Vice-Chair Joe Hancock
Member Virginia Johns
Member William "Bill" Menadier
Member Keith Vermillion
School Board Member Tina Certain

City Manager Mike DaRoza

Planning and Zoning Board
At 6:00 PM

Meeting Date: June 11, 2024

Meeting Location: James A. Lewis Commission Chambers

Notice given pursuant to Section 286.0105, Florida Statutes. In order to appeal any decision made at this meeting, you will need a verbatim record of the proceedings. It will be your responsibility to ensure such a record is made.

PLANNING AND ZONING BOARD MEETING AGENDA

CALL TO ORDER

INVOCATION

PLEDGE TO THE FLAG

APPROVAL OF THE AGENDA

I. OLD BUSINESS

II. NEW BUSINESS

A. Approval of PZB Meeting Minutes- May 14, 2024

B. Special Exception Permit - Pleasant Solar: A request by Travis Hastay, P.E., of Causseaux,

Hewett, & Walpole, LLC, applicant and agent for Waco Properties, Inc.; Gary D. Brown Trust Dated 1/23/04; Linda Weidner; Joanne Alspaugh; & Henderson Brothers, Inc., property owners, for consideration of a special exception permit to allow a major utility (solar facility) in the Agricultural (A) and Residential Single Family Disrtict-4 (RSF-4) zone districts. The subject property is located at 17920 Peggy Road; FLU: Agriculture, Moderate Density Residential; ZONING: A, RSF-4; Tax Parcel: 03894-000-000, 03898-000-000 (Quasi-Judicial Hearing)

C. Site Plan - Pleasant Solar: A request by Travis Hastay, P.E., of Causseaux, Hewett, & Walpole, LLC, applicant and agent for Waco Properties, Inc.; Gary D. Brown Trust Dated 1/23/04; Linda Weidner; Joanne Alspaugh; & Henderson Brothers, Inc., property owners, for consideration of a site plan proposing the construction of a ± 74.9 MWac solar facility containing ± 248,921 square feet of impervious surface area with associated site improvements on a ± 321.49-acre subject property located at 17920 Peggy Road; FLU: Agriculture, Moderate Density Residential; ZONING: A, RSF-4; Tax Parcel: 03894-000-000, 03898-000-000 (Quasi-Judicial Hearing)

D. Special Exception Permit - Tara Forest West Stormwater Facilities: A request by Christopher Potts, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC, property owner, for consideration of a Special Exception Permit to allow stormwater facilities in a less intense zone district, generally located north of US 441, west of NW 147th Drive, Tara Baywood and Tara Forest East Subdivisions; Consisting of portions of Tax Parcel Number 03067-001-000 and 03008-000-000; FLUM: Recreation; Zoning: Agricultural (A). (Quasi-Judicial Hearing)

E. Preliminary Plat – Tara Forest West: A request by Logan Peters, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC, property owner, for consideration of the Preliminary Plat of the Tara Forest West Subdivision, which proposes the subdivision of a ±198.39 acre subject property into a total of 523 single family lots, with associated common areas and right-of-way, generally located north of US 441,west of NW 147th Drive, Tara Baywood and Tara Forest East Subdivisions; Portions of Tax Parcel Numbers 03067-001-000 and 03008-000-000 (Quasi-Judicial Hearing).

Planning and Zoning Board Meeting Minutes

CALL TO ORDER

Sandy Burgess – Chair 6:00 p.m.

INVOCATION

Led by Chair Burgess

PLEDGE TO THE FLAG

Led by Chair Burgess

APPROVAL OF THE AGENDA

Member Virginia Johns moved to approve the agenda; seconded by Vice Chair Joe Hancock.

Motion passed by unanimous consent.

I. OLD BUSINESS

II. NEW BUSINESS

A. Approval of PZB Meeting Minutes- April 16, 2024

Member Johns moved to approve the minutes from the April 16, 2024 meeting; seconded by Vice Chair Hancock.

Motion passed by unanimous consent.

B. #PCA24-0004 | Certificate of Appropriateness – First United Methodist Church Digital Sign Face: A request by Fred Hilton, Trustee, applicant and agent for First United Methodist Church of Alachua, Inc., property owner, for consideration of a Certificate of Appropriateness for the alteration of an existing structure at 14805 NW 140th Street; Tax Parcel: 03400-000-000 (Quasi-Judicial Hearing).

Carson Crockett, Planner, presented. Received and filed.

Member Keith Vermillion moved that, based on the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, this Board finds the application to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and approves the application for a Certificate of Appropriateness for First United Methodist Church of Alachua, Inc., subject to the one condition provided in "Exhibit A" and located on page 8 of the May 14, 2024 Staff Report to the Planning & Zoning Board; seconded by Vice Chair Hancock.

Motion passed by 5-0 roll call vote.

III. BOARD COMMENTS/DISCUSSION

IV. CITIZENS COMMENTS

ADJOURN

Chair Burgess adjourned the meeting. 6:15 p.m.

City of Alachua
THE GOOD LIFE COMMUNITY

Board/Committee Agenda Item

MEETING DATE: 6/11/2024
SUBJECT: Special Exception Permit - Pleasant Solar: A request by Travis Hastay, P.E., of Causseaux, Hewett, & Walpole, LLC, applicant and agent for Waco Properties, Inc.; Gary D. Brown Trust Dated 1/23/04; Linda Weidner; Joanne Alspaugh; & Henderson Brothers, Inc., property owners, for consideration of a special exception permit to allow a major utility (solar facility) in the Agricultural (A) and Residential Single Family Disrtict-4 (RSF-4) zone districts. The subject property is located at 17920 Peggy Road; FLU: Agriculture, Moderate Density Residential; ZONING: A, RSF-4; Tax Parcel: 03894-000-000, 03898-000-000 (Quasi-Judicial Hearing)

PREPARED BY: Carson J. Crockett, AICP Candidate, Planner

RECOMMENDED ACTION:
Staff recommends that the Planning & Zoning Board approve the Special Exception Permit for a major utility on tax parcels 03894-000-000 and 03898-000-000, subject to the six conditions provided in Exhibit "A" and located on page 21 of the June 11, 2024 Staff Report to the Planning & Zoning Board.

Recommended Motion: *I move based upon the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, that this Board finds the application to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and approves the Special Exception Permit for a major utility on tax parcels 03894-000-000 and 03898-000-000, subject to the six conditions provided in Exhibit "A" and located on page 21 of the June 11, 2024 Staff Report to the Planning & Zoning Board.*

Summary

This application is a request by Travis Hastay, P.E., of Causseaux, Hewett, & Walpole, LLC, applicant and agent for Waco Properties, Inc.; Gary D. Brown Trust Dated 1/23/04; Linda Weidner; Joanne Alspaugh; & Henderson Brothers, Inc., property owners, for consideration of a special exception permit to allow a major utility (solar facility) in the Agricultural (A) and Residential Single Family District-4 (RSF-4) zone districts. The subject property is located at 17920 Peggy Road (tax parcel: 03894-000-000; 03898-000-000).

Table 4.1-1 of the City's Land Development Regulations establishes the uses permitted within each zoning district. Major utilities are permitted by special exception permit in the A and RSF-4 zone districts.

This application for a special exception permit is a companion request to application #PSP23-0011, Pleasant Solar Site Plan Application. The Pleasant Solar Site Plan Application is included with this special exception permit application to demonstrate compliance with the standards for a

with this special exception permit application to demonstrate compliance with the standards for a special exception permit.

City of Alachua
Planning & Community Development Department
Staff Report

Planning & Zoning Board Hearing Date: June 11, 2024
Quasi-Judicial Hearing **Application #: PSE23-0001**

SUBJECT:	A request for a special exception permit to allow a major utility (solar facility) within the Agricultural (A) and Residential Single Family District-4 (RSF-4) zone districts.
APPLICANT/AGENT:	Travis Hastay, P.E., Causseaux, Hewett, & Walpole, LLC
PROPERTY OWNER:	Waco Properties, Inc.; Gary D. Brown Trust Dated 1/23/04; Linda Weidner; Joanne Alspaugh; Henderson Brothers, Inc.
LOCATION:	17920 Peggy Road
PARCEL ID NUMBER:	03894-000-000; 03898-000-000
FLUM DESIGNATION:	Agriculture; Moderate Density Residential
ZONING:	Agricultural (A); Residential Single Family District-4 (RSF-4)
OVERLAY:	N/A
ACREAGE:	± 321.49
PROJECT PLANNER:	Carson J. Crockett, AICP Candidate
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board approve the Special Exception Permit for a major utility on tax parcels 03894-000-000 and 03898-000-000, subject to the six conditions provided in Exhibit "A" and located on page 21 of the June 11, 2024 Staff Report to the Planning & Zoning Board.
RECOMMENDED MOTION:	*I move based upon the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, that this Board finds the application to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and approves the Special Exception Permit for a major utility on tax parcels 03894-000-000 and 03898-000-000, subject to the six conditions provided in Exhibit "A" and located on page 21 of the June 11, 2024 Staff Report to the Planning & Zoning Board.*

SUMMARY

This application is a request by Travis Hastay, P.E., of Causseaux, Hewett, & Walpole, LLC, applicant and agent for Waco Properties, Inc.; Gary D. Brown Trust Dated 1/23/04; Linda Weidner; Joanne Alspaugh; & Henderson Brothers, Inc., property owners, for consideration of a special exception permit to allow a major utility (solar facility) in the Agricultural (A) and Residential Single Family District-4 (RSF-4) zone districts. The subject property is located at 17920 Peggy Road (tax parcel: 03894-000-000; 03898-000-000).

Table 4.1-1 of the City's Land Development Regulations establishes the uses permitted within each zoning district. Major utilities are permitted by special exception permit in the A and RSF-4 zone districts.

Section 2.4.4(A) of the City's Land Development Regulations states that uses that require a special exception permit are those which are, "...generally compatible with the other uses permitted in a zone district, but require individual review of their location, design, configuration, density, intensity, and public facility impact to determine the appropriateness of the use on any particular site in the district and their compatibility with adjacent uses." Once a special exception permit is granted, the approval runs with the land and is not affected by a change in ownership, unless specifically conditioned as part of the approval.

This application for a special exception permit is a companion request to application #PSP23-0011, Pleasant Solar Site Plan Application. The Pleasant Solar Site Plan Application is included with this special exception permit application to demonstrate compliance with the standards for a special exception permit.

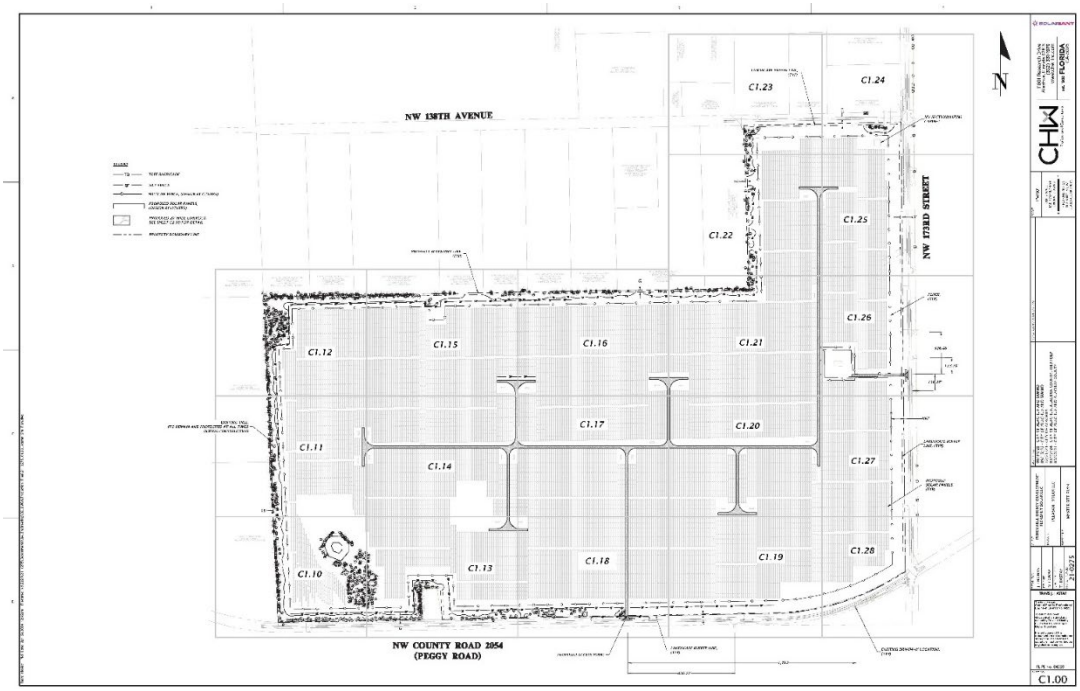

Figure 1. Proposed Site Plan Overview

SURROUNDING USES

The existing uses, Future Land Use Map (FLUM) designations, and zoning districts of the surrounding area are identified in Table 1. Figure 2 provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. The information below is not intended to be all-inclusive, and may not identify all existing uses, FLUM designations, and/or zoning districts surrounding the subject property.)

Table 1. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Agriculture; Single-family residential	Rural/Agriculture (County)	Agricultural (A) (County)
South	Single-family residential; Warehouse & distribution	Agriculture; Industrial	Agricultural (A); General Industrial (IG)
East	Single-family residential	Agriculture	Agricultural (A)
West	Agriculture; Single-family residential	Rural/Agriculture (County)	Agricultural (A) (County)

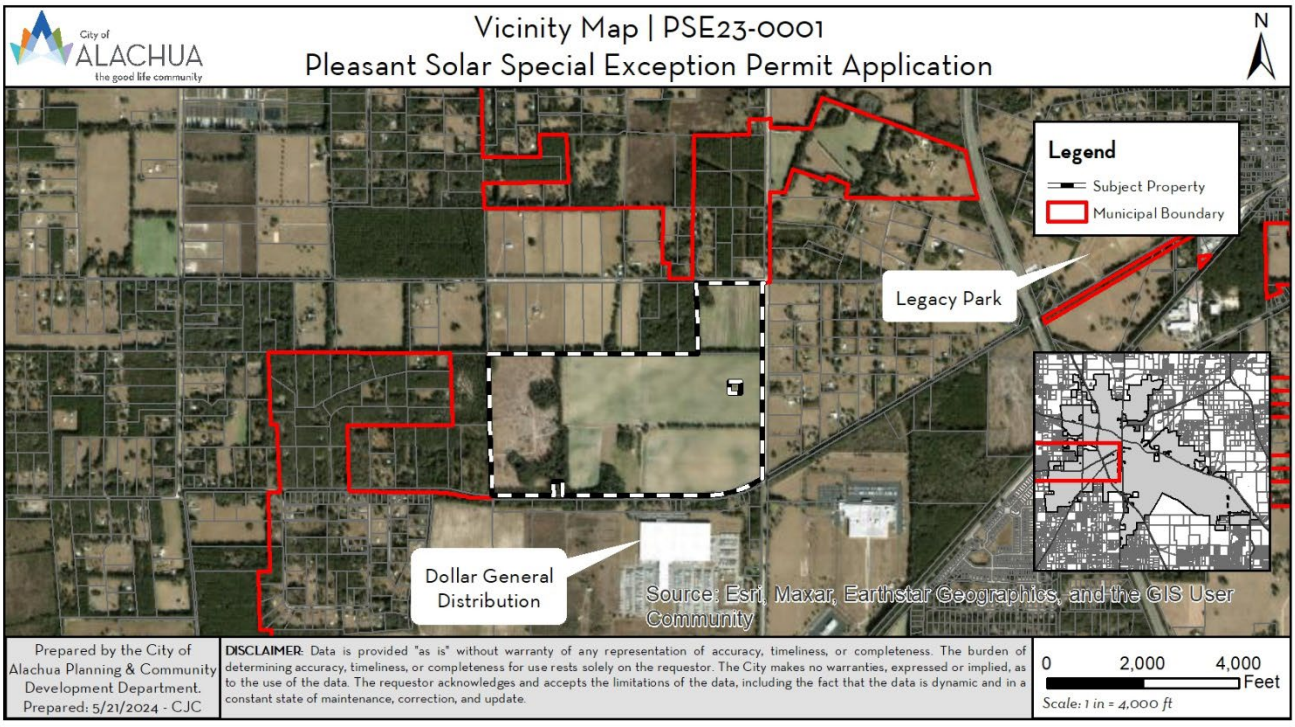

Figure 2. Vicinity Map

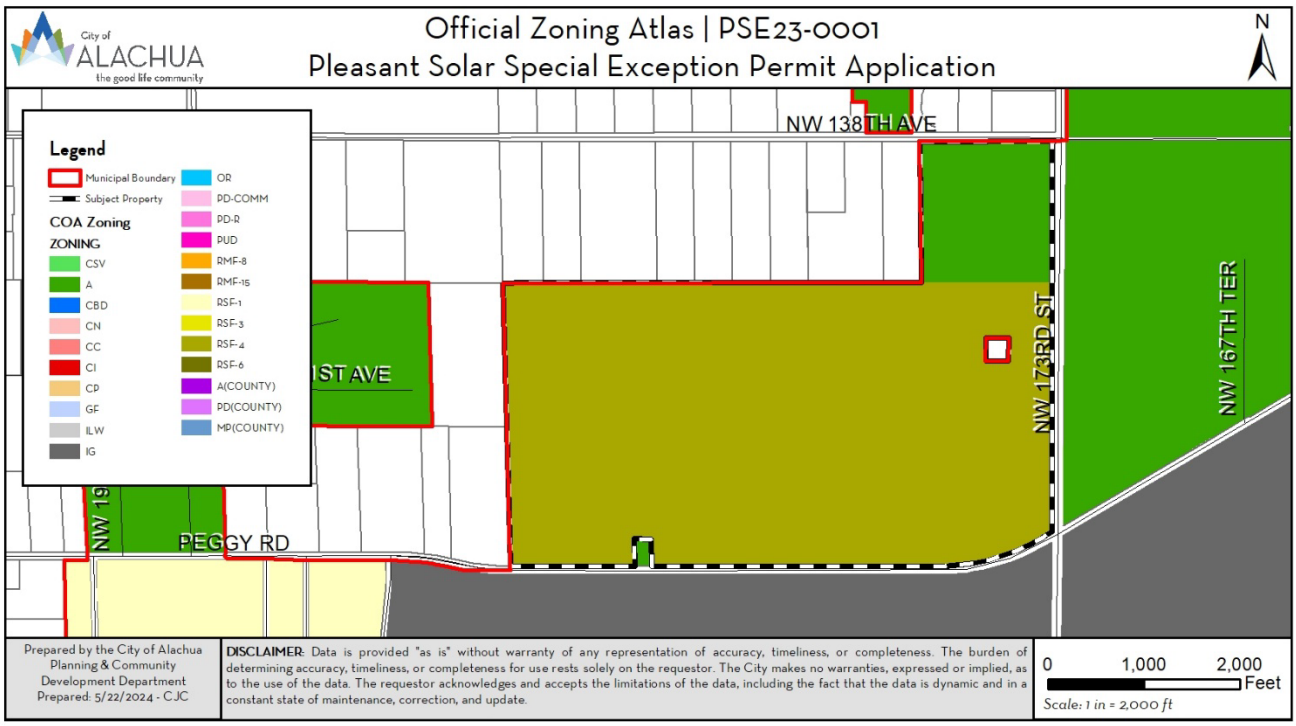

Figure 3. Zoning Map

NEIGHBORHOOD MEETING

The purpose of a neighborhood meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. Neighborhood meetings are required for special exception permit applications.

A neighborhood meeting was held on April 27, 2022 at 11801 Research Drive, Alachua Fl 32615 (CHW Office). As required by Section 2.4.4 of the City's Land Development Regulations, all property owners within 400 feet of the subject property were notified and notice of the meeting was published in a newspaper of general circulation. The applicant was available to answer questions. Materials submitted by the applicant indicate that the meeting was attended by 10 members of the public.

An additional neighborhood meeting was held on August 18, 2022 at 11801 Research Drive, Alachua Fl 32615 (CHW Office). The applicant was available to answer questions. Materials submitted by the applicant indicate that the meeting was attended by 16 members of the public.

Neighborhood meeting summaries are available for inspection and are included as part of the application materials.

COMPRHENSIVE PLAN CONSISTENCY ANALYSIS

The Goals, Objectives, and Policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

Future Land Use Element

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.1: *Agriculture*

The City shall establish an Agriculture land use category in order to maintain agriculture operations within the city limits as well as preserve the rural character and small-town charm of Alachua.

Evaluation & Findings – Objective 1.1: State Statute 163.3205 establishes a solar facility as a permitted use in all agricultural land use categories in a local government comprehensive plan. The proposed special exception use is consistent with the uses permitted within the Agriculture land use category (solar facility).

Objective 5.1: *Natural features*

The City shall coordinate land use categories with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.a: *Topography*: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Policy 5.1.b: *Soils*: The City shall ensure soil protection and intervention measures are included in the development review process.

Policy 5.1.c: *Flood prone areas*: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d: *Wetlands*: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Policy 5.1.e: *Habitat*: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory may be established in the City's Land Development Regulations.

Evaluation & Findings – Policy 1.2.b: An environmental conditions analysis has been included within this staff report. Based upon a wetland delineation completed by TRC Environmental Corporation in December of 2022, a ± 0.12-acre wetland is present on the site. The wetland has been sufficiently buffered and is proposed to remain. Based on the best available data, there are no other significant environmental resources that could limit or impact development.

Transportation Element

Objective 1.1: *Level of Service*

The City shall establish a safe, convenient, and efficient level of service standard for all motorized and non-motorized transportation systems.

Evaluation & Findings – Objective 1.1: An analysis of the impacts to transportation facilities has been provided within this report. The proposed special exception use will not result in a decrease in the level of service for transportation facilities monitored for concurrency.

Community Facilities Element

Policy 1.1.d: The City hereby establishes the following level of service standards for sanitary sewer facilities:

Wastewater System Levels of Service

a) *Quality*: Compliance with all applicable standards of the U.S. Environmental Protection Agency (EPA) and the Florida Department of Environmental Protection (FDEP).
b) *Quantity*: System-wide wastewater collection and treatment will be sufficient to provide a minimum of 250 gallons per day per equivalent residential unit (ERU) on an average annual basis. Plant expansion shall be planned in accordance with Rule 62-600.405, Florida Administrative Code, or subsequent provision.
c) *System capacity*: If the existing demand and reserved capacity of the committed use of the City's wastewater facility reaches 85% of the permitted capacity design, no further development orders for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement.

Evaluation & Findings – Policy 1.1.d: An analysis of the impacts to wastewater facilities has been provided within this report. The proposed special exception use will not result in a decrease in the level of service for wastewater facilities monitored for concurrency.

Objective 2.1: *Solid Waste Level of Service Standards and Implementation*

The City shall continue to ensure satisfactory and economical solid waste service for all City residents with an emphasis on reuse and recycling.

Policy 2.1.a: The City hereby establishes the following level of service for solid waste disposal facilities for residential uses:

Facility Type	Level of Service Standard
Solid Waste Landfill	0.73 tons per capita per year

Evaluation & Findings – Objective 2.1 and Policy 2.1.a: An analysis of the impacts to solid waste facilities has been provided within this report. The proposed special exception use will not result in a decrease in the level of service for solid waste facilities monitored for concurrency.

Policy 4.1.c: The City shall establish the following level of service standards for potable water:

1. *Quality*: Compliance with all applicable standards of the U.S. Environmental Protection Agency (EPA) and the Florida Department of Environmental Protection.
2. *Quantity*: System-wide potable water distribution and treatment will be sufficient to provide a minimum of 275 gallons per day per equivalent residential unit (ERU) on an average annual basis.
3. *Capacity*: Plant expansion shall be planned in accordance with Florida Administrative Code. Additionally, if the existing demand and reserved capacity of the City's potable water facility reach 85% of the permitted design capacity, no further development orders or permits for projects without reserved capacity will be issued until additional capacity becomes available or funds to increase facility capacity are committed in accordance with a development agreement.

Evaluation & Findings – Policy 4.1.c: An analysis of the impacts to potable water facilities has been provided within this report. The proposed special exception use will not result in a decrease in the level of service for potable water facilities monitored for concurrency.

Conservation and Open Space Element

Objective 1.10: *Wetlands*

The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrological disturbances.

Evaluation & Findings – Objective 1.10: An environmental conditions analysis has been included within this staff report. Based upon a wetland delineation completed by TRC Environmental Corporation in December of 2022, a ± 0.12-acre wetland is present on the site. The wetland has been sufficiently buffered and is proposed to remain.

ENVIRONMENTAL CONDITIONS ANALYSIS

Wetlands

Wetlands are areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal conditions do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas.

Evaluation & Findings: Based upon a wetland delineation completed by TRC Environmental Corporation in December of 2022, a ± 0.12-acre wetland is present on the subject property. The wetland has been sufficiently buffered and is proposed to remain.

Strategic Ecosystems

Strategic ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1987 and updated in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation & Findings: The subject property is not located within or adjacent to a strategic ecosystem, therefore, the proposed special exception use will have no impact upon any strategic ecosystems identified within the ecological inventory report.

Regulated Plant & Animal Species

The Florida Natural Areas Inventory (FNAI) has identified areas throughout the State of Florida which may contain good quality natural communities. This data layer is known as the Potential Natural Areas (PNA) data layer, and identifies privately owned lands that are not managed or listed for conservation purposes. These areas were delineated by FNAI scientific staff through interpretation of natural vegetation from 1988-1993 FDOT aerial photographs and from input received during Regional Ecological Workshops held for each regional planning council. These workshops were attended by experts familiar with natural areas in the region.

Potential Natural Areas were assigned ranks of Priority 1 through Priority 5 based on size, perceived quality, and type of natural community present. The areas included in Priority 5 are exceptions to the above criteria. These areas were identified through the same process of aerial photographic interpretation and regional workshops as the PNA 1 through 4 ranked sites, but do not meet the standard criteria.

Evaluation & Findings: No species identified as endangered, threatened, or of special concern are known to exist on the subject property. A western portion of the subject property is identified as FNAI Priority 5. If a regulated plant or animal species is identified during development, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and Land Development Regulations.

Soil Survey

The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff.) There are four hydrologic groups: A, B, C, and D. "Group A" soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. "Group D" soils have a lower infiltration rate and therefore a higher runoff potential.

There are nine soil types found within the subject property, shown in Table 2.

Table 2. Soil Types

Soil Type	Hydrologic Group	Drainage Class	Limitations		% of Subject Property (may not total to 100% due to rounding)
			Dwellings Without Basements	Small Commercial Buildings	
Arredondo Fine Sand, 0 to 5% Slope	A	Well drained	Slight	Slight	53.66
Fort Meade Fine Sand, 0 to 5% Slope	A	Well drained	Slight	Slight	14.29
Gainesville Sand, 0 to 5% Slope	A	Well drained	Slight	Slight	10.87
Kendrick Sand, 2 to 5% Slope	A	Well drained	Slight	Slight	7.45
Millhopper Sand, 0 to 5% Slope	A	Moderately well drained	Slight	Slight	6.31
Arredondo Fine Sand, 5 to 8% Slope	A	Well drained	Slight	Moderate: slope	3.61
Lochloosa Fine Sand, 2 to 5% Slope	C	Somewhat poorly drained	Slight	Slight	2.53
Bivans Sand, 5 to 8% Slope	D	Poorly drained	Severe: wetness, shrink-swell	Severe: wetness, shrink-swell	1.01
Lake Fine Sand, 0 to 5% Slope	A	Excessively drained	Slight	Slight	0.27

Evaluation & Findings: The soil types present on the subject property do not pose any significant limitations for the proposed special exception use.

Flood Potential

Panel 12001C0120D of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated June 16, 2006 indicates that the development area is in Flood Zone X (areas determined to be outside of the 500-year floodplain).

Evaluation & Findings: The subject property is located in Flood Zone X (areas determined to be outside of the 500-year floodplain) and there are no issues related to flood potential.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations.

Evaluation & Findings: The subject property is located within an area designated by the Suwannee River Water Management District (SRWMD) High Aquifer Recharge Map (HARP) as an area with a high aquifer recharge potential. Additionally, best available data indicates five potential sinkholes on the subject property. A Geotechnical Engineering Report prepared by GSE Engineering & Consulting, Inc. concludes that the potential sink holes appear to be relic sinkholes and that the "risk for sinkhole development at this site is lower than what would be expected for the general area of Alachua County."

Wellfield Protection Zones

Policy 7.2.1 of the Future Land Use Element of the City's Comprehensive Plan establishes a 500-foot radius area around each city-owned potable water well.

Evaluation & Findings: The subject property is not located within a City of Alachua wellfield protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the City's Comprehensive Plan and there are no issues related to wellfield protection.

Historic Structures/Markers and Historic Features

The State of Florida and the Alachua County Historic Resources Inventory identify historic structures in addition to the City's Historic Overlay District, as established by Section 3.7 of the City's Land Development Regulations.

Evaluation & Findings: The subject property is not within the City's Historic Overlay District and the State of Florida and Alachua County Historic Resources Inventory note no historic structure or markers on the subject property.

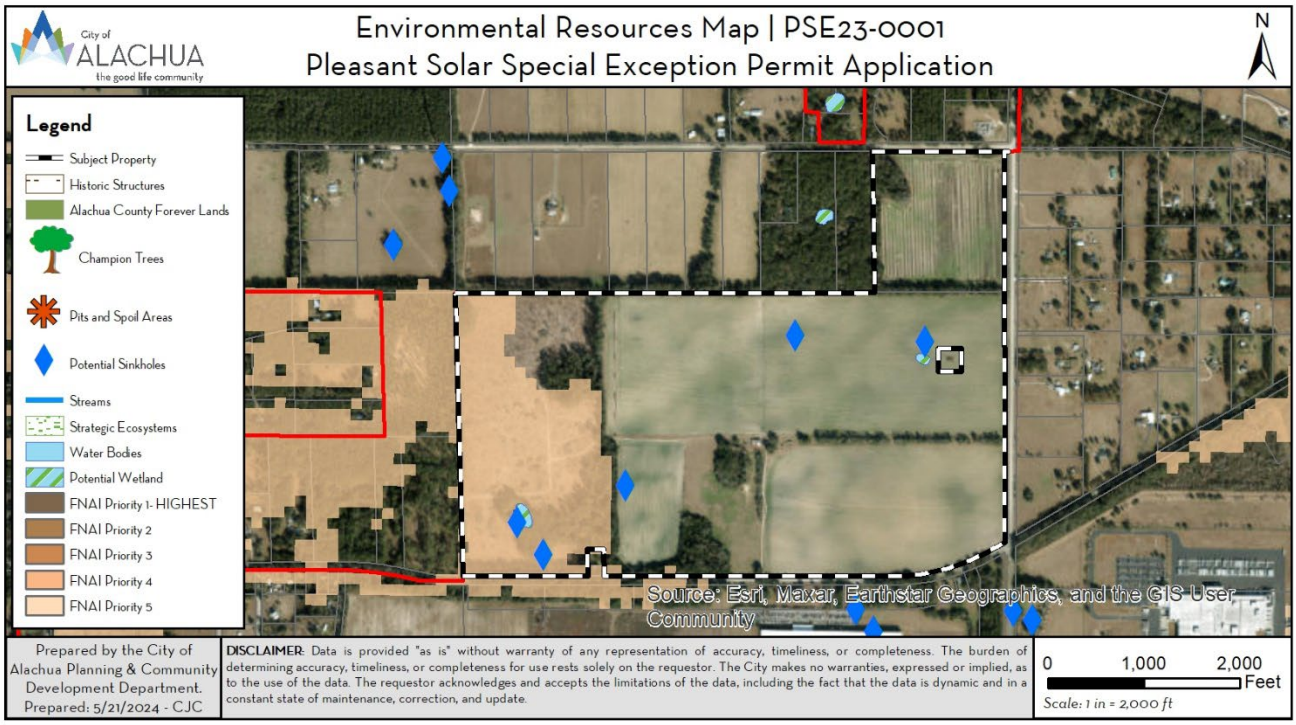

Figure 4. Environmental Resources Map

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

Special Exception Permit Standards

Section 2.4.4(D) of the City's Land Development Regulations (LDRs) establishes the standards for the approval of special exception permit applications. The application has been reviewed for compliance with the standards of Section 2.4.4(D). An evaluation of the findings of the applicant's compliance with the standards of Section 2.4.4(D) is provided below.

(D) Special exception standards. A special exception permit shall be approved only upon a finding the applicant demonstrates all the following standards are met:

(1) ***Complies with use specific regulations***. The proposed special exception complies with all relevant standards in Section 4.3, Use specific standards, or Section 5.2.3(B), as applicable.

Evaluation & Findings: Use specific standards for a major utility use are established in Section 4.3.2(I)(3) of the City's Land Development Regulations. The applicant has demonstrated compliance with all use specific standards.

(2) ***Compatibility***. The proposed special exception is appropriate for its location and compatible with the character of surrounding lands and the uses permitted in the zone district.

Evaluation & Findings: Compatibility is defined by the City's Comprehensive Plan as "a condition in which land uses or conditions can coexist in relative proximity to each other in a stable fashion over time such that no use or condition is unduly negatively impacted directly or indirectly by another use or condition." The proposed use is located along two major collector roadways (CR 235A and CR2054), primarily adjacent to industrial and agricultural uses with some single-family residential use adjacency as demonstrated in the Surrounding Uses section of this report. The applicant contends that the proposed use has been sufficiently buffered by more than 100 feet of distance from property lines and landscape screening. The proposed use is not anticipated to have a negative impact on the existing residential uses, agricultural uses, or industrial uses in close proximity.

(3) ***Design minimizes adverse impacts***. The design of the proposed special exception minimizes adverse effects, including visual impacts of the proposed use on adjacent lands; furthermore, the proposed special exception avoids significant adverse impact on surrounding lands regarding service delivery, parking and loading, odors, noise, glare, and vibration, and does not create a nuisance.

Evaluation & Findings: The design of the site and location of the proposed use are expected to have limited impacts on surrounding uses. Visual impacts are to be mitigated through landscape buffering. The applicant has provided a Noise Study demonstrating no adverse impacts related to noise are anticipated. The applicant contends that no impacts related to appearance, service delivery, parking and loading, odors, noise, glare, and vibration are anticipated.

(4) ***Design minimizes environmental impacts***. The proposed special exception minimizes environmental impacts and does not cause significant deterioration of light, water and air resources, wildlife habitat, stormwater management, scenic resources, and other natural resources.

Evaluation & Findings: The applicant has provided a Wetland and Waterbody Delineation Report identifying one wetland to be sufficiently buffered and proposed to remain. The applicant has also provided a Threatened and Endangered Species Habitat Assessment Report that identified no known threatened or endangered species residing on the subject property. If a regulated plant or animal species is identified during development, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and Land Development Regulations. There are no significant environmental impacts anticipated which would result from the special exception.

(5) ***Roads and other public facilities***. There is adequate public facility capacity available to serve the proposed special exception, and the proposed special exception use is designed to ensure safe ingress and egress onto the site and safe road conditions around the site.

Evaluation & Findings: A public facilities impact analysis has been included within this staff report. The proposed use is to be an unmanned facility except for occasional maintenance. De minimis impacts are anticipated on public facilities.

(6) ***Not injure neighboring land or property values***. The proposed special exception will not substantially injure the use of neighboring land for those uses that are permitted in the zone district, or reduce land values.

Evaluation & Findings: The applicant has provided a Property Value Impact Study demonstrating no adverse impacts to property values are anticipated. The proposed use is not anticipated to injure neighboring land or property values.

(7) ***Drawings***. A site plan (Subsection 2.4.9 of this section) or preliminary plat (Subsection 2.4.10(G)(3) of this section) has been prepared that demonstrates how the proposed special exception use complies with the other standards of this subsection.

Evaluation & Findings: #PSP23-0011, Pleasant Solar Site Plan Application has been submitted and reviewed concurrently with this special exception permit application. The site plan demonstrates that the proposed use complies with the applicable requirements of the City's Land Development Regulations, including the standards of Section 2.4.4(D).

(8) ***Complies with all other relevant laws and ordinances***. The proposed special exception use complies with all other relevant City laws and ordinances, State and Federal laws, and regulations.

Evaluation & Findings: The application is found to comply with all other applicable City laws and ordinances, State and Federal laws, and regulations.

PUBLIC FACILITIES IMPACT ANALYSIS

Section 2.4.4(D)(5) of the City's Land Development Regulations establishes the standard that there must be adequate public facility capacity available to serve a proposed special exception. The application has been reviewed for impacts to roads, sanitary sewer, solid waste, stormwater management, potable water, and recreation facilities to ensure the application's potential impacts do not negatively impact the level of service (LOS) for those public facilities. De minimis impacts are anticipated on public facilities.

Traffic Impact

The following impacts are expected on the roadway segments identified in Table 3-1.

Table 3-1. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2]	Segment Description	Lanes	Functional Classification	Area Type	LOS
14	CR 2054, From SR 235 to the West City Limit	2	Major Collector	Comm	D
17	CR 235A, From US Hwy 441 to CR 235	2	Major Collector	Comm	D

1 City of Alachua Comprehensive Plan, Transportation Element.
2 For developments generating less than 1,000 trips, affected roadway segments are identified as all those wholly or partially located within 1/2 mile of the development's ingress/egress, or to the nearest intersecting major street, whichever is greater [Section 2.4.14(H)(2)(a)of the LDRs].

Table 3-2. Projected Impact on Affected Comprehensive Plan Roadway Segment 14

Traffic System Category	Segment 14 CR 2054, From SR 235 to the West City Limit	
	AADT	Peak Hour
Maximum Service Volume[1]	15,120	1,359
Existing Traffic[2]	2,498	237
Reserved Trips[3]	661	0

Available Capacity[3]	5,998	463
Increase/Decrease in Trips Generated by Development[4]	1	0
Residual Capacity	5,217	463
Residual Percentage of Permitted Design Capacity Utilized	60.34%	65.91%

1 AADT & Peak Hour MSVs calculated using LOSPLAN 2012. County Facilities reflect a 10 percent reduction in the MSV calculated within LOSPLAN 2012 as set forth in the Generalized Tables for AADT / Peak Hour Volumes, FDOT 2018 Q/LOS Handbook.
2 Florida Department of Transportation. (2024). *2023 Count Data*. Accessed via Florida Traffic Online April 2024.
3 Source: City of Alachua May 2024 Development Monitoring Report.
4 Trip Generation Formula: Projected Trip Generation: Unmanned facility, 1 trip monthly; Trip Distribution: Segment 17 – 100%.

Evaluation & Findings: The proposed site plan is not anticipated to adversely impact the level of service of the affected roadway segments.

Potable Water Impacts

Table 4. Potable Water Impacts

System Category	Gallons Per Day
Current Permitted Capacity[1]	2,300,000
Less Actual Potable Water Flows[1]	1,548,250
Reserved Capacity[2]	401,945
Available Capacity	349,805
Increase/Decrease in Potable Water Demand from Application[3]	0
Residual Capacity	349,805
Residual Percentage of Permitted Design Capacity Utilized	84.79%

1 City of Alachua Public Services Department, April 2024
2 City of Alachua May 2024 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 4.1.c(2): 275 GPD / Unit

Evaluation & Findings: The proposed site plan is not anticipated to adversely impact the level of service of the City's potable water facilities.

Sanitary Sewer Impacts

Table 5. Sanitary Sewer Impacts

System Category	Gallons Per Day
Treatment Plant Permitted Capacity[1]	1,500,000
Less Actual Treatment Plant Flows[1]	764,000
Reserved Capacity[2]	376,009
Available Capacity	359,991
Increase/Decrease in Sanitary Sewer Demand from Application[3]	0
Residual Capacity	359,991
Residual Percentage of Permitted Design Capacity Utilized	76.00%

1 City of Alachua Public Services Department, April 2024
2 City of Alachua May 2024 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 1.1.d(b): 250 GPD / Unit

Evaluation & Findings: The proposed site plan is not anticipated to adversely impact the level of service of the City's wastewater facilities.

Solid Waste Impacts

Table 6. Solid Waste Impacts

System Category	Pounds Per Day	Tons Per Year
Existing Demand[1]	44,060.00	8,040.95
Reserved Capacity[2]	47,884.21	8,738.87
Increase/Decrease in Demand Generated by Application[3]	0	0
New River Solid Waste Facility Anticipated Capacity[4]	50+ Years	

1 Bureau of Economic & Business Research, University of Florida, Estimates of Population by County and City in Florida (2023); Policy 2.1.a, Community Facilities Element. Formula: 11,015 Persons x 0.73 tons per year.
2 City of Alachua May 2024 Development Monitoring Report
3 Formula: Per City of Alachua Comprehensive Plan, Community Facilities Element Policy 2.1.a: 0.73 tons / year per capita
4 New River Solid Waste Association, April 2024

Evaluation & Findings: The proposed site plan is not anticipated to adversely impact the level of service of solid waste facilities.

Recreation Facilities

The proposed development is a nonresidential development. Therefore, there are no impacts to recreation facilities. The development will have no impact to the level of service of recreation facilities.

Public School Facilities

The proposed development is a nonresidential development. Therefore, there are no impacts to public school facilities. The development will have no impact to the level of service of public school facilities.

SPECIAL EXCEPTION PERMIT APPLICATION
STAFF REPORT

CONDITIONS

1. The applicant acknowledges and agrees that construction activities associated with any approval or permit issued as part of the site plan and special exception permit shall occur subject to the following:
    a. All staging areas for construction equipment, vehicles, and materials for installation must be internal to the site;
    b. Construction activities may only occur between the hours of 7:00 AM and 7:00 PM, Monday through Friday and between the hours of 9:00 AM and 7:00 PM, Saturday and Sunday;
    c. Dust and debris from construction activities must be minimized as to not spread dust and debris off-site. This may include, but is not limited to, dust control achieved through water trucks, removal of mud/soil from vehicle tires before exiting the site, and street cleaning; and,
    d. Any lighting required for construction activities must be shielded and/or directed as to not spill light to off-site areas or adjacent properties and rights-of-way. Lighting may only be used during the restricted hours of construction activities, except minimal security lighting, which may be used outside the restricted hours of construction only such that no disturbances or light spill to off-site areas or adjacent properties and rights-of-way occur.
2. The applicant acknowledges and agrees that the submitted Decommissioning Plan and signed memorandum are incorporated as part of the site plan.
3. The applicant acknowledges and agrees that no construction or pre-construction activities in any way related to the site plan and special exception permit shall commence until the approved Decommissioning Plan and signed memorandum have been recorded in the public Records of Alachua County, Florida to run with the land as a restrictive covenant and a recorded copy has been provided to the City of Alachua. The City of Alachua shall hold the original approved site plan until this condition has been met. The applicant is responsible for all costs associated with recording the Decommissioning Plan in the Public Records of Alachua County, Florida.
4. The applicant acknowledges and agrees that decommissioning to address the cease of operations of the facility must commence within 180 days of the cease of operations. Decommissioning must be completed within 180 days of commencement. Extensions may be granted in 30 day increments by showing of good cause to the City of Alachua LDR Administrator. Extensions must be requested at least 30 days prior to the expiration.

5. The applicant acknowledges and agrees that the applicant and owner will obtain all other applicable local, state, and federal permits before the commencement of site work.
6. The applicant acknowledges and agrees that Conditions 1-5 as stated above do not inordinately burden the land and shall be binding upon the property owners, including any subsequent property owners, successors, or assigns, and that the special exception permit shall comply with Conditions 1-6 as stated herein.

RE: Notice of Hearing to be Scheduled for Pleasant Solar Site Plan and Special Exception Permit Applications

Dear Mr. Hastay,

On May 2, 2024, the City of Alachua received your revised site plan and special exception permit applications for the Pleasant Solar project submitted on behalf of Waco Properties, Inc., and Alspaugh & Brown Trustee & Henderson Brothers Inc. & Weidner. Based on review of the materials submitted, the City has determined that this application can now be scheduled for a hearing before the Planning & Zoning Board.

The application has been scheduled for the **June 11, 2024** Planning & Zoning Board meeting.

You must provide two *double sided, three-hole punched, color sets* of each **complete** application package (two site plan and two special exception permit sets), seven full size sets of site plans, and a digital copy of all materials in PDF format on a CD or by emailing a Cloud/FTP link to download the materials to planning@cityofalachua.org *no later than 10 business days prior to the Planning & Zoning Board meeting at which you application is scheduled to be heard*; therefore, the above referenced materials must be submitted to the City no later than ***Thursday, May 23, 2024***. Materials may be submitted earlier than this date.

Additionally, Section 2.2.9(D) of the Land Development Regulations requires the applicant to place posted notice signs on the subject property at least 14 days prior to the public hearing; therefore, posted notice signs must be placed on the property no later than ***Tuesday, May 28, 2024***. You will be notified when the signs are available for pick up.

If you plan to utilize a PowerPoint presentation or would like other materials to be available for reference during the public hearing, please submit the presentation or materials no later than 12:00 PM on the last business day prior to the Planning & Zoning Board meeting; therefore, the presentation or materials must be submitted no later than 12:00 PM on ***Monday, June 10, 2024***. Any presentation or materials may be submitted electronically by emailing them to planning@cityofalachua.org.

If you have any questions regarding the information above, please contact me at (386) 418-6137 or via email at ccrockett@cityofalachua.org.

Sincerely,

Carson J. Crockett, AICP Candidate

RE: Project Assistance Team (PAT) Comments for Pleasant Solar Site Plan and Special Exception Permit Applications

Dear Mr. Hastay,

On March 11, 2024, the City of Alachua received your revised site plan and special exception permit applications for the Pleasant Solar project, which proposes the construction of a ± 74.9 MWac solar facility containing approximately ± 248,921 square feet of impervious surface area with associated site improvements on a ± 321.49-acre subject property (tax parcel: 03894-000-000; 03898-000-000). This letter address both the site plan and special exception permit applications.

The application has been reviewed by the City's Planning Assistance Team (PAT). Upon review of the application materials, the following insufficiencies must be addressed. A meeting is scheduled for **10:00 AM on Thursday, April 11, 2024** to review these comments.

Please address all insufficiencies in writing and provide an indication as to how they have been addressed by **5:00 PM on Thursday, May 2, 2024**. A total of four copies of the application package, plans, and a digital copy of all materials in PDF format on a CD or sent by emailing a Cloud/FTP link must be provided by this date. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the Planning & Zoning Board. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time. If all comments are addressed by the resubmission date above, the application may be scheduled for the **June, 2024 Planning & Zoning Board (PZB) Meeting**.

Pursuant to Resolution 20-13, application fees include two (2) PAT reviews, and the reviews associated with each resubmittal to confirm that comments were addressed. **Please note, if an additional PAT review is required, a surcharge of 25% of the site plan application fee and special exception permit application fee will be assessed for the additional PAT review (site plan application fee - $2,700; 25% surcharge - $675; special exception permit application fee - $2,000; 25% surcharge - $500).** You will be notified if an additional PAT review is required, and the surcharge must be paid prior to any further review of the application.

Address the following insufficiencies:

Remaining Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations **

3. **Article 2 – Administration**
   a. Section 2.4.4 – Special exception permit
      iv. Section 2.4.4(D)(4)
         2. The application materials refer to the ability to restore the site to natural conditions at the end of the project lifespan (20-40 years). Provide a preliminary decommissioning plan with more specific information such as contact information for all parties involved, any recycling of PV modules or other components, handling of potentially hazardous waste, conditions under which decommissioning will take place, time period of decommissioning, scope of work, the responsibilities of all parties involved, and contingencies should the owner or operator fail to deliver the decommissioning plan.
            Applicant Response: Pleasant Solar LLC has provided a preliminary Decommissioning Plan, which is included in this resubmittal package. The Decommissioning Plan is also addressed in the revised Special Exception Report.
            Remaining Deficiency: Address contingencies should the owner or operator fail to deliver the decommissioning plan.

5. **Article 6 – Development Standards**
   a. Section 6.2 – Tree protection and landscaping standards
      i. Ensure proposed tree barriers and proposed fencing on sheets LS-15, LS-16, LS-17, LS-19, and LS-21 do not conflict with trees proposed for preservation or planting. Refer to Section 6.2.1(D)(2) and adjust as needed.

         Applicant Response: Conflicts between fencing and protected trees have been resolved and plans have been updated.

         Remaining Deficiency: One tree to be preserved is located within the 25-foot fire access on sheet LS-16. Revise as necessary.

iv. Utility, major is categorized as a public and institutional use. Update the site landscape calculations to reflect the standards under Section 6.2.2(D)(1)(b) and provide required plantings.

Applicant Response: Site landscape calculations have been revised for public/institutional use. See revised Landscape Plans.

Remaining Deficiency: Update code reference on site landscape calculations table to 6.2.2(D)(1)(b).

b. Section 6.3 – Fencing standards

iii. Section 6.3.3, Height

2. In residential districts, any fence installed in a front yard shall be no greater than 50 percent opacity. Update the front yard fence in the residential district to be no greater than 50 percent opacity.

Applicant Response: This major utility/ solar collection facility is allowed by Special Exception in this district. The fence height requirement is regulated by the National Electrical Code (NEC).

Remaining Deficiency: Applicant's response does not address opacity requirement.

v. Section 6.3.5 prohibits chain link fences when visible from the public right-of-way or when located on any land other than land with a residential zoning designation. Black or green vinyl coated chain link are permitted when not visible from an arterial or collector roadway. Refer to section 6.3.5(A) for allowed materials.

Applicant Response: The black vinyl coated chain link fence with privacy slats is located 130 feet from the collector streets, CR 235A and Peggy Road, and is fully screened by a continuous hedge and hundreds of trees.

Remaining Deficiency: The proposed fencing will be visible from CR235A and Peggy Road at the time of installation and will potentially remain visible for multiple years as evidenced by the provided "Landscape Perspective A". Provide fencing consisting of permitted materials.

f. Section 6.9 – Environmental protection standards

i. Show wetland boundaries and provided wetland buffer areas on site plan.

Applicant Response: Buffers have been added to the site plans.

Remaining Deficiency: Buffers shown are 25 feet. The minimum required wetland buffer for a wetland under 0.5-ac in area that does not support federally and/or state regulated vertebrae wetland/aquatic dependent animal species is 35 feet with an average buffer width of 50 feet. Revise provided buffer.

Additional Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations **

1. **Article 6 – Development Standards**
   a. Section 6.2 – Tree protection and landscaping standards
      i. Per Section 6.2.1(D)(6)(a) and Section 6.2.2(D)(4), any existing canopy or understory tree proposed to count towards site landscaping or buffer requirements must be in very good to excellent health and a table displaying a list of all trees claimed for credits under this subsection shall be included in the landscape plan, including common name, botanical name, caliper at DBH, health, number of credits, and reference number to location on a tree survey as part of the landscape plan.
      ii. Sheet LS-2 does not contain the required continuous hedge per the alternative landscape plan. Provide continuous hedge.
      iii. Sheet LS-15 does not contain the required continuous hedge per the alternative landscape plan. Provide continuous hedge.
      iv. Cemetery buffer displays "Mrs. Shiller's Delight Viburnum" (VOS). Per the alternative landscape plan, provide "Sweet Viburnum" (VO).
   b. Section 6.3 – Fencing standards
      i. Fencing plan depicts a gate present on the access road to the cemetery enclave, but it has not been depicted on any other sheet or previous submittals. Clarify if this gate will be present or not.
2. **Outside Review**
   a. Review and address comments from City of Alachua Public Services dated 04/01/2024 (attached).
   b. Review and address comments from Alachua County Fire Rescue dated 03/20/2024 (attached).
3. **Miscellaneous**
   a. Provide updated proof of payment of taxes for year 2023.
   b. Review proposed conditions as part of the special exception permit.

Proposed Conditions as Part of the Special Exception Permit

1. Construction activities associated with any approval or permit issued as part of the site plan and special exception permit shall occur subject to the following:
   a. All staging areas for construction equipment, vehicles, and materials for installation must be internal to the site;
   b. Construction activities may only occur between the hours of 7:00 AM and 7:00 PM, Monday through Friday and between the hours of 9:00 AM and 7:00 PM, Saturday and Sunday;
   c. Dust and debris from construction activities must be minimized as to not spread dust and debris off-site. This may include, but is not limited to, dust control achieved through water trucks, removal of mud/soil from vehicle tires before exiting the site, and street cleaning; and,
   d. Any lighting required for construction activities must be shielded and/or directed as to not spill light to off-site areas or adjacent properties and rights-of-way. Lighting may only be used during the restricted hours of construction activities, except for minimal security lighting, which may be used outside of the restricted hours of construction only such that no disturbances or light spill to off-site areas or adjacent properties and rights-of-way occur.
2. Establishment and approval of required tree banking in lieu of on-site tree mitigation will occur as a resolution separate from the site plan and special exception permit approvals in accordance with Section 6.2.1(D)(7) of the City of Alachua Land Development Regulations. Payment of the fee for off-site tree mitigation established in the aforementioned resolution must be paid prior to the commencement of any construction activities, or the issuance of any permit, associated with any approval or permit issued as part of the site plan and special exception permit.

If you have any questions regarding the information above, please contact me at (386) 418-6137 or via email at ccrockett@cityofalachua.org. We look forward to receiving your revised application.

Sincerely,

Carson J. Crockett, AICP Candidate

RE: **Pleasant Solar Site Plan**

Public Services has reviewed the subject project (March 2024 Documents) and offer the following comments. Review was specific to the Public Services Utilities.

NO.	COMMENTS
A	**Meaning of Conditional Approval** Please address the following comments. Rather than submitting a complete hard copy set, the design engineer has the option of (1) to instead forward to Public Services and Planning by email the revised pdf of this sheet. (Public Services contact is Tom Ridgik, th_ridgik@cityofalachua. org) or (2) to provide a link so Public Services and Planning can download the complete PDF set. Public Services would then review this sheet, presumably approve it and so notify the Planning Department.)
1	**Comment on Sept 12 Submittal** **Sheet C0.00** To be consistent with COA planning terminology, please change "CONSTRUCTION DOCUMENTS" to "SITE PLANS". Please **Revise & Resubmit** this sheet.

NO.	COMMENTS
	Comment on March 11 Submittal **Sheet C0.00** The above comment does not appear to have been addressed, and is repeated below: To be consistent with COA planning terminology, please change "CONSTRUCTION DOCUMENTS" to "SITE PLANS". **Conditional Approval.**
2	**Comment on Sept 12 Submittal** **Sheet IR-3** This sheet shows the meter and backflow preventer. What is the water supply? Please show more detail. Please **submit** response & **Revise & Resubmit** sheet(s) as necessary. **Comment on Mar 11 Submittal** **Sheet IR-3** This sheet shows the meter and backflow preventer. What is the water supply? Please show more detail. The Engineer's response is that a well will supply the irrigation system as shown on IR-3. But IR-3 does not appear to show the well (symbol "W" in a box). **Conditional Approval.**
END OF COMMENTS	

Please advise if you have any questions or require additional information.

RE: LDR Administrator Interpretation: Land Development Regulations Text – Application of Section 4.3.2(I)(3)(b) of the LDRs for Pleasant Solar Site Plan & Special Exception Permit Applications.

Dear Mr. Dedenbach,

On February 15, 2024 the City of Alachua received your application for an Interpretation by the Land Development Regulation (LDR) Administrator pursuant to Section 2.4.19 of the City's LDRs. This application requests an interpretation of the text of the LDRs by the LDR Administrator. Specifically, it requests an interpretation of the application of Section 4.3.2(I)(3)(b) of the LDRs with respect to the Pleasant Solar Site Plan and Special Exception Permit applications.

The Pleasant Solar applications propose the construction of a ± 74.9 MWac solar facility located in the Agricultural (A) and Residential Single Family-4 (RSF-4) zoning districts on a ± 321.49-acre subject property (tax parcel 03894-000-000; 03898-000-000).

Article 10 of the LDRs identifies major utilities as "infrastructure services providing regional or communitywide service that normally entail the construction of new buildings or structures such as water towers, waste treatment plants, potable water treatment plants, solid waste facilities, electrical substations, and park-and-ride facilities". The proposed solar facility would provide regional or communitywide services and entails the construction of new structures (the panels).

Article 4 establishes use specific standards for certain uses, with Section 4.3.2(I)(3) establishing use specific standards for major utilities, including "an electrical power facility, substation, or transmission station". Section 4.3.2(I)(3) states:

(3) *Utility, major.* An electrical power facility, substation, or transmission station shall comply with the following standards:

(a) *Location.* Be within reasonable proximity of the area to be served by the facility.
(b) *Setback.* Be set back a minimum of 100 feet from property lines and buffered to ensure it does not have an adverse impact on surrounding uses.
(c) *Compatibility.* Provide adequate setbacks, screening and buffering around the perimeter of the proposed use if it is deemed necessary to ensure land use compatibility with surrounding uses.

The applicant contends that Section 4.3.2(I)(3)(b) does not apply to interior property lines/enclaves under different ownership. "The graveyard is an area internal to the overall project site and not 'surrounding lands' as referenced". Instead, the applicant proposes a 25-foot setback from the interior property lines surrounding tax parcel 03894-002-000, which contains a small, family cemetery plot. The applicant demonstrated that with the proposed 25-foot setback, the buffer distance from the setback to the edge of the cemetery is a minimum of 100-feet. The applicant contends that the 100-foot separation, but only a 25-foot setback, will sufficiently meet the spirit and intent of Section 4.3.2(I)(3)(b). The applicant is "requesting [the] imposition of a site-specific condition to ensure the appropriateness of the use at [this] particular location".

Upon reviewing the LDR interpretation request and the associated conceptual materials, the LDR Administrator hereby finds that **the requirements of Section 4.3.2(I)(3)(b) are met by providing a minimum 100' buffer from the existing "4' CHAIN LINK FENCE FOR GRAVEYRAD" as shown on the attached 'Exhibit A'**, originally provided as part of the application. This approval does not eliminate the requirement to comply with all other applicable provisions of the City's LDRs, including but not limited to Sections 2.4.4, 2.4.9, 4.3.2(I)(3), and 6.2. *Include this letter in all future submissions of the Pleasant Solar Site Plan and Special Exception Applications. Reference this letter when calling out the required setbacks of the buffer area on site plans and other related documents associated with the applications.*

If you have any questions related to this interpretation, please contact the Planning & Community Development Department at 386-418-6121.

Sincerely,

Mike DaRoza
City Manager / LDR Administrator

RE: Project Assistance Team (PAT) Comments for Pleasant Solar Site Plan and Special Exception Permit applications

Dear Mr. Hastay:

On September 25, 2023 the City of Alachua received your revised site plan application for the Pleasant Solar project, which proposes the construction of a ±74.9 MWac solar facility containing approximately ±248,921 square feet of impervious area with associated site improvements on a ±321.49 acre subject property (Tax Parcels 03894-000-000 and 03898-000-000). This letter addresses both the Pleasant Solar Site Plan and Special Exception Permit applications.

The applications have been reviewed by the City's Planning Assistance Team (PAT). Upon review of the applications and materials, the following insufficiencies must be addressed. A meeting is scheduled for 4:00 PM on Tuesday, October 24, 2023 to review these comments.

Please address all insufficiencies in writing and provide an indication as to how they have been addressed by 5:00 PM on Monday, November 13, 2023. A total of four (4) copies of the application package, plans, and a digital copy of all materials in PDF format on a CD or sent by emailing a Cloud / FTP link must be provided by this date. Upon receipt of your revised applications, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB. Please note that if Staff determines that the revised submission requires outside technical review by the City, your application may be delayed in order to allow for adequate review time.

Address the following insufficiencies:

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations **

1. Comprehensive Plan Consistency Analysis
   a. Community Facilities Element
      i. The site is located in a karst sensitive area. Analyze the project in relation to the applicable policies under Objective 3.5.
   b. Conservation and Open Space Element
      i. Evaluate the project in relation to Policy 1.2.j, which requires all new development to maintain internal and external connectivity of all open and natural space to the maximum extent practicable.
      ii. Policy 1.8.a applies the Alachua County Hazardous Materials Management Code. Provide an analysis of the project in relation to the Alachua County Hazardous Materials Management Code at all points of the project's life span (construction, use, and decommissioning).
2. Concurrency Impact Analysis
   a. The irrigation plan does not depict a water source. Revise concurrency impact analysis if necessary once a water source is provided.
3. Article 2 - Administration
   a. Section 2.4.4 - Special exception permit
      i. Section 2.4.4 (D)(1) requires the proposed special exception comply with all specific use standards. Refer to the applicable specific use standards in Section 4.3.2 (I)(3). Comply with all standards.
      ii. Section 2.4.4 (D)(3), *Design minimizes adverse impacts*
         1. Provide Staff a landscape viewshed looking from the peak of CR-235A towards the site to help determine the extent of any adverse impacts.
         2. The special exception justification report does not address adverse impacts as part of the construction process. Address the construction process, including proposed access to the site, proposed staging areas, proposed hours of construction, anticipated timeline, and anticipated noise, lighting, and odors.
      iii. Provide landscaping as part of the buffer area surrounding the cemetery enclave to limit adverse impacts. See comment 5.a.vi.
      iv. Section 2.4.4 (D)(4), *Design minimizes environmental impacts*
         1. Wildlife corridors were discussed during pre-application meetings with Staff; however, none are proposed. Neighborhood meeting documents claim these corridors to be infeasible. Neighborhood meeting documents also infer that a six-inch gap would be left under any fencing for accessibility of small wildlife. Provide a narrative addressing this comment and providing clarification.
         2. The application materials refer to the ability to restore the site to natural conditions at the end of the project lifespan (20-40 years). Provide a preliminary decommissioning plan with more specific information such as contact information for all parties involved, any recycling of PV modules or other components, handling of potentially hazardous waste, conditions under which decommissioning will take place, time period of decommissioning, scope of work, the responsibilities of all parties involved, and contingencies should the owner or operator fail to deliver the decommissioning plan.

4. Article 4 – Use Specific Standards
   a. Section 4.3.2 (I)(3)(b) requires a 100-foot setback from property lines. These setbacks apply to all property lines, including the cemetery enclave. Provide 100-foot setback and buffer around the cemetery.
5. Article 6 – Development Standards
   a. Section 6.2 – Tree protection and landscaping standards
      i. Ensure proposed tree barriers and proposed fencing on sheets LS-15, LS-16, LS-17, LS-19, and LS-21 do not conflict with trees proposed for preservation or planting. Refer to Section 6.2.1 (D)(2) and adjust as needed.
      ii. Section 6.2.1 (D)(7), *Tree banking*, establishes the formula for off-site mitigation fees. After referencing recently adopted off-site mitigation fees, Staff advises that the applicant's estimate is significantly below the typical fee per tree. Note, final determination is by the City Commission through resolution.
      iii. Include required note from Section 6.2.1 (G)(1)(c).
      iv. *Utility, major* is categorized as a public and institutional use. Update the site landscape calculations to reflect the standards under Section 6.2.2 (D)(1)(b) and provide required plantings.
      v. Site landscape calculations should be completed using the total site area. Refer to Section 6.2.2 (D)(10), *Alternative landscape plan*, and submit the appropriate request or complete calculations using the total site area.
      vi. Section 6.2.2 (D)(3), *Perimeter Buffers*
         1. The site is not a typical, four-sided site. Update perimeter buffer landscape requirements table to reflect all required buffers by stretch of site perimeter
         2. Provide required 15-foot, Type-D buffer around the southern outcrop surrounding adjacent single-family development (Table 6.2-2).
         3. Provide required 10-foot, Type-D buffer around the cemetery enclave (Table 6.2-2).
      vii. Include required note on irrigation plan from Section 6.2.2 (D)(7)(b)(vi).
      viii. Irrigation plan does not encompass all proposed plantings. Refer to Section 6.2.2 (D)(7)(b)(vi), *Efficient irrigation*.
      ix. Landscape plan cites the Alachua County Land Development Code in the irrigation notes. Remove any nonapplicable notes and replace with applicable City of Alachua Land Development Regulation notes.
      x. Note, Alachua County Environmental Protection Department (EPD) requires the review and approval of all new commercial automatic irrigation systems. It is recommended that the applicant contact Alachua County EPD to coordinate this review and approval. Additional information is available at: https://alachuacounty.us/Depts/epd/WaterResources/WaterConservation/Pages/Irrigation-Efficiency-Design-and-Maintenance-Code.aspx
   b. Section 6.3 – Fencing standards
      i. Section 6.3.1 (A)(2) requires the submission of a fencing plan with an application for a site plan. Staff is requesting a standalone fencing plan separate from the landscape plan, depicting greater detail due to the special exception and the nature and scale of the proposed fencing. Provide fencing plan.

ii. Section 6.3.1 (A)(3), *Exemption for security plan*, is only applicable to fence heights in the business districts. The site is located within residential and agricultural districts.
    1. Provide the full and exact language of cited Rule 110A, Enclosure of equipment, of the NESC. See Building Official's comments.
iii. Section 6.3.3, *Height*
    1. Requested deviation noted. At this time, the proposed fence is still considered to not comply with the height requirement for front yards in residential districts of four feet.
    2. In residential districts, any fence installed in a front yard shall be no greater than 50 percent opacity. Update the front yard fence in the residential district to be no greater than 50 percent opaque.
iv. Section 6.3.4 limits the maximum length of unbroken perimeter wall plane to 200 feet. Breaks may be achieved by two-foot depth changes, measured perpendicular to the street, and at least two feet in length. Provide breaks.
v. Section 6.3.5 prohibits chain link fences when visible from the public right-of-way or when located on any land other than land with a residential zoning designation. Black or green vinyl coated chain link are permitted when not visible from an arterial or collector roadway. Refer to Section 6.3.5 (A) for allowed materials.
vi. Provide typical fence detail, in color.
vii. Show proposed gates on fencing plan. Provide gate details, in color.
viii. Show any proposed signage that may be secured or attached to fencing on fencing plan.
ix. Adjust fencing shown on sheets C1.26 and LS-9 to ensure proper access is maintained to the cemetery site. See comment 7.b.
x. Neighborhood meeting documents show concerns about the aesthetic of fencing provided and a response from the applicant citing that the fencing choices were still being evaluated. Readdress this comment to the Planning and Community Development Department. Provide a narrative explaining the final choice of fencing materials and design. Include reasoning for not updating the design to address aesthetics or provide an updated aesthetic/design to resolve the comments and increase compatibility with surrounding lands.
xi. Applicant noted themselves as amenable to exploring wildlife friendly fencing in pre-application meetings with Staff and in neighborhood meetings. Provide wildlife friendly fencing or provide narrative explaining the infeasibility of wildlife friendly fencing.

c. Section 6.4 – Exterior lighting standards
    i. Correspondence dated September 25, 2023, notes no proposed lighting. The provided special exception justification report notes minimal safety lighting at the on-site inverters. Clarify the nature of the minimal safety lighting and provide details of the proposed lighting fixtures.
    ii. Note, Staff may deem a photometric plan necessary dependent on the applicant's response to the previous comment (comment 5.d.i).
d. Section 6.5 – Signage
    i. The provided special exception justification report notes one business identification sign at the main ingress/egress. Clarify the nature of this sign and show on plans if necessary. Show any additional proposed signage on site plan.

e. Section 6.6 – Infill standards
   i. Section 6.6.3 (A) establishes residential protection standards for any nonresidential development located within 500 feet of any residential district or adjacent to an existing residential single-family or two-family development. Provide an analysis of the residential protection standards from Section 6.6.3 as applicable to the project and possible adverse impacts of the project on neighboring residents.
f. Section 6.9 – Environmental protection standards
   i. Show wetland boundaries and provided wetland buffer areas on site plan.

6. Outside Review
   a. Review and address comments from outside reviewer dated October 18, 2023 (attached).
   b. Review and address comments from City of Alachua Public Services dated October 12, 2023 (attached).
   c. Review and address comments from City of Alachua Building Official dated October 4, 2023 (attached).
   d. Consult directly with Alachua County Fire Rescue regarding an emergency action plan and additional fire protection requirements. Provide a copy of correspondence.
7. Miscellaneous
   a. Provide a copy of the title commitment dated dated March 1, 2022 referenced on sheet C0.00 to City of Alachua Compliance and Risk Management.
   b. Review Florida Statute 704.08, Cemeteries; right of ingress and egress for visiting or maintenance. Ensure access to required parties is maintained at reasonable times and in a reasonable manner.
   c. Pre-application meetings with Staff involved the discussion of an already completed glinting and/or glare analysis. Provide glinting and/or glare analysis.
   d. Provide typical inverter and transformer skid detail.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1606 or via e-mail at ca_crockett@cityofalachua.org. We look forward to receiving your revised application.

Sincerely,

Carson J. Crockett
Planner

Ref: Pleasant Solar, LLC

Dear Mr. Hall:

The following are our comments for the submittal of Pleasant Solar, LLC.

1. **General comments:**
    a. Plans shall be signed and sealed, and the name of the engineering company should be included in the plans.
    b. Provide storm routing analysis for the proposed swales.

2. **Sheet C0.00:**
    1. Plans need to be signed and sealed.

3. **Several plans:**
    1. Callouts for the Silt Fence are needed.

4. **Sheet C2.00:**
    1. The Pre-Development drainage areas are shown, but not the Post Development drainage areas. Will the roadways change drainage areas? Please clarify.
    2. Is there any proposed grading for the roads? If so, it needs to be shown.

5. **Sheet C2.11:**
    1. Silt Fencing or some kind of Sediment Control must be installed around the swales per Notes Section 5(B) on sheet C0.20.
    2. Show the post development drainage area(s) connected to the proposed swale.

6. **Sheet C2.12:**
    1. Why does one of the hammerhead ends of the proposed access road have swales and the rest do not?

7. **Sheet C2.13:**

1. Silt Fencing or some kind of Sediment Control must be installed around the swales per Notes Section 5(B) on sheet C0.20.
2. Show the post development drainage area(s) connected to the proposed swale.

Please do not hesitate to contact me if you have any questions/comments.

Sincerely,

RE: Second Completeness Review: Pleasant Solar Special Exception Permit Application

Dear Mr. Hastay:

On September 21, 2023, the City of Alachua received your revised application for a Special Exception Permit submitted on behalf of Pleasant Solar LLC for the Pleasant Solar project. The application addresses the corresponding Site Plan application proposing the construction of a total ±75 MWac solar facility with ±248,921 sqft of associated site improvements on a ±321.49 ac subject property, consisting of Alachua County Tax Parcels 03894-000-000 and 03898-000-000.

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is complete.

These findings are based solely on a preliminary review of your application for completeness. An in-depth review of the content of the application will be performed, and the findings of the in-depth review will be provided to you under separate cover.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1606 or via e-mail at ca_crockett@cityofalachua.org.

Sincerely,

Carson J. Crockett

RE: Completeness Review: Pleasant Solar Special Exception Permit Application

Dear Mr. Hastay:

On September 14, 2023, the City of Alachua received your application for a Special Exception Permit submitted on behalf of Pleasant Solar LLC for the Pleasant Solar project. The application addresses the corresponding Site Plan application proposing the construction of a total ±75 MWac solar facility with ±248,921 sqft of associated site improvements on a ±321.49 ac subject property, consisting of Alachua County Tax Parcels 03894-000-000 and 03898-000-000.

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is incomplete. The following information is needed to begin the review of the application.

The comments below are based solely on a preliminary review of your application for completeness. An in-depth review of the content of the application will be performed, and the findings of the in-depth review will be provided to you under separate cover.

Please address the following:

1. Provide one set of supporting application materials for the Special Exception Permit application, including:
    a. Authorized Agent Affidavit (if applicable).
    b. Analysis of compliance with the Standards for a Special Exception.
    c. Two sets of mailing labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits.
    d. Neighborhood meeting materials.
    e. Map of the subject property and surrounding area with zoning.
    f. Legal description with tax parcel number.
    g. Proof of ownership.
    h. Proof of payment of taxes.

In accordance with Section 2.2.6 (B) of the LDRs, the applicant must correct the deficiencies and resubmit the application for completeness determination. *Plans and application materials may be made available for return in order to revise and resubmit as needed.*

The time frame and cycle for review shall be based upon the date the application is determined to be complete. If the applicant fails to respond to the identified deficiencies within forty-five (45) calendar days (Monday, November 6, 2023), the application shall be considered withdrawn.

Please note that if an additional completeness review is required, a resubmittal fee equal to 10% of the application fee will be assessed for each additional completeness review and must be paid prior to further review of the application.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1606 or via e-mail at ca_crockett@cityofalachua.org.

Sincerely,

Carson J. Crockett

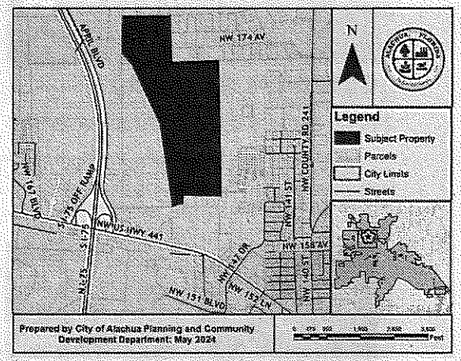
REALTY

City of ALACHUA

NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning and Zoning Board of the City of Alachua will hold a public hearing on June 11, 2024 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located 15100 NW 142nd Terrace, Alachua, Florida, to consider the following:

A request by Tavis Hastay, P.E. of Causseaux, Hewett, & Walpole, LLC, applicant, on behalf of Waco Properties, Inc.; Gary D. Brown Revocable Trust Dated 1/23/04; Linda Weidner; Joanne Alspaugh; and Henderson Brothers, Inc., property owners, for consideration of a special exception permit to allow a major utility (solar facility) within the Agricultural (A) and Residential Single Family District-4 (RSF-4) zone districts on a ± 321.49-acre subject property located at 17920 Peggy Road (tax parcel: 03894-000-000; 03898-000-000). FLUM: Agriculture; Moderate Density Residential. ZONING: Agricultural (A); Residential Single Family District-4 (RSF-4).



At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL, 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal and decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

(Published: Alachua County Today - May 30, 2024)

City of ALACHUA

NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning & Zoning Board of the City of Alachua will hold a public hearing on June 11, 2024, at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located at 15100 NW 142nd Terrace, Alachua, Florida, to consider the following: A request by Logan B. Peters, P.E., of JBrown Professional Group, Inc., applicant and agent for Tara Forest, LLC, property owner, for consideration of the Preliminary Plat for the Tara Forest West subdivision, which proposes the subdivision of a ±198.39 acre property into a total of 523 single family lots, with associated common areas and right-of-way. The subject property is generally located north of US 441 and west of NW 147th Drive; Portions of Tax Parcel Numbers 03008-000-000 and 03067-001-000; Future Land Use Map (FLUM) Designations: Moderate Density Residential, and Recreation; Zoning: Residential Single Family -4 (RSF-4), and Agricultural (A).

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

(Published: Alachua County Today - May 30, 2024)

Transportation, Inc. at (352) 375-2784, no later than 72 hours prior to the proceedings. If hearing impaired, call the Florida Relay System at (800) 955-8770.

3. Parcel ID Number(s): 03894-000-000 and 03898-000-000
4. Existing Use of Property: Agriculture/Pasture
5. Future Land Use Map Designation : Agriculture, Moderate Density Residential
6. Zoning Designation: A, RSF-4
7. Acreage: ±320

B. APPLICANT

1. Applicant's Status ☐ Owner (title holder) ☒ Agent
2. Name of Applicant(s) or Contact Person(s): Travis Hastay, PE Title: Director of Planning
   Company (if applicable): CHW
   Mailing address: 11801 Research Dr
   City: Alachua State: FL ZIP: 32615
   Telephone: ( ) (352) 331-1976 FAX: ( ) e-mail: travish@chw-inc.com
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): see property owner affidavits
   Mailing Address: _____
   City: _____ State: _____ ZIP: _____

   * Must provide executed Property Owner Affidavit authorizing the agent to act on behalf of the property owner.

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☐ Yes ■ No
   If yes, list names of all parties involved: _____
   If yes, is the contract/option contingent or absolute? ☐ Contingent ☐ Absolute

D. ATTACHMENTS

1. Statement of proposed special exception including the identification of the provision of the Land Development Regulations under which the special exception permit is sought, and stating the grounds on which it is requested.

2. Analysis of compliance with the Standards for a Special Exception, as defined in Section 2.4.4 of the Land Development Regulations (LDRs), and listed below:
   a. Complies with Use Specific Regulations
   b. Compatibility
   c. Design Minimizes Adverse Impact
   d. Design Minimizes Environmental Impact
   e. Roads and Other Public Facilities
   f. Not Injure Neighboring Land or Property Values
   g. Site Plan
   h. Complies will All Other Relevant Laws and Ordinances

3. Materials which demonstrate that the special exception permit would promote the public health, safety, morals, order, comfort, convenience, appearance, prosperity or the general welfare, which shall include (at a minimum):

a. A site plan showing the proposed placement of structures on the property; provisions for ingress and egress, off-street parking and off-street loading areas, and refuse and service areas; and required yards and other open spaces;
b. Access and points of connection to utilities (electric, potable water, sanitary sewer, gas, etc.)
c. Plans for screening and buffering with reference to type, character and dimensions;
d. Proposed landscaping, signs and lighting, including type, dimensions and character;
e. Any specific requirements of the zoning district.

4. Two (2) sets of labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits. (Obtain from the Alachua County Property Appraiser).

5. Neighborhood Meeting Materials, including:
   i. Copy of the required published notice (advertisement) – must be published a newspaper of general circulation, as defined in Article 10 of the City's Land Development Regulations
   ii. Copy of written notice (letter) sent to all property owners within 400 feet, and mailing labels or list of those who received written notice
   iii. Written summary of meeting – must include (1) those in attendance; (2) a summary of the issues related to the development proposal discussed; (3) comments by those in attendance about the development proposal; and, (4) any other information deemed appropriate.

6. Map of the subject property and surrounding area with zoning.

7. Legal description with tax parcel number.

8. Proof of ownership.

9. Proof of payment of taxes.

10. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any necessary technical review will be billed to the applicant at the rate of the reviewing entity. The invoice shall be paid in full prior to any legislative and/or quasi-judicial action of any kind on the petition, appeal, or development application.

All 10 attachments are required for a complete application. A completeness review of the application will be conducted within 5 business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

QUIT-CLAIM DEED

This Indenture, made as of this 13 day of July, 2006, between **MILLER OIL PROPERTIES, L.L.C.**, a limited liability company organized under the laws of Oklahoma, whose address is 10202 Grand Teton Court, Austin, TX 78759-5519, party of the first part, and **WACO PROPERTIES, INC.**, a Florida corporation, whose address is c/o John T Sefton, PO Box 240, Jacksonville, FL 32201-0240, party of the second part.

WITNESSETH:

That party of the first part for and in consideration of the sum of $10 and other valuable consideration, the receipt and sufficiency of which is hereby acknowledged, has remised, released, and quitclaimed to party of the second part, and party of the second part's heirs, successors and assigns forever, all of party of the first part's right, title, and interest, if any, in and to the following described real property located in Alachua County, Florida, to wit:

W 1/2 of SW 1/4, Section 20, T8S, R18E

which party of the first part may have as of the date of this deed, together with all tenements, hereditaments, appurtenances thereunto belonging or in anywise appurtaining, to have and to hold unto party of the second part's successors and assigns, forever.

IN WITNESS WHEREOF, party of the first part has hereunto set its hand and seal as of the day and year first above written.

Warranty Deed

This Indenture, Made this 17th day of May , 2005 A.D., **Between**

WILLIAM R. SABIS, a married man;

of the County of ALACHUA, State of Florida, **Grantor**, and

GARY D. BROWN, as Trustee of the GARY D. BROWN REVOCABLE TRUST DATED 1/23/04, as to an undivided 25% interest; and LINDA WEIDNER, as to an undivided 25% interest; and JOANNE ALSPAUGH, as to an undivided 25% interest; and HENDERSON BROTHERS, INC., as to an undivided 25% interest, as tenants in common.

whose post office address is: c/o Paul Himmelrich, 710 E. Hillsboro Blvd., Suite 201, Deerfield Beach, FL 33441.

of the County of BROWARD, State of Florida, **Grantee**

Witnesseth that the GRANTOR, for and in consideration of the sum of TEN & NO/100 ($10.00), and other good and valuable consideration to GRANTOR in hand paid by GRANTEE, the receipt of which is hereby acknowledged, has granted, bargained and sold to the said GRANTEE and GRANTEE'S successors and assigns forever, the following described land, situate, lying and being in the County of ALACHUA, State of Florida to wit:

See Attached Exhibit "A"

SUBJECT TO THE FOLLOWING:

A. Zoning restrictions, prohibitions and other requirements imposed by governmental authority;
B. Restrictions and matters appearing on the plat and/or common to the subdivision;
C. Taxes for the year 2005 and subsequent years.

The Grantee Trustee named herein shall have the power and authority either to protect, conserve and to sell, or to lease, or to encumber, or otherwise to manage and dispose of the real property described in the recorded instrument.

and the grantor does hereby fully warrant the title to said land, and will defend the same against lawful claims of all persons whomsoever.

Grantor hereby warrants and represents that the subject property is not his Constitutional Homestead, nor of his spouse, if any, nor is it contiguous thereto.

In Witness Whereof, the grantor has hereunto set his hand and seal the day and year first above written.

Signed, sealed and delivered in our presence:

Pleasant Solar Project

Environmental Resource Permit

State-owned Submerged Lands Authorization – Not Applicable

U.S. Army Corps of Engineers Authorization – Not Included

Alachua County
Permit No.: 01-0408317-002-EI

Permit Issuance Date: May 13, 2024
Permit Construction Phase Expiration Date: May 13, 2029

Environmental Resource Permit

Permittee: Pleasant Solar Project
Permit No: 01-0408317-002-EI

PROJECT LOCATION

The activities authorized by this permit are located at 17910 Peggy Road, Parcel IDs 03894-000-000 and 03898-000-000, Alachua, Florida 32615, in Section 20, Township 8 S, Range 18 E in Alachua County, at latitude 29º 46' 29.17" N, longitude 82º 32' 2.14" W.

PROJECT DESCRIPTION

The project is to construct a stormwater management system associated with the development of a 74.9-megawatt solar photovoltaic energy facility upon approximately 320 acres of agricultural and silvicultural lands. The facility consists of solar panels, inverters, and 16-ft wide at-grade access roads. The total proposed impervious area is approximately 5.71 acres. The stormwater management system consists of one (1) proposed swale and fifteen (15) existing depressions. The swale is 2.0-ft wide at the bottom, 1.0-ft deep, 4H:1V side slope, and 300-ft long in Basin 3. Some existing depressions will have their bottoms raised and flattened but still have storages. The proposed swale combined with the remaining volumes of the existing depressions will provide stormwater collection; stormwater treatment in a volume that is runoff from 2.0 inches of rainfall over the drainage area of each basin; and stormwater attenuation up to 100-year storm event with 1-, 2-, 4-, 8-, 24-hour durations for the entire project area. In addition, two new culverts will be constructed at the facility entrances from Peggy Road and NW 173rd St. Authorized activities are depicted on the attached exhibits.

AUTHORIZATIONS

Pleasant Solar Project

Environmental Resource Permit

The Department has determined that the activity qualifies for an Environmental Resource Permit. Therefore, the Environmental Resource Permit is hereby granted, pursuant to Part IV of Chapter 373, Florida Statutes (F.S.), and Chapter 62-330, Florida Administrative Code (F.A.C.).

Sovereignty Submerged Lands Authorization

As staff to the Board of Trustees of the Internal Improvement Trust Fund (Board of Trustees), the Department has determined the activity is not on submerged lands owned by the State of Florida. Therefore, your project is not subject to the requirements of Chapter 253, F.S., or Rule 18-21, F.A.C.

Federal Authorization

Your proposed activity as outlined on your application and attached drawings does not qualify for Federal authorization pursuant to the State Programmatic General Permit and a SEPARATE permit or authorization shall be required from the Corps. You must apply separately to the Corps using the Application for Department of the Army Permit (ENG 4345) or alternative as allowed by Corps regulations. More information on Corps permitting may be found online in the Jacksonville District Regulatory Division Sourcebook:

(https://www.saj.usace.army.mil/Missions/Regulatory/Source-Book/).
Authority for review - an agreement with the USACOE entitled "Coordination Agreement Between the U. S. Army Corps of Engineers (Jacksonville District) and the Florida Department of Environmental Protection (or Duly Authorized Designee), State Programmatic General Permit", Section 10 of the Rivers and Harbor Act of 1899, and Section 404 of the Clean Water Act.

Water Quality Certification
This permit also constitutes a grant of water quality certification under Section 401 of the Clean Water Act, 33 U.S.C. Section 1341. Pursuant to Rule 62-330.062, F.A.C. issuance of the individual or conceptual approval permit under this chapter shall constitute certification of compliance with water quality standards.

Other Authorizations
You are advised that authorizations or permits for this activity may be required by other federal, state, regional, or local entities including but not limited to local governments or municipalities. This permit does not relieve you from the requirements to obtain all other required permits or authorizations.

The activity described may be conducted only in accordance with the terms, conditions and attachments contained in this document. Issuance and granting of the permit and authorizations herein do not infer, nor guarantee, nor imply that future permits, authorizations, or modifications will be granted by the Department.

PERMIT CONDITIONS
The activities described must be conducted in accordance with:

- **The Specific Conditions**
- **The General Conditions**
- **The limits, conditions and locations of work shown in the attached drawings**
- **The term limits of this authorization**

You are advised to read and understand these conditions and drawings prior to beginning the authorized activities, and to ensure the work is conducted in conformance with all the terms, conditions, and drawings herein. If you are using a contractor, the contractor also should read and understand these conditions and drawings prior to beginning any activity. Failure to comply with these conditions, including any mitigation requirements, shall be grounds for the Department to revoke the permit and authorization and to take appropriate enforcement action. Operation of the facility is not authorized except when determined to be in conformance with all applicable rules and this permit as described.

SPECIFIC CONDITIONS - PRIOR TO ANY CONSTRUCTION

1. The permittee must acquire legal ownership or legal control of all project areas as delineated in the permitted construction drawings.

2. Prior to commencement of work authorized by this permit, the permittee shall provide written notification of the date of the commencement and proposed schedule of construction to the Department of Environmental Protection, Northeast District, 8800 Baymeadows Way West, Suite 100, Jacksonville, Florida 32256.

SPECIFIC CONDITIONS – CONSTRUCTION ACTIVITIES

3. This permit does not authorize the removal of any vegetation within the jurisdictional area. No dredging, filling, or other construction activity, including the removal of tree stumps and/or vegetative root masses, shall be conducted within the wetlands other than that performed within the specifically authorized work corridor.

4. Outside the specific limits of construction authorized by this permit, any disturbance of or damage to wetlands shall be corrected by restoring pre-construction elevations as to maintain natural hydrology, drainage patterns, and planting vegetation of the same species, size, and density that exist in adjacent undisturbed wetland area.

5. There shall be no storage or stockpiling of tools, equipment, materials (e.g., lumber, pilings, riprap, and debris) within wetlands, along the shoreline within the littoral zone, or elsewhere within waters of the state unless specifically approved in this permit. Any and all construction debris shall be removed from wetlands/waters of the state within 14 days of completion of the work authorized by this permit.

6. There shall be no discharge of construction debris into the waters of the state as conditioned by this permit enforceable under the Florida Litter Law 403.413, F.S., by all law enforcement officers.

7. Best management practices for erosion control shall be implemented prior to construction commencement and shall be maintained at all times during construction to prevent siltation and turbid discharges in excess of State water quality standards pursuant to Rule 62-302, F.A.C. Methods shall include, but are not limited to, the use of staked hay bales, staked filter cloth, sodding, seeding, staged construction and the installation of silt fencing around the immediate project site. Erosion control methods shall be implemented as depicted in the attached best management plan.

8. Fill material which has escaped the containment devices shall be immediately removed from the wetlands and deposited within the authorized construction area landward of the limit of fill as depicted on the attached permit drawings.

9. Historic properties Site AL04791, Catchart Family Cemetery, should be avoided by all ground disturbing project activities, including staging. If avoidance is not possible, further consultation with the Florida Department of State, Division of Historical Resources will be necessary.

10. If prehistoric or historic artifacts, such as pottery or ceramics, projectile points, dugout canoes, metal implements, historic building materials, or any other physical remains that could be associated with Native American, early European, or American settlement are encountered at

any time within the project site area, the permitted project shall cease all activities involving subsurface disturbance in the vicinity of the discovery. The applicant shall contact the Florida Department of State, Division of Historical Resources, Compliance and Review Section at (850)-245-6333. Project activities shall not resume without verbal and/or written authorization. In the event that unmarked human remains are encountered during permitted activities, all work shall stop immediately, and the proper authorities notified in accordance with Section 872.05, Florida Statutes.

SPECIFIC CONDITIONS - OTHER LISTED SPECIES

11. This permit does not authorize the permittee to cause any adverse impact to or "take" of state listed species and other regulated species of fish and wildlife. Compliance with state laws regulating the take of fish and wildlife is the responsibility of the owner or permittee associated with this project. Please refer to Chapter 68A-27 of the Florida Administrative Code for definitions of "take" and a list of fish and wildlife species. If listed species are observed onsite, Florida Fish and Wildlife Conservation Commission (FWC) staff are available to provide decision support information or assist in obtaining the appropriate FWC permits. Most marine endangered and threatened species are statutorily protected and a "take" permit cannot be issued. Requests for further information or review can be sent to ConservationPlanningServices@MyFWC.com

12. If new information (e.g. listing of new species, new critical habitat, etc.) shows that the magnitude of impacts to federally listed species has the potential for adverse effects, the U.S. Fish and Wildlife Service (USFWS) will notify the Department. The Department will initiate coordination with the permittee and with the USFWS to determine what adverse impacts are likely and if additional minimization measures, reporting, or monitoring are required in order to be consistent with the Endangered Species Act, as deemed necessary by USFWS.

13. The Permittee shall report any injured, sick, or dead federally or state listed animal(s) discovered onsite to the Florida Fish and Wildlife Conservation Commission Wildlife Alert number at 888-404-FWCC (3922).

14. The bald eagle has been removed from state and federal listing but is still governed by the state bald eagle rule (68A-16.002 F.A.C.) and the federal Bald and Golden Eagle Protection Act. No activities shall occur within a 660-foot buffer distance from an eagle nest. If activities within a 660-foot buffer distance from an eagle nest cannot be avoided, the Permittee shall follow the USFWS Eagle Management Guidelines (https://www.fws.gov/southeast/our-services/permits/eagles/#southeast-region-bald-eagle-monitoring-guidelines-section). If the protective measures in the referenced guidance cannot be followed, no activities shall occur unless, and until, an eagle permit is issued by USFWS. Applications and information about federal eagle permits are available online (https://www.fws.gov/southeast/our-services/permits/eagles/#southeast-region-bald-eagle-and-golden-eagle-permitting-section) or by contacting the regional USFWS Migratory Bird Office directly at (404) 679- 7070 or permitsR4MB@fws.gov .

SPECIFIC CONDITIONS - CONSTRUCTION COMPLETION

15. Upon completion of construction, the permittee shall submit to the Department of Form 62-330.310(1) "As-Built Certification and Request for Conversion to Operation Phase". The form shall be certified by a registered professional and serve to notify the Department that the project, or independent portion of the project, is completed and ready for inspection by the Department. The person completing Form 62-330.310(1) shall inform the Department if there are substantial deviations from the plans approved as part of the permit and include as-built drawings with the form.

16. The plans must be clearly labeled as "as-built" or "record" drawings and shall consist of the permitted drawings that clearly highlight (such as through "red lines" or "clouds") any substantial deviations made during construction. The permittee shall be responsible for correcting the deviations [as verified by a new certification using Form 62-330.310(1)]. If such deviations require a modification of the permit under Rule 62-330.315, F.A.C., the permittee shall separately request a modification to the permit, which must be issued by the Department prior to the Department approving the request to convert.

17. When projects authorized by the permit are to be constructed in phases, each phase or independent portion of the permitted project must be completed and the permittee must have submitted Form 62-330.310(1) "As-Built Certification and Request for Conversion to Operation Phase," in accordance with subparagraph 62-330.350(1)(f)2., F.A.C., certifying as to such completion prior to the use of that phase or independent portion of the project. The request for conversion to the operating phase for any phase or independent portion of the permitted project shall occur before construction of any future work that may rely on that infrastructure for conveyance and water quality treatment and attenuation. Phased construction can include a partial certification.

SPECIFIC CONDITIONS – OPERATION AND MAINTENANCE ACTIVITIES

18. In accordance with Section 373.416(2), F.S., unless revoked or abandoned, all stormwater management systems, dams, impoundments, reservoirs, appurtenant works, or works permitted under Part IV of Chapter 373, F.S., must be operated and maintained in perpetuity. The operation and maintenance shall be in accordance with the designs, plans, calculations, and other specifications that are submitted with an application, approved by the Department, and incorporated as a condition into any permit issued.

19. A registered professional shall perform inspections every three years after conversion of the permit to the operation and maintenance phase to identify if there are any deficiencies in structural integrity, degradation due to insufficient maintenance, or improper operation that may endanger public health, safety, or welfare, or the water resources, and to ensure that systems are functioning as designed and permitted. Within 30 days of the inspection, a report shall be submitted electronically or in writing to the Department using Form 62-330.311(1), "Operation and Maintenance Inspection Certification".

20. The permittee shall conduct periodic inspections in addition to the above professional inspections, especially after heavy rain. The permittee shall maintain a record of each

inspection, including the date of inspection, the name and contact information of the inspector, whether the system was functioning as designed and permitted, and make such record available upon request of the Department. Within 30 days of any failure of any system or deviation from the permit, a report shall be submitted electronically or in writing to the Department using Form 62-330.311(1), "Operation and Maintenance Inspection Certification," describing the remedial actions taken to resolve the failure or deviation.

21. The following operational maintenance activities shall be performed on all permitted systems on a regular basis or as needed:
a. Inspection of pipes and structures for damage and blockage
b. Removal of trash, debris, and sediments from the proposed swale and existing depressions
c. Mowing and removal of clippings from the proposed swale and existing onsite depressions
d. Stabilization and restoration of eroded areas and slopes
e. Maintenance of overland flow areas to prevent channelization
f. Check for any indication of sinkhole development and repair of any sinkhole or solution pipe that develops in the system

GENERAL CONDITIONS FOR INDIVIDUAL PERMITS

The following general conditions are binding on all individual permits issued under this chapter, except where the conditions are not applicable to the authorized activity, or where the conditions must be modified to accommodate project-specific conditions.

1. All activities shall be implemented following the plans, specifications and performance criteria approved by this permit. Any deviations must be authorized in a permit modification in accordance with rule 62-330.315, F.A.C. Any deviations that are not so authorized may subject the permittee to enforcement action and revocation of the permit under chapter 373, F.S.

2. A complete copy of this permit shall be kept at the work site of the permitted activity during the construction phase and shall be available for review at the work site upon request by the Agency staff. The permittee shall require the contractor to review the complete permit prior to beginning construction.

3. Activities shall be conducted in a manner that does not cause or contribute to violations of state water quality standards. Performance-based erosion and sediment control best management practices shall be installed immediately prior to, and be maintained during and after construction as needed, to prevent adverse impacts to the water resources and adjacent lands. Such practices shall be in accordance with the State of Florida Erosion and Sediment Control Designer and Reviewer Manual (Florida Department of Environmental Protection and Florida Department of Transportation, June 2007), and the Florida Stormwater Erosion and Sedimentation Control Inspector's Manual (Florida Department of Environmental Protection, Nonpoint Source Management Section, Tallahassee, Florida, July 2008), which are both incorporated by reference in subparagraph 62-330.050(9)(b)5., F.A.C., unless a project-specific erosion and sediment control plan is approved or other water quality control measures are required as part of the permit.

4. At least 48 hours prior to beginning the authorized activities, the permittee shall submit to

the Agency a fully executed Form 62-330.350(1), "Construction Commencement Notice," (October 1, 2013), (http://www.flrules.org/Gateway/reference.asp?No=Ref-02505), incorporated by reference herein, indicating the expected start and completion dates. A copy of this form may be obtained from the Agency, as described in subsection 62-330.010(5), F.A.C., and shall be submitted electronically or by mail to the Agency. However, for activities involving more than one acre of construction that also require a NPDES stormwater construction general permit, submittal of the Notice of Intent to Use Generic Permit for Stormwater Discharge from Large and Small Construction Activities, DEP Form 62-621.300(4)(b), shall also serve as notice of commencement of construction under this chapter and, in such a case, submittal of Form 62-330.350(1) is not required.

5. Unless the permit is transferred under rule 62-330.340, F.A.C., or transferred to an operating entity under rule 62-330.310, F.A.C., the permittee is liable to comply with the plans, terms, and conditions of the permit for the life of the project or activity.

6. Within 30 days after completing construction of the entire project, or any independent portion of the project, the permittee shall provide the following to the Agency, as applicable:
a. For an individual, private single-family residential dwelling unit, duplex, triplex, or quadruplex – "Construction Completion and Inspection Certification for Activities Associated with a Private Single-Family Dwelling Unit" [Form 62-330.310(3)]; or
b. For all other activities – "As-Built Certification and Request for Conversion to Operation Phase" [Form 62-330.310(1)].
c. If available, an Agency website that fulfills this certification requirement may be used in lieu of the form.

7. If the final operation and maintenance entity is a third party:
a. Prior to sales of any lot or unit served by the activity and within one year of permit issuance, or within 30 days of as-built certification, whichever comes first, the permittee shall submit, as applicable, a copy of the operation and maintenance documents (see sections 12.3 thru 12.3.4 of Volume I) as filed with the Florida Department of State, Division of Corporations, and a copy of any easement, plat, or deed restriction needed to operate or maintain the project, as recorded with the Clerk of the Court in the County in which the activity is located.
b. Within 30 days of submittal of the as-built certification, the permittee shall submit "Request for Transfer of Environmental Resource Permit to the Perpetual Operation and Maintenance Entity" [Form 62-330.310(2)] to transfer the permit to the operation and maintenance entity, along with the documentation requested in the form. If available, an Agency website that fulfills this transfer requirement may be used in lieu of the form.

8. The permittee shall notify the Agency in writing of changes required by any other regulatory agency that require changes to the permitted activity, and any required modification of this permit must be obtained prior to implementing the changes.

9. This permit does not:
a. Convey to the permittee any property rights or privileges, or any other rights or privileges other than those specified herein or in chapter 62-330, F.A.C.;
b. Convey to the permittee or create in the permittee any interest in real property;

c. Relieve the permittee from the need to obtain and comply with any other required federal, state, and local authorization, law, rule, or ordinance; or
d. Authorize any entrance upon or work on property that is not owned, held in easement, or controlled by the permittee.

10. Prior to conducting any activities on state-owned submerged lands or other lands of the state, title to which is vested in the Board of Trustees of the Internal Improvement Trust Fund, the permittee must receive all necessary approvals and authorizations under chapters 253 and 258, F.S. Written authorization that requires formal execution by the Board of Trustees of the Internal Improvement Trust Fund shall not be considered received until it has been fully executed.

11. The permittee shall hold and save the Agency harmless from any and all damages, claims, or liabilities that may arise by reason of the construction, alteration, operation, maintenance, removal, abandonment or use of any project authorized by the permit.

12. The permittee shall notify the Agency in writing:
a. Immediately if any previously submitted information is discovered to be inaccurate; and
b. Within 30 days of any conveyance or division of ownership or control of the property or the system, other than conveyance via a long-term lease, and the new owner shall request transfer of the permit in accordance with rule 62-330.340, F.A.C. This does not apply to the sale of lots or units in residential or commercial subdivisions or condominiums where the stormwater management system has been completed and converted to the operation phase.

13. Upon reasonable notice to the permittee, Agency staff with proper identification shall have permission to enter, inspect, sample and test the project or activities to ensure conformity with the plans and specifications authorized in the permit.

14. If prehistoric or historic artifacts, such as pottery or ceramics, projectile points, stone tools, dugout canoes, metal implements, historic building materials, or any other physical remains that could be associated with Native American, early European, or American settlement are encountered at any time within the project site area, the permitted project shall cease all activities involving subsurface disturbance in the vicinity of the discovery. The permittee or other designee shall contact the Florida Department of State, Division of Historical Resources, Compliance Review Section (DHR), at (850)245-6333, as well as the appropriate permitting agency office. Project activities shall not resume without verbal or written authorization from the Division of Historical Resources. If unmarked human remains are encountered, all work shall stop immediately and the proper authorities notified in accordance with section 872.05, F.S. For project activities subject to prior consultation with the DHR and as an alternative to the above requirements, the permittee may follow procedures for unanticipated discoveries as set forth within a cultural resources assessment survey determined complete and sufficient by DHR and included as a specific permit condition herein.

15. Any delineation of the extent of a wetland or other surface water submitted as part of the permit application, including plans or other supporting documentation, shall not be considered binding unless a specific condition of this permit or a formal determination under rule 62-

330.201, F.A.C., provides otherwise.

16. The permittee shall provide routine maintenance of all components of the stormwater management system to remove trapped sediments and debris. Removed materials shall be disposed of in a landfill or other uplands in a manner that does not require a permit under chapter 62-330, F.A.C., or cause violations of state water quality standards.

17. This permit is issued based on the applicant's submitted information that reasonably demonstrates that adverse water resource-related impacts will not be caused by the completed permit activity. If any adverse impacts result, the Agency will require the permittee to eliminate the cause, obtain any necessary permit modification, and take any necessary corrective actions to resolve the adverse impacts.

18. A Recorded Notice of Environmental Resource Permit may be recorded in the county public records in accordance with subsection 62-330.090(7), F.A.C. Such notice is not an encumbrance upon the property.

19. In addition to those general conditions in subsection (1), above, the Agency shall impose any additional project-specific special conditions necessary to assure the permitted activities will not be harmful to the water resources, as set forth in rules 62-330.301 and 62-330.302, F.A.C., Volumes I and II, as applicable, and the rules incorporated by reference in this chapter.

NOTICE OF RIGHTS

This action is final and effective on the date filed with the Clerk of the Department unless a petition for an administrative hearing is timely

filed under Sections 120.569 and 120.57, F.S., before the deadline for filing a petition. On the filing of a timely and sufficient petition, this action will not be final and effective until further order of the Department. Because the administrative hearing process is designed to formulate final agency action, the hearing process may result in a modification of the agency action or even denial of the application.

Petition for Administrative Hearing
A person whose substantial interests are affected by the Department's action may petition for an administrative proceeding (hearing) under Sections 120.569 and 120.57, F.S. Pursuant to Rules 28-
106.201 and 28-106.301, F.A.C., a petition for an administrative hearing must contain the following information:
(a) The name and address of each agency affected and each agency's file or identification number, if known;
(b) The name, address, any e-mail address, any facsimile number, and telephone number of the petitioner, if the petitioner is not represented by an attorney or a qualified representative; the name, address, and telephone number of the petitioner's representative, if any, which shall be the address for service purposes during the course of the proceeding; and an explanation of how the petitioner's substantial interests will be affected by the agency determination;

(c) A statement of when and how the petitioner received notice of the agency decision;
(d) A statement of all disputed issues of material fact. If there are none, the petition must so indicate;
(e) A concise statement of the ultimate facts alleged, including the specific facts that the petitioner contends warrant reversal or modification of the agency's proposed action;
(f) A statement of the specific rules or statutes that the petitioner contends require reversal or modification of the agency's proposed action, including an explanation of how the alleged facts relate to the specific rules or statutes; and
(g) A statement of the relief sought by the petitioner, stating precisely the action that the petitioner wishes the agency to take with respect to the agency's proposed action.
The petition must be filed (received by the Clerk) in the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@dep.state.fl.us. Also, a copy of the petition shall be mailed to the applicant at the address indicated above at the time of filing.

Time Period for Filing a Petition
In accordance with Rule 62-110.106(3), F.A.C., petitions for an administrative hearing by the applicant and persons entitled to written notice under Section 120.60(3), F.S., must be filed within 21 days of receipt of this written notice. Petitions filed by any persons other than the applicant, and other than those entitled to written notice under Section 120.60(3), F.S., must be filed within 21 days of publication of the notice or within 21 days of receipt of the written notice, whichever occurs first. You cannot justifiably rely on the finality of this decision unless notice of this decision and the right of substantially affected persons to challenge this decision has been duly published or otherwise provided to all persons substantially affected by the decision. While you are not required to publish notice of this action, you may elect to do so pursuant Rule 62-110.106(10)(a).

The failure to file a petition within the appropriate time period shall constitute a waiver of that person's right to request an administrative determination (hearing) under Sections 120.569 and 120.57, F.S., or to intervene in this proceeding and participate as a party to it. Any subsequent intervention (in a proceeding initiated by another party) will be only at the discretion of the presiding officer upon the filing of a motion in compliance with Rule 28-106.205, F.A.C. If you do not publish notice of this action, this waiver will not apply to persons who have not received written notice of this action.

Extension of Time
Under Rule 62-110.106(4), F.A.C., a person whose substantial interests are affected by the Department's action may also request an extension of time to file a petition for an administrative hearing. The Department may, for good cause shown, grant the request for an extension of time. Requests for extension of time must be filed with the Office of General Counsel of the Department at 3900 Commonwealth Boulevard, Mail Station 35, Tallahassee, Florida 32399-3000, or via electronic correspondence at Agency_Clerk@dep.state.fl.us, before the deadline for filing a petition for an administrative hearing. A timely request for extension of time shall toll the running of the time period for filing a petition until the request is acted upon.

Mediation
Mediation is not available in this proceeding.

FLAWAC Review
The applicant, or any party within the meaning of Section 373.114(1)(a) or 373.4275, F.S., may also seek appellate review of this order before the Land and Water Adjudicatory Commission under Section 373.114(1) or 373.4275, F.S. Requests for review before the Land and Water Adjudicatory Commission must be filed with the Secretary of the Commission and served on the Department within 20 days from the date when this order is filed with the Clerk of the Department.

Judicial Review
Once this decision becomes final, any party to this action has the right to seek judicial review pursuant to Section 120.68, F.S., by filing a Notice of Appeal pursuant to Florida Rules of Appellate Procedure 9.110 and 9.190 with the Clerk of the Department in the Office of General Counsel (Station #35, 3900 Commonwealth Boulevard, Tallahassee, Florida 32399-3000) and by filing a copy of the Notice of Appeal accompanied by the applicable filing fees with the appropriate district court of appeal. The notice must be filed within 30 days from the date this action is filed with the Clerk of the Department.

ALTA COMMITMENT FOR TITLE INSURANCE

Issued By:

Fidelity National Title Insurance Company

Commitment Number:

36523532

NOTICE

IMPORTANT - READ CAREFULLY: THIS COMMITMENT IS AN OFFER TO ISSUE ONE OR MORE TITLE INSURANCE POLICIES. ALL CLAIMS OR REMEDIES SOUGHT AGAINST THE COMPANY INVOLVING THE CONTENT OF THIS COMMITMENT OR THE POLICY MUST BE BASED SOLELY IN CONTRACT.

THIS COMMITMENT IS NOT AN ABSTRACT OF TITLE, REPORT OF THE CONDITION OF TITLE, LEGAL OPINION, OPINION OF TITLE, OR OTHER REPRESENTATION OF THE STATUS OF TITLE. THE PROCEDURES USED BY THE COMPANY TO DETERMINE INSURABILITY OF THE TITLE, INCLUDING ANY SEARCH AND EXAMINATION, ARE PROPRIETARY TO THE COMPANY, WERE PERFORMED SOLELY FOR THE BENEFIT OF THE COMPANY, AND CREATE NO EXTRACONTRACTUAL LIABILITY TO ANY PERSON, INCLUDING A PROPOSED INSURED.

THE COMPANY'S OBLIGATION UNDER THIS COMMITMENT IS TO ISSUE A POLICY TO A PROPOSED INSURED IDENTIFIED IN SCHEDULE A IN ACCORDANCE WITH THE TERMS AND PROVISIONS OF THIS COMMITMENT. THE COMPANY HAS NO LIABILITY OR OBLIGATION INVOLVING THE CONTENT OF THIS COMMITMENT TO ANY OTHER PERSON.

COMMITMENT TO ISSUE POLICY

Subject to the Notice; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and the Commitment Conditions, Fidelity National Title Insurance Company, a Florida corporation (the "Company"), commits to issue the Policy according to the terms and provisions of this Commitment. This Commitment is effective as of the Commitment Date shown in Schedule A for each Policy described in Schedule A, only when the Company has entered in Schedule A both the specified dollar amount as the Proposed Policy Amount and the name of the Proposed Insured.

If all of the Schedule B, Part I-Requirements have not been met within six (6) months after the Commitment Date, this Commitment terminates and the Company's liability and obligation end.

EXHIBIT "A"

Legal Description

An interest in land, said interest being over a portion of the following described parent parcel:

Parcel 1:

Overall Tract “E”:

A tract of land situated in the South 1/2 of Section 20, Township 8 South, Range 18 East, Alachua County, Florida, said tract of land being more particularly described as follows:
Commence at the Southwest corner of the aforementioned Section 20 for a point of reference and run N.01°43'30”W., along the West line of said Section 20, a distance of 40.32 feet to a concrete monument at the intersection of said West line of Section 20 with the Northerly right of way line of County Road 2054 (80 foot right of way) and the true point of beginning; thence continue N.01°43'30”W., along said West line of Section 20, a distance of 2547.72 feet to a concrete monument at the Northwest corner of the aforementioned South 1/2 of Section 20; thence run N.89°48'16”E., along the North line of said South 1/2, a distance of 4989.78 feet to a concrete monument at the intersection of said North line with the Westerly right of way line of County Road 235A (100 foot right of way); thence run S.00°14'05”W., along said Westerly right of way line, a distance of 2239.68 feet to a concrete monument at the intersection of said Westerly right of way line with the aforementioned Northerly right of way line of County Road 2054; thence run S.59°24'55”W., along said Northerly right of way line, a distance of 100.58 feet to a concrete monument at the beginning of a curve concave Northwesterly, said curve having a radius of 1869.86 feet; thence run Southwesterly, along said right of way line and with said curve, through an arc angle of 30°23'36", an arc distance of 991.89 feet (chord bearing and distance of S.74°36’43"W., 980.30 feet respectively) to a concrete monument at the end of said curve; thence run S.89°48'31”W., along said Northerly right of way line, a distance of 2591.89 feet to a concrete monument at the intersection of said Northerly right of way line with the East line of the West 1/2 of the Southwest 1/4 of said Section 20; thence run N.01°58'22”W., along said East line, a distance of 243.48 feet to a concrete monument located 300.00 feet North of the South line of said Section 20; thence run N.89°27'14”W., parallel with said South line of Section 20, a distance of 150.00 feet; thence run S.01°58'22”E., parallel with said East line, a distance of 245.42 feet to said Northerly right of way line of County Road 2054; thence run S.89°48’31”W., along said Northerly right of way line, a distance of 1096.30 feet to a steel rod and cap at the beginning of a curve concave Northerly, said curve having a radius of 1869.86 feet; thence run Westerly, along said right of way line and with said curve, through an arc angle of 01°02'35”, an arc distance of 34.04 feet (chord bearing and distance of N.89°40'12”W., 34.04 feet respectively) to the true point of beginning, less and except one acre reserved therein for graveyard, containing a total of 285.031 acres more or less.

Said one acre reserved for graveyard being more particularly described as follows:
Commence at the Southwest corner of the aforementioned Section 20 for a point of reference and run N.01°43'30"W., along the West line of said Section 20, a distance of 2588.04 feet to a concrete monument at the Northwest corner of the aforementioned South 1/2 of Section 20; thence run N.89°48'16”E., along the North line of said South 1/2, a distance of 4989.78 feet to a concrete monument at the intersection of said North line with the Westerly right of way line of County Road 235A (100 foot right of way); thence run S.00°14'05”W., along said Westerly right of way line, a distance of 501.38 feet; thence run N.89°45'54”W., a distance of 405.49 feet to a steel rod and cap at the true point of beginning of graveyard parcel; thence run S.00°14'06”W., a distance of 208.71 feet to a steel rod and cap; thence run N.89°45'54”W., a distance of 208.71 feet to a steel rod and cap; thence run N.00°14'06”E., a distance of 208.71 feet to a steel rod and cap; thence run S.89°45'54”E., a distance of 208.71 feet to the true point of beginning, containing 1.000 acres more or less.

AND BEING the same property conveyed to Waco, Inc., qualified to do business in Florida as Waco of Alabama, Inc., an Alabama corporation from International Business Machines Corporation, a New York corporation by Special Warranty Deed dated November 10, 1997 and recorded November 18, 1997 in Deed Book 2140, Page 1837.; said Waco, Inc, an Alabama corporation merged into Wade Alabama Corporation, a Florida corporation; and said Waco of Alabama, Inc, an Alabama corporation merged into Wade Alabama Corporation, an Alabama corporation, and said Wade Alabama

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Fidelity National Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

Copyright American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

SCHEDULE B, PART I
REQUIREMENTS

All of the following Requirements must be met:

1. The Proposed Insured must notify the Company in writing of the name of any party not referred to in this Commitment who will obtain an interest in the Land or who will make a loan on the Land. The Company may then make additional Requirements or Exceptions.

2. Pay the agreed amount for the estate or interest to be insured.

3. Pay the premiums, fees, and charges for the Policy to the Company.

4. Documents satisfactory to the Company that convey the Title or create the Mortgage to be insured, or both, must be properly authorized, executed, delivered, and recorded in the Public Records.

5. The Company must be provided with the executed Owner's Affidavit and Agreement relating to, among other items, bankruptcy, mechanics' liens, and parties in possession.

6. Instrument(s) satisfactory to create the estate or interest to be insured must be properly executed (see Document(s) Requirement Note below), delivered and duly filed for record, including any Recorder of Deeds' or Clerks' required Cover Sheets, Affidavits or Forms:

   A. Memorandum of Lease from Waco Properties, Inc, a Florida corporation, (As to Parcel 1) and Gary D. Brown, as Trustee of the Gary D. Brown Revocable Trust dated January 23, 2004; Linda Weidner; Joanne Alspaugh and Henderson Brothers, Inc., as tenants in common, (As to Parcel 2) to Pleasant Solar LLC, a Florida limited liability company.

   i. Each document submitted for recording must be executed before an FNF approved Notary for acknowledgement. Properly completed and executed attached Affidavit of Notary will be sufficient evidence of compliance with FNF approved Notary requirement.
   ii. Each document involving an entity as a party, must include a statement of the state of formation for the entity and must correctly recite any mergers, name changes, fictitious names or erroneous names appearing in the title to clarify the record.
   iii. Power of Attorney ("POA") - We will not accept documents signed by an agent without prior review and approval by this office. Additional requirements will be added upon approval of a POA.
   iv. Each document received by this office for recording must be dated and executed no more than five (5) days before we receive it. In some cases a document received by our office more than five (5) days after execution, may be subject to fines or additional fees imposed by the Clerk's office. FNF-SMS is not responsible for payment or fronting of any fine or fee for tardy submission of a document and we may hold such document until we receive funds sufficient to cover the cost of recording plus the fine or fee.

7. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance by the corporation named below:

   Name of Corporation: Waco Properties, Inc, a Florida corporation

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Fidelity National Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

entity was created

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

11. The Company will require the following documents for review prior to the issuance of any title insurance predicated upon a conveyance or encumbrance from the entity named below.

Limited Liability Company: Pleasant Solar LLC, a Florida limited liability company

a. A copy of its operating agreement, if any, and any and all amendments, supplements and/or modifications thereto, certified by the appropriate manager or member.

b. If a domestic Limited Liability Company, a copy of its Articles of Organization and all amendment thereto with the appropriate filing stamps.

c. If the Limited Liability Company is member-managed a full and complete current list of members certified by the appropriate manager or member.

d. A current dated certificate of good standing from the proper governmental authority of the state in which the entity was created

e. If less than all members, or managers, as appropriate, will be executing the closing documents, furnish evidence of the authority of those signing.

The Company reserves the right to add additional items or make further requirements after review of the requested documentation.

12. The actual value of the estate or interest to be insured must be disclosed to the Company, and subject to approval by the Company, entered as the amount of the policy to be issued. Until the amount of the policy to be issued shall be determined, and entered as aforesaid, it is agreed that as between the Company, the applicant for this Company, and every person relying on this Commitment, the Company cannot be required to approve any such evaluation in excess of $100,000.00 and the total liability of the Company on account of this Commitment shall not exceed said amount.

END OF REQUIREMENTS

SCHEDULE B, PART II
EXCEPTIONS

THIS COMMITMENT DOES NOT REPUBLISH ANY COVENANT, CONDITION, RESTRICTION, OR LIMITATION CONTAINED IN ANY DOCUMENT REFERRED TO IN THIS COMMITMENT TO THE EXTENT THAT THE SPECIFIC COVENANT, CONDITION, RESTRICTION, OR LIMITATION VIOLATES STATE OR FEDERAL LAW BASED ON RACE, COLOR, RELIGION, SEX, SEXUAL ORIENTATION, GENDER IDENTITY, HANDICAP, FAMILIAL STATUS, OR NATIONAL ORIGIN.

The Policy will not insure against loss or damage resulting from the terms and provisions of any lease or easement identified in Schedule A, and will include the following Exceptions unless cleared to the satisfaction of the Company:

CLICK HERE TO ACCESS DOCUMENT IMAGES

General Exceptions:

1. Any defect, lien, encumbrance, adverse claim, or other matter that appears for the first time in the Public Records or is created, attaches, or is disclosed between the Commitment Date and the date on which all of the Schedule B, Part I—Requirements are met.

2. Rights or claims of parties in possession not shown by the Public Records.

3. Any encroachment, encumbrance, violation, variation, or adverse circumstance affecting the title that would be disclosed by an accurate and complete land survey of the Land.

4. Easements, or claims of easements, not shown by the Public Records.

5. Any lien, or right to a lien, for services, labor, or material heretofore or hereafter furnished, imposed by law and not shown by the Public Records.

6. Taxes or special assessments which are not shown as existing liens by the Public Records.

   NOTE: Upon receipt of satisfactory Owner/Seller Affidavit Schedule B - Section II Items 2, 4, 5 and 6 will be deleted from final policy, and Item 3 will be deleted upon receipt of satisfactory ALTA/NSPS Survey. Item 1 will be deleted from final policy upon receipt of all requirements and a satisfactory title update.

Special Exceptions:

7. Taxes for the year 2022 and subsequent years, a lien not yet due and payable. (As to Parcel 1 and Parcel 2)

8. Easement in favor of State of Florida, recorded on October 17, 1960 in Deed Book 114, Page 427. (As to Parcel 1)

9. 80 foot wide strip of land conveyed in Warranty Deed from W. D. Pope, Jr. and James A. Lewis to Alachua County, recorded on October 14, 1977 in Deed Book 1096, Page 575. (As to Parcel 1)

10. Mineral Deed to W. H. Wellborn and Hillary Wellborn, dated November 21, 1996 and recorded January 6, 1997 in Deed Book 2094, Page 476. (As to Parcel 1)

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Fidelity National Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

COMMITMENT CONDITIONS

1. DEFINITIONS

(a) "Knowledge" or "Known": Actual or imputed knowledge, but not constructive notice imparted by the Public Records.

(b) "Land": The land described in Schedule A and affixed improvements that by law constitute real property. The term "Land" does not include any property beyond the lines of the area described in Schedule A, nor any right, title, interest, estate, or easement in abutting streets, roads, avenues, alleys, lanes, ways, or waterways, but this does not modify or limit the extent that a right of access to and from the Land is to be insured by the Policy.

(c) "Mortgage": A mortgage, deed of trust, or other security instrument, including one evidenced by electronic means authorized by law.

(d) "Policy": Each contract of title insurance, in a form adopted by the American Land Title Association, issued or to be issued by the Company pursuant to this Commitment.

(e) "Proposed Insured": Each person identified in Schedule A as the Proposed Insured of each Policy to be issued pursuant to this Commitment.

(f) "Proposed Policy Amount": Each dollar amount specified in Schedule A as the Proposed Policy Amount of each Policy to be issued pursuant to this Commitment.

(g) "Public Records": Records established under state statutes at the Commitment Date for the purpose of imparting constructive notice of matters relating to real property to purchasers for value and without Knowledge.

(h) "Title": The estate or interest described in Schedule A.

2. If all of the Schedule B, Part I-Requirements have not been met within the time period specified in the Commitment to Issue Policy, this Commitment terminates and the Company's liability and obligation end.

3. The Company's liability and obligation is limited by and this Commitment is not valid without:

(a) the Notice;

(b) the Commitment to Issue Policy;

(c) the Commitment Conditions;

(d) Schedule A;

(e) Schedule B, Part I-Requirements;

(f) Schedule B, Part II-Exceptions; and

(g) a counter-signature by the Company or its issuing agent that may be in electronic form.

4. COMPANY'S RIGHT TO AMEND

The Company may amend this Commitment at any time. If the Company amends this Commitment to add a defect, lien, encumbrance, adverse claim, or other matter recorded in the Public Records prior to the Commitment Date, any liability of the Company is limited by Commitment Condition 5. The Company shall not be liable for any other amendment to this Commitment.

5. LIMITATIONS OF LIABILITY

(a) The Company's liability under Commitment Condition 4 is limited to the Proposed Insured's actual expense incurred in the interval between the Company's delivery to the Proposed Insured of the Commitment and the delivery of the amended Commitment, resulting from the Proposed Insured's good faith reliance to:

(i) comply with the Schedule B, Part I-Requirements;

(ii) eliminate, with the Company's written consent, any Schedule B, Part II-Exceptions; or

(iii) acquire the Title or create the Mortgage covered by this Commitment.

(b) The Company shall not be liable under Commitment Condition 5(a) if the Proposed Insured requested the amendment or had Knowledge of the matter and did not notify the Company about it in writing.

(c) The Company will only have liability under Commitment Condition 4 if the Proposed Insured would not have incurred the expense had the Commitment included the added matter when the Commitment was first delivered to the Proposed Insured.

(d) The Company's liability shall not exceed the lesser of the Proposed Insured's actual expense incurred in good faith and described in Commitment Conditions 5(a)(i) through 5(a)(iii) or the Proposed Policy Amount.

(e) The Company shall not be liable for the content of the Transaction Identification Data, if any.

(f) In no event shall the Company be obligated to issue the Policy referred to in this Commitment unless all of the Schedule B, Part I-Requirements have been met to the satisfaction of the Company.

(g) In any event, the Company's liability is limited by the terms and provisions of the Policy.

6. LIABILITY OF THE COMPANY MUST BE BASED ON THIS COMMITMENT

(a) Only a Proposed Insured identified in Schedule A, and no other person, may make a claim under this Commitment.

(b) Any claim must be based in contract and must be restricted solely to the terms and provisions of this Commitment.

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Fidelity National Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

Copyright American Land Title Association. All rights reserved.

The use of this Form (or any derivative thereof) is restricted to ALTA licensees and ALTA members in good standing as of the date of use. All other uses are prohibited. Reprinted under license from the American Land Title Association.

(continued)

(c) Until the Policy is issued, this Commitment, as last revised, is the exclusive and entire agreement between the parties with respect to the subject matter of this Commitment and supersedes all prior commitment negotiations, representations, and proposals of any kind, whether written or oral, express or implied, relating to the subject matter of this Commitment.

(d) The deletion or modification of any Schedule B, Part II-Exception does not constitute an agreement or obligation to provide coverage beyond the terms and provisions of this Commitment or the Policy.

(e) Any amendment or endorsement to this Commitment must be in writing and authenticated by a person authorized by the Company.

(f) When the Policy is issued, all liability and obligation under this Commitment will end and the Company's only liability will be under the Policy.

7. IF THIS COMMITMENT HAS BEEN ISSUED BY AN ISSUING AGENT

The issuing agent is the Company's agent only for the limited purpose of issuing title insurance commitments and policies. The issuing agent is not the Company's agent for the purpose of providing closing or settlement services.

8. PRO-FORMA POLICY

The Company may provide, at the request of a Proposed Insured, a pro-forma policy illustrating the coverage that the Company may provide. A pro-forma policy neither reflects the status of Title at the time that the pro-forma policy is delivered to a Proposed Insured, nor is it a commitment to insure.

END OF CONDITIONS

This page is only a part of a 2016 ALTA® Commitment for Title Insurance issued by Fidelity National Title Insurance Company. This Commitment is not valid without the Notice; the Commitment to Issue Policy; the Commitment Conditions; Schedule A; Schedule B, Part I-Requirements; Schedule B, Part II-Exceptions; and a counter-signature by the Company or its issuing agent that may be in electronic form.

FIDELITY NATIONAL FINANCIAL
PRIVACY NOTICE

Effective January 1, 2021

Fidelity National Financial, Inc. and its majority-owned subsidiary companies (collectively, "FNF," "our," or "we") respect and are committed to protecting your privacy. This Privacy Notice explains how we collect, use, and protect personal information, when and to whom we disclose such information, and the choices you have about the use and disclosure of that information.

A limited number of FNF subsidiaries have their own privacy notices. If a subsidiary has its own privacy notice, the privacy notice will be available on the subsidiary's website and this Privacy Notice does not apply.

Collection of Personal Information

FNF may collect the following categories of Personal Information:

- contact information (*e.g.*, name, address, phone number, email address);
- demographic information (*e.g.*, date of birth, gender, marital status);
- identity information (*e.g.* Social Security Number, driver's license, passport, or other government ID number);
- financial account information (*e.g.* loan or bank account information); and
- other personal information necessary to provide products or services to you.

We may collect Personal Information about you from:

- information we receive from you or your agent;
- information about your transactions with FNF, our affiliates, or others; and
- information we receive from consumer reporting agencies and/or governmental entities, either directly from these entities or through others.

Collection of Browsing Information

FNF automatically collects the following types of Browsing Information when you access an FNF website, online service, or application (each an "FNF Website") from your Internet browser, computer, and/or device:

- Internet Protocol (IP) address and operating system;
- browser version, language, and type;
- domain name system requests; and
- browsing history on the FNF Website, such as date and time of your visit to the FNF Website and visits to the pages within the FNF Website.

Like most websites, our servers automatically log each visitor to the FNF Website and may collect the Browsing Information described above. We use Browsing Information for system administration, troubleshooting, fraud investigation, and to improve our websites. Browsing Information generally does not reveal anything personal about you, though if you have created a user account for an FNF Website and are logged into that account, the FNF Website may be able to link certain browsing activity to your user account.

Other Online Specifics

Cookies. When you visit an FNF Website, a "cookie" may be sent to your computer. A cookie is a small piece of data that is sent to your Internet browser from a web server and stored on your computer's hard drive. Information gathered using cookies helps us improve your user experience. For example, a cookie can help the website load properly or can customize the display page based on your browser type and user preferences. You can choose whether or not to accept cookies by changing your Internet browser settings. Be aware that doing so may impair or limit some functionality of the FNF Website.

Web Beacons. We use web beacons to determine when and how many times a page has been viewed. This information is used to improve our websites.

Do Not Track. Currently our FNF Websites do not respond to "Do Not Track" features enabled through your browser.

Links to Other Sites. FNF Websites may contain links to unaffiliated third-party websites. FNF is not responsible for the privacy practices or content of those websites. We recommend that you read the privacy policy of every website you visit.

Use of Personal Information

FNF uses Personal Information for three main purposes:

- To provide products and services to you or in connection with a transaction involving you.
- To improve our products and services.
- To communicate with you about our, our affiliates', and others' products and services, jointly or independently.

When Information Is Disclosed

We may disclose your Personal Information and Browsing Information in the following circumstances:

- to enable us to detect or prevent criminal activity, fraud, material misrepresentation, or nondisclosure;
- to nonaffiliated service providers who provide or perform services or functions on our behalf and who agree to use the information only to provide such services or functions;
- to nonaffiliated third party service providers with whom we perform joint marketing, pursuant to an agreement with them to jointly market financial products or services to you;
- to law enforcement or authorities in connection with an investigation, or in response to a subpoena or court order; or
- in the good-faith belief that such disclosure is necessary to comply with legal process or applicable laws, or to protect the rights, property, or safety of FNF, its customers, or the public.

The law does not require your prior authorization and does not allow you to restrict the disclosures described above. Additionally, we may disclose your information to third parties for whom you have given us authorization or consent to make such disclosure. We do not otherwise share your Personal Information or Browsing Information with nonaffiliated third parties, except as required or permitted by law. We may share your Personal Information with affiliates (other companies owned by FNF) to directly market to you. Please see "Choices with Your Information" to learn how to restrict that sharing.

We reserve the right to transfer your Personal Information, Browsing Information, and any other information, in connection with the sale or other disposition of all or part of the FNF business and/or assets, or in the event of bankruptcy, reorganization, insolvency, receivership, or an assignment for the benefit of creditors. By submitting Personal Information and/or Browsing Information to FNF, you expressly agree and consent to the use and/or transfer of the foregoing information in connection with any of the above described proceedings.

Security of Your Information

We maintain physical, electronic, and procedural safeguards to protect your Personal Information.

Choices With Your Information

If you do not want FNF to share your information among our affiliates to directly market to you, you may send an "opt out" request as directed at the end of this Privacy Notice. We do not share your Personal Information with nonaffiliates for their use to direct market to you without your consent.

Whether you submit Personal Information or Browsing Information to FNF is entirely up to you. If you decide not to submit Personal Information or Browsing Information, FNF may not be able to provide certain services or products to you.

For California Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties, except as permitted by California law. For additional information about your California privacy rights, please visit the "California Privacy" link on our website (https://fnf.com/pages/californiaprivacy.aspx) or call (888) 413-1748.

For Nevada Residents: You may be placed on our internal Do Not Call List by calling (888) 934-3354 or by contacting us via the information set forth at the end of this Privacy Notice. Nevada law requires that we also provide you with the following contact information: Bureau of Consumer Protection, Office of the Nevada Attorney General, 555 E. Washington St., Suite 3900, Las Vegas, NV 89101; Phone number: (702) 486-3132; email: BCPINFO@ag.state.nv.us.

For Oregon Residents: We will not share your Personal Information or Browsing Information with nonaffiliated third parties for marketing purposes, except after you have been informed by us of such sharing and had an opportunity to indicate that you do not want a disclosure made for marketing purposes.

For Vermont Residents: We will not disclose information about your creditworthiness to our affiliates and will not disclose your personal information, financial information, credit report, or health information to nonaffiliated third parties to market to you, other than as permitted by Vermont law, unless you authorize us to make those disclosures.

Information From Children

The FNF Websites are not intended or designed to attract persons under the age of eighteen (18). We do not collect Personal Information from any person that we know to be under the age of thirteen (13) without permission from a parent or guardian.

International Users

FNF's headquarters is located within the United States. If you reside outside the United States and choose to provide Personal Information or Browsing Information to us, please note that we may transfer that information outside of your country of residence. By providing FNF with your Personal Information and/or Browsing Information, you consent to our collection, transfer, and use of such information in accordance with this Privacy Notice.

FNF Website Services for Mortgage Loans

Certain FNF companies provide services to mortgage loan servicers, including hosting websites that collect customer information on behalf of mortgage loan servicers (the "Service Websites"). The Service Websites may contain links to both this Privacy Notice and the mortgage loan servicer or lender's privacy notice. The sections of this Privacy Notice titled When Information is Disclosed, Choices with Your Information, and Accessing and Correcting Information do not apply to the Service Websites. The mortgage loan servicer or lender's privacy notice governs use, disclosure, and access to your Personal Information. FNF does not share Personal Information collected through the Service Websites, except as required or authorized by contract with the mortgage loan servicer or lender, or as required by law or in the good-faith belief that such disclosure is necessary: to comply with a legal process or applicable law, to enforce this Privacy Notice, or to protect the rights, property, or safety of FNF or the public.

Your Consent To This Privacy Notice; Notice Changes; Use of Comments or Feedback

By submitting Personal Information and/or Browsing Information to FNF, you consent to the collection and use of the information in accordance with this Privacy Notice. We may change this Privacy Notice at any time. The Privacy Notice's effective date will show the last date changes were made. If you provide information to us following any change of the Privacy Notice, that signifies your assent to and acceptance of the changes to the Privacy Notice.

WIRE SAFE™ | Inquire before you wire!

WIRE FRAUD ALERT

This Notice is not intended to provide legal or professional advice.
If you have any questions, please consult with a lawyer.

All parties to a real estate transaction are targets for wire fraud and many have lost hundreds of thousands of dollars because they simply relied on the wire instructions received via email, without further verification. **If funds are to be wired in conjunction with this real estate transaction, we strongly recommend verbal verification of wire instructions through a known, trusted phone number prior to sending funds.**

In addition, the following non-exclusive self-protection strategies are recommended to minimize exposure to possible wire fraud.

- **NEVER RELY** on emails purporting to change wire instructions. Parties to a transaction rarely change wire instructions in the course of a transaction.
- **ALWAYS VERIFY** wire instructions, specifically the ABA routing number and account number, by calling the party who sent the instructions to you. DO NOT use the phone number provided in the email containing the instructions, use phone numbers you have called before or can otherwise verify. **Obtain the number of relevant parties to the transaction as soon as an escrow account is opened.** DO NOT send an email to verify as the email address may be incorrect or the email may be intercepted by the fraudster.
- **USE COMPLEX EMAIL PASSWORDS** that employ a combination of mixed case, numbers, and symbols. Make your passwords greater than eight (8) characters. Also, change your password often and do NOT reuse the same password for other online accounts.
- **USE MULTI-FACTOR AUTHENTICATION** for email accounts. Your email provider or IT staff may have specific instructions on how to implement this feature.

For more information on wire-fraud scams or to report an incident, please refer to the following links:

RE:	Pleasant Solar LLC – Comprehensive Plan Consistency Analysis

This Comprehensive Plan Consistency Analysis is submitted in support of the site plan application for Pleasant Solar LLC in Alachua. The proposed use is a solar energy collection and storage facility. The site is ±321.49 acres and includes Alachua County Tax Parcels 03894-000-000 and 03898-000-000. The development area is located at 17910 Peggy Road (north of Peggy Rd/CR 2054), and on the west side of NW 173rd Street/CR 235A. The site's Future Land Use (FLU) categories are Agriculture (A) and Moderate Density Residential (MOD). The Zoning District classifications are Agricultural (A) and Residential District (RSF-4).

The following identifies specific **City of Alachua Comprehensive Plan Goals, Objectives, and Policies** and explains how this application is consistent with each. Comprehensive Plan text is provided in normal font, while consistency statements are provided in **bold**.

FUTURE LAND USE ELEMENT

Policy 2.4.b Landscaping: Buffering – A buffer consists of horizontal space (land) and vertical elements (plants, berms, fences, walls) that physically separate and visually screen adjacent uses. The City shall establish buffer yard requirements that are based on the compatibility of the adjacent uses and the desired result of the buffer.

Landscape buffers are provided per City of Alachua Land Development Regulations (LDRs) and shown on the Landscape Plan submitted with this application. Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001 is included with this application.

All landscape buffers are provided within a 100' setback from the property line around the project perimeter, defined by a black vinyl-coated chain link fence around the solar array and a 25' fire break/maintenance path. The north, west, and southwest buffers are provided by a 15' wide area of preserved existing vegetation and proposed landscape plantings. The northeast and east buffers are provided by a 15' landscape buffer. A 15' buffer is provided around the southern boundary outcrop and a 5' buffer along the remaining southern perimeter. There is a 10' wide landscape buffer surrounding the small, family cemetery plot that is internal to the southern parcel (as shown on the Landscape Section in the approved Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001).

Policy 2.5 a: There shall be a minimum of 10% open space required. The City shall establish incentives for the provision of open space beyond minimum requirements.

The proposed solar collection and storage facility site plan provides ±11% of open space, exceeding the 10% open space requirement. A Landscape Plan showing this information has been submitted with this application.

Policy 5.1.a Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

The natural drainage pattern of the site will be maintained and there will be minimal grading onsite. Along with the perimeter fence and landscape buffering, the natural slope of the property will further obscure views of the solar panels from CR 235A and adjacent properties. *The geotechnical summary report by GSE has been submitted with this application.*

Policy 5.1.d Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

The application complies with State and Federal laws and regulations for delineation and protection of wetland areas. The wetland is protected with a 50' setback, and the natural depressional areas are protected with a 100' setback. *The geotechnical summary report by GSE has been submitted with this application. The Wetland Delineation Report has been submitted with this application.*

COMMUNITY FACILITIES ELEMENT

Objective 3.5: Stormwater System Design in High Aquifer Recharge Areas
The City shall work with the Suwanee River Water Management District and the FL Dept of Environmental Protection criteria for karst stormwater management system design.

Policy 3.5.a: The following general requirement apply to stormwater management systems within high aquifer recharge areas:

1. Stormwater shall not be directly discharged to active sinkholes;

Natural stormwater sheet flow will be maintained to the existing depression.

2. When soil and water table conditions allow, the use of offline retention systems for stormwater systems shall be required;

The goal of the stormwater treatment plan on this project is to maintain natural drainage patterns; therefore no offline retention systems are proposed.

3. Swale conveyances shall be used to the greatest extent possible and contextually appropriate;

The goal of the stormwater treatment plan on this project is to maintain natural drainage patterns. The majority of the site will remain at natural grade and some areas will be minimally graded. Two basins with swales are proposed in the areas with minimal grading.

4. Projects in areas zoned for industrial land uses shall not discharge industrial pollutants into the stormwater system or allow permit pollutants to come in contact with groundwater;

No industrial uses are proposed on the site. Solar panels are completely sealed. Routine inspection of the facility, including the solar modules, by an Operations & Management provider will occur and in the rare event of panel damage, the modules will be replaced and recycled as needed.

5. Natural depressions may be used for stormwater management only when hydrogeological evidence shows that the geologic structure and soils are stable and unlikely to form a direct connection to the groundwater. To verify geologic stability, the design professional shall provide soil boring information and/or supplemental data such as ground penetrating radar.

Hydrogeological stability is addressed in the geotechnical review, and soil borings are included in the data. Refer to the geotechnical report by GSE, which has been submitted with this application.

6. If the hydrogeological conditions are suitable and a natural depression is proposed for use as part of the stormwater management system, a spreader swale shall be employed at the inflow location;

No point discharges to the existing depression are proposed. Natural sheet flow condition will be preserved.

7. Regular inspection shall be conducted by developer/maintenance entity to visibly check for the indicators of or the existence of solution pipes; and

Inspections will be conducted as described in the Stormwater Operations and Maintenance document. Refer to the Stormwater Report for detailed information.

8. Remedial plugging activities shall employ methodologies acceptable to the applicable regulatory agency (the FL Dept of Environmental Protection or the Suwannee River WMD).

Remedial plugging activities, if required, shall meet the requirements and best practices of the Florida Department of Environmental Protection (FDEP) and Suwannee River Water Management District (SRWMD).

Policy 3.5.c. In addition to the requirements of Policy 3.5.a., stormwater systems in high aquifer recharge areas shall:

1. Use swales, preferably with cross block or raised driveway culverts, to promote retention/infiltration within swales; and

Natural sheet flow and drainage patterns on the site will be maintained.

2. Use shallow, vegetated, offline infiltration systems that are incorporated into a project's open space/landscaping areas.

No offline retention systems are proposed; the stormwater design will maintain natural drainage patterns.

CONSERVATION AND OPEN SPACE ELEMENT

Policy 1.2.j. The City shall require all new developments to maintain internal and external connectivity of all open space to the maximum extent practicable.

The ±11% open space set-aside exceeds the 10% requirement for the site. The project proposes to retain the existing wooded vegetation within the buffer areas of the 100 foot setback around the site's external perimeter. The majority of this existing wooded area stretches from the southwest, along the western boundary, and across the northern property line for a length of over 10,000 feet.

As shown on the Site Plan, the majority of the open space is located in the buffers. The open space area around the perimeter of the solar array will not be disturbed, affected by grading activities, and will remain natural and traversable for wildlife. Refer to the Memorandum "Pleasant Solar Perimeter Fencing and Wildlife Corridor" prepared by CHW Ecological Services for more information.

The open space area surrounding the existing natural depression is proposed to remain within the fenced area of the site for safety. The internal area of the site within the fence will be comprised of solar collection equipment and will be unmanned and remotely monitored. No parking areas or facilities will be provided. To provide safety for the public, the internal solar array areas of the site will be fully fenced. The land underneath the solar array area will be seeded with pollinator friendly plant species to increase biodiversity and benefit pollinating invertebrates.

Policy 1.8.a. The City shall comply with the Alachua County Hazardous Materials Management Code.

The purpose of the Alachua County Hazardous Material Management Code is to regulate and provide standards for storage, handling, and monitoring of hazardous materials to prevent discharges to the environment.

Solar panels are not addressed in the Alachua County Hazardous Materials Management Code. Federal and state solid and hazardous waste regulations may apply to solar panels only at the point that they are removed from service and/or must be discarded. Therefore, no monitoring is required.

Policy 1.10.a: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code and regulations adopted by the DEP and the Suwannee River Water Management District.

An environmental analysis was conducted for the site. One wetland and three depressional areas were identified. A Site Plan (submitted with this application) has been designed to protect these areas with a 50' setback around the wetland area, and 100' setbacks around the depressional areas. *The geotechnical summary report by GSE has been submitted with this application. The Wetland Delineation Report and Sinkhole Survey have been submitted with this application.*

Objective 1.13 Energy Conservation. The City shall encourage and promote the conservation of energy resources to reduce negative impacts to the environment.

Solar energy use supports the City's objective to conserve energy resources and reduce negative impacts to the environment. This proposed solar energy collection and storage facility will provide the City of Alachua and surrounding areas with an additional source of renewable energy.

To:	Kathy Winburn, AICP, City of Alachua Planning & Community Dev. Director
From:	Danika Oliverio, Project Manager
Date:	March 7, 2024 – Resubmitted May 2, 2024
RE:	Pleasant Solar LLC – Concurrency Impact Analysis

This Concurrency Impact Analysis is submitted in support of the site plan application for the Pleasant Solar LLC in Alachua. The proposed use is a solar energy collection and storage facility. The site is ±321.49 acres and includes Alachua County Tax Parcels 03894-000-000 and 03898-000-000. The development area is located at 17910 Peggy Road (north of Peggy Rd/CR 2054), and on the west side of NW 173rd Street/CR 235A. The site's Future Land Use (FLU) categories are Agriculture (A) and Moderate Density Residential (MOD). The Zoning District classifications are Agricultural (A) and Residential District (RSF-4).

The following analysis estimates potential impacts on City of Alachua public facilities that may result from the proposed development.

Roadways / Transportation

Table 1: Projected Trip Generation

Variable Type	Variable Size	Daily	AM Peak			PM Peak		
		Total	Total	In	Out	Total	In	Out
KSF GLA	1	1	0	0	0	0	0	0

NOTE: The Solar Facility will be unmanned and monitored remotely. There will be a maintenance visit once or twice monthly.

Conclusion: Approval of this application may generate up to **1 daily vehicle trip**. Thus, the proposed development will not negatively impact the adopted LOS for adjacent and nearby roadways, as demonstrated in Tables 2 of this report.

Per City LDR §2.4.14(H)(2), affected roadways for developments generating *less* than 1,000 external average daily trips (ADT) are those within one-half mile of the development's ingress/egress, or to the nearest intersecting major street, whichever is greater. Table 2 calculates projected impacts on City of Alachua roadways.

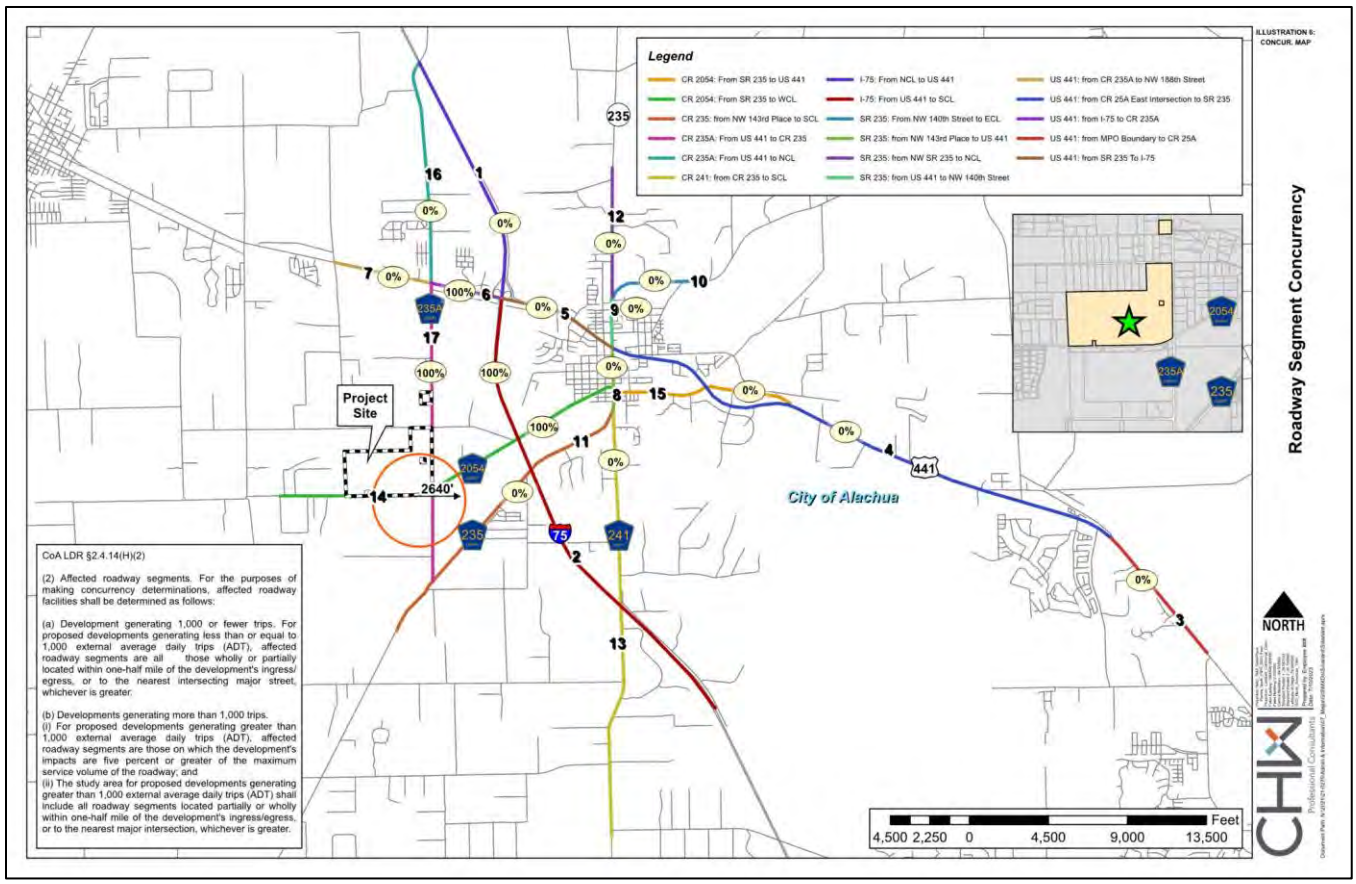

Figure 1: Traffic Segment Map

Table 2a: Projected Impacts on Roadway Segments 14 and 17

Traffic System Category	AADT	PM	AADT	PM
	Segment 14		Segment 17	
	CR 2054 - From SR 235 to West City Limit		CR 235A – From US 441 To CR 235	
Maximum Service Volume[1]	15,120	1,359	15,120	1,359
Existing Traffic[1]	2,498	237	5,302	504
Reserved Trips[1]	0	0	0	0
Available Capacity	12,622	1,122	9,671	838
Projected Trip Generation[2]	1	0	1	0
Available Capacity w/ Application approval	**12,621**	**1,122**	**9,670**	**838**

1. *Source: City of Alachua June 2023 Development Monitoring Report*
2. *NOTE: Projected trip distribution percentage is as follows:*
    a. *Segment 14 and 17: 100%*

Table 2b: Projected Impacts on Roadway Segments 2 and 6

Traffic System Category	AADT	PM	AADT	PM
	Segment 2		Segment 6	
	I-75, From US 441 to the South City Limit		US Hwy 441 – From I-75 to CR 235A	
Maximum Service Volume[1]	91,600	8,250	39,000	3,510
Existing Traffic[1]	67,958	7,136	27,914	2,652
Reserved Trips[1]	0	0	0	0
Available Capacity	23,257	1,076	8,089	606
Projected Trip Generation[2]	1	0	1	0
Available Capacity w/ Application approval	**23,256**	**1,076**	**8,088**	**606**

1. *Source: City of Alachua June 2023 Development Monitoring Report*
2. *NOTE: Projected trip distribution percentage is as follows:*
    a. *Segment 2 and 6: 100%*

Conclusion: Affected roadway segments include Segments 2, 6, 14, and 17. There is available capacity with this application's approval. Therefore, this development *will not* cause the roadway segments to fall below the LOS standards.

Potable Water/Sanitary Sewer

Table 3: Projected Potable Water Impact

System Category	Gallons Per Day (GPD)
Current Permitted Capacity[1]	2,300,000
Less actual Potable Water Flows[1]	1,309,883
Reserved Capacity[1]	295,666
Residual Capacity[1]	613,501
Percentage of Permitted Design Capacity Utilized[1]	73.33%
Projected Potable Water Demand from Proposed Project[2]	0
Residual Capacity after Proposed Project	**613,501**

1. *Source: City of Alachua June 2023 Development Monitoring Report*
2. *Formulas used: (1 gallon per unit up to 200 units [200] + 1 gallon for each 2 units over 200 [128/2])*
    a. *Source: 62-6.008 Florida Administrative Code (FAC)*

*Note: After construction, the landscape plantings will be temporarily irrigated using the **existing on-site well**. Refer to Site Plan & Irrigation Plan for water source information/location.*

Conclusion: There is residual capacity with this application's approval. Therefore, the proposed development *will not* cause the City's potable water facilities to fall below LOS standards.

Table 4: Projected Sanitary Sewer Impact

System Category	Gallons Per Day (GPD)
Treatment Plant Current Permitted Capacity[1]	1,500,000
Less actual Treatment Plant Flows[1]	719,250
Reserved Capacity[1]	278,135
Residual Capacity[1]	502,615
Percentage of Permitted Design Capacity Utilized[1]	66.49%
Projected Potable Water Demand from Proposed Project[2]	0
Residual Capacity after Proposed Project	**502,615**

1. *Source: City of Alachua June 2023 Development Monitoring Report*
2. *Formulas used: (1 gallon per unit up to 200 units [200] + 1 gallon for each 2 units over 200 [128/2])*
    a. *Source : 62-6.008 Florida Administrative Code (FAC)*

Conclusion: There is residual capacity with this application's approval. Therefore, the proposed development will not cause sanitary sewer facilities to fall below LOS standards.

Solid Waste

Table 5: Projected Solid Waste Impact

System Category	LBs Per Day	Tons Per Year
Existing Demand[1]	43,376.00	7,916.12
Reserved Capacity[1]	38,651.26	7,053.85
New River Solid Waste Facility Capacity[1]	50 years	
Solid Waste Generated by Proposed Project[2]		**0**

1. *Source: City of Alachua June 2023 Development Monitoring Report.*
2. *Source: Sincero and Sincero; Environmental Engineering: A Design Approach. Prentice Hall, New Jersey, 1996. Formula used: (((12 lbs. / 1,000 ft^2/day x 56299 sq. ft.) x 365)/2,000)*

Conclusion: There is available capacity with this application's approval. Therefore, the proposed development *will not* cause the City's solid waste facilities to fall below LOS standards.

Mailed Memorandum

NEIGHBORHOOD MEETING NOTIFICATION

PN 21-0275

To: Neighbors of Peggy Road / CR 235A Intersection

From: Craig Brashier, AICP

Date: 13 April 2022

RE: Neighborhood Meeting Public Notice

A Neighborhood Meeting will be held to discuss a Special Exception application and site plan application on ±320 acres in the City of Alachua (Alachua County Tax Parcels # 03894-000-000 and 03898-000-000). The property's Future Land Use classifications are Agriculture and Moderate Density Residential. The property's zoning districts are Agriculture (A) and Residential Single Family (RSF-4).

The site is located generally at the northwestern intersection of Peggy Road and County Road 235A.

The intent of the Special Exception application is to permit a solar energy collection facility, which is considered a "major utility" by City of Alachua Land Development Regulations. Major utilities are permitted in the property's zoning districts by Special Exception, per City of Alachua Land Development Regulations Table 4.1-1.

The solar energy collection facility will be operated by Solariant Capital, LLC. More information about Solariant can be found at their website, https://www.solariantcapital.com/.

Meeting Details:

Date: 27 April 2022

Time: 6:00 PM

Location: CHW Office, 11801 Research Drive, Alachua, FL, 32615

Contact: Craig Brashier, AICP
11801 Research Drive
Alachua, FL 32615
(352) 331-1976
Live@CHW-inc.com

This is not a public hearing. The purpose of the neighborhood meeting is to inform the public about the nature of the proposal and seek their comments.

If you are unable to attend the meeting, please contact CHW using the information above, and we will provide materials after the meeting is held. Comments may also be submitted in writing to the address or email above or by phone at the phone number above.

PUBLIC NOTICE

A Neighborhood Meeting will be held to discuss a Special Exception application on ±320 acres in the City of Alachua (Alachua County Tax Parcels # 03894-000-000 and 03898-000-000). The property's Future Land Use classifications are Agriculture and Moderate Density Residential. The property's zoning districts are Agriculture (A) and Residential Single Family (RSF-4).

The intent of the Special Exception application is to permit a solar energy collection facility, which is considered a "major utility" by City of Alachua Land Development Regulations. Major utilities are permitted in the property's zoning districts by Special Exception.

The site is located generally at the northwestern intersection of Peggy Road and County Road 235A.

This is not a public hearing. The purpose of this meeting is to inform the public about the nature of the proposals and seek their comments.

Time: 6:00 pm on April 27, 2022

Alimony

Continued from Page 3A

Battle over alimony in Florida has been decades-long

Proponents launched the latest offensive in the decade-long battle three years ago. That's when Marc Johnson formed the Florida Family Fairness Political Committee (FFFPC) to end life-long alimony payments and impose a presumption of equal custody of children.

FFFPC was seeded with $28,000 from the now-defunct Florida Family Law Reform (FFLR) Political Action Committee and another $20,000 from Key West millionaire James Lindstrom. Before disbanding, FFLR also donated to the campaigns of eight lawmakers who voted for SB 1796 and to Gov. Ron DeSantis.

FFFPC spent $46,000 in contributions to lawmakers' campaigns and three other political action committees leading up to the 2020 election. Those three committees contributed to the campaigns of at least another 10 lawmakers who supported SB 1796, including Senate President Wilton Simpson and incoming House Speaker Paul Renner.

Fiveash notes that FFPC shares the same mailing address, telephone number and treasurer or registered agent with a half-dozen other committees that funneled millions of dollars to Republican lawmakers, the Florida House Republican Campaign, and the Florida Republican Party itself.

"They are all the same people: A bunch of wealthy men and their lawyers. Whenever they think they need to clean up their image, they change their name," Fiveash said.

Fiveash describes what she calls an incestuous relationship among the committees that funds a cash pipeline to the Legislature to tilt Florida law toward the interest of men who had dumped their wives as they prepare for retirement.

Four committees connected to FFPC — the Eagle Eye PAC, Florida Conservative Committee, Conservatives for Principled Leadership, and the Conservative Legacy Fund — at a suite of offices opposite the Capitol contributed at least $134,000 to 15 lawmakers and candidates in 2020 and another $1.5 million to committees affiliated with the Republican Party or have a history of supporting GOP candidates.

SB 1796 passed the Senate on a straight party-line vote. It was approved in the House where two Democrats crossed the aisle and voted with Republicans.

Sen. Joe Gruters, R-Sarasota, doubles as the GOP state party chair, and defended the bill he sponsored as a way to provide "consistency and predictability" in divorce proceedings.

When lawmakers sent a similar proposal to then Gov. Rick Scott in 2016, protesters descended on Scott's office to demand a veto JOE RONDONE/DEMOCRAT

The proposal sets up a schedule for alimony payments based on the length of a marriage. There would be no alimony for a marriage of less than three years, and spouses in a marriage of longer than 20 years would be eligible to receive payments for a time equal to 75% of the length of the marriage.

"It eliminates the inequitable standard of maintaining the 'marital lifestyle' post-divorce that causes so much litigation and replaces it with a more reasonable presumption that lifestyles of the parties will presumably be lower when the same marital income is sustaining two households," said Johnson, chair of Florida Family Fairness, Inc.

The bill is retroactive and could void thousands of divorce agreements.

Gruters said his intent is to provide "parameters and guidance for courts to use" when reviewing a petition to modify an alimony agreement. Alimony recipients who are caregivers to disabled children, or whose income is up to 130% of federal poverty level without alimony, would be able to petition the court to extend alimony payments.

Sponsor calls it 'fairest and most equitable' alimony reform bill ever

Rep. Jenna Persons-Mulicka, R-Fort Myers, the bill's House sponsor, said it was "the fairest and most equitable" alimony reform bill the Legislature had ever seen.

"It balances the goal to protect those who need alimony the most, with the goal to reduce the need for exhaustive and costly litigation," Persons-Mulicka said.

A contentious provision in the measure would require judges to begin with a "presumption" that children should split their time equally between parents. Scott flagged a similar child-sharing requirement in a 2016 veto as not necessarily in a child's best interest.

The Florida Bar Family Law Section and the American Academy of Matrimonial Lawyers worked with Gruters and Persons-Mulicka on the proposal.

They were surprised by a strike-all amendment in the session's final week that created the 50/50 children time-share presumption and made the end to permanent alimony agreements retroactive. The Florida Bar pulled its support.

In a letter to Gov. DeSantis, Heather Lynn Apicella, chair of the Family Law Section, said SB 1796 will negatively impact seniors and children and called for a veto of "unwarranted changes to alimony and timesharing."

Anthony Verdugo, executive director of the Christian Family Coalition, countered Apicella's letter by telling DeSantis the measure upholds fundamental conservative principles.

"(It) reflects child-centric values and promotes Florida's continued growth as a place people want to raise their children," Verdugo wrote.

A DeSantis spokesperson said the Legislature has yet to send the bill to the governor's office for review. Once it arrives, DeSantis will decide whether to veto, sign, or allow the bill to become law without his signature. He'll have 14 days.

Fiveash's 30-year marriage ended 11 years ago with a marriage settlement agreement where in exchange for a set amount of alimony she assumed the mortgage on the family home and gave up her rights to a share of her ex-husband's pension and 401K.

If DeSantis does sign the bill, Fiveash and others expect a court challenge over the provision making it retroactive, voiding marital settlement agreements, which are signed contracts.

"They passed an unconstitutional bill," Fiveash said. "We just don't know how they get away with this."

Jones

Continued from Page 3A

so large that the couple decided to start their own church, first known as Open Door Baptist Church before later becoming Open Door Ministries.

The church held services at a Boys and Girls Club that used to be located on Northeast Eighth Avenue and Waldo Road and at the old Odd Feller Building at 110 S.E. Eight St. As the church grew, construction of its sanctuary was completed in 1978.

Owen Headley, who used to attend the church studying at the University of Florida in the 1980s, describes the late Jones as a preacher who taught the word of God "letter by letter, word by word, sentence by sentence, paragraph by paragraph, page by page, chapter by chapter and book by book."

Jones' teachings didn't stop with religion.

He went on to a bachelor's degree from Florida A&M University, earning numerous counseling and theological certificates and degrees along the way. He completed three years of study at the Medical Training Institute of America in Indianapolis and later received his pastoral training at the Charles E. Fuller Institute in Pasadena, California.

Locally, he was active with numerous community, civic, educational and religious agencies and organizations, including work as a supporter of Pace Center for Girls, Arbor House for Girls, East Gainesville Instruction, ACTION Network to name a few.

As president of the ACTION Network, which consists of a group of local churches, Jones helped grow it into one of the most effective lobbying organizations in Alachua County

It has successfully pushed local, state and federal representatives to support funding for much-needed after-school and recreational programs, as well as improvements to roads in east Gainesville.

Jones, during his presidency of the group, traveled to Washington, D.C., with his wife and other group members to successfully lobby former U.S. representatives Corrine Brown and Cliff Stearns to get $1.2 million in federal funding to make infrastructure improvements, especially along Northeast 25th Street between Eighth and East University avenues, in the Duval neighborhood in northeast Gainesville.

Considering all of his accomplishments and service to the community, he will undoubtedly be best known for being a champion of successful and prosperous marriages, says his wife and son.

"He believed marriage is a covenant and not a contract," his son said.

Margaret Ann Jones said she and her husband received great joy from leading marriage counseling sessions for many years, and received even greater joy from witnessing the success of marriages.

Those who knew him best say a big part of Samuel Jones' legacy will be that he helped people through tough times.

"He always teaches and preaches about making sure your heart is right," Timothy Jones said.

It was that kind of lessons that attracted Audrey Aldridge to the church.

"If it wasn't for him, I wouldn't be the person I am now," said Aldridge, 75, who joined the church in 1978. "He believes in marriage and he builds up your character. I joined the church because he helped me see my need for Jesus. He was a good man and he is going to be missed."

Funeral services for Pastor Jones will be held at 10 a.m. Saturday at Greenhouse Church Gainesville, 11200 N.W. 39th Ave. A public viewing will be held from 3-7 p.m. Friday at Open Door Ministries, 601 N.E. 19th St.

He is survived by his wife, Margaret Ann Jones; daughters Cynthia Jones Tennell (Greg), Katrina Gainey (Eddie), Casandra McNair (U.S. Army Capt. Erwin McNair); sons Dr. Samuel Jones III (Allison), Pastor Timothy Jones Sr. (Lady Nona Jones); 16 grandchildren, nine great-grandchildren, siblings and a host of other relatives and friends.

CHW

NOTICE OF PUBLIC HEARING

The Alachua County Board of County Commissioners will hold public hearings Tuesday, April 26, 2022. The meeting will be held in the John R. "Jack" Durrance Auditorium, room 209, 12 SE 1st Street, Gainesville, Florida to consider the following quasi-judicial zoning items:

Item to be considered at 11:30 AM or as soon thereafter as it may be heard:

ZOM-04-22 (Fletcher's Financial rezoning)
A request by Ryan Thompson of CHW Inc., agent, for Fletcher's Center West, LLC, owners, to rezone from the BR (Business, Retail Sales and Services) and BW (Wholesale and Warehousing) zoning districts to the BH (Highway Oriented Business) zoning district. The site has a future land use designation of Commercial (Jonesville Activity Center) and is approximately 1.02 acres, located on tax parcel number 04344-007-002 at 14133 W. Newberry Rd.

Item to be considered at 5:00 PM or as soon thereafter as it may be heard:

ZOX-03-21 (Duke Energy Substation Special Exception, continued from 12/14/21)
A request by Shutts & Bowen LLP, agent, for Duke Energy Florida, Inc., owner, for a special exception to allow a major utility in the Agriculture zoning district. The site has an existing utility substation and is proposing to add a new, unmanned telecommunications shelter (13' x 17' building within a 40' x 40' gated compound area). As the existing substation predates the Comprehensive Plan and ULDC (operating since 1962), it exists as a legal, nonconforming use. The site has a future land use designation of Institutional and is approximately 15.12 acres, located on tax parcel number 04631-001-000 at 10329 SW 154th St.

This meeting will allow for in person participation at 12 SE 1st Street, Gainesville, FL, Second Floor, Jack Durrance Board Room.

PUBLIC COMMENTS / PARTIES / EVIDENCE

The public is encouraged to submit any written or photographic documents prior to the meeting.

No later than 7 calendar days prior to the hearing, an individual or entity wishing to participate as a party in a quasi-judicial public hearing must provide the County with a written request to be considered as a party. The request must include a factual basis for why the requestor believes that he or she should be allowed to participate as a party.

If an individual or entity intends to participate as a party and provide evidence, beyond testimony, at the public hearing, the individual or entity must provide electronic copies of all evidence to the County no later than 5 calendar days prior to the hearing. Any evidence provided electronically will be entered into the record and provided to all identified parties.

All comments, party requests and party evidence should be submitted at:
https://growth-management.alachuacounty.us/PublicComment

The Planning Commission shall consider written requests for party status at the outset of the hearing and make a determination of which requesting individuals or entities qualify for party status in the hearing.

If any accommodations are needed for persons with disabilities, please contact the Alachua County Equal Opportunity Office at least two business days in advance at (352) 374-5275 (voice) or (352) 374-5284 TDD users, please call 711 (Florida Relay Service). Printed materials are available in alternate format upon request.

All persons are advised that, if they decide to appeal any decision made at this public hearing or meeting, they will need a record of the proceedings and, for such purpose, they may need to ensure that a verbatim record of the proceedings is made, which record includes the testimony and evidence upon which the appeal is to be based.

General Information: A draft of the above items will be available on Friday of the week preceding the meeting by visiting https://mapgenius.alachuacounty.us/development-projects/. For further information call (352) 374-5249. Visit www.alachuacounty.us and click on the meetings tab on the homepage for the most up to date information.

City of Alachua
Neighborhood Meeting
April 27, 2022

The purpose of the neighborhood meeting:

The City of Alachua requires applicants to host a neighborhood meeting *prior* to application submittal.

The purpose is to inform neighbors of the proposed action's nature and to get feedback early in the process.

This meeting provides the applicant with an opportunity to identify concerns prior to the application's submission.

PUBLIC NOTIFICATION

NEIGHBORHOOD MEETING NOTIFICATION

To: Neighbors of Peggy Road / CR 235A Intersection
From: Craig Brashier, AICP
Date: 13 April 2022
RE: Neighborhood Meeting Public Notice

A Neighborhood Meeting will be held to discuss a Special Exception application and site plan application on ±320 acres in the City of Alachua (Alachua County Tax Parcels # 03894-000-000 and 03898-000-000). The property's Future Land Use classifications are Agriculture and Moderate Density Residential. The property's zoning districts are Agriculture (A) and Residential Single Family (RSF-4).

The site is located generally at the northwestern intersection of Peggy Road and County Road 235A.

The intent of the Special Exception application is to permit a solar energy collection facility, which is considered a "major utility" by City of Alachua Land Development Regulations. Major utilities are permitted in the property's zoning districts by Special Exception, per City of Alachua Land Development Regulations Table 4.1-1.

The solar energy collection facility will be operated by Solariant Capital, LLC. More information about Solariant can be found at their website, https://www.solariantcapital.com/.

Battle over alimony in Florida has been decades-long

Proponents launched the latest offensive in the decade-long battle three years ago. That's when Marc Johnson formed the Florida Family Fairness Political Committee (FFFPC) to end life-long alimony payments and impose a presumption of equal custody of children.

FFFPC was seeded with $36,000 from the now-defunct Florida Family Law Reform (FFLR) Political Action Committee and another $20,000 from Key West millionaire James Lindstrom. Before disbanding, FFLR also donated to the campaigns of eight lawmakers who voted for HB 7196 and to Gov. Ron DeSantis.

FFFPC spent $46,000 in contributions to lawmakers' campaigns and three other political action committees leading up to the 2020 election. Those three committees contributed to the campaigns of at least nineteen Republicans who supported HB 7196, including Senate President Wilton Simpson and incoming House Speaker Paul Renner.

Frivaldi notes that FFFPC shares the same mailing address, telephone number and treasurer as registered agent with a half-dozen other committees that funneled millions of dollars to Republican lawmakers, the Florida House Republican Campaign, and the Florida Republican Party itself.

"They are all the same people. A bunch of wealthy men and their lawyers. Wherever they think they need to drum up their image, they change their name," Frivaldi said.

Frivaldi describes what she calls an incestuous relationship among the committees that funds cash payouts to the Legislature to kill Florida law toward the interest of men who had dumped their wives as they prepare for retirement.

Four committees connected to FFFPC — the Eagle Eye PAC, Florida Conservative Committee, Conservatives for Principled Leadership, and the Conservative Legacy Fund — act a suite of officers opposite the Capitol contributed at least $154,000 to 15 lawmakers and candidates in 2020 and another $1.5 million to committees affiliated with the Republican Party to have a history of supporting GOP candidates.

SB 1796 passed the Senate on a straight party-line vote. It was approved in the House where two Democrats crossed the aisle and voted with Republicans.

Sen. Jay Trumbull, R-Sarasota, doubles as the GOP caucus party chair, and defended the bill he sponsored as a way to provide "consistency and predictability" in divorce proceedings.

The proposal sets up a schedule for alimony payments based on the length of a marriage. There would be no alimony for a marriage of less than three years, but spouses in a marriage of longer than 20 years would be eligible to receive payments for a time equal to 75% of the length of the marriage.

"It eliminates the inequitable standard of maintaining the married lifestyle post-divorce that causes so much litigation and replaces it with a more reasonable presumption that lifestyles of the parties will predominately be lower when the same marital income is sustaining two households," said Johnson, chair of Florida Family Fairness, Inc.

The bill is retroactive and could void thousands of divorce agreements.

Graham said his intent is to provide "parameters and guidance for courts to use" when reviewing a petition to modify an alimony agreement. Alimony recipients who are caregivers to disabled children, or whose income is up to 130% of federal poverty level without alimony, would be able to petition the court to extend alimony payments.

Sponsor calls it 'fairest and most equitable' alimony reform bill ever

Rep. Jenna Persons-Mulicka, R-Fort Myers, the bill's House sponsor, said it was "the fairest and most equitable" alimony reform bill the Legislature had ever seen.

"It balances the goal to protect those who need alimony the most, with the goal to reduce the need for exhaustive and costly litigation," Persons-Mulicka said.

A contentious provision in the measure would require judges to begin with a "presumption" that children should split their time equally between parents. Scott flagged a similar child-sharing requirement in a 2016 veto as not necessarily in a child's best interest.

The Florida Bar Family Law Section and the American Academy of Matrimonial Lawyers worked with Graham and Persons-Mulicka on the proposal.

They were surprised by a strike-all amendment in the session's final week that created the 30/30 claim, then time-share presumption and made the end to permanent alimony agreements retroactive. The Florida Bar pulled its support.

In a letter to Gov. DeSantis, Heather Lynn Apicella, chair of the Family Law Section, said SB 1796 will negatively impact seniors and children and called for a veto of "unintended changes to alimony and timesharing."

Anthony Verdugo, executive director of the Christian Family Coalition, countered Apicella's letter by telling DeSantis the measure upholds fundamental conservative principles.

"[It] reflects child-centric values and promotes Florida's continued growth as a place people want to raise their children," Verdugo wrote.

A DeSantis spokesperson said the Legislature has yet to send the bill to the governor's office for review. Once it arrives, DeSantis will decide whether to veto, sign, or allow the bill to become law without his signature. He'll have 15 days.

Frivaldi's 30-year marriage ended 11 years ago with a marriage settlement agreement where in exchange for a net amount of alimony she accepted the mortgage on the family home and gave up her rights to a share of her ex-husband's pension and 401K.

If DeSantis does sign the bill, Frivaldi and others expect a court challenge over the provision making it retroactive, voiding marital settlement agreements, which are signed contracts.

"They passed an unconstitutional bill," Frivaldi said. "We just don't know how they get away with this."

NOTICE OF PUBLIC HEARING

The Alachua County Board of County Commissioners will hold public hearings on Tuesday, April 26, 2022. The meeting will be held in the James "Jack" Durrence Auditorium, room 209, 12 SE 1st Street, Gainesville, Florida to consider the following quasi-judicial zoning items:

Item to be considered at 11:30 AM or as soon thereafter as it may be heard:

ZOM-04-21 (Hatcher's Financial rezoning)
A request by Ryan Thompson of CHW Inc., agent, for [illegible] Center West, LLC, owners, to rezone from [illegible] (Business, Retail Sales, and Services) and RW (Wholesale and Warehousing) zoning districts to the MU (Highway Oriented Business) zoning district. The site has a future land use designation of Commercial (Gainesville Activity Center) and is approximately 1.02 acres, located on the parcel number 04344-007-002 at 14133 W. Newberry Rd.

Item to be considered at 5:00 PM or as soon thereafter as it may be heard:

ZOX-03-21 (Duke Energy Substation Special Exception, Continued from 12/14/21)
A request by Shutts & Bowen LLP, agent, for Duke Energy Florida Inc., owner, for a special exception to allow a major utility in the Agriculture zoning district. The site has an existing utility substation and is proposing to add a new, unmanned telecommunications shelter (12' x 17' building within a 60' x 40' gated compound area). As the existing substation predates the Comprehensive Plan and ULDC (operating since 1962), it exists as a legal, nonconforming use. The site has a future land use designation of Institutional and is approximately 13.12 acres, located on tax parcel number 06821-001-000 at 16225 SW 154th St.

The meeting will start in person participation at 12 SE 1st Street, Gainesville, FL, Second Floor, Jack Durrence Board Room.

PUBLIC COMMENTS / PARTIES / EVIDENCE

The public is encouraged to submit any written or [illegible] documents prior to the meeting.

All persons wishing to speak during the meeting, as [illegible] or virtually, must register as a party. In a quasi-judicial public hearing, each person the County wish to speak, register to be considered as a party. The request must include a factual basis for why the requestor believes that he or she should be allowed to participate as a party.

Upon invitation or entry request by participant as a party and provide evidence, beyond testimony, at the public hearing, the individual or entity must provide electronic copies of all materials to the County no later than 3 calendar days prior to the hearing. Any evidence provided additionally will be entered into the record and provided to all identified parties.

All comments, party requests and public evidence should be submitted at: [illegible]

The Planning Commission shall consider written comments by any citizen at the conclusion of the hearing and make a determination of which requested exhibits are or are not qualified for party status at the hearing.

Many accommodations are provided for persons with disabilities upon request. Contact the Alachua County Equal Opportunity Office at least two business days in advance at (352) 374-5275 (voice) or (352) 374-5284 TDD users, please call 711 (Florida Relay Service). Printed materials are available in alternate formats upon request.

All persons are advised that, if they decide to appeal any decision made at this public hearing or meeting, they will need a record of the proceedings and, for such purpose, they may need to ensure that a verbatim record of the proceedings is made, which record includes the testimony and evidence upon which the appeal is to be based.

General Information: A draft of the above agenda is available on Friday of the week preceding the meeting, by visiting www.alachuacounty.us/Depts/BOCC/Pages/BOCCMeetings.aspx. For further information, contact Mike Arnold at (352) 374-5265. Visit [illegible] and click on the meetings tab on the homepage for the most up to date information.

CHW

SOLARIANT EXPERTISE & BACKGROUND

United States

- Based in Pasadena, CA; development team across the U.S. (including in FL)
- Solariant Capital LLC is mandated by its investors to source and structure financing for U.S. infrastructure and renewable energy projects
- Solariant is currently developing 12+ solar and storage projects totaling more than 1,000 MWp of solar and 2.5 GWh of battery storage

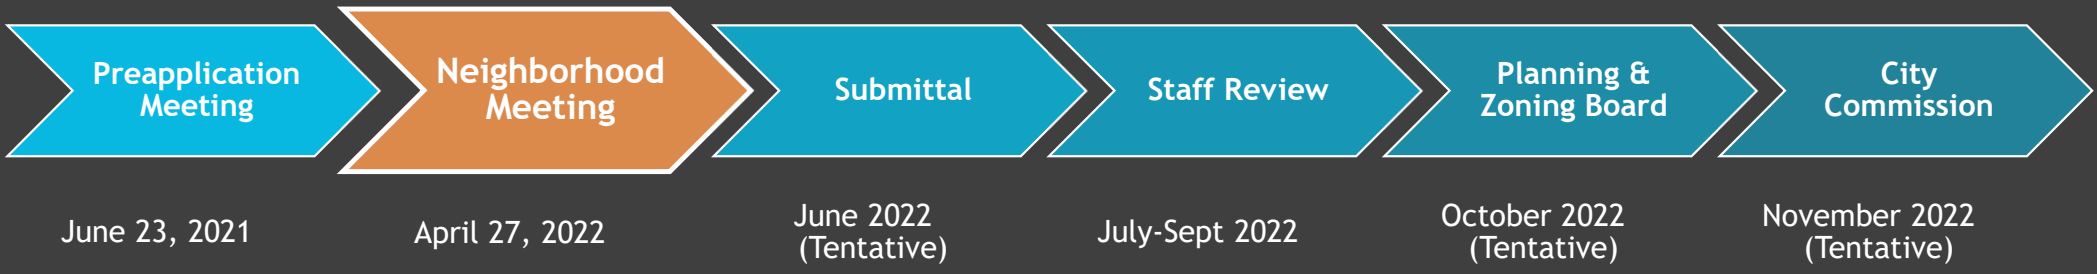
Japan

- Solariant Inc. & Solariant Japan Co., Ltd., established in 2012 with offices in Tokyo
- Since expanded its operation with 90 team members in four offices in Asia
- Completed development of seven utility-scale power projects throughout Japan
- Other activities include developing woody biomass plantations and pellet plants in the Philippines and SE Asian countries to supply fuel for Japanese biomass energy plants

INTENT:

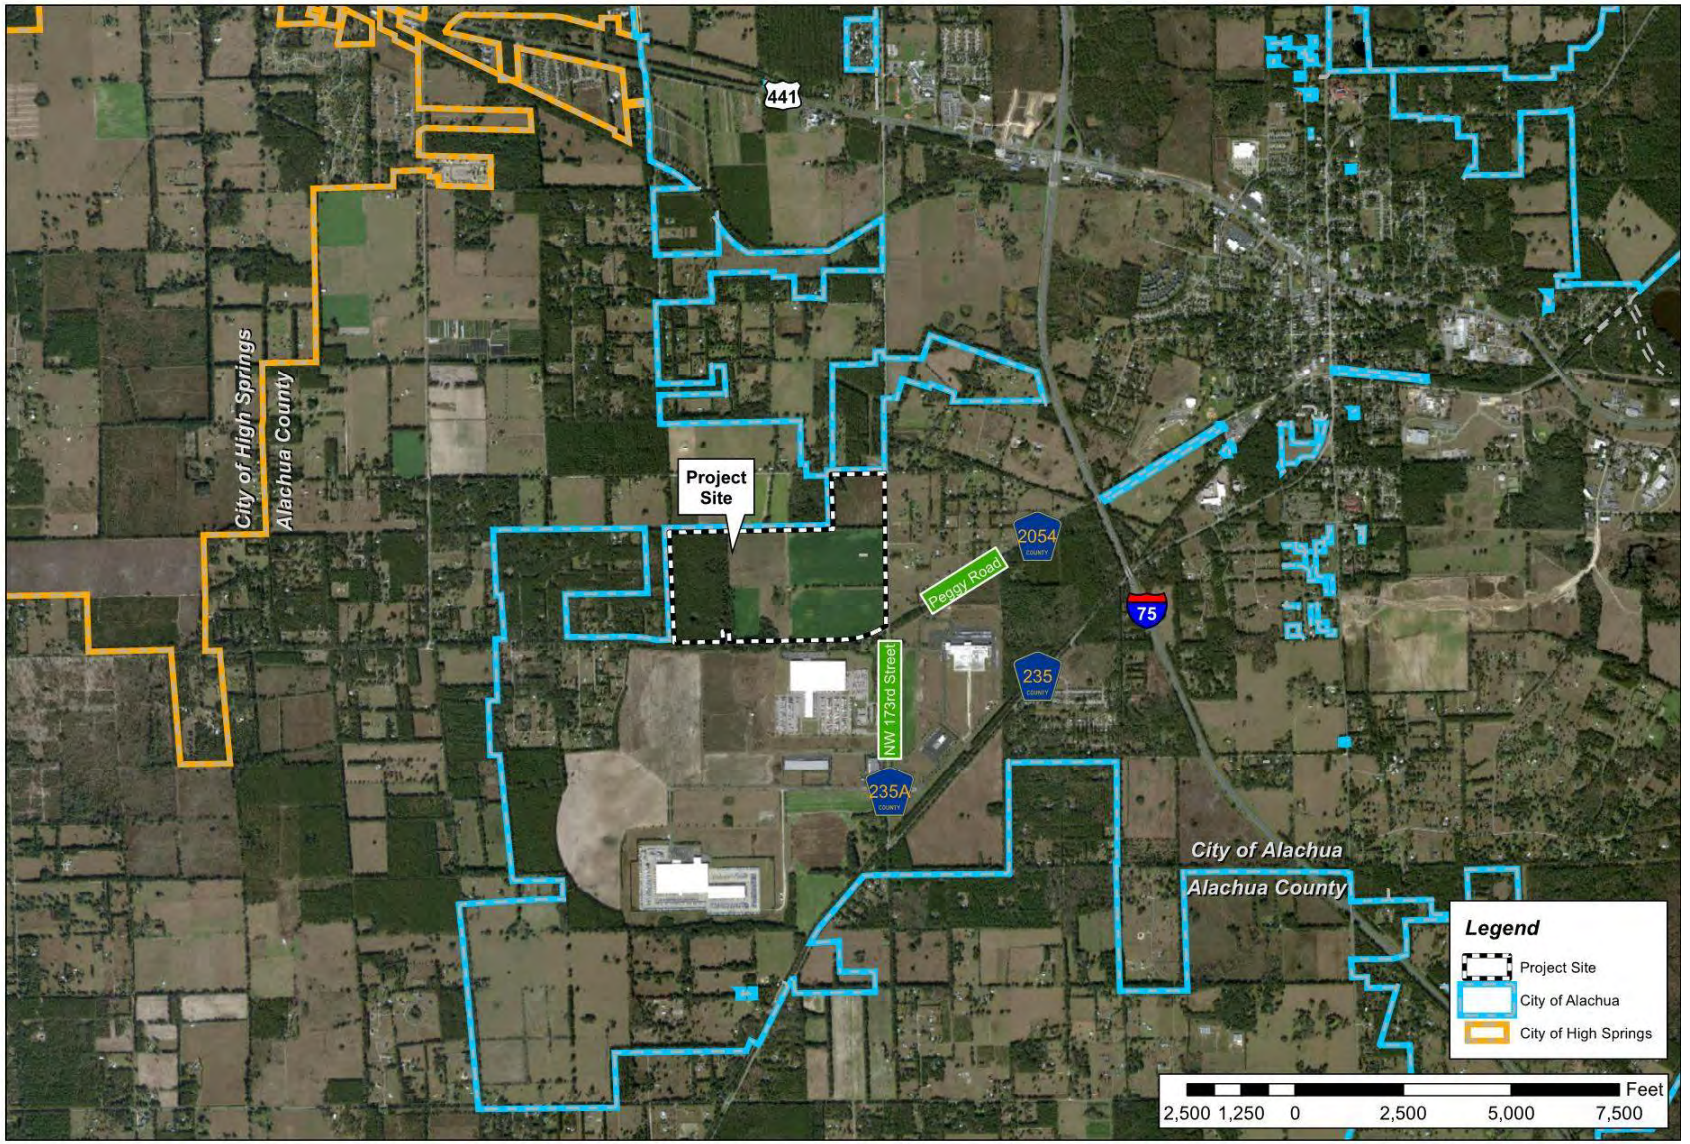
Permit and build a 74.9 MWac PV solar energy collection and energy storage facility.

REQUESTS:



- Special Exception Application for a major utility
- Site Plan Application

OPPORTUNITIES:



- Diversify energy supply for North Central Florida
- Reserve undeveloped land on boundary of city with low-intensity use for years to come
- Economic development, job creation, and community benefits (e.g. property tax revenue)

ADDRESSING COMMON QUESTIONS:

- **Traffic:** *Insignificant amount generated, maintenance only*
- **Noise:** *Inverters' sound at level equivalent to an AC wall unit; placed centrally within the property*
- **Lights:** *Lighting at key points for security and personnel*
- **Smell:** *No odor anticipated*
- **Aquifer:** *Solar panels are sealed*
- **Wildlife:** *Harm to wildlife by panels not typical*

- **Buffers/fencing:** *Large buffers with fencing protects privacy of neighbors and mitigates sound*
- **Security Vandalism:** *Property will be completely fenced & landscaped*

- **Property values:** *Studies indicate either no impact or slight positive impact from solar development & long-term use*

KAGOSHIMA SOLAR PROJECT

- **41.3 MWp**
- **Kirishima, Kagoshima Prefecture, Japan**

NEIGHBORHOOD MEETING MINUTES

Pleasant Solar + Storage

21-0275

Event:	City of Alachua required Neighborhood Meeting, Special Exception / Site Plan
Date/Time:	April 27, 2022 @ 6:00 PM
Place:	CHW Office – 11801 Research Drive, Alachua, FL, 32615
Re:	Special Exception and Site Plan Applications

Solariant Attendees: Andy Cerrato; Kevin Kohlstedt
Patrice Boyes, P.A. Attendees: Patrice Boyes, Esq.
CHW Attendees: Craig Brashier, AICP; Gerry Dedenbach, AICP; Seth Wood
Public Attendees: 10

CHW hosted the required Neighborhood Meeting and presented the following: the meeting's purpose; the applications' requests and intents; the opportunities presented by the applications; the general application review process and a preliminary estimated project timeline; maps illustrating the site's regulatory and physical characteristics; and a conceptual layout. Following the presentation, the floor was opened for questions and comments. Questions and comments from public attendees are below, with agent responses. Please note, these meeting minutes are not a verbatim transcript of the meeting.

AREA COMMENTS

Comment: This land is beautiful, this soil is fertile, and you are eliminating primary agricultural land.
Response: Thank you for your comment. Solar energy collection facilities like the one proposed are very low intensity activities. The passive use as a solar collection field also will allow the soil to rebound from years of agricultural production. Once built, the facility will have minimal impact on the land itself due to the lack of permanent impervious surface area installed. The site's buffering, combined with the minimal noise generated at the internal inverters, has been found to be less than the ambient context area. These factors ensure the development has no deleterious impacts to the quality of life for neighbors and the community.

Question: Why our neighborhood? Why not somewhere where there aren't people?
Response: The existing electric infrastructure in this specific area makes the location a good candidate for locating a solar facility. Existing infrastructure where power can be injected into the electric grid is the major factor in selecting sites for utility-scale solar energy collection facilities. People live everywhere, and building in an area without people is nearly impossible. We believe, based on our experience and data, that solar energy collection facilities are quiet, low-intensity, good neighbors that do not generate noise, odors, light, traffic, or other impacts.

Comment: The cemetery on this property is charming.
Response: The cemetery will not be part of the Special Exception or Site Plan applications and will be protected by generous buffers in development of the site. Access to the cemetery will be enhanced by the creation of a stabilized driveway, as the facility today exists in a farm field.

Comment: I do not want this, but it is preferable to a 1,150-home subdivision.
Response: Thank you for your comment.

Question: Why not build on environmentally damaged land, such as a superfund or brownfield site?
Response: Development of any sort on lands such as those requires very costly remediation that would make the project, or any other similar proposal, economically infeasible.

Mailed Memorandum

NEIGHBORHOOD MEETING NOTIFICATION

PN 21-0275

To: Neighbors of Peggy Road / CR 235A Intersection

From: Gerry Dedenbach, AICP

Date: 5 August 2022

RE: Neighborhood Meeting Public Notice

A hybrid Neighborhood Meeting will be held to discuss updates regarding the Pleasant Solar Special Exception application and Site Plan application on ±320 acres in the City of Alachua (Alachua County Tax Parcels # 03894-000-000 and 03898-000-000). The property's Future Land Use classifications are Agriculture and Moderate Density Residential. The property's zoning districts are Agriculture (A) and Residential Single Family (RSF-4).

The site is located generally at the northwestern intersection of Peggy Road and County Road 235A.

The intent of the Special Exception application is to permit a solar energy collection facility, which is considered a "major utility" by City of Alachua Land Development Regulations.

The solar energy collection facility will be operated by Solariant Capital, LLC. More information about Solariant can be found at their website, https://www.solariantcapital.com/.

Meeting Details:

Date: 18 August 2022

Time: 6:00 PM

Location: CHW Office, 11801 Research Drive, Alachua, FL, 32615

Virtual Option: Zoom meeting Link: bit.ly/21-275-NHM2
Zoom Call-in Number: 896 0332 3142
Zoom Meeting ID: +1 646 931 3860

Contact: Gerry Dedenbach, AICP

Special Exception and Site Plan Applications

SOLARIANT

CHW Professional Consultants

City of Alachua
Neighborhood Meeting
August 18, 2022

1

MEETING AGENDA

- Project Background
- Panels/materials demonstration
- Noise levels video
- Tree harvesting schedule
- Environmental Analysis findings
- Fencing options

2

The purpose of this neighborhood meeting:

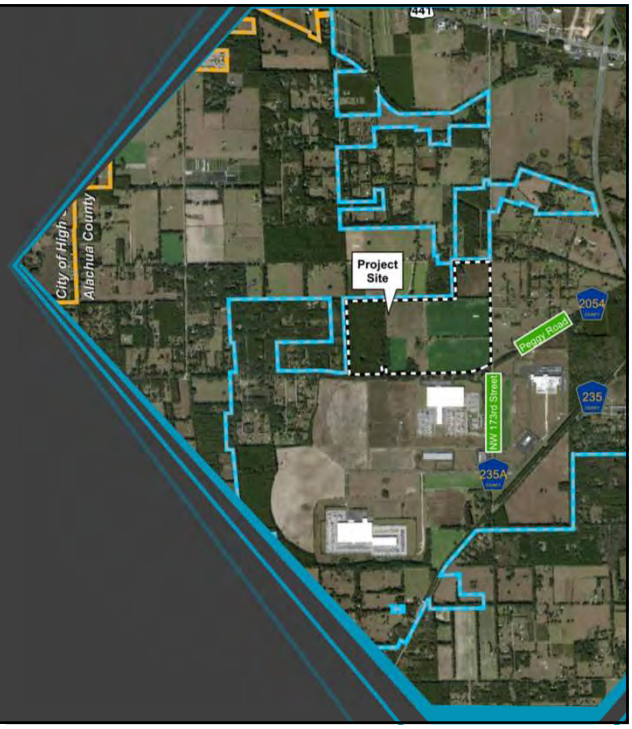
Solariant seeks to follow up with neighbors on their project *prior* to application submittal.

The purpose is to update neighbors on the progress of the project and results of recent studies.

This meeting provides the applicant with an opportunity to communicate with neighbors prior to the application's submission.

3

PROJECT INTENT:



Permit and build a 74.9 MWac PV solar energy collection and energy storage facility.

APPLICATIONS:

- Special Exception Application for a major utility
- Site Plan Application

OPPORTUNITIES:

- Diversify energy supply for North Central Florida
- Reserve land on boundary of city with low-intensity use for years to come
- Economic development, job creation, and community benefits (e.g. property tax revenue)

4

TIMBER HARVESTING

- Bona fide silviculture operation with approved permit for harvesting based on Best Management Practices
- Harvesting is occurring on all Waco Properties (±747.17 acres)
- Buffer of existing trees to remain along western boundary, portions of north and south boundary
- Project site is mix of pine (NPH) and hardwood (Hwd) and open field
- Majority of merchantable timber in NPH stand is water oak, laurel oak, slash pine, and cherry
- Existing Trees within a 20ft buffer of the property line will remain

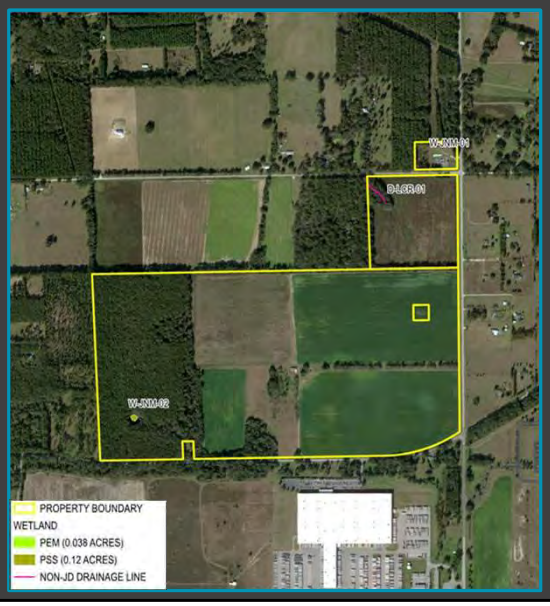
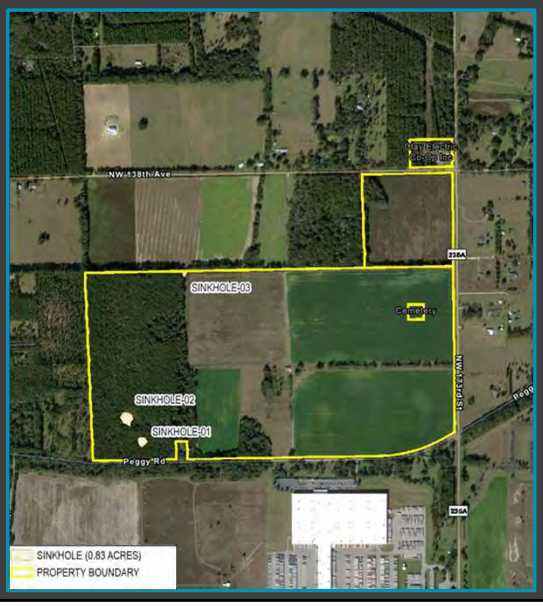
ENVIRONMENTAL ANALYSIS



- No critical habitats or wading bird rookeries known to occur on or in vicinity of Project Site
- Findings & recommendations of Threatened & Endangered Species Habitat Assessment Report, conducted by TRC Environmental Corporation: **professional opinion that the project is not likely to adversely impact listed animal species**

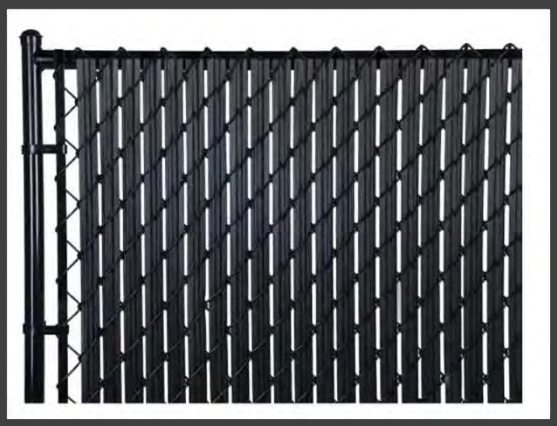


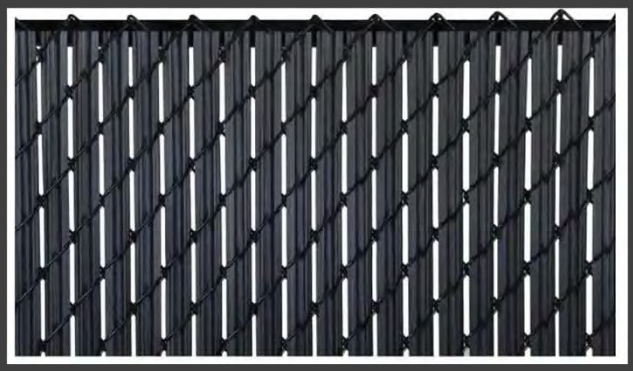
Animal Species with potential to occur on/near project site	Status	Potential to Occur on Site	Recommended action
Squirrel chimney cave shrimp	Federally threatened	Moderate	Avoid impacts to sinkholes
Monarch butterfly	Candidate for federal status	None	N/A
Eastern indigo snake	Federally threatened	Low	N/A
Gopher tortoise	State threatened, federal candidate	Low	Pre-construction survey (required)
Short-tailed snake	State threatened	Low	N/A
Striped newt	Candidate for state status	Low	N/A
Burrowing owl	State threatened	Low	Pre-construction survey (required)
Sandhill crane	State threatened	Low	N/A
Wood stork	Federally threatened	None	N/A

14

ENVIRONMENTAL ANALYSIS

Wetlands, sinkholes identified by TRC; site design will reflect these findings





15

NEIGHBORHOOD MEETING SUMMARY

Pleasant Solar

21-0275

Event: Neighborhood Meeting #2, Special Exception / Site Plan

Date: August 18, 2022, 6:00 PM

Place: CHW Office – 11801 Research Drive, Alachua, FL, 32615

Re: Special Exception and Site Plan Applications for Solar Energy Collection Facility

Solariant Attendees: Andy Cerrato; Kevin Kohlstedt (virtual); Jacob Wilson (virtual)
Patrice Boyes, P.A. Attendees: Patrice Boyes, Esq.
CHW Attendees: Craig Brashier, AICP; Gerry Dedenbach, AICP; Seth Wood, AICP
Public Attendees: 16

CHW, on behalf of Solariant, hosted an elective Neighborhood Meeting to updated neighbors on project progress since the required Neighborhood Meeting held on April 27, 2022. The presentation materials covered the following topics:

1. Project background, inclusive of project intent, the opportunities presented, and a tentative application timeline;
2. Maps illustrating the physical and regulatory landscape on the subject property;
3. Two (2) videos showing the amount of noise generated by solar panels;
4. The ongoing active silvicultural operation occurring on the property and other properties in the area owned by WACO Properties, Inc.;
5. The results of the preliminary environmental analysis;
6. Fencing and landscaping options, visible from the roadway; and
7. A conceptual site layout, updated to reflect the comments of neighbors at the April 27, 2022 meeting;

Questions and comments from public attendees are below, with applicant and agent responses. Please note, the meeting summary is not a verbatim transcript of the meeting. In addition, the summary is sorted to present topics in a grouped manner, although there was a free-flowing dialogue all evening.

PROJECT BACKGROUND

A sample of solar panel materials were displayed for attendees to see and handle.
Question: How long will these solar panels last?
Response: The specific panels that will be used on this property have not been selected. Solariant is committed to using the most up-to-date and efficient panels practicable. Panels are anticipated to last approximately 30 years.

Question: What factors does Solariant consider when choosing solar panels?
Response: Solariant chooses solar panels based on a decision matrix considering recyclability, energy efficiency, and cost. Solariant takes recommendations from ethical industry groups regarding best practices and participates in these groups' evaluations and recommendations.

Question: Where are Solariant's panels manufactured?
Response: The specific panels that will be used on this property have not been selected. The panels we choose will likely be manufactured in Japan. This ensures an ethical manufacturing process, in contrast to panels made in other countries.

t: (904) 619-6521 | 8465 Merchants Way, Suite 102, Jacksonville, FL 32222
t: (352) 331-1976 | 11801 Research Drive, Alachua, FL 32615
t: (352) 414-4621 | 2100 SE 17th Street, Unit 802, Ocala, FL 34471
www.chw-inc.com

Question: What will you do when the solar panels are no longer usable?
Response: A Decommissioning Plan will be put in place, ensuring a City-approved protocol at the end of the site's life cycle. To maximize cost savings, Solariant works to recycle as much of the equipment practicable. This includes: steel, aluminum, wiring, and panels.

Question: Will the panels cause glare?
Response: Glare is dependent on panel type. Solariant uses bifacial panels, which minimize glare.

Question: Will this cause a heat island effect? Neighbors to a similar facility in Lake Butler think their properties are hotter due to adjacency to a solar facility.
Response: Heat island effect is not anticipated. Solar panels are designed to absorb energy, not emit it to surrounding areas. However, each facility is unique and increased temperatures at other facilities could be due to other factors.

Question: How will this impact property values?
Response: Numerous studies across the country indicate solar energy collection facilities either have no significant impact on area property values, or a notable positive impact on property values. In response to this question being asked at the April 27, 2022 meeting, Solariant had a study of the site conducted. The appraiser's findings indicated no significant negative impacts to area property values are anticipated.

Comment: Having more houses proximate to my house would increase the value of my property more than a solar energy collection facility. People want to live proximate to other people; no one wants to live near a solar energy facility.
Response: Research is mixed as to whether additional housing has a positive, negative, or neutral impact on existing housing. That determination is heavily dependent on site, type, and number of houses. The majority of this ±321-acre parcel is zoned for a density of 4 dwelling units per acre, meaning ±1,140 new homes (±285 acres * 4 dwelling units/acre) could be built here. This could also mean substantially more people, who would impact various public facilities, including transportation infrastructure, public school capacity, and emergency services. By contrast, a solar energy facility places a very low impact use on land for multiple decades and causes no such impacts.

Question: Will infrastructure be put in place to guard against electromagnetic interference?
Response: No, because the facility is not a generator of electromagnetic interference.

<u>MAPS ILLUSTRATING THE PHYSICAL AND REGULATORY LANDSCAPE</u>
Question: Will the electric cables be overhead or underground?
Response: That has not yet been determined. Solariant's preference is underground. Research is currently underway regarding whether this aligns with local regulations. In previous solar efforts, Alachua County has been amenable to the undergrounding of utility infrastructure.

Question: Why here and not on other WACO Properties land?
Response: Partly due to the preference of the property owner, and partly because this is the closest property Solariant was able to find proximate to key utility infrastructure. As a solar energy collection facility moves further from a utility tie-in point, costs increase exponentially. The ideal location is less than one mile from field to the in-point.

Question: Why not build on Duke Energy's property, at the southwest corner of US 441 and CR 235A?
Response: That is a different property owner and a different negotiation. *Upon further investigation, the land area being discussed is a grouping of parcels owned by various property owners, not Duke Energy.*

Question: Why not build on a landfill?
Response: Landfills present numerous costly challenges related to infrastructure installation. Additionally, there are very costly remediation requirements that make building on a landfill cost-prohibitive.

Question: Why not build on environmentally damaged land, such as superfund sites?
Response: Development of any sort on that type of land requires very costly remediation that would make a project such as this economically infeasible.

Question: How large of a buffer will be put in place?
Response: The buffer will be 100 feet wide. This includes the maintenance of 20 feet of existing perimeter tree line, and 80 feet of open space to accommodate required landscaping.

Comment: You are disrupting a wildlife corridor. I propose you create uninterrupted passage points, similar to an eco-passage, through the facility to allow animals to travel.
Response: For insurance purposes, the facility needs to be fully fenced. For economic reasons, the number of panels cannot be reduced and produce the required energy output.

Question: From what road will the site be accessed?
Response: Site access is planned from Peggy Road. Access to the cemetery will be provided off of NW 173rd Street. Access from NW 138th Avenue was removed from the previous concept plan in response to feedback at the April 27, 2022, meeting. The site is estimated to generate approximately five (5) trips per month.

Comment: I propose you plant pollinators on the property.
Response: Solariant is amenable to this idea and has been looking into it since proposed at the April 27, 2022 neighborhood meeting.

NOISE VIDEOS
Question: How far away would one need to be from the panels to not hear them?
Response: The loudest part of a solar facility's infrastructure is the inverters, which produce noise comparable to a window or wall air conditioning unit. These will be placed internal to the site and positioned to direct the majority of noise away from the site's perimeter. An individual standing at the property line will not be able to hear the units.

Question: How loud is the sound of the panels shifting?
Response: The noise of panel movement is very minimal, to the point that one is unlikely to hear it standing near the panels. *Videos were played demonstrating noise levels, which were unnoticeable compared to the prairie dogs in the video.*

Question: Will the panels amplify the noise of large trucks on the nearby roadway?
Response: No, the site's topography will not increase adjacent traffic noise. The site's topography will also benefit sound capture, as the site slopes away from the public road.

SILVICULTURAL OPERATION
The team explained neighbors can expect to see silviculture activity in the area and onsite occurring on the property in the coming weeks. The team explained this is part of an approved Forest Management Plan on land owned by WACO Properties. Solariant made clear this harvesting had been planned prior to their interest in the property and should not be taken to mean construction of the solar energy collection facility is imminent.

Question: Will any tree line remain?
Response: Yes, a 20-foot buffer of trees is set to remain around the pertinent property lines.

Question: If Solariant was not attempting to build on this property, would the harvesting still occur?
Response: Yes, if Solariant were not attempting to build on this property, the onsite trees would be harvested and clear-cut to the property boundary. Solariant has requested a 20-foot buffer of trees be retained out of respect for the privacy of abutting property owners.

PRELIMINARY ENVIRONMENTAL ANALYSIS

A preliminary environmental assessment of the property was conducted on the property. The conceptual layout was revised to work around environmental features, buffering as appropriate. The results of this assessment were shared with attendees.

Comment: I am concerned about the impacts of this facility on wildlife. Specifically, I am concerned about the potential impacts to the Florida Panther that lives in the area.
Response: Our preliminary environmental assessment, conducted by a professional scientist, found no evidence of a Florida Panther in the area. *Neighbors offered to share photos and videos of said panther; CHW requested they do so. No photos have been received to date.*

Comment: The onsite water feature is used by area wildlife. I suggest you reroute your fencing to allow continued access.
Response: We will investigate the feasibility of excluding this area from fencing.

FENCING AND LANDSCAPING OPTIONS

Comment: With regards to fencing, six inches (6”) at the bottom of the fence is not wide enough for some animals. At a facility in Lake Butler, panels of fencing were left open during construction to let animals through.
Response: The fence being designed needs to strike a balance between local, state, and federal regulations as well as the needs of wildlife. Animals were not able to travel through the fence you are referring to once the facility was constructed. Small animals will be able to travel through this site when constructed. For insurance and security purposes, the facility needs to be fully fenced.

Comment: The fencing you show is ugly.
Response: Your comment is noted. Fencing choices are still being evaluated and not yet finalized. The fence will also be screened by landscaping.

The meeting began at 6:00 PM and was concluded at approximately 8:55 PM.

DECOMMISSIONING & RESTORATION PLAN

Introduction

Pleasant Solar LLC, a Florida limited liability company (the **"Applicant"),** has prepared this Decommissioning & Restoration Plan (the **"Plan")** to outline the methods and means to decommission the Pleasant Solar Project (the **"Project"**), located in the City of Alachua, FL on CR 235A, at the end of the Project's useful life. The purpose of the Plan is to identify the methodology to be used to mitigate potential impacts resulting from the cessation of operation of the Project. All decommissioning and restoration activities will adhere to the applicable local, state, and federal laws.

The Project is a 74.9 MWac solar generation facility with a minimum of 20 years expected useful life and an option to extend up to 40 years. The proposed solar generation facility configuration utilizes photovoltaic solar panels and approximately 22 inverters skids and medium voltage transformers. The proposed solar generation facility will interconnect into a new on-site Duke Energy Florida **("DEF")** owned transmission substation approximately 0.5 miles North of the Project site. The Project will be located on approximately +/- 350 acres of land on parcels secured via a lease agreement from a private landowner. Project components will be enclosed with fencing, consisting of approximately +/- 320 acres of panels and inverters and +/- 30 acres of substation equipment associated with the DEF interconnection.

The Applicant has developed this Plan for the proposed ground-mounted solar generation facility. Decommissioning cost budget of the Project will be developed based on final plans. The major components include ground-mounted solar arrays, collection lines, fencing, inverters, sectionalizing cabinet, and access roads.

The goal of decommissioning is the safe (including de-energization of the solar generation facility) and efficient removal of all solar energy facility components and reclamation of the site to conditions as close to pre-construction characteristics as possible where active crop production was underway. The same safety protocols that are used during construction will be used during decommissioning.

For decommissioning, the Applicant shall, as needed:

- Be responsible for all decommissioning costs;
- Acquire permits and develop a Stormwater Pollution Prevention Plan **("SWPPP")** to remove concrete foundations, pads, and fences, perform grading and completion of ground stabilization using revegetating or other means in accordance with permits and in compliance with all applicable rules and regulations then in effect governing;
- Commence work decommissioning, removing, and legally disposing and/or recycling of Project components;

- Remove and dispose of and/or recycle all associated equipment, including arrays, module racking, inverter structures, etc.;

- Removed materials shall be recycled, and/or salvaged to a reasonable extent practical and all waste streams shall be managed in accordance with the State's and local authority's waste hierarchy.

Anticipated Operational Life of the Project

Typically, solar modules (panels) have a useful operational life of approximately 30+ years. The Applicant will construct the solar arrays (consisting of multiple modules or panels) on leased land. Based on these terms, it is anticipated that the Project will be operational for at least 20 years with an option to extend up to 40 years.

At the end of its useful economic life, the Project will be decommissioned, and solar modules, collection lines, and associated equipment will be removed. Decommissioning will commence if the Project has not generated electricity for a period of 12 continuous months, unless the 12-month period of no energy output is the result of (a) a repair, restoration or improvement to an integral part of the Project that affects the generation of electricity and that repair, restoration or improvement is being diligently pursued by the Owner, or (b) a Force Majeure event. Force majeure includes, but is not limited to, causes or events beyond the reason- able control of, and without the fault or negligence of the party claiming Force Majeure, including acts of God, sudden actions of the elements such as floods, earthquakes, hurricanes, or tornadoes; sabotage; terrorism; war; riots; explosion; blockades; and insurrection. Typically, the decommissioning process is completed within 6 months. This timeframe depends on the size of the facility, time of year, and availability of qualified workforce.

Implementation Plan

The decommissioning will include disassembly and removal of associated equipment, removal of subsurface structures to a minimum depth of 24 inches below grade in non-agricultural land, and 48 inches below grade in agricultural land, and re-grading and re-seeding of disturbed areas. A professional salvaging company will be contracted to disassemble, remove, and recycle major Project components and materials.

- The Applicant will give the City of Alachua and other stakeholders 180-days advance notice prior to commencing decommissioning activities.

- Prior to commencing decommissioning, the Project will be shut down, de-energized and disconnected from the generation tie line at the Project collection substation. The Applicant will coordinate de-energization with DEF to ensure no disruption to the overall electrical system.

- Solar modules will be disconnected, collected, and disposed at an approved recycler or reused / resold on the market. Although the solar modules will not be producing maximum

power at the time of decommissioning, they are estimated to still produce approximately 80% of their original electricity output at year 30 and add value for many additional years.

- All aboveground and underground electrical interconnection and distribution cables no longer deemed necessary shall be removed and disposed off-site or recycled.

- Galvanized steel solar module support and racking system support posts shall be removed and disposed of (off-site) or recycled.

- Electrical and electronic devices, including transformers and inverters shall be removed and disposed of or recycled. The substation transformer and step-up transformers in the inverter units will be transported off-site to be sent back to the manufacturer, recycled, reused, or safely disposed off-site in accordance with current standards and best practices.

- Concrete foundations and support structures (incl. Inverter/Transformer foundations) will be broken down and shall be removed and disposed off-site by a licensed contractor.

- Fencing shall be removed and recycled at a metal recycling facility.

- Gravel roads will be left in place for the convenience of the lessor.

- Any trenching, holes, or elevation impacts caused by the removal of facilities will be filled and leveled to match existing grade.

Financial Assurance

The Applicant is committed to being accountable and environmentally responsible for all the solar facilities it owns, operates, or develops. All costs associated with the decommissioning of the Project will be the responsibility of the Applicant. The majority of the Project components will be reused, resold, or recycled, and it is anticipated that a large portion of the cost of decommissioning will be offset by these efforts.

Application #: PSP23-0011; PSE23-0001

RE: Pleasant Solar – Alternative Landscape Plan Determination

Dear Ms. Oliverio,

On February 29, 2024 the City of Alachua received your revised request for an alternative landscape plan for the Pleasant Solar Site Plan and Special Exception Permit applications. The Pleasant Solar applications propose the construction of a ± 74.9 MWac solar facility located in the Agricultural (A) and Residential Single Family-4 (RSF-4) zoning districts on a ± 321.49-acre subject property (tax parcel 03894-000-000; 03898-000-000).

Section 6.2.2(D)(10)(a) of the City of Alachua Land Development Regulations (LDRs) states: "an alternative landscape plan may be used where unreasonable or impractical situations would result from application of this section, or to replace a damaged tree pursuant to Subsection 6.2.1 of this section, alternative plans, materials or methods may be justified from natural conditions, such as streams, natural rock formations, topography and physical conditions related to the site. Also, the lot configuration and utility easements may justify an alternative landscape plan."

Section 6.2.2(D)(10)(b) of the LDRs establish allowable deviations, including:

(i) "A reduction in the total number of required trees and/or alteration of the spacing requirements between trees when underground connections to public facilities or public utilities, or public easements or rights-of-way, are located upon or in close proximity to the parcel or whenever a fewer number of trees would be more desirable in terms of good landscape planning practice.

(ii) A reduction in the count, spacing, or species diversity standards which would be more desirable in terms of good landscape planning practice considering the nature of the parcel and adjacent parcels.

(iii) Up to a 33 percent reduction in the total number of required trees provided that the cumulative caliper size of all trees to be planted meets or exceeds the total caliper inches that would have been provided otherwise."

The applicant provided a proposed alternative landscape plan on February 29, 2024, including justification. The applicant contends that "trees directly impact solar production by (1) casting shade along solar panels, (2) presenting possible equipment damage from falling branches/debris, and (3) may present a fire hazard if placed near electrical equipment. Proper landscape planning practices recommend consideration of the anticipated canopy sizes for mature trees", which may be constrained due to the nature of a solar facility.

The alternative plan proposes calculating the required number of plantings based on solely the proposed planting area demonstrated in the attached proposed alternative plan. The proposed plan would result in a reduction from 7,711 total trees required to 1,471 total trees required to be planted. This alternative plan would not affect the mitigation calculations. The proposed alternative plan also calls out proposed plantings and planting arrangements on a typical cross section. A landscape plan is still required to be submitted as part of the Site Plan and Special Exception Permit applications that complies with the alternative landscape plan.

Upon reviewing the request for an alternative landscape plan for the Pleasant Solar Site Plan and Special Exception Permit applications, the LDR Administrator hereby finds that the applications meet the qualifications to apply an alternative landscape plan and approves the alternative landscape plan requirements as submitted on February 29, 2024, and attached to this letter. This approval does not eliminate the requirement to comply with all other applicable provisions of the City's LDRs, including but not limited to Sections 2.4.4, 2.4.9, 4.3.2(I)(3), and 6.3. The alternative landscape plan is not to be construed as an approved fencing plan nor an approved landscape plan and the approval of the alternative landscape plan only applies as to establishing alternative site landscaping and buffering requirements as described in the attached alternative plan.

Include this letter and the alternative landscape plan requirements in all future submissions of the Pleasant Solar Site Plan and Special Exception Permit applications. Reference this letter on the landscape plans associated with these applications.

If you have any questions related to the information above, please contact the Planning & Community Development Department at 386-418-6121.

Sincerely,

Mike DaRoza
City Manager / LDR Administrator

MEMORANDUM

Pleasant Solar

21-0275

CHW Professional Consultants

To: **Mike DeRoza, City Manager/LDR Administrator**
From: **John-Michael Simpson, PLA**
Date: **2/29/2024**
RE: **Pleasant Solar – Alternative Landscape Plan**

Alternative Landscape Plan Summary

Due to the proposed use, lot configuration, and utility constraints, CHW is submitting a request to use an alternative landscape plan to fulfill site landscape requirements on the project site in accordance with Section 6.2.2(D)(10). Specifically, it is unreasonable and impractical to apply the standards of this section since a solar facility is negatively impacted by the shade created from the required landscape plantings.

The alternative landscape items are detailed below, and attached to this letter is an exhibit highlighting the proposed alternative landscape calculations and supporting planting area exhibits.

Code Reference:

(10) Alternative landscape plan.

(a) Generally. An alternative landscape plan may be used where unreasonable or impractical situations would result from application of this section, or to replace a damaged tree pursuant to Subsection 6.2.1 of this section, alternative plans, materials or methods may be justified from natural conditions, such as streams, natural rock formations, topography and physical conditions related to the site. Also, the lot configuration and utility easements may justify an alternative landscape plan.

(b) Allowable deviations. The LDR Administrator shall approve an alternative landscape plan. Allowable deviations from the standards of this section include, but are not limited to the following:

(i) A reduction in the total number of required trees and/or alteration of the spacing requirements between trees when underground connections to public facilities or public utilities, or public easements or rights-of-way, are located upon or in close proximity to the parcel or whenever a fewer number of trees would be more desirable in terms of good landscape planning practice.

(ii) A reduction in the count, spacing, or species diversity standards which would be more desirable in terms of good landscape planning practice considering the nature of the parcel and adjacent parcels.

Requested Alterations:

Site Landscape Requirements:

This project involves the construction of a utility scale solar power plant in an area zoned for single family residential and agriculture. The project is adjacent to industrial land uses, agricultural property, and some single family residential. The existing property has traditionally been used for agriculture and as a result is largely clear of existing tree canopy. There are 2,162 regulated trees currently on the 320.5 acre site which is 6.75 trees per acre.

The proposed solar site consists of approximately 280.5 acres of solar panels, electric power inverters, battery storage banks, buried electrical cables, and maintenance paths (88% of the site). The solar array is set within a 100’ wide perimeter setback which includes a 25’ fire break/maintenance path, open space, and a 15’ wide landscape buffer. This 100’ perimeter setback creates approximately 40.87 acres of space with 26 acres of that space available for planting.

Per code, there are no landscape requirements for permitting a solar energy utility project. However, a major utility project is classified as a public/institutional land use, which would require 21 trees pre acre to be planted on site in addition to the required buffer plantings. Since the purpose of a solar energy facility is to absorb the maximum amount of available sunlight across the site, shading created by canopy trees which is typically desirable on other land uses instead poses a significant obstacle. Trees directly impact solar production by (1) casting shade along solar panels, (2) presenting possible equipment damage from falling branches/debris, and (3) may present a fire hazard if placed near electrical equipment.

Proper landscape planning practices recommend consideration of the anticipated canopy sizes for mature trees when selecting species and proper spacing of a landscape. This is necessary to avoid over-shading and creating a poor habit for tree growth. Since trees must compete with each other for sunlight, moisture, and nutrients, overcrowding can impact the quality of the future canopy and structure of the trees. When trees are planted in a very dense manner, they will typically focus much of their energy on growing vertically and have limited ability to spread out horizontally. This often results in trees with a very uniform caliper (trunk) size, from top to bottom, which can reduce the structural integrity of the tree and result in significantly smaller canopies. The City's land development regulations require site landscape plantings that take into consideration the appropriate spacing required for trees. Alachua County provides an estimated canopy size of typical trees in area at 20 years. Using the information from the County, along with a diverse tree selection, the code requirements would require approximately 83 acres of space, at 20 years, to provide a typical healthy area for growth. This represents approximately 25% of the existing site area and would present a significant reduction in solar production area.

We propose to calculate the site landscape requirements based on the "plant-able" land that falls outside the main solar energy production area, as well as the 25' fire/maintenance path, as this area cannot be feasibly planted with understory or canopy trees. **The alternative landscape plan requests that we restrict the site calculations to the plant-able perimeter area around the site which is 26 acres in area.**

This will result in a requirement of 338 canopy trees and 208 understory trees for the site landscape. When combined with the buffer plantings the total landscape requirement will be 1,471 trees which is 47.42 trees per acre. These trees would then be placed along the perimeter of the property which will provide a dense visual screen for the proposed solar array. Placing the trees along the perimeter of the site will also allow us to (1) reduce potential shading impact to the solar panels and (2) reduce fire risks by keeping the vegetation further from the high voltage electrical equipment located around the solar panels.

Perimeter Buffer Requirements:
This site has an 18,641 linear foot perimeter. The perimeter area contains many existing trees and is adjacent to some existing overhead utilities. The required landscape buffers that are located along the perimeter are up to 15 feet in width and that area includes 343 existing trees that are at least 8" in diameter at breast height (DBH). The location of these trees along with other existing trees and overhead utilities along portions of the perimeter buffer make planting new trees impractical in some locations. **This alternative plan proposes relocating some of the required buffer landscape to adjacent areas just outside the buffer area but still within the 100' setback area for the solar panels.** Relocating some of the required landscape will help to mitigate impacts to existing utilities and the existing vegetation while still being able to provide screening for the proposed development.

Cemetery Buffer Requirements:
The solar project also surrounds an existing 2,100 sq. ft. small, family cemetery plot. Per LDR Administrator Interpretation PLDR24-0009, this area will require a 100' buffer from the existing 4-foot chain link fence of the cemetery to the perimeter fence surrounding the solar array. The cemetery land use as parks/open space requires a 10' wide Type D landscape buffer. Seeing as this cemetery is central to the main solar array, the required canopy trees in the landscape buffer would pose significant impacts to the surrounding solar panels and electrical equipment. **The alternative landscape plan proposes to utilize shrubs to fulfill the landscape buffer requirements for this area.** A dense continuous hedge can provide an opaque visual screen to reduce the impact of the surrounding solar panels from the cemetery site.

Pleasant Solar

21-0275

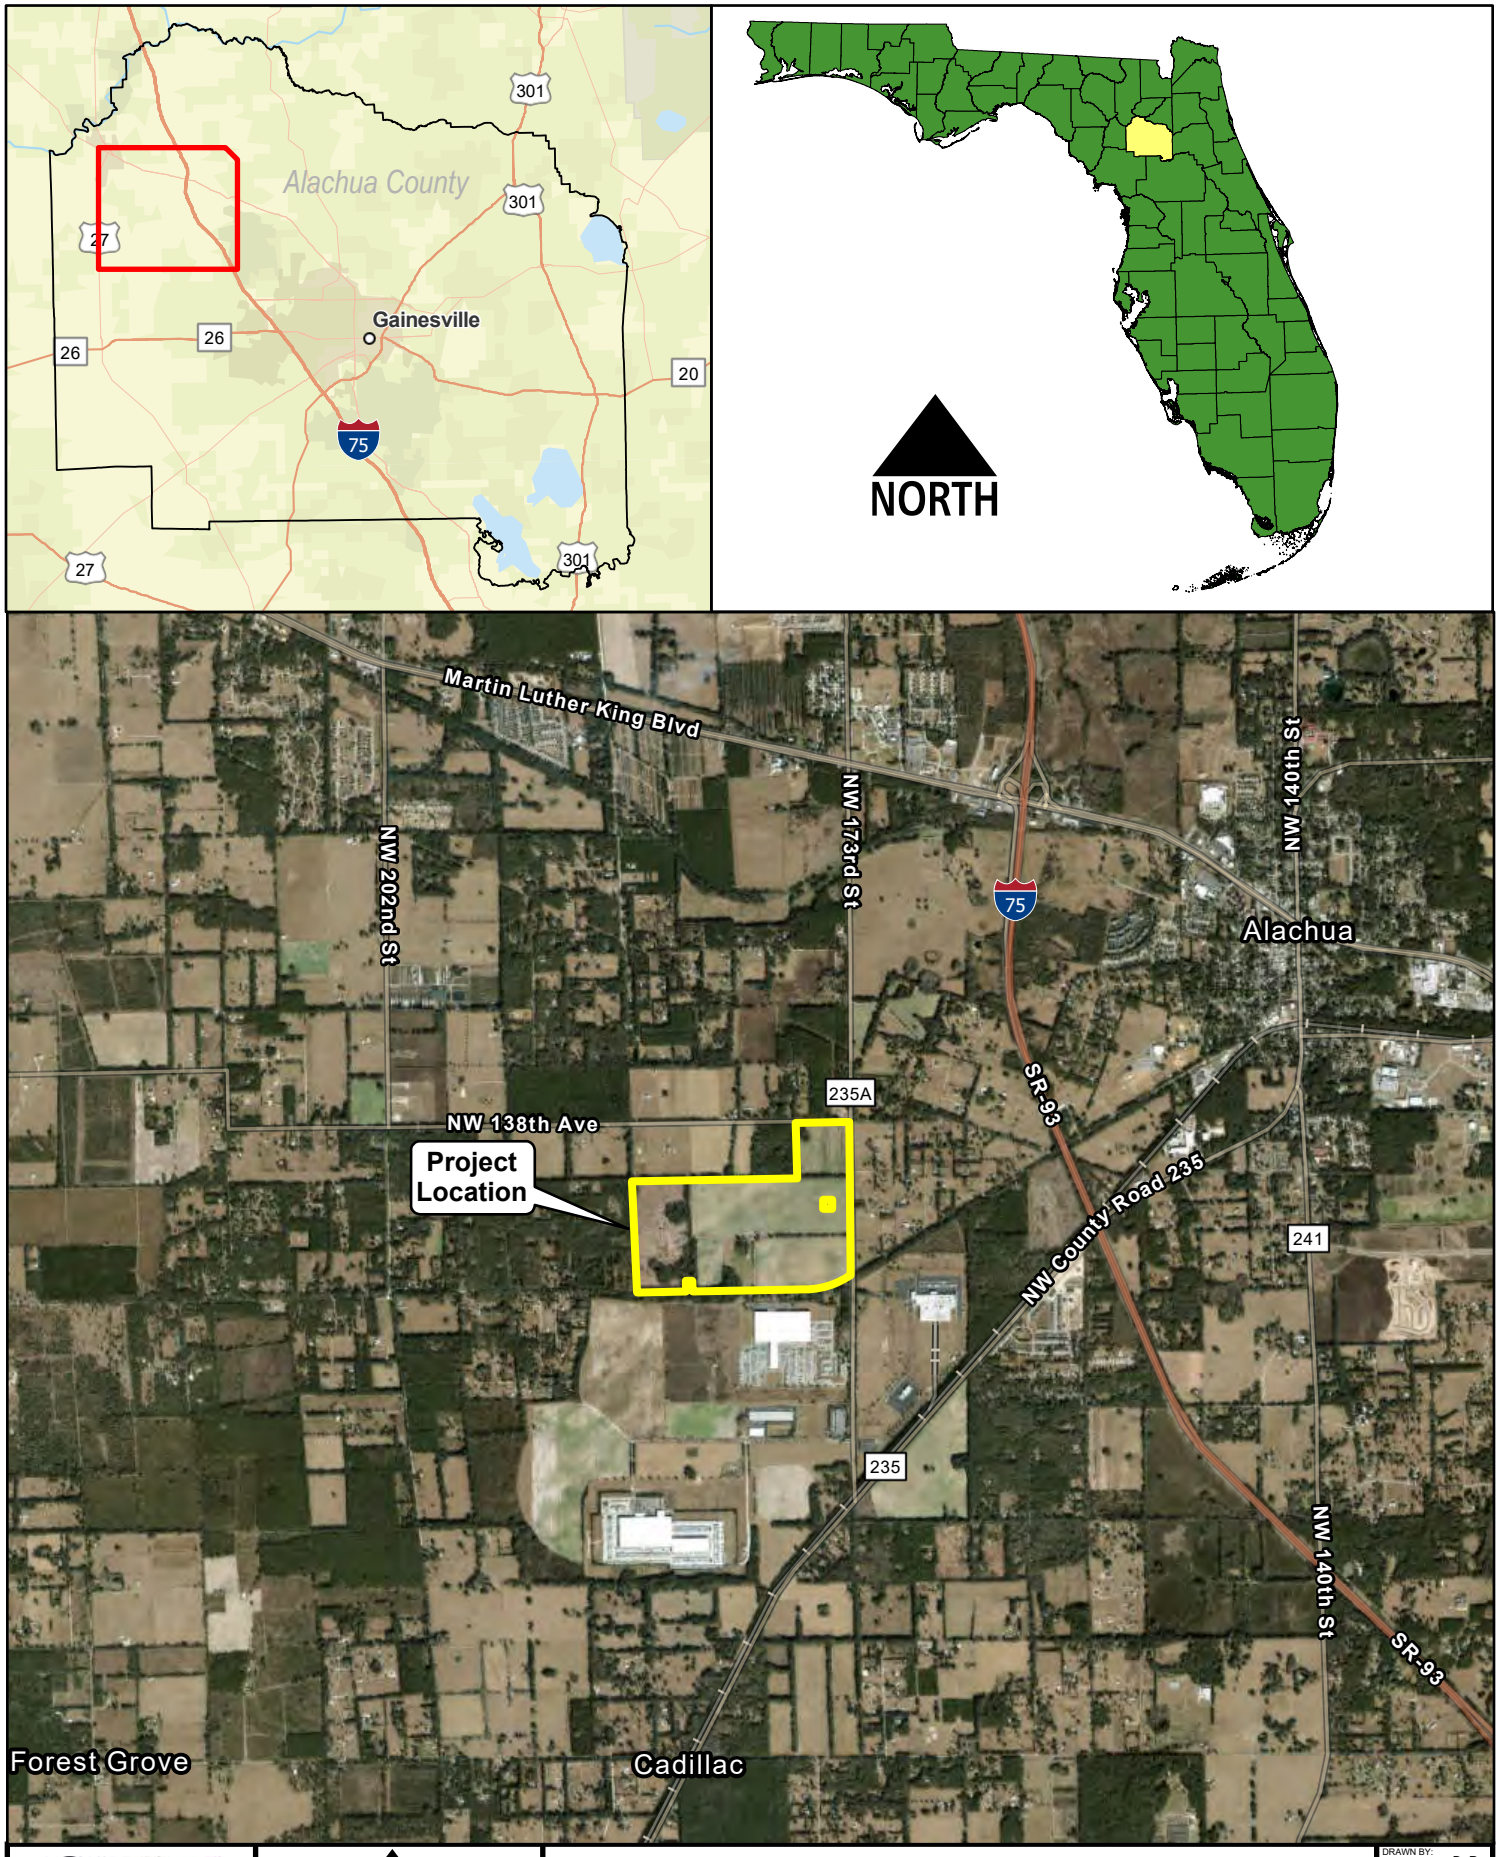
CHW Professional Consultants

To: City of Alachua

From: Andy Woodruff (CHW Ecological Services)

Date: 12/22/2023

RE: Pleasant Solar Perimeter Fencing and Wildlife Corridor



Current utilization by wildlife likely includes a variety of mammals, reptiles and amphibians, birds, and invertebrates that are known to inhabit disturbed ecosystems. Use of the site by large and medium sized mammals is already limited by its position in the landscape and limited existing native habitat conditions (Exhibit 1). The proposed site does not bisect large natural areas or otherwise serve as a significant regional corridor for wildlife movement (Exhibits 2 and 3). Past agricultural and silvicultural use of the property has limited available habitat for wildlife utilization in the proposed solar field and surrounding areas. Corridors for wildlife at this location are interrupted to the south by existing abutting roads and industrial developments, to the north by open agricultural areas, and to the east by abutting roadways and residential development (Exhibit 4). The site is not a critical link to adjacent protected areas of ecological significance.

From May 25 to May 27, 2022, TRC Environmental Corporation biologists conducted onsite surveys for state and federally listed species (Threatened and Endangered Species Habitat Assessment Report, December 2022). TRC identified no listed wildlife species present. Furthermore, based on TRC's onsite evaluation, the potential likelihood for listed wildlife species occurrence was determined to either be "none" or "low" based on lack of habitat conditions to support either foraging or nesting.

For safety and security purposes the proposed Pleasant Solar facility must provide for perimeter fencing that will limit movement across the site by large and medium sized mammals. In accordance with Chapter 110.31 of the National Electrical Code: "*For installations other than equipment as described in 110.31(D), a wall, screen, or fence shall be used to enclose an outdoor electrical installation to deter access by persons who are not qualified. A fence shall not be less than 2.1 m (7 ft) in height or a combination of 1.8 m (6 ft) or more of fence fabric and a 300 mm (1 ft) or more extension utilizing three or more strands of barbed wire or equivalent.*"

The desire to allow fence permeability into the proposed solar field for large and medium sized mammals will conflict with site security concerns and does not appear warranted based on existing and proposed onsite habitat conditions and limited surrounding natural resources.

In order to provide for some continued wildlife compatibility with the proposed solar use, there is a plan of plantings within a 100-foot setback strip surrounding the solar field (Exhibit 5). The groundcover within the solar field will be planted with a low maintenance, pollinator friendly, seed mix to increase biodiversity and benefit pollinating invertebrates. Between the solar field security fencing and the property line there is a proposed 100-foot setback which includes: over one thousand existing trees to be preserved, a 25-foot wide clear fire safety strip, and a 75-foot width for site/buffer landscape plantings. This 100-foot perimeter area will act as a wildlife corridor for continued linkage around the project site, while maintaining security and a visual barrier for neighboring land uses. The 100-foot corridor will incorporate existing mature trees and a planting plan to include a majority native and naturalized trees, shrubs, and groundcover.

Executive Summary

Jurisdiction: City of Alachua	**Development Intent:** Solar energy collection and storage facility (Major Utility)
Location Description/Address: 17910 Peggy Road, Alachua, FL 32615	
Parcel Numbers: 03894-000-000, 03894-002-000, & 03898-000-000	**Site Acreage:** ±321.49 acres (Source: CHW Survey)

Existing Future Land Uses:

Agriculture (A): The Agricultural land use category is established to maintain agriculture operations within city limits as well as preserve the rural character and small-town charm of Alachua. The following types of uses are permitted:

1. Residential uses;
2. Community services;
3. Agri-business and agritourism uses; and
4. Rural conservation subdivision option

Solar energy collection facilities are permitted by right in Agricultural land use per Florida Statutes SS. 163.3205(3).

§163.3205 Solar facility approval process.

(1) It is the intent of the Legislature to encourage renewable solar electrical generation throughout the state. It is essential that solar facilities and associated infrastructure be constructed and maintained in various locations throughout the state in order to ensure the availability of renewable energy production, which is critical to this state's energy and economic future.

(2) As used in this section, the term "solar facility" means a production facility for electric power which:

(a) Uses photovoltaic modules to convert solar energy to electricity that may be stored onsite, delivered to a transmission system, and consumed primarily offsite.

(b) Consists principally of photovoltaic modules, a mounting or racking system, power inverters, transformers, collection systems, battery systems, fire suppression equipment, and associated components.

(c) May include accessory administration or maintenance building, electric transmission lines, substations, energy storage equipment, and related accessory uses and structures.

(3*) A solar facility shall be a permitted use in all agricultural land use categories in a local government comprehensive plan* and all agricultural zoning districts within an unincorporated area, and must comply with the setback and landscaped buffer area criteria for other similar uses in the agricultural district.

(4) A county may adopt an ordinance specifying buffer and landscaping requirements for solar facilities. Such requirements may not exceed the requirements for similar uses involving the construction of other facilities that are permitted uses in agricultural land use categories and zoning districts.

Moderate Density Residential (MOD), 0 to 4 dwelling units per acre:

The Moderate Density Residential land use category allows residential development at a maximum density of 4 dwelling units per acre.

Acres	Dwelling Units per Acre	Maximum Dwelling Units
285 x	4	= 1,140

Existing Zoning Districts:

Agricultural (A) District

The A district is intended to provide for areas primarily consisting of agriculture uses and agriculture support uses and also allow low-density single-family residential development. The maximum residential density allowed in the district is one dwelling unit per five acres, except that homesteaded lots may be developed at one unit per two acres.

Solar energy collection facilities (major utilities) are permitted in Agricultural zoning by Special Exception per LDR Table 4.1-1.

Residential District (RSF-4)

RSF-4, Residential Single-Family 4. ***A solar collection facility (major utility) use is permitted in RSF-4 by Special Exception.***

*A "special exception" is a use that is generally compatible with the other uses permitted in a zone district, but requires individual review of the location, design, configuration, density, intensity, and public facility impact to determine the appropriateness of the use on any particular site in the district and their compatibility with adjacent uses. (*City of Alachua Code of Ordinances, Subpart B: Land Development Regulations, Article 2, Administration, Sec. 2.4.4 (A))

Request:

Special Exception to permit a solar energy collection and storage facility on the subject property.

Statement of Proposed Change

This Special Exception application is submitted concurrently with the Pleasant Solar LLC site plan and application. All supporting documentation, including sound study, environmental analysis, and geotechnical information, is intended to provide justification material for both applications.

LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001 are also included with other supporting documentation.

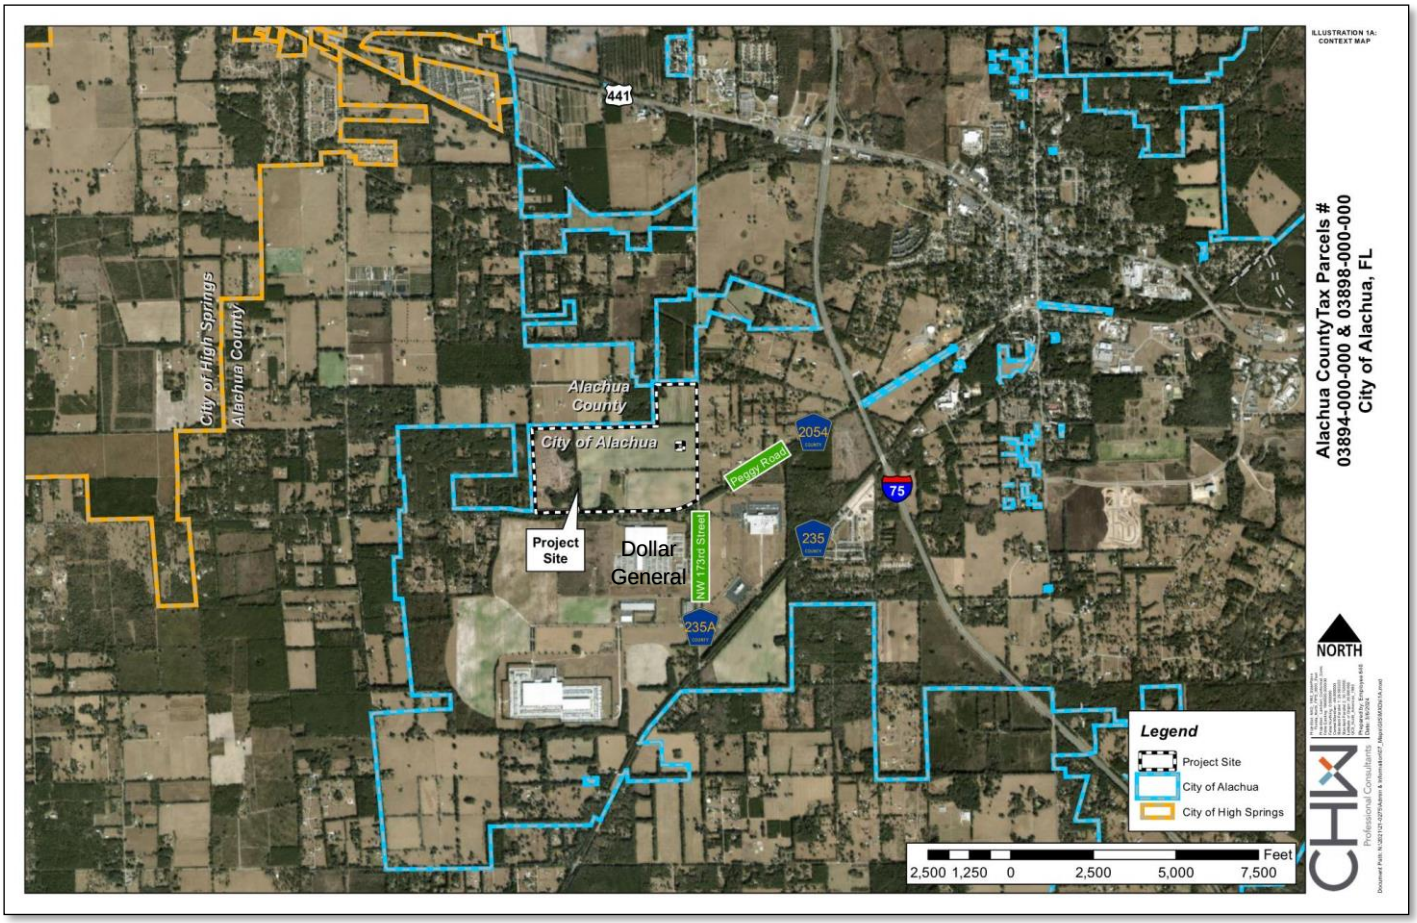

Figure 1: Aerial Map

This Special Exception application requests to permit a major utility solar energy collection and storage facility on ±321.49 acres (Alachua County Tax Parcels 03894-000-000 and 03898-000-000) in the City of Alachua. The project site is located at 17910 Peggy Road (on the north side of Peggy Rd/CR 2054), the west side of NW 173rd Street/CR 235A, and south of local road NW 138th Avenue. **Figure 1**, an aerial map, shows the site location and adjacent uses.

The City of Alachua Land Development Regulations (LDRs) have not established specific requirements for the use of a "solar energy collection and storage facility." However, a **"major utility" is defined as "infrastructure services providing regional or communitywide service that normally entails the construction of new buildings or structures**." The proposed solar energy collection and storage facility addresses the "use specific" standards for a "major utility" within the City of Alachua LDRs.

The maps in **Figure 2** and **Figure 3** show the existing land use and zoning of the subject property and surrounding properties. **Table 1** shows the surrounding Future Land Use and Zoning designations.

The subject property currently has two (2) City of Alachua Land Use Classifications. The parcel to the north is Agriculture (1 dwelling unit per 5 acres (du/ac)). The larger parcel to the south is Moderate Density Residential (1-4 du/ac). There is a ± 2,100 sq. ft. small, family cemetery plot (known as Cathcart Cemetery) internal to the southern parcel surrounded by an existing 1 acre buffer. The project site has two (2) City Zoning Categories, Agriculture and Residential Single-Family-4 (RSF-4), and Alachua County Rural Agriculture on 1 acre.

Table 1: Surrounding Future Land Use and Zoning Designations

Direction	Future Land Use Designation	Zoning Designation
North	Rural/Agricultural	A
East	Agricultural	A
South	Industrial	IND
West	Rural/Agricultural	A

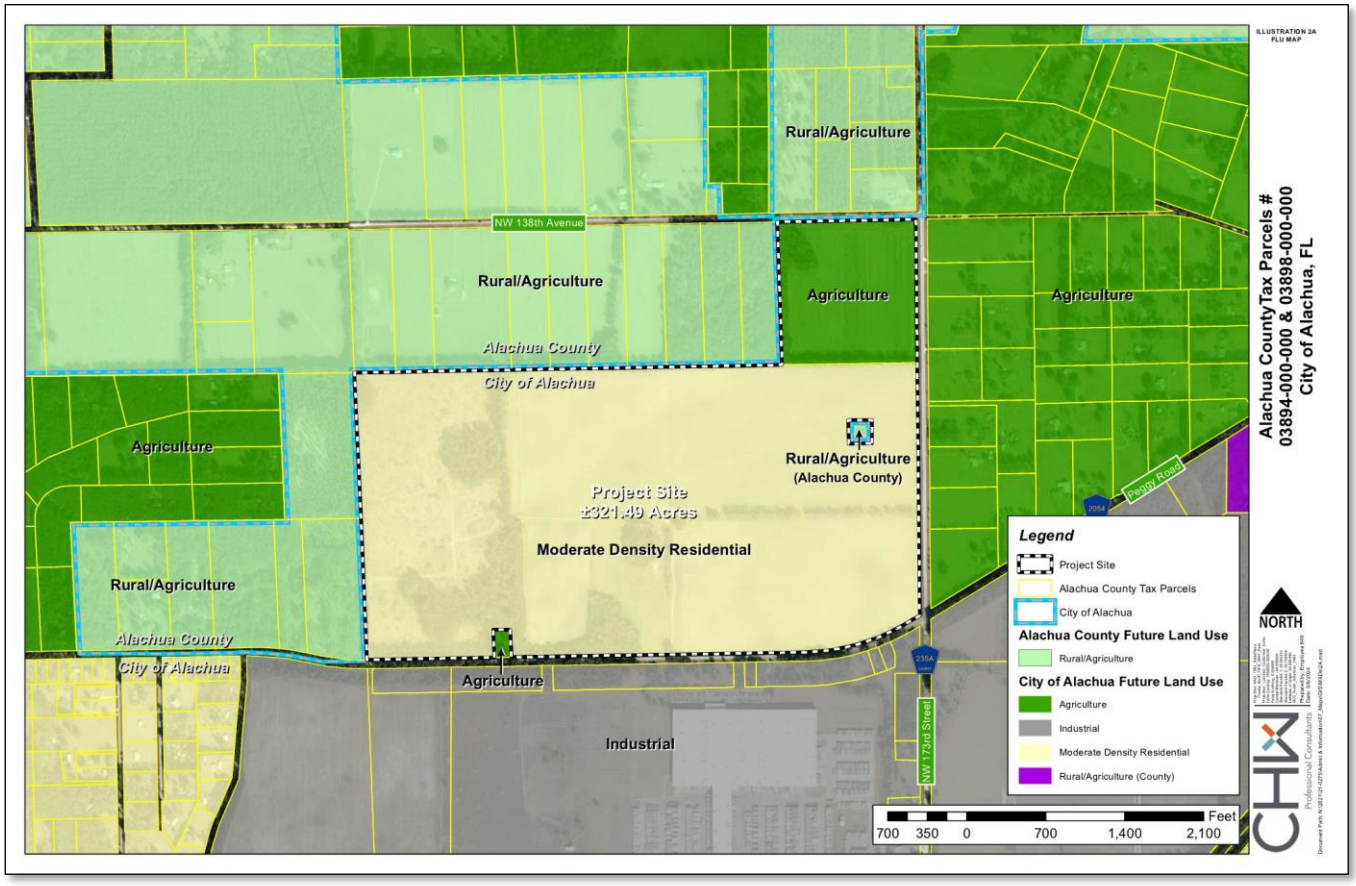

Figure 2: Future Land Use Map

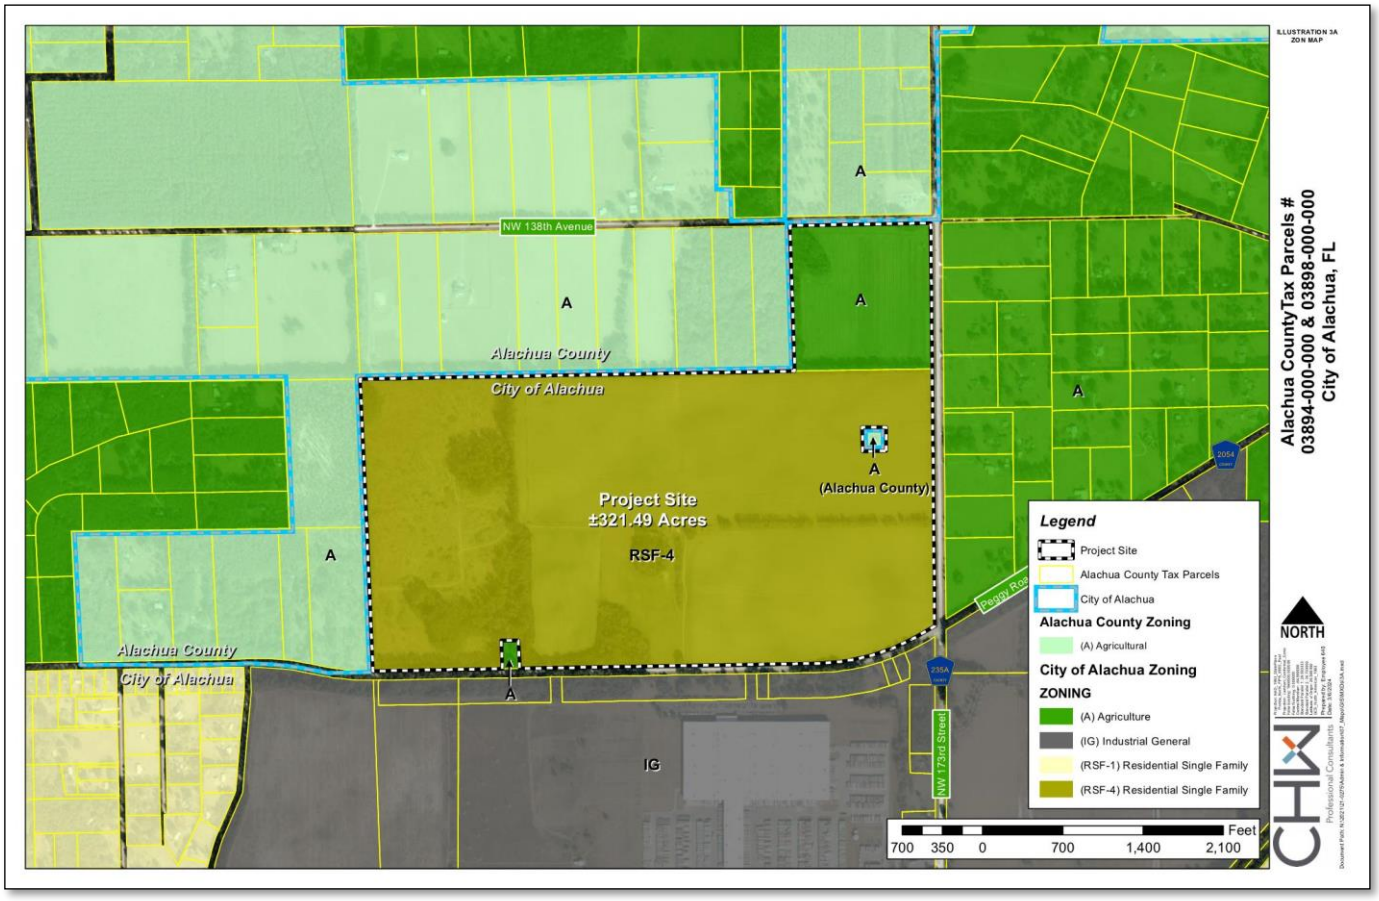

Figure 3: Zoning Map Atlas

Solar Energy Collection Facilities in Florida Statutes

Solar energy collection facilities are permitted by right in Agricultural land use and zoning per Florida Statutes SS. 163.3205(3).

§163.3205 Solar facility approval process.

(1) It is the intent of the Legislature to encourage renewable solar electrical generation throughout the state. It is essential that solar facilities and associated infrastructure be constructed and maintained in various locations throughout the state in order to ensure the availability of renewable energy production, which is critical to this state's energy and economic future.

(2) As used in this section, the term "solar facility" means a production facility for electric power which:

(a) Uses photovoltaic modules to convert solar energy to electricity that may be stored onsite, delivered to a transmission system, and consumed primarily offsite.

(b) Consists principally of photovoltaic modules, a mounting or racking system, power inverters, transformers, collection systems, battery systems, fire suppression equipment, and associated components.

(c) May include accessory administration or maintenance building, electric transmission lines, substations, energy storage equipment, and related accessory uses and structures.

(3) *A solar facility shall be a permitted use in all agricultural land use categories in a local government comprehensive plan* and all agricultural zoning districts within an unincorporated

area, and must comply with the setback and landscaped buffer area criteria for other similar uses in the agricultural district.

(4) A county may adopt an ordinance specifying buffer and landscaping requirements for solar facilities. Such requirements may not exceed the requirements for similar uses involving the construction of other facilities that are permitted uses in agricultural land use categories and zoning districts.

Major utilities are permitted in RSF-4 by Special Exception in the City of Alachua.

2.4.4 Special exception permit.
(A) Purpose. The purpose of this subsection is to provide a means for reviewing applications for approval of uses allowed as special exceptions. These are uses that are generally compatible with the other uses permitted in a zone district, but require individual review of their location, design, configuration, density, intensity, and public facility impact to determine the appropriateness of the use on any particular site in the district and their compatibility with adjacent uses. ***Special exception uses may require the imposition of conditions to ensure the appropriateness of the use at a particular location.***

In preparation of the application, the applicant and consulting team reviewed Article 4 – USE REGULATIONS Sec. 4.3. – Use Specific Standards, specifically (3) Utility, Major. Land Development Regulations Consistency, beginning on Page 13, contains a detailed Consistency Statement. The document also proposes imposition of a condition to ensure appropriateness of the use at its particular location in accordance with the enabling language in Sec. 2.4.4 (A).

Special Exception Report and Supporting Documentation – Key Points

This Report addresses how the proposed Special Exception adheres to the City of Alachua Comprehensive Plan and all LDRs. *All supporting documentation for the site plan application, including sound study, environmental analysis, and geotechnical information, is intended to provide justification material for this Special Exception application.* ***LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001 are included with the supporting documentation.***

Key points that will be addressed in this report:

- The proposed solar energy collection and storage facility represents **a significantly lower impact and more compatible use in the immediate and context area** than the 4du/acre residential development that is currently permittable on the southern parcel. The existing Land Use and Zoning of the southern parcel entitles up to 1,140 homes to be permitted, abutting 1du/acre rural agricultural homesites to the west, north, and east. The intensity and density of the permittable use is higher than the proposed use as a solar collection facility.

- The proposed unmanned, remotely-monitored, solar energy collection and storage facility **will have *de minimus* impacts on current traffic patterns or levels of service for transportation**. One driveway access is proposed from Peggy Road, directly across from the Industrial zoning district Dollar General warehouse. General maintenance of the solar site will be conducted once or twice monthly. **No parking areas** are proposed for the facility. The Concurrency Report has been submitted with the site plan application.

- The proposed use will have **no impacts on infrastructure, sanitary sewer, solid waste, or public schools**. There will be a water connection to the site, and electric will be self-generated

from the panels. Stormwater runoff from the proposed driveways between solar panels will be captured onsite, making use of naturally low-lying areas of the site.

- For the currently permittable residential use, there would be no landscape buffers required between land uses, and minimal 15' rear yard setbacks. By contrast, the proposed site plan for the solar facility provides a **100' setback from surrounding property lines (with exception of the cemetery which is addressed in LDR Administrator Interpretation #PDLR24-0009), a fence around the solar array, and heavily landscaped buffers around the perimeter of the site**. The Site Plan, Landscape Plan, and Fencing Plan have been submitted with the Pleasant Solar LLC application.

- A Property Value Impact Study analysis submitted with this application shows **no impact in home values due to an abutting or adjoining solar farm**. In addition, the **site can be returned to natural condition** at the end of the project life span, a minimum of 20 years to 40 years.

- This Special Exception application is asking as a condition of approval to allow a 7-foot high fence **to meet the security requirements of Rule 110.31 "Enclosure for Electrical Installations" of the National Electrical Code (NEC).**

As stated on Page 6**, a "special exception" is a use that is generally compatible with the other uses permitted in a zone district, but requires individual review of the location, design, configuration, density, intensity, and public facility impact to determine the appropriateness of the use on any site in the district and the compatibility with adjacent uses.**

The proposed solar collection and storage facility is consistent with the City of Alachua Comprehensive Plan and complies with "use specific" regulations for a "major utility," and "special exception standards" per the City LDRs, as shown in the following sections of this report.

Comprehensive Plan Consistency

This section identifies specific City of Alachua Comprehensive Plan Goals, Objectives, and Policies and explains how the Special Exception application is consistent with each. Text from the City of Alachua is provided in normal font while consistency statements are provided in **bold**.

FUTURE LAND USE ELEMENT

Policy 2.4.b Landscaping: Buffering – A buffer consists of horizontal space (land) and vertical elements (plants, berms, fences, walls) that physically separate and visually screen adjacent uses. The City shall establish buffer yard requirements that are based on the compatibility of the adjacent uses and the desired result of the buffer.

Landscape buffers are provided per City of Alachua Land Development Regulations (LDRs) and shown on the Landscape Plan submitted with this application. Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001 is included with this application.

All landscape buffers are provided within a 100' setback from the property line around the project perimeter, defined by a black vinyl-coated chain link fence around the solar array and a 25' fire break/maintenance path. The north, west, and southwest buffers are provided by a 15' wide area of preserved existing vegetation and proposed landscape plantings. The northeast and east buffers are provided by a 15' landscape buffer. A 15' buffer is provided around the southern boundary outcrop and a 5' buffer along the remaining southern perimeter. There is a 10' wide landscape buffer surrounding the small, family cemetery plot that is internal to the southern parcel (as shown on the Landscape Section in the approved Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001).

Policy 2.5 a: There shall be a minimum of 10% open space required. The City shall establish incentives for the provision of open space beyond minimum requirements.

The proposed solar collection and storage facility site plan provides ±11% of open space, exceeding the 10% open space requirement. A Landscape Plan showing this information has been submitted with this application.

Policy 5.1.a Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

The natural drainage pattern of the site will be maintained and there will be minimal grading onsite. Along with the perimeter fence and landscape buffering, the natural slope of the property will further obscure views of the solar panels from CR 235A and adjacent properties. *The geotechnical summary report by GSE has been submitted with this application.*

Policy 5.1.d Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

The application complies with State and Federal laws and regulations for delineation and protection of wetland areas. The wetland is protected with a 50' setback, and the natural depressional areas

are protected with a 100' setback. ***The geotechnical summary report by GSE has been submitted with this application. The Wetland Delineation Report has been submitted with this application.***

COMMUNITY FACILITIES ELEMENT

Objective 3.5: Stormwater System Design in High Aquifer Recharge Areas
The City shall work with the Suwanee River Water Management District and the FL Dept of Environmental Protection criteria for karst stormwater management system design.

Policy 3.5.a: The following general requirement apply to stormwater management systems within high aquifer recharge areas:

1. Stormwater shall not be directly discharged to active sinkholes;

Natural stormwater sheet flow will be maintained to the existing depression.

2. When soil and water table conditions allow, the use of offline retention systems for stormwater systems shall be required;

The goal of the stormwater treatment plan on this project is to maintain natural drainage patterns; therefore no offline retention systems are proposed.

3. Swale conveyances shall be used to the greatest extent possible and contextually appropriate;

The goal of the stormwater treatment plan on this project is to maintain natural drainage patterns. The majority of the site will remain at natural grade and some areas will be minimally graded. Two basins with swales are proposed in the areas with minimal grading.

4. Projects in areas zoned for industrial land uses shall not discharge industrial pollutants into the stormwater system or allow permit pollutants to come in contact with groundwater;

No industrial uses are proposed on the site. Solar panels are completely sealed. Routine inspection of the facility, including the solar modules, by an Operations & Management provider will occur and in the rare event of panel damage, the modules will be replaced and recycled as needed.

5. Natural depressions may be used for stormwater management only when hydrogeological evidence shows that the geologic structure and soils are stable and unlikely to form a direct connection to the groundwater. To verify geologic stability, the design professional shall provide soil boring information and/or supplemental data such as ground penetrating radar.

Hydrogeological stability is addressed in the geotechnical review, and soil borings are included in the data. Refer to the geotechnical report by GSE, which has been submitted with this application.

6. If the hydrogeological conditions are suitable and a natural depression is proposed for use as part of the stormwater management system, a spreader swale shall be employed at the inflow location;

No point discharges to the existing depression are proposed. Natural sheet flow condition will be preserved.

7. Regular inspection shall be conducted by developer/maintenance entity to visibly check for the indicators of or the existence of solution pipes; and

Inspections will be conducted as described in the Stormwater Operations and Maintenance document. Refer to the Stormwater Report for detailed information.

8. Remedial plugging activities shall employ methodologies acceptable to the applicable regulatory agency (the FL Dept of Environmental Protection or the Suwannee River WMD).

Remedial plugging activities, if required, shall meet the requirements and best practices of the Florida Department of Environmental Protection (FDEP) and Suwannee River Water Management District (SRWMD).

Policy 3.5.c. In addition to the requirements of Policy 3.5.a., stormwater systems in high aquifer recharge areas shall:

1. Use swales, preferably with cross block or raised driveway culverts, to promote retention/infiltration within swales; and

Natural sheet flow and drainage patterns on the site will be maintained.

2. Use shallow, vegetated, offline infiltration systems that are incorporated into a project's open space/landscaping areas.

No offline retention systems are proposed; the stormwater design will maintain natural drainage patterns.

CONSERVATION AND OPEN SPACE ELEMENT

Policy 1.2.j. The City shall require all new developments to maintain internal and external connectivity of all open space to the maximum extent practicable.

The ±11% open space set-aside exceeds the 10% requirement for the site. The project proposes to retain the existing wooded vegetation within the buffer areas of the 100 foot setback around the site's external perimeter. The majority of this existing wooded area stretches from the southwest, along the western boundary, and across the northern property line for a length of over 10,000 feet.

As shown on the Site Plan, the majority of the open space is located in the buffers. The open space area around the perimeter of the solar array will not be disturbed, affected by grading activities, and will remain natural and traversable for wildlife. Refer to the Memorandum "Pleasant Solar Perimeter Fencing and Wildlife Corridor" prepared by CHW Ecological Services for more information.

The open space area surrounding the existing natural depression is proposed to remain within the fenced area of the site for safety. The internal area of the site within the fence will be comprised of solar collection equipment and will be unmanned and remotely monitored. No parking areas or facilities will be provided. To provide safety for the public, the internal solar array areas of the site will be fully fenced. The land underneath the solar array area will be seeded with pollinator friendly plant species to increase biodiversity and benefit pollinating invertebrates.

Policy 1.8.a. The City shall comply with the Alachua County Hazardous Materials Management Code.

The purpose of the Alachua County Hazardous Material Management Code is to regulate and provide standards for storage, handling, and monitoring of hazardous materials to prevent discharges to the environment.

Solar panels are not addressed in the Alachua County Hazardous Materials Management Code. Federal and state solid and hazardous waste regulations may apply to solar panels only at the point that they are removed from service and/or must be discarded. Therefore, no monitoring is required.

Policy 1.10.a: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code and regulations adopted by the DEP and the Suwannee River Water Management District.

An environmental analysis was conducted for the site. One wetland and three depressional areas were identified. A Site Plan (submitted with this application) has been designed to protect these areas with a 50' setback around the wetland area, and 100' setbacks around the depressional areas. ***The geotechnical summary report by GSE has been submitted with this application. The Wetland Delineation Report and Sinkhole Survey have been submitted with this application.***

Objective 1.13 Energy Conservation. The City shall encourage and promote the conservation of energy resources to reduce negative impacts to the environment.

Solar energy use supports the City's objective to conserve energy resources and reduce negative impacts to the environment. This proposed solar energy collection and storage facility will provide the City of Alachua and surrounding areas with an additional source of renewable energy.

Land Development Regulations Consistency

The following identifies how this application is consistent with the City of Alachua's Land Development Regulations (LDRs). Language from the LDR is provided in normal font, and the consistency statements are provided in **bold** font.

Article 2 – ADMINISTRATION
Sec. 2.4 Specific requirements for applications for development permits.

(D) *Special exception standards.* A special exception permit shall be approved only upon a finding that the applicant demonstrates all the following standards are met:

(1) *Complies with use specific regulations*… in Section 4.3:

See Section 4.3 Use Specific Regulations (pages 14-15). The proposed use meets all use specific regulations (Location, Setback, and Compatibility) per the City of Alachua LDRs.

(2) *Compatibility*. The proposed special exception is appropriate for its location and compatible with the character of the surrounding lands and the uses permitted in the zone district.

The proposed use is compatible with adjacent uses: Industrial General (IG) use to the south (Dollar General warehouse), and Agricultural (A) to the west, north, and east. Solar facilities are allowed by right in Agricultural land use per Florida Statutes SS. 163.3205(3).

A solar facility (classified as a "major utility" in the City's LDRs) requires 100' setbacks from property lines, "*to ensure it does not have an adverse impact on surrounding uses.*" Based on location, the currently permitted surrounding residential use on the southern parcel would require the following setbacks: 20' front, 15' back, and 7.5' side. The currently permitted surrounding agricultural use on the northern parcel would require: 30' front, 25' back, and 25' side setbacks. The 100' setbacks from surrounding external property lines greatly exceeds the site's existing setbacks, by at least a three times (3 X) to thirteen (13 X) multiplier, around the external perimeter.

All landscape buffers are provided within a 100' setback from the property line around the project perimeter, defined by a fence around the solar array and a 25' fire break/maintenance path. The north, west, and southwest buffers area are enhanced by a 15' wide area of preserved existing vegetation and additional site landscape/buffer material. The northeast and east buffers are enhanced by a 15' landscape buffer. The southern buffer is provided by a 5' buffer, and the outcrop is a 15' buffer. The Site Plan, Landscape Plan, and Fence Plan have been submitted with this application. Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001 is included with this application.

A small one-acre (1ac) enclave exists ±400' inside the farm field on the site's eastern boundary with CR 235A, which contains a ±2,100 sq. ft. family graveyard. Waco Properties provided the 1-acre enclave parcel, creating a protective zone and buffer from adjacent uses, which is twenty-one times (21 X) the graveyard's actual size. In addition, the graveyard is only accessed by pedestrian or four-wheel drive type vehicles. The graveyard is an area internal to the overall project site.

CHW field survey data illustrates at least 73' - 87' buffer presently exists in all directions around the actual graveyard. The applicant proposes a 25' buffer, adding 0.6 acres to the existing one-acre perpetual buffer, which substantively meets the spirit and intent of Sec. 4.3 Use Specific standards (I)(3)(b), requiring buffering *"…to ensure it (use) does not have an adverse impact on surrounding*

***use”*. As both the graveyard and solar facility are passive uses, there’s no inherent incompatibility justifying, essentially, a 100-ft buffer of the already existing 73’-87’ buffer on the graveyard site. The additional proposed 25-ft. buffer comports with policy requirement ensuring no adverse impacts.**

In addition, CHW staff contacted the graveyard’s heirs, who no longer can maintain the 2,100 sq. ft. area. The applicant is providing an access drive and vegetative maintenance to the heirs’ site. The applicant proposes a 25’ buffer be a site-specific Condition to the Special Exception application., which is permissible under Florida law.

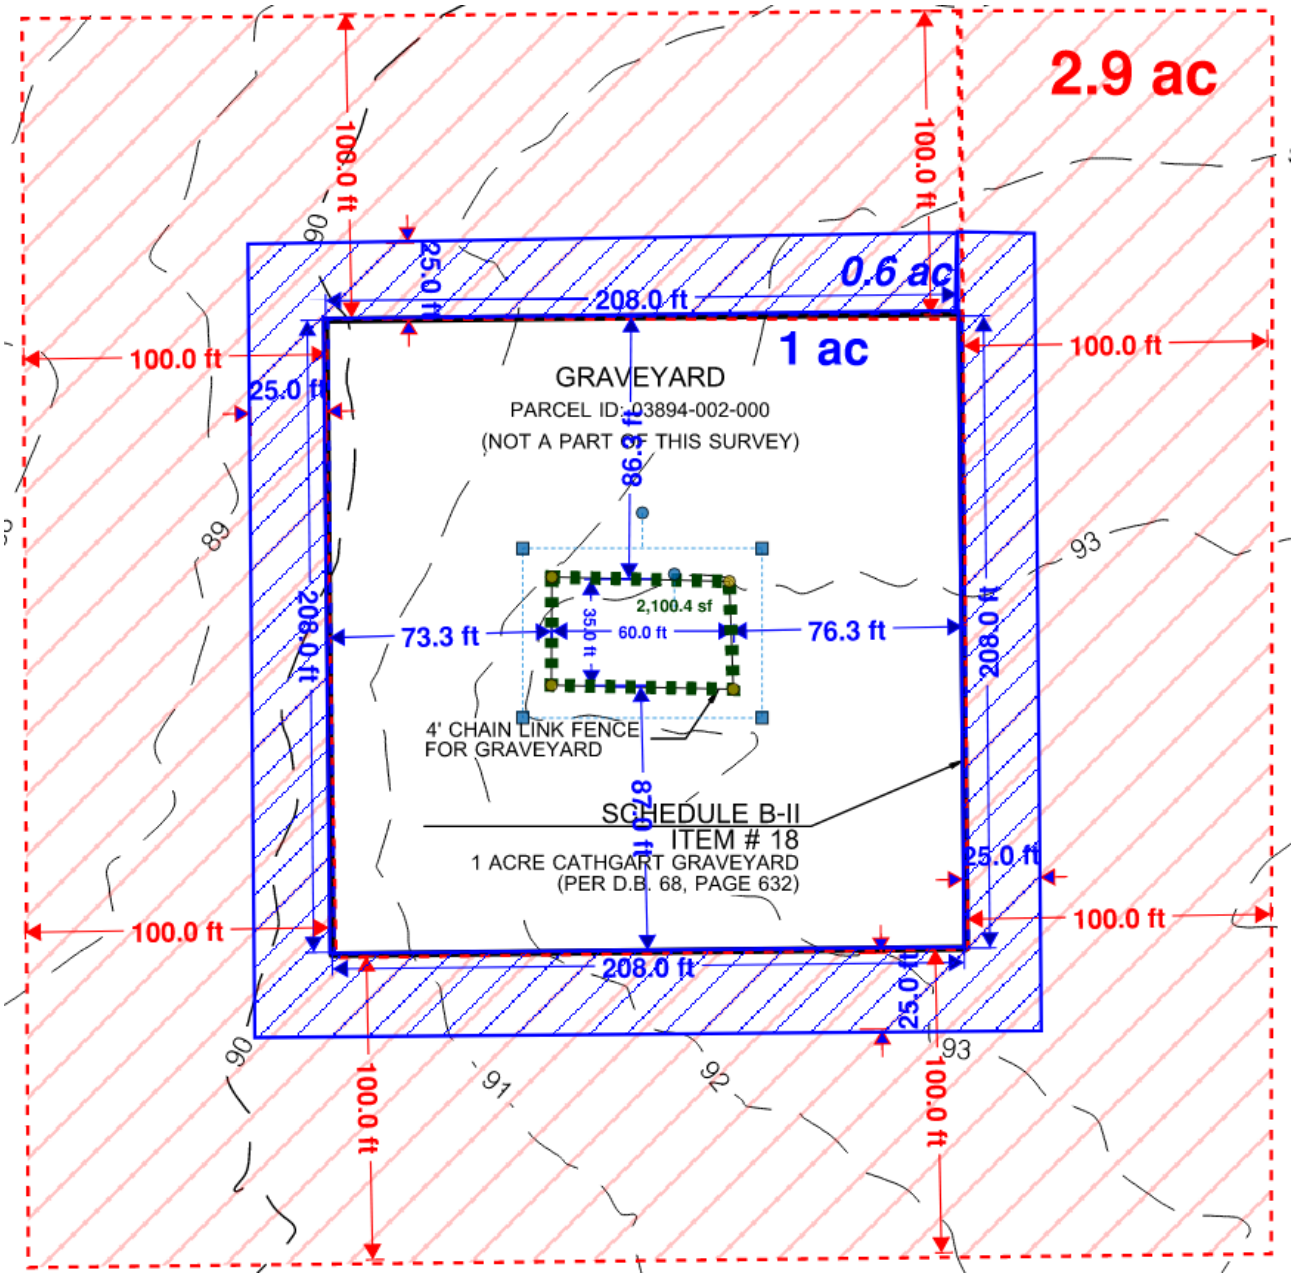

Figure 4: Cathcart Graveyard Buffering Exhibit

In addition, creating a four (4) acre carve-out around the ±2,100 graveyard area is disproportionate to the impacts, if any, of the passive solar facility on the small, already well-buffered graveyard. An oversized carve-out draws attention to the enclave on CR 235A, inviting trespass to the legacy family graveyard.

Upon review of the LDR interpretation request and associated exhibit, the LDR Administrator has found that "the requirements of Section 4.3.2(I)(3)(b) are met by providing a minimum 100' buffer from the existing 4' chain link fence for the graveyard," as shown in Figure 4. LDR Administrator Interpretation #PLDR24-0009 is included with this application.

(3) *Design minimizes adverse impact*. The design of the proposed special exception minimizes adverse effects, including visual impacts of the proposed use on adjacent lands; furthermore, the proposed special exception avoids significant adverse impact on surrounding lands regarding service, delivery, parking and loading, odors, noise, glare, and vibration, and does not create a nuisance.

- **The natural slope of the property will minimize views of the solar panels from CR 235A and properties to the east. The solar array will be entirely fenced using vinyl-coated black chain link fencing material, and the surrounding perimeter of the site will be buffered with existing dense vegetation and opaque landscape buffer material. *A Site Plan, Landscape Plan, and Fencing Plan showing these details have been submitted with this application.***

- **Refer to the Landscape Viewshed Exhibit, for a representation of the minimized visual impact from CR 235A and Peggy Road. The proposed special exception avoids significant adverse impacts with well-placed opaque screening and multiple layers of landscape material, including over one thousand existing trees and over one thousand proposed trees and shrubs.**

- **No parking/loading will be conducted. The proposed use is an unmanned solar energy collection facility, which will have a *di minimus* impact on infrastructure. *A Concurrency Report has been submitted with the application.***

- **Property access will be one driveway/gate off Peggy Road, directly across from Industrial General (IG) land use to the south (Dollar General warehouse). *A Site Plan showing the property access has been submitted with this application.***

- **No odors are anticipated with this solar energy collection and storage facility.**

- **Solar panels are designed to absorb light, not reflect it, and non-glare/anti-reflective surface materials are provided on the proposed panels to avoid any adverse impact on surrounding lands. Additional information on the project selected solar panels has been submitted with the Site Plan on sheet C2.31.**

- **Site sound levels are anticipated to be well below the limits typically required. The inverter boxes, located centrally on the ±321.49 acre project site, emit a low hum, similar to a window-mounted air conditioning unit. These boxes will be wrapped with "shields" to further reduce this sound. The central location of these inverters, with the additional shields, will significantly minimize any noticeable vibration or sound at the project site boundary. *A Site Sound Study by Seibein Acoustic has been conducted, and the report is submitted with this application.***

- **The proposed project will include emergency infrastructure/safety improvements. The developer has met with local emergency response personnel and a 25' wide access path between the perimeter fencing and existing trees to remain/landscape buffer is proposed to allow for ease of safety access.**

- **Short-term construction phase effects will be minimized through mud removal, dust and odor control, light management, flexible construction scheduling, and noise mitigation:**

    - **Site Access: All staging areas for construction equipment, vehicles, and materials for installation will be internal to the site. Refer to sheet C0.30 of the Site Plan for location information.**

    - **Dust Control: Dust and debris from construction activities must be minimized so as not to spread dust and debris off-site. This may include, but is not limited to, dust control achieved through water trucks, removal of mud/soil from vehicle tires before existing the site, and street cleaning. Dust control will take place during the duration of the construction process to limit impacts from construction traffic. (Chemical dust control is sometimes used on sites where water trucks are not sufficient; however, that is not anticipated for the Pleasant Solar site based on soil types and ground conditions.)**

    - **Staging Areas: Construction staging area on the eastern side of the site is indicated on the Site Plan. Typically, the staging area will include temporary fencing and yard lights for security purposes. One to two smaller satellite staging areas may be used as needed throughout the project site during construction period.**

    - **Schedule: Construction activities will only occur between the hours of 7:00 AM and 7:00 PM on Monday through Friday and between the hours of 9:00 AM and 7:00 PM on Saturday and Sunday.**

    - **Construction Timeline & Sequence: A 10-month construction timeline is anticipated. The typical construction sequence would be site preparation and any grading needed, roads and surfacing, racking and PV installation, electrical installations, and testing and commissioning.**

    - **Noise: Construction noise is anticipated to be equal to or less than any typical construction project approved by the City. A pile driver will insert the tracker foundations, and other construction equipment including backhoes, dozers, excavators, forklifts, trucks, trenchers, watering trucks, concrete trucks, compactors, etc. may be used as needed.**

    - **Lighting: Any lighting required for construction activities will be shielded and/or directed so as not to spill light to off-site areas or adjacent properties and rights-of-way. Lighting may only be used during the restricted hours of construction activities, except for minimal security lighting, which may be used outside of the restricted hours of construction only such that no disturbances or light spill to off-site areas or adjacent properties and right-of-way occur.**

    - **Odor: No strong odors are anticipated during the construction process. Typical construction site odors consist of gases, fumes, or diesel from construction**

equipment. However, all equipment meets EPA standards and heavy emissions are not allowable.

- **During the decommissioning process, the goal will be the safe and efficient removal of all solar facility components and reclamation of the site to conditions as close to pre-construction characteristics as possible, including the restoration of native vegetation. The same safety protocols and minimization of adverse impacts that are used during construction will also be used during decommissioning. Refer to the Decommissioning Plan for more details.**

(4) *Design minimizes environmental impact*. The proposed special exception minimizes environmental impacts and does not cause significant deterioration of light, water, and air resources, wildlife habitat, stormwater management, scenic resources, and other natural resources.

- **The project site has been used as an active silviculture operation with an approved permit for harvesting based on Best Management Practices (as on other Waco Properties). The property is a mix of pine and hardwood trees and open field. The majority of merchantable timber onsite includes water oak, laurel oak, slash pine, and cherry.**

- **Impacts to natural resources are minimized by preserving existing trees along the western boundary and portions of the north and south boundary. Existing trees within a 15 foot buffer of the property line will be preserved to support landscape buffering requirements according to the City of Alachua LDRs. *A Landscape Plan, showing existing trees to be preserved, has been submitted with the application. Approved Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001 is included with this application.***

- **More than 280 acres of landcover under the solar arrays will be seeded with a low-maintenance, pollinator-friendly seed mix to increase biodiversity and benefit pollinating invertebrates. These groundcovers/grasses will include a mix of species familiar to areas of the southeastern U.S. and Florida, including *Gallardia pulchella* (Indian Blanket) and *Eragrostis spectabilis* (Purple Love Grass).**

- **No critical habitats or wading bird rookeries are known to occur on or in the vicinity of the project site. Findings and recommendations of the Threatened & Endangered Species Habitat Assessment Report, conducted by TRC corporation, indicated that the project is not likely to adversely impact listed animal species. *The T&E Species Habitat Assessment Report is submitted with this application.***

- **The site is not a critical link to adjacent protected areas of ecological significance. In order to provide for some continued wildlife compatibility with the proposed solar energy collection use, the 100' setback area will be maintained as a wildlife corridor. Refer to the Memorandum provided by CHW Ecological Services, "Pleasant Solar Perimeter Fencing and Wildlife Corridor."**

- **An environmental analysis was conducted for the site. One wetland and three depressional areas were identified. A Site Plan (submitted with this application) has been designed to protect these areas with a 50' setback around the wetland area, and 100' setbacks around the depressional areas. *The geotechnical summary report by GSE has been submitted with this application. The Wetland Delineation Report and Sinkhole Survey have been submitted with this application.***

- **The site's natural stormwater drainage pattern will be maintained. *The geotechnical summary report by GSE has been submitted with this application.***

- **The solar panels are completely sealed and are designed to withstand a Category 3 hurricane. The project will also include emergency infrastructure improvements; a 25' wide access path between the solar array perimeter fencing and the area of existing trees to remain/landscape buffer is proposed to allow for safety access. A Site Plan and Landscape Plan have been submitted with this application. Additional information on the project selected solar panels has been submitted with the Site Plan on sheet C2.31.**

(5) *Roads and other public facilities*. There is adequate public facility capacity available to serve the proposed special exception, and the proposed special exception use is designed to ensure safe ingress and egress onto the site and safe road conditions around the site.

The project will have *de minimus* impacts on current traffic patterns or levels of service for transportation. There will be one vehicular driveway access to the site from Peggy Road. The proposed solar energy collection facility will be unmanned and monitored remotely, with maintenance of the site conducted once or twice a month. *A Site Plan showing access information and a Concurrency Report has been submitted with this application.*

(6) *Not injure neighboring land or property values*. The proposed special exception will not substantially injure the use of neighboring land for those uses that are permitted in the zone district or reduce land values.

***The Property Value Impact Study, submitted with this application,* demonstrates that a matched pair analysis (including 19 solar farms in Florida) shows no impact in home values due to abutting or adjoining a solar farm, as well as no impact to abutting or adjacent vacant residential or agricultural land.**

The study conclusion notes that criteria that would typically correlate with downward adjustments on property value, such as noise, odor, and traffic are not anticipated with the proposed use. In addition, the appraiser noted several positive benefits for neighboring landowners, including protection from future residential development or other more intrusive uses; reduced dust, odor, and chemicals from former farming operations; protection from light pollution at night; and minimal/nonexistent traffic.

During its operational years, the proposed solar collection and storage facility will have less of an impact than the permitted use. In addition, the project has a lifespan of approximately 20 to 40 years, after which time the site can be returned to pre-construction condition.

(7) *Drawings*. A site plan or preliminary plat has been prepared that demonstrates how the proposed special exception use complies with the other standards of this subsection.

A Site Plan has been submitted with this application. Coupled with the Site Plan, construction process, decommissioning plan, Landscape Plan, Fencing Plan, wildlife corridor narrative, sound study, environmental analysis, and geotechnical information, this Report addresses, in detail, how the proposed Special Exception adheres to the City of Alachua Comprehensive Plan and LDR requirements and standards. *LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001 are also included with the supporting documentation.*

(8) *Complies with all other relevant laws and ordinances*. The proposed special exception use complies with all other relevant City laws and ordinances, State and Federal laws, and regulations.

This Report addresses how the proposed Special Exception adheres to the City of Alachua Comprehensive Plan and all LDRs. As such, the application also complies with State and Federal laws and regulations.

Article 3 – ZONE DISTRICTS
Sec. 3.3 Agricultural district.
3.3.2 *Use regulations and development standards.* The following table 3.3-1 Use Regulations and Development Standards in the A District, indicates the location of standards in these LDRs related to allowable uses, density limitation, dimensional standards, development standards, and subdivision standards for the A district:

Table 3.3-1. Use Regulations and Development Standards in the A District	
Type of Standard	Location in these LDRs
Allowable uses	Table 4.1-1
Density/intensity/dimensional standards	Table 5.1-3 **[DOES NOT APPLY DUE TO TYPE OF DEVELOPMENT PROPOSED]**
Development standards	Article 6
Subdivision standards	Article 7 **[DOES NOT APPLY DUE TO TYPE OF DEVELOPMENT PROPOSED]**

Solar energy collection facilities are permitted in Agricultural zoning by Special Exception per LDR Table 4.1-1.

Sec. 3.4 Residential districts.
3.4.3 Use regulations and development standards. The following table 3.4-1 Use Regulations and Development Standards in the Residential Districts, indicates the location of standards in these LDRs related to allowable uses, density limitation, dimensional standards, development standards, and subdivision standards for the residential zone districts.

Table 3.4-1. Use Regulations and Development Standards in the Residential Districts	
Type of Standard	Location in these LDRs
Allowable uses	Table 4.1-1
Density/intensity/dimensional standards	Table 5.1-3 **[DOES NOT APPLY DUE TO TYPE OF DEVELOPMENT PROPOSED]**
Development standards	Article 6
Subdivision standards	Article 7 **[DOES NOT APPLY DUE TO TYPE OF DEVELOPMENT PROPOSED]**

Sec. 4.1. – Table of uses.
4.1.1 (C) *Special exception uses*. The letter “S” in a cell indicates that a use category or use type is allowed as a special exception in the respective zone district, subject to compliance with the use-specific standards

set forth in the final column of the table and approval of a special exception permit in accordance with the procedures and standards of Section 2.4.4, Special exception permit.

Table 4.4-1. Table of Allowed Uses		
P = Permitted use S = Special Exception permit A = Allowed in PD districts Blank cell = Prohibited		
Use Category/Use Type	Residential Single-Family RSF-4	Use Specific Standards (Sec. 4.3)
Utilities		
Utility, major	S	4.3.2(I)(3)

4.3.2 (I)(3) *Utility, major*. An electrical power facility, substation, or transmission station shall comply with the following standards:

(a) *Location*. Be within reasonable proximity of the area to be served by the facility.

There is a point of connection available directly north of the proposed solar field, approximately 1,900 LF from the site.

(b) *Setback*. Be set back a minimum of 100 feet from property lines and buffered to ensure it does not have an adverse impact on surrounding areas.

The project meets the 100' perimeter setback requirement for a major utility use, which is greater than what is currently permitted on the site (from 7.5' to 30' setbacks). Fencing is provided around the solar array. Landscape buffers are provided per the City of Alachua LDRs and per the LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.

The north, west, and southwest buffers are also provided by a 15' wide area of preserved existing vegetation. The northeast and east buffers are provided by a 15' landscape buffer, and the cemetery enclave is provided by a 10' buffer. The southern buffer is provided by a 5' buffer and the southern outcrop is provided by a 15' buffer.

(c) *Compatibility*. Provide adequate setbacks, screening and buffering around the perimeter of the proposed use if it is deemed necessary to ensure land use compatibility with surrounding uses.

A "major utility" requires a 100' setback from the property line to ensure the use does not have an adverse impact on surrounding uses. The proposed solar energy collection facility provides a 100' setback from the property line to the perimeter fence of the solar array (with exception of the cemetery which is addressed in LDR Administrator Interpretation #PDLR24-0009). This 100' setback far greater than the currently permitted residential use on the southern parcel, which would require the following setbacks: 20' front, 15' back, and 7.5' side. It is also greater than the currently permitted agricultural use on the northern parcel, which would require: 30' front, 25' back, and 25' side setbacks.

All landscape buffers are provided within the 100' setback from the property line around the project perimeter, defined by a fence around the solar array and a 25' fire break/maintenance path. The north, west, and southwest buffers are provided by a 15' wide area of preserved existing vegetation and proposed landscape plantings. The northeast and east buffers are provided by a 15' landscape buffer. A 15' buffer is provided around the southern boundary outcrop and a 5' buffer along the

remaining southern perimeter. There is a 10' wide landscape buffer surrounding the small, family cemetery plot that is internal to the southern parcel.

The internal graveyard enclave, with its ±2,100 sq. ft. family burial area, is internal to the site and within a one acre (1 ac) permanent buffer area. An additional 25' buffer is provided to effectuate a 100' setback from the graveyard itself.

A Site Plan, Landscape Plan, and Fencing Plan showing these setbacks and buffers has been submitted with this application, as well as LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.

6.2. – *Tree protection and landscaping standards.*

6.2.1.(D) *Tree planting, relocation, replacement, credit, banking.*
(1) *New trees.* New trees shall be installed to replace healthy regulated trees removed pursuant to this section. Regulated trees shall be replaced on a one-for-one basis. Healthy heritage and champion trees removed as provided herein shall be replaced on an inch-for-inch basis. Replacement trees shall be graded Florida No. 1 or better.

Trees removed from the site that are more than 30" DBH will be replaced on an inch-for-inch basis. Regulated trees over 8" DBH will be replaced on a tree-for-tree basis. New trees proposed for the perimeter buffers of the site are required to meet Florida No. 1 standards. A Landscape Plan showing these calculations in detail has been submitted with this application.

(2)(a) During development…protective barricades shall be placed to define a protective area around existing trees to remain. Barriers shall be placed around all regulated trees at a minimum of two-thirds of the area of the dripline of the tree or stand of trees or at six feet from the trunk of the tree whichever is greater.

Protective tree barricades are shown on the Site Plan and will be placed around preserved trees, per City of Alachua LDRs. Development plans show that over a thousand existing trees are scheduled to remain on site. Additional unregulated trees (less than 8" DBH) that are within groupings of preserved trees, will also remain.

(4) *Tree replacement*.

(a) When the applicant is required to replace a regulated or heritage tree as a condition of approval for a tree removal, site plan, or subdivision plat, the applicant shall select site appropriate trees if it is feasible, the regulated, heritage, or champion tree may be related on the same parcel of land. When selecting replacement trees from the recommended tree list, the applicant shall choose from a similar species of category as the tree that is being removed.
(b) …up to 25 percent of the trees required to meet the site landscaping, parking lot landscaping, or perimeter buffer standards may be counted towards the requirements of Subsection 6.2.1(D)(1).
(c) At least 50 percent of the total required replacement trees shall be shade trees and at least 75 percent of the total required trees shall be site-specific trees appropriate for the site.

Site appropriate tree species, including Live Oak, Magnolia, and Chickasaw Plum, have been selected for the proposed use. The "Site Landscape Calculations" table is shown on sheet LS-1 of the Landscape Plan set and includes the quantities of canopy and understory trees proposed for the site.

6.2.2 Landscaping standards.
(1) *Site landscaping.*
(c) *Business uses other than those types found in the Industrial Services, Manufacturing and Production, and Warehouse and Freight Movement Use Categories.*

The "Site Landscape Calculations" table is shown on sheet LS-1 of the Landscape Plan set, and includes the quantities of canopy and understory trees proposed for the site. Additional information on Site Landscape Calculations is demonstrated in the approved Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.

(3) Perimeter buffers.

Table 6.2-1. Perimeter Buffer Classifications			
Buffer Type and Configuration	Screening Requirement Within Buffer Yard		
	Option 1	Option 2	Option 3
A Basic This buffer area functions as a basic edge demarcating individual properties with a slight visual obstruction from the ground to a height of ten feet.	One canopy tree every 60 linear feet, plus one understory or ornamental tree per 60 linear feet.	One canopy tree every 60 linear feet, plus one hedge.	One four-foot high berm or fence.
D. Opaque This perimeter buffer functions as an opaque screen from the ground to a height of at least six feet. This type of buffer prevents visual contact between uses and creates a strong impression of total separation.	One canopy tree every 25 linear feet, one understory tree every 40 linear feet, plus one evergreen hedge	One canopy tree every 25 linear feet, one understory tree every 35 feet, plus one shrub hedge per five linear feet	One fence or wall, plus one canopy tree every 25 linear feet.

Table 6.2-2. Buffer Class Application											
Letter = Buffer type; Number = Required width in feet											
A = Type A; B = Type B; C = Type C; D = Type D; N = No buffer required											
Proposed Use		Adjacent Use									
		Residential Uses			Public and Institutional Uses			Commercial Uses			
		1	2	3	4	5	6	7	8	9	10
Residential uses											
6	Animal services, government facilities, health care facilities, public safety, transportation, **utilities**	**D 15**	C 15	B 15	D 10	B 7.5	A 7.5	B 7.5	A 7.5	A 5	**A 5**

The site plan provides 15' buffers of preserved existing trees on the north, west, and southwest areas of the perimeter. In addition, perimeter buffer requirements are met with a 15' Buffer Type D, Option 1, on the east, west, north, and southern outcrop. Along the southern perimeter, there is a 5' Buffer Type A, Option 2. Around the small family cemetery plot, there is a 10' Buffer Type D, which is further addressed in the approved Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.

Sec. 6.3 – Fencing standards.

6.3.1(A)(2) Time of compliance. A plan shall be submitted with an application for a site and development plan, subdivision, planned development, or building permit, whichever occurs first, for any development that is required to comply with the standards of this section, demonstrating how the development processes to comply.

See Fencing Plan, sheet FP-1 of the Site Plan set, for fence location, typical fence detail, and gate details. Fence location and buffers are also addressed in the LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.

6.3.3 *Height*. All fences and walls shall conform to the following standards. In all cases, heights are measured from natural grade.

(A) Residential districts. Fences and walls, including retaining walls, shall not exceed a height of 4 feet in front yards and eight feet in side or rear yards. Any fence installed in a front yard shall be no greater than 50 percent opacity (that is, shall obscure no more than 50 percent of the view into the property). If a fence is constructed on top of a retaining wall or other wall, the combined height of the fence and wall shall not exceed a maximum height of 16 feet.

This use is allowed by Special Exception per the Land Development Code. This major utility use must include a 7' high fence to meet the national safety security requirements of Rule 110.31 "Enclosure for Electrical Installations" of the National Electrical Code (NEC):

110.31 Enclosure for Electrical Installations
Electrical Installations in a vault, room, or closet or in an area surrounded by a wall, screen, or fence, access to which is controlled by a lock(s) or other approved means, shall be considered to be accessible to qualified persons only. The type of enclosure used in a given case shall be designed and constructed according to the nature and degree of the hazard(s) associated with the installation.

For installations other than equipment as described in 110.31(D), a wall, screen, or fence shall be used to enclose an outdoor electrical installation to deter access by persons who are not qualified. A fence shall not be less than 2.1 m (7 ft.) in height or a combination of 1.8 m (6 ft.) or more of fence fabric and a 300 mm (1 ft) or more extension utilizing three or more strands of barbed wire or equivalent.

6.3.4 *Perimeter fences abutting public rights-of-way.* For purposes of this subsection, the term "perimeter fences and walls" means any fence or wall that is 36 inches or more in height and within 50 feet of the edge of the right-of-way of an arterial or collector road. Development that abuts arterial or collector roads is not generally required to have perimeter fences and walls between the primary structures and the abutting arterial or collector road, except where such fences or walls are required to meet the screening requirements of Section 6.2. Where a landowner/developer chooses to install perimeter fences and walls, they shall comply with the following standards:

(A) General standards.
(4) *Materials.* Perimeter fences and walls visible from the public right-of-way shall consist of the following materials: wood, stone, brick, wrought iron, or products designed to resemble these

materials. Galvanized chain link is prohibited. Black or green vinyl coated/PVC coated chain link fences are permitted except when visible from an arterial or collector road.

(5) Maximum length of unbroken wall plane. The maximum length of unbroken perimeter wall plane shall be 200 feet. A break in the plane of a fence or wall may be achieved by a break in the length of the wall or fence that is at least two feet long (measured parallel to the street) and at least two feet wide (measured perpendicular to the street).

The property line is ± 30 feet from the right-of-way and the fencing around the solar array is located 100 feet from the property line. Therefore, the proposed fencing is not considered perimeter fencing, since it is not located within 50 feet of the right-of-way. Materials standards in Sec. 6.3.4 (A)(4) do not apply since the fencing is not considered perimeter fencing. The unbroken wall plane requirements in Sec. 6.3.4 (A)(5) do not apply since the fencing is not considered perimeter fencing.

6.3.5. Prohibited fences.

(B) Chainlink fences prohibited. Chainlink fences are prohibited except when not visible from public right-of-way; when located on any land with a residential zoning designation; when located on the site of a minor utility as described in Section 10.2 of these LDRs; or when used as customary fencing for a tennis court, ball field, or other recreational facility. Black or green vinyl coated/PVC coated chainlink fences are permitted except when visible from an arterial or collector road.

Per Sec. 6.3.5., The use of chain link fencing is prohibited except on land with residential zoning designation. This property is zoned RSF-4. In addition, the use of chain link fencing is prohibited except on the site of a minor utility. While this project is a major utility, the utility use remains the same.

"Black or green vinyl coated/PVC coated chain link fences *are permitted* except when visible from an arterial or collector road." The fencing selected for this solar energy collection facility is proposed to be located ± 130 feet from the right-of-way on CR 235A and Peggy Road (collector roads) and will be screened from visibility by a continuous shrub hedge and hundreds of required landscape buffer and site landscaping trees. Refer to the Landscape Plan, approved Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001, and the Landscape Viewshed Exhibit for additional detail.

The site perimeter is more than 18,600 linear feet. Fence material selection is important for security, cost, maintenance, and aesthetics of the project. Black vinyl-coated chain link fencing was selected to provide a perimeter boundary around the solar array with a neat, well-kept appearance for the lifespan of the project.

The proposed fence height and material will not have an adverse effect on the security, functioning, appearance, or value of adjacent properties or the surrounding area as a whole. In addition, this project has a lifespan of 20 to 40 years, and after that time the site can be returned to pre-construction condition.

Sec. 6.4. – Exterior lighting standards.

6.4.3 General standards.

(A) Hours of illumination. Lands on which public or institutional uses or business uses are located (see Table 4.1-1, Table of Allowed Uses) that are adjacent to residential development or vacant land in residential districts, shall turn off all lighting during nonoperating hours, except lighting that is necessary for security, safety, identification purposes. The public and institutional uses and business uses may activate on-site motion sensor devices for emergency purposes.

There will be no lighting internal to the site and no night-time illumination of the site. The facility will be remotely monitored for energy collection and storage and accessed for maintenance once or twice monthly during daylight hours. (Substation infrastructure typically requires the most extensive lighting, and that infrastructure is not part of this site plan application.)

(B) Direction of lighting.
(1) No light source directed outward. No light sources shall be directed outward toward property boundaries or adjacent rights-of-way.

There will be no daytime or night-time illumination of the site. (Substation infrastructure typically requires the most extensive lighting, and that infrastructure is not part of this site plan application.)

Sec. 6.5 – Signage.
6.5.2 Applicability.
(A) Sign permit required. It shall be unlawful for any person to post, display, erect, or structurally modify a sign or advertising structure in the City without first obtaining a sign permit in accordance with Section 2.4.11, Sign permit, unless a general sign permit is granted in accordance with Section 2.4.11(C), General sign permit granted.

(B) Compliance with ordinances and codes. In addition to the provisions of this section, signs or other advertising structures shall be constructed and maintained in accordance with… City, State and Federal ordinances and codes.

As shown on the Fencing Plan submitted with this application, there will be one Solar Identification Sign at the one gate access to the project site. In addition, there will be Solar Safety Signs located every 1,000 feet around the perimeter of the site. These signs will be permitted according to City of Alachua LDR standards, if required.

Sec.6.6. – Infill Standards
6.6.3 Residential Protection Standards

(A) General conditions. As a condition of the approval of any nonresidential development located within 500 feet of any residential district of adjacent to an existing residential single-family or two-family development, conditions may be imposed to reduce or minimize any potential adverse impacts on the residential land or development. Such conditions may include but are not limited to the following:

(1) *Hours of operation and deliveries*. Hours of operation and deliveries.

The facility will be unmanned and monitored remotely. There will be no hours of operation or deliveries. Site maintenance will be conducted once or twice a month.

(2) *Activities that generate potential adverse impacts.* Location on a site of activities that generate potential adverse impacts on adjacent uses such as noise or glare.

Solar panels are designed to absorb light, not reflect it. Bifacial modules collect light from both the front and back sides of the panels and have solar cells on both sides. Unlike monofacial panels, bifacial panels allow some light to pass through to be captured by the back panel. Anti-reflective materials are used on both sides of the panels to ensure that the maximum amount of light is absorbed. This project proposes single axis trackers which allow the panels to follow the path of

the sun, like sunflowers turning toward the angle of the light. This mechanism serves to collect and absorb a maximum amount of sunlight to yield the highest production.

Site sound levels are anticipated to be well below the limits typically required. *A Site Sound Study by Seibein Acoustic has been conducted, and the report is submitted with this application.*

(3) *Placement of trash receptacles*. Placement of trash receptacles.

There will be no trash receptacles on site.

(4) *Loading and delivery area*. Location of loading and delivery areas.

There will be no loading or delivery areas.

(5) *Lighting.* Lighting location, intensity, and hours of illumination.

There will be no lighting on site.

(6) *Placement of outdoor machines and activities*. Placement and illumination of outdoor vending machines, telephone, or similar outdoor services and activities.

There will be no outdoor vending machines, telephones, or other outdoor services and activities.

(7) *Additional landscaping and buffering to mitigate adverse impacts.* Additional landscaping and buffering to mitigate adverse impacts.

The site perimeter within the 100' setback will be heavily buffered with a combination of existing wooded areas and over one thousand proposed landscape trees and shrubs. *A Landscape Plan, showing existing trees to be preserved and all new landscaping proposed for the site, has been submitted with the application. Additional information on landscaping and buffers is provided in the LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.*

(8) *Height restrictions.* Height restrictions to preserve light and privacy and views of significant features from public property and rights-of-way.

The solar panels will be screened from view by the 7' high fence located ± 130 feet from the property line, heavy landscaping with proposed trees, and a continuous line of shrubs along the collector streets. A Landscape Plan and an exhibit showing the viewshed from CR 235A has been submitted with this application. *Additional information on landscaping and buffers is provided in the LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.*

(9) *Preservation of natural lighting and solar access.* Preservation of natural lighting and solar access.

The purpose of the solar collection facility is to preserve natural lighting and solar access.

(10) *Ventilation and control of odors and fumes*. Ventilation and control of odors and fumes.

There are no odors anticipated with this solar energy collection facility.

(11) *Paving and parking areas.* Paving to control dust.

Stabilized access roads of crushed lime rock or gravel will allow access to the solar arrays.

(12) *Placement or configuration of site design.* Placement or configuration of site design.

Site has been designed to make the best use of the natural topography of the site, minimizing grading and maintaining the existing sheet flow for stormwater. This solar energy project meets the "major utility" requirement for a 100' setback from perimeter property lines. The solar arrays will be entirely fenced and the perimeter of the site will be heavily landscaped for additional screening. *Additional information on landscaping and buffers is provided in the LDR Administrator Interpretation #PDLR24-0009 and Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.*

Sec. 6.7. – Open space standards.
6.7.3 General standards.
(A) Amounts of open space required. Development shall provide at least the minimum amounts of open space set-aside in the following Table 6.7-1, Open Space Set-Aside:

Table 6.7-1. Open Space Set-Aside	
Type of Land Use	Minimum Percent of Gross Site Area Designated as Open Space
Public and Institutional	10

(B) *Calculations*. For purposes of complying with this section:
(1) *Unique features.* Natural features (riparian areas, wetlands, native upland ecosystems, wildlife corridors, etc.) natural hazard areas, (floodplains, karst areas, etc.), water features (drainage canals, ditches, lakes, natural ponds, etc.), and wildlife habitat areas for threatened and endangered species shall be counted towards the open space set-aside.

(2) *Required landscaping and tree protection zones*. Areas occupied by required landscaping and tree protection zones shall be counted towards the open space set-aside.

(5) Stormwater management and similar systems. Land occupied by stormwater management systems, including retention and detention ponds, sand filters, and other retention devices shall be counted toward the open space set-aside.

The ±11% open space set-aside exceeds the 10% requirement. The area designated for open space incorporates the existing depressional areas, the existing stormwater retention area, and the required landscape perimeter buffers, designed per City of Alachua LDRs. A Site Plan and Landscape Plan showing these calculations has been submitted with this application.

6.7.4 Design standards. Land set aside as open space shall comply with the following standards:
(C) Prioritization of features for open space set-aside. To the maximum extent practicable, open space set-asides should be located and organized to include, protect, or enhance as many of the following features as possible:

(1) *Natural features.* Natural features such as wetlands, riparian areas, mature trees (six-inch caliper or greater), native upland ecosystems and wildlife corridors.

(2) *Water features.* Water features such as drainages, canals, ditches, lakes, natural ponds and retention and detention ponds.

(3) *Natural hazard areas.* Natural or geologic hazard areas or soil conditions, such as karst areas, other potentially unstable soils or floodplains.

(4) *Habitat for endangered or threatened species.* Habitat for threatened or endangered species listed, or proposed for listing, by either the Federal or State government.

(5) *Multiple compatible open space uses.* Areas that accommodate multiple compatible open space uses rather than a single use.

The ±11% open space set-aside exceeds the 10% requirement. The area designated for open space incorporates the existing depressional areas, the existing stormwater retention area, and existing areas of natural vegetation preserved in perimeter buffers. A Site Plan and Landscape Plan showing these calculations has been submitted with this application.

Sec. 6.9 Environmental protection standards.
(D) *Stormwater management standards.*
(2) *Natural drainage system.* To the extent practicable, all development shall conform to the natural contours of the land. In addition, natural and preexisting manmade drainageways shall remain undisturbed.

There will be minimal grading onsite. The natural topography of the property lends itself well to the development intent. The natural drainage pattern of the site will be maintained. *The geotechnical summary report by GSE has been submitted with this application. A site plan has been submitted with this application showing the wetland boundaries and buffers.*

Conclusion

Special exceptions are issued in the City of Alachua, Florida, for uses that are generally compatible with other uses in a zoning district; they require individual review of the location, design, configuration, density, intensity, and public facility impact, to determine the appropriateness and compatibility with adjacent uses. The design of the solar facility minimizes adverse impacts to the surrounding properties: no parking/loading will occur on the proposed solar facility, no odors are anticipated, non-glare/light-absorbing solar panels will be installed, and site sound levels are anticipated to be well below typically required limits.

This Special Exception minimizes environmental impacts and does not cause deterioration of natural resources: the natural drainage pattern will be maintained, no critical habitats are known to occur, and wetland/depressional areas are protected with setback requirements. Over one thousand (>1,000) existing regulated trees will be preserved, and more than one thousand (>1,000) new trees and shrubs will be planted. While the site is not considered a critical link to adjacent lands of ecological significance, ±40 acres surrounding the perimeter of the solar array will be accessible as a wildlife corridor.

The proposed solar energy collection and storage facility is consistent with the City of Alachua's Comprehensive Plan Future Land Use Element, Community Facilities Element, and Conservation and Open Space Element. Land uses surrounding the project are Agriculture and Industrial. The proposed use demonstrates consistency with surrounding uses by meeting minimum landscape buffer and setback requirements and by preserving open space, exceeding what is currently required under the existing Future Land Use designation. Proposed site landscaping and buffers are addressed in the approved Alternative Landscape Plan Determination #PSP23-0011 and PSE23-0001.

The proposed use is compatible with surrounding uses and is an appropriate use for the site. The existing land use and zoning of the larger parcel on the project site would currently allow an intensity and density much higher than a solar energy collection and storage facility. Property Value Impact Analysis demonstrates no impact to abutting or adjoining solar farms or vacant residential or agricultural land. This unmanned, remotely monitored, renewable energy project will have *de minimus* impacts on current traffic patterns, and no impacts on infrastructure, sanitary sewer, solid waste, or public schools.

Minimal earthwork/grading is needed, and the site will maintain its natural drainage pattern for stormwater. The facility will provide 100' setbacks from adjacent external surrounding property lines, as well as perimeter fencing around the solar array, and extensive buffer/site landscape plantings. The site can be returned to pre-construction condition at the end of the project lifespan, a minimum of 20 years, with an option up to 40 years.

A condition of approval is being requested to allow the necessary security fencing required by the National Electrical Code (NEC) around the solar array as outlined in this justification report. The applicant has also proposed a site-specific condition for a 25' buffer around the site's internal legacy graveyard's existing 1-acre buffer area. This has been approved in the LDR Administrator Interpretation #PDLR24-0009*.* Both conditions are in accordance with the enabling language in Sec. 2.4.4 (A).

The foregoing report and supporting documentation addresses, in detail, how the proposed solar energy collection and storage facility is consistent with the City of Alachua Comprehensive Plan and complies with use specific regulations for a "major utility" and the special exception standards per the City of Alachua Land Development Regulations. The proposed use is shown to be compatible with other uses in the area and meets the criteria for a Special Exception Permit.

RE: Pleasant Solar Project – Property Value Impact Study

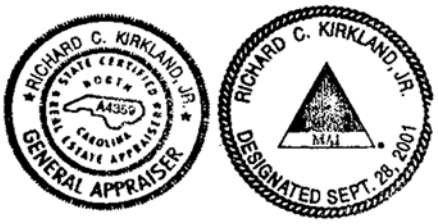
Mr. Cerrato

At your request, I have considered the impact of a solar farm proposed to be constructed on a portion of a 320-acre tract located off NW 138th Avenue, Alachua, Alachua County, Florida. Specifically, I have been asked to give my professional opinion on whether the proposed solar farm will have any impact on adjoining property value and whether "the location and character of the use, if developed according to the plan as submitted and approved, will be in harmony with the area in which it is to be located."

To form an opinion on these issues, I have researched and visited existing and proposed solar farms in Florida as well as other states, researched articles through the Appraisal Institute and other studies, and discussed the likely impact with other real estate professionals. I have not been asked to assign any value to any specific property.

This letter is a limited report of a real property appraisal consulting assignment and subject to the limiting conditions attached to this letter. My client is Solariant Capital, LLC, represented to me by Mr. Andrew Cerrato. My findings support the Application. The effective date of this consultation is June 18, 2022.

Conclusion



The matched pair analysis shows no impact in home values due to abutting or adjoining a solar farm as well as no impact to abutting or adjacent vacant residential or agricultural land. The criteria that typically correlates with downward adjustments on property values such as noise, odor, and traffic all indicate that a solar farm is a compatible use for rural/residential transition areas and that it would function in a harmonious manner with this area.

Very similar solar farms in very similar areas have been found by hundreds of towns and counties not to have a substantial injury to abutting or adjoining properties, and many of those findings of no impact have been upheld by appellate courts. Similar solar farms have been approved adjoining agricultural uses, schools, churches, and residential developments.

Based on the data and analysis in this report, it is my professional opinion that the solar farm proposed at the subject property will have no impact on the value of adjoining or abutting property and that the proposed use is in harmony with the area in which it is located. I note that some of the positive implications of a solar farm that have been expressed by people living next to solar farms include protection from future development of residential developments or other more intrusive uses, reduced dust, odor and chemicals from former farming operations, protection from light pollution at night, it's quiet, and there is minimal traffic.

If you have any further questions please call me any time.

Sincerely,

Richard C. Kirkland, Jr., MAI

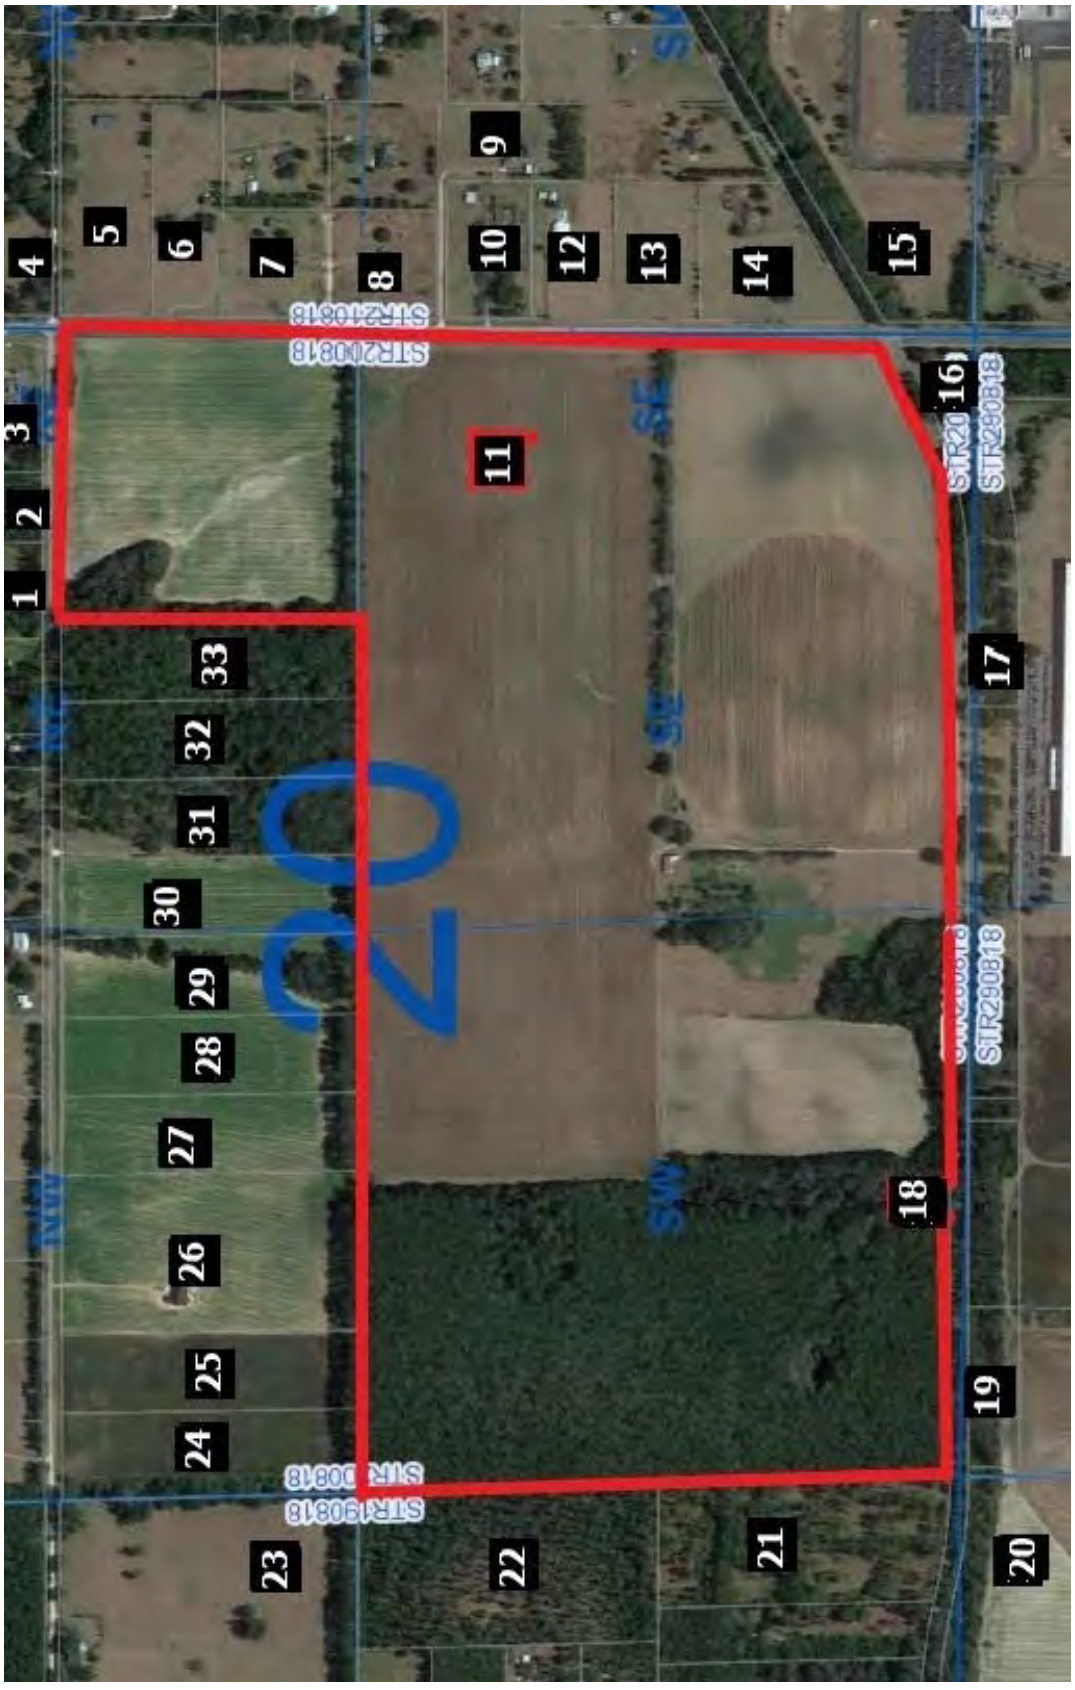
I. Proposed Project and Adjoining Uses

Proposed Use Description

This 74.9 MW solar farm proposed to be constructed on a portion of a 320-acre tract located off NW 138th Avenue, Alachua, Alachua County, Florida.

Adjoining Properties



I have considered adjoining uses and included a map to identify each parcel's location. The closest adjoining home will be at least 200 feet from the closest solar panel and the average distance to adjoining homes will be 700 feet to the nearest solar panel.

The breakdown of those uses by acreage and number of parcels is summarized below.

Adjoining Use Breakdown

	Acreage	**Parcels**
Residential	22.43%	72.73%
Substation	0.57%	3.03%
Agricultural	43.41%	9.09%
Industrial	28.46%	6.06%
Agri/Res	5.01%	6.06%
Cemetary	0.11%	3.03%
Total	**100.00%**	**100.00%**

II. Methodology and Discussion of Issues

Standards and Methodology

I conducted this analysis using the standards and practices established by the Appraisal Institute and that conform to the Uniform Standards of Professional Appraisal Practice. The analyses and methodologies contained in this report are accepted by all major lending institutions, and they are used in Florida and across the country as the industry standard by certified appraisers conducting appraisals, market analyses, or impact studies and are considered adequate to form an opinion of the impact of a land use on neighboring properties. These standards and practices have also been accepted by the courts at the trial and appellate levels and by federal courts throughout the country as adequate to reach conclusions about the likely impact a use will have on adjoining or abutting properties.

The aforementioned standards compare property uses in the same market and generally within the same calendar year so that fluctuating markets do not alter study results. Although these standards do not require a linear study that examines adjoining property values before and after a new use (e.g. a solar farm) is developed, some of these studies do in fact employ this type of analysis. Comparative studies, as used in this report, are considered an industry standard.

The type of analysis employed is a Matched Pair Analysis or Paired Sales Analysis. This methodology is outlined in **The Appraisal of Real Estate**, Twelfth Edition by the Appraisal Institute pages 438-439. It is further detailed in **Real Estate Damages**, Third Edition, pages 33-36 by Randall Bell PhD, MAI. Paired sales analysis is used to support adjustments in appraisal work for factors ranging from the impact of having a garage, golf course view, or additional bedrooms. It is an appropriate methodology for addressing the question of impact of an adjoining solar farm. The paired sales analysis is based on the theory that when two properties are in all other respects equivalent, a single difference can be measured to indicate the difference in price between them. Dr. Bell describes it as comparing a test area to control areas. In the example provided by Dr. Bell he shows five paired sales in the test area compared to 1 to 3 sales in the control areas to determine a difference. I have used 3 sales in the control areas in my analysis for each sale developed into a matched pair.

Determining what is an External Obsolescence

An external obsolescence is a use of property that, because of its characteristics, might have a negative impact on the value of adjacent or nearby properties because of identifiable impacts. Determining whether a use would be considered an external obsolescence requires a study that isolates that use, eliminates any other causing factors, and then studies the sales of nearby versus distant comparable properties. The presence of one or a combination of key factors does not mean the use will be an external obsolescence, but a combination of these factors tends to be present when market data reflects that a use is an external obsolescence.

External obsolescence is evaluated by appraisers based on several factors. These factors include but are not limited to:

1) Traffic. Solar Farms are not traffic generators.

2) Odor. Solar farms do not produce odor.

3) Noise. Solar farms generate no noise concerns and are silent at night.

4) Environmental. Solar farms do not produce toxic or hazardous waste. Grass is maintained underneath the panels so there is minimal impervious surface area.

5) Appearance/Viewshed. This is the one area that potentially applies to solar farms. However, solar farms are generally required to provide significant setbacks and landscaping buffers to address that concern. Furthermore, any consideration of appearance of viewshed impacts has to be considered in comparison with currently allowed uses on that site. For example if a residential subdivision is already an allowed use, the question becomes in what way does the appearance impact adjoining property owners above and beyond the appearance of that allowed subdivision or other similar allowed uses.

6) Other factors. I have observed and studied many solar farms and have never observed any characteristic about such facilities that prevents or impedes neighbors from fully using their homes or farms or businesses for the use intended.

Relative Solar Farm Sizes

Solar farms have been increasing in size in recent years. Much of the data collected is from existing, older solar farms of smaller size, but there are numerous examples of sales adjoining 75 to 80 MW facilities that show a similar trend as the smaller solar farms. This is understandable given that the primary concern relative to a solar farm is the appearance or view of the solar farm, which is typically addressed through setbacks and landscaping buffers. The relevance of data from smaller solar farms to larger solar farms is due to the primary question being one of appearance. If the solar farm is properly screened, then little of the solar farm would be seen from adjoining property regardless of how many acres are involved.

Larger solar farms are often set up in sections where any adjoining owner would only be able to see a small section of the project even if there were no landscaping screen. Once a landscaping screen is in place, the primary view is effectively the same whether adjoining a 5 MW, 20 MW or 100 MW facility.

I have split out the data for the matched pairs adjoining larger solar farms only to illustrate the similarities later in this report.

Steps Involved in the Analysis

The paired sales analysis employed in this report follows the following process:

1. Identify sales of property adjoining existing solar farms.
2. Compare those sales to similar property that does not adjoin an existing solar farm.
3. Confirmation of sales are noted in the analysis write ups.
4. Distances from the homes to panels are included as a measure of the setbacks.
5. Topographic differences across the solar farms themselves are likewise noted along with demographic data for comparing similar areas.

There are a number of Sale/Resale comparables included in the write ups, but most of the data shown is for sales of homes after a solar farm has been announced (where noted) or after a solar farm has been constructed.

III. Research on Solar Farms

A. Appraisal Market Studies

I have also considered a number of impact studies completed by other appraisers as detailed below.

CohnReznick – Property Value Impact Study: Adjacent Property Values Solar Impact Study: A Study of Eight Existing Solar Facilities

Patricia McGarr, MAI, CRE, FRICS, CRA and Andrew R. Lines, MAI with CohnReznick completed an impact study for a proposed solar farm in Cheboygan County, Michigan completed on June 10, 2020. I am familiar with this study as well as a number of similar such studies completed by CohnReznick. I have not included all of these studies but I submit this one as representative of those studies.

This study addresses impacts on value from eight different solar farms in Michigan, Minnesota, Indiana, Illinois, Virginia and North Carolina. These solar farms are 19.6 MW, 100 MW, 11.9 MW, 23 MW, 71 MW, 61 MW, 40 MW, and 19 MW for a range from 11.9 MW to 100 MW with an average of 31 MW and a median of 31.5 MW. They analyzed a total of 24 adjoining property sales in the Test Area and 81 comparable sales in the Control Area over a five-year period.

The conclusion of this study is that there is no evidence of any negative impact on adjoining property values based on sales prices, conditions of sales, overall marketability, potential for new development or rate of appreciation.

Christian P. Kaila & Associates – Property Impact Analysis – Proposed Solar Power Plant Guthrie Road, Stuarts Draft, Augusta County, Virginia

Christian P. Kaila, MAI, SRA and George J. Finley, MAI developed an impact study as referenced above dated June 16, 2020. This was for a proposed 83 MW facility on 886 acres.

Mr. Kaila interviewed appraisers who had conducted studies and reviewed university studies and discussed the comparable impacts of other development that was allowed in the area for a comparative analysis of other impacts that could impact viewshed based on existing allowed uses for the site. He also discussed in detail the various other impacts that could cause a negative impact and how solar farms do not have such characteristics.

Mr. Kaila also interviewed county planners and real estate assessors in eight different Virginia counties with none of the assessor's identifying any negative impacts observed for existing solar projects.

Mr. Kaila concludes on a finding of no impact on property values adjoining the indicated solar farm.

Fred Beck, MAI, CCIM – Impact Analysis in Lincoln County 2013

Mr. Fred Beck, MAI, CCIM completed an impact analysis in 2013 for a proposed solar farm that concluded on a negative impact on value. That report relied on a single cancelled contract for an adjoining parcel where the contracted buyers indicated that the solar farm was the reason for the cancellation. It also relied on the activities of an assessment impact that was applied in a nearby county.

Mr. Beck was interviewed as part of the Christian Kalia study noted above. From that I quote "Mr. Beck concluded on no effect on moderate priced homes, and only a 5% change in his limited research of higher priced homes. His one sale that fell through is hardly a reliable sample. It also was misleading on Mr. Beck's part to report the lower re-assessments since the primary cause of the

re-assesments were based on the County Official, who lived adjacent to the solar farm, appeal to the assessor for reductions with his own home." In that Clay County Case study the noted lack of lot sales after announcement of the solar farm also coincided with the recession in 2008/2009 and lack of lot sales effectively defined that area during that time.

I further note, that I was present at the hearing where Mr. Beck presented these findings and the predominance of his argument before the Lincoln County Board of Commissioner's was based on the one cancelled sale as well as a matched pair analysis of high-end homes adjoining a four-story call center. He hypothesized that a similar impact from that example could be compared to being adjacent solar farm without explaining the significant difference in view, setbacks, landscaping, traffic, light, and noise. Furthermore, Mr. Beck did have matched pairs adjoining a solar farm in his study that he put in the back of his report and then ignored as they showed no impact on property value.

Also noted in the Christian Kalia interview notes is a response from Mr. Beck indicating that in his opinion "the homes were higher priced homes and had full view of the solar farm." Based on a description of screening so that "the solar farm would not be in full view to adjoining property owners. Mr. Beck said in that case, he would not see any drop in property value."

NorthStar Appraisal Company – Impact Analysis for Nichomus Run Solar, Pilesgrove, NJ, September 16, 2020

Mr. William J. Sapio, MAI with NorthStar Appraisal Company considered a matched pair analysis for the potential impact on adjoining property values to this proposed 150 MW solar farm. Mr. Sapio considered sales activity in a subdivision known as Point of Woods in South Brunswick Township and identified two recent new homes that were constructed and sold adjoining a 13 MW solar farm and compared them to similar homes in that subdivision that did not adjoin the solar farm. These homes sold in the $1,290,450 to $1,336,613 price range and these homes were roughly 200 feet from the closest solar panel.

Based on this analysis, he concluded that the adjoining solar farm had no impact on adjoining property value.

MR Valuation Consulting, LLC – The Kuhl Farm Solar Development and The Fischer Farm Solar Development – June 7, 2012

Mr. Mark Pomykacaz, MAI MRICS with MR Valuation Consulting, LLC considered a matched pair analysis for sales near these solar farms. The sales data presented supported a finding of no impact on property value for nearby and adjoining homes and concludes that there is no impact on marketing time and no additional risk involved with owning, building, or selling properties next to the solar farms.

Mary McClinton Clay, MAI – McCracken County Solar Project Value Impact Report, July 10, 2021

Ms. Mary Clay, MAI reviewed a report by Kirkland Appraisals in this case and also provided a differing opinion of impact. She cites a number of other appraisal studies and interestingly finds fault with heavily researched opinions, while praising the results of poorly researched studies that found the opposing view.

Her analysis includes details from solar farms that show no impact on value, but she dismisses those.

She cites the University of Texas study noted later in this report, but she cites only isolated portions of that study to conclude the opposite of what that study specifically concludes.

She cites the University of Rhode Island study noted alter in this report, but specifically excludes the conclusion of that study that in rural areas they found no impact on property value.

She cites lot sales near Spotsylvania Solar without confirming the purchase prices with brokers as indicative of market impact and has made no attempt to compare lot prices that are contemporaneous. In her 5 lot sales that she identifies, all of the lot prices decline with time from 2015 through 2019. This includes the 3 lot sales prior to the approval of the solar farm. The decrease in lot values shown in this chart are more indicative of the trend in the market, than of any impact related to the solar farm. Otherwise, how does she explain the drop in price from 2015 to 2017 prior to the solar farm approval.

She considers data at McBride Place Solar Farm and does a sale/resale analysis based on Zillow Home Value Index, which is not a reliable indication for appreciation in the market. She then adjusted her initial sales prior to the solar farm over 7 years to determine what she believes the home should have appreciated by and then compares that to an actual sale. She has run no tests or any analysis to show that the appreciation rates she is using are consistent with the market but more importantly she has not attempted to confirm any of these sales with market participants. I have spoken with brokers active in the sales that she cites and they have all indicated that the solar farm was not a negative factor in marketing or selling those homes.

She has considered lot sales at Sunshine Farms in Grandy, NC. She indicates that the lots next to the solar farm are selling for less than lots not near the solar farm, but she is actually using lot sales next to the solar farm prior to the solar farm being approved. She also ignores recent home sales adjoining this solar farm after it was built that show no impact on property value.

She also notes a couple of situations where solar developers have purchased adjoining homes and resold them or where a neighbor agreement was paid as proof of a negative impact on property value. Given that there are over 2,500 solar farms in the USA as of 2018 according to the U.S. Energy Information Administration and there are only a handful of such examples, this is clearly not an industry standard but a business decision. Furthermore, solar developers are not in the business of flipping homes and are in a position very similar to a bank that acquires a home as OREO (Other Real Estate Owned), where homes are frequently sold at discounted prices, not because of any drop in value, but because they are not a typically motivated seller. Market value requires an analysis of a typically motivated buyer and seller. So these are not good indicators of market value impacts.

The comments throughout this study are heavy in adjectives, avoids stating facts contrary to the conclusion and shows a strong selection bias.

Conclusion of Impact Studies

Of the five studies noted two included actual sales data to derive an opinion of no impact on value. The two studies to conclude on a negative impact includes the Fred Beck study based on no actual sales data, and he has since indicated that with landscaping screens he would not conclude on a negative impact. The other study by Mary Clay shows improper adjustments for time, a lack of confirmation of sales comparables, and exclusion of data that does not support her position.

I have relied on these studies as additional support for the findings in this impact analysis.

B. Articles

I have also considered a number of articles on this subject as well as conclusions and analysis as noted below.

Farm Journal Guest Editor, March 22, 2021 – Solar's Impact on Rural Property Values

Andy Ames, ASFMRA (American Society of Farm Managers and Rural Appraisers) published this article that includes a discussion of his survey of appraisers and studies on the question of property value related to solar farms. He discusses the university studies that I have cited as well as Patricia McGarr, MAI.

He also discusses the findings of Donald A. Fisher, ARA, who served six years at the Chair of the ASFMRA's National Appraisal Review Committee. He is also the Executive Vice President of the CNY Pomeroy Appraiser and has conducted several market studies on solar farms and property impact. He is quoted in the article as saying, "Most of the locations were in either suburban or rural areas, and all of those studies found either a neutral impact, or ironically, a positive impact, where values on properties after installation of solar farms went up higher than time trends."

Howard Halderman, AFM, President and CEO of Halderman Real Estate and Farm Management attended the ASFMRA solar talk hosted by the Indiana Chapter of the ASFMRA and he concludes that other rural properties would likely see no impact and farmers and landowners shown even consider possible benefits. "In some cases, farmers who rent land to a solar company will insure the viability of their farming operation for a longer time period. This makes them better long-term tenants or land buyers so one can argue that higher rents and land values will follow due to the positive impact the solar leases offer."

National Renewable Energy Laboratory – Top Five Large-Scale Solar Myths, February 3, 2016

Megan Day reports form NREL regarding a number of concerns neighbors often express. Myth #4 regarding property value impacts addresses specifically the numerous studies on wind farms that show no impact on property value and that solar farms have a significantly reduced visual impact from wind farms. She highlights that the appearance can be addressed through mitigation measures to reduce visual impacts of solar farms through vegetative screening. Such mitigations are not available to wind farms given the height of the windmills and again, those studies show no impact on value adjoining wind farms.

North Carolina State University: NC Clean Energy Technology Center White Paper: Balancing Agricultural Productivity with Ground-Based Solar Photovoltaic (PV) Development (Version 2), May 2019

Tommy Cleveland and David Sarkisian wrote a white paper for NCSU NC Clean Energy Technology Center regarding the potential impacts to agricultural productivity from a solar farm use. I have interviewed Tommy Cleveland on numerous occasions and I have also heard him speak on these issues at length as well. He addresses many of the common questions regarding how solar farms work and a detailed explanation of how solar farms do not cause significant impacts on the soils, erosion and other such concerns. This is a heavily researched paper with the references included.

North Carolina State University: NC Clean Energy Technology Center White Paper: Health and Safety Impacts of Solar Photovoltaics, May 2017

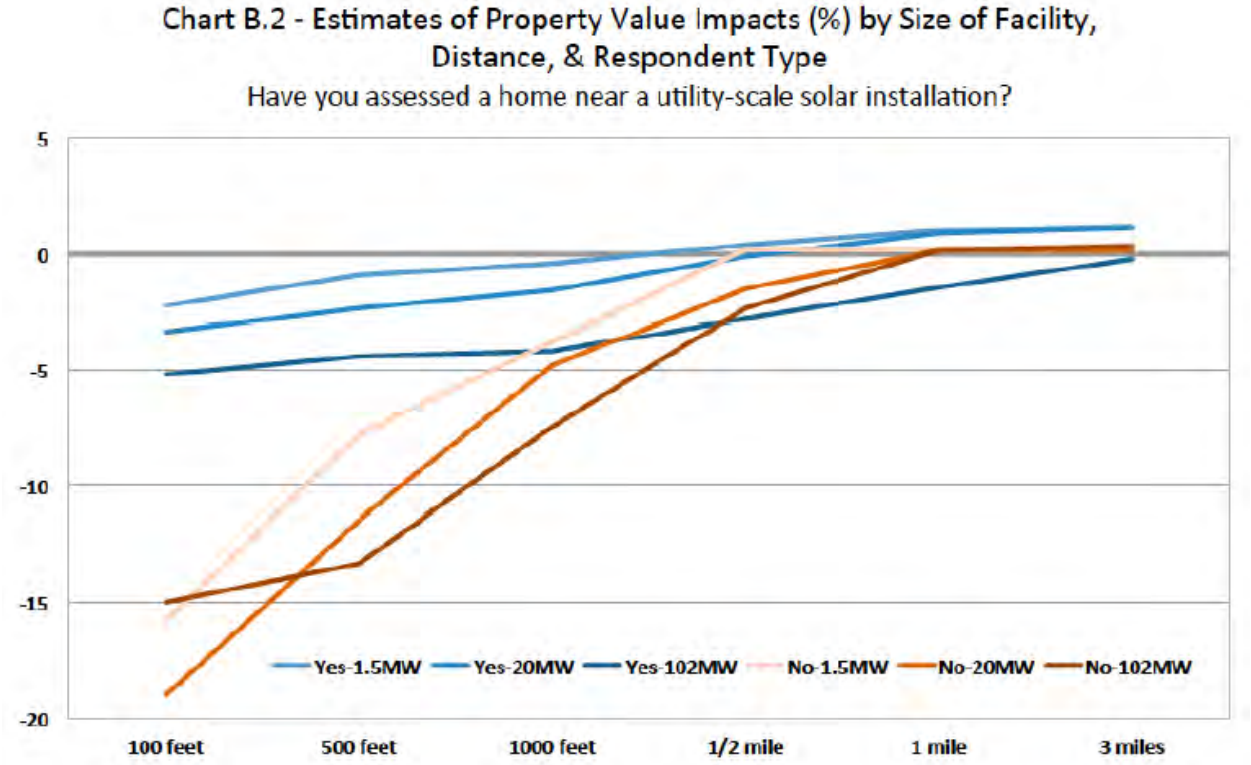
Tommy Cleveland wrote a white paper for NCSU NC Clean Energy Technology Center regarding the health and safety impacts to address common questions and concerns related to solar farms. This is a heavily researched white paper addressing questions ranging from EMFs, fire safety, as well as vegetation control and the breakdown of how a solar farm works.

C. Broker Commentary

In the process of working up the matched pairs used later in this report, I have collected comments from brokers who have actually sold homes adjoining solar farms indicating that the solar farm had no impact on the marketing, timing, or sales price for the adjoining homes. I have included comments from brokers within this report where they discussed specific solar projects including brokers from Kentucky, Virginia, Tennessee, and North Carolina.

IV. University Studies

I have also considered the following studies completed by four different universities related to solar farms and impacts on property values.



A. University of Texas at Austin, May 2018

An Exploration of Property-Value Impacts Near Utility-Scale Solar Installations

This study considers solar farms from two angles. First it looks at where solar farms are being located and concludes that they are being located primarily in low density residential areas where there are fewer homes than in urban or suburban areas.

The second part is more applicable in that they conducted a survey of appraisers/assessors on their opinions of the possible impacts of proximity to a solar farm. They consider the question in terms of size of the adjoining solar farm and how close the adjoining home is to the solar farm. I am very familiar with this part of the study as I was interviewed by the researchers multiple times as they were developing this. One very important question that they ask within the survey is very illustrative. They asked if the appraiser being surveyed had ever appraised a property next to a solar farm. There is a very noticeable divide in the answers provided by appraisers who have experience appraising property next to a solar farm versus appraisers who self-identify as having no experience or knowledge related to that use.

On Page 16 of that study they have a chart showing the responses from appraisers related to proximity to a facility and size of the facility, but they separate the answers as shown below with appraisers with experience in appraising properties next to a solar farm shown in blue and those inexperienced shown in brown. Even within 100 feet of a 102 MW facility the response from experienced appraisers were -5% at most on impact. While inexperienced appraisers came up with significantly higher impacts. This chart clearly shows that an uninformed response widely diverges from the sales data available on this subject.

Furthermore, the question cited above does not consider any mitigating factors such as landscaping buffers or screens which would presumably reduce the minor impacts noted by experienced appraisers on this subject.

The conclusion of the researchers is shown on Page 23 indicated that "Results from our survey of residential home assessors show that the majority of respondents believe that proximity to a solar installation has either no impact or a positive impact on home values."

This analysis supports the conclusion of this report that the data supports no impact on adjoining property values.

B. University of Rhode Island, September 2020

Property Value Impacts of Commercial-Scale Solar Energy in Massachusetts and Rhode Island

The University of Rhode Island published a study entitled **Property Value Impacts of Commercial-Scale Solar Energy in Massachusetts and Rhode Island** on September 29, 2020 with lead researchers being Vasundhara Gaur and Corey Lang. I have read that study and interviewed Mr. Corey Lang related to that study. This study is often cited by opponents of solar farms but the findings of that study have some very specific caveats according to the report itself as well as Mr. Lang from the interview.

While that study does state in the Abstract that they found depreciation of homes within 1-mile of a solar farm, that impact is limited to non-rural locations. On Pages 16-18 of that study under Section 5.3 Heterogeneity in treatment effect they indicate that the impact that they found was limited to non-rural locations with the impact in rural locations effectively being zero. For the study they defined "rural" as a municipality/township with less than 850 population per square mile.

They further tested the robustness of that finding and even in areas up to 2,000 population per square mile they found no statistically significant data to suggest a negative impact. They have not specifically defined a point at which they found negative impacts to begin, as the sensitivity study stopped checking at the 2,000-population dataset.

Where they did find negative impacts was in high population density areas that was largely a factor of running the study in Massachusetts and Rhode Island which the study specifically cites as being the 2nd and 3rd most population dense states in the USA. Mr. Lang in conversation as well as in recorded presentations has indicated that the impact in these heavily populated areas may reflect a loss in value due to the scarce greenery in those areas and not specifically related to the solar farm itself. In other words, any development of that site might have a similar impact on property value.

Based on this study I have checked the population for the High Springs-Alachua CCD of Alachua County, which has a population of 43,105 population for 2021 based on HomeTownLocator.com and a total area of 222.19 square miles. This indicates a population density of 194 people per square mile which puts this well below the threshold indicated by the Rhode Island Study.

I therefore conclude that the Rhode Island Study supports a finding of no impact on adjoining properties for the proposed solar farm.

High Springs-Alachua CCD Data & Demographics (As of July 1, 2021)

POPULATION	
Total Population	43,105 (100%)
Population in Households	43,056 (99.9%)
Population in Families	34,496 (80.0%)
Population in Group Quarters[1]	49 (0.1%)
Population Density	194
Diversity Index[2]	50

HOUSING	
Total HU (Housing Units)	19,636 (100%)
Owner Occupied HU	13,788 (70.2%)
Renter Occupied HU	4,228 (21.5%)
Vacant Housing Units	1,620 (8.3%)
Median Home Value	$254,563
Average Home Value	$294,225
Housing Affordability Index[3]	130

INCOME	
Median Household Income	$62,082
Average Household Income	$85,576
% of Income for Mortgage[4]	17%
Per Capita Income	$35,769
Wealth Index[5]	101

HOUSEHOLDS	
Total Households	18,016
Average Household Size	2.39
Family Households	11,812
Average Family Size	3

C. Georgia Institute of Technology, October 2020

Utility-Scale Solar Farms and Agricultural Land Values

This study was completed by Nino Abashidze as Post-Doctoral Research Associate of Health Economics and Analytics Labe (HEAL), School of Economics, Georgia Institute of Technology. This research was started at North Carolina State University and analyzes properties near 451 utility-scale ground-mount solar installations in NC that generate at least 1 MW of electric power. A total of 1,676 land sales within 5-miles of solar farms were considered in the analysis.

This analysis concludes on Page 21 of the study "Although there are no direct effects of solar farms on nearby agricultural land values, we do find evidence that suggests construction of a solar farm may create a small, positive, option -value for land owners that is capitalized into land prices. Specifically, after construction of a nearby solar farm, we find that agricultural land that is also located near transmission infrastructure may increase modestly in value."

This study supports a finding of no impact on adjoining agricultural property values and in some cases could support a modest increase in value.

D. Master's Thesis: ECU by Zachary Dickerson July 2018

A Solar Farm in *My* Backyard? Resident Perspectives of Utility-Scale Solar in Eastern North Carolina

This study was completed as part of a Master of Science in Geography Master's Thesis by Zachary Dickerson in July 2018. This study sets out to address three questions:

1. Are there different aspects that affect resident satisfaction regarding solar farms?

2. Are there variations in satisfaction for residents among different geographic settings, e.g. neighborhoods adjacent to the solar farms or distances from the solar farms?

3. How can insight from both the utility and planning sectors, combined with knowledge gained from residents, fill gaps in communication and policy writing in regard to solar farms?

This was done through survey and interview with adjacent and nearby neighbors of existing solar farms. The positive to neutral comments regarding the solar farms were significantly higher than negative. The researcher specifically indicates on Page 46 "The results show that respondents generally do not believe the solar farms pose a threat to their property values."

The most negative comments regarding the solar farms were about the lack of information about the approval process and the solar farm project prior to construction.

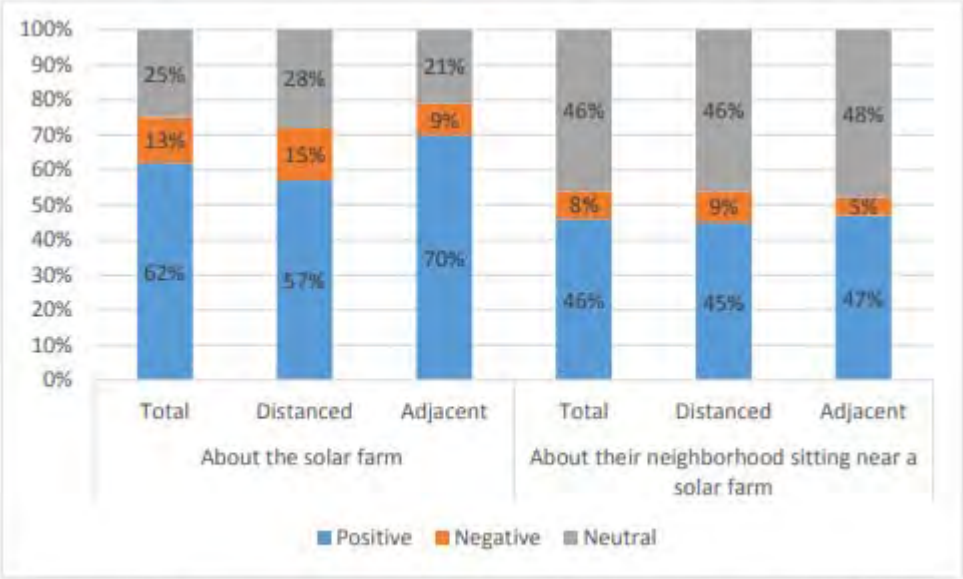


Figure 11: Residents' positive/negative word choices by geographic setting for both questions

V. Assessor Surveys

I have attempted to contact all of the assessor departments in North Carolina to determine how local assessors are handling solar farms and adjoining property values. I have spoken personally with a number of assessors, but much of this data was obtained via email. I have 39 counties in NC that have both responded to these questions on property value and also have solar farms in that county. I have excluded responses from assessors from counties where there are no current solar farms.

As can be seen in the chart below, of the 39 responses all of the responses have indicated that they make no adjustment to properties adjoining solar farms. Several assessors indicated that it would require an adjoining property owner to appeal their property value with data showing a negative impact before they would make any adjustment and to date they have not had that happen.

I also point out specifically Clay County. I spoke with the assessor there specifically about adjustments that were applied to some properties near a solar farm back in 2008. She was unaware of the details of that event as she was not in this position at that time. As discussed earlier in this report the lower re-assessments at that solar farm were based on a County Official, who owned property adjacent to the solar farm, who made an appeal to the assessor for reductions for his own property. The noted lack of lot sales after announcement of the solar farm however coincided with the recession in 2008/2009 and lack of lot sales effectively defined that area during that time, but without relying on any data the assessor made that change in that time frame based on conversations with the assessor. Since then, Clay County has confirmed that they do not currently make any changes to adjoining property values and the current county assessor was not even aware that they had in the past done so.

NC Assessor Survey on Solar Farm Property Value Impacts

County	Assessor's Name	Number of Farms	Change in Adjacent Property Value
Alexander	Doug Fox	3	No
Buncombe	Lisa Kirbo	1	No
Burke	Daniel Isenhour	3, 2 on 1 parcel, 1 on 3 parcels	No
Cabarrus	Justin	less than 10, more in the works	No
Caldwell	Monty Woods	3 small	No, but will look at data in 2025
Catawba	Lori Ray	14	No
Chatham	Jenny Williams	13	No
Cherokee	Kathy Killian	9	No
Chowan	Melissa Radke	3, I almost operational	No

Negative Impact on Adjoining Value = Yes: 0
Negative Impact on Adjoining Value = No: 39

I have also been working on a survey of Virginia Assessors regarding property values related to solar farms and whether or not the local assessors have found any data to support any changes to value on property adjoining solar farms. In this process I have contacted every assessor's office by email and I have received responses by email and by phone from a number of these counties. Many of the counties in Virginia rely on outside firms to assist in gathering data for the assessments and where that is the case, we have contacted the outside firms regarding the question of whether or not the assessors are currently making any adjustments to properties adjoining solar farms.

I currently have response from 16 counties that have solar farms in them and of those 16 responses none of the assessors are currently applying a negative impact on property value. One response suggested that adjoining values may go up.

I did speak with Randy Willis with Pearson Assessors. His company assists in the assessments in many of the counties south of Richmond. He indicated that they had found no data to suggest a negative impact on property value and they have looked as they were concerned about that issue. He indicated that they would make no negative impact adjustments and that he recognizes that

there are a number of agricultural adjoining uses that have a greater impact on adjoining properties in terms of noise, dust and odor than a solar farm would have. He did indicate that there could be situations where an individual home might have a greater visual impact and those should be looked at on a case-by-case basis, but he also agreed that many allowed agricultural uses could have similar visual impacts on such properties as well.

VIRGINIA Commissioner of the Revenue

County	Assessor Name	Number of Farms in Operation	Change in adjacent property value
Appomattox	Sara Henderson	1, plus one in process	No
Augusta	W. Jean Shrewsbury	no operational	No
Buckingham	Stephanie D. Love	1	No
Charlotte	Naisha Pridgen Carter	1, several others in the works	No
Clarke	Donna Peake	1	No
Frederick	Seth T. Thatcher	none, 2 appoved for 2022	No, assuming compatible with rural area
Goochland	Mary Ann Davis		No
Hanover	Ed Burnett	1	No

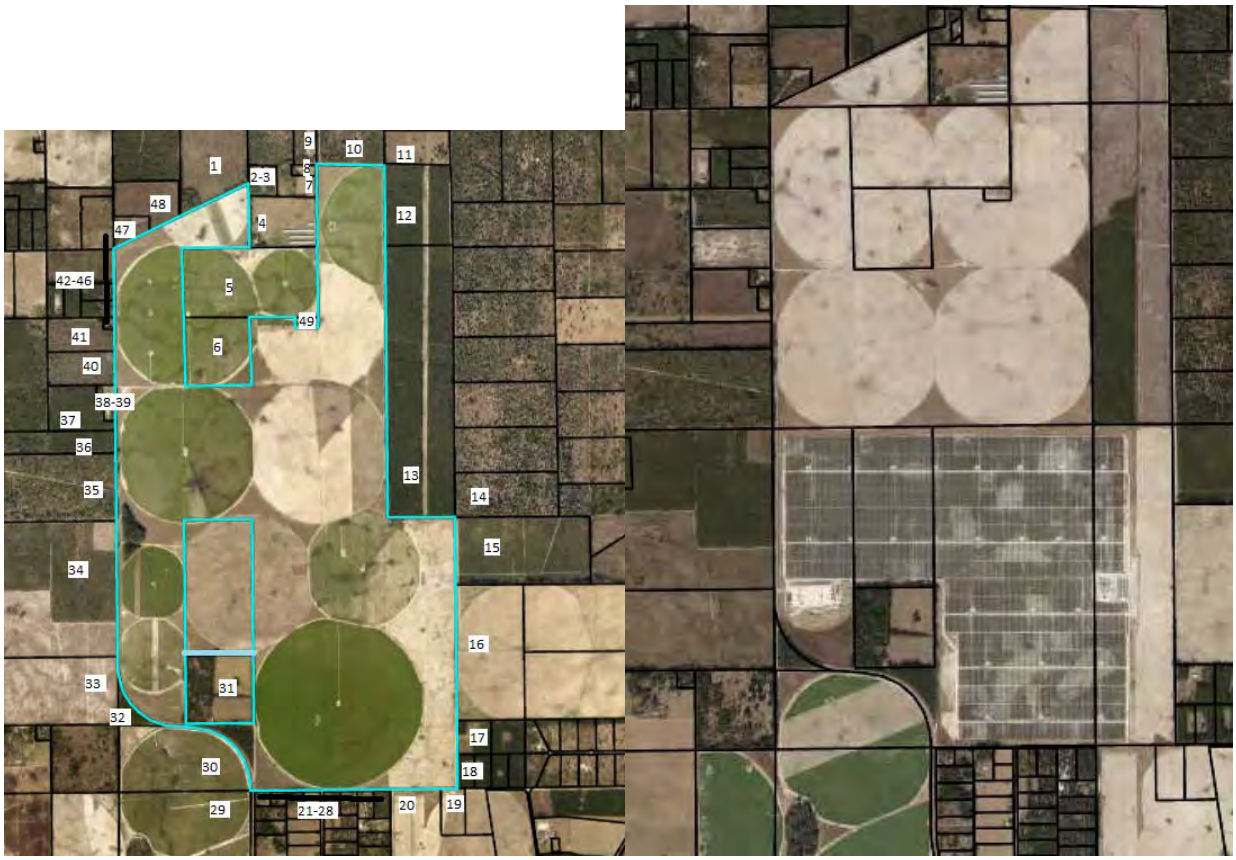
VI. Summary of Solar Projects In and Around Florida

I have researched the solar projects in Florida. I identified the solar farms through the Solar Energy Industries Association (SEIA) Major Projects List and then excluded the roof mounted facilities. I focused on larger solar farms over 10 MW though I have included a couple of smaller solar farms as shown in the chart below



I was able to identify and research 19 existing solar farms in Florida as shown below. These are primarily in the 74.5 MW size with adjoining homes as close as 67 feet and the mix of adjoining uses is primarily agricultural and residential.

#	State	County	City	Name	Output (MW)	Total Acres	Used Acres	Avg. Dist to home	Closest Home	Adjoining Use by Acre			
										Res	Agri	Agri/Res	Com
319	FL	Hamilton	Jasper	Hamilton	74.9	1268.9	537	3,596	240	5%	67%	28%	0%
320	FL	Suwannee	Falmouth	Suwannee		165.5	83.95			14%	69%	17%	0%

On the following pages I have included summary data on the Florida solar farms indicated above. Similar information is available for the larger set of solar farms in the adjoining states in my files if requested.

The number before each solar farm is the Kirkland Appraisal's File Number for solar farms. For example, 319 indicates that this is the 319th solar farm that I have looked at and this numbering system includes all states where I have done such research.

319. Hamilton Solar, Jasper, Hamilton County

This project is located on 537 acres out of a 1,268.89-acre parent tract for a 74.9 MW facility. The closest adjoining home is 240 feet away and all of the adjoining uses are agricultural and residential. The project was built in 2018.

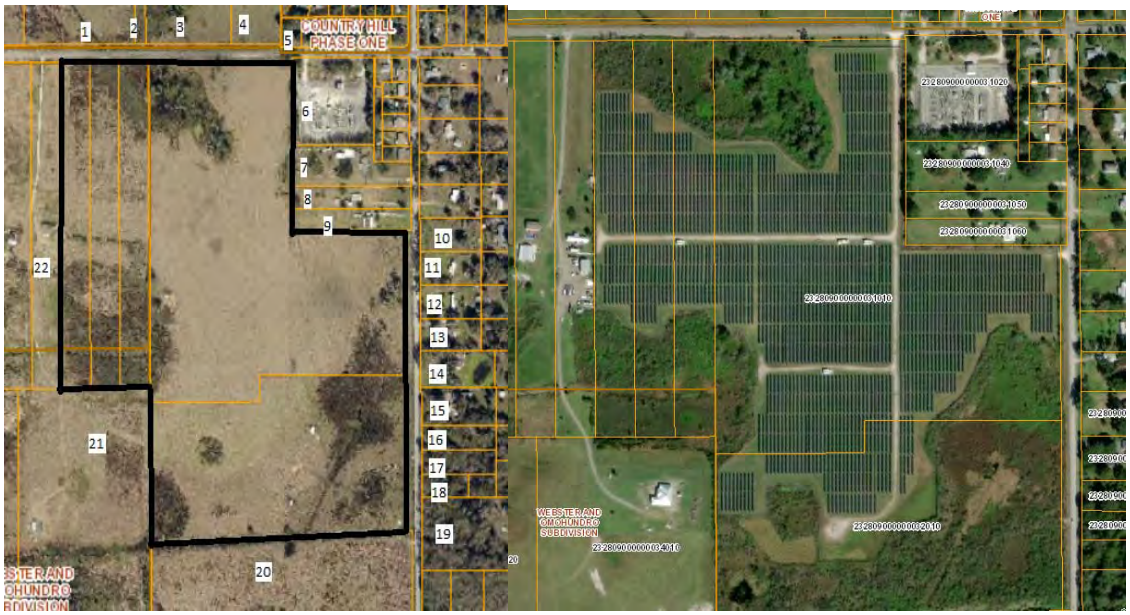
320. Suwanee Solar Farm, Falmouth, Suwannee County

This project is located on 83.95 acres out of a parent tract of 165.50 acres located on River Road, Falmouth, Florida. The adjoining uses are entirely agricultural and residential. This was built in 2017.

321. Osceola Solar Farm, St. Cloud, Osceola County

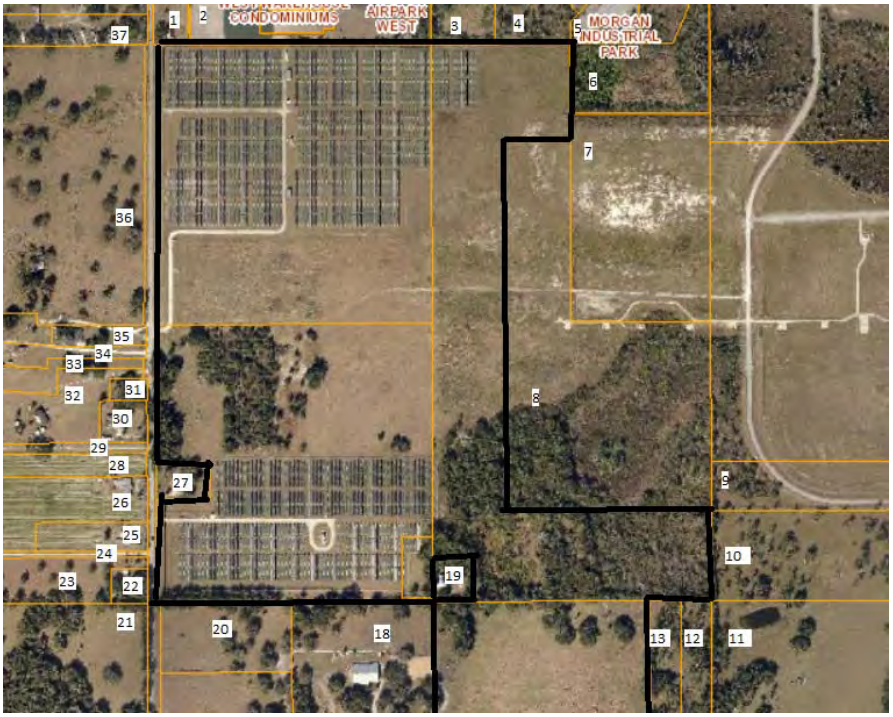
This project is located on 25.10 acres on Bar 7 Ranch Road south of St. Cloud, Florida. The adjoining uses are entirely agricultural.

322. Perry Solar Farm, Perry, Taylor County



This project is located on 55.63 acres on Howard Street, Perry, Florida. The adjoining uses are agricultural, residential, a cemetery, and a school. Of note there are two homes within 100 feet of the solar panels at this site.

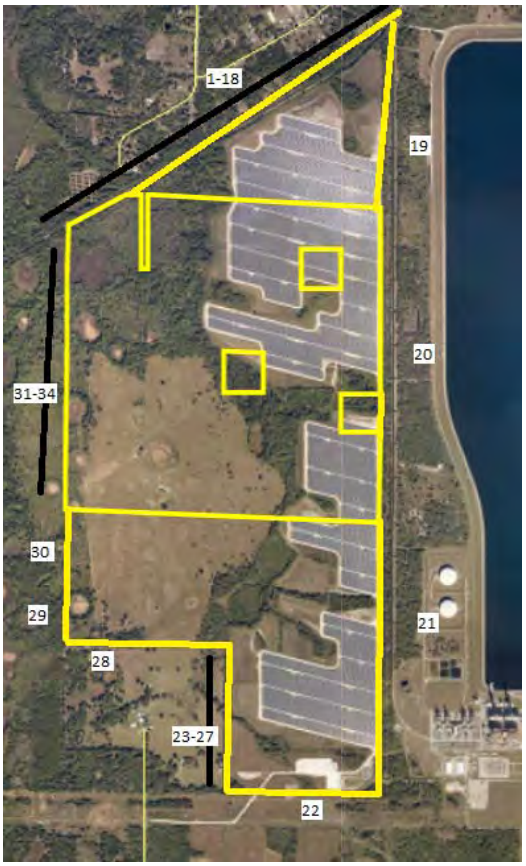
323. Jacksonville Solar Farm, Jacksonville, Duval County



This project is located on 441.67 acres on US 301 N, Jacksonville, Florida. The adjoining uses are agricultural, residential and a substation.

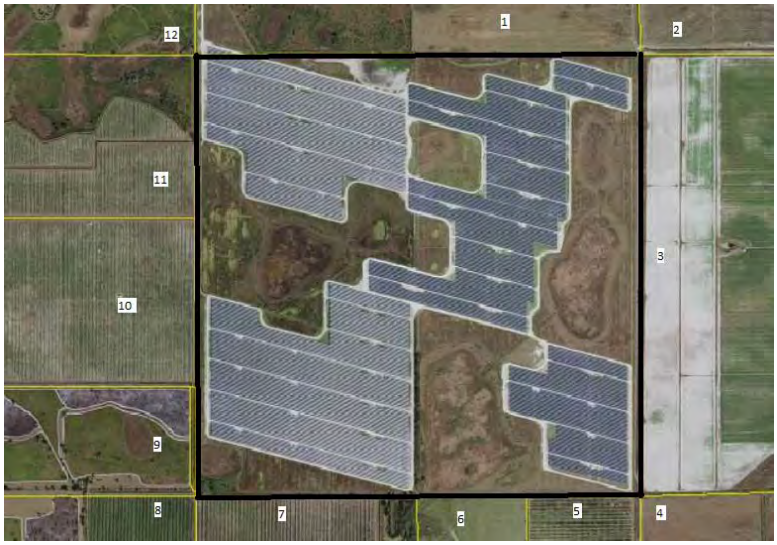
334. LKL BLBD Solar Farm, Lakeland, Polk County

This project is located on a 68.64-acre tract on Bella Vista Street, Lakeland, Florida. Adjoining uses are residential, agricultural and a substation. The closest home to panel that I measured at this location is 70 feet.



335. Polk Electric Solar Farm, Lakeland, Polk County

This solar farm is located on a 143.03 acre tract on Hamilton Road, Lakeland, Florida. An airport is located to the east, an industrial park is to the north east and most of the rest of the land is

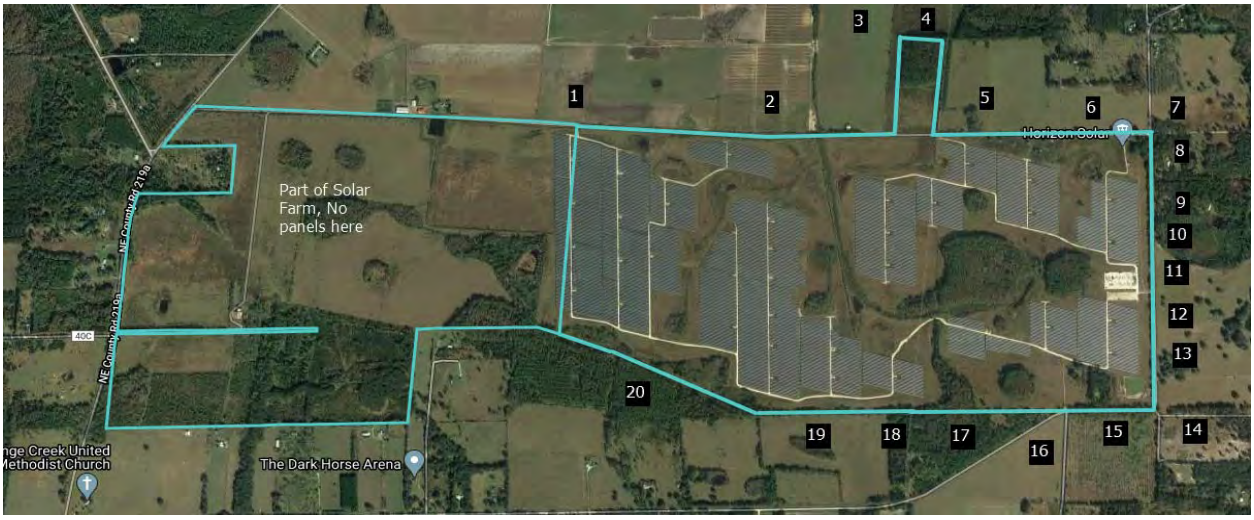


residential and agricultural. This write up shows the boundary of Lakeland 1, 2 and 3, three separate solar farms for a combined output around 11 MW.

336. Manatee Solar Farm, Parrish, Manatee County

This project is located on a 1,280.38-acre tract located near Seminole Trail, Parrish, Florida. Adjoining uses are primarily agricultural and residential. The closest home is 625 feet away.

337. Citrus Solar Farm, Arcadia, DeSoto County



This project is located on a 640-acre tract near NE McIntyre Street, Arcadia, Florida. The adjoining uses are entirely agricultural.

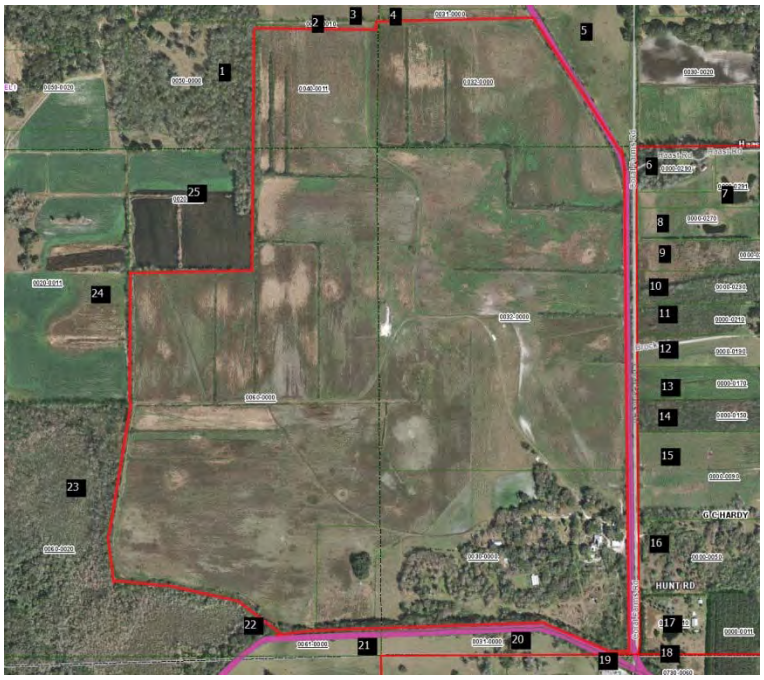
338. Babcock Ranch Solar Farm, Port Charlotte, Charlotte County

This project is located on a 442.61-acre tract located at 8500 SR 31, SE of Port Charlotte, Florida. The adjoining uses are entirely agricultural.

441. Horizon Solar, Hawthorne, Alachua & Putnam County

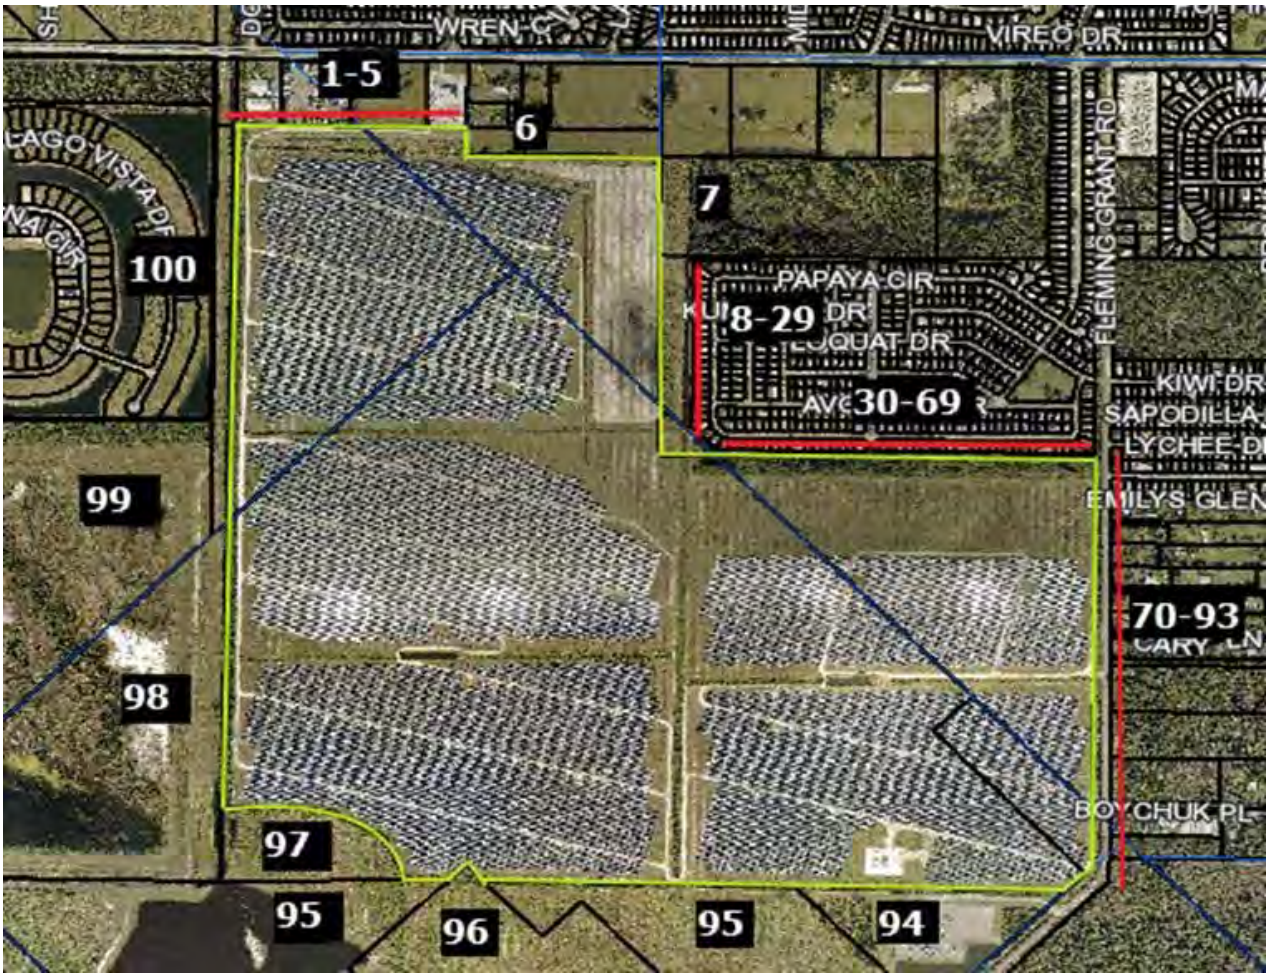
This project is located on a 684-acre tract for a 74.5 MW facility. All adjoining uses are agricultural and residential. This project was built in 2018. The closest adjoining home is 460 feet away.

667. Pioneer Trail Solar, New Smyrna Beach, Volusia County



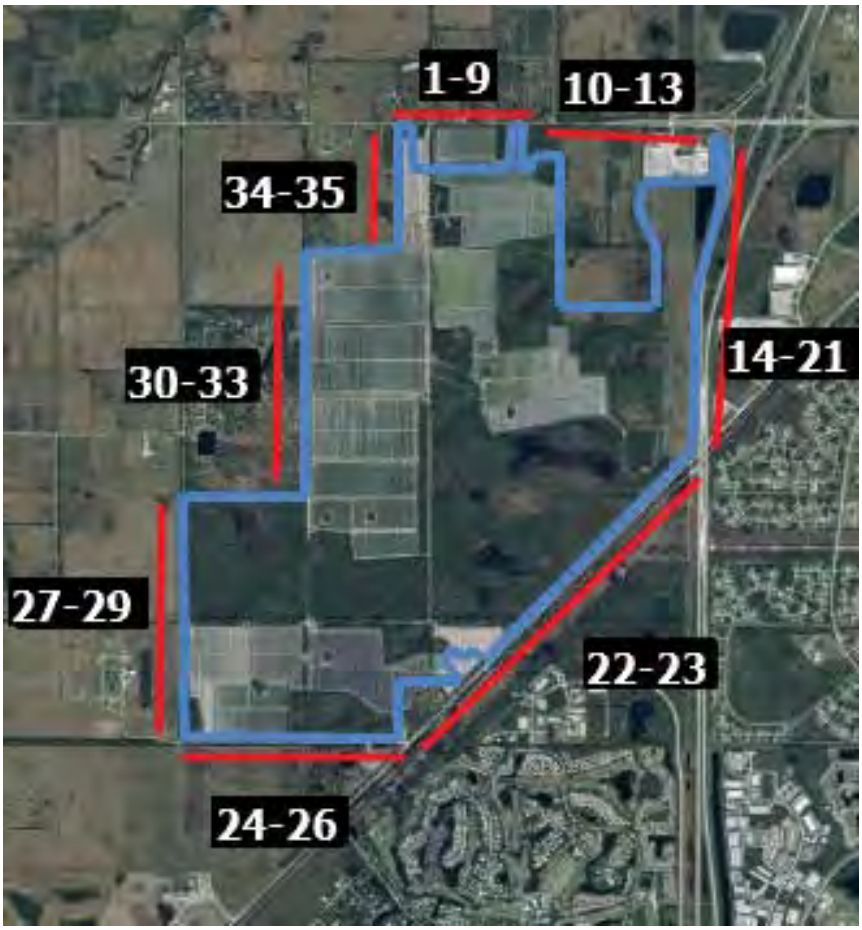
This project is located on approximately 900 acres out of a 1,202.80-acre tract for a 74.5 MW facility. All adjoining uses are agricultural and residential. This project was built in 2019. The closest home is 225 feet from the nearest panel.

668. Sunshine Gateway Solar, Lake City, Columbia County



This project is located on 472 acres out of a 904.29-acre tract for a 74.5 MW facility. All adjoining uses are agricultural and residential. This project was built in 2019.

669. Coral Farms Solar, Florahome, Putnam County



This project is located on 580 acres out of a 666.54-acre tract for a 74.5 MW facility. All adjoining uses are agricultural and residential. This project was built in 2018.

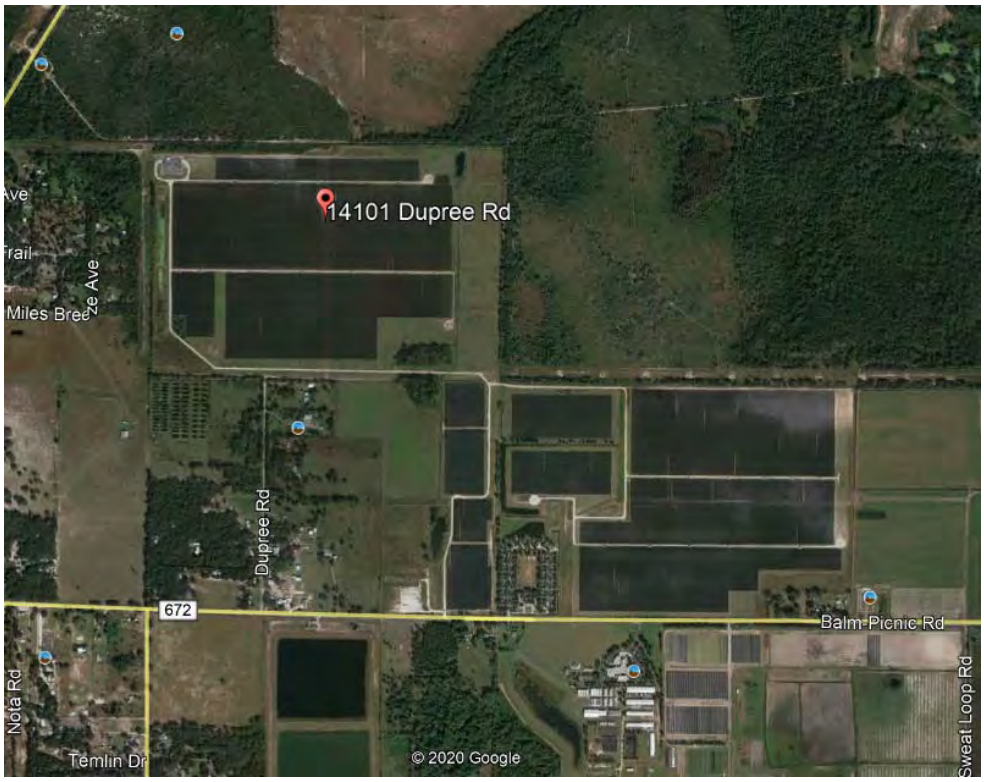
741. Barefoot Bay Solar, Barefoot Bay, Brevard County

This project is located on 504 acres for a 704.5 MW facility. Most of the adjoining uses are medium density residential with some lower density agricultural uses to the southwest. This project was built in 2018. There is a new subdivision under development to the west.

742. Loggerhead Solar, Port St. Lucie, St. Lucie County

This project is located on 1,161 acres out of a 2,100-acre tract for a 74.5 MW facility. Most of the adjoining uses are agricultural and residential. This project was built in 2018. The closest home is 285 feet from the nearest panel.

743. Interstate Solar, Fort Pierce, St. Lucie County



This project is located on 420.30 acres for a 74.5 MW facility. All of the adjoining uses are agricultural and residential. This project was built in 2018.

744. Miami-Dade Solar, Miami, Miami-Dade County

This project is located on 346.80 acres for a 74.5 MW facility. All of the adjoining uses are agricultural and residential. This project was built in 2019.

745. Balm Solar, Wimauma, Hillsborough County

This project is located on 419.67 acres out of a parent tract of 547.44 acres for a 74.5 MW facility. Adjoining uses are agricultural and residential including school (IFAS Institute). This project was built in 2018.

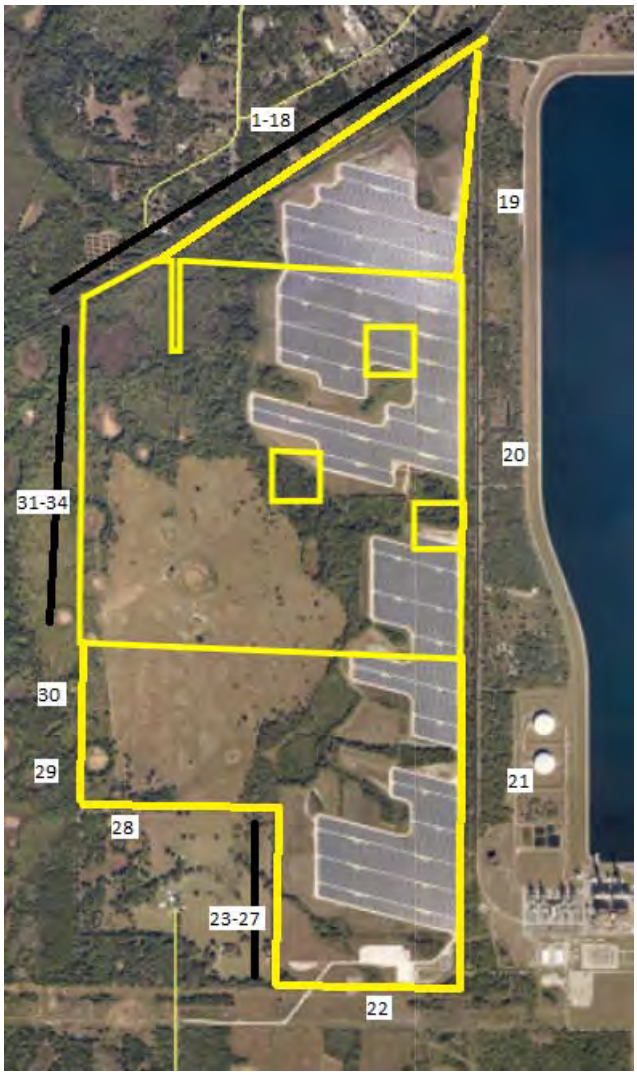
VII. Market Analysis of the Impact on Value from Solar Farms

I have researched hundreds of solar farms in numerous states to determine the impact of these facilities on the value of adjoining property. This research has primarily been in North Carolina, but I have also conducted market impact analyses in Virginia, South Carolina, Tennessee, Texas, Oregon, Mississippi, Maryland, New York, California, Missouri, Florida, Montana, Georgia, Louisiana, and New Jersey.

Wherever I have looked at solar farms, I have derived a breakdown of the adjoining uses to show what adjoining uses are typical for solar farms and what uses would likely be considered consistent with a solar farm use similar to the breakdown that I've shown for the subject property on the previous page. A summary showing the results of compiling that data over hundreds of solar farms is shown later in the Scope of Research section of this report.

I also consider whether the properties adjoining a solar farm in one location have characteristics similar to the properties abutting or adjoining the proposed site so that I can make an assessment of market impact on each proposed site. Notably, in most cases solar farms are placed in areas very similar to the site in question, which is surrounded by low density residential and agricultural uses. In my over 700 studies, I have found a striking repetition of that same typical adjoining use mix in over 90% of the solar farms I have looked at. Matched pair results in multiple states are strikingly similar, and all indicate that solar farms – which generate very little traffic, and do not generate noise, dust or have other harmful effects – do not negatively impact the value of adjoining or abutting properties.

On the following pages I have considered matched pair data specific to Florida.



In the Appendix I have considered matched pair data throughout the Southeast of the United States as being the most similar states that would most readily compare to Florida. This includes data from Florida, Georgia, South Carolina, North Carolina, Tennessee, Virginia and Maryland. I focused on projects of 5 MW and larger though I have significant supplemental data on solar farms just smaller than that in North Carolina and Kentucky that show similar results. This data is available in my files.

Also in the Appendix I have additional supporting information from other states in my files that show a consistent pattern across the United States, but again, I have focused on the Southeast in this analysis.

A. Florida Data

I have identified matched pairs adjoining 3 of the 19 solar farms noted above. The following pages detail the matched pairs and how they were derived.

1. Matched Pair – Manatee Solar Farm, Parrish, FL

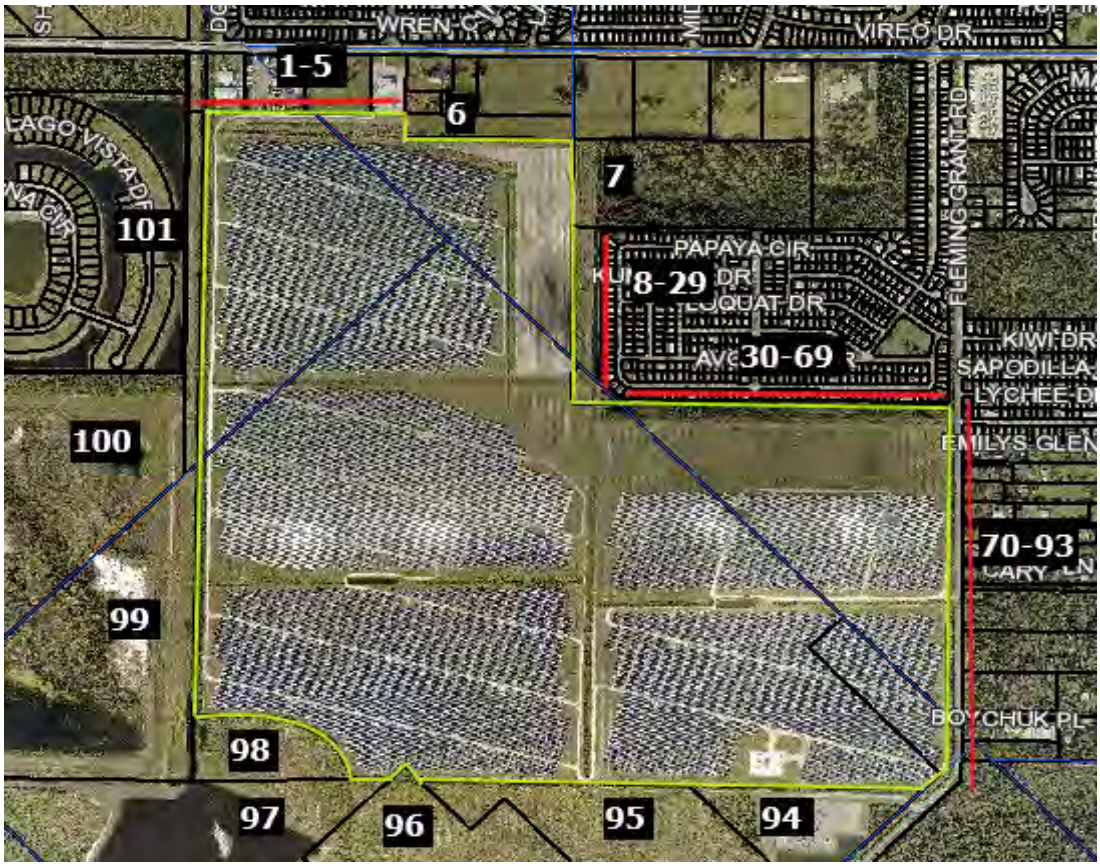
This solar farm is located near Seminole Trail, Parrish, FL. The solar farm has a 74.50 MW output and is located on a 1,180.38 acre tract and was built in 2016. The tract is owned by Florida Power & Light Company. The closest home adjoining home is 625 feet from the nearest panel.

I have considered the recent sale of 13670 Highland Road, Wimauma, Florida. This one-story, block home is located just north of the solar farm and separated from the solar farm by a railroad corridor. This home is a 3 BR, 3 BA 1,512 s.f. home with a carport and workshop. The property includes new custom cabinets, granite counter tops, brand new stainless steel appliances, updated bathrooms and new carpet in the bedrooms. The home is sitting on 5 acres. The home was built in 1997.

I have compared this sale to several nearby homesales as part of this matched pair analysis as shown below.

Solar	TAX ID/Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style	Note
Adjoins	13670 Highland	5.00	8/21/2017	$255,000	1997	1,512	$168.65	3/3	Carport/Wrkshp	Ranch	Renov.
Not	2901 Arrowsmith	1.91	1/31/2018	$225,000	1979	1,636	$137.53	3/2	2 Garage/Wrkshp	Ranch	
Not	602 Butch Cassidy	1.00	5/5/2017	$220,000	2001	1,560	$141.03	3/2	N/A	Ranch	Renov.
Not	2908 Wild West	1.23	7/12/2017	$254,000	2003	1,554	$163.45	3/2	2 Garage/Wrkshp	Ranch	Renov.
Not	13851 Highland	5.00	9/13/2017	$240,000	1978	1,636	$146.70	4/2	3 Garage	Ranch	Renov.

		Adjoining Sales Adjusted								
Solar	**TAX ID/Address**	**Time**	**Acres**	**YB**	**GLA**	**BR/BA**	**Park**	**Note**	**Total**	**% Diff**
Adjoins	13670 Highland								$255,000	
Not	2901 Arrowsmith	$2,250	$10,000	$28,350	-$8,527	$5,000	-$10,000	$10,000	$262,073	-3%
Not	602 Butch Cassidy	-$2,200	$10,000	-$6,160	-$3,385	$5,000	$2,000		$225,255	12%
Not	2908 Wild West	$0	$10,000	-$10,668	-$3,432	$5,000	-$10,000		$244,900	4%
Not	13851 Highland	$0	$0	$31,920	-$9,095	$3,000	-$10,000		$255,825	0%
									Average	3%



The sales prices of the comparables before adjustments range from $220,000 to $254,000. After adjustments they range from $225,255 to $262,073. The comparables range from no impact to a strong positive impact. The comparables showing -3% and +4% impact on value are considered within a typical range of value and therefore not indicative of any impact on property value.

This set of matched pair data falls in line with the data seen in other states. The closest solar panel to the home at 13670 Highland is 1,180 feet. There is a wooded buffer between these two properties.

I have included a map showing the relative location of these properties below.

2. Matched Pair – Barefoot Bay Solar Farm, Barefoot Bay, FL

This project is located on 504 acres for a 704.5 MW facility. Most of the adjoining uses are medium density residential with some lower density agricultural uses to the southwest. This project was built in 2018. There is a new subdivision under development to the west. The closest adjoining home is 235 feet from the nearest panel.

I have considered a number of recent home sales from the Barefoot Bay Golf Course in the Barefoot Bay Recreation District. There are a number of sales of these mobile/manufactured homes along the eastern boundary and the lower northern boundary. I have compared those home sales to other similar homes in the same community but without the exposure to the solar farm. Staying within the same community keeps location and amenity impacts consistent. I did avoid any comparison with home sales with golf course or lakefront views as that would introduce another variable.

The six manufactured/double wide homes shown below were each compared to three similar homes in the same community and are consistently showing no impact on the adjoining property values. Based on the photos from the listings, there is limited but some visibility of the solar farm to the east, but the canal and landscaping between are providing a good visual buffer and actually are commanding a premium over the non-canal homes.

I also identified a new subdivision being developed just to the west of this solar farm called The Lakes at Sebastian Preserve. These are all canal-lot homes that are being built with homes starting at $271,000 based on the website and closed sales showing up to $342,000. According to Monique, the onsite broker with Holiday Builders, the solar farm is difficult to see from the lots that back up to that area and she does not anticipate any difficulty in selling those future homes or lots or any impact on the sales price. The closest home that will be built in this development will be approximately 340 feet from the nearest panel.

Based on the closed home prices in Barefoot Bay as well as the broker comments and activity at The Lakes at Sebastian Preserve, the data around this solar farm strongly indicates no negative impact on property value.

3. Matched Pair – Miami-Dade Solar Farm, Miami, FL

This project is located on 346.80 acres for a 74.5 MW facility. All of the adjoining uses are agricultural and residential. This project was built in 2019. The closest adjoining home is 475 feet from the nearest panel.

I considered the recent sale of Parcel 26 to the south that sold for over $1.6 million dollars. This home is located on 4.2 acres with additional value in the palm trees according to the listing. The comparables include similar homes nearby that are all actually on larger lots and several include avocado or palm tree income as well. All of the comparables are in similar proximity to the subject and all have similar proximity to the Miami-Dade Executive airport that is located 2.5 miles to the east.

These sales are showing no impact on the value of the property from the adjoining solar farm.

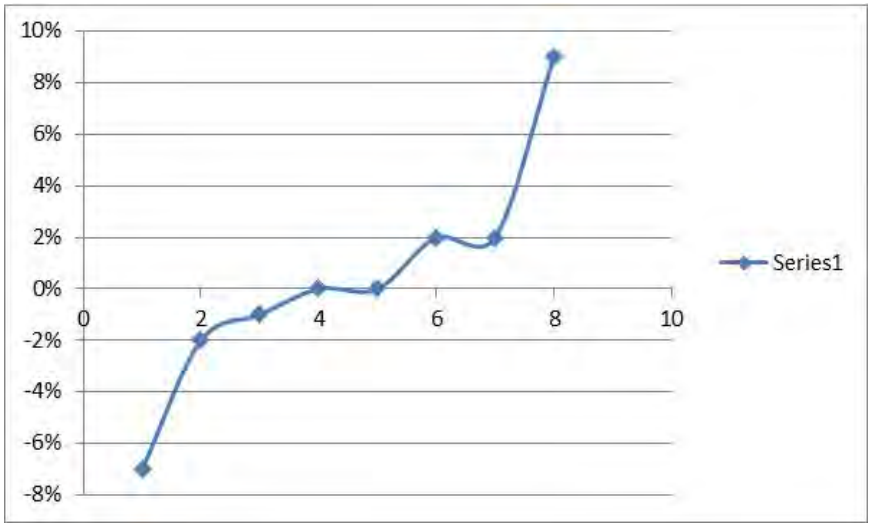
	Low			347	74.50	0	2%	74%	0%	0%	48	$36,737	$143,320

The median income for the population within 1 mile of a solar farm is $75,000 with a median housing unit value of $291,667. All of these comparable solar farms have homes within a 1-mile radius under $400,000 on average, though one of these solar farms has an adjoining home that sold for over $1.6 million. The adjoining uses show that residential and agricultural uses are the predominant adjoining uses.



The demographics around the subject property are showing 35 population within a 1-mile radius of the center of the project with a median income of $100,000 and an average home value of $262,500. If I expand that out to a 3-mile radius the population is 2,635 with a median income of $80,979 and an average home value of $276,751.

Based on the similarity of adjoining uses and demographic data between these sites and the subject property, I consider it reasonable to compare these sites to the subject property. These solar farms are all of similar size and scale to the proposed solar farm which makes for a strong comparison.

Each of these solar farms has adjoining home sales that support a conclusion of no impact on adjoining property values.

The following pages show greater detail on these solar farms and how the 8 residential matched pairs from 3 solar farms were established.

Below I have shown those findings charted from smallest to largest to show that most of the findings are between +/-5% within typical market variation. There is one outlier above and one oulier below this range.

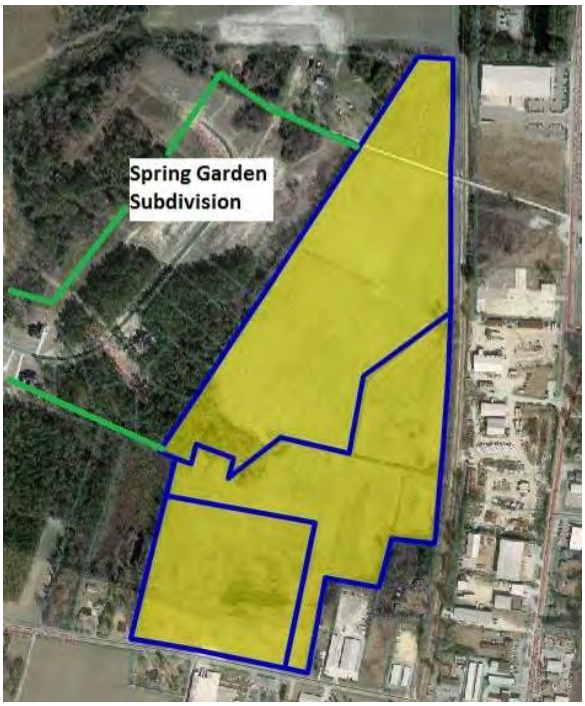
I also spoke with Rolando Ortiz with La Rosa Realty North Florida, LLC regarding a property that he was the buyer's agent on adjoining the Horizon Solar site in Archer/Putnam County. He represented a buyer that picked up this fenced pasture land with 20 acres for $150,000 on May 30, 2019. He is now representing that buyer in marketing this land for $180,000. According to Mr. Ortiz, they did not consider the solar farm as a negative in either the purchase or now in the marketing of the property.



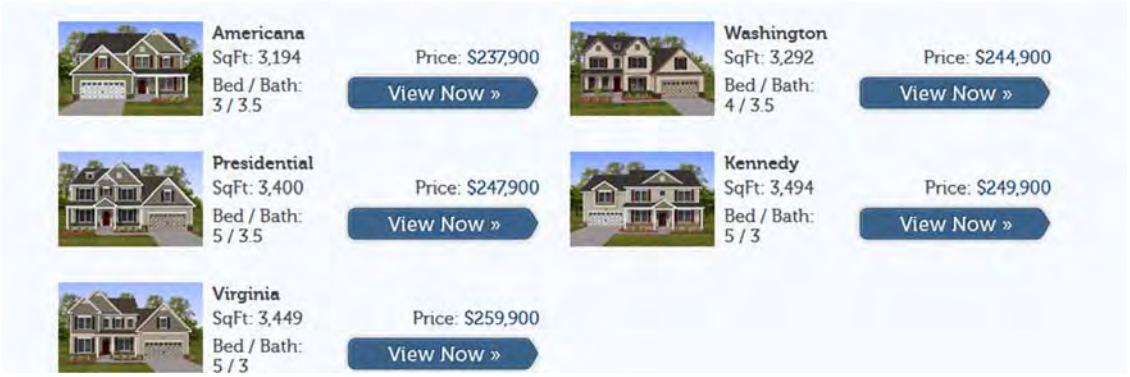
I also spoke with Century 21 Lakeside Realty about 21.38 acres located at 270 Price Road Hawthorne and adjoining the same Horizon Solar site in Archer/Putnam County. They were the selling agent and indicated that the solar farm had no impact on the marketing or sales price of this site. This property sold on July 23, 2020 for $75,000. This included a significant amount of unbuildable area, but also backed up to a secluded fishing pond.

I did not generate matched pairs for these land sales as land values in the area were highly variable due to fencing and unbuildable areas, which made locating usable matched pairs challenging. For example, even comparing these two land sales to each other, they are very similar in size, both have fencing in place, and both adjoin the solar farm but one sold for half the price of the other due to variations in the buildable area. Still the comments from the brokers reinforce the conclusions shown by the matched pairs noted above.

B. Southeastern USA Data – Over 5 MW

1. Matched Pair – AM Best Solar Farm, Goldsboro, NC

This 5 MW solar farm adjoins Spring Garden Subdivision which had new homes and lots available for new construction during the approval and construction of the solar farm. The recent home sales have ranged from $200,000 to $250,000. This subdivision sold out the last homes in late 2014. The solar farm is clearly visible particularly along the north end of this street where there is only a thin line of trees separating the solar farm from the single-family homes.



Homes backing up to the solar farm are selling at the same price for the same floor plan as the homes that do not back up to the solar farm in this subdivision. According to the builder, the solar farm has been a complete non-factor. Not only do the sales show no difference in the price paid for the various homes adjoining the solar farm versus not adjoining the solar farm, but there are actually more recent sales along the solar farm than not. There is no impact on the sellout rate, or time to sell for the homes adjoining the solar farm.

I spoke with a number of owners who adjoin the solar farm and none of them expressed any concern over the solar farm impacting their property value.

The data presented on the following page shows multiple homes that have sold in 2013 and 2014 adjoining the solar farm at prices similar to those not along the solar farm. These series of sales indicate that the solar farm has no impact on the adjoining residential use.

The homes that were marketed at Spring Garden are shown below.

The homes adjoining the solar farm are considered to have a light landscaping screen as it is a narrow row of existing pine trees supplemented with evergreen plantings.

I note that 2308 Granville Drive sold again in November 2015 for $267,500, or $7,500 more than when it was purchased new from the builder two years earlier (Tax ID 3600195361, Owner: Leak). The neighborhood is clearly showing appreciation for homes adjoining the solar farm.

The Median Price is the best indicator to follow in any analysis as it avoids outlying samples that would otherwise skew the results. The median sizes and median prices are all consistent throughout the sales both before and after the solar farm whether you look at sites adjoining or nearby to the solar farm. The average size for the homes nearby the solar farm shows a smaller building size and a higher price per square foot. This reflects a common occurrence in real estate where the price per square foot goes up as the size goes down. So even comparing averages the indication is for no impact, but I rely on the median rates as the most reliable indication for any such analysis.

I have also considered four more recent resales of homes in this community as shown on the following page. These comparable sales adjoin the solar farm at distances ranging from 315 to 400 feet. The matched pairs show a range from -9% to +6%. The range of the average difference is -2% to +1% with an average of 0% and a median of +0.5%. These comparable sales support a finding of no impact on property value.

I have also considered the original sales prices in this subdivision relative to the recent resale values as shown in the chart below. This rate of appreciation is right at 2.5% over the last 6 years. Zillow indicates that the average home value within the 27530-zip code as of January 2014 was $101,300 and as of January 2020 that average is $118,100. This indicates an average increase in the market of 2.37%. I conclude that the appreciation of the homes adjoining the solar farm are not impacted by the presence of the solar farm based on this data.

2. Matched Pair – Mulberry, Selmer, TN

This 16 MW solar farm was built in 2014 on 208.89 acres with the closest home being 480 feet.

This solar farm adjoins two subdivisions with Central Hills having a mix of existing and new construction homes. Lots in this development have been marketed for $15,000 each with discounts offered for multiple lots being used for a single home site. I spoke with the agent with Rhonda Wheeler and Becky Hearnsberger with United County Farm & Home Realty who noted that they have seen no impact on lot or home sales due to the solar farm in this community.

I have included a map below as well as data on recent sales activity on lots that adjoin the solar farm or are near the solar farm in this subdivision both before and after the announced plan for this solar farm facility. I note that using the same method I used to breakdown the adjoining uses at the subject property I show that the predominant adjoining uses are residential and agricultural, which is consistent with the location of most solar farms.

Adjoining Use Breakdown

	Acreage	Parcels
Commercial	3.40%	0.034
Residential	12.84%	79.31%
Agri/Res	10.39%	3.45%
Agricultural	73.37%	13.79%
Total	**100.00%**	**100.00%**

I have run a number of direct matched comparisons on the sales adjoining this solar farm as shown below. These direct matched pairs include some of those shown above as well as additional more recent sales in this community. In each of these I have compared the one sale adjoining the solar farm to multiple similar homes nearby that do not adjoin a solar farm to look for any potential impact from the solar farm.

										Average	3%	

The best matched pair is 53 Glen, which was most similar in time frame of sale and required less adjustment. It indicates a +4% increase in value due to the solar farm adjacency.

The average indicated impact from these three sets of matched pairs is +4%, which suggests a mild positive relationship due to adjacency to the solar farm. The landscaping buffer for this project is mostly natural tree growth that was retained as part of the development but much of the trees separating the panels from homes are actually on the lots for the homes themselves. I therefore consider the landscaping buffer to be thin to moderate for these adjoining homes.

I have also looked at several lot sales in this subdivision as shown below.

These are all lots within the same community and the highest prices paid are for lots one parcel off from the existing solar farm. These prices are fairly inconsistent, though they do suggest about a $3,000 loss in the lots adjoining the solar farm. This is an atypical finding and additional details suggest there is more going on in these sales than the data crunching shows. First of all Parcel 4 was purchased by the owner of the adjoining home and therefore an atypical buyer seeking to expand a lot and the site is not being purchased for home development. Moreover, using the SiteToDoBusiness demographic tools, I found that the 1-mile radius around this development is expecting a total population increase over the next 5 years of 3 people. This lack of growing demand for lots is largely explained in that context. Furthermore, the fact that finished home sales as shown above are showing no sign of a negative impact on property value makes this data unreliable and inconsistent with the data shown in sales to an end user. I therefore place little weight on this outlier data.

3. Matched Pair – Leonard Road Solar Farm, Hughesville, MD

This 5 MW solar farm is located on 47 acres and mostly adjoins agricultural and residential uses to the west, south and east as shown above. The property also adjoins retail uses and a church. I looked at a 2016 sale of an adjoining home with a positive impact on value adjoining the solar farm of 2.90%. This is within typical market friction and supports an indication of no impact on property value.

I have shown this data below. The landscaping buffer is considered heavy.

Leonardtown Road Solar Farm, Hughesville, MD

This is within typical market friction and supports an indication of no impact on property value.

4. Matched Pair – Gastonia SC Solar, Gastonia, NC

This 5 MW project is located on the south side of Neal Hawkins Road just outside of Gastonia. The property identified above as Parcel 4 was listed for sale while this solar farm project was going

through the approval process. The property was put under contract during the permitting process with the permit being approved while the due diligence period was still ongoing. After the permit was approved the property closed with no concerns from the buyer. I spoke with Jennifer Bouvier, the broker listing the property and she indicated that the solar farm had no impact at all on the sales price. She considered some nearby sales to set the price and the closing price was very similar to the asking price within the typical range for the market. The buyer was aware that the solar farm was coming and they had no concerns.

This two-story brick dwelling was sold on March 20, 2017 for $270,000 for a 3,437 square foot dwelling built in 1934 in average condition on 1.42 acres. The property has four bedrooms and two bathrooms. The landscaping screen is light for this adjoining home due to it being a new planted landscaping buffer.

Adjoining Residential Sales After Solar Farm Approved

5. Matched Pair – Summit/Ranchlands Solar, Moyock, NC

This project is located at 1374 Caritoke Highway, Moyock, NC. This is an 80 MW facility on a parent tract of 2,034 acres. Parcels Number 48 and 53 as shown in the map above were sold in 2016. The project was under construction during the time period of the first of the matched pair sales and the permit was approved well prior to that in 2015.

I looked at multiple sales of adjoining and nearby homes and compared each to multiple comparables to show a range of impacts from -10% up to +11% with an average of +2% and a median of +3%. These ranges are well within typical real estate variation and supports an indication of no impact on property value.

6. Matched Pair – Tracy Solar, Bailey, NC

This project is located in rural Nash County on Winters Road with a 5 MW facility that was built in 2016 on 50 acres. A local builder acquired parcels 9 and 10 following construction as shown below

at rates comparable to other tracts in the area. They then built a custom home for an owner and sold that at a price similar to other nearby homes as shown in the matched pair data below. The retained woods provide a heavy landscaped buffer for this homesite.

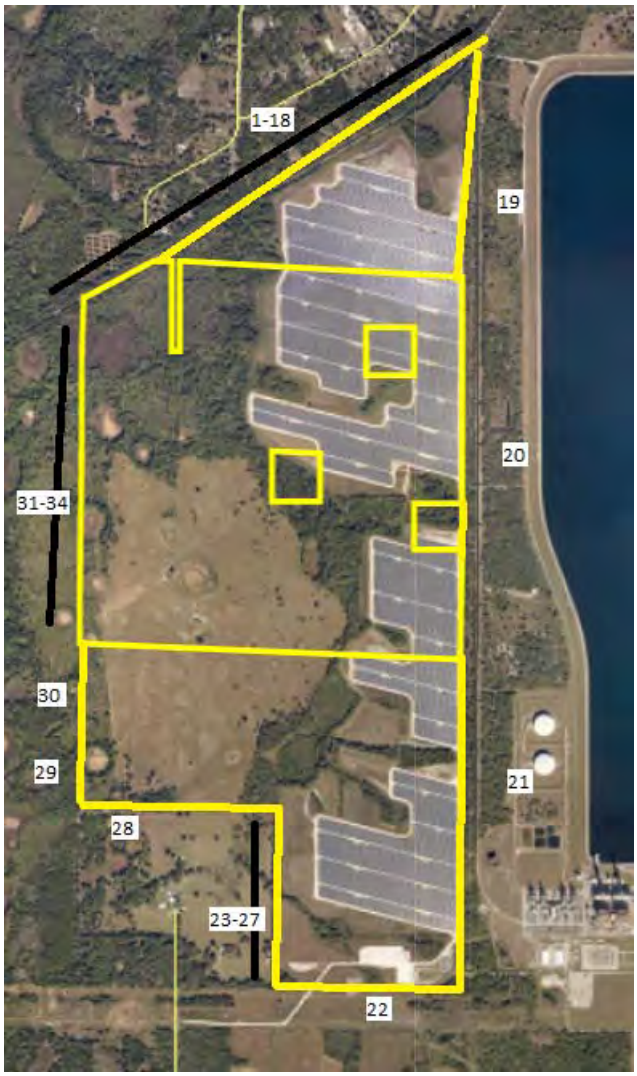
Time	Acres	YB	GLA	Style	Other	Total	% Diff
						$255,000	
$0	$44,000	$7,392	$5,007	$5,000	$15,000	$252,399	1%



The comparables for the land show either a significant positive relationship or a mild negative relationship to having and adjoining solar farm, but when averaged together they show no negative impact. The wild divergence is due to the difficulty in comping out this tract of land and the wide variety of comparables used. The two comparables that show mild negative influences include a property that was partly developed as a residential subdivision and the other included a doublewide with some value and accessory agricultural structures. The tax assessed value on the improvements were valued at $60,000. So both of those comparables have some limitations for comparison. The two that show significant enhancement due to adjacency includes a property with a cemetery located in the middle and the other is a tract almost twice as large. Still that larger tract after adjustment provides the best matched pair as it required the least adjustment. I therefore conclude that there is no negative impact due to adjacency to the solar farm shown by this matched pair.

The dwelling that was built on the site was a build-to-suit and was compared to a nearby homesale of a property on a smaller parcel of land. I adjusted for that differenced based on a $25,000 value for a 1-acre home site versus the $70,000 purchase price of the larger subject tract. The other adjustments are typical and show no impact due to the adjacency to the solar farm.

The closest solar panel to the home is 780 feet away.

I note that the representative for Kingsmill Homes indicated that the solar farm was never a concern in purchasing the land or selling the home. He also indicated that they had built a number of nearby homes across the street and it had never come up as an issue.

7. Matched Pair – Manatee Solar Farm, Parrish, FL

This solar farm is located near Seminole Trail, Parrish, FL. The solar farm has a 74.50 MW output and is located on a 1,180.38-acre tract and was built in 2016. The tract is owned by Florida Power & Light Company.

I have considered the recent sale of 13670 Highland Road, Wimauma, Florida. This one-story, concrete block home is located just north of the solar farm and separated from the solar farm by a railroad corridor. This home is a 3 BR, 3 BA 1,512 s.f. home with a carport and workshop. The property includes new custom cabinets, granite counter tops, brand-new stainless-steel appliances, updated bathrooms and new carpet in the bedrooms. The home is sitting on 5 acres. The home was built in 1997.

I have compared this sale to several nearby homesales as part of this matched pair analysis as shown below. The landscaping separating the home from the solar farm is considered heavy.

Solar	TAX ID/Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style	Note
Adjoins	13670 Highland	5.00	8/21/2017	$255,000	1997	1,512	$168.65	3/3	Carport/Wrkshp	Ranch	Renov.

Not	13851 Highland	$0	$0	$31,920	-$9,095	$3,000	-$10,000		$255,825	0%
									Average	3%

The sales prices of the comparables before adjustments range from $220,000 to $254,000. After adjustments they range from $225,255 to $262,073. The comparables range from no impact to a strong positive impact. The comparables showing -3% and +4% impact on value is considered within a typical range of value and therefore not indicative of any impact on property value.

This set of matched pair data falls in line with the data seen in other states. The closest solar panel to the home at 13670 Highland is 1,180 feet. There is a wooded buffer between these two properties.

I have included a map showing the relative location of these properties below.

8. Matched Pair – McBride Place Solar Farm, Midland, NC

This project is located on Mount Pleasant Road, Midland, North Carolina. The property is on 627 acres on an assemblage of 974.59 acres. The solar farm was approved in early 2017 for a 74.9 MW facility.

I have considered the sale of 4380 Joyner Road which adjoins the proposed solar farm near the northwest section. This property was appraised in April of 2017 for a value of $317,000 with no consideration of any impact due to the solar farm in that figure. The property sold in November

2018 for $325,000 with the buyer fully aware of the proposed solar farm. The landscaping buffer relative to Joyner Road, Hayden Way, Chanel Court and Kristi Lane is considered medium, while the landscaping for the home at the north end of Chanel Court is considered very light.

I have considered the following matched pairs to the subject property.

Adjoining Residential Sales After Solar Farm Approved

Solar	Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style	Other
Adjoins	4380 Joyner	12.00	11/22/2017	$325,000	1979	1,598	$203.38	3/2	2xGar	Ranch	Outbldg

								Average	3%

The home at 4380 Joyner Road is 275 feet from the closest solar panel.

I also considered the recent sale of a lot at 5800 Kristi Lane that is on the east side of the proposed solar farm. This 4.22-acre lot sold in December 2017 for $94,000. A home was built on this lot in 2019 with the closest point from home to panel at 689 feet. The home site is heavily wooded and their remains a wooded buffer between the solar panels and the home. I spoke with the broker, Margaret Dabbs, who indicated that the solar farm was considered a positive by both buyer and seller as it ensures no subdivision will be happening in that area. Buyers in this market are looking for privacy and seclusion.

The breakdown of recent lot sales on Kristi are shown below with the lowest price paid for the lot with no solar farm exposure, though that lot has exposure to Mt Pleasant Road South. Still the older lot sales have exposure to the solar farm and sold for higher prices than the front lot and adjusting for time would only increase that difference.

Adjoining Lot Sales After Solar Farm Built

Parcel	Solar	Address	Acres	Date Sold	Sales Price	$/AC	$/Lot
	Adjoins	5811 Kristi	3.74	5/1/2018	$100,000	$26,738	$100,000
	Adjoins	5800 Kristi	4.22	12/1/2017	$94,000	$22,275	$94,000
	Not	5822 Kristi	3.43	2/24/2020	$90,000	$26,239	$90,000

The lot at 5811 Kristi Lane sold in May 2018 for $100,000 for a 3.74-acre lot. The home that was built later in 2018 is 505 feet to the closest solar panel. This home then sold to a homeowner for $530,000 in April 2020. I have compared this home sale to other properties in the area as shown below.

Adjoining Residential Sales After Solar Farm Built

Solar	Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style	Other
Adjoins	5811 Kristi	3.74	3/31/2020	$530,000	2018	3,858	$137.38	5/3.5	2 Gar	2-story	Cement Ext

Not	314 Old Hickory	1.24	9/20/2019	$492,500	2017	3,903	$126.18	6/4.5	2 Gar	2-story	

Solar	Address	Time	Site	YB	GLA	BR/BA	Park	Other	Total	% Diff	Avg % Diff
Adjoins	5811 Kristi								$530,000		5%
Not	3915 Tania	$6,285		$27,225	-$3,852		-$20,000		$504,657	5%	
Not	6782 Manatee	$1,189		$46,000	$4,995	$5,000			$517,183	2%	
Not	314 Old Hickory	$10,680		$2,463	-$2,839	-$10,000			$492,803	7%	

After adjusting the comparables, I found that the average adjusted value shows a slight increase in value for the subject property adjoining a solar farm. As in the other cases, this is a mild positive impact on value but within the typical range of real estate transactions.

I also looked at 5833 Kristi Lane that sold on 9/14/2020 for $625,000. This home is 470 feet from the closest panel.

Solar	Address	Acres	Date Sold	Sales Price	Built	GBA	$/GLA	BR/BA	Park	Style	Other
Nearby	5833 Kristi	4.05	9/14/2020	$625,000	2008	4,373	$142.92	5/4	3-Car	2-Brick

Not	9522 Bales	1.47	6/18/2020	$600,000	2007	4,014	$149.48	4/4.5	3-Car	2-Stone	

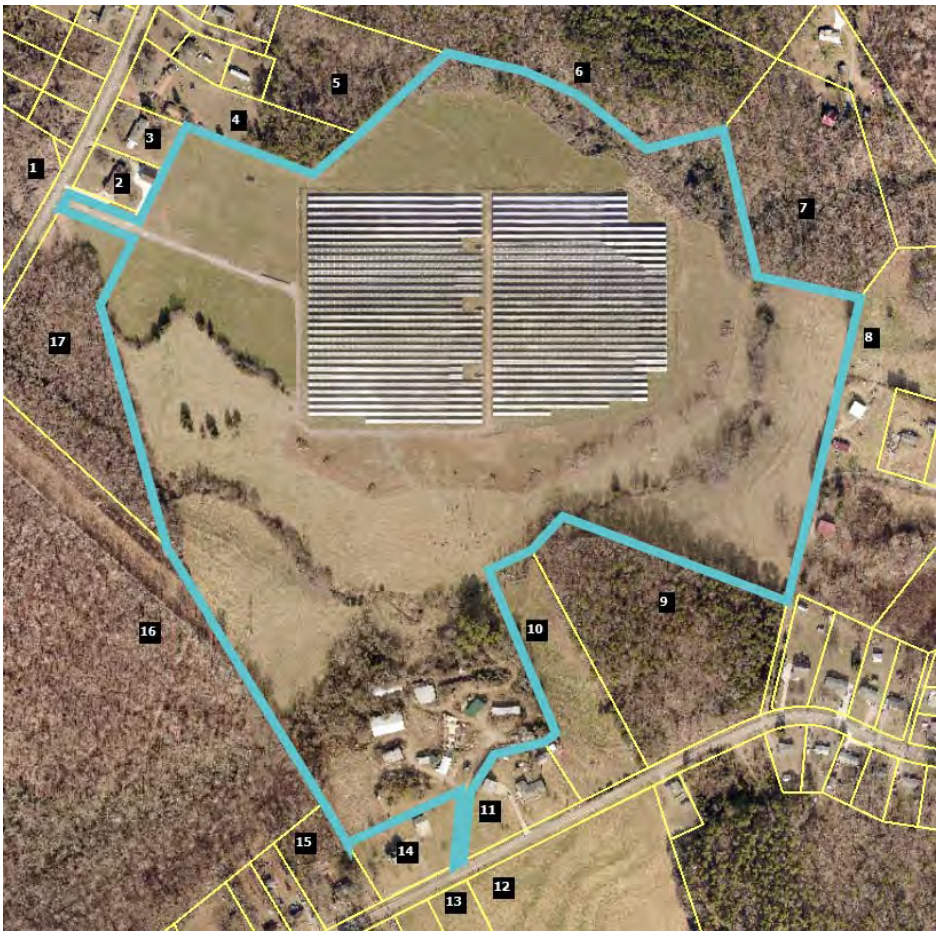
Adjoining Sales Adjusted

Address	Time	Site	YB	GLA	BR/BA	Park	Other	Total	% Diff	Avg % Diff	Distance
5833 Kristi								$625,000			470
4055 Dakeita	-$9,220		$5,661	-$6,138		-$25,000		$594,303	5%		
9615 Bales	$6,455		$1,860	$28,042	-$10,000	-$15,000		$631,356	-1%		
9522 Bales	$7,233		$1,800	$42,930	-$5,000			$646,963	-4%		
										0%	

The average difference is 0% impact and the differences are all within a close range with this set of comparables and supports a finding of no impact on property value.

I have also looked at 4504 Chanel Court. This home sold on January 1, 2020 for $393,500 for this 3,010 square foot home built in 2004 with 3 bedrooms, 3.5 bathrooms, and a 3-car garage. This home includes a full partially finished basement that significantly complicates comparing this to other sales. This home previously sold on January 23, 2017 for $399,000. This was during the time that the solar farm was a known factor as the solar farm was approved in early 2017 and public discussions had already commenced. I spoke with Rachelle Killman with Real Estate Realty, LLC the buyer's agent for this transaction and she indicated that the solar farm was not a factor or consideration for the buyer. She noted that you could see the panels sort of through the trees, but it wasn't a concern for the buyer. She was not familiar with the earlier 2017 sale, but indicated that it was likely too high. This again goes back to the partially finished basement issue. The basement has a fireplace, and an installed 3/4 bathroom but otherwise bare studs and concrete floors with different buyers assigning varying value to that partly finished space. I also reached out to Don Gomez with Don Anthony Realty, LLC as he was the listing agent.

I also looked at the recent sale of 4599 Chanel Court. This home is within 310 feet of solar panels but notably does not have a good landscaping screen in place as shown in the photo below. The plantings appear to be less than 3-feet in height and only a narrow, limited screen of existing hardwoods were kept. The photograph is from the listing.



According to Scott David with Better Homes and Gardens Paracle Realty, this property was under contract for $550,000 contingent on the buyer being able to sell their former home. The former home was apparently overpriced and did not sell and the contract stretched out over 2.5 months.

The seller was in a bind as they had a home they were trying to buy contingent on this closing and were about to lose that opportunity. A cash buyer offered them a quick close at $500,000 and the seller accepted that offer in order to not lose the home they were trying to buy. According to Mr. David, the original contracted buyer and the actual cash buyer never considered the solar farm as a negative. In fact Mr. David noted that the actual buyer saw it as a great opportunity to purchase a home where a new subdivision could not be built behind his house. I therefore conclude that this property supports a finding of no impact on adjoining property, even where the landscaping screen still requires time to grow in for a year-round screen.

I also considered a sale/resale analysis on this property. This same home sold on September 15, 2015 for $462,000. Adjusting this upward by 5% per year for the five years between these sales dates suggests a value of $577,500. Comparing that to the $550,000 contract that suggests a 5% downward impact, which is within a typical market variation. Given that the broker noted no negative impact from the solar farm and the analysis above, I conclude this sale supports a finding of no impact on value.

9. Matched Pair – Mariposa Solar, Gaston County, NC

This project is a 5 MW facility located on 35.80 acres out of a parent tract of 87.61 acres at 517 Blacksnake Road, Stanley that was built in 2016.

I have considered a number of recent sales around this facility as shown below.

The first is identified in the map above as Parcel 1, which is 215 Mariposa Road. This is an older dwelling on large acreage with only one bathroom. I've compared it to similar nearby homes as shown below. The landscaping buffer for this home is considered light.

Adjoining Residential Sales After Solar Farm Approved

Solar	Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style
Adjoins	215 Mariposa	17.74	12/12/2017	$249,000	1958	1,551	$160.54	3/1	Garage	Br/Rnch

Adjoining Residential Sales After Solar Farm Approved — Adjoining Sales Adjusted

Solar	Address	Acres	Date Sold	Sales Price	Time	YB	Acres	GLA	BR/BA	Park	Other	Total	% Diff
Adjoins	215 Mariposa	17.74	12/12/2017	$249,000								$249,000	
Not	249 Mariposa	0.48	3/1/2019	$153,000	-$5,583	-$17,136	$129,450	-$20,576	-$10,000			$229,154	8%
Not	110 Airport	0.83	5/10/2016	$166,000	$7,927	-$4,648	$126,825	-$47,078	-$10,000			$239,026	4%
Not	1249 Blacksnake	5.01	9/20/2018	$242,500	-$5,621	-$37,345	$95,475	-$68,048	-$10,000	$5,000		$221,961	11%
Not	1201 Abernathy	27.00	5/3/2018	$390,000	-$4,552	-$32,760	-$69,450	-$60,705	-$10,000			$212,533	15%
												Average	9%

The average difference after adjusting for all factors is +9% on average, which suggests an enhancement due to the solar farm across the street. Given the large adjustments for acreage and size, I will focus on the low end of the adjusted range at 4%, which is within the typical deviation and therefore suggests no impact on value.

I have also considered Parcel 4 that sold after the solar farm was approved but before it had been constructed in 2016. The landscaping buffer for this parcel is considered light.

Adjoining Residential Sales After Solar Farm Approved

Solar	Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style	Other
Adjoins	242 Mariposa	2.91	9/21/2015	$180,000	1962	1,880	$95.74	3/2	Carport	Br/Rnch	Det Wrkshop

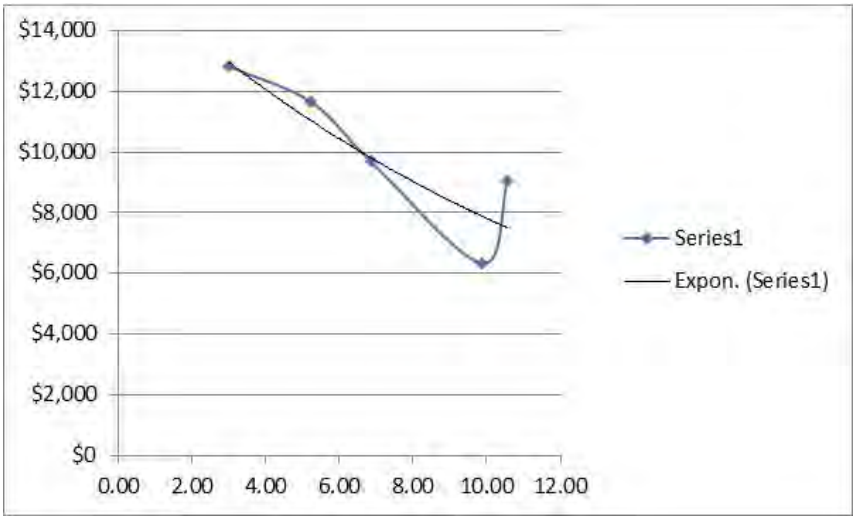
												Average	6%

The average difference after adjusting for all factors is +6%, which is again suggests a mild increase in value due to the adjoining solar farm use. The median is a 4% adjustment, which is within a standard deviation and suggests no impact on property value.



I have also considered the recent sale of Parcel 13 that is located on Blacksnake Road south of the project. I was unable to find good land sales in the same 20-acre range, so I have considered sales of larger and smaller acreage. I adjusted each of those land sales for time. I then applied the price per acre to a trendline to show where the expected price per acre would be for 20 acres. As can be seen in the chart below, this lines up exactly with the purchase of the subject property. I therefore conclude that there is no impact on Parcel 13 due to proximity to the solar farm.

Adjoining Residential Land Sales After Solar Farm Approved						**Adjoining Sales Adjusted**	
Solar	**Tax/Street**	**Acres**	**Date Sold**	**Sales Price**	**$/Ac**	**Time**	**$/Ac**
Adjoins	174339/Blacksnake	21.15	6/29/2018	$160,000	$7,565		$7,565
Not	227852/Abernathy	10.57	5/9/2018	$97,000	$9,177	$38	$9,215
Not	17443/Legion	9.87	9/7/2018	$64,000	$6,484	-$37	$6,447
Not	164243/Alexis	9.75	2/1/2019	$110,000	$11,282	-$201	$11,081
Not	176884/Bowden	55.77	6/13/2018	$280,000	$5,021	$7	$5,027

Finally, I have considered the recent sale of Parcel 17 that sold as vacant land. I was unable to find good land sales in the same 7-acre range, so I have considered sales of larger and smaller acreage. I adjusted each of those land sales for time. I then applied the price per acre to a trendline to show where the expected price per acre would be for 7 acres. As can be seen in the chart below, this lines up with the trendline running right through the purchase price for the subject property. I therefore conclude that there is no impact on Parcel 13 due to proximity to the solar farm. I note that this property was improved with a 3,196 square foot ranch built in 2018 following the land purchase, which shows that development near the solar farm was unimpeded.

Adjoining Residential Land Sales After Solar Farm Approved						**Adjoining Sales Adjusted**		
Solar	**Tax/Street**	**Acres**	**Date Sold**	**Sales Price**	**$/Ac**	**Time**	**Location**	**$/Ac**

10. Matched Pair – Clarke County Solar, Clarke County, VA

This project is a 20 MW facility located on a 234-acre tract that was built in 2017.

I have considered two recent sales of Parcel 3. The home on this parcel is 1,230 feet from the closest panel as measured in the second map from Google Earth, which shows the solar farm under construction. This home sold in January 2017 for $295,000 and again in August 2019 for $385,000. I show each sale below and compare those to similar home sales in each time frame. The significant increase in price between 2017 and 2019 is due to a major kitchen remodel, new roof, and related upgrades as well as improvement in the market in general. The sale and later resale of the home with updates and improvements speaks to pride of ownership and increasing overall value as properties perceived as diminished are less likely to be renovated and sold for profit.

I note that 102 Tilthammer includes a number of barns that I did not attribute any value in the analysis. The market would typically give some value for those barns but even without that adjustment there is an indication of a positive impact on value due to the solar farm. The landscaping buffer from this home is considered light.

Adjoining Residential Sales After Solar Farm Approved

11. Matched Pair – Simon Solar, Social Circle, GA

This 30 MW solar farm is located off Hawkins Academy Road and Social Circle Fairplay Road. I identified three adjoining sales to this tract after development of the solar farm. However, one of those is shown as Parcel 12 in the map above and includes a powerline easement encumbering over a third of the 5 acres and adjoins a large substation as well. It would be difficult to isolate those impacts from any potential solar farm impact and therefore I have excluded that sale. I also excluded the recent sale of Parcel 17, which is a farm with conservation restrictions on it that similarly would require a detailed examination of those conservation restrictions in order to see if there was any impact related to the solar farm. I therefore focused on the recent sale of Parcel 7 and the adjoining parcel to the south of that. They are technically not adjoining due to the access road for the flag-shaped lot to the east. Furthermore, there is an apparent access easement serving the two rear lots that encumber these two parcels which is a further limitation on these sales. This analysis assumes that the access easement does not negatively impact the subject property, though it may.

The landscaping buffer relative to this parcel is considered medium.

Adjoining Land Sales After Solar Farm Approved

Parcel	Solar	Address	Acres	Date Sold	Sales Price	$/AC	Type	Other
7+	Adjoins	4514 Hawkins	36.86	3/31/2016	$180,000	$4,883	Pasture	Esmts

** Dwelling built in 1996 with a 2016 tax assessed value of $75,800 deducted from sales price to reflect land value

Adjoining Sales Adjusted						Avg
Time	Size	Type	Other	Total/Ac	% Diff	% Diff
				$4,883		
$89	$256			$5,455	-12%	
-$90	$241			$4,974	-2%	
-$60	$389			$4,214	14%	
						0%

The range of impact identified by these matched pairs are -12% to +14%, with an average of 0% impact due to the solar farm. The best matched pair with the least adjustment supports a -2% impact due to the solar farm. I note again that this analysis considers no impact for the existing access easements that meander through this property and it may be having an impact. Still at -2% impact as the best indication for the solar farm, I consider that to be no impact given that market fluctuations support +/- 5%.

12. Matched Pair – Candace Solar, Princeton, NC

This 5 MW solar farm is located at 4839 US 70 Highway just east of Herring Road. This solar farm was completed on October 25, 2016.

I identified three adjoining sales to this tract after development of the solar farm with frontage on US 70. I did not attempt to analyze those sales as they have exposure to an adjacent highway and railroad track. Those homes are therefore problematic for a matched pair analysis unless I have similar homes fronting on a similar corridor.

I did consider a land sale and a home sale on adjoining parcels without those complications.

The lot at 499 Herring Road sold to Paradise Homes of Johnston County of NC, Inc. for $30,000 in May 2017 and a modular home was placed there and sold to Karen and Jason Toole on September 29, 2017. I considered the lot sale first as shown below and then the home sale that followed. The landscaping buffer relative to this parcel is considered medium.

Adjoining Land Sales After Solar Farm Approved							**Adjoining Sales Adjusted**				
Parcel	**Solar**	**Address**	**Acres**	**Date Sold**	**Sales Price**	**Other**	**Time**	**Site**	**Other**	**Total**	**% Diff**

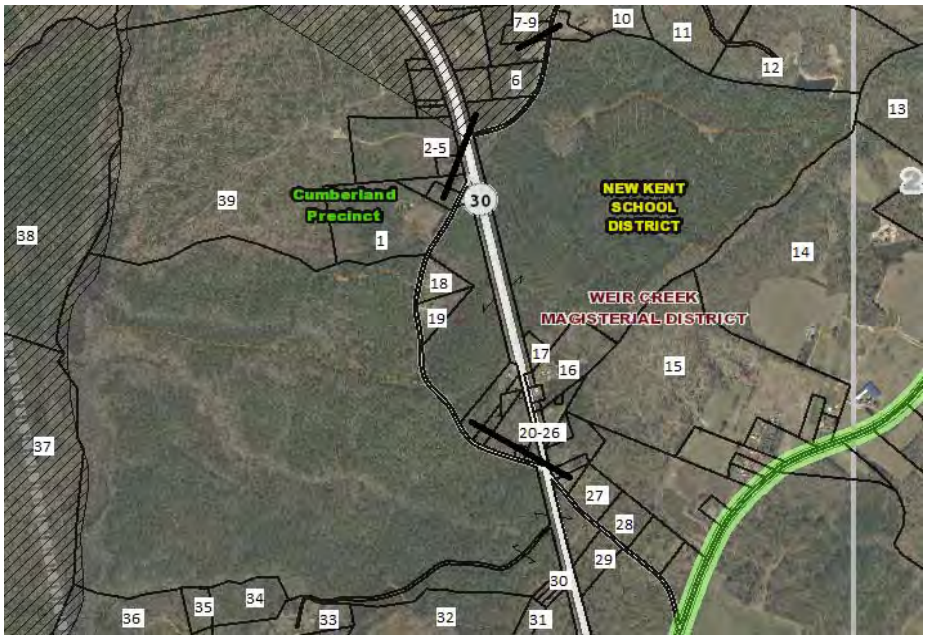
	Not	37 Becky	0.87	7/23/2019	$24,500	Sub/Pwr	-$1,679	$4,900		$27,721	8%
	Not	5858 Bizzell	0.88	8/17/2016	$18,000		$390	$3,600		$21,990	27%
	Not	488 Herring	2.13	12/20/2016	$35,000		$389			$35,389	-18%
										Average	5%

Following the land purchase, the modular home was placed on the site and sold. I have compared this modular home to the following sales to determine if the solar farm had any impact on the purchase price.

Adjoining Residential Sales After Solar Farm Approved



Parcel	**Solar**	**Address**	**Acres**	**Date Sold**	**Sales Price**	**Built**	**GBA**	**$/GBA**	**BR/BA**	**Park**	**Style**	**Other**
16	Adjoins	499 Herring	2.03	9/27/2017	$215,000	2017	2,356	$91.26	4/3	Drive	Modular

16	Adjoins	499 Herring								$215,000			488
	Not	678 WC	-$10,037	-$25,000	$24,860	$37,275	-$5,000	-$7,500	-$20,000	$220,599	-3%		
	Not	1810 Bay V	-$2,579	-$20,000	$11,900	$0				$159,321	26%		
	Not	1795 Bay V	-$1,063		$0	$21,964				$214,902	0%		
												8%	

The best comparable is 1795 Bay Valley as it required the least adjustment and was therefore most similar, which shows a 0% impact. This signifies no impact related to the solar farm.

The range of impact identified by these matched pairs ranges are therefore -3% to +26% with an average of +8% for the home and an average of +4% for the lot, though the best indicator for the lot shows a $5,000 difference in the lot value due to the proximity to the solar farm or a -12% impact.

13. Matched Pair – Walker-Correctional Solar, Barham Road, Barhamsville, VA

This project was built in 2017 and located on 484.65 acres for a 20 MW with the closest home at 110 feet from the closest solar panel with an average distance of 500 feet.

I considered the recent sale identified on the map above as Parcel 19, which is directly across the street and based on the map shown on the following page is 250 feet from the closest panel. A

limited buffering remains along the road with natural growth being encouraged, but currently the panels are visible from the road. Alex Uminski, SRA with MGMiller Valuations in Richmond VA confirmed this sale with the buying and selling broker. The selling broker indicated that the solar farm was not a negative influence on this sale and in fact the buyer noticed the solar farm and then discovered the listing. The privacy being afforded by the solar farm was considered a benefit by the buyer. I used a matched pair analysis with a similar sale nearby as shown below and found no negative impact on the sales price. Property actually closed for more than the asking price. The landscaping buffer is considered light.

Adjoining Residential Sales After Solar Farm Approved

I also spoke with Patrick W. McCrerey of Virginia Estates who was marketing a property that sold at 5300 Barham Road adjoining the Walker-Correctional Solar Farm. He indicated that this property was unique with a home built in 1882 and heavily renovated and updated on 16.02 acres. The solar farm was through the woods and couldn't be seen by this property and it had no impact on marketing this property. This home sold on April 26, 2017 for $358,000. I did not set up any matched pairs for this property since it is a unique property that any such comparison would be difficult to rely on. The broker's comments do support the assertion that the adjoining solar farm had no impact on value. The home in this case was 510 feet from the closest panel.

14. Matched Pair – Innovative Solar 46, Roslin Farm Rd, Hope Mills, NC

This project was built in 2016 and located on 532 acres for a 78.5 MW solar farm with the closest home at 125 feet from the closest solar panel with an average distance of 423 feet.

I considered the recent sale of a home on Roslin Farm Road just north of Running Fox Road as shown below. This sale supports an indication of no impact on property value. The landscaping buffer is considered light.

Adjoining Residential Sales After Solar Farm Approved

Solar	Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style	Other	Distance

15. Matched Pair – Innovative Solar 42, County Line Rd, Fayetteville, NC

This project was built in 2017 and located on 413.99 acres for a 71 MW with the closest home at 135 feet from the closest solar panel with an average distance of 375 feet.

I considered the recent sales identified on the map above as Parcels 2 and 3, which is directly across the street these homes are 330 and 340 feet away. Parcel 2 includes an older home built in 1976, while Parcel 3 is a new home built in 2019. So the presence of the solar farm had no impact on new construction in the area.

The matched pairs for each of these are shown below. The landscaping buffer relative to these parcels is considered light.

Adjoining Residential Sales After Solar Farm Approved

Solar	Address	Acres	Date Sold	Sales Price	Built	GBA	$/GBA	BR/BA	Park	Style	Other	Distance

Not	3005 Hemingway	$748		$1,345	-$16,547				$254,546	4%	
Not	7031 Glynn Mill	$8,724		$2,550	-$1,852				$264,422	1%	
Not	5213 Bree Brdg	$920		$1,300	$76			-$10,000	$252,296	5%	

Both of these matched pairs adjust to an average of +3% on impact for the adjoining solar farm, meaning there is a slight positive impact due to proximity to the solar farm. This is within the standard +/- of typical real estate transactions, which strongly suggests no impact on property value. I noted specifically that for 2923 County Line Road, the best comparable is 2109 John McMillan as it does not have the additional rental unit on it. I made no adjustment to the other sale for the value of that rental unit, which would have pushed the impact on that comparable downward – meaning there would have been a more significant positive impact.

16. Matched Pair – Sunfish Farm, Keenebec Rd, Willow Spring, NC

This project was built in 2015 and located on 49.6 acres (with an inset 11.25-acre parcel) for a 6.4 MW project with the closest home at 135 feet with an average distance of 105 feet.

I considered the 2017 sale identified on the map above, which is 205 feet away from the closest panel. The matched pairs for each of these are shown below followed by a more recent map showing the panels at this site. The average difference in the three comparables and the subject property is +3% after adjusting for differences in the sales date, year built, gross living area, and other minor differences. This data is supported by the comments from the broker Brian Schroepfer with Keller Williams that the solar farm had no impact on the purchase price. The landscaping screen is considered light.

17. Matched Pair – Sappony Solar, Sussex County, VA

This project is a 30 MW facility located on a 322.68-acre tract that was built in the fourth quarter of 2017.

I have considered the 2018 sale of Parcel 17 as shown below. This was a 1,900 s.f. manufactured home on a 6.00-acre lot that sold in 2018. I have compared that to three other nearby manufactured homes as shown below. The range of impacts is within typical market variation with an average of -1%, which supports a conclusion of no impact on property value. The landscaping buffer is considered medium.

									-1%	

18. Matched Pair – Camden Dam, Camden, NC

This 5 MW project was built in 2019 and located on a portion of 49.83 acres.

Parcel 1 noted above along with the home on the adjoining parcel to the north of that parcel sold in late 2018 after this solar farm was approved but prior to construction being completed in 2019. I have considered this sale as shown below. The landscaping screen is considered light.

The comparable at 548 Trotman is the most similar and required the least adjustment shows no impact on property value. The other two comparables were adjusted consistently with one showing significant enhancement and another as showing a mild negative. The best indication is the one requiring the least adjustment. The other two sales required significant site adjustments which make them less reliable. The best comparable and the average of these comparables support a finding of no impact on property value.

19. Matched Pair – Grandy Solar, Grandy, NC

This 20 MW project was built in 2019 and located on a portion of 121 acres.

Parcels 40 and 50 have sold since construction began on this solar farm. I have considered both in matched pair analysis below. I note that the marketing for Parcel 40 (120 Par Four) identified the lack of homes behind the house as a feature in the listing. The marketing for Parcel 50 (269 Grandy) identified the property as "very private." Landscaping for both of these parcels is considered light.

Both of these matched pairs support a finding of no impact on value. This is reinforced by the listings for both properties identifying the privacy due to no housing in the rear of the property as part of the marketing for these homes.

20. Matched Pair – Champion Solar, Lexington County, SC

This project is a 10 MW facility located on a 366.04-acre tract that was built in 2017.

I have considered the 2020 sale of an adjoining home located off 517 Old Charleston Road. Landscaping is considered light.

21. Matched Pair – Barefoot Bay Solar Farm, Barefoot Bay, FL

This project is located on 504 acres for a 704.5 MW facility. Most of the adjoining uses are medium density residential with some lower density agricultural uses to the southwest. This project was built in 2018. There is a new subdivision under development to the west.

I have considered a number of recent home sales from the Barefoot Bay Golf Course in the Barefoot Bay Recreation District. There are a number of sales of these mobile/manufactured homes along the eastern boundary and the lower northern boundary. I have compared those home sales to other similar homes in the same community but without the exposure to the solar farm. Staying within the same community keeps location and amenity impacts consistent. I did avoid any comparison with home sales with golf course or lakefront views as that would introduce another variable.

The six manufactured/double wide homes shown below were each compared to three similar homes in the same community and are consistently showing no impact on the adjoining property values. Based on the photos from the listings, there is limited but some visibility of the solar farm to the east, but the canal and landscaping between are providing a good visual buffer and actually are commanding a premium over the non-canal homes.

Landscaping for these adjoining homes is considered light, though photographs from the listings show that those homes on Papaya that adjoin the solar farm from east/west have no visibility of the solar farm and is effectively medium density due to the height differential. The homes that adjoin the solar farm from north/south along Papaya have some filtered view of the solar farm through the trees.

									2%	

I also identified a new subdivision being developed just to the west of this solar farm called The Lakes at Sebastian Preserve. These are all canal-lot homes that are being built with homes starting at $271,000 based on the website and closed sales showing up to $342,000. According to Monique, the onsite broker with Holiday Builders, the solar farm is difficult to see from the lots that back up to that area and she does not anticipate any difficulty in selling those future homes or lots or any impact on the sales price. The closest home that will be built in this development will be approximately 340 feet from the nearest panel.

Based on the closed home prices in Barefoot Bay as well as the broker comments and activity at The Lakes at Sebastian Preserve, the data around this solar farm strongly indicates no negative impact on property value.

22. Matched Pair – Miami-Dade Solar Farm, Miami, FL

This project is located on 346.80 acres for a 74.5 MW facility. All of the adjoining uses are agricultural and residential. This project was built in 2019.

I considered the recent sale of Parcel 26 to the south that sold for over $1.6 million dollars. This home is located on 4.2 acres with additional value in the palm trees according to the listing. The comparables include similar homes nearby that are all actually on larger lots and several include avocado or palm tree income as well. All of the comparables are in similar proximity to the subject and all have similar proximity to the Miami-Dade Executive airport that is located 2.5 miles to the east.

These sales are showing no impact on the value of the property from the adjoining solar farm. The landscaping is considered light.

23. Matched Pair – Spotsylvania Solar, Paytes, VA

This solar farm is being built in four phases with the area known as Site C having completed construction in November 2020 after the entire project was approved in April 2019. Site C, also known as Pleinmont 1 Solar, includes 99.6 MW located in the southeast corner of the project and shown on the maps above with adjoining parcels 111 through 144. The entire Spotsylvania project totals 617 MW on 3500 acres out of a parent tract assemblage of 6,412 acres.

I have identified three adjoining home sales that occurred during construction and development of the site in 2020.

The first is located on the north side of Site A on Orange Plank Road. The second is located on Nottoway Lane just north of Caparthin Road on the south side of Site A and east of Site C. The third is located on Post Oak Road for a home that backs up to Site C that sold in September 2020 near the completion of construction for Site C.

All three of these homes are well set back from the solar panels at distances over 1,000 feet and are well screened from the project. All three show no indication of any impact on property value.

There are a couple of recent lot sales located along Southview Court that have sold since the solar farm was approved. The most recent lot sales include 11700 Southview Court that sold on December 29, 2021 for $140,000 for a 0.76-acre lot. This property was on the market for less than 2 months before closing within 6% of the asking price. This lot sold earlier in September 2019 for $55,000 based on a liquidation sale from NTS to an investor.

A similar 0.68-acre lot at 11507 Stonewood Court within the same subdivision located away from the solar farm sold on March 9, 2021 for $109,000. This lot sold for 18% over the asking price within 1 month of listing suggesting that this was priced too low. Adjusting this lot value upward by 12% for very strong growth in the market over 2021, the adjusted indicated value is $122,080 for this lot. This is still showing a 15% premium for the lot backing up to the solar farm.

The lot at 11009 Southview Court sold on August 5, 2019 for $65,000, which is significantly lower than the more recent sales. This lot was sold by NTS the original developer of this subdivision, who was in the process of liquidating lots in this subdivision with multiple lot sales in this time period throughout the subdivision being sold at discounted prices. The home was later improved by the buyer with a home built in 2020 with 2,430 square feet ranch, 3.5 bathrooms, with a full basement, and a current assessed value of $492,300.

I spoke with Chris Kalia, MAI, Mark Doherty, local real estate investor, and Alex Doherty, broker, who are all three familiar with this subdivision and activity in this neighborhood. All three indicated that there was a deep sell off of lots in the neighborhood by NTS at discounted prices under $100,000 each. Those lots since that time are being sold for up to $140,000. The prices paid for the lots below $100,000 were liquidation values and not indicative of market value. Homes are being built in the neighborhood on those lots with home prices ranging from $600,000 to $800,000 with no sign of impact on pricing due to the solar farm according to all three sources.

New areas of new lot construction started after approval of solar farm in 2019 outlined in green.
Future development to the south shown with preliminary road clearing outlined in blue.

The solar farm matched pairs shown above have similar characteristics to each other in terms of population, but with several outliers showing solar farms in farm more urban areas. The median income for the population within 1 mile of a solar farm is $60,037 with a median housing unit value of $231,408. Most of the comparables are under $300,000 in the home price, with $483,333 being the high end of the set, though I have matched pairs in multiple states over $1,000,000 adjoining solar farms. The adjoining uses show that residential and agricultural uses are the predominant adjoining uses. These figures are in line with the larger set of solar farms that I have looked at with the predominant adjoining uses being residential and agricultural and similar to the subject property.

Based on the similarity of adjoining uses and demographic data between these sites and the subject property, I consider it reasonable to compare these sites to the subject property.

I have pulled 56 matched pairs from the above referenced solar farms to provide the following summary of home sale matched pairs and land sales next to solar farms. The summary shows that the range of differences is from -10% to +10% with an average of +1% and median of +1%. This means that the average and median impact is for a slight positive impact due to adjacency to a solar farm. However, this +1 to rate is within the typical variability I would expect from real estate. I therefore conclude that this data shows no negative or positive impact due to adjacency to a solar farm.

While the range is seemingly wide, the graph below clearly shows that the vast majority of the data falls between -5% and +5% and most of those are clearly in the 0 to +5% range. This data strongly supports an indication of no impact on adjoining residential uses to a solar farm.

I therefore conclude that these matched pairs support a finding of no impact on value at the subject property for the proposed project, which as proposed will include a landscaped buffer to screen adjoining residential properties.

Low	-10%

I have further broken down these results based on the MWs, Landscaping, and distance from panel to show the following range of findings for these different categories.

Most of the findings are for homes between 201 and 500 feet. Most of the findings are for Light landscaping screens.

Light landscaping screens are showing no impact on value at any distances, including for solar farms over 75.1 MW.

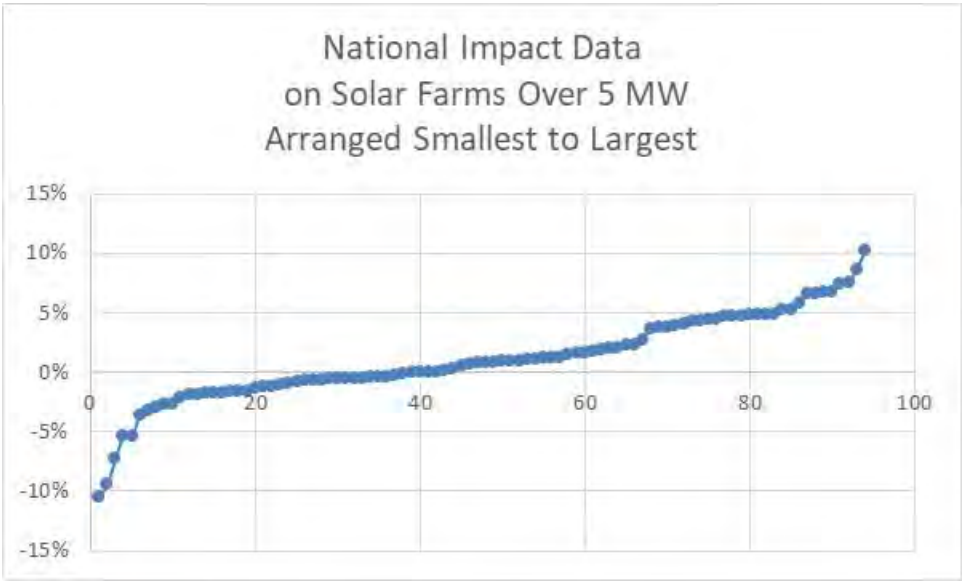
C. Summary of National Data on Solar Farms

I have worked in 19 states related to solar farms and I have been tracking matched pairs in most of those states. On the following pages I provide a brief summary of those findings showing 37 solar farms over 5 MW studied with each one providing matched pair data supporting the findings of this report.



The solar farms summary is shown below with a summary of the matched pair data shown on the following page.

Matched Pair Summary							**Adj. Uses By Acreage**				**1 mile Radius (2010-2020 Data)**			
	Name	**City**	**State**	**Acres**	**MW**	**Topo Shift**	**Res**	**Ag**	**Ag/Res**	**Com/Ind**	**Popl.**	**Med. Income**	**Avg. Housing Unit**	**Veg. Buffer**

45	Barefoot Bay	Barefoot Bay	FL	504	74.50	0	11%	87%	0%	3%	2,446	$36,737	$143,320	Lt to Med
36	Miami-Dade	Miami	FL	347	74.50	0	26%	74%	0%	0%	127	$90,909	$403,571	Light
37	Spotyslvania	Paytes	VA	3,500	617.00	160	37%	52%	11%	0%	74	$120,861	$483,333	Med to Hvy
	Average			362	42.05	32	24%	52%	19%	6%	1,515	$66,292	$242,468	
	Median			150	17.80	10	16%	59%	7%	0%	560	$62,384	$230,848	
	High			3,500	617.00	160	98%	98%	94%	44%	7,684	$120,861	$515,399	
	Low			35	5.00	0	1%	0%	0%	0%	48	$35,057	$96,555	

From these 37 solar farms, I have derived 94 matched pairs. The matched pairs show no negative impact at distances as close as 105 feet between a solar panel and the nearest point on a home. The range of impacts is -10% to +10% with an average and median of +1%.

	MW	Avg. Distance		Indicated Impact
Average	44.80	569	**Average**	1%
Median	14.00	400	**Median**	1%
High	617.00	1,950	**High**	10%
Low	5.00	145	**Low**	-10%

While the range is broad, the two charts below show the data points in range from lowest to highest. There is only 3 data points out of 94 that show a negative impact. The rest support either a finding of no impact or 9 of the data points suggest a positive impact due to adjacency to a solar farm. As discussed earlier in this report, I consider this data to strongly support a finding of no impact on value as most of the findings are within typical market variation and even within that, most are mildly positive findings.

D. Larger Solar Farms

I have also considered larger solar farms to address impacts related to larger projects. Projects have been increasing in size and most of the projects between 100 and 1000 MW are newer with little time for adjoining sales. I have included a breakdown of solar farms with 20 MW to 80 MW facilities with one 617 MW facility.

Matched Pair Summary - @20 MW And Larger							Adj. Uses By Acreage				1 mile Radius (2010-2019 Data)			
	Name	City	State	Acres	MW	Topo Shift	Res	Ag	Ag/Res	Com/Ind	Popl.	Med. Income	Avg. Housing Unit	Veg. Buffer
1	Summit	Moyock	NC	2,034	80.00	4	4%	0%	94%	2%	382	$79,114	$281,731	Light

13	Avra Valley	Tucson	AZ	246	25.00	N/A	3%	94%	3%	0%	85	$80,997	$292,308	None
14	Sappony	Stony Crk	VA	322	20.00	N/A	2%	98%	0%	0%	74	$51,410	$155,208	None
15	Grandy	Grandy	NC	121	20.00	10	55%	24%	0%	21%	949	$50,355	$231,408	Medium
16	Barefoot Bay	Barefoot Bay	FL	504	74.50	0	11%	87%	0%	3%	2,446	$36,737	$143,320	Lt to Med
17	Miami-Dade	Miami	FL	347	74.50	0	26%	74%	0%	0%	127	$90,909	$403,571	Light
18	Spotyslvania	Paytes	VA	3,500	617.00	160	37%	52%	11%	0%	74	$120,861	$483,333	Med to Hvy
	Average			640	76.03		19%	64%	17%	4%	721	$69,501	$262,659	
	Median			335	29.20		12%	68%	2%	0%	293	$72,579	$273,135	
	High			3,500	617.00		75%	98%	94%	25%	2,446	$120,861	$483,333	
	Low			121	19.60		1%	0%	0%	0%	48	$36,737	$110,361	

The breakdown of adjoining uses, population density, median income and housing prices for these projects are very similar to those of the larger set. The matched pairs for each of these were considered earlier and support a finding of no negative impact on the adjoining home values.

I have included a breakdown of solar farms with 50 MW to 617 MW facilities adjoining.

Matched Pair Summary - @50 MW And Larger							Adj. Uses By Acreage				1 mile Radius (2010-2019 Data)			
	Name	City	State	Acres	MW	Topo Shift	Res	Ag	Ag/Res	Com/Ind	Popl.	Med. Income	Avg. Housing Unit	Veg. Buffer
1	Summit	Moyock	NC	2,034	80.00	4	4%	0%	94%	2%	382	$79,114	$281,731	Light
2	Manatee	Parrish	FL	1,180	75.00	20	2%	97%	1%	0%	48	$75,000	$291,667	Heavy
3	McBride	Midland	NC	627	75.00	140	12%	10%	78%	0%	398	$63,678	$256,306	Lt to Med

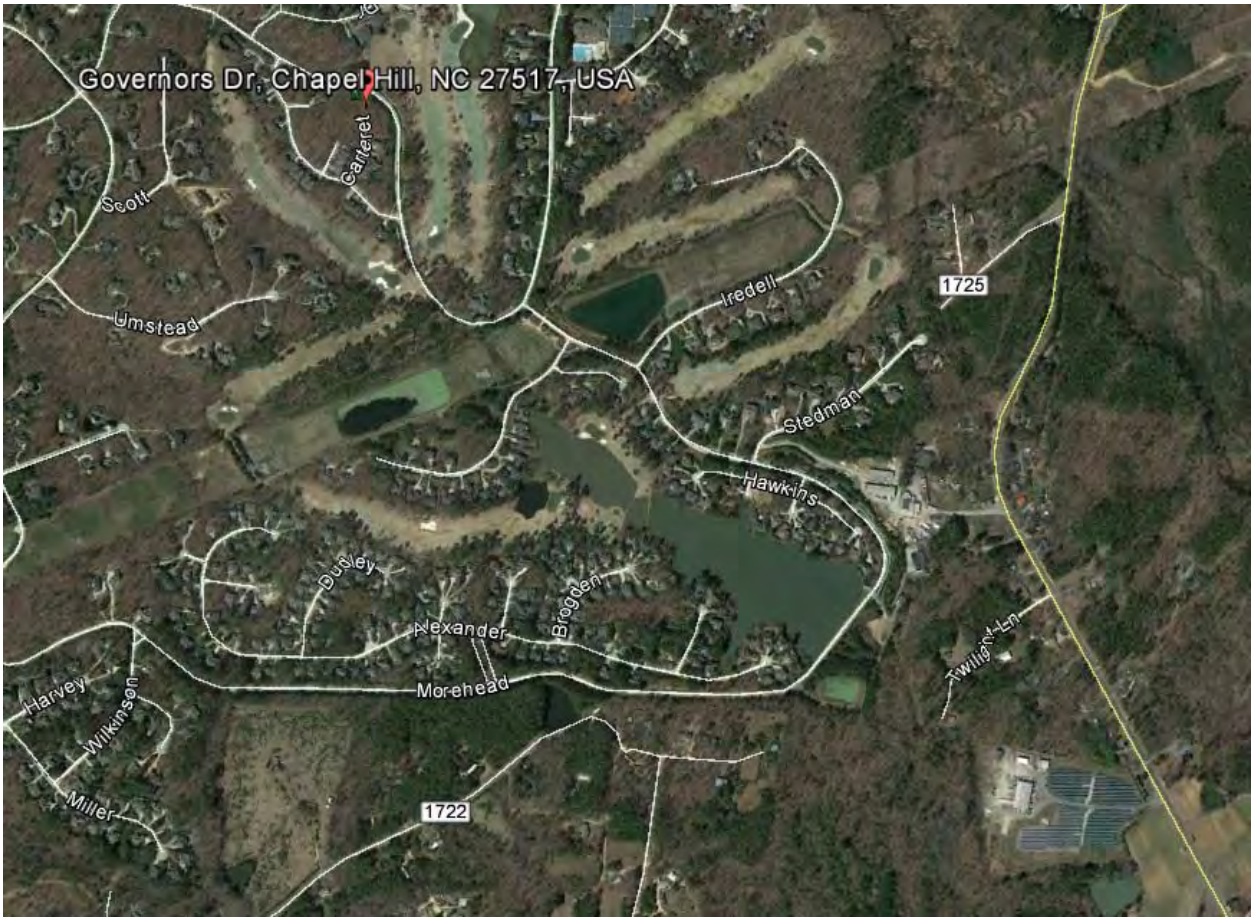
8	Spotyslvania	Paytes	VA	3,500	617.00	160	37%	52%	11%	0%	74	$120,861	$483,333	Med to Hvy
	Average			1,142	143.19		19%	58%	23%	1%	786	$73,128	$289,964	
	Median			580	75.00		15%	67%	0%	0%	390	$69,339	$279,039	
	High			3,500	617.00		41%	97%	94%	3%	2,446	$120,861	$483,333	
	Low			347	71.00		2%	0%	0%	0%	48	$36,737	$143,320	

The breakdown of adjoining uses, population density, median income and housing prices for these projects are very similar to those of the larger set. The matched pairs for each of these were considered earlier and support a finding of no negative impact on the adjoining home values.

The data for these larger solar farms is shown in the SE USA and the National data breakdowns with similar landscaping, setbacks and range of impacts that fall mostly in the +/-5% range as can be seen earlier in this report.



On the following page I show 81 projects ranging in size from 50 MW up to 1,000 MW with an average size of 111.80 MW and a median of 80 MW. The average closest distance for an adjoining home is 263 feet, while the median distance is 188 feet. The closest distance is 57 feet. The mix of adjoining uses is similar with most of the adjoining uses remaining residential or agricultural in nature. This is the list of solar farms that I have researched for possible matched pairs and not a complete list of larger solar farms in those states.

Parcel #	State	City	Name	Output (MW)	Total Acres	Used Acres	Avg. Dist to home	Closest Home	Adjoining Use by Acre Res	Agri	Ag/R	Com

VIII. Scope of Research

I have researched over 900 solar farms and sites on which solar farms are existing and proposed in North Carolina, Florida, Virginia as well as other states to determine what uses are typically found in proximity with a solar farm. The data I have collected and provide in this report strongly supports the assertion that solar farms are having no negative consequences on adjoining agricultural and residential values. While I have focused on adjoining values, I note that there are many examples of solar farms being located within a quarter mile of residential developments, including such notable developments as Governor's Club in Chapel Hill, which has a solar farm within a quarter mile as shown on the following aerial map. Governor's Club is a gated golf community with homes selling for $300,000 to over $2 million.

The subdivisions included in the matched pair analysis also show an acceptance of residential uses adjoining solar farms with no negative impact on property value.

Beyond these references, I have quantified the adjoining uses for a number of solar farm comparables to derive a breakdown of the adjoining uses for each solar farm. The chart below shows the breakdown of adjoining or abutting uses by total acreage.

Percentage By Adjoining Acreage									
	Res	Ag	Res/AG	Comm	Ind	Avg Home	Closest Home	All Res Uses	All Comm Uses
Average	19%	53%	20%	2%	6%	887	344	91%	8%
Median	11%	56%	11%	0%	0%	708	218	100%	0%
High	100%	100%	100%	93%	98%	5,210	4,670	100%	98%
Low	0%	0%	0%	0%	0%	90	25	0%	0%

Res = Residential, Ag = Agriculture, Com = Commercial

Total Solar Farms Considered: 705

I have also included a breakdown of each solar farm by number of adjoining parcels rather than acreage. Using both factors provides a more complete picture of the neighboring properties.

Percentage By Number of Parcels Adjoining									
	Res	Ag	Res/AG	Comm	Ind	Avg Home	Closest Home	All Res Uses	All Comm Uses
Average	61%	24%	9%	2%	4%	887	344	93%	6%
Median	65%	19%	5%	0%	0%	708	218	100%	0%
High	100%	100%	100%	60%	78%	5,210	4,670	105%	78%
Low	0%	0%	0%	0%	0%	90	25	0%	0%

Res = Residential, Ag = Agriculture, Com = Commercial

Total Solar Farms Considered: 705

Both of the above charts show a marked residential and agricultural adjoining use for most solar farms. Every single solar farm considered included an adjoining residential or residential agricultural use.

IX. Specific Factors Related To Impacts on Value

I have completed a number of Impact Studies related to a variety of uses and I have found that the most common areas for impact on adjoining values typically follow a hierarchy with descending levels of potential impact. I will discuss each of these categories and how they relate to a solar farm.

1. Hazardous material
2. Odor
3. Noise
4. Traffic
5. Stigma
6. Appearance

1. Hazardous material

A solar farm presents no potential hazardous waste byproduct as part of normal operation. Any fertilizer, weed control, vehicular traffic, or construction will be significantly less than typically applied in a residential development and even most agricultural uses.

The various solar farms that I have inspected and identified in the addenda have no known environmental impacts associated with the development and operation.

2. Odor

The various solar farms that I have inspected produced no odor.

3. Noise

Whether discussing passive fixed solar panels, or single-axis trackers, there is no negative impact associated with noise from a solar farm. The transformer reportedly has a hum similar to an HVAC that can only be heard in close proximity to this transformer and the buffers on the property are sufficient to make emitted sounds inaudible from the adjoining properties. No sound is emitted from the facility at night.

The various solar farms that I have inspected were inaudible from the roadways.

4. Traffic

The solar farm will have no onsite employee's or staff. The site requires only minimal maintenance. Relative to other potential uses of the site (such as a residential subdivision), the additional traffic generated by a solar farm use on this site is insignificant.

5. Stigma

There is no stigma associated with solar farms and solar farms and people generally respond favorably towards such a use. While an individual may express concerns about proximity to a solar farm, there is no specific stigma associated with a solar farm. Stigma generally refers to things such as adult establishments, prisons, rehabilitation facilities, and so forth.

Solar panels have no associated stigma and in smaller collections are found in yards and roofs in many residential communities. Solar farms are adjoining elementary, middle and high schools as well as churches and subdivisions. I note that one of the solar farms in this report not only adjoins

a church, but is actually located on land owned by the church. Solar panels on a roof are often cited as an enhancement to the property in marketing brochures.

I see no basis for an impact from stigma due to a solar farm.

6. Appearance

I note that larger solar farms using fixed or tracking panels are a passive use of the land that is in keeping with a rural/residential area. As shown below, solar farms are comparable to larger greenhouses. This is not surprising given that a greenhouse is essentially another method for collecting passive solar energy. The greenhouse use is well received in residential/rural areas and has a similar visual impact as a solar farm.

The solar panels are all less than 15 feet high, which means that the visual impact of the solar panels will be similar in height to a typical greenhouse and lower than a single-story residential dwelling. Were the subject property developed with single family housing, that development would have a much greater visual impact on the surrounding area given that a two-story home with attic could be three to four times as high as these proposed panels.

Whenever you consider the impact of a proposed project on viewshed or what the adjoining owners may see from their property it is important to distinguish whether or not they have a protected viewshed or not. Enhancements for scenic vistas are often measured when considering properties that adjoin preserved open space and parks. However, adjoining land with a preferred view today conveys no guarantee that the property will continue in the current use. Any consideration of the impact of the appearance requires a consideration of the wide variety of other uses a property already has the right to be put to, which for solar farms often includes subdivision development, agricultural business buildings such as poultry, or large greenhouses and the like.

Dr. Randall Bell, MAI, PhD, and author of the book **Real Estate Damages**, Third Edition, on Page 146 "Views of bodies of water, city lights, natural settings, parks, golf courses, and other amenities are considered desirable features, particularly for residential properties." Dr. Bell continues on Page

147 that "View amenities may or may not be protected by law or regulation. It is sometimes argued that views have value only if they are protected by a view easement, a zoning ordinance, or covenants, conditions, and restrictions (CC&Rs), although such protections are relatively uncommon as a practical matter. The market often assigns significant value to desirable views irrespective of whether or not such views are protected by law."

Dr. Bell concludes that a view enhances adjacent property, even if the adjacent property has no legal right to that view. He then discusses a "borrowed" view where a home may enjoy a good view of vacant land or property beyond with a reasonable expectation that the view might be partly or completely obstructed upon development of the adjoining land. He follows that with "This same concept applies to potentially undesirable views of a new development when the development conforms to applicable zoning and other regulations. Arguing value diminution in such cases is difficult, since the possible development of the offending property should have been known." In other words, if there is an allowable development on the site then arguing value diminution with such a development would be difficult. This further extends to developing the site with alternative uses that are less impactful on the view than currently allowed uses.

This gets back to the point that if a property has development rights and could currently be developed in such a way that removes the viewshed such as a residential subdivision, then a less intrusive use such as a solar farm that is easily screened by landscaping would not have a greater impact on the viewshed of any perceived value adjoining properties claim for viewshed. Essentially, if there are more impactful uses currently allowed, then how can you claim damages for a less impactful use.

7. Conclusion

On the basis of the factors described above, it is my professional opinion that the proposed solar farm will not negatively impact adjoining property values. The only category of impact of note is appearance, which is addressed through setbacks and landscaping buffers. The matched pair data supports that conclusion.

X. Conclusion

The matched pair analysis shows no negative impact in home values due to abutting or adjoining a solar farm as well as no impact to abutting or adjacent vacant residential or agricultural land. The criteria that typically correlates with downward adjustments on property values such as noise, odor, and traffic all support a finding of no impact on property value.

Very similar solar farms in very similar areas have been found by hundreds of towns and counties not to have a substantial injury to abutting or adjoining properties, and many of those findings of no impact have been upheld by appellate courts. Similar solar farms have been approved adjoining agricultural uses, schools, churches, and residential developments.

I have found no difference in the mix of adjoining uses or proximity to adjoining homes based on the size of a solar farm and I have found no significant difference in the matched pair data adjoining larger solar farms versus smaller solar farms. The data in the Southeast is consistent with the larger set of data that I have nationally.

Based on the data and analysis in this report, it is my professional opinion that the solar farm proposed at the subject property will have no negative impact on the value of adjoining or abutting property. I note that some of the positive implications of a solar farm that have been expressed by people living next to solar farms include protection from future development of residential developments or other more intrusive uses, reduced dust, odor and chemicals from former farming operations, protection from light pollution at night, it's quiet, and there is no traffic.

XI. Certification

I certify that, to the best of my knowledge and belief:

1. The statements of fact contained in this report are true and correct;

2. The reported analyses, opinions, and conclusions are limited only by the reported assumptions and limiting conditions, and are my personal, unbiased professional analyses, opinions, and conclusions;

3. I have no present or prospective interest in the property that is the subject of this report and no personal interest with respect to the parties involved;

4. I have no bias with respect to the property that is the subject of this report or to the parties involved with this assignment;

5. My engagement in this assignment was not contingent upon developing or reporting predetermined results;

6. My compensation for completing this assignment is not contingent upon the development or reporting of a predetermined value or direction in value that favors the cause of the client, the amount of the value opinion, the attainment of a stipulated result, or the occurrence of a subsequent event directly related to the intended use of the appraisal;

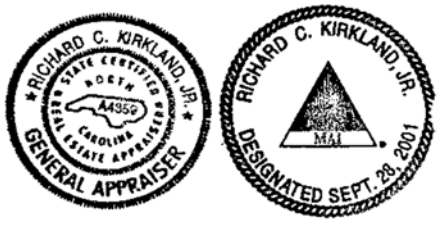
7. The reported analyses, opinions, and conclusions were developed, and this report has been prepared, in conformity with the requirements of the Code of Professional Ethics and Standards of Professional Appraisal Practice of the Appraisal Institute;

8. My analyses, opinions and conclusions were developed, and this report has been prepared, in conformity with the Uniform Standards of Professional Appraisal Practice.

9. The use of this report is subject to the requirements of the Appraisal Institute relating to review by its duly authorized representatives;

10. I have not made a personal inspection of the property that is the subject of this report, and;

11. No one provided significant real property appraisal assistance to the person signing this certification.



12. As of the date of this report I have completed the continuing education program for Designated Members of the Appraisal Institute;

13. I have not performed services, regarding the property that is the subject of this report within the three-year period immediately preceding acceptance of this assignment.

Disclosure of the contents of this appraisal report is governed by the bylaws and regulations of the Appraisal Institute and the National Association of Realtors.

Neither all nor any part of the contents of this appraisal report shall be disseminated to the public through advertising media, public relations media, news media, or any other public means of communications without the prior written consent and approval of the undersigned.

March 23, 2023

Mr. Andy Cerrato
Project Development Manager (U.S.)
Solariant Capital, LLC
301 North Lake Avenue, Suite 950
Pasadena, California 91101

Dear Andy,

This letter presents the site noise study for the Solariant Solar Energy Facility in Alachua, Florida. The purpose of this study was to determine if sounds produced on site would meet the sound level limits of the Alachua County noise ordinance. Acoustical measurements of existing ambient noise levels were recorded on site for a 6 day period of time from December 17-23, 2022; and December 28, 2022 to January 1, 2023. Short term measurements of specific acoustic events including distant aircraft flyovers, distant traffic noise, trucks driving on CR 235A (173rd Street) birds, insects, wind in the trees and other wildlife were also made during the site visits. A computer model of the solar facility with the proposed inverters was constructed and sound level contours were propagated from the facility to surrounding properties. Sound levels from the facility at all property lines are more than 10 dB less than the levels allowed by ordinance and are within the range of ambient sound levels measured on site. It was determined that sounds produced on site would meet the sound level limits of the Alachua County noise ordinance and were within the range of measured ambient sound levels on site.

SOUND LEVELS AND DECIBELS

Sound is defined as a pressure disturbance in the air caused by a vibrating body that is capable of being heard or detected by the human ear. The average sound pressure level or equivalent continuous sound level (LAeq) of a time-varying sound is defined as the level of an equivalent steady sound at a specific location for the same measurement duration that has the same A-weighted sound energy as the time-varying sound. The maximum A-weighted sound level or LAFmax is the greatest sound level measured on a sound level meter using the fast response of the sound level meter during a designated time duration and an A-weighted filter. The L10 is the fast, A-weighted sound level exceeded 10 percent of the time. Sounds are typically measured in decibels. A decibel is 10 times the logarithm to the base 10 of the pressure disturbance in the air compared to the pressure at the threshold of human hearing. Decibels cannot be added directly because they are logarithmic ratios. For example, 2 sounds of 50 decibels each added together result in a sound of 53 dB, not 100 dB. A summary of the way that sounds of different levels are added together is shown in Table 1.

Table 1. Examples of the addition of different sound levels (dBA).

Sound level 1	Sound level 2	Combined sound level	Explanation
50 dBA	50 dBA	53 dBA	When two sounds of equal level are combined, the result is a 3 dB increase in sound level
50 dBA	52 dBA	54 dBA	When one sound is combined with another sound that is 2-3 dB louder than first sound, the combined sound level is 2 dB louder than the louder sound
50 dBA	55 dBA	56 dBA	When one sound is combined with another sound that is 4-7 dB louder than the first sound, the combined sound level is 1 dB louder than the louder sound

Sound level 1	Sound level 2	Combined sound level	Explanation
50 dBA	60 dBA	60 dBA	When one sound is 10 dB louder than another, the combined sound level is approximately equal to the louder sound level

The differences in sound levels are not perceived by people linearly either. One sound must be 10 dB louder than another sound for it to be heard as approximately twice as loud as the first sound. A sound that is 0 to 1 dB louder than another sound is heard as approximately the same loudness as the first sound. A sound that is 2 to 3 dB louder than another sound is heard as barely louder than the first sound. A sound that is 5 to 6 dB louder than another sound is heard as noticeably louder, but not twice as loud as the first sound. A summary of the perception of the relative loudness of two sounds is shown in Table 2. An acoustic thermometer showing the sound levels associated with different sounds is shown in Figure 1.

The sound levels are measured in A-weighted decibels or dBA. An A-weighted decibel is one that has been adjusted so it corresponds to the relative loudness of middle level sounds as they are heard by human listeners. The low frequency or bass sounds are reduced by the A-weighting process and the higher pitch sounds that human ears are more sensitive to are increased slightly by the A-weighting process.

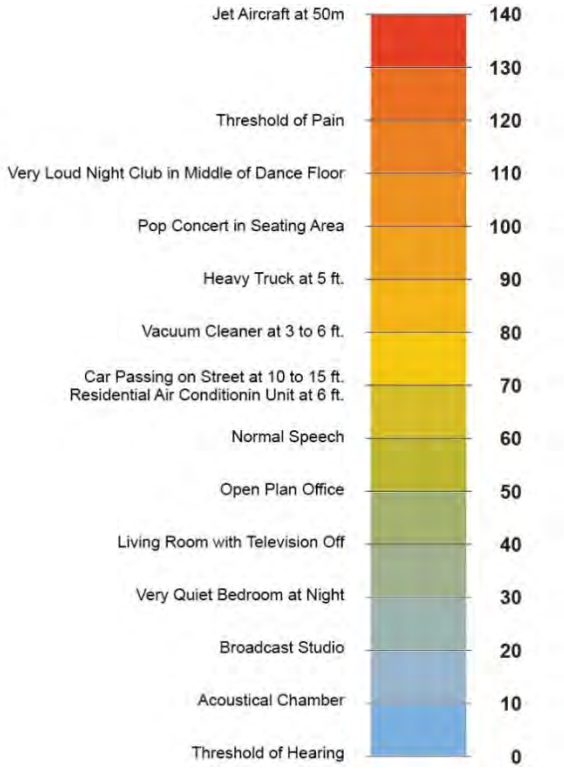

Figure 1. Acoustical thermometer showing the relative loudness of various sounds in dBA

Table 2. Perception of the relative loudness of 2 sounds.

Difference in sound level between two sounds	The louder sound is perceived as ____ the quieter sound
0 to 1 dB	Almost the same as
2-3 dB	Barely louder than
5-6 dB	Noticeably louder than, but not twice as loud as
10-12 dB	Approximately twice as loud as
15 dB	Approximately three times as loud as
20 dB	Approximately four times as loud as

In general terms, sound levels of 30 to 40 dBA are usually perceived by people as being relatively quiet. Normal conversation measured at approximately 3 feet from the person speaking is 60 to 65 dBA. Cars passing on a street, a washing machine, coffee grander, or a residential air-conditioning unit are approximately 65 to 75 dBA. Loud night clubs, machinery in a factory and amplified music at concerts are often played at levels of 100 to 110 dBA.

METHOD

The method for the Site Noise Study consisted of the items listed below.

I. Take long-term sound level measurements at 4 locations on site to document the range of sound levels that occur over a 6 day period of time.

II. Take short-term sound level measurements at 8 locations on the site to help establish design criteria for the project.

III. Construct a 3-dimensional computer model of the site and the proposed Solariant solar energy facility to determine sound levels at surrounding properties based on sound pressure level data received from the manufacturer for the inverters.

IV. Produce noise contours for the site showing anticipated sound levels on the site and propagated into the surrounding areas to determine if sound levels from the facility comply with the applicable noise ordinance.

CRITERIA

Alachua County Noise Ordinance:

The Alachua County Code of Ordinances Chapter 110. – Noise Control, Section 110.04 *Noise generated across real property lines* states that "noise from any activity or from any permissible use of property within the applicable zoning district classifications of Alachua County shall be deemed to be excessive, unnecessary, offensive and unusually loud if the total noise level as measured on the A-scale due to both ambient noise, and the alleged source of the unnecessary, offensive or excessive noise, exceeds the noise levels which are in prescribed in Table I, the measurement of which is based upon decibels, i.e. 0.0002 microbar. All such measurements as well as the method employed shall be consistent with the regulations of the American National Standards Institute, Inc., and shall represent the A-weighted sound pressure level which is exceeded ten percent of the time (L10) during the observation period". According to section 110.04 Table 1, the sound level limits are 60 dBA Daytime, 55 dBA Nighttime for Residential Occupancies.

Daytime as defined in the Noise Ordinance "the hours between 7:00 a.m. and 9:00 p.m. of the same day."

The hours of operation when the solar panels and inverters will be active for the proposed solar energy facility are proposed to be from sunrise to sunset.

INSTRUMENTATION

Short Term Measurements of Specific Acoustic Events

A Larson Davis Model 831 Sound Level Meter, which meets ANSI S1.4 requirements for type 1 sound level meters was used to record the overall A-weighted average sound levels as well as flat-weighted 1/1 and 1/3 octave band levels at the site for specific acoustic events. The meter was calibrated with a Larson Davis CAL 200 calibrator prior to and after testing and found to be within 0.1 dB of the initial calibration after testing. The microphone was held approximately 5' - 6' above the ground. A windscreen was attached to the microphone for all measurements. Qualitative observations of the type and character of sounds were noted by the Consultants during the measurement process. A tabular summary of A-weighted sound levels recorded at each location with qualitative descriptions of specific acoustic events are included in Appendix B.

Long Term Measurements of Average Sound Levels on the Solariant Alachua Solar Site

Long term measurements of average sound levels on the site and near adjacent properties were made with one Rion NL-52 and 3 Svantek SV-307A integrating sound level meters. The Rion equipment meets ANSI requirements for type I sound level meters. The meter was set to the fast, A-weighted mode to acquire data. The equipment was calibrated with a Larson Davis Cal 200 calibrator prior to and after testing. The calibration level was within ±0.1 dB from the beginning of the measurement period to the end. The microphones were covered with wind screens.

The Svantek SV307A meters meet the IEC 61672-1:2013 for Class I sound level meters. The meters recorded the overall A-weighted average sound levels as well as flat-weighted 1/1 and 1/3 octave band levels at the site for the existing ambient sound levels. The Svantek SV 307A meters are internally calibrated before and after each use. The microphones were mounted approximately 5' - 6' above the ground and chained to trees at each location. A windscreen was attached to each microphone for all measurements.

The Rion NL-52 was strapped to a tree on the east side of the property and placed approximately at the same distance from the County Road 235A (NW 173rd Street) at approximately the same distance from the road as the residence across the street is from the road to the east at approximately 5.5 ft. above grade.

Svantek 205 (Green) was strapped to a tree approximately 450 ft. from the western boundary of the site at approximately 5.5 ft above grade.

Svantek 203 (Blue) was strapped to a tree off the entry road to the site off CR 2054 (Peggy Road) approximately 800 ft north of CR 2054.

Svantek 204 (Red) was strapped to a tree along the border between the woods and the farm field approximately 450 ft. south of NW 138th Avenue near the north side of the site.

The meters were placed in secure weather proof boxes to record sound levels for approximately 6 days each.

Sound levels at Svantek 205 (Green) varied between 28 and 52 dBA with several excursions each day to 55 to 61 dBA. The Day-Night Average sound levels varied between 42 and 52 dBA at this location.

Sound levels at Svantek 203 (Blue) varied between 30 and 60 dBA with several excursions to 60 dBA and higher. The higher sound levels are likely farm equipment passing in the vicinity of the sound level meter.

The Day-Night Average sound levels varied between 48 and 58 dBA at this location.

Sound levels at Svantek 204 (Red) near 138th Street varied between 31 and 60 dBA with several excursions to 60 dBA and higher. The Day-Night Average sound levels varied between 51 and 60 dBA at this location.

Sound levels at Rion 8 off CR 235A varied between 35 and 63 dBA with several excursions to 65 dBA and higher. The Day-Night Average sound levels varied between 58 and 62 dBA at this location. The variation in LDN's is smaller at this location than at the other measurement locations because the sounds are dominated by traffic and trucks driving on CR 235A. The traffic is fairly constant during the day.

There is a larger variation in sound levels and LDN's at the other measurement locations because the quieter levels occur when there is little activity near the measurement location. The higher sound levels occur when there is more activity such as agricultural activities on the property and traffic on the nearby roads.

Figure 2. Site map with short and long term measurement locations shown. Long term measurement locations are shown with yellow dots, short term measurement locations are shown with blue dots.

Short term measurements were made at the same locations as the long term measurements and in 4 additional locations: one on each side of the existing substation across the NW 138th Avenue from the project site.

Short term sound levels of 33 to 43 dBA of insects, a light breeze blowing through the trees and distant cars were measured at R4 or Svantek 205 Green on the west side of the site.

Short term sound levels of 43 to 59 dBA were measured at R8 near CR 235A of light traffic on the road with a truck approaching and passing, insects, and crows cawing.

Short term sound levels of a farm truck idling, light traffic on Peggy Road, insects and crows were measured at 39 to 55 dBA at Svantek 203 (Blue) location on the ingress road ot the site off Peggy Road.

Short term sound levels varied between 36 and 55 dBA at Svantek 204 Red near 173rd Street.

Sound levels at the 4 locations around the existing Substation varied between 45 and 57 dBA increasing to 68 dBA when cars pass by the Substation.

COMPUTER MODEL STUDY

A three-dimensional computer model was constructed using AutoCAD software of the proposed location of the site, surrounding properties and buildings near the project site; and the land area that extends approximately 2000 to 2500 feet from the approximate property line of the site in all directions.

The AutoCAD model was imported into Cadna-A software which is a state-of-the-art noise propagation modeling software. The computer sound propagation model was used to calculate the sound levels from the proposed inverters to the property lines on all sides of the solar energy facility in accordance with ISO 9613. The solar panels were also included in the computer model. Octave band sound pressure level data measured for similar inverters were calibrated to the overall sound pressure level data received from the Client for the proposed Ninja inverters and used as the sound source data in the model. Table 3 lists the sound sources included in the acoustical model.

Table 3. Sound sources included in the acoustical model.

Sources	Type	dBA	Octave Band Sound Data Used							
			63	125	250	500	1000	2000	4000	8000
Ninja Inverters with retrofitted sound reducing hoods										
Front (Long side)	SPL @ 1m.	**90**	96	97	86	86	82	80	83	84
Rear		**84**	90	91	80	80	76	74	77	78
Right Side		**81**	86	87	76	76	73	71	73	75
Left Side		**75**	80	81	70	70	67	65	67	69
Substation										
Substation	SPL @ 30 ft.	**45**	50	53	40	43	38	35	36	30

RESULTS

1. A computer model that included the Ninja Inverters with the sound reducing hoods demonstrated that off-site sound levels from the proposed solar plant facility are below the sound level limits of the Alachua County Noise Ordinance and is within the range of the existing ambient sound levels measured on the site.

2. The model shows that the sounds from the inverters with the sound reducing hoods will be approximately <40 to 50 dBA at the property line on the north side of the site, 42 to 53 dBA on the east, 42 to 47 dBA on the south and <40 to 47 dBA on the western property line.

3. The sounds from the inverters do not cause excessive and unnecessary noise at adjacent properties, because the sound levels of the operation of the inverters falls in the range of the existing ambient sound levels measured on site.

4. The noise study shows that the facility will comply with the Alachua County Noise Ordinance when the Ninja Inverters with sound reducing hoods are used.

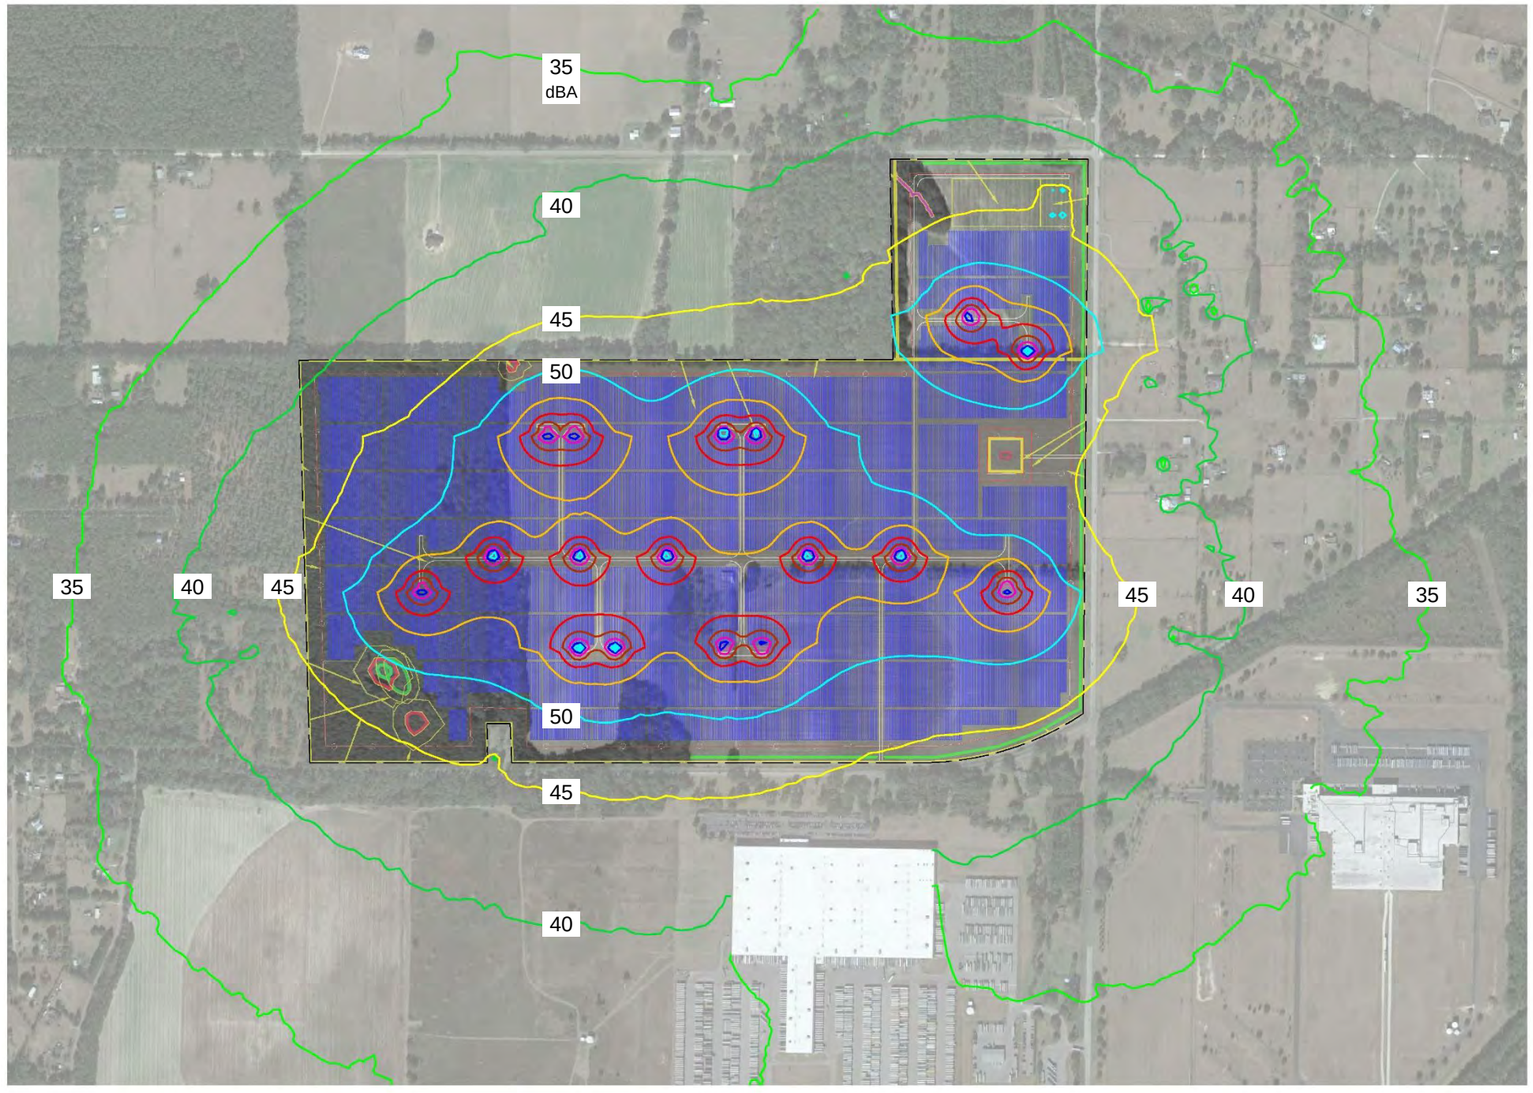

Figure 3. Aerial map overlaid with the resulting sound levels from the proposed solar project with skids retrofitted with sound reducing hoods. Sound levels from the proposed substation are also included.

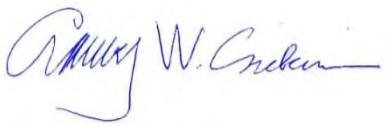
CONCLUSIONS

The proposed solar facility has a site design that is carefully planned from an acoustical point-of-view with adequate distance to allow sound reduction to levels that are within the range of the existing ambient sound levels at all property lines. The computer model study indicates that the proposed solar plant facility produced significantly less sound than the sound level limits in the Alachua County noise ordinances allows when the Ninja Inverters with retrofitted sound reducing hoods are used.

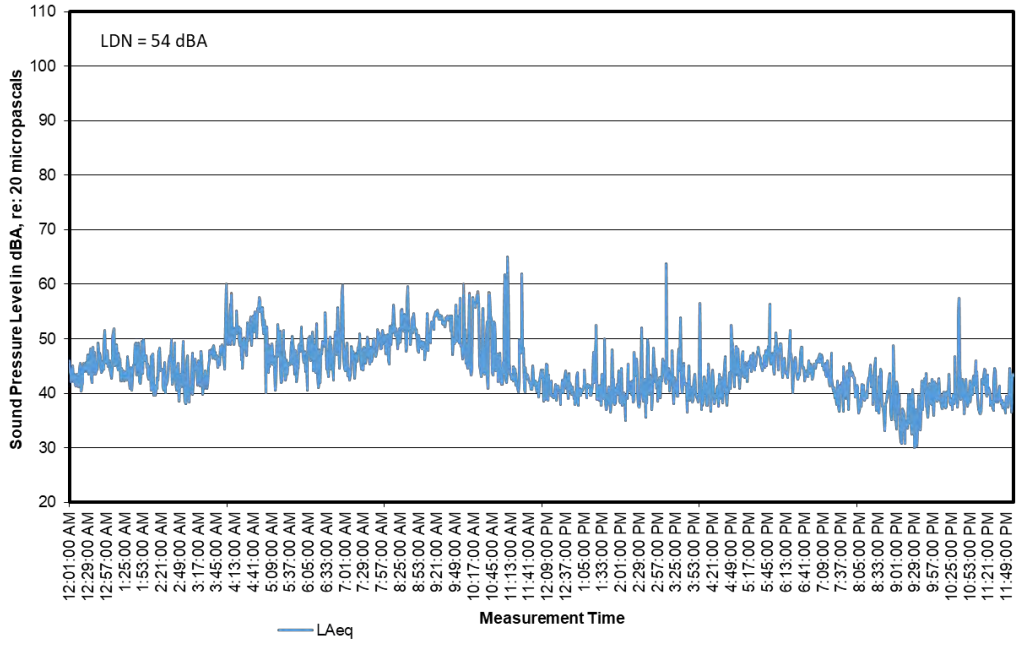


1. The computer model analysis shows that the sound level limit of 60 dBA is met at all surrounding properties with the Ninja Inverters with retrofitted sound reducing hoods running.

2. Ambient sound levels varied between 28 to 60 dBA with brief excursions to over 60 dBA during daylight hours. Higher levels were measured near County Road 235A and were dominated by traffic on the road. Lower levels of 30 to 50 dBA increasing to 60 dBA and higher when birds were chirping, insects were active or breezes were blowing through the trees were measured at locations away from the road with intermittent agricultural activities on site, the breeze in the trees, insects, birds and traffic on distant roads comprising the background sounds.

3. Sound levels with the Ninja Inverters with retrofitted sound reducing hoods running are estimated to be approximately <40 to 53 dBA at all property lines. These levels are 2 to 15 dBA or more lower than the nighttime sound level limits in noise ordinance and are within the range of the existing ambient sound levels measured on site.

Please do not hesitate to contact us if you have any questions in this regard.



Sincerely,
SIEBEIN ASSOCIATES, INC.

1.0 Introduction

1.1 Project Description and Location

TRC Environmental Corporation (TRC), was contracted by Solariant Capital, LLC (Solariant) to conduct a wetland and waterbody delineation for its Pleasant Solar Project (Project) site located southwest of the City of Alachua in Alachua County, Florida. The Project is situated north of Peggy Road, west of NW 173rd Street, and north and south of NW 138th Avenue and consists of three parcels totaling 325.6 acres, which are identified in Table 1 below. Two of the parcels are proposed for the solar facility and substation and lie within the limits of the City of Alachua. The third parcel is near the proposed point of interconnect (POI) to the existing electrical grid and is within unincorporated Alachua County. Solariant is proposing to construct a 74.9MW utility scale solar facility which will tie into Duke Energy Florida's (Duke) existing 69 kV line. The southern two parcels are currently being used for agricultural purposes. A site location map (Figure 1), United States Geological Survey (USGS) topo quadrangle map (Figure 2), and aerial map (Figure 3) are included in Appendix A to depict the location of the Project site.

Table 1: Pleasant Solar Project Site Parcels

Proposed Project Facility	Lot #	Parcel Owner	Acres
Solar Facility	3894	Waco Properties Inc.	285.3
Solar Facility	3898	Alspaugh Brown Trustee	35.34
Existing Substation	3897	Clay Electric	4.95
		Total	**325.59**

1.2 Project Purpose

The purpose of this wetland and waterway delineation was to map all wetlands and surface waters (rivers, streams, ponds, lakes, etc.) regardless of jurisdictional status within the Project Site. Documentation of the wetland and waterway features will be used for design and avoidance purposes, and the description of jurisdictional areas lends itself towards assessing regulated buffers and implementing setbacks. Specific tasks performed include a field delineation of all potential state and federal jurisdictional areas within the Site, a subsequent mapping survey of jurisdictional area boundaries utilizing a handheld Global Positioning System (GPS) with sub-meter accuracy, and a detailed description of jurisdictional areas based on hydrology, vegetation, and soils data collected in the field. All features documented during the site visit are included in this report.

2.0 Regulatory Authorities

2.1 Waters of the United States

As defined by the United States Army Corps of Engineers (USACE), Waters of the United States (WOTUS) include all lakes, ponds, streams (intermittent and perennial), and wetlands regulated under Sections 401 and 404 of the Clean Water Act. Wetlands are defined as "Those

areas that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions" (40CFR 230.3). In order for an area to be classified as wetland, hydrophytic vegetation, hydric soils, and wetland hydrology indicators must be present.

The USACE also regulates navigable waters under Section 10 of the Rivers and Harbor Act (33 U.S.C. 401 et seq.). Permits are required by the USACE for activities that involve construction of any structure in or over any jurisdictional WOTUS, as well as any proposed action that would alter or disturb these waters such as excavation/dredging or deposition of materials.

On January 23, 2020, the U.S. Environmental Protection Agency (EPA) and the U.S. Army Corps of Engineers (USACE) finalized the Navigable Waters Protection Rule (NWPR) to define "waters of the United States" (WOTUS), which are protected under the Clean Water Act. This rule outlines four clear categories of waters that are considered WOTUS and 11 categories that are not WOTUS. Table 1 below summarizes the resources that are included and excluded from the definition of WOTUS.

Table 2. Jurisdictional Waters of the U.S. as Defined in the Navigable Waters Protection Rule
Jurisdictional WOTUS Includes:
Territorial seas and traditional navigable waters (TNWs)
Tributaries, which include perennial and intermittent rivers and streams that contribute surface flow to traditional navigable waters in a typical year;
Lakes, ponds, and impoundments of jurisdictional waters where they contribute surface water flow to a TNW a typical year either directly or through other "waters of the United States," through channelized non-jurisdictional surface waters, through artificial features (including culverts and spillways), or through natural features (including debris piles and boulder fields).
Adjacent wetlands • Wetlands that physically touch other jurisdictional waters are "adjacent wetlands," such as Horicon Marsh along the Rock River in Wisconsin. • Wetlands separated from a "water of the United States" by only a natural berm, bank or dune are also "adjacent." • Wetlands inundated by flooding from a "water of the United States" in a typical year are "adjacent." • Wetlands that are physically separated from a jurisdictional water by an artificial dike, barrier, or similar artificial structure are "adjacent" so long as that structure allows for a direct hydrologic surface connection between the wetlands and the jurisdictional water in a typical year, such as through a culvert, flood or tide gate, pump, or similar artificial feature. • An adjacent wetland is jurisdictional in its entirety when a road or similar artificial structure divides the wetland, as long as the structure allows for a direct hydrologic surface connection through or over that structure in a typical year.
Non-jurisdictional Waters
Groundwater, including groundwater drained through subsurface drainage systems, such as drains in agricultural lands.
Ephemeral features that flow only in direct response to precipitation, including ephemeral streams, swales, gullies, rills, and pools.
Diffuse stormwater runoff and directional sheet flow over upland.
Ditches that are not traditional navigable waters, tributaries, or that are not constructed in adjacent wetlands, subject to certain limitations.
Prior converted cropland
Artificially irrigated areas that would revert to upland if artificial irrigation ceases.
Artificial lakes and ponds that are not jurisdictional impoundments and that are constructed or excavated in upland or non-jurisdictional waters.
Water-filled depressions constructed or excavated in upland or in non-jurisdictional waters incidental to mining or construction activity, and pits excavated in upland or in non-jurisdictional waters for the purpose of obtaining fill, sand, or gravel.
Stormwater control features constructed or excavated in upland or in non-jurisdictional waters to convey, treat, infiltrate, or store stormwater run-off.
Groundwater recharge, water reuse, and wastewater recycling structures constructed or excavated in upland or in non-jurisdictional waters.
Waste treatment systems
Source: 2018 Clean Water Rule (Federal Register/ Volume 80, No. 124)

2.2 Florida Wetland and Stream Regulations

The definition of regulated wetlands in Florida, defined in Section 373.019(27) Florida Statutes (FS), and subsection 62-340.200(19), Florida Administrative Code (FAC), is similar to the federal definition, except that Florida wetlands generally do not include longleaf or slash pine flatwoods with an understory dominated by saw palmetto (F.S., 2018). Waters of the state are defined in Section 373.414, F.S, and subsection 62-340.200 (2) and shall be the more landward of the following:

- Wetlands as defined by Rule 62-340.300, F.A.C.
- The mean high-water line elevation for tidal water bodies
- The ordinary high-water line for non-tidal natural water bodies
- The top of the bank for artificial lakes, borrow pits, canals, ditches, and other artificial waterbodies with side slopes of 1 foot vertical to 4 feet horizontal or steeper, excluding spoil banks when the canals and ditches have resulted from excavation into the ground, or
- The seasonal high-water line for artificial lakes, borrow pits, canals, ditches, and other artificial water bodies with side slopes flatter than 1 foot vertical to 4 feet horizontal along with any artificial water body created by diking or impoundment above the ground.

Development activities in Florida state wetlands and surface waters are regulated under Chapter 62-330 FAC, which is principally administered by the Florida Department of Environmental Protection (FDEP) through the Environmental Resource Permit (ERP) process. An ERP permit is required for impacts to wetlands and waters as well as for development of stormwater management systems in Florida.

3.0 Project Setting

3.1 Resources

A number of resources were reviewed and utilized in support of the delineation, including USGS topographic mapping (1983 State Plane High Springs Florida Quadrangle) (USGS, 2010) (Figure 2, Appendix A), National Wetlands Inventory (NWI) mapping (USFWS, 2022) (Figure 6, Appendix A), United States Department of Agriculture (USDA) Natural Resources Conservation Service (NRCS), Alachua County Soil Survey (USDA, NRCS, 198), USDA NRCS Web Soil Survey (USDA, NRCS, 2022) (Figure 4, Appendix A), the NRCS hydric soil list (USDA, NRCS, 2018), the USGS National Hydrography Dataset (NHD) (USGS, 2017a), recent aerial photography (Google Earth, 2022), and Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) number 12057C0332J, (FEMA, 2020) (Figure 5, Appendix A).

3.2 Physiographic and Ecological Region

The Project is located within the Southern Coastal Plain Major Land Resource Area (MLRA) physiographic region, within the South Atlantic and Gulf Slope Cash Crops, Forest, and Livestock Region of the Coastal Plain Province of the Atlantic Plain. This MLRA consists of generally smooth Atlantic and Gulf Coast marine terraces and the hilly piedmont area. Elevation ranges from 80 to 655 feet, on the coastal plain and from 20 to 200 feet in the piedmont. The average

annual precipitation for this area is about 44 to 63 inches. The precipitation falls almost entirely as rainfall during frontal storms in late fall, winter, and early spring; as rainfall occurring as convective storms during the growing season; and as heavy rainfall produced by tropical storms. (USDA, NRCS 2006)

The geologic material in this area consists of very thick deposits of sandy to clayey marine sediments on the coastal plain and Precambrian and Paleozoic metamorphic and igneous rocks in the piedmont. Abundant moisture and a long growing season favor agricultural production in this region. If crops are to be grown, artificial drainage typically is needed to lower the water table on the lower marine terraces. (USDA, NRCS, 2006)

About 97 percent of the land in the Southern Coastal Plain is privately owned. The native vegetation consists of oak-pine forests. The diverse array of crops includes cotton, soybeans, peanuts, corn, rice, sugarcane, and wheat. (USDA, NRCS, 2006)

3.3 Soils

Soil survey maps prepared by the USDA NRCS were reviewed prior to conducting the delineation fieldwork to determine the extent of mapped hydric soils within the Project site. Nine soil types occur within the Project site: Arredondo fine sand 0 to 5 percent slopes, Fort Meade fine sand, Millhopper sand, Lochloosa fine sand, Kendrick sand, Gainesville sand, Lake fine sand, Arredondo fine sand 5 to 8 percent slopes, and Bivans sand. According to the National List of Hydric Soils prepared by the USDA NRCS (2018), none of the soil types mapped within the Project Site are classified as predominantly hydric (i.e., greater than 90 percent hydric). Figure 4 (Appendix A) depict the soil types within the Project limits. Descriptions of all the mapped soils occurring on the Project site are provided in Table 2 below.

Table 3. Soils Mapped on the Project Site

Map Unit Symbol	Mapped Unit Name	Drainage Class	Prime Farmland	Percent Hydric	On-Site Acres
3	Arredondo fine sand, 0 to 5 percent slopes	Well drained	Not prime farmland	0	172.09
5	Fort Meade fine sand, 0 to 5 percent slopes	Well drained	Not prime farmland	0	45.90
8	Millhopper sand, 0 to 5 percent slopes	Moderately well drained	Not prime farmland	1	20.35
29	Lochloosa fine sand, 2 to 5 percent slopes	Somewhat poorly drained	Not prime farmland	0	8.09
30	Kendrick sand, 2 to 5 percent slopes	Well drained	Not prime farmland	0	23.85
35	Gainesville sand, 0 to 5 percent slopes	Well drained	Not prime farmland	0	34.84
58	Lake fine sand, 0 to 5 percent slopes	Excessively drained	Not prime farmland	0	0.87
69	Arredondo fine sand, 5 to 8 percent slopes	Well drained	Not prime farmland	0	16.38

Map Unit Symbol	Mapped Unit Name	Drainage Class	Prime Farmland	Percent Hydric	On-Site Acres
76	Bivans sand, 5 to 8 percent slopes	Poorly drained	Not prime farmland	20	3.22
				Total	**325.59**
Source: USDA, NRCS, 2022					

The **Arredondo fine sand, 0 to 5 percent slopes (3)** series consists of nearly level to gently sloping, well drained soils. that formed from sandy and loamy marine sediments. Slopes are smooth to convex, and these soils tend to occur in areas which are irregular in size and range from 10 to 160 acres. Limestone boulders, fragments of limestone, and sinkholes are in some areas of this soil, mainly in the limestone plain sections of the western part of the county. Organic matter content is low, and the water table is at a depth of more than 72 inches. (USDA, NRCS, 1982; USDA, 2018).

The **Fort Meade fine sand (5)** series consists of very deep, well drained, rapidly permeable soils that formed in moderately thick beds of loamy sand on gently rolling uplands of the lower Coastal Plain. Included with this soil in mapping are small areas of Arredondo, Gainesville, Kendrick, and Millhopper soils. The available water capacity is low to medium, and the permeability is rapid. The natural fertility is low, and the water table is at a depth of more than 72 inches. (USDA, NRCS, 1982; USDA, 2013).

The **Millhopper sand (8)** consists of very deep, moderately well drained, moderately permeable soils that formed in thick beds of sandy and loamy marine sediments. They occur on slightly rolling knolls in the broad flatwoods of central and southern Florida. Slopes range from 0 to 8 percent and are slightly convex. This soil has severe limitations for most cultivated crops. The water table is at a depth of 40 to 60 inches for 1 to 4 months and at a depth of 60 to 72 inches for 2 to 4 months during most years. (USDA, NRCS, 1982; USDA, 2018).

The **Lochloosa fine sand (29)** consists of somewhat poorly drained, slowly permeable soils formed in thick beds of sandy and loamy marine sediments in central Florida. Slopes range from 0 to 8 percent. These soils have moderate limitations for most cultivated crops. The water table is at a depth of 30 to 40 inches for 1 to 4 months during most years and rises to a depth of 20 to 30 inches for 1 to 3 weeks. (USDA, NRCS, 1982; USDA, 2001).

The **Kendrick sand (30)** consists of well drained, slowly to moderately slowly permeable soils formed in thick beds of loamy marine sediments on nearly level to sloping areas in the Coastal Plain. Slopes range from 0 to 8 percent. Sinkholes and limestone boulders occur in some areas. This soil has moderate limitations for cultivated crops because of the hazard of erosion. The water table is more than 72 inches below the surface. (USDA, NRCS, 1982; USDA, 2018).

The **Gainesville sand (35)** consists of well drained, rapidly permeable soils formed in thick beds of sandy marine deposits. They are on nearly level to strongly sloping uplands in the lower Coastal Plain. Slopes range from 0 to 15 percent. Sinkholes and limestone boulders occur in some areas. This soil has moderate limitations for cultivated crops because of the hazard of erosion. The water table is more than 72 inches below the surface. (USDA, NRCS, 1982; USDA, 2018).

The **Lake fine sand (58)** consists of excessively drained, rapidly to very rapidly permeable soils formed in thick beds of sand. They are on nearly level to steep slopes in central Florida. Slopes range from 0 to 30 percent. This soil has very severe limitations for cultivated crops and moderately well suited to improved pasture. The water table is more than 72 inches below the surface. (USDA, NRCS, 1982; USDA, 2018).

The **Arredondo fine sand, 5 to 8 percent slope (69)** series consists of nearly level to gently sloping, well drained soils, that formed from sandy and loamy marine sediments. Slopes are smooth to convex, and these soils tend to occur in areas which are irregular in size and range from 10 to 160 acres. Limestone boulders, fragments of limestone, and sinkholes are in some areas of this soil, mainly in the limestone plain sections of the western part of the county. Organic matter content is low, and the water table is at a depth of more than 72 inches. (USDA, NRCS, 1982; USDA, 2018).

The **Bivans sand (76)** series consists of very deep, poorly drained, slowly or very slowly permeable soils on the rolling uplands of central Florida. They formed in thick beds of clayey and sandy marine sediments in central Florida. Near the type location, the mean annual precipitation is about 55 inches. Slopes range from 0 to 12 percent. (USDA, NRCS, 1982; USDA, 2019).

3.4 Topography and Hydrology

The elevation on site ranges from 75 to 100 feet above sea level (USGS 7.5-minute quad maps: High Springs Florida) (USGS, 1983).

The site is located in the Waccasassa watershed (Hydrologic Unit Code 8 [HUC] 03110101) (FDEP, 2021).

The NWI map (USFWS, 2020) identified two wetlands within the project site: two Palustrine Emergent Wetlands (PEM). The NWI wetlands are depicted on Figure 6 (Appendix A).

According to the FEMA FIRM, the project site is outside of a 100-year floodplain (FEMA, 2018).

4.0 Land Use and Vegetation Communities

A team of TRC ecologists conducted a field evaluation of the site from May 25 to May 27, 2022. As part of this evaluation, TRC characterized and mapped the land cover and vegetation communities on the site using the Florida Land Use Cover and Forms and Classification System (FLUCFCS) (FDOT, 1999). The land cover types delineated by TRC on the site are shown on Figure 5 and listed in Table 3.

Table 4. Field Verified Land Use and Vegetation Communities on the Project Site

FLUCFCS ID	Description	Acres	Percent of Site
1110	Low Density Fixed Single Family Units	0.40	0.12
2140	Row Crops	124.02	38.09
2153	Hay Fields	84.51	25.96

FLUCFCS ID	Description	Acres	Percent of Site
2600	Other Open Lands (Rural)	5.28	1.62
2610	Fallow Cropland	16.6	5.10
4140	Pine-Mesic Oak	0.94	0.29
4200	Upland Hardwood Forests	89.83	27.59
8315	Electrical Power Substations	3.82	1.17
8320	Electrical Power Transmission Lines	0.19	0.06
	Total	325.59	

Nine land cover types were identified on the site: low density fixed single family units, row crops, hay fields, other open lands (rural), fallow cropland, pine-mesic oak, upland hardwood forests, electrical power substations, and electrical power transmission lines. Descriptions of each community type are provided below.

1110- Low Density Fixed Single Family Units
Approximately 0.40 acres (0.12 percent) of the Site consists of low density fixed single family units.

2140- Row Crops
Approximately 124.02 acres (38.09 percent) of the Site consists of row crops. These areas appear to have been planted with corn which had been recently harvested.

2153- Hay Fields
Approximately 84.51 acres (25.96 percent) of the Site is newly planted hay fields.

2600 – Other Open Lands (Rural)
Approximately 5.28 acres (1.62 percent) of the site consists of other open lands used for agricultural purposes. There is a large barn, pump house, and diesel tank within this area.

2610- Fallow Cropland
Approximately 16.6 acres (5.10 percent) of the Site consists of fallow cropland. This area has been taken over by weeds.

4140- Pine-Mesic Oak
Approximately 0.94 acres (0.29 percent) of the Site is pine-mesic oak forest consisting primarily of Slash pine (*Pinus elliottii*), Laurel oak (*Quercus laurifolia*), water oak (*Quercus nigra*), live oak (*Quercus virginiana*), hickories (*Carya spp.*), dog fennel (*Eupatorium capillifolium*) and greenbriers (*Smilax spp.*).

4200- Upland Hardwood Forests
Approximately 89.83 acres (27.59 percent) of the Site is upland hardwood forests consisting primarily of black cherry (*Prunus serotina*), Darlington's oak (*Quercus hemisphaerica*), laurel oak (*Quercus laurifolia*), water oak (*Quercus nigra*), live oak (*Quercus virginiana*), sweetgum (*Liquidambar styraciflua*), hickories (*Carya spp.*), American beauty berry (*Callicarpa*

americana), saw greenbrier (*Smilax bona-nox*), and Virginia creeper (*Parthenocissus quinquefolia*).

8315- Electrical Power Substations

Approximately 3.82 acres (1.17 percent) of the site is an existing electrical power substation. The substation is owned by Clay Electric Cooperative and is located on the northern Project parcel.

8320- Electrical Power Transmission Lines

The Project site contains about 0.19 acres (0.06 percent) of electrical power transmission lines. These are located on the northern Project parcel owned by Clay Electric Cooperative.

5.0 Methodology

TRC wetland ecologists conducted field investigations on the site from May 25 to May 27, 2022, to identify wetlands, waterbodies, and other surface waters. The methodology used in wetlands and streams are described in the following sections.

5.1 Wetland Delineation

Surveys were performed in accordance with criteria set forth in the USACE 1987 Wetlands Delineation Manual (USACE, 1987) and the 2010 Regional Supplement to the Corps of Engineers Wetland Delineation Manual: Atlantic and Gulf Coastal Plain Region (Version 2.0) (USACE, 2010). Data were collected at sample plots in each delineated wetland and were recorded on USACE Routine Wetland Determination forms (Appendix B). Following the delineation of each waterway and wetland, boundary flags and wetland and upland data points were collected and mapped using a Geode GNSS receiver with sub-meter accuracy paired with a Samsung Galaxy Tab E tablet. These points were then connected by GIS staff to generate lines and polygons of the delineated features. The features were added as layers onto projected Esri basemaps (topographic and aerial imagery) to create maps used to illustrate the location and size of the delineated wetlands and waterways. These maps are incorporated into the wetland delineation report and may be used in future agency consultations, permit applications and plans.

Hydrophytic vegetation was assessed by identifying plant species and their assigned wetland indicator rating of obligate, facultative wet, facultative, facultative upland, and upland according to the 2018 National Wetland Plant List (USACE, 2018). Vegetation in both upland and wetland communities was characterized using the areal dominance method, with a radius of 30-feet around the soil sample location for trees, 15-feet radius for saplings and shrubs, and 5 feet for herbaceous plants.

Hydric soil indicators were determined according to the USDA NRCS (2018) Field Indicators of Hydric Soils in the U.S., using soil characteristics such as color matrix, hue, evidence of redox features which may include indicators such as saturation, gleyed matrix, mottling, hydrogen sulfide odor, and organic/peat layers present. Soil test pits were dug using a shovel to a depth of approximately 20-inches or refusal due the presence of hard pan layer, rock, or hard fill materials. Soil color was described using the Munsell Color book (Munsell Color, 2010), texture using USDA hand-texture methods and the presence/absence of redoximorphic features, including depletions and concentrations, was recorded.

Hydrology was determined based on a number of indicators that are divided into two categories, primary and secondary. The USACE manual (USACE, 1987) and Atlantic and Gulf Coastal Plain Regional Supplement (USACE, 2010) defines hydrology as present when at least one primary indicator or two secondary indicators are identified. One primary indicator is sufficient to determine if hydrology is present; however, if these are absent then two or more of the secondary indicators are required to determine hydrology. If other probable hydrology evidence was found, then this was subsequently documented on the data sheet. Representative photographs were taken of each delineated wetland community and are included in Appendix E with the USACE upland and wetland data sheets.

5.2 Waterbody Delineation

Waterbodies including streams, channels, drainageways, and ponds identified during field surveys were delineated and characterized. The centerline of streams and channels and outer limits of ponds were delineated and located with a Geode GNSS receiver with sub-meter accuracy paired with a Samsung Galaxy Tab E tablet. Streams and other surface waters were characterized by standard measurements such as bank height and stability, channel width and substrate, and direction/presence of water flow.

6.0 Results

6.1 Wetlands

Approximately 0.158 acres of wetlands were delineated and assessed within the northernmost and southernmost parcels of the Project site, as shown on Figure 7 in Appendix A. Table 4 below summarizes the wetland acreages by wetland types. The PSS wetland is an isolated depression within a sinkhole located in the upland hardwoods forest. The PEM wetland is an isolated swale located adjacent to the existing substation. The PSS wetland is associated with an NWI mapped wetland (PEM1F). Of the 0.158 acre of wetlands, 0.12 acre (0.04 percent) are scrub/shrub, and 0.038 acre (0.01 percent) are herbaceous.

Table 5: Wetlands Delineated on the Project Site

Wetland Type	Acreage	Percentage of Wetland Type in Project Area
PSS	0.12 acres	0.04%
PEM	0.038 acres	0.01%
Total	**0.158 acres**	

Wetland Type: PEM= Palustrine emergent wetland, PSS = Palustrine scrub/shrub wetland, PFO = Palustrine forested wetland, PUB= Palustrine unconsolidated bottom (Cowardin, 1979).

Common shrub species in the wetlands include Carolina willow (*Salix caroliniana*), Sweet bay (*Magnolia virginiana*), and cabbage palm (*Sabal palmetto*). Common herbaceous species within the PEM wetland include southern water grass (*Luziola fluitans*), common spike-rush (*Eleocharis palustris*) and Herb-of-Grace (*Bacopa monnieri*).

Typical primary hydrologic indictors observed in the wetlands include the presence of surface water, soil saturation, and inundation visible on aerial imagery. Commonly observed secondary indicators include drainage patterns, geomorphic position, and saturation visible on aerial imagery. The most common hydric soil indicator is depleted matrix.

Common tree species observed in the uplands include black cherry and Darlington's oak. Cabbage palm is the common shrub species in the forested uplands. American beauty berry, ebony spleenwort (*Asplenium platyneuron*), and English ivy (*Hedera helix*) are the common herbaceous species in the forested uplands. Virginia creeper and saw greenbrier was the dominant vine species observed in the uplands. Bahia grass (*Paspalum notatum*) and vasey grass (*Paspalum urvillei*) are the common herbaceous species observed in the non-forested uplands.

6.2 Waterbodies

TRC identified one non-jurisdictional drainage ditch within the upland hardwoods on the middle parcel. No streams or ponds were observed during the Project Site visit.

7.0 Summary and Recommendations

TRC ecologists conducted a wetland and waterbody delineation from May 25 to 27, 2022. During the site visit, TRC delineated two wetlands: a 0.12-acre PSS wetland and a 0.038-acre PEM wetland. TRC also delineated one non-jurisdictional drainage ditch. Non-jurisdictional drainage ditches are not regulated by the USACE or state of Florida and can be impacted with no permit or mitigation required. TRC recommends Solariant avoid all impacts to wetlands, wherever possible. If wetland impacts are unavoidable, a permit will be required. It is TRC's opinion that the wetlands on the Project site are not federally jurisdictional so a permit should not be needed from the USACE. Development activities in Florida state wetlands and surface waters are regulated under Chapter 62-330 FAC, which is administered by the Florida Department of Environmental Protection (FDEP) through the Environmental Resource Permit (ERP) process. An ERP permit would be required for any proposed impacts to the wetlands on the Project site. If impacts to wetlands are avoided, no ERP would be required; however, an ERP will be required for the development of a stormwater management system. The state of Florida regulates an average 25-foot buffer (15 foot minimum) around all wetlands. Since the Project is located within Alachua County, the Project must also adhere to the wetland setback requirements outlined in Chapter 77, Article II of the Alachua County Code. Alachua County regulates a 50-foot buffer (35-foot minimum) around all surface waters and wetlands less than or equal to 0.5 acre that do not include Outstanding Florida Waters or listed animal species. TRC anticipates both wetlands on the Project site will require a 50-foot buffer. However, the PSS wetland is located within a sinkhole and Alachua County requires a 75-foot buffer for all sinkholes. Therefore, the PSS wetland will require a 75-foot buffer.

WETLAND DETERMINATION DATA FORM – Atlantic and Gulf Coastal Plain Region

Project/Site: Pleasant Solar **City/County:** Alachua, Alachua Coun… **Sampling Date:** 2022-May-25
Applicant/Owner: Solariant **State:** FL **Sampling Point:** W-JNM-01_PEM-1
Investigator(s): Jennifer Manikowski, Lindsay Robinson , Jennifer Man… **Section, Township, Range:**
Landform (hillslope, terrace, etc.): Swale **Local relief (concave, convex, none):** Concave **Slope (%):** 1 to 3
Subregion (LRR or MLRA): LRR P **Lat:** 29.7824646243 **Long:** -82.5277507921 **Datum:** WGS84
Soil Map Unit Name: Arredondo fine sand, 5 to 8 percent slopes **NWI classification:** None
Are climatic/hydrologic conditions on the site typical for this time of year? Yes _✓_ No ____ (If no, explain in Remarks.)
Are Vegetation ____, Soil ____, or Hydrology ____ significantly disturbed? Are "Normal Circumstances" present? Yes _✓_ No ____
Are Vegetation ____, Soil ____, or Hydrology ____ naturally problematic? (If needed, explain any answers in Remarks.)

SUMMARY OF FINDINGS – Attach site map showing sampling point locations, transects, important features, etc.

Hydrophytic Vegetation Present?	Yes _✓_ No ____		
Hydric Soil Present?	Yes _✓_ No ____		
Wetland Hydrology Present?	Yes _✓_ No ____	**Is the Sampled Area within a Wetland?**	**Yes _✓_ No ____**

Remarks:

Covertype is PEM. Area is wetland, all three wetland parameters are present..

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ____ Surface Water (A1)
- ____ High Water Table (A2)
- _✓_ Saturation (A3)
- ____ Water Marks (B1)
- ____ Sediment Deposits (B2)
- ____ Drift Deposits (B3)
- ____ Algal Mat or Crust (B4)
- ____ Iron Deposits (B5)
- ____ Inundation Visible on Aerial Imagery (B7)
- ____ Water-Stained Leaves (B9)
- ____ Aquatic Fauna (B13)
- ____ Marl Deposits (B15) **(LRR U)**
- ____ Hydrogen Sulfide Odor (C1)
- ____ Oxidized Rhizospheres along Living Roots (C3)
- ____ Presence of Reduced Iron (C4)
- ____ Recent Iron Reduction in Tilled Soils (C6)
- ____ Thin Muck Surface (C7)
- ____ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Sparsely Vegetated Concave Surface (B8)
- _✓_ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- _✓_ Saturation Visible on Aerial Imagery (C9)
- _✓_ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- _✓_ FAC-Neutral Test (D5)
- ___ Sphagnum moss (D8) **(LRR T, U)**

Field Observations:

Surface Water Present?	Yes ____ No _✓_	Depth (inches):	
Water Table Present?	Yes ____ No _✓_	Depth (inches):	
Saturation Present? (includes capillary fringe)	Yes _✓_ No ____	Depth (inches):	6

Wetland Hydrology Present? Yes _✓_ No ____

Describe Recorded Data (stream gauge, monitoring well, aerial photos, previous inspections), if available:

Remarks:

The criterion for wetland hydrology is met. A positive indication of wetland hydrology was observed (primary and secondary indicators were present).

Sampling Point: W-JNM-01_PEM-1

VEGETATION (Four Strata) -- Use scientific names of plants.

Tree Stratum (Plot size: 30)	Absolute % Cover	Dominant Species?	Indicator Status
1.			
2.			
3.

3.			
4.			
5.			
	0 = Total Cover		
50% of total cover: 0	20% of total cover: 0		

Dominance Test worksheet:

Number of Dominant Species That Are OBL, FACW, or FAC:	1	(A)
Total Number of Dominant Species Across All Strata:	1	(B)
Percent of Dominant Species That Are OBL, FACW, or FAC:	100	(A/B)

Prevalence Index worksheet:

Total % Cover of:		Multiply By:	
OBL species	90	x 1 =	90
FACW species	0	x 2 =	0
FAC species	0	x 3 =	0
FACU species	0	x 4 =	0
UPL species	0	x 5 =	0
Column Totals	90	(A)	90 (B)
Prevalence Index = B/A =	1		

Hydrophytic Vegetation Indicators:

- ✓ 1- Rapid Test for Hydrophytic Vegetation
- ✓ 2 - Dominance Test is >50%
- ✓ 3 - Prevalence Index is ≤ 3.0[1]
- ____ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ____

Remarks: (Include photo numbers here or on a separate sheet.)

A positive indication of hydrophytic vegetation was observed (>50% of dominant species indexed as OBL, FACW, or FAC). A positive indication of hydrophytic vegetation was observed (Prevalence Index is ≤ 3.00). A positive indication of hydrophytic vegetation was observed (Rapid Test for Hydrophytic Vegetation).

SOIL

Sampling Point: W-JNM-01_PEM-1

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

Depth	Matrix		Redox Features					
(inches)	Color (moist)	%	Color (moist)	%	Type[1]	Loc[2]	Texture	Remarks

Hydrophytic Vegetation Indicators:

✓ 1- Rapid Test for Hydrophytic Vegetation

✓ 2 - Dominance Test is >50%

✓ 3 - Prevalence Index is ≤ 3.0[1]

____ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic

Definitions of Four Vegetation Strata:

Tree – Woody plants, excluding vines, 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/Shrub – Woody plants, excluding vines, less than 3 in. DBH and greater than 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes ✓ No ____

Remarks: (Include photo numbers here or on a separate sheet.)

A positive indication of hydrophytic vegetation was observed (>50% of dominant species indexed as OBL, FACW, or FAC).

1.0 Introduction

1.1 Project Description and Location

TRC Environmental Corporation (TRC), was contracted by Solariant Capital, LLC (Solariant) to conduct a threatened and endangered (T&E) habitat assessment for its Pleasant Solar Project (Project) site located southwest of the City of Alachua in Alachua County, Florida. The Project is situated north of Peggy Road, west of NW 173rd Street, and north and south of NW 138th Avenue. The Project consists of three parcels totaling 325.59 acres, which are identified in Table 1 below. Two of the parcels are proposed for the solar facility and substation and lie within the limits of the City of Alachua. The third parcel is near the proposed point of interconnect (POI) to the existing electrical grid and is within unincorporated Alachua County. Solariant is proposing to construct a 74.9 MW utility scale solar facility and tie into Duke Energy Florida's (Duke) existing 69 kV line. The southern two parcels are currently being used for agricultural purposes. The results of this assessment will be used to determine environmental constraints from a listed species perspective and potential permits that may be needed to a develop a solar facility on this site. A site location map (Figure 1), United States (U.S.) topographic map (Figure 2), and aerial map (Figure 3) are included in Appendix A to depict the location of the Project site.

Table 1: Pleasant Solar Project Site Parcels

Proposed Project Facility	Lot #	Parcel Owner	Acres
Solar Facility	3894	Waco Properties Inc.	285.3
Solar Facility	3898	Alspaugh Brown Trustee	35.34
Existing Substation	3897	Clay Electric	4.95
		Total	**325.59**

1.2 Project Purpose

The purpose of this T&E species habitat assessment was to identify the presence of habitats that could potentially support state or federally protected plant or wildlife species within the approximately 325.59-acre site. Documentation of the T&E habitats will be used to determine if the site is suitable and if any species-specific permits are required. Specific tasks performed include a desktop evaluation of existing maps and T&E species data, a field assessment of the site to identify habitats that could potentially support T&E species, and characterization of potentially suitable T&E species habitat. All features documented during the site visit are included in this report.

2.0 Regulatory Authorities

Federal, state, and local laws, regulations, codes, and ordinances provide the context to the T&E assessment being performed as part of this scope of work, in terms of methodologies, extent and type of surveys, and potential permits that may be required to develop a solar facility on the Project site. A description of these applicable regulatory authorities is provided by resource and regulatory entity below.

2.1 Federal

Federally listed threatened and endangered species and their designated critical habitats are protected under the Endangered Species Act (ESA) of 1973, as amended, (16 United States Code [USC] A-1535-1543, P.L. 93-205). The ESA prohibits the take of federally listed species as well as the import or export of these species. Take includes a variety of actions including harass, harm, pursue, hunt, shoot, wound, kill, trap, capture, or collect, or an attempt to engage in any such conduct. Migratory birds, including their nests and eggs, are protected under the Migratory Bird Treaty Act (MBTA) (16 U.S.C. 703–711), which prohibits the take of these species without a valid permit. The take and possession of bald and golden eagles, including their eggs and nests, is prohibited under the Bald and Golden Eagle Act ((16 U.S.C. 668). The U.S. Fish and Wildlife Service (USFWS) and the National Oceanic and Atmospheric Administration (NOAA) Fisheries Service implements these laws and programs.

Federally listed species have four levels of protection status: endangered, threatened, candidate and proposed. Federally listed endangered and threatened species are protected by the take prohibits of Section 9 under the Endangered Species Act, while candidate and proposed species are not.

2.2 State of Florida

Florida Statutes 379.411 declares that it is unlawful for a person to intentionally kill or wound any species of fish or wildlife listed as endangered, threatened, or of special concern (as determined by the state of Florida) or to intentionally destroy the eggs or nest of any such fish or wildlife unless authorized by rules of the Florida Fish and Wildlife Conservation Commission (FFWCC). State listed wildlife species regulations are defined in 68A-27 FAC and are implemented by the FFWCC. Permits are required by the FFWCC to relocate or for incidental take of state-protected wildlife species.

Florida regulations/permitting requirements are written to eliminate the need for both federal and state permits for take and incidental take of federally designated endangered and threatened wildlife species. Activities that result in take or incidental take of federally designated endangered and threatened species do not require a permit from the FFWCC when authorized by the USFWS or the NOAA Fisheries Service pursuant to 16 U.S.C. Section 1539, or other authorization provided by 16 U.S.C. Section 1536.

Florida Statute 581.85 declares it is unlawful for any person to willfully destroy or harvest any plant listed as endangered, threatened, or commercially exploited growing on the private land of another or on any public land without first obtaining the written permission of the landowner or legal representative of the landowner and a permit from the from the Division of Plant Industry within Florida Department of Agriculture and Consumer Services (FDACs).

3.0 Methodology

3.1 Desktop Review

Prior to conducting the field habitat assessments, TRC collected and reviewed existing data regarding protected species and sensitive habitats within Alachua County, Florida, and the surrounding area (~1-mile radius). The following resources were used in this evaluation:

- USFWS Information, Planning, and Conservation System (IPaC) online planning tool and official special species list (USFWS, 2022)
- Florida Natural Areas Inventory (FNAI) Element Occurrence and Biodiversity Matrix for the Project site and vicinity (FNAI, 2022a)
- FNAI – Current Element Tracking Summary, updated August 2021 (FNAI, 2022b)
- FFWCC water bird locater (FFWCC, 2022a), and
- FFWCC bald eagle nest locator (FFWCC, 2022b).

3.2 Field Assessment

Following the desktop review, qualified TRC biologists conducted a field investigation (pedestrian) on the site from May 25 to May 27, 2022, to evaluate on-site habitats for suitability to support any state or federally listed species potentially occurring in the site vicinity. Data collected from the desktop evaluation was used to develop a field survey plan to focus on habitats with the potential to support protected species. During the site visit, biologists conducted pedestrian transects through areas of potentially suitable threatened and endangered habitats to characterize the quality of the habitat and to search for listed species or evidence thereof (i.e., tracks, nests, burrows, etc.). Notes and locations of individual species and/or their preferred habitats were taken during the assessment. The locations of listed species or evidence thereof were recorded using a GPS with submeter accuracy.

4.0 Land Use and Vegetation Communities

A team of TRC biologists conducted a pedestrian field evaluation of the site from May 25 to May 27, 2022. As part of this evaluation, TRC characterized and mapped the land cover and vegetation communities on the project site using the Florida Land Use Cover and Forms Classification System (FLUCFCS) (FDOT, 1999). The land cover types delineated by TRC on the site are described below and shown on Figure 4 in Attachment A.

Nine land cover types were identified on the site: low density fixed single family units, row crops, hay fields, other open lands (rural), fallow cropland, pine-mesic oak, upland hardwood forests, electrical power substations, and electrical power transmission lines. Descriptions of each community type are provided below.

1110- Low Density Fixed Single Family Units

Approximately 0.40 acres (0.12 percent) of the Site consists of low density fixed single family units.

2140- Row Crops
Approximately 124.02 acres (38.09 percent) of the Site consists of row crops. These areas appear to have been planted with corn which has been recently harvested.

2153- Hay Fields
Approximately 84.51 acres (25.96 percent) of the Site is newly planted hay fields.

2600 – Other Open Lands (Rural)
Approximately 5.28 acres (1.62 percent) of the site consists of other open lands used for agricultural purposes. There is a large barn, pump house, and diesel tank within this area.

2610- Fallow Cropland
Approximately 16.6 acres (5.10 percent) of the Site consists of fallow cropland. This area has been taken over by weeds.

4140- Pine-Mesic Oak
Approximately 0.94 acres (0.29 percent) of the Site is pine-mesic oak forest consisting primarily of Slash pine (*Pinus elliottii*), Laurel oak (*Quercus laurifolia*), water oak (*Quercus nigra*), live oak (*Quercus virginiana*), hickories (*Carya spp.*), dog fennel (*Eupatorium capillifolium*) and greenbriers (*Smilax spp.*).

4200- Upland Hardwood Forests
Approximately 89.83 acres (27.59 percent) of the Site is upland hardwood forests consisting primarily of black cherry (*Prunus serotina*), Darlington's oak (*Quercus hemisphaerica*), laurel oak (*Quercus laurifolia*), water oak (*Quercus nigra*), live oak (*Quercus virginiana*), sweetgum (*Liquidambar styraciflua*), hickories (*Carya spp.*), American beauty berry (*Callicarpa americana*), saw greenbrier (*Smilax bona-nox*), and Virginia creeper (*Parthenocissus quinquefolia*).

8315- Electrical Power Substations
Approximately 3.82 acres (1.17 percent) of the site is an existing electrical power substation. The substation is owned by Clay Electric Cooperative and is located on the northern Project parcel.

8320- Electrical Power Transmission Lines
The Project site contains about 0.19 acres (0.06 percent) of electrical power transmission lines. These are located on the northern Project parcel owned by Clay Electric Cooperative.

Prior to the field evaluation, TRC biologists reviewed USFWS National Wetland Inventory (NWI) data for potential wetlands or surface waters on the project site. The NWI map identified two wetlands within the project site: two Palustrine Emergent Wetlands (PEM). TRC observed two wetlands and one non-jurisdictional drainage within the Project limits. They are depicted on Figure 5 in Appendix A.

5.0 RESULTS

5.1 Critical Habitat

There are no critical habitats (USFWS, 2022) or wading bird rookeries (FFWCC, 2022) known to occur on or in the vicinity of the Project site.

5.2 T&E Species

Based on results of the desktop evaluation, there are 9 state or federally protected (or proposed for federal protection) animal species and 8 state protected plant species with the potential to occur on or near the Project site. These species are identified in Table 1 along with their current protection status, preferred habitat, potential for occurrence on the Project site, and TRC's recommendations for future actions.

TRC's opinion regarding the potential for each of the species to occur on the Project site is based on the habitat type, quality, quantity, and known range and characteristics of each species. The likelihood of occurrence is classified as follows:

- None – no chance the species would occur onsite due to lack of suitable habitat or beyond species range.
- Low – limited potentially suitable habitat present; the habitat may be disturbed, limited in area, low quality or disturbed
- Moderate – suitable habitat present, no individuals previously recorded in site vicinity and no evidence of their existence on the site observed during the field survey.
- High – suitable habitat on site and known occurrences in the area or was observed on or near the site during the field survey.

Table 2. State and Federally Listed Species with Potential to Occur on or Near the Project Site					
Common Name Scientific Name	**Status**		**Preferred Habitat**	**Potential to Occur on Site**	**Recommended Action**
	F	**S**			
Invertebrates					
Squirrel chimney cave shrimp *Palaemonetes cummingi*	T	FT	Obligate cave dwelling species; known only to inhabit the Squirrel Chimney sinkhole and flooded cave system	**Moderate**; there is a deep, water-filled sinkhole in the southwest portion of the site that is located within the limits of the Squirrel Chimney cave system	It is TRC's understanding that Solariant intends to avoid impacts to sinkhole in the southwest portion of the site; therefore, adverse impacts to this species are unlikely to occur
Insects					
Monarch Butterfly *Danaus plexippus*	C	-	Open fields and meadows with milkweed	None; no suitable habitat for this species onsite.	No further consultation/permit needed
Amphibians and Reptiles					
Eastern indigo snake *Drymarchon couperi*	T	FT	Broad range of habitats from scrub and sand hill to wet prairies; in northern part of range, often winters in gopher tortoise burrows in sandy uplands but forages in more hydric habitats; requires very large tracts to survive	Low; while the uplands on the site may provide some low-quality habitat, this species is unlikely to occur on the Project site due to the lack of gopher tortoise burrows and ongoing agricultural activities.	No further consultation/permit anticipated.
Gopher tortoise *Gopherus polyphemus*	C	T	Inhabits a wide variety of upland habitats including, sandhills; dry hammocks; longleaf pine-turkey oak woods; old fields	Low; while the uplands on the site provide some suitable habit, no gopher tortoise burrows were observed on the site during the field visit. Furthermore, the ongoing agricultural activities would discourage use of the Site by tortoises.	Consultation with FFWCC is not required if no construction occurs within 25 feet of a potentially occupied burrow; no further consultation/permit is required. Because suitable habitat is present onsite, there is potential for this species to move onto the site between the time of field survey and the start of

Table 2. State and Federally Listed Species with Potential to Occur on or Near the Project Site					
Common Name **Scientific Name**	**Status**		**Preferred Habitat**	**Potential to Occur on Site**	**Recommended Action**
	F	**S**			
					construction. TRC recommends a pre-construction survey to ensure tortoises have not begun inhabiting the site.
Short-tailed snake *Lampropeltis extenuate*	-	T	Dry upland habitats, principally sand hill, xeric hammock, and sand pine scrub. A secretive burrower only rarely seen above ground or under cover objects	Low; while the uplands on the site provide some suitable habit, the ongoing agricultural activities would discourage use of the Site by this species.	No further consultation/permit anticipated.
Striped newt *Notophthalmus perstriatus*	-	C	Xeric upland communities, principally sand hill but also scrub, occasionally in pine flatwoods. Breeds in isolated, mostly ephemeral wetlands; occasional fire and relatively undisturbed soil and vegetative groundcover are important terrestrial habitat components	Low; while there are some suitable uplands on the site, there are no ephemeral wetlands or vernal pools to support breeding	No further consultation/permit needed.
Birds					
Florida burrowing owl *Athene cunicularia floridana*	-	T	Found in sparsely vegetated, sandy habitats such as dry prairies, sandhills, pastures, old fields, road rights-of-ways, and open fields	Low; while there is some suitable habitat for this species onsite, no nesting burrows were observed during the site visit; furthermore, the ongoing agriculture would likely deter burrowing owls from nesting onsite.	Consultation with FFWCC is not required if no construction occurs within 33 feet of an occupied burrow; no further consultation/permit anticipated. Because suitable habitat is present onsite, there is potential for this species to move onto the site between the time of field survey and the start of construction. TRC recommends a pre-construction survey to ensure owls have not begun inhabiting the site.

Table 2. State and Federally Listed Species with Potential to Occur on or Near the Project Site					
Common Name **Scientific Name**	**Status**		**Preferred Habitat**	**Potential to Occur on Site**	**Recommended Action**
	F	**S**			
Florida sandhill crane *Antigone canadensis pratensis*	-	T	Prairies, freshwater marshes, and pasture lands. Avoids forests and deep marshes but uses transition zones and edges between these and prairies or pasture lands. Will frequent agricultural areas like feed lots and crop fields; Nest is a mound of herbaceous plant material in shallow water or on the ground in marshy areas.	Low; the site does not provide suitable nesting habitat; there is potential for this species to utilize the site for foraging.	Consultation with FFWCC is not required if no active nests within 1500 feet of site; no further consultation/permit needed.
Wood stork *Mycteria americana*	T	FT	Nests colonially in a variety of inundated forested wetlands, including cypress strands and domes, mixed hardwood swamps, sloughs, and mangroves. Forages mainly in shallow water in freshwater marshes, swamps, lagoons, ponds, tidal creeks, flooded pastures, and ditches	None; the site does not provide suitable nesting habitat or suitable foraging habitat onsite.	No further consultation/permit needed.
Flowering Plants					
Incised Groove-bur *Agrimonia incisa*	-	T	Found in sandy, dry-mesic, usually upland in the lower Coastal Plain; longleaf pine-deciduous scrub oak, sandy or sandy loam. Open pine woods or mixed pine-oak woods, bluffs, small clearings, and old roads, sometimes at the edge of more mesic habitats.	Low; potentially suitable habitat present within the pine-oak forested area	Consultation/permit not required to affect state listed species on one own's property. No further surveys needed.
Many-flowered grass pink *Calopogon multiflorus*	-	T	Dry to moist flatwoods with longleaf pine, wiregrass, saw palmetto	None; no suitable habitat for this species onsite.	No further surveys/consultation/permit needed.

Table 2. State and Federally Listed Species with Potential to Occur on or Near the Project Site					
Common Name **Scientific Name**	**Status**		**Preferred Habitat**	**Potential to Occur on Site**	**Recommended Action**
	F	**S**			
Godfrey's swamp privet *Forestiera godfreyi*	-	E	Upland hardwood forests with limestone at or near the surface, often on slopes above lakes and rivers	**Moderate**; there is suitable habitat for this species onsite within the upland hardwoods.	Consultation/permit not required to affect state listed species on one own's property. No further surveys needed.
Hartwrightia *Hartwrightia floridana*	-	T	Seepage slopes, edges of baygalls and springheads, wet prairies, and flatwoods with wet, peaty soils. Often with hooded pitcher plants or, in central FL, cutthroat grass.	None; no suitable habitat for this species onsite.	No further surveys/consultation/permit needed.
Florida spiny-pod *Matelea floridana*	-	E	Upland hardwood forests, with laurel oak, red oak, pignut or mockernut hickory, spruce, pine, and southern magnolia. A variety of wooded habitats from moist woods, such as those in lime sink areas, to dry, open oak-hickory or oak-hickory-pine upland forests	**Moderate**; there is suitable habitat for this species onsite within the upland hardwoods.	Consultation/permit not required to affect state listed species on one own's property. No further surveys needed.
Florida mountain-mint *Pycnanthemum floridanum*	-	T	Sandhills, pinewoods, hammocks	Low; there is some suitable habitat on the site	Consultation/permit not required to affect state listed species on one own's property. No further surveys needed.
Florida willow *Salix floridana*	-	E	Springheads, edges of spring runs, hydric hammocks, floodplains	None; no suitable habitat for this species onsite.	No further surveys/consultation/permit needed.
Silver buckthorn *Sideroxylon alachuense*	-	E	Margins of ponds	None; no suitable habitat for this species onsite.	No further surveys/consultation/permit needed.
Notes: Federal Status (F): E = Endangered, T = Threatened, C = Candidate, PT = Proposed Threatened, State Status (S): FE = Federally Endangered, FT = Federally Threatened, SE= State Endangered, ST = State Threatened, SCC = Species of Special Concern					
Sources: FNAI, 2022a; FNAI, 2022b; USFWS, 2022; TRC, 2022.					

The USFWS Species List (Appendix B) identified three federally protected species and two candidate wildlife species that could potentially occur on or near the Project site. These include the Squirrel Chimney cave shrimp, wood stork, Eastern indigo snake, gopher tortoise (candidate species), and monarch butterfly (candidate species). (USFWS, 2022)

The FNAI Biodiversity Matrix Report (Appendix C) identified four additional state-protected wildlife species and eight state-protected plant species as having the potential to occur on or near the Project site (FNAI, 2022).

No known records for state or federally listed species were identified on the Project site in the site-specific FNAI Element Occurrence Report (FNAI, 2022a). The FNAI biodiversity matrix identifies two protected species likely to occur on or near the Project site: the wood stork and Eastern indigo snake.

According to USFWS (2022), there are no federally listed plant species with the potential to occur on the site. Therefore, no additional surveys or agency consultation with respect to federally listed plant species are necessary.

According to FNAI (2022a), there are eight state-listed plant species with the potential to occur on the site. There are no known records of any of these species in the site vicinity. There is potentially suitable habitat for four of the plant species. There is no requirement to consult with or obtain a permit from the State to remove any plant species if it is done on one's own property. TRC does not recommend additional surveys or agency consultation with respect to state-listed plant species.

Nine wildlife species were identified by USFWS (USFWS, 2022) or FNAI (FNAI, 2022a) as having potential to occur on or near the Project site. The site lacks suitable habitat for two of these species: the monarch butterfly and wood stork. Since these species would not occur on the site, the Project has no potential to adversely affect them and future surveys, agency consultation, or permits for these species will not be needed.

The **gopher tortoise** is threatened in Florida and is a candidate for listing at the federal level. The tortoise occupies high, dry sandy habitats such as longleaf pine-xeric oak sandhills, scrub, dry hammocks, dry flatwoods, dry prairies, and a variety of disturbed habitats, such as pastures. While much of the site is actively managed agriculture, some suitable habitat is present for this species. TRC biologists, who are also FFWCC authorized gopher tortoise agents, conducted a survey for gopher tortoise burrows during the site visit in May 2022. No burrows or other evidence of the gopher tortoise was observed on the project site or immediately adjacent to the site. Protection measures for this species pertain to avoiding land disturbing activities within 25 feet of any potentially occupied gopher tortoise burrow. Because no burrows were observed on or adjacent to the project site, agency consultation or future surveys are not required for this species. However, given the presence of suitable habitat, there is potential for this species to move onto the site between the time of field survey and the start of construction. TRC recommends a pre-construction survey using the recommended survey methodology for this species to ensure tortoises have not

begun inhabiting the site. TRC also recommends silt fencing around the project site to prevent tortoises from moving onsite during clearing and construction.

The **Eastern indigo snake** is a federally threatened species that requires large tracts of lands with a mosaic of habitat types to survive. They occupy a variety of habitat types with a preference for uplands, but also utilize some wetlands and agricultural areas. Eastern indigo snakes will often seek shelter inside gopher tortoise burrows. While most of the site is actively managed agriculture, there is some potential habitat. TRC did not observe this species, or any gopher tortoise burrows during the May 2022 field survey. Because the site and surrounding area provides little benefit to the snake and due to the lack of gopher tortoise burrows, there is little reason to believe the eastern indigo snake would occur on the site. As such, agency consultation or future surveys are not anticipated for this species.

The **short-tailed snake** is a state threatened reptile species that is endemic to Florida. It is fossorial, meaning it is adapted to digging and living underground. It can be found burrowed in sandy soils in long-leaf pine and xeric oak sandhills, scrub, and xeric hammocks. The site provides little suitable habitat for this species, and it was not observed during the May 2022 field visit. Specific conservation guidelines have not been developed for this species. Impacts to this species should be avoided if it is observed during construction activities. As such, agency consultation or future surveys are not anticipated for this species.

The **striped newt** was recently designated as a Candidate Species for listing in the state of Florida. The listing process for the species is expected to be completed in 2022. They inhabit fire-maintained xeric upland communities, principally sand hill but also scrub, and pine flatwoods. They breed in isolated, fish free ephemeral wetlands. Undisturbed soil and vegetative groundcover are essential for this species' survival. The Site is not fire maintained and no suitable breeding habitat was present on the Site. Furthermore, the striped newt is only a candidate species and is not afforded any protection at this time. Therefore, agency consultation or future surveys will not be required for this species.

The **Florida sandhill crane** is a state threatened bird species. They forage in a variety of open habitats with low groundcover vegetation including shallow marshes, improved pastures, prairies, open pine forests, croplands, and open fields. Nesting and roosting are limited to shallow freshwater marshes. Protection measures for this species pertain to avoiding impacts to active nests (no impacts within 1500 feet of an active nest). The project site has ample habitat for this species to forage, but there is no suitable nesting habitat. As such, agency consultation or future surveys will not be required for this species.

The **Florida burrowing owl** is a state threatened bird species. It inhabits open areas with short groundcover such as dry prairies, pastures, agricultural fields, golf courses, airports, and vacant lots. This small long-legged owl lives in pairs or loose colonies and uses burrows for breeding and sheltering. The agricultural fields onsite provide some suitable habitat for this species, but the long-term and frequent disturbances would likely deter the owl from using these fields. No owls or their burrows were observed during the April 2021 or May 2022 site visit, conducted by TRC and no owls or nests have been documented on or adjacent to the Site. Activities occurring within 33 feet

of a potentially occupied burrow during breeding season (February 15 to July 10) or any disturbance within 10 feet of a potentially occupied burrow any time of year are prohibited without a permit from the FFWCC. Given the presence of suitable habitat, there is potential for this species to move onto the site between the time of field survey and the start of construction. TRC recommends a pre-construction survey using the recommended survey methodology for this species to ensure owls have not begun inhabiting the site. Incidental take permits for this species may be issued by the FFWCC on a case-by-case basis and may require mitigation. The FFWCC review will include assessment of whether the proposed construction activities could significantly modify habitat (e.g., more than 50% of total habitat loss within 1,970-foot radius circle around potentially occupied nest).

The **Squirrel Chimney cave shrimp** is a federally threatened crustacean species. This species only inhabits the Squirrel Chimney sinkhole and associated flooded cave system. It has not been recorded since 1973, which raises fears that it may be extinct. There is a deep, water-filled sinkhole in the southwest portion of the site that is located within the limits of the Squirrel Chimney cave system. Alachua County requires a 75-foot average (50 foot minimum) buffer around sinkholes. Given that the sinkhole and surrounding buffer are likely to be preserved, impacts to this species are not anticipated. In addition, it was determined that no Federal recovery plan for this species was warranted because it is known only from a single, privately-owned location, and a recovery plan would not further its conservation. Therefore, future surveys and agency consultation are not anticipated.

The **wood stork** is a federally threatened bird species. They nest in inundated forested wetlands, such as, cypress stands and mixed hardwoods swamps and sloughs. There is no suitable nesting habitat on or adjacent to the Site. According to the USFWS, suitable foraging habitat for the wood stork includes wetlands with shallow open water areas that are relatively calm and have a permanent or seasonal water depth of 2 to 15 inches. While the Site has a PEM wetland on the Site, it did not provide the depth of water required for foraging. Therefore, no future surveys or agency consultation are needed for this species.

5.3 Migratory Birds

According to the USFWS (2022), ten species of migratory birds, protected by the MBTA or GEPA are of particular concern for the Project area. These species, their preferred nesting habitat, and breeding seasons are summarized in Table 3. There is potentially suitable breeding habitat for several of these birds onsite. To avoid impacts to these species or other migratory birds, the USFWS recommends limiting construction activities to a time of year when birds are not nesting. If this is not feasible, the USFWS recommends conducting pre-construction surveys to identify nests and providing protective buffers when present, educating workers about relevant rules and procedures, and using trained biological monitors during construction activities.

Table 3. Protected Migratory Birds that may Breed in Project Vicinity			
Species	**Preferred Nesting/Breeding Habitat**	**Breeding Time of Year**	**Potential for Project Impact/ Recommendations**
American kestrel *Falco sparverius paulus*	Tall dead trees or utility poles generally with an unobstructed view of surroundings. Sandhill habitats seem to be preferred but may also occur in flatwoods settings.	4/1 to 8/31	Potential for nesting onsite; conduct pre-construction surveys if construction proposed during nesting season;
Bald eagle *Haliaeetus leucocephalus*	Large trees in forested areas adjacent to large bodies of water	9/1 to 7/31	Not likely to nest onsite; no known nests within 5 miles of the Site and none observed during the Site visit.
Red-headed woodpecker *Melanerpes erythrocephalus*	Deciduous forests with oak or beech, groves of dead or dying trees, river bottoms, clearings, farmland, grasslands with scattered trees, forest edges, and roadsides	5/10 to 9/10	Limited potential for nesting onsite in forested areas; conduct pre-construction survey and protect any active nests during construction or avoid construction during nesting season
Swallow-tailed kite *Elanoides forcatus*	Wooded river swamps; requires tall trees for nesting and nearby open country with abundant prey	3/10 to 6/30	No nesting habitat onsite; no further action needed
Black Skimmer *Rynchops niger*	lay eggs directly on sandy, shelly, or stony ground, usually on islands or remote beaches that have at least a little vegetation. Some nest in the higher parts of saltmarshes.	5/20 to 9/15	No nesting habitat onsite; no further action needed
Great Blue Heron *Ardea herodias occidentalis*	Nests in trees or shrubs near water, sometimes on ground in areas free of predators.	1/1 to 12/31	No nesting habitat onsite; no further action needed
Henslow's Sparrow *Ammodramus henslowii*	breeds throughout the northeastern U.S., Midwestern U.S., and into southern Ontario	Breeds elsewhere	Does not breed in Florida; no further action needed
Lesser Yellowlegs *Tringa flavipes*	breeds in the meadows and open woodlands of boreal Canada	Breeds elsewhere	Does not breed in Florida; no further action needed
Magnificent Frigatebird *Fregata magnificens*	nest and roost in mangrove cays on coral reefs and in low trees and shrubs on islands	10/1 to 4/30	No nesting habitat onsite; no further action needed
Prairie Warbler *Dendroica discolor*	nests mainly in young second growth scrub and densely overgrown fields	5/1 to 7/31	Potential for nesting onsite; conduct pre-construction surveys if construction proposed during nesting season;
Source: USFWS, 2022			

5.3.1 *Bald Eagles*

No known bald eagle nests are documented within 1 mile of the Project site (FFWCC, 2022b) and none were observed onsite during the May 2022 field visit. The closest documented bald eagle nest is over five miles southeast of the Project site.

6.0 Recommendations

There are 9 state or federally protected (or proposed for federal protection) wildlife species and 8 state protected plant species with the potential to occur on or near the Project site. Of these 17 species, the Project site only provides suitable habitat for 7 listed wildlife species (Squirrel Chimney cave shrimp, gopher tortoise, Eastern indigo snake, short-tailed snake, striped newt, Florida burrowing owl, and Florida sandhill crane) and four listed plant species (incised groove-bur, Godfrey's swamp privet, Florida spiny pod, and Florida mountain mint).

There is suitable habitat for four of the state listed plant species; however, none of these species were observed during the May 2022 site visit. In addition, Florida does not require consultation or permits to impact state listed plants on one's own property. Therefore, TRC does not recommend any further surveys or consultation.

The Squirrel Chimney cave shrimp occurs only in one sinkhole and there is no federal recovery plan for this species. It has not been recorded since 1973 which raises fears that it may be extinct. It is TRC's understanding that sinkholes will be avoided during construction. Therefore, adverse impacts to this species are unlikely and consultation with USFWS for this species is not anticipated.

The various upland areas within the Project site provide some suitable habitat for the rest of the wildlife species. Presently, it is TRC's opinion that this Project is not likely to adversely impact any of these species.

Given the presence of suitable habitat, there is potential for the gopher tortoise and/or the Florida burrowing owl to move onto the site between the time of field survey and the start of construction. TRC recommends a pre-construction survey using the recommended survey methodologies for these species to ensure they have not begun inhabiting the site. TRC also recommends Solariant install a silt fence around the project site to prevent gopher tortoises and deter burrowing owls from moving onto the site during clearing and construction.

USFWS IPaC Resource List

IPaC **U.S. Fish & Wildlife Service**

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

Location

Alachua County, Florida

NOT FOR CONSULTATION

Local office

Florida Ecological Services Field Office

TBD

TBD

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Draw the project location and click CONTINUE.
2. Click DEFINE PROJECT.
3. Log in (if directed to do so).
4. Provide a name and description for your project.
5. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

NOT FOR CONSULTATION

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Birds

NAME	STATUS
Wood Stork *Mycteria americana* No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/8477	Threatened

Reptiles

NAME	STATUS
Eastern Indigo Snake *Drymarchon couperi* Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/646	Threatened
Gopher Tortoise *Gopherus polyphemus* No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/6994	Candidate

Insects

NAME	STATUS

NOT FOR CONSULTATION

Monarch Butterfly Danaus plexippus Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/9743	Candidate

Crustaceans

NAME	STATUS
Squirrel Chimney Cave Shrimp Palaemonetes cummingi Wherever found No critical habitat has been designated for this species. https://ecos.fws.gov/ecp/species/1551	Threatened

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

NOT FOR CONSULTATION

Additional information can be found using the following links:

- Birds of Conservation Concern https://www.fws.gov/program/migratory-birds/species
- Measures for avoiding and minimizing impacts to birds https://www.fws.gov/library/collections/avoiding-and-minimizing-incidental-take-migratory-birds
- Nationwide conservation measures for birds https://www.fws.gov/sites/default/files/documents/nationwide-standard-conservation-measures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)

NOT FOR CONSULTATION

American Kestrel Falco sparverius paulus — Breeds Apr 1 to Aug 31

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA
https://ecos.fws.gov/ecp/species/9587

Bald Eagle Haliaeetus leucocephalus — Breeds Sep 1 to Jul 31

This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.

Black Skimmer Rynchops niger — Breeds May 20 to Sep 15

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/5234

Great Blue Heron Ardea herodias occidentalis — Breeds Jan 1 to Dec 31

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

Henslow's Sparrow Ammodramus henslowii — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/3941

Lesser Yellowlegs Tringa flavipes — Breeds elsewhere

This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/9679

Magnificent Frigatebird Fregata magnificens — Breeds Oct 1 to Apr 30

This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA

NOT FOR CONSULTATION

Prairie Warbler Dendroica discolor — Breeds May 1 to Jul 31
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Red-headed Woodpecker Melanerpes erythrocephalus — Breeds May 10 to Sep 10
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.

Swallow-tailed Kite Elanoides forficatus — Breeds Mar 10 to Jun 30
This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.
https://ecos.fws.gov/ecp/species/8938

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

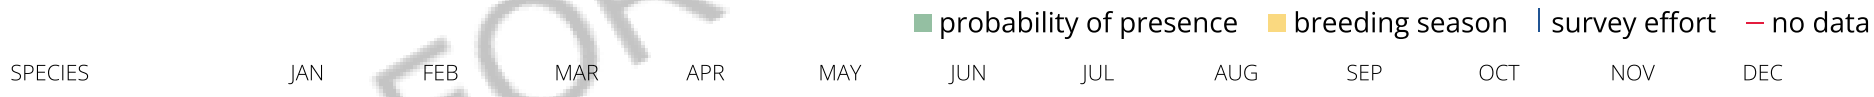
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.

NOT FOR CONSULTATION

2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.



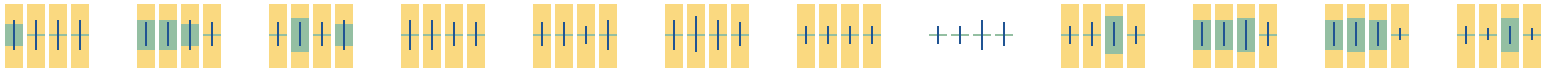
Breeding Season (▪)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

To see a bar's survey effort range, simply hover your mouse cursor over the bar.

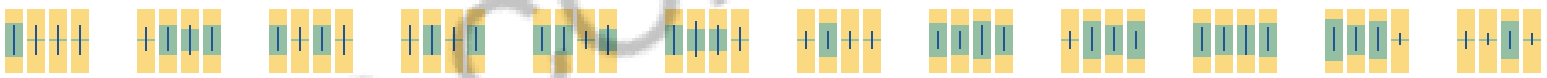
No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.



NOT FOR CONSULTATION

American Kestrel BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)



Bald Eagle Non-BCC Vulnerable (This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities.)

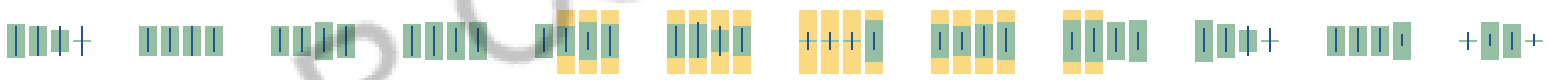
Black Skimmer BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Great Blue Heron BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

NOT FOR CONSULTATION

Henslow's Sparrow BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Lesser Yellowlegs BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



Magnificent Frigatebird BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Prairie Warbler BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Red-headed Woodpecker BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

NOT FOR CONSULTATION

Swallow-tailed Kite BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

NOT FOR CONSULTATION

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

NOT FOR CONSULTATION

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Coastal Barrier Resources System

Projects within the John H. Chafee Coastal Barrier Resources System (CBRS) may be subject to the restrictions on federal expenditures and financial assistance and the consultation requirements of the Coastal Barrier Resources Act (CBRA) (16 U.S.C. 3501 et seq.). For more information, please contact the local Ecological Services Field Office or visit the CBRA Consultations website. The CBRA website provides tools such as a flow chart to help determine whether consultation is required and a template to facilitate the consultation process.

THERE ARE NO KNOWN COASTAL BARRIERS AT THIS LOCATION.

Data limitations

The CBRS boundaries used in IPaC are representations of the controlling boundaries, which are depicted on the official CBRS maps. The boundaries depicted in this layer are not to be considered authoritative for in/out determinations close to a CBRS boundary (i.e., within the "CBRS Buffer Zone" that appears as a hatched area on either side of the boundary). For projects that are very close to a CBRS boundary but do not clearly intersect a unit, you may contact the Service for an official determination by following the instructions here: https://www.fws.gov/service/coastal-barrier-resources-system-property-documentation

NOT FOR CONSULTATION

Data exclusions

CBRS units extend seaward out to either the 20- or 30-foot bathymetric contour (depending on the location of the unit). The true seaward extent of the units is not shown in the CBRS data, therefore projects in the offshore areas of units (e.g., dredging, breakwaters, offshore wind energy or oil and gas projects) may be subject to CBRA even if they do not intersect the CBRS data. For additional information, please contact CBRA@fws.gov.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

NOT FOR CONSULTATION

Please note that the NWI data being shown may be out of date. We are currently working to update our NWI data set. We recommend you verify these results with a site visit to determine the actual extent of wetlands on site.

This location overlaps the following wetlands:

FRESHWATER EMERGENT WETLAND

Palustrine

A full description for each wetland code can be found at the National Wetlands Inventory website

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons

NOT FOR CONSULTATION

intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

Biodiversity Matrix Query Results

UNOFFICIAL REPORT

Created 6/17/2022

(Contact the FNAI Data Services Coordinator at 850.224.8207 or kbrinegar@fnai.fsu.edu for information on an official Standard Data Report)

NOTE: The Biodiversity Matrix includes only rare species and natural communities tracked by FNAI.

Report for 4 Matrix Units: 24075 , 24076 , 24328 , 24329

Descriptions

DOCUMENTED - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit.

DOCUMENTED-HISTORIC - There is a documented occurrence in the FNAI database of the species or community within this Matrix Unit; however the occurrence has not been observed/reported within the last twenty years.

LIKELY - The species or community is *known* to occur in this vicinity, and is considered likely within this Matrix Unit because:

1. documented occurrence overlaps this and adjacent Matrix Units, but the documentation isn't precise enough to indicate which of those Units the species or community is actually located in; *or*
2. there is a documented occurrence in the vicinity and there is suitable habitat for that species or community within this Matrix Unit.

POTENTIAL - This Matrix Unit lies within the known or predicted range of the species or community based on expert knowledge and environmental variables such as climate, soils, topography, and landcover.

Introduction

The Pleasant Solar project proposes the development of a ±320 acre solar farm on a property located in the northwestern quadrant of the intersection of Peggy Road and NW 173rd St (CR235A). The project will add ±9305 LF of access road and invertors with stormwater management being handled by the fifteen existing onsite depressions (Basins 1 through 15). As the solar panels will be raised from the ground on pillars, the areas covered by solar panels are still considered pervious.

The project site is located on tax parcels 03894-000-000 and 03898-000-000, north of Peggy Road and west of NW 173rd St in the City of Alachua. Tax parcel 03894-002-000, which is completely surrounded by tax parcel 03894-000-000, is not part of this project and will be left in its current condition. Figure 1 provides a location map and Figure 2 depicts the site on a portion of the High Springs quadrangle map. The site is in Sections 17 & 20, Township 8 South, and Range 17 East, Alachua County.

The site drains to 15 existing depressional areas (Basins 1-15) some of which are located onsite, some offsite, and some both onsite and offsite. No changes are proposed to most of the depressional areas though water quality treatment swales will be provided to the access road in watersheds which drain offsite (3). The depressions in Basins 4, 5, 6, 7, and 9 will be graded in order to reduce the amount of water below the solar panels. The basins were modeled in the pre- and post-development condition in order to determine their maximum stages. Overall, the basins provide stormwater retention onsite with no offsite discharges.

Refer to the accompanying engineering plans for details about the proposed construction and demolition with regards to this project.

Design Criteria

The design criteria for the proposed Stormwater Management Facilities are based upon the criteria set forth by the Florida Department of Environmental Protection (FDEP) and City of Alachua (CoA) for dry retention system design in a closed watershed. The criteria met by this report are:

1. Provide Water Quality Treatment Volume (WQTV) – The minimum stormwater treatment volume shall be the runoff from the first 2.0 inches of rainfall from the design storm. WQTV must be recovered within 72 hours (FDEP).

2. Provide Discharge Rate and Volume Attenuation – Attenuate the post-development peak discharge rates and volumes to be less than the pre-development peak discharge rates and volumes for the 100 year - 1 hour, 100 year - 2 hour, 100 year - 4 hour, 100 year - 8 hour, and 100 year - 24 hour (FDEP & CoA).

3. Provide Volume Recovery – Retention systems must have one-half of the total volume available within 7 days following the end of the design storm event, and the total volume must be recovered within 30 days following the end of the storm event. Alternatively, if

recovery requirements cannot be met, back-to-back storms can be routed through the system (FDEP)

4. Freeboard – Retention ponds shall have a freeboard of 1 foot above the maximum stage in order to function properly during storms greater than the design storm (FDEP)

5. Side Slopes – Side slopes steeper than 4:1 require fencing (FDEP).

The City of Alachua and the FDEP require that best management practices (BMPs) be employed to control erosion and sedimentation and an operation and maintenance entity be established.

Site Characteristics

Physical characteristics of the site are described in the following sections. Additional details are provided in the accompanying Engineering plans.

Site Topography

In the present condition, the project site largely consists of open agricultural space with isolated areas of trees. The trees occur on the property boundary between the two tax parcels, on what appears to be field boundaries, and in groups in the western portion of the site and near the existing house. The site has various high and low points and depressional areas. Site topography varies from a high of el. ±135' in the north to a low of el. 40' in the southwest, with all elevations given in NAVD88.

The site consists of 15 watersheds which drain into 15 depressional areas, listed below. In addition to the ±320 onsite acres, the depressions also provide storage for ±276 acres of offsite area.

WTRSHD-1 is located on the western edge of the site and consists of ±11.36 acres, most of which is offsite. BASIN-1, the depressional area associated with WTRSHD-1, is mostly offsite and does not appear to outfall.

WTRSHD-2 is located to the north and east of WTRSHD-1 and consists of ±29.96 acres and is mostly onsite. BASIN-2 is located in the south side of WTRSHD-2. The watershed is entirely contained onsite and outfalls to BASIN-12 at el. 84.50'.

WTRSHD-3 is located northeast of WTRSHD-2 on the northern property line and consists of ±111 acres which are mostly offsite. BASIN-3 is approximately half onsite and does not appear to outfall.

WTRSHD-4 is located east of WTRSHD-3 and consists of ±35 acres which are mostly offsite. BASIN-4 is completely contained onsite and does not outfall.

WTRSHD-5 is located east of WTRSHD-4 and consists of ±148 acres containing the northern tax parcel and the northeastern corner of the southern tax parcel. Approximately half of the watershed is located offsite and it drains to BASIN-5. BASIN-5 is completely contained onsite and outfalls to BASIN-6, located in WTRSHD-6.

WTRSHD-6 is located entirely onsite, is southwest of WTRSHD-5, consists of ±34 acres, and drains to BASIN-6, which outfalls to BASIN-9.

WTRSHD-7 is located south of WTRSHD-5 and southeast WTRSHD-6, containing the southeast corner of the site and consisting of ±82 acres. BASIN-7 is contained onsite and does not discharge.

WTRSHD-8 is located west of WTRSHD-7 and south of WTRSHD-6 and consists of ±10.5 acres and is completely contained onsite. BASIN-8 is entirely onsite but drains south via a pipe under Peggy Road, discharging to a closed basin north of the Dollar General Distribution Center.

WTRSHD-9 is located west of WTRSHD-8 and southwest of WTRSHD-6 adjacent to Peggy Road. WTRSHD-9 is completely contained onsite and consists of ±34 acres and drains to BASIN-9 which discharges to BASIN-10.

WTRSHD-10 is located west of WTRSHD-9 and east of WTRSHD-2, contained entirely onsite, consists of ±53 acres and drains to BASIN-10. BASIN-10 does not discharge but does accept discharge from BASIN-15 and BASIN-9.

WTRSHD-11 is located in the southwest corner of the site. The vast majority of WTRSHD-11 is onsite with a small sliver of offsite and it consists of ±4 acres. BASIN-11 does not discharge.

WTRSHD-12 is located northwest of WTRSHD-11 and is approximately half onsite and half-offsite. It consists of ±12 acres and drains to BASIN-12, which is also half onsite and half offsite and is not known to discharge but does accept discharge from BASIN-2.

WTRSHD-13 is located north of WTRSHD-2, consists of ±13 acres, and drains to BASIN-2 which discharges south to BASIN-12.

WTRSHD-14 is located south of WTRSHD-2, consists of ±3 acres, is contained onsite, and drains to BASIN-14 which does not discharge.

WTRSHD-15 is located northeast of WTRSHD-10, consists of ±14 acres, and is entirely contained onsite. BASIN-15 discharges to WTSHD-10.

Pre-Development Drainage

In pre-development, the site has largely been cleared for agricultural purposes. The western section of parcel 03894-000-000 was used for growing pines and has recently been cleared. Additionally, there are trees located at the north, west, and southern property lines as well as between the two parcels. The southern parcel has several copses, especially in the area around the identified wetland. The northern parcel has a copse on its northwestern corner where the existing road drains into the site via a ditch.

As several of the existing watersheds are or extend offsite, the pre-development condition was

analyzed to determine if there was an increase in offsite stages.

Refer to Figure 6 for information on the pre-development drainage patterns. Refer to Appendix A and the accompanying engineering plans for additional details.

Post-Development Drainage

In post-development, 10 of the 15 watersheds will be retained in their existing condition while basins 4, 5, 6, 7, and 9 will have their bottoms raised and flattened. Many of the internal trees will be removed, but as the solar panels will be installed on posts and suspended above the ground, the project site will remain largely pervious.

Refer to Figure 7 for information on the post-development drainage patterns. Refer to Appendix A and the accompanying engineering plans for additional details.

Soils Information

The National Resource Conservation Service (NRCS) Soil Survey for Alachua County describes the near surface soil profile as consisting of the following:

- *Arredondo fine sand (0 to 5 percent slopes)* with a hydrologic soil group rating of 'A'
- *Fort Meade fine sand (0 to 5 percent slopes)* with a hydrologic soil group rating of 'A'
- *Millhopper sand (0 to 5 percent slopes)* with a hydrologic soil group rating of 'A'
- *Lochloosa Fine Sand (2 to 5 percent slopes)* with a hydrologic soil group rating of 'B'
- *Kendrick sand (2 to 5 percent slopes)* with a hydrologic soil group rating of 'B'
- *Norfolk loamy fine sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'B'
- *Gainesville sand (0 to 5 percent slopes)* with a hydrologic soil group rating of 'A'.
- *Bonneau fine sand (2 to 5 percent slopes)* with a hydrologic soil group rating of 'C'.
-*Lake fine sand (0 to 5 percent slopes)* with a hydrologic soil group rating of 'A'.
- *Arredondo fine sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'A'
- *Millhopper Sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'A'.
- *Lochloosa Fine Sand (2 to 5 percent slopes)* with a hydrologic soil group rating of 'B'
- *Kendrick sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'B'.
- *Blichton sand (2 to 5 percent slopes)* with a hydrologic soil group rating of 'C/D'
- *Blichton sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'C/D'
- *Bivans sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'C/D'
- *Norfolk loamy fine sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'B'
- *Gainesville sand (5 to 8 percent slopes)* with a hydrologic soil group rating of 'A'.

Refer to Figure 4 for the NRCS Soils Map.

A peer review completed by GSE Engineering & Consulting, Inc. in August 2023. Based on the

Summary Report of A Peer Review, the following design parameters were determined and applied for the stormwater management facility calculations. Refer to Appendix C for further details.

- Base of mobilized aquifer: el. 0'
- Unsaturated vertical infiltration rate: 1 ft/day (includes factor of safety)
- Horizontal hydraulic conductivity: 1 ft/day (includes factor of safety)
- Fillable porosity: 20%
- Average seasonal high groundwater table: el. 45'

Drainage Analysis

The 100 year critical storms were routed through all of the depressions in order to determine the max stages in pre and post development.

Please refer to Appendix A for detailed information, routing results, and hydraulic calculations.

Analysis Methodology

The drainage analysis was conducted using the computer program ICPR v3.10 to generate runoff hydrographs and route the runoff hydrographs through the proposed stormwater management system with a groundwater mounding analysis. The required storm events were analyzed using SRWMD rainfall amounts for Alachua County (FDOT Zone 5) and FDOT distributions for the pre and post-development watersheds.

The drainage analysis was conducted using the Green-Ampt rainfall excess method, with soil characteristics obtained from the National Resources Conservation Service (NRCS) Soil Survey Geodatabase (SSURGO) and published values by Rawls and Brakensiek that identify soil parameters based on soil texture class.

Unit Hydrograph Parameters

Unit hydrograph parameters required for the drainage analysis include drainage area, percent impervious and directly connected impervious area (DCIA), and time of concentration (Tc). The NRCS TR-55 method was utilized to calculate the time of concentration for all watersheds.

The depressional areas were assumed to be 100% directly connected impervious up to the maximum stage. Due to the nature of the site, this is the only directed connected impervious in the model.

Values used in the pre-development analysis are summarized as follows:

WTRSHD-1

Soil Number	Soil Name	Area (SF)	Area (Ac)	% Imp	% DCIA	Depth to Water Table	Hyd. Cond.	Eff. Por.	Suction Head
58	Lake fine sand, 0 to 5 percent slopes	351,225	8.06	4.18	4.18	4.76	51.14	0.417	4.17

Pond Storage

Stage-storage values for all depressions are provided in Appendix A.

Water Quality Treatment Volume

Per FDEP, the required WQTV for a dry retention system is the runoff from 2.0 inches of rainfall from the design storm calculated using the rational method. For Basin 3, where new impervious is proposed and the existing depression extends offsite, a roadside swale is proposed to provide extra WQTV.

Table 1 below shows the required water quality treatment volume utilized for each basin and the corresponding elevation of this volume.

Table 1: Post-Development Water Quality Treatment

Basin ID	Required WQTV (cf)	Provided (cf)	WQTV Stage (FT)	Recovery (hrs)
BASIN-1	20,163	20,163	85.28	<31
BASIN-2	63,807	63,807	59.49	>72
BASIN-3	342,685	342,685	81.53	< 18
BASIN-4	142,220	142,220	85.68	<37
BASIN-5	393,422	393,422	87.77	<17
BASIN-6	112,046	112,046	85.28	<19
BASIN-7	215,288	215,288	78.65	<7
BASIN-8	21,900	21,900	86.00	< 62
BASIN-9	78,429	78,429	77.48	<16
BASIN-10	167,430	167,430	73.20	<29
BASIN-11	8,223	8,223	82.05	<26
BASIN-12	39,112	39,112	82.77	<19
BASIN-13	20,749	20,749	89.05*	>72
BASIN-14	8,939	8,939	78.32	<67
BASIN-15	34,227	34,227	84.24	<30

* Basin 13 discharges to Basin 2, so the excess WQTV will remain onsite.

Basins 2 and 13 do not recover. However, Basin 2 also does not recover in any of the storm routings and both basins are considered to be sinkholes. No changes are proposed to those depressions and no additional impervious is proposed to drain to those depressions.

Run-off and Facility Routing Results

The routing results are summarized below in Tables 2-9. The maximum stages for each basin are broken down by storm, with the maximum stages for the 100-year, 24-hour storm in Table 2, the 100-year, 8-hour storm in Table 3, the 100-year, 4-hour storm in Table 4, the 100-year, 2-hour storm in Table 5, and the 100-year, 1-hour storm in Table 6.

Detailed post-development modeling results are included in Appendix A.

* Above basin bottom

Note 1: Basins marked "N/A" do not have watersheds which reach the property boundary
Note 2: Basins in red extend over the property boundary. Basins not in red serve a watershed which extends over the property boundary but are contained onsite.

Basins 4, 6, 7, and 9 see consistent increases in stage in post development as compared to pre-development. This is a result of the basin bottoms being raised in post-development. Basin 3 sees a 0.02 ft (0.24") in post-development for the 24-hour storm. While Basin 3 extends offsite, the increase in stage is de minis given how small it is. Basin 2 does not recover in pre or post development but there is also no proposed maximum stage increases.

Post-development offsite discharges are summarized in tables 7-21, below. Please note that the majority of the depressions are full retention, even if they extend offsite.

Summary and Conclusions

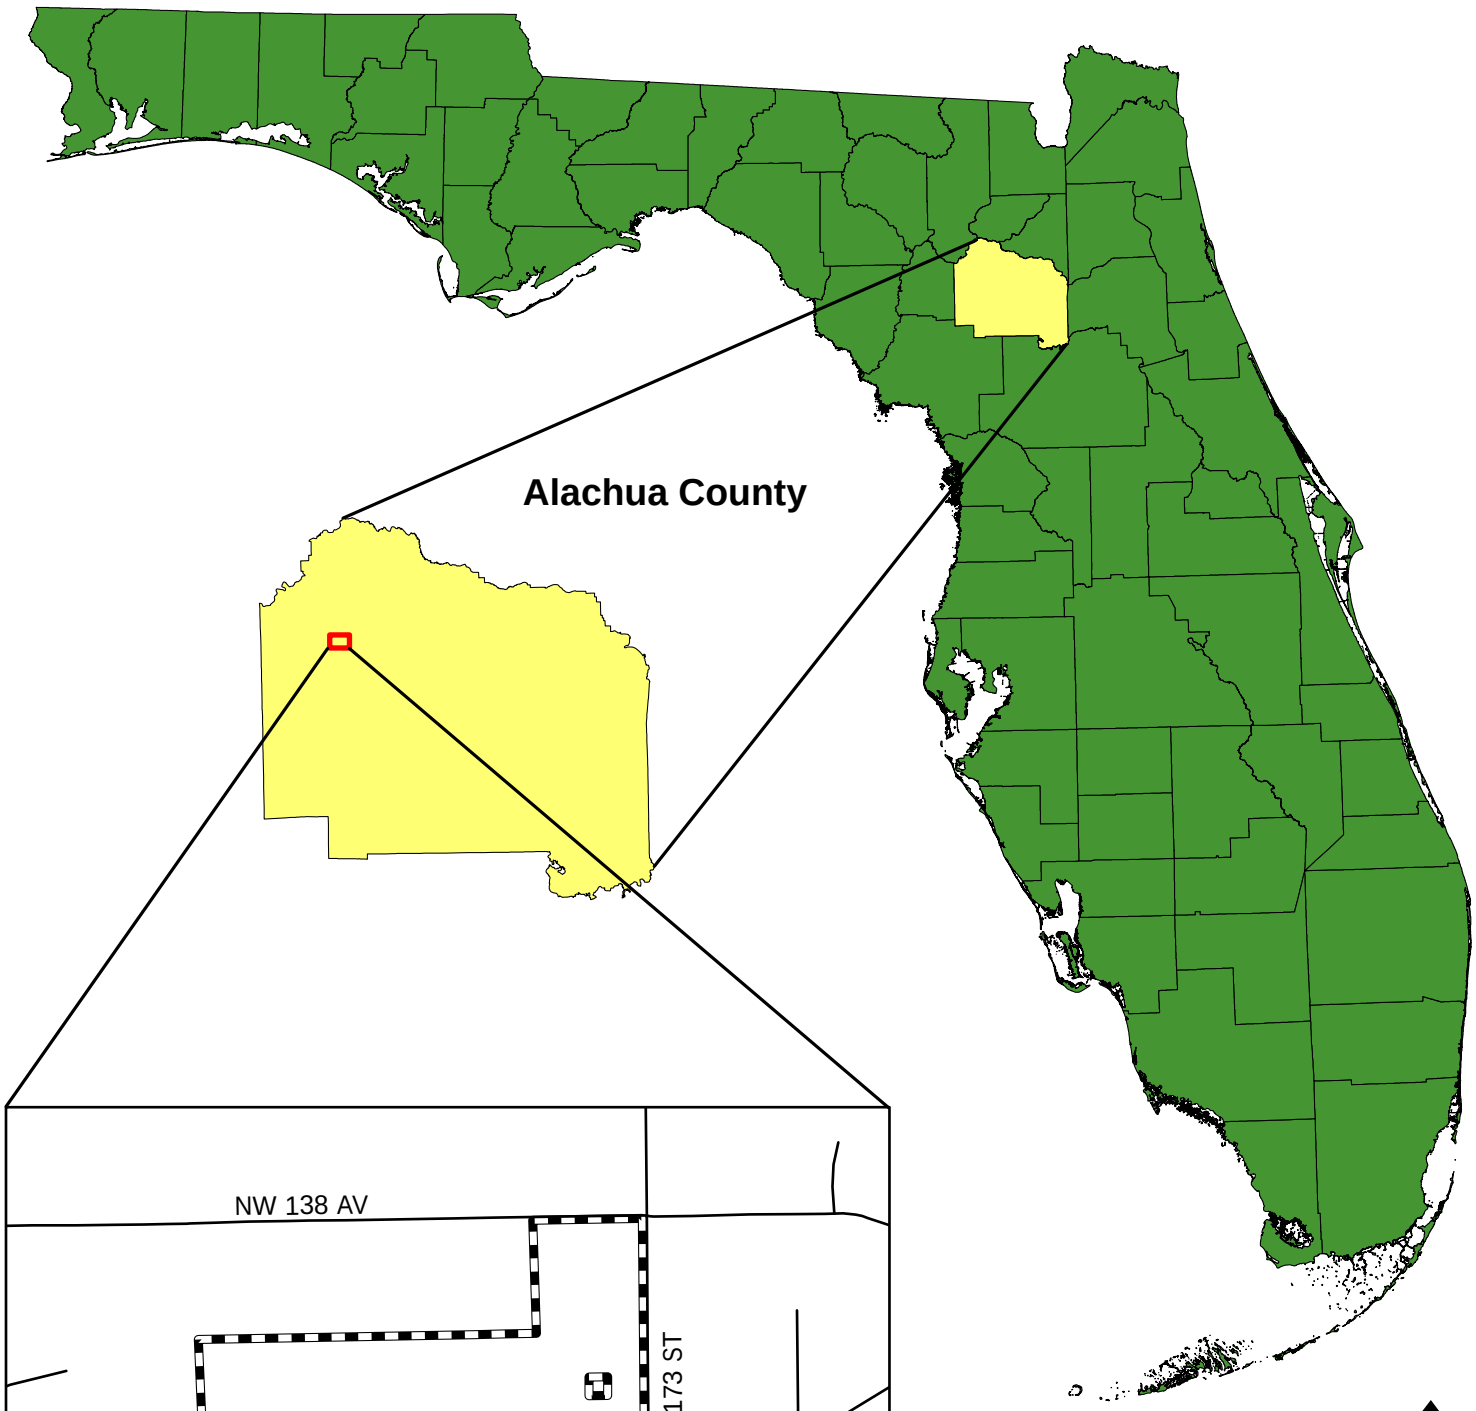
The proposed drainage system meets City of Alachua and SRWMD criteria for stormwater management facilities as follows:

1. Provide Water Quality Treatment Volume (WQTV): SMF-1 and SMF-2 have been designed to retain the first 2.0 inches of rainfall over from the drainage area and recover the WQTV within 72 hours for the roadway in the (FDEP).

2. Provide Discharge Rate and Volume Attenuation: The majority of the basins do not discharge or discharge onsite. The only basin which discharges offsite does not have an increase in peak discharge or volumetric discharge. (FDEP)

3. Provide Volume Recovery – Most of the depressions recover in both pre and post-development. The one depression which does not recover, Basin-2, does not recover in both the pre and post-development conditions. (FDEP)

4. Freeboard – The majority of the depressions do not have 1' of freeboard in the pre or post-development condition. Any increase in post-development stage is de minimis or otherwise contained onsite. (FDEP)



5. Side Slopes – Side slopes steeper than 4:1 require fencing (FDEP).

Based on the information provided, the project is eligible for approval by the Cityof Alachua and FDEP.

Notes

1. ToG = Top of Grate/EoP = Edge of Pavement; the lowest elevation of adjacent pavement
2. FB = Free Board
3. Rainfall intensity is based on the FDOT Zone 7 Rainfall Intensity-Duration-Frequency curve for the 3 YR - 10 min storm event (6.1 inches/hr)
4. The tailwater condition in the pond was set at crown for the proposed pipe
5. MES-1 and MES-2 are located at the main entrance on Peggy Road. MES-3 and MES-4 are located at the cemetary entrance on CR235A
