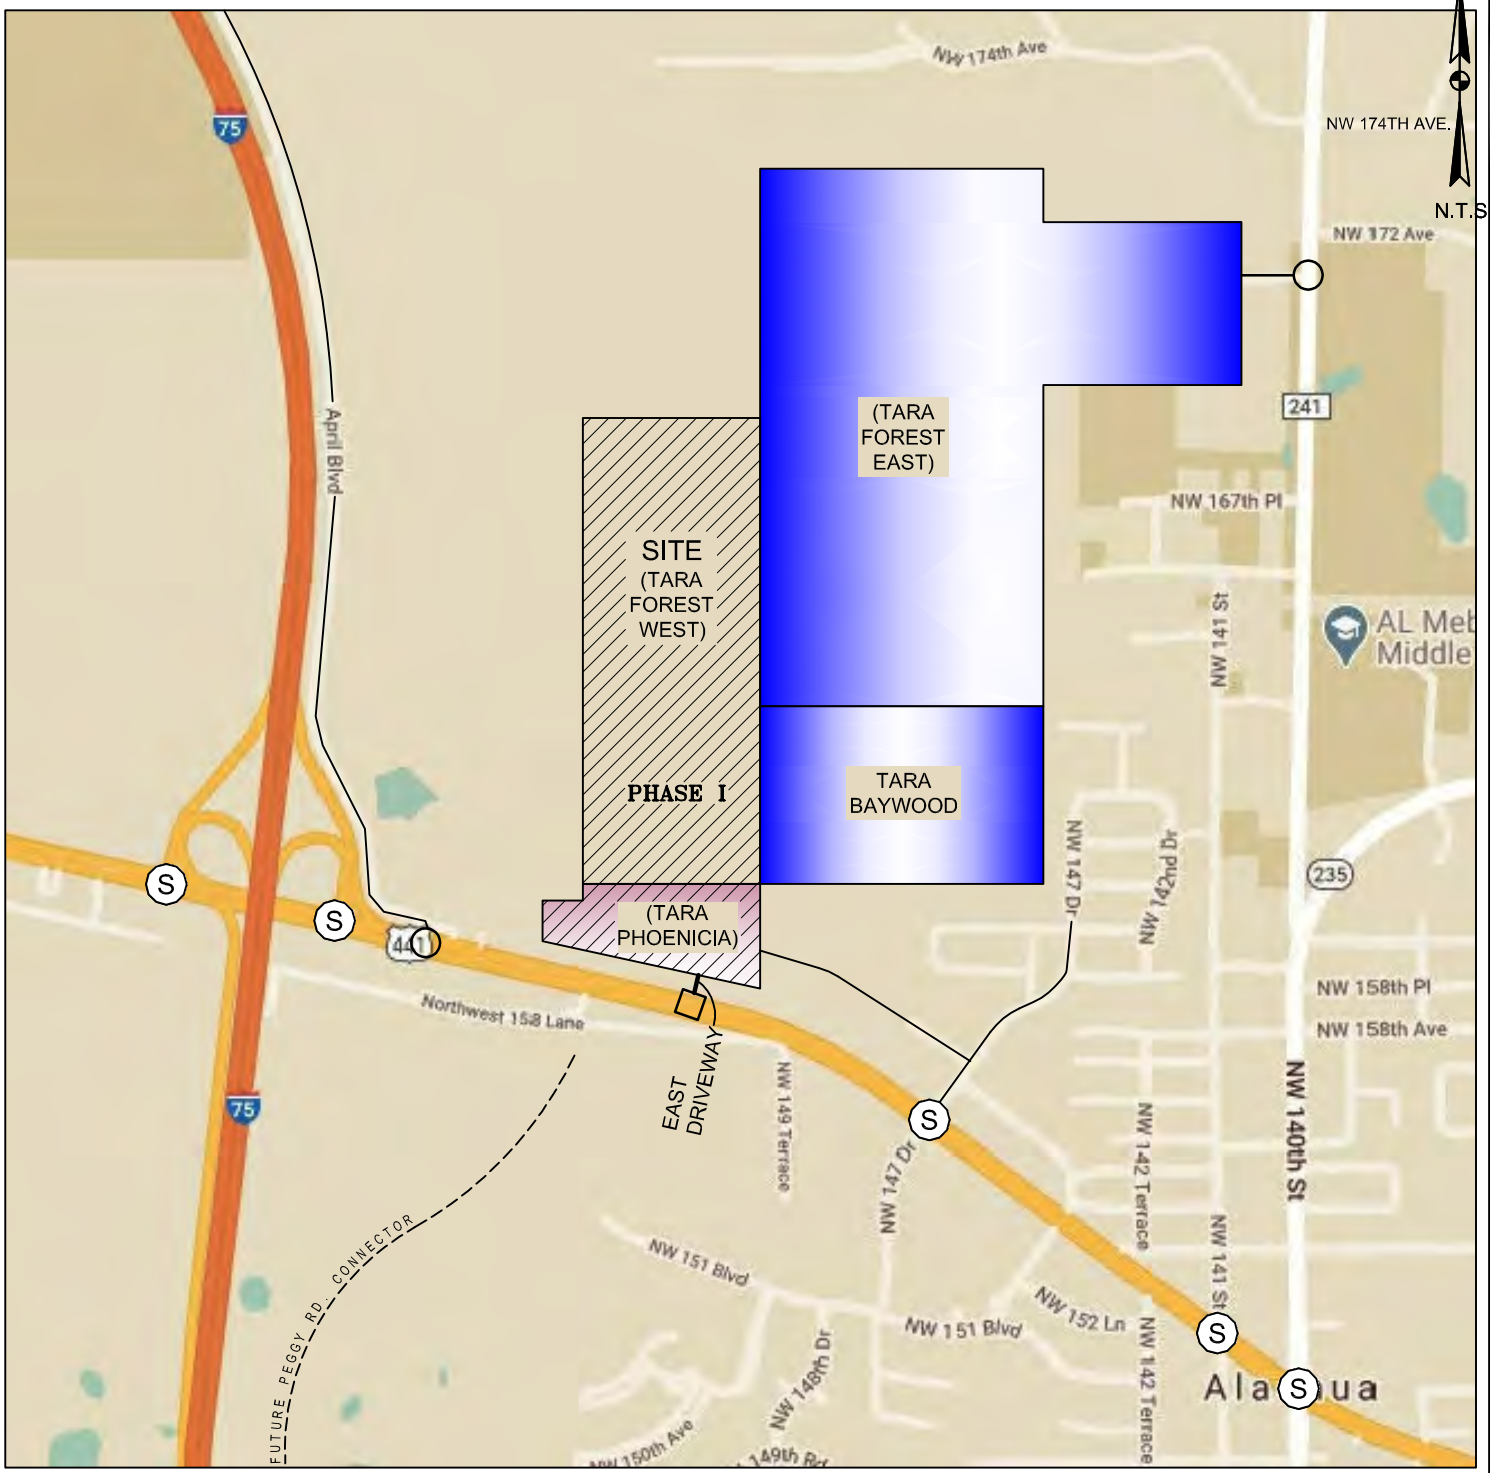
Under 2025 Build conditions all minor movements at the CR 241/Tara Forest East Driveway intersection are expected to operate at level of service B or better during both weekday peak hours with minimal queuing and a volume-to-capacity ratio of well less than one. The addition of both left and right auxiliary lanes on CR 241 were assumed for the analysis.

SIGNALIZED INTERSECTION CAPACITY ANALYSIS

The signalized US 441/West I-75 Ramps intersection, the signalized US 441/East I-75 Ramps intersection, the signalized US 441/NW 147th Drive intersection, and the signalized US 441/SR 235 intersection were analyzed using the operational methodology contained in Chapter 19 of the Sixth Edition of the Highway Capacity Manual. Recommended consultant timings were used for the analyses with the timings provided in Appendix E. Tables 12 through 15 contain the capacity analysis results with the supporting calculations provided in Appendix F.

Under 2025 No Build conditions with optimized splits and offsets, the US 441/I-75 West Ramps intersection is expected to operate at LOS B during the weekday AM peak hour and LOS E during the weekday PM peak hour (see Table 12). Under 2025 Build conditions with optimized splits and offsets, the US 441/I-75 West Ramps intersection is expected to continue to operate at LOS B during the weekday AM peak hour and LOS E during the weekday PM peak hour.

Under 2025 No Build conditions with optimized splits and offsets, the US 441/I-75 East Ramps intersection is expected to operate at LOS D during the weekday AM peak hour and LOS E during the weekday PM peak hour (see Table 13). Under 2025 Build conditions with optimized splits and offsets, the US 441/I-75 East Ramps intersection is expected to operate at LOS D during the weekday AM peak hour and LOS F during the weekday PM peak hour.



Under 2025 No Build conditions with optimized splits, the US 441/NW 147th Drive intersection is expected to operate at LOS B during the both weekday AM and PM peak hours (see Table 14). Under 2025 Build conditions with optimized splits, the US 441/NW 147th Drive intersection is expected to operate at LOS C during both weekday peak hours. Side street lane reconfiguration and side street split phasing, along with the installation of a right turn overlap phase for both the north approach and the south approach is assumed in this analysis.

Under 2025 No Build conditions with optimized splits, the US 441/NW 140th Street intersection is expected to operate at LOS D during the weekday AM peak hour and LOS E during the weekday PM peak with extensive queueing and substantial delay and with a high volume-to-capacity above one for the eastbound left turn movement (see Table 15). Under 2025 Build conditions with optimized splits, the US 441/NW 140th Street intersection is expected to operate at LOS E during the weekday AM peak hour and LOS F during the weekday PM peak hour with extensive queueing and substantial delay and with a high volume-to-capacity ratio of well above one for the eastbound left turn movement. The extension of all of the left turn lanes to 300 feet in length, as is currently programmed by others, is assumed in this analysis.

OPERATIONAL CONSIDERATIONS FOR PHASE I ACCESS

Connecting the Tara Phoenicia development to the NW 147th Drive via NW 157th Lane can be expected to have certain operational benefits. With this connection, occupants of both existing and planned residential developments located along NW 147th Drive will have direct access to commercial developments located north of US 441. This improved access should increase the attractiveness of both the residential units and the commercial developments while reducing traffic volumes along US 441. The capacity analysis of the signalized US 441/NW 147th Drive intersection contained in this report demonstrates that, by installing side street split phasing and adding side street right turn overlaps, this intersection should operate in an acceptable manner under 2025 Build conditions with the Phase I Tara Phoenicia/Tara Forest West development in place. Consideration should be given to closing the Advanced Auto Parts driveway that intersects the north approach of this intersection and replacing it with an internal driveway to the north that connects to the existing shopping center parking lot.

Since minimal traffic is expected to enter the Tara Phoenicia/Tara Forest West development using NW 157th Lane (the new East Driveway on US 441 is a more direct route for entering traffic) any negative effects at the unsignalized NW 147th Drive/NW 157th Lane intersection should be minimal - although the addition of a second approach lane on NW 157th Lane would be beneficial.

APPENDIX D: Access Management

HAGEN CONSULTING SERVICES, LLC

Tara Forest West – Stage 1 Access Management

GSE Engineering & Consulting, Inc.

October 18, 2022

Sayed Moukhtara
Tara Forest, LLC
7717 NW 20th Lane
Gainesville, Florida 32605

Summary Report of a Geological Review and Active Ground Loss Evaluation
Tara Forest West, Tara Phoenicia, Tara April
Alachua, Alachua County, Florida
GSE Project No. 14759B

GSE Engineering & Consulting, Inc. (GSE) has performed a geological review to provide an opinion on the locations of active ground loss at the Tara Forest West, Tara Phoenicia and Tara April projects in Alachua, Florida. This review and report have been prepared at your request.

Background Information

We understand that you propose to develop these properties into residential and commercial developments. The sites are generally located at the northeast quadrant of the U.S. Highway 441 and I-75 intersection in Alachua, Florida and contains approximately 555 +/- acres. Figure 1 indicates the project location.

GSE has performed geotechnical explorations at these sites to assist with stormwater management facility and infrastructure design. Please refer to reports under GSE Project Numbers 14759, 14759A, 14891 and 15138 previously submitted.

We understand the City of Alachua retained Wood Environment & Infrastructure Solutions, Inc. (Wood) to assist with the development review process. As part of this review, Wood had concerns that active ground loss may be occurring below ground elevations of 75 feet. Wood recommended that the portion of the site lower than elevation 75 feet be analyzed further with engineering and geologic studies to identify if there is actual active ground loss occurring.

This geologic review has been performed to evaluate whether active ground loss is occurring at the site.

Regional Geology

In order to understand the mechanisms of ground loss, the regional geology of the site must be reviewed and considered. Ground loss in Alachua County typically occurs from soil erosion and sinkhole development. Ground loss from soil consolidation typically does not occur, as the majority of the soils in Alachua County are over consolidated from prior land form changes (sea level rise/recession and soil deposition) that occurred in the geologic past (millions of years ago).

Alachua County straddles two physiographic provinces: Northern Highlands and Coastal Lowlands[1]. A broad karst escarpment known as the Cody Scarp separates these two provinces.

The Northern Highlands, which lie north and east of the Cody Scarp, are underlain by a thick sequence of relatively impermeable Miocene to Pleistocene sediments. Because of this thick sequence of sediments, the Northern Highlands Province contains few karst features. This upland plateau is nearly level, sloping gently to the west, north and east. Elevation ranges from about 150 to 200 feet above sea level. The plateau, which originally extended completely across the county, has many swamps. Sinkholes are not common within the plateau, but a few are found near its margin.

Thin Plio-Pleistocene sediments overlying thin and discontinuous, residual Miocene strata and Eocene limestone characterize the Lowlands. Karst features are numerous in the Lowlands. The western plains region has low relief. Elevation ranges from about 50 to 80 feet above sea level. The plain is devoid of stream channels, but it is dotted with sinks and limestone mines. While the Ocala Limestone is essentially near the surface in this region, many of the old sinks have become filled (some to a depth of 250 feet) with sand, clayey sand, and sandy clay. These soil materials come from marine submergence, soil creep and slumping, and stream transport from the Northern Highlands. This sinkhole fill tends to mask many of the karst irregularities of the Ocala surface.

The Cody Scarp, which separates the Northern Highlands from the Coastal Lowlands, contains large sinkholes, sinking streams, and other karst features. The bottoms of the karst features often penetrate to the Ocala Limestone and the depressions are usually filled with organic soils, fluvial and lacustrine sediments, and clay-rich soils. The hills within the scarp contain Miocene sediments similar to the Northern Highlands Province. Many of the large, flat-bottomed lakes and wet prairies are associated with the scarp and represent coalescent sinkholes known as poljes and uvalas. Many of these level prairies and lakes, most of which are near or below 60 feet NGVD, are associated with ground water levels.

Three major geologic formations occur at or near the surface within the county. These formations have influenced soil development. They are, in order of decreasing age, the Ocala Limestone of Eocene age, the Miocene to Pliocene Hawthorn Group, and the Plio-Pleistocene Terrace Deposits.

The Ocala Limestone underlies the entire county; exposures are common in the Coastal Lowlands in the southern and western parts of the county. Here a limestone plain is formed which is covered by a veneer of loose sand in most places. Thin and discontinuous beds of clay-rich soils may also occur in this region of the county. The Ocala Limestone consists of soft, white to cream colored, chalky, limestone that is approximately 98 percent calcium carbonate. Boulders and irregular masses of chert are common near the top. In many areas the Ocala is cavernous and fractured.

The Miocene Hawthorn Group includes at least three formations in Alachua County. These are, from bottom to top, the Penny Farms Formation, Marks Head Formation, and Coosawhatchie Formation[2]. All three formations consist of varying proportions of interbedded clay, sand, limestone, and dolostone, all of which are phosphatic.

---

1 White, W.A., 1970. The Geomorphology of the Florida Peninsula. Florida Geological Survey, Bulletin 51.

2 Scott, T.M., 1988. The Lithostratigraphy of the Hawthorn Group (Miocene) of Florida. Florida Geological Survey, Bulletin No. 59.

The Hawthorn Group crops out in isolated areas around the town of Micanopy and in an irregular pattern along the Cody Scarp from Lochloosa Lake northwestward through Gainesville and into the north-Northern and northwestern part of the county. Much of the outcrop area is hill and valley terrain created by the formation of karst features at the foot of the escarpment. A thin veneer of loose sands of the older Plio-Pleistocene Terrace deposits covers the Hawthorn Group of sediments in the Cody Scarp and Northern Highlands. The Hawthorn Group lies unconformably on the solution-pitted Ocala Limestone surface.

The most recent formation is a surface mantle of fine to medium sand, silt, and clay that formed as Pliocene and Pleistocene sea levels fluctuated and periodically inundated portions of the county. Primarily, the terrace deposits overlie the Hawthorn Group. They are exposed in the Northern and eastern parts of the county.

The site is located in the rolling hills topography of Alachua County that lies within the Cody Scarp geology. Site elevations range from about 45 feet to more than 150 feet. The site is located just northeast of the Mill Creek Sink Cave. The Mill Creek Sink Cave is a well-documented sinkhole that is connected to an underground cavern system that is commonly used for cave diving. The Wood report identifies the approximate location of the cave system, which runs to the south across U.S. Highway 441 and to the east along the northern edge of U.S. Highway 441. Cave divers have documented that the cave system to the north has collapsed and is infilled with soil. The cave system is generally on the order of 100 to 200+ feet below land surface.

General Site Observations and Historic Site Use

Mr. Kenneth L. Hill, P.E. and Mr. Jason E. Gowland, P.E. with GSE have visited the site on numerous occasions to observe the site conditions. In addition, we have reviewed historical aerials of the site to observe the changes in the surface conditions of the site.

The site is currently mostly open land that is grown up in tall weeds. There are tree lines and wooded areas scattered throughout the site. Mill Creek is wooded along its banks. The majority of the site below elevation 75 feet is a valley along Mill Creek, with moderate to steep topography sloping up to the east and west from the creek.

From approximately 2004 to 2020, the site was planted in pine trees. The pine trees were harvested around 2020. Prior to 2004, the site was mostly open pasture with scattered tree lines and wooded areas dating back to 1964.

The 1964 aerial, attached as Figure 4, indicates that some of the site had been disturbed. The northern portion of the site and an area along the north side of U.S. Highway 441 appear disturbed, and possibly used as borrow areas or construction staging. This aerial is from the time period when the I-75 construction was nearing completion (there are no autos on I-75 but autos are present on U.S Highway 441). Ponds and wetland areas are easily identifiable on the aerial, along with the meandering Mill Creek. Mill Creek appears to be dry in this aerial, as this creek primarily transports stormwater runoff. A wet weather pond in the central portion of the site east of Mill Creek appears to be man made and from the land disturbance.

The 1971 aerial, attached as Figure 5, indicates the site is mostly pasture with scattered tree lines and woods. The majority of Mill Creek is located in open pasture and appears wet. Wetlands and ponds are identifiable. The disturbed areas are somewhat overgrown with pasture, but appear to have poor coverage.

The 1982 aerial, attached as Figure 6, shows that the site has remained pasture with no significant change since 1971. The poor established pasture in the northern disturbed area is more established. The site appears dry, with no water in Mill Creek and the ponds and wet weather pond areas showing less standing water. The most obvious change is the presence of a "black dot" in the northern portion of the site. The dot is believed to be a small chimney sinkhole, as this dot is at the location of a cluster of chimney sinkholes that are present on the site. These sinkholes were previously evaluated by GSE in our Project No. 14759A.

The 1994 aerial, attached as Figure 7, shows that the site is essentially in the same condition as prior years. Mill Creek appears wet. There is no vegetation along the majority of the creek. The location of the "black dot" now has two or three dots, indicating additional chimney sinkholes have developed. A 1999 aerial, not shown, indicates a fence has been constructed around the area of the "black dots" in a square shape. Remnants of this fence remain on the site today and surround the cluster of chimney sinkholes. This confirms the black dots on the aerial are chimney sinkholes which developed from about 1982 to 1999. The 2004 aerial shows the site is planted in pine trees, and remained in this condition until their harvest around 2020.

Evaluation and Discussion of Active Ground Loss

Wood has concerns with the potential of active ground loss in the lower elevations of the site. Based upon our observation of the site and review of historical data, we agree that active ground loss is occurring at the north end of the site at the location of the cluster of chimney sinkholes (see GSE Project No. 14759A). It is our opinion that active ground loss, other than normal surface erosion, is not occurring over the remainder of the site.

Wood specifically is concerned with two features they believe are swallets. The Wood report describes the locations of these features as *immediately adjacent to the western boundary of the property (in the lower 1/3 of the property boundary) and the other on the western side of Mill Creek immediately south of the first one.* The Wood Figure 5 shows the location of one swallet. The locations of both swallets described by Wood are not within the property boundaries (they are off site) and it is our opinion they have no impact on the Tara properties.

During a telephone conference with Wood, they believed that slow ground subsidence has occurred in the lower elevations along Mill Creek over the years. This opinion was based upon comparison of USGS Topographic Maps (digitizing the elevations and overlaying them). It is our opinion this conclusion cannot be made based upon the quality of the data. USGS Map Accuracy Standards[3] states the accuracy of 1:24,0000 USGS Topographic Maps is 5 feet vertically and 40 feet horizontally. This means that any point on the map may have an elevation that is 5 feet higher or lower than what is shown. Further, any point may be 40 feet in any direction away from where it is shown.

As a comparison of the accuracy of the USGS Topographic Maps, we overlayed the USGS topographic maps from 1963 and 1999 (Figures 2 and 3) onto the site topographic surveys. The topographic surveys were provided by eda and JBPro. These overlays show that the horizontal and vertical accuracy is reasonably within this range for the portion of the site above elevation 75 feet. Below elevation 75 feet, the horizontal accuracy is far less than 40 feet (the 50 feet contour lines are approximately 175 apart) and the vertical accuracy is generally beyond 5 feet. This is shown on Figures 2 and 3.

3 USGS Fact Sheet 171-99, November 1999

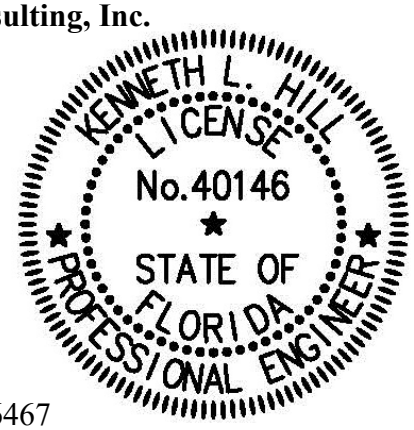
An opinion that a few feet of ground subsidence has occurred cannot be supported by data with this accuracy. Further, there are other sites nearby and that border this site that have improvements that are below elevation 75 feet, including portions of U.S Highway 441. If slow ground subsidence was actively occurring below elevation 75 feet, there would be reported damage to existing facilities. We are not aware of slow ground subsidence damage to nearby properties. We are aware of sudden ground subsidence caused by collapse type sinkholes.

GSE agrees that ground subsidence related to soil erosion is and can continue to occur at this site. This is entirely related to the quality of ground cover and rainfall intensity. Soil erosion is occurring along Mill Creek and in natural and man-made drainage swales where ground cover is poor. It is our opinion that slow ground subsidence related to karst geology is not occurring.

Sinkholes in Alachua County are typically sudden collapse type features. The typical geology of the Cody Scarp is a thin sand layer covering clay-rich soils. A pinnacled limestone formation is below the clay-rich soil at varying depths. A surficial groundwater table is typically not present or is a transient perched condition on the clays. Sinkholes develop from the sudden erosion or collapse of soil into cracks, crevices and voids in the upper portion of the limestone formation and the development of sinkholes is commonly related to high intensity rain events. These sinkholes typically vary from a few feet in diameter to 10 to 20 feet in diameter. The cluster of sinkholes at the north end of the site are typical sinkholes for the Cody Scarp geology. GSE is not aware of a slow ground subsidence type sinkhole occurring in the Cody Scarp geology of Alachua County.

Slow ground subsidence related to karst geology is common in the Central Florida region where the geology is different. The geology in Central Florida typically consists of 40+ feet of sandy soil that overlies confining clay-rich soils. Limestone is typically at depths of 100+ feet. A surficial groundwater table is typically present within 10 feet of land surface. Slow ground subsidence occurs from the raveling (erosion) of the sandy soils through breaches in the clay confining layer into voids in the limestone formation from the infiltration of the surficial water table into the Floridan Aquifer (groundwater recharge). This type of ground subsidence can take days or years to develop. This area of Alachua County does not have this type of geology (there is no persistent surficial groundwater table to slowly infiltrate and induce raveling), and therefore, does not have slow ground subsidence related to karst geology.

Summary



GSE has performed additional analysis and evaluations of the Tara project sites in Alachua, Florida to evaluate the potential for active ground loss. It is GSE's opinion that one isolated area at the northern portion of the site has active ground loss in the form of a cluster of chimney sinkholes that developed from approximately 1982 through 1999. These features were evaluated in GSE Project Number 14759A. It is GSE's opinion that active ground loss is not occurring in the portions of the site lower than elevation 75 feet over the remainder of the site. The two swallets identified by Wood are located off site and in our opinion have no impact on these sites. It is GSE's opinion that requiring further geological or geotechnical studies to evaluate active ground loss is an unnecessary requirement that is not warranted by the regional geology.

Closure

GSE appreciates this opportunity to provide these engineering services to you on this important matter. If you have any questions, or if we can provide any additional information, please contact us.

Sincerely,

GSE Engineering & Consulting, Inc.

When the meeting was held for Tara Forest, I was away due to a family illness and funeral . We live adjacent, at 14655 NW 174 Ave.
Our concerns about the development are these:
1. Preserving the small city/rural vibe Alachua has in spite of I75
2. Street lights should be shielded above the light bulb to direct light downward to prevent light pollution
3. Field grown - Native Trees be planted along buffer ASAP between existing 2.5 acre and larger lots and the new high density development
4. Considering Most trees on the property have been cut down or sprayed with herbicide and Climate Change and the impact 543 homes will have on the electric grid, Will city require that the development have solar panels on the homes?

We appreciate any help you can provide. The character of our community and quality of life here is very important to all us!
Bill and Pam Baker

Good afternoon, Mr. Hall. My name is Jimmy and I'm a board member and representative from the HOA of Dogwood Acres. I know several of our home owners have contacted you and I am writing you about the same worry they we all share: Tara Forest.

I realize that nothing can be done to stop the progress and I hope that the development brings in revenue for the city of Alachua. At the same time, there are concerns we have with the development.

The first is in regards to the traffic it will bring, especially to the 241 area around Mebane Middle. I know they are planning on a turn lane insertion, but what about extended sidewalks?

Our main concern is about the privacy that involves the area just south of Dogwood Acres. While I realize in your email replies that you stated the City of Alachua will "ensure full compliance with all applicable standards of the City of Alachua Comprehensive Plan and City of Alachua Land Development Regulations" we do not want applicable standards met. If that were to happen, we would get a minimal fence erected and that would be all. We expect you and the city to ensure that we, those that have lived here before the development, are able to retain our peace and quiet. That includes visual and audible privacy.

Is this something that you can assure us that you will work on? I hope to receive more than a copy of a minimalist email. If you would rather have a sit down, we can accomplish that. Please let me know. Thank you for your time.

Jimmy Anuszewski

I move away from Gainesville in November of 2020 to get away from the over population, bad roads, and horrible traffic among other thing, after living there since 1977. I moved to Alachua where I could enjoy more country living, less development, and better traffic with less people. I knew development was inevitable on some on the bigger pieces of land, and I have to admit I am glad the land east of I-75 will not be used for more fast food restaurants but 500 HOMES!!! Oh my God! The traffic in Gainesville is unlivable and now little ole Alachua is going to do the same stupid development that Gainesville does "shot > read > aim" is the wrong order when it comes to road planning. I beg you to do a study of the traffic patterns on 441! Please do not ruin Alachua with over population! If the road cannot support 500 homes with 500+ cars I beg you to modify the building plan to less homes. Thank you! Sheila Diuguid 16776 NW 168th Ter, Alachua, FL 32615

Mr. Hall,
I am writing you in regards to the recent preliminary plat meeting that took place at the Swick House on August 18th, 2021, concerning the proposed Tara West subdivision.

My wife and I, in the recent past, purchased the 3.93 acre lot 12A in Dogwood acres as a place to get away from the close living of the inner city. We spent over a year and a lot of money working with Justin in your office on a minor subdivision to remove easements from our property, so that we could enjoy the quiet and peaceful large parcel of land close to the city amenities of Alachua. When we bought the property, we knew where our backdoor neighbor would be, several acres away. We knew where our next door neighbors would be, several acres more away. Our intention was to build a large beautiful custom home on this lot to spend our last few working years and into retirement.

I honestly don't see this being the case if the proposed plat of Tara West is left as is. I see it as a horrible financial decision on my part knowing that I potentially could have 9- 7500 sq ft lots parked up against my western boundary. 9 different quick mass built homes. 9 different barking dogs. 9 different sheds against my fence. The list goes on and on.
Thats just the 9 lots that are directly adjacent to me. It doesn't even include the fact that we will be within eyesight of another 9 lots north of us and another 10-12 south of us along the same boundary.
It's heartbreaking at the very least. This is no less than the worst case scenario for all of the lot owners of Dogwood acres adjoining both Tara East and Tara West.

See next email for continuation of this request.

I would ask that you please consider some ideas of good will towards the residents of Dogwood Acres as it pertains to this development.
1. Can we please consider mandating some type of meaningful wall / sound and sight barrier?
2. Could your office at least consider the following. If the plat cannot be changed to at least provide some type of buffer zone between the large parcels of land that Dogwood acres consists of, can you at least consider that the lots that are adjacent to Dog wood acres be larger parcels? It's crazy to step from 2.5, 4, and 7 acre lots to less than .2 acre parcels dotted all along our fence lines. You would think that a gradual step down in lots sizes would be a more prudent thing to consider?
I hope you please consider mine and the other residents of Dog Wood acres privacy and current peaceful living situations going forward in this process. Because we all own large parcels of land adjacent to this subdivision, we have a small group of voices. With over 30 acres of land bordering these 2 planned subdivisions, we only have about 10 directly affected owner voices.
I won't even address the traffic issues this subdivision is going to cause. That's for another day.
I would really appreciate your attention and concern on our part in this process.

Sincerely,
John and Toni Sapp

Neighborhood Meeting Advertisement For Tara Forest West – Major Subdivision – Preliminary Plat

As a property owner located within the required 400-foot radius of a proposed development, you are hereby being notified of a proposal for a Major Subdivision Preliminary Plat as required by, Section 2.2.4 Neighborhood Meetings, of the City of Alachua Land Development Regulations. Tara Forest, LLC, is proposing Major Subdivision Preliminary Plat to develop 540 single family homes on 393.95 acres, in the City of Alachua, FL. The property is located at 15845 NW US Hwy 441 Alachua, FL. The proposed Major Subdivision Preliminary Plat will encompass, parcels numbers 0 3 0 0 8 - 0 0 0 - 0 0 0 , 03020-000-000, and 03067-001-000. The property is zoned Residential Single Family 4 (RSF-4), Conservation (CSV) and Commercial Intensive (CI).

The Neighborhood Meeting will discuss the proposed Major Subdivision Preliminary Plat, share a copy the plat, and receive comments from the public and adjacent property owners. The neighborhood meeting will be held at on August 18th, 2021, at the Swick House Conference Room, located at 15100

NW 142 Terrace, Alachua, FL 32615, between the hours of 6:00PM and 7:00PM. You may also submit your comments electronically to the Representative for the Developer of the project, JBPro, Chris Potts, Director Engineering, 3530 NW 43rd Street Gainesville FL 32606, 352-375-8999 or by email at Chris.Potts@jbpro.com.

Tara Forest West – Preliminary Plat Neighborhood Workshop Summary

Meeting Location: Swick House Cedar Room
Meeting Date and Time: August 18th at 6pm
Meeting Presenter: Chris Potts, PE, JBPro

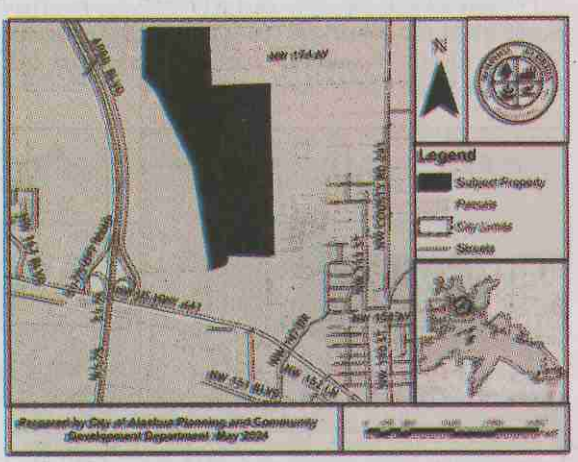
The neighborhood meeting began on time, with approximately 15 neighbors in attendance. Mr. Potts gave a PowerPoint presentation which described the nature of the application for a preliminary plat and provided a visual representation of the Preliminary Plat for the development at this stage of the permitting and review process. Many questions were asked, and sparked a good discussion on topics like noise and traffic concerns, and environmental and flooding impacts to adjacent properties. The timeline to final buildout was also discussed. Specific questions are listed below, with responses.

1. What is the breakdown of the size and price of the proposed homes? Are there any buffers proposed? What is the overall timeline for this proposed development?
   Response: Mr. Potts explained the proposed minimum lot size of 7,500 sf, estimated home size of 1,200 sf to 2,500 sf one-story and two-story homes, that will likely be priced between $250,000 and $400,000. He explained the recreational zoned parcel that is provided as a buffer between the proposed residential lots and the conservation area, and that no buffer was required or provided between the two residential uses. Mr. Potts mentioned that a 6-foot tall privacy fence would likely be proposed as a way to separate the proposed development from existing residential lots. Several neighbors voiced their opinion of the inadequacy of a 6-foot tall fence, saying they preferred a taller masonry style wall to separate and protect them from noise and light pollution. The option of providing larger lots along the property boundary was discussed. Lastly, Mr. Potts explained the review process and timeframe for the proposed project and mentioned construction for Phase 1 would likely start in approximately 2 years.

2. Who decided the zoning breakdown of the subject parcels?
   Response: Mr. Potts explained the history of the zoning breakdown and that the City made the decision to dedicate the conservation land as the western portion of the property.

3. Is it possible to expand the radius for notifications of future meetings?
   Response: Mr. Potts explained that City of Alachua has a criterion of a 400-foot radius for which to provide notification of public meetings and hearings. He agreed to expand the radius in order to encompass a larger area for future meetings.

4. Discussion was brought up regarding the existing sink holes on site, whether additional pines would be planted on the property during the permitting process, and the occurrence of a helicopter spraying the property.
   Response: Mr. Potts explained that environmental assessments are a required aspect of all proposed developments and we are aware of the sink holes on the property. He mentioned that as JBPro does not own the property, we are unaware of any activities regarding spraying and planting but would be happy to inquire. Concerns regarding what was being sprayed and how it would affect the aquifer were discussed. Mr. Potts explained the stormwater treatment requirements and methods and ensured that no adverse effects from the development would impact the aquifer.



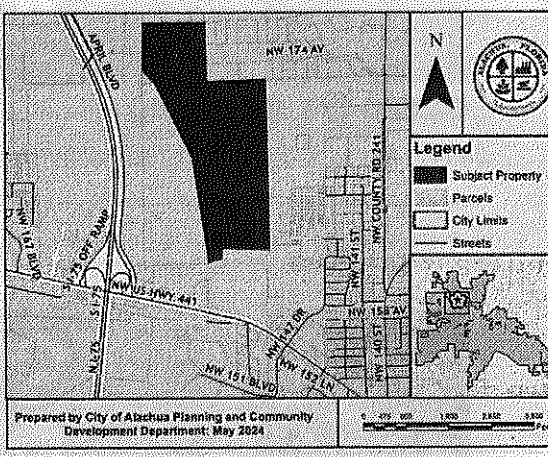
5. The topography of the development and surrounding areas was discussed, as well as flooding concerns.
   Response: Mr. Potts explained that while some fill for the site will be required, it is the intent of the design to follow the natural topography of the land. Flooding concerns were alleviated through discussions of stormwater requirements.

6. Many neighbors voiced concerns regarding the additional traffic load this development will generate, and expressed a lack of faith in the ability to calm traffic and mitigate for the additional volume.
   Response: Mr. Potts explained that this development will undergo review by FDOT as it connects to roads falling within that jurisdiction, and that any improvements will be approved by FDOT in accordance with their standards for design and safety. Neighbors requested a traffic light at the connection to US 441, and Mr. Potts explained that traffic lights are not typically desired by FDOT, but more discussions will be had prior to final approval.

City of ALACHUA

NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning and Zoning Board of the City of Alachua will hold a public hearing on June 11, 2024 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located at 15100 NW 142nd Terrace, Alachua, Florida, to consider the following: A request by Christopher Potts, P.E. of JBrown Professional Group, Inc., applicant, on behalf of Tara Forest, LLC, property owner, for consideration of a Special Exception Permit to allow stormwater retention and detention facilities on a portion of a ±198.39 acre subject property. The subject property is generally located north of US 441 and west of NW 147th Drive; Portions of Tax Parcel Numbers 03008-000-000 and 03067-001-000; Future Land Use Map (FLUM) Designations: Moderate Density Residential, and Recreation; Zoning: Residential Single Family -4 (RSF-4), and Agricultural (A).



At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.
