Policy 1.10.a specifically refers to *Wetlands* as those areas that would be identified using the Statewide Delineation Methodology that is defined in **Rule 62-340, FAC. Delineation of the Landward Extent of Wetlands and Surface Waters.** This methodology and its associated definitions are binding on all Municipal and County governments in the State of Florida. The regulations defined in*: **Objective 1.10: Wetlands*** specifically refers to Regulation of "*Wetlands." Wetlands* in **Chapter 62-340** are defined differently and delineated differently than *Surface Waters.* Within this chapter it is specifically stated that "all Wetlands are Surface Waters but not all Surface Waters are Wetlands." Wetlands are a specifically defined subset of surface waters that have different delineation procedures, different permitting exemptions, and very different regulatory treatment throughout the Florida Administrative Code.

The City Comprehensive Plan regulates Surface Waters, in part, through the provisions of **Objective 1.12: Water Resources**, as follows:

> **Objective 1.12: Water Resources**
>
> The City shall protect and conserve the quantity and quality of water resources, not only for the benefit of residents of the City, but for all in North Florida who depend on the Floridan aquifer for drinking water, and for the benefit of all connected springs, streams, and rivers which may be impacted by the City's land use and development practices.

This Objective specifically references connected surface waters such as springs, streams, and rivers, which are all *natural connected water systems*.

and,

Policy 1.12 b further defines the Objective in the context of *flowing Surface Water bodies,* as follows:

> *Policy 1.12.b:* The City shall inventory flowing surface water bodies within the City, utilizing topographic maps, or obtain an established inventory from an appropriate government agency. The inventory utilized should not identify water bodies in isolation; water bodies should be identified relative to their watersheds and basins.

Nowhere within **Objective 1.10: Wetlands** or **Objective 1.12: Water Resources** are regulations described for prohibition of development in or around man-made or non-natural surface waters or isolated natural surface waters. There are NO prohibitions described for development in or around these surface water types. These surface water types are the surface water categories that are proposed for impact on the Schmidt Planning Parcel.

Chapter 62-340 is very specific in its treatment and delineation of Surface Waters versus Wetlands. Wetlands are defined, as follows,

> (19) "Wetlands," as defined in Section 373.019(25), F.S., means those areas that are inundated or saturated by surface water or ground water at a frequency and a duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soils. Soils present in wetlands generally are classified as hydric or alluvial, or possess characteristics that are associated with reducing soil conditions. The prevalent vegetation in wetlands generally consists of facultative or obligate hydrophytic macrophytes that are typically adapted to areas having soil conditions described above. These species, due to morphological, physiological, or reproductive adaptations, have the ability to grow, reproduce or persist in aquatic environments or anaerobic soil conditions. Florida wetlands generally include swamps, marshes, bayheads, bogs,

cypress domes and strands, sloughs, wet prairies, riverine swamps and marshes, hydric seepage slopes, tidal marshes, mangrove swamps and other similar areas. Florida wetlands generally do not include longleaf or slash pine flatwoods with an understory dominated by saw palmetto.

Within the Florida Administrative Code , *Surface Waters* are defined, as follows.

Chapter 62-340.600 Surface Waters.

(1) For the purposes of Section 373.421, F.S., surface waters are waters on the surface of the earth, contained in bounds created naturally or artificially, including, the Atlantic Ocean, the Gulf of Mexico, bays, bayous, sounds, estuaries, lagoons, lakes, ponds, impoundments, rivers, streams, springs, creeks, branches, sloughs, tributaries, and other watercourses. However, state water quality standards apply only to those waters defined in Section 403.031(13), F.S.

Delineation of Surface Waters and Wetlands are described within **Section 62-340.600(2) (a-d)**, as follows:

(2) The landward extent of a surface water in the State for the purposes of implementing Section 373.414, F.S., shall be the more landward of the following:

(a) Wetlands as located by Rule 62-340.300, F.A.C., of this chapter;

(b) The mean high water line elevation for tidal water bodies;

(c) The ordinary high water line for non-tidal natural water bodies;

(d) The top of the bank for artificial lakes, borrow pits, canals, ditches and other artificial water bodies with side slopes of 1 foot vertical to 4 feet horizontal or steeper, excluding spoil banks when the canals and ditches have resulted from excavation into the ground, or

(e) The seasonal high water line for artificial lakes, borrow pits, canals, ditches, and other artificial water bodies with side slopes flatter than 1 foot vertical to 4 feet horizontal along with any artificial water body created by diking or impoundment above the ground.

(3) Determinations made pursuant to paragraphs (2)(b) and (2)(c), shall be for regulatory purposes and are not intended to be a delineation of the boundaries of lands for the purposes of title.

Rulemaking Authority 373.421 FS. Law Implemented 373.421, 373.4211, 403.031(13) FS. History–New 7-1-94, Formerly 17-340.600.

Natural Flowing Surface Waters are further defined in the context, of streams (creeks, rivers, etc.), as follows,

Section 373.019 F.S. (20) Stream

(20) "Stream" means any river, creek, slough, or natural watercourse in which water usually flows in a defined bed or channel. It is not essential that the flowing be uniform or uninterrupted. The fact that some part of the bed or channel has been dredged or improved does not prevent the watercourse from being a stream.

The ***Florida Statutes* (Section 373.019 FS. Definitions)** defines '*man-made drainage features'* in the context of *'Other Watercourses',* as follows,

> *(14) 'Other Watercourse***'** means any canal, ditch, or other artificial watercourse in which water usually flows in a defined bed or channel. It is not essential that the flowing be uniform or uninterrupted.

Therefore, for State permitting purposes flowing natural surfaces waters such as streams are defined and treated differently than artificial man-made drainages such as excavated ditches and canals.

The Objectives within the City Comp Plan defined above that deal with Wetlands and Surface Water specifically separate Wetland regulations from Surface Water regulations pursuant to guidelines established in **Chapter 62-340** as related to their delination. In addition, regulations in **Objective 1.12** are defined in terms of *Natural Surface Waters* and exclude *Artitfically Created Surface Waters.* City development regulations within *Policcy 1.10b* specifically define and distinguish between allowable and limited development in *Isoslated Wetlands* as opposed to *Connected Wetlands* howver no such definition exists for isolated and man-made Surface Water areas where allowable impacts remain largely undefined and prohitions for development impacts are also not defined.

Based on the context of these regulations, the impacts proposed for the Schmidt Farms Planning Parcel are consistent with any prohibitions defined within **Objectives 1.10 and 1.12**. Since the Surface Water impacts are not specicifally addressed in these regulations, the impacts would be regulated pursuant to the requirements of the Water Manaagement District as defined in the Applicant's Handbook and **Chapter 62-345. Uniform Mitigation Assessment Method, FAC**. Further, when local municipal regulations are less restrictive or do not address specific Wetland or Surface water impacts in Alachua County, then the provisions of ***Article II Countywide Wetlands Protection Code*** defined within ***Chapter 77, Water Quality Standards and Management Practices*** (ULDC)would take precedent. Within this Code, **Section 77.21. Exemptions** defines several exemptions, as follows:

> **Sec. 77.21. - Exemptions**.
>
> (a) The following activities are allowed on regulated surface waters, wetlands, and wetland buffers, subject to municipal regulations, if any, and any specified limitations, restrictions, and conditions:
>
> (11) *Artificial wetlands.* All man-made impoundments, lakes, streams, ponds, artificial or created wetlands, and all stormwater management facilities, provided that alteration in these areas will not adversely impact natural or mitigation surface waters and wetlands. If these facilities were required as a mitigation project they shall not be exempt from this chapter. If any wetlands or surface waters are part of a stormwater management facility approved by a city or the county, the same function must be provided, and any modifications shall be subject to approval by the applicable city or county engineer.

Based on this Code, the largest acreage of impacts proposed on Schmidt Planning Parcel involves created agricultural ponds and excavated drainage ditches, which are low-quality habitats that have received significant historical impacts as a result of intense cattle management. These ponds and ditches currently act as a continual pollution source to downstream areas of Turkey Creek, Brooke Pointe Creek, and Schmidt Creek. The *Conservation Easement* as proposed by the applicant would more than account for mitigation for the loss of these constructed Surface Waters, and by rule, these appear to be exempt from County and City Mitigation. As previously described, the impacts proposed for this site were approved during the 2008 application process by the City and District. The impacts proposed then are the same as those proposed for the current Project. Hence, the proposed impacts must also be considered in context of the following Code,

> **Sec. 77.21. - Exemptions**.
>
> (9) *Previously approved permits.*
> a. *Dredge and fill permits:* Specifically permitted dredge and fill or surface water management activities that were approved by a federal or state agency or a water management district, prior to the effective date of this code. Failure to comply with operating conditions of such permits shall nullify this exemption.
> b. *Other permits:* Projects for which the applicant demonstrates that final site plan or development plan approvals have been issued prior to the effective date of this code. Failure to comply with operating conditions of such permits shall nullify this exemption.

and,

> (10) *Altered wetlands.* In instances where the water regime of a wetland has been artificially altered, but the dominant vegetation of the area in question continues to be comprised of listed species, a feasibility of hydrologic restoration shall be made by county staff. Hydrologic restoration that can be accomplished by minor earth work or drainage controls, and would not be contrary to the public health, safety, and welfare, shall be viewed as the preferable alternative to the proposed alteration. This provision for exemption is not intended to apply in the case where a surface water and/or wetland has been filled or altered in violation of any rule, regulation, statute, or this chapter.

Summary

In summary, this ERA report documents the existing conditions found on the Planning Parcel. From this review, it can be stated that the Planning Parcel does not contain any natural native Upland or Wetland habitats that have not been significantly altered by past and ongoing agricultural and cattle management practices. As part of the proposed development, the following statements apply:

1. All Regulated Natural Resources that include Wetlands and natural Surface Waters on the site will be protected in perpetuity by Conservation Easements.
2. Development will **NOT** adversely affect Regulated Resources on the Planning Parcel or on adjacent sites.
3. **NO** known listed species will be adversely affected by development of the Planning Parcel.
4. Future development will be consistent with environmental regulations specified within the City Comprehensive Plan, the Alachua County Unified Land Development Code, and all set-aside required by Code will be established prior to any development activity of the Planning Parcel.

Table 3. Plant species recorded at the Schmidt Farms Planned Development Site, Alachua County.

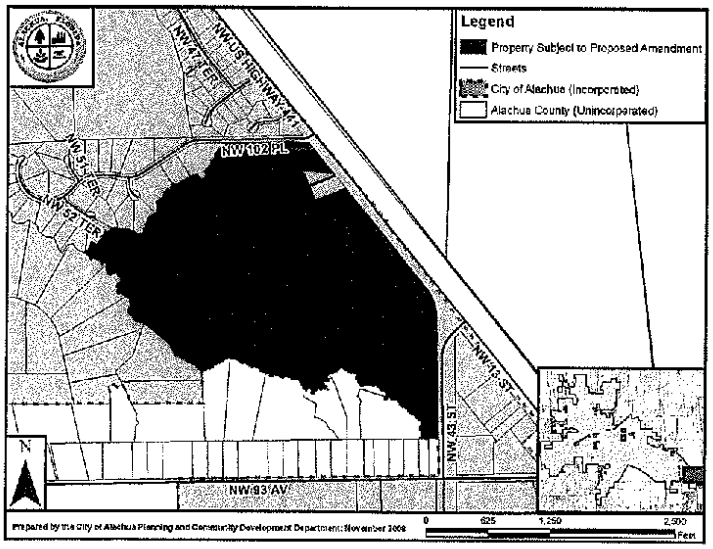
ATTACHMENT 1: Public Notice Issued 26 January 2009

City of Alachua



PUBLIC NOTICE
NOTICE OF ENACTMENT OF AN ORDINANCE
OF THE CITY OF ALACHUA, FLORIDA

The City of Alachua City Commission will hold a public hearing on a proposed ordinance on January 26, 2009 at 7:00 p.m. The hearing will be held in the Commission Chambers of City Hall, at 15100 NW 142nd Terrace, Alachua, Florida.

The ordinance title is as follows:

ORDINANCE 09 12

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE LARGE SCALE AMENDMENT OF THE CITY OF ALACHUA COMPREHENSIVE PLAN FUTURE LAND USE MAP, 2015; AMENDING THE FUTURE LAND USE MAP CLASSIFICATION FROM AGRICULTURE (±92.23 ACRES) AND COMMERCIAL (±39.37 ACRES) TO COMMERCIAL (±50.81 ACRES), CONSERVATION (±37.06 ACRES), AND MODERATE DENSITY RESIDENTIAL (±43.73 ACRES) ON FIVE PARCELS OF LAND THAT TOTAL ±131.6 ACRES; LOCATED AT 9900 NW US HIGHWAY 441, ALACHUA, FLORIDA, WEST OF THE INTERSECTION OF NW US HIGHWAY 441 AND NW 43RD STREET AND THE DEERHAVEN POWER PLANT. TAX PARCEL NUMBERS 05936-001-000; 05936-001-001; 05936-006-000; 05936-007-000; 05945-000-000; PROVIDING A REPEALING CLAUSE; PROVIDING SEVERABILITY; PROVIDING AN EFFECTIVE DATE.

P.O. Box 9 ❖ Alachua, Florida 32616-0009
Phone: (386) 418-6121 ❖ Fax: (386) 418-6130

City of Alachua

At the public hearing, all interested parties may appear and be heard with respect to the proposed ordinance. Copies of the proposed ordinance, the Staff Report, and related materials are available for public inspection at the Planning and Community Development Department or at the Office of the City Clerk, 15100 NW 142nd Terrace, on any regular business day between the hours of 8:00 a.m. to 4:30 p.m. the Thursday prior to the City Commission meeting. **Written comments on the proposed ordinance may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua FL 32616.** Notice is given pursuant to Section 286.0105, Florida Statutes, that in order to appeal any decision made at these public hearings, you will need to ensure that a verbatim record is made. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 101 at least 48 hours prior to the public hearing.

VI. COMMENTS FROM CITIZENS ON SUBJECT OF CHOICE

(Please Limit to 3 Minutes. Any citizen who did not speak during the Citizen Comments period at the beginning of the meeting may do so at this time.)

VII. COMMENTS FROM CITY MANAGER

VIII. COMMISSION COMMENTS/DISCUSSION

ADJOURN

Mr. Stubbs confirms for Vice-Mayor Burgess that a wetland pond is located on the subject property, but there are no springs. Mr. Stubbs notes there are protection standards in the Comprehensive Plan and the Land Development Regulations. Miss Portal states the City of Alachua has excellent policies and a lot of opportunity for setback and environmental resource protection in the planning process.

Vice-Mayor Burgess moves to approve Ordinance 09 11 on First Reading stating this Commission finds this application for a Large Scale Comprehensive Plan Amendment (LSCPA) to be consistent with the City of Alachua Comprehensive Plan and with a requirement that a text amendment concurrent with adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development of Regional Impact (DRI) threshold would be necessary, and authorize staff to transmit the proposed LSCPA to the Florida Department of Community Affairs; Commissioner Coerper seconds the motion.

Motion carries 4-0 on roll call vote.

C. **FIRST READING AND FIRST PUBLIC HEARING OF ORDINANCE 09 12: A REQUEST BY CAUSSEAUX, HEWETT, & WALPOLE, INC., AGENT FOR MESA-SAND REALTY, LLC, JULE L. SCHMIDT, AS CO-PERSONAL REPRESENTATIVE AND AS SUCCESSOR CO-TRUSTEE, PATRICIA M. SCHMIDT RICHARD, AS CO-PERSONAL REPRESENTATIVE AND AS SUCCESSOR CO-TRUSTEE, THOMAS ALAN SCHMIDT, AS CO-PERSONAL REPRESENTATIVE AND AS SUCCESSOR CO-TRUSTEE, HERBERT MATILSKY AND BARBARA MATILSKY, OWNERS, FOR CONSIDERATION OF A LARGE SCALE COMPREHENSIVE PLAN AMENDMENT (LSCPA) TO THE CITY OF ALACHUA FUTURE LAND USE MAP FROM AGRICULTURE (±92.23 ACRES) AND COMMERCIAL (±39.37 ACRES) TO COMMERCIAL (±50.81 ACRES), CONSERVATION (±37.06 ACRES), AND MODERATE DENSITY RESIDENTIAL (±43.73 ACRES). THE ±131.6 ACRE SUBJECT PROPERTY FOR THE PROPOSED AMENDMENT IS LOCATED AT 9900 NW US HIGHWAY 441, ALACHUA, FLORIDA. EXISTING FLUM: AGRICULTURE AND COMMERCIAL; ZONING: AGRICULTURE AND COMMERCIAL INTENSIVE (CI); TAX PARCEL NOS. 05936-001-000; 05936-001-001; 05936-006-000; 05936-007-000; 05945-000-000 (THIS IS A LEGISLATIVE HEARING).**

i. FIRST READING, ORDINANCE 09 12; CONSIDERATION OF APPROVAL OF THE ABOVE STATED ORDINANCE
ii. PUBLIC HEARING TO CONSIDER ADOPTION OF THE ABOVE-REFERENCED ORDINANCE

First reading of Ordinance 09 12 by title only for public record by City Attorney Rush.

City Planner Justin Tabor gives a brief overview of the above-referenced item noting the subject property contains one single family residence and accessory structures typical of agricultural activities, and has most recently been used for cattle grazing. According to the applicant, the proposed land use change would result in a mix of residential and non-residential uses and provide for the protection of the most significant natural areas. Mr. Tabor reviews maps showing the adjacent properties and their land use. The Planning and Zoning Board held a public hearing on

this item on December 16, 2008 and voted 5-0 for approval and transmittal to the City Commission with a requirement that a text amendment concurrent with the adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development (DRI) thresholds would be necessary. Mr. Tabor notes that the concerns of the citizens in attendance at the Planning and Zoning Board meeting are summarized and in the Agenda packets, staff report, and the minutes from the meeting.

Gerry Dedenbach, with Causseaux, Hewett, & Walpole, Inc., agent for the applicant, gives a Power Point presentation outlining what is being proposed for this property beginning with a timeline of the land use change process. He notes a neighborhood meeting was held on the proposed changes, as well as a subsequent meeting. By moving the commercial areas away from the residential areas and into the core, large conservation areas were created. He notes three main concerns: 1) Surface water flow; 2) Conservation area behind Brooke Point; and 3) NW 102nd Place access.

Mr. Tabor continues with the staff report reviewing site suitability, needs analysis, urban sprawl analysis, public facilities impacts, consistency with the Comprehensive Plan, and DRI related issues.

Commissioner Coerper comments on the drainage on the subject property.

Mayor Calderwood notes for the record that they have received William Burger's letter, respectfully submitted by the Brooke Pointe Home Owners Association, noting three (3) concerns.

William Burger states the Commission has effectively raised the major concerns that the homeowners have about the subject property, especially potential flooding and the entrance to Brooke Pointe. He commends Mr. Dedenbach for the neighborhood meetings.

Pam Connolly respectively requests that maximum consideration be given to the conservation area, light pollution, and noise abatement, as well as the setback from wetlands, buffering, and stormwater management.

Richard Beardsley presents a letter to the Commission and comments on what draws people to this part of Alachua County. He is against approval of this Ordinance.

Karen Arington presents a letter to the Commission. She states the proposed development should not be approved.

Rupert Murphy states he is opposed to this development; he sees their way of life being destroyed and he objects to it.

Amy Ellis comments she is glad to see the Commission is looking closely at the creek on the subject property; she would like to see where it goes.

Shanna Johnson presents a letter to the Commission and reads it aloud. She requests that the Commission consider other options that bring better benefits to this area.

Mr. Dedenbach addresses the concerns that were noted by the citizens.

Commissioner Coerper moves to extend the meeting tonight until it ends no matter what time that is; Vice-Mayor Burgess seconds the motion.

Passed by unanimous consent.

Pete Wallace comments on the wetlands on the subject property noting they had put every possible place in conservation and this will be allowed to naturally succeed.

Commissioner Hills moves to approve Ordinance 09 12 on First Reading stating this Commission finds this application for a Large Scale Comprehensive Plan Amendment (LSCPA) to the City of Alachua Future Land Use Map to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations, with a requirement that a text amendment concurrent with the adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development of Regional Impact (DRI) thresholds would be necessary, and authorize staff to transmit the proposed amendment to the Florida Department of Community Affairs; Commissioner Coerper seconds the motion.

Motion carries 4-0 on roll call vote.

D. FIRST READING AND FIRST PUBLIC HEARING, ORDINANCE 09 13: A REQUEST BY CAUSSEAUX, HEWETT & WALPOLE, INC. FOR CONSIDERATION OF A TEXT AMENDMENT TO THE CITY OF ALACHUA COMPREHENSIVE PLAN TO AMEND OBJECTIVE 1.6 OF THE FUTURE LAND USE ELEMENT TO ALLOW PRIVATELY OWNED RECREATIONAL LANDS IN THE RECREATION FUTURE LAND USE MAP CATEGORY, AND AMEND POLICY 1.6.D OF THE FUTURE LAND USE ELEMENT TO LIMIT THE FLOOR AREA RATIO FOR PRIVATELY OWNED RECREATIONAL LANDS IN THE FUTURE LAND USE MAP CATEGORY

i. FIRST READING, ORDINANCE 09 13; CONSIDERATION OF APPROVAL OF THE ABOVE STATED ORDINANCE
ii. PUBLIC HEARING TO CONSIDER ADOPTION OF THE ABOVE-REFERENCED ORDINANCE

First reading of Ordinance 09 13 by title only for public record by City Attorney Rush.

Planning Director Kathy Winburn gives a brief overview of the above-referenced item noting Objective 1.6 currently reads as follows: Recreation: the City of Alachua shall designate a Recreation land use category for all publicly owned recreational lands, however, in order to provide the opportunity for recreation activities, recreational uses may be allowed outside of the Recreation land use category. The new language, underlined and in bold text, for the proposed Objective 1.6 is "...for all publicly **or privately** owned recreational lands...". Mrs. Winburn notes it is common in other local governments to allow privately owned recreational lands in a Recreation Future Land Use Map category and states the proposed amendment would bring the

Subject: Approval of Conceptual Environmental Resource Permit Application Number ERP08-0278, The Market at Schmidt Farms, Alachua County

Dear Applicant:

The Suwannee River Water Management District (District) proposes to issue Conceptual Environmental Resource Permit Number 08-0278 for your project located in Township 8 South, Range 19 East, Sections 34 and 35 26, in Alachua County. This proposed action is subject to final Governing Board approval at their regularly scheduled meeting on January 13, 2009.

Persons considered to be potentially affected by this proposed agency action may request an administrative hearing. The request must be in writing and must adhere to the guidelines set forth in Chapter 28-106, Florida Administrative Code. Please see the enclosed Notice of Rights. All requests for administrative hearings are required to be sent to the Suwannee River Water Management District, 9225 County Road 49, Live Oak, Florida 32060. Questions regarding the proposed action should be directed to the Department of Resource Management, 386.362.1001.

Sincerely,

Jon Dinges, P.E.
Director, Resource Management

Subject: Approval of Environmental Resource Permit Application Number ERP08-0278, The Market at Schmidt Farms, Alachua County

Dear Applicant:

Enclosed is your permit for the above referenced project. This permit was issued for a period of five years. Please pay close attention to the conditions of your permit.

Substantially affected persons are entitled to request an administrative hearing pursuant to ss.120.57 (1), Florida Statutes (F.S.), and Chapter 28, Florida Administrative Code, if they object to the Suwannee River Water Management District's (District) actions. Failure to request a hearing within 21 days will constitute a waiver of your right to request such a hearing. In addition, the District will presume that permittee waives Chapter 120, F.S., rights to object or appeal the action upon commencement of construction authorized by the permit. This permit does not alleviate you from having to obtain all other clearances, permits, or authorizations required by any unit of local, state, or federal government.

If you wish, we will visit with you on site to discuss the terms of the permit, review existing pre-construction conditions, and answer any questions you may have prior to beginning work. To schedule a pre-construction meeting, please contact me.

If you have any questions regarding this, please call me at 386.362.1001.

Sincerely,

Jon Dinges, P.E.
Director, Resource Management

PROJECT: THE MARKET AT SCHMIDT FARMS

Approved entity to whom operation and maintenance may be transferred pursuant to rule 40B-4.1130, Florida Administrative Code (F.A.C.):

MYERS SAND REALTY, LLC
2220 N. MERIDIAN ST.
INDIANAPOLIS, IN 46208

Based on information provided, the Suwannee River Water Management District's (District) rules have been adhered to and an environmental resource conceptual permit is in effect for the permitted activity description below:

This permit authorizes a 0.882-acre wetland creation area, and 36.38 acres of wetlands and upland buffers to be placed in a conservation easement as mitigation for 0.88 acres of wetland impacts. The project will be completed in a manner consistent with the application package completed on December 3, 2008, by Myers Sand Realty, LLC, and satisfying the criteria in Chapters 40B-4 and 40B-400, Florida Administrative Code.

It is your responsibility to ensure that adverse off-site impacts do not occur either during or after construction. Any additional construction or alterations not authorized by this permit may result in flood control or water quality problems both on and off site and will be a violation of District rule.

You or any other substantially affected persons are entitled to request an administrative hearing or mediation. Please refer to enclosed notice of rights.

This permit is issued under the provisions of chapter 373, F.S., chapter 40B-4, and chapter 40B-400,

F.A.C. A general permit authorizes the construction, operation, maintenance, alteration, abandonment, or removal of certain minor surface water management systems. This permit authorizes the permittee to perform the work necessary to construct, operate, and maintain the surface water management system shown on the application and other documents included in the application. This is to notify you of District's agency action concerning Notice Of Intent. This action is taken pursuant to rule 40B-4 and 40B-400, F.A.C.

Standard Conditions for All General Permits:

1. The permittee shall perform all construction authorized in a manner so as to minimize adverse impacts to fish, wildlife, natural environmental values, and water quality. The permittee shall institute necessary measures during construction including riprap, reinforcement, or compaction of any fill materials placed around newly installed structures, to minimize erosion, turbidity, nutrient loading, and sedimentation in the receiving waters.

2. Water quality data representative of the water discharged from the permitted system, including, but not limited to, the parameters in chapter 62-3, F.A.C., shall be submitted to the District as required. If water quality data are required, the permittee shall provide data as required on the volume and rate of discharge including the total volume discharged during the sampling period. All water quality data shall be in accordance with and reference the specific method of analysis in "Standard Methods for the Examination of Water and Wastewater" by the American Public Health Association or "Methods for Chemical Analysis of Water and Wastes" by the U.S. Environmental Protection Agency.

3. The operational and maintenance phase of a surfacewater management permit will not become effective until the owner or his authorized agent certifies that all facilities have been constructed in accordance with the design permitted by the District. If required by the District, such as-built certification shall be made by an engineer or surveyor. Within 30 days after the completion of construction of the system, the permittee shall notify the District that the facilities are complete. If appropriate, the permittee shall request transfer of the permit to the responsible entity approved by the District for operation and maintenance. The District may inspect the system and, as necessary, require remedial measures as a condition of transfer of the permit or release for operation and maintenance of the system.

4. Off-site discharges during and after construction shall be made only through the facilities authorized by the permit. Water discharged from the project shall be through structures suitable for regulating upstream stage if so required by the District. Such discharges may be subject to operating schedules established by the District.

5. The permit does not convey to the permittee any property right nor any rights or privileges other

than those specified in the permit and chapter 40B-1, F.A.C.

6. The permittee shall hold and save the District harmless from any and all damages, claims, or liabilities which may arise by reason of the construction, operation, maintenance, alteration, abandonment, or development in a Works of the District which is authorized by the permit.

7. The permit is issued based on the information submitted by the applicant which reasonably demonstrates that adverse off-site water resource impacts will not be caused by the permitted activity. It is the responsibility of the permittee to insure that such adverse impacts do not in fact occur either during or after construction.

8. It is the responsibility of the permittee to obtain all other clearances, permits, or authorizations required by any unit of local, state, or federal government.

9. The surfacewater management system shall be constructed prior to or concurrent with the development that the system is intended to serve and the system shall be completed within 30 days of substantial completion of the development which the system is intended to serve.

10. Except for General Permits After Notice or permits issued to a unit of government, or unless a different schedule is specified in the permit, the system shall be inspected at least once every third year after transfer of a permit to operation and maintenance by the permittee or his agent to ascertain that the system is being operated and maintained in a manner consistent with the permit. A report of inspection is to be sent to the District within 30 days of the inspection date. If required by chapter 471, F.S., such inspection and report shall be made by an engineer.

11. As-built certification shall be made by an engineer or surveyor.

12. The permittee shall allow reasonable access to District personnel or agents for the purpose of inspecting the system to insure compliance with the permit. The permittee shall allow the District, at its expense, to install equipment or devices to monitor performance of the system authorized by their permit.

13. The surfacewater management system shall be operated and maintained in a manner which is consistent with the conditions of the permit and chapter 40B-4.2040, F.A.C.

14. The permittee is responsible for the perpetual operation and maintenance of the system unless the operation and maintenance is transferred pursuant to chapter 40B-4.1130, F.A.C., or the permit is modified to authorize a new operation and maintenance entity pursuant to chapter 40B-4.1110, F.A.C.

Permit No.: ERP08-0278

Project: THE MARKET AT SCHMIDT FARMS

Page 4 of 7

15. Notwithstanding any reference herein made, no construction is authorized by this conceptual plan permit.

16. Each phase shall require a general environmental resource permit.

Special limiting conditions made part of this permit are as follows:

17. Prior to issuance of future environmental resource permits for construction, the proposed conservation easement shall be accepted by the District Governing Board and recorded with the Alachua County Clerk of Courts.

WITHIN 30 DAYS AFTER COMPLETION OF THE PROJECT, THE PERMITTEE SHALL NOTIFY THE DISTRICT, IN WRITING, THAT THE FACILITIES ARE COMPLETE.

NOTICE OF RIGHTS

1. A person whose substantial interests are or may be determined has the right to request an administrative hearing by filing a written petition with the Suwannee River Water Management District (District), or may choose to pursue mediation as an alternative remedy under Section 120.569 and 120.573, Florida Statutes, before the deadline for filing a petition. Choosing mediation will not adversely affect the right to a hearing if mediation does not result in a settlement. The procedures for pursuing mediation are set forth in Sections 120.569 and 120.57 Florida Statutes. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). A petition must comply with Chapter 28-106, Florida Administrative Code.

2. If the Governing Board takes action which substantially differs from the notice of District decision to grant or deny the permit application, a person whose substantial interests are or may be determined has the right to request an administrative hearing or may chose to pursue mediation as an alternative remedy as described above. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). Such a petition must comply with Chapter 28-106, Florida Administrative Code.

3. A substantially interested person has the right to a formal administrative hearing pursuant to Section 120.569 and 120.57(1), Florida Statutes, where there is a dispute between the District and the party regarding an issue of material fact. A petition for formal hearing must comply with the requirements set forth in Rule 28-106.201, Florida Administrative Code.

4. A substantially interested person has the right to an informal hearing pursuant to Section 120.569 and 120.57(2), Florida Statutes, where no material facts are in dispute. A petition for an informal hearing must comply with the requirements set forth in Rule 28-106.301, Florida Administrative Code.

5. A petition for an administrative hearing is deemed filed upon receipt of the petition by the Office of the District Clerk at the District Headquarters in Live Oak, Florida.

6. Failure to file a petition for an administrative hearing within the requisite time frame shall constitute a waiver of the right to an administrative hearing pursuant to Rule 28-106.111, Florida Administrative Code.

Permit No.: ERP08-0278

Project: THE MARKET AT SCHMIDT FARMS

Page 6 of 7

7. The right to an administrative hearing and the relevant procedures to be followed is governed by Chapter 120, Florida Statutes, and Chapter 28-106, Florida Administrative Code.

8. Pursuant to Section 120.68, Florida Statutes, a person who is adversely affected by final District action may seek review of the action in the District Court of Appeal by filing a notice of appeal pursuant to the Florida Rules of Appellate Procedure, within 30 days of the rendering of the final District action.

9. A party to the proceeding before the District who claims that a District order is inconsistent with the provisions and purposes of Chapter 373, Florida Statutes, may seek review of the order pursuant to Section 373.114, Florida Statutes, by the Florida Land and Water Adjudicatory Commission, by filing a request for review with the Commission and serving a copy of the Department of Environmental Protection and any person named in the order within 20 days of adoption of a rule or the rendering of the District order.

10. For appeals to the District Courts of Appeal, a District action is considered rendered after it is signed on behalf of the District, and is filed by the District Clerk.

11. Failure to observe the relevant time frames for filing a petition for judicial review, or for Commission review, will result in waiver of the right to review.

CERTIFICATE OF SERVICE

I hereby certify that a copy of the foregoing Notice of Rights has been sent by U.S. Mail to:

MYERS SAND REALTY, LLC
2220 N. MERIDIAN ST.
INDIANAPOLIS, IN 46208

At 4:00 p.m. this 15 day of JAN, 2021.

Jon M. Dinges
Deputy Clerk
Suwannee River Water Management District
9225 C.R. 49
Live Oak, Florida 32060

Permit No.: ERP08-0278

Project: THE MARKET AT SCHMIDT FARMS

Page 7 of 7

cc: File Number: ERP08-0278

NOTICE OF RIGHTS

1. A person whose substantial interests are or may be determined has the right to request an administrative hearing by filing a written petition with the Suwannee River Water Management District (District), or may choose to pursue mediation as an alternative remedy under Section 120.569 and 120.573, Florida Statutes, before the deadline for filing a petition. Choosing mediation will not adversely affect the right to a hearing if mediation does not result in a settlement. The procedures for pursuing mediation are set forth in Sections 120.569 and 120.57 Florida Statutes. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). A petition must comply with Chapter 28-106, Florida Administrative Code.

2. If the Governing Board takes action which substantially differs from the notice of District decision to grant or deny the permit application, a person whose substantial interests are or may be determined has the right to request an administrative hearing or may chose to pursue mediation as an alternative remedy as described above. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). Such a petition must comply with Chapter 28-106, Florida Administrative Code.

3. A substantially interested person has the right to a formal administrative hearing pursuant to Section 120.569 and 120.57(1), Florida Statutes, where there is a dispute between the District and the party regarding an issue of material fact. A petition for formal hearing must comply with the requirements set forth in Rule 28-106.201, Florida Administrative Code.

4. A substantially interested person has the right to an informal hearing pursuant to Section 120.569 and 120.57(2), Florida Statutes, where no material facts are in dispute. A petition for an informal hearing must comply with the requirements set forth in Rule 28-106.301, Florida Administrative Code.

5. A petition for an administrative hearing is deemed filed upon receipt of the petition by the Office of the District Clerk at the District Headquarters in Live Oak, Florida.

6. Failure to file a petition for an administrative hearing within the requisite time frame shall constitute a waiver of the right to an administrative hearing pursuant to Rule 28-106.111, Florida Administrative Code.

7. The right to an administrative hearing and the relevant procedures to be followed is governed by Chapter 120, Florida Statutes, and Chapter 28-106, Florida Administrative Code.

8. Pursuant to Section 120.68, Florida Statutes, a person who is adversely affected by final District action may seek review of the action in the District Court of Appeal by filing a notice of appeal pursuant to the Florida Rules of Appellate Procedure, within 30 days of the rendering of the final District action.

9. A party to the proceeding before the District who claims that a District order is inconsistent with the provisions and purposes of Chapter 373, Florida Statutes, may seek review of the order pursuant to Section 373.114, Florida Statutes, by the Florida Land and Water Adjudicatory Commission, by filing a request for review with the Commission and serving a copy of the Department of Environmental Protection and any person named in the order within 20 days of adoption of a rule or the rendering of the District order.

10. For appeals to the District Courts of Appeal, a District action is considered rendered after it is signed on behalf of the District, and is filed by the District Clerk.

11. Failure to observe the relevant time frames for filing a petition for judicial review described in paragraphs no. 11 and 12, or for Commission review as described in paragraph no. 13, will result in waiver of the right to review.

Recommended Agency Action

Staff recommends issuance of a conceptual permit with sixteen standard conditions and one special limiting condition. A draft permit containing the conditions is attached to this staff report.

SRWMD Project Review Staff

Louis Mantini, P.W.S, Environmental Specialist; and Tim Sagul, P.E., Assistant Director, Resource Management, reviewed the project application.

Approved By: _____
Jon Dinges, P.E., Director, Resource Management

Project Location

The project is located at the intersection of US 441 and NW 43rd Street in Township 8 South, Range 19 East, Sections 34 and 35, in Alachua County

Project Description

The applicant requests a permit to mitigate for 0.88 acres of direct wetland impacts as part of a conceptual development with a combined 17.00 acres of residential development, 26.77 acres of open space, and 51.54 acres of commercial development.

Interagency Coordination

Staff notified the following: Alachua County Board of Commissioners, the United States Army Corps of Engineers, and the Florida Fish and Wildlife Conservation Commission, and the Florida Department of State – Historical Resources.

Review of Resource Impacts and District Permitting Criteria

Will the project increase flood hazards outside the project area?
[ref. 40B-4.2030(2)(a) and 40B-4.2030(5)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the project increase flood hazards that may affect the health, safety and general welfare of persons residing within the project area?
[ref. 40B-4.2030(2)(b) and 40B-4.2030(5)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the project create excessive drainage of surfacewaters or permanent dewatering of surficial aquifers?
[ref. 40B-4.2030(2)(a)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will erosion be controlled to avoid sedimentation, which would render the proposed system unserviceable; or to avoid sedimentation that would degrade receiving waters?
[ref. 40B-4.2030(2)(d)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the waters discharged or percolated from the surfacewater management system receive at least the minimum level of stormwater treatment necessary to comply with state water quality standards?
[ref. 40B-4.2030(2)(e) and 40B-4.2030(7)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the system have adverse environmental impacts including impacts to fish, wildlife, wetlands, and other natural resources?
[ref. 40B-4.2030(2)(f)]

No. In order to offset 0.88 acres of direct wetland impacts, the applicant is proposing to mitigate on-site with a 0.882-acre wetland creation area and 36.38 acres of wetland buffers, the latter to be placed in a conservation easement to the benefit of the district. The conservation easement will be brought to the Governing Board at a later time for consideration, and is proposed in concept only at this time.

Will the new surfacewater management system convert wetlands to uplands through drainage, filling, or other means? (If yes, describe mitigation for loss of storage, wetland mitigation, and effects on aquifer recharge.)
[ref. 40B-4.2030(3)]

Yes. The applicant proposes 0.777 acres of direct impacts to a livestock pond and associated overland drainage ditches; 0.040 acres of streamside wetlands associated with a proposed road crossing; and 0.065 acres of impacts to two isolated wetlands.

In order to offset 0.88 acres of direct wetland impacts, the applicant is proposing to mitigate on-site with a 0.882-acre wetland creation area and 36.38 acres of wetlands and upland buffers, the latter to be placed in a conservation easement to the District.

The proposed conservation easement will preserve 36.38 acres of wetlands and upland buffers currently under agricultural land use, including 15.65 acres of extended wetland and streamside buffers associated with Turkey Creek, Brooke Pointe Creek, and an unnamed tributary of Turkey Creek.

Monitoring will not be required for the created wetland, since mitigation will be satisfied by the proposed conservation easement.

Will the new surfacewater management system result in development within a work of the district that has the potential for reducing floodway conveyance?
[ref. 40B-4.2030(4) and 40B-4.2030(6)]

The project is not in a Work of the District.

Who is the authorized Operation and Maintenance Entity?

Myers Sand Realty, LLC, is the proposed operation and maintenance entity.

WETLAND MITIGATION STAFF REPORT

CONCEPTUAL ENVIRONMENTAL RESOURCE PERMIT APPLICATION

DATE: December 23, 2008

PROJECT: The Market at Schmidt Farms

APPLICANT:
Myers Sand Realty, LLC
2220 N. Meridian Street
Indianapolis, IN 46208

PERMIT APPLICATION NO.: ERP08-0278
DATE OF APPLICATION: 08/07/08
APPLICATION COMPLETE: 12/03/08
DEFAULT DATE: 03/03/09

The applicant requests a permit to mitigate for 0.88 acres of direct wetland impacts as part of a conceptual planned development with a combined 17.00 acres of residential development, 26.77 acres of open space, and 51.54 acres of commercial development.

The Uniform Mitigation Assessment Method (UMAM) in 62-345, Florida Administrative Code, was used to determine the amount of wetland function lost by the 0.88 acres of wetland impacts. The functional loss associated with the 0.88 acres of wetland impacts is 0.4724 functional loss units. The applicant is proposing to mitigate on-site with a 0.882-acre wetland creation area and 36.38 acres of wetlands and upland buffers, the latter to be placed in a conservation easement. The wetland buffers will be an average of 75 feet and minimum of 50 feet from the jurisdictional wetland boundary. The proposed conservation easement will preserve 36.38 acres of upland and wetland areas currently under agricultural land use, including 15.65 acres of extended wetland and streamside buffers associated with Turkey Creek, Brooke Pointe Creek, and an unnamed tributary of Turkey Creek.

A total of 0.4724 functional loss units will be offset by 0.3440 and 2.110 units of functional gain associated with wetland creation and conservation easement, respectively. Monitoring will not be required for the creation wetland, since mitigation will be completely satisfied by the easement.

MARKET AT SCHMIDT FARMS – LARGE SCALE COMPREHENSIVE PLAN AMENDMENT

December 16, 2008

I. OVERVIEW

Large Scale Comprehensive Plan Amendment (LSCPA). A request by Causseaux, Hewett, & Walpole, Inc., agent for Mesa-Sand Realty, LLC, Jule L. Schmidt, as co-personal representative and as successor co-trustee, Patricia M. Schmidt Richard, as co-personal representative and as successor co-trustee, Thomas Alan Schmidt, as co-personal representative and as successor co-trustee, Herbert Matilsky and Barbara Matilsky, owners, for consideration of a Large Scale Comprehensive Plan Amendment (LSCPA) to the City of Alachua Future Land Use Map from Agriculture (±92.23 acres) and Commercial (±39.37 acres) to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres). The ±131.6 acre subject property for the proposed amendment is located at 9900 NW US Highway 441, Alachua, Florida. Existing FLUM: Agriculture and Commercial; Zoning: Agriculture and Commercial Intensive (CI); Tax Parcel Nos. 05936-001-000; 05936-001-001; 05936-006-000; 05936-007-000; 05945-000-000.

Map 1. Future Land Use Map with Subject Property

II. BACKGROUND

The proposed Large Scale Comprehensive Plan Amendment (LSCPA) is a request by Causseaux, Hewett, & Walpole, Inc., to amend the City of Alachua Future Land Use Map from Agriculture (±92.23 acres) and Commercial (±39.37 acres) to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres) on an approximate 131.6 acre subject property. The subject property contains one single family residence and accessory structures typical of agricultural activities, and has most recently been used for cattle grazing. According to the applicant, the proposed land use change would result in a mix of residential and non-residential uses and provide for the protection of the most significant natural areas.

The subject property is located west of the intersection of US Highway 441 and NW 43rd Street. The Deerhaven Power plant is located to the north of the subject property. Located to the east of the subject property is Deerhaven Citgo and NW 43rd Street Storage, among other commercial and office uses. Single family residences are located to the south, west, and north of the subject property.

Best available data and the Environmental Resource Assessment submitted by the applicant indicate that the subject property contains wetland areas and that the subject property is in Flood Zone A (areas determined to be inside of the 100-year floodplain, with no Base Flood Elevation (BFE) determined) and Flood Zone X (areas determined to be outside of the 500-year floodplain). Turkey Creek is located along the western and southern property boundary. An unnamed creek is located north of the subject property and adjacent to a portion of the northern and western property boundary. This unnamed creek flows to and joins with Turkey Creek along the western property boundary. A third creek (also unnamed) runs through a portion of the eastern part of the subject property. This creek also flows to Turkey Creek. One lake is located on the subject property, which, according to the Environmental Resource Assessment submitted by the applicant, is an excavated pond that was dug circa 1979 in an historic forested wetland area. The pond has been degraded due to agricultural activity that has occurred on-site. The subject property does not contain any champion trees, sinkholes, Alachua County Forever Lands, Florida Natural Area Inventory areas, Strategic Ecosystems, or pits and spoil areas.

The ***Commercial Future Land Use Map (FLUM) Designation*** is described as follows in Policy 1.3.b of the Future Land Use Element of the Comprehensive Plan:

> The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses could locate. The following uses are allowed within the Commercial land use category:
>
> 1. Retail sales and services;
> 2. Personal services;
> 3. Financial Institutions;
> 4. Outdoor recreation and entertainment;
> 5. Tourist-related uses;
> 6. Hotels, motels;

7. Commercial shopping centers;
8. Auto-oriented uses;
9. Traditional Mixed-use Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/business parks;
13. Limited industrial services;
14. Eating Establishments

The ***Moderate Density Residential Future Land Use Map (FLUM) Designation*** is described as follows in Policy 1.2.a of the Future Land Use Element of the Comprehensive Plan:

Moderate density residential (0 to 4 dwelling units per acre): The moderate density residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the moderate density residential land use category:

1. Single family, conventional dwelling units;
2. Accessory dwelling units;
3. Manufactured or modular homes meeting certain design criteria
4. Mobile homes only within mobile home parks;
5. Duplexes and quadplexes;
6. Townhomes;
7. Residential Planned Developments;
8. Supporting community services, such as schools, houses of worship, parks, and community centers

The ***Conservation Future Land Use Map (FLUM) Designation*** is described as follows in Objective 1.7 of the Future Land Use Element of the Comprehensive Plan:

Conservation: The City shall create a Conservation land use category for lands on which certain identifiable features, such as flowing surface water bodies, wetland systems, flood plains, wellfield protection areas, unique geologic characteristics, and listed plant and wildlife habitat require enhanced oversight and regulatory protection. Land use regulations for designated conservation areas will consider the vulnerability of susceptible features and vary accordingly. Conservation areas will allow a diverse range of activities and development opportunities, depending on the nature and degree of vulnerability of the susceptible features present.

3

In addition, Policy 1.7.a of the Future Land Use Element of the Comprehensive Plan elaborates upon Objective 1.7, and states:

> Conservation uses: Conservation uses shall be limited to public access, low-intensity resource-based recreation, (i.e., greenways and trails), native vegetative community restoration, residential and non-residential uses necessary to manage such conservation lands (i.e., ranger stations, research stations, and park amenities).

Under the existing FLUM Designations of Agriculture and Commercial, the subject property currently consists of the following maximum development potential:

Table 1. Existing Future Land Use Map Designation Maximum Densities & Intensities

Existing Future Land Use Map Designation	Acreage	Maximum Permitted Density/Intensity	Subject Property Maximum Density/Intensity
Commercial	39.37	0.5 FAR	857,479 square feet
Agriculture	92.23	1 DU / 5 Acres	18 dwelling units

Under the proposed FLUM Designations of Commercial, Conservation, and Moderate Density Residential, the subject property would consist of the following maximum development potential:

Table 2. Proposed Future Land Use Map Designation Maximum Densities & Intensities

Proposed Future Land Use Map Designation	Acreage	Maximum Permitted Density/Intensity	Subject Property Maximum Density/Intensity
Commercial	50.81	0.5 FAR	1,106,685 square feet
Conservation	37.06	N/A	N/A
Moderate Density Residential	43.73	4 DU / Acre	174 dwelling units

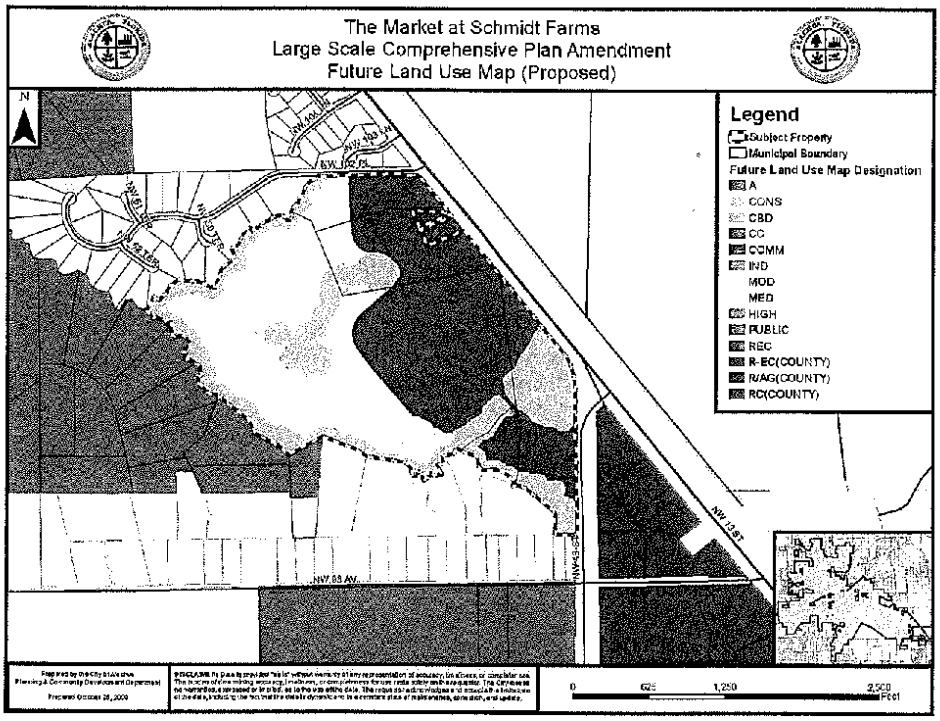
The net increase in maximum permitted densities and intensities is as shown in Table 3 below:

Table 3. Net Increase in Maximum Permitted Densities & Intensities

	Commercial Future Land Use Map Designation	"Residential" FLUM Designations[1]
Proposed Future Land Use Map Designations	1,106,685 square feet	174 dwelling units
Existing Future Land Use Map Designations	857,479 square feet	18 dwelling units
Net Increase	**249,206 square feet**	**156 dwelling units**

1. "Residential" FLUM Designations represent Agriculture and Moderate Density Residential FLUM Designations.

The applicant has also provided a proposed maximum development scenario. This development scenario would limit the development below Development of Regional Impact (DRI) thresholds.



The maximum development potential under the applicant's proposed maximum development scenario is as follows:

Table 4. Proposed Future Land Use Map Designation Maximum Densities & Intensities

Proposed Future Land Use Map Designation	Acreage	Proposed Maximum Density/Intensity
Moderate Density Residential	43.73	174 dwelling units
Commercial	50.81	399,900 square feet (retail)
		44,000 square feet (office)

The existing uses, Future Land Use Map (FLUM) Designations, and Zone Districts of the surrounding area are outlined in Table 5. Map 2 shows the amended Future Land Use Map, if the proposed amendment is approved.

Map 2. Proposed Amendment to the Future Land Use Map

A. Surrounding Uses.

Table 5. Surrounding Land Uses

Direction	Existing Use	Land Use	Zoning
North	Brook Pointe Subdivision, Staghorn Subdivision, Deerhaven Power Plant	Moderate Density Residential; Public Facilities (City of Gainesville Des.)	Residential Single Family – 1 (RSF-1); Planned Unit Development (PUD); Public Services (City of Gainesville Des.)
South	Single Family Residences	Residential Low Density (Alachua Co. Des.)	Residential Single Family Estate (RE-1) (Alachua Co. Des.)
East	Deerhaven Citgo, 43rd Street Storage, Deerhaven Power Plant	Commercial; Public Facilities (City of Gainesville Des.)	Commercial Intensive (CI); Public Services (City of Gainesville Des.)
West	Morgan Manor Subdivision, Brook Pointe Subdivision	Moderate Density Residential; Agriculture	Residential Single Family – 1 (RSF-1); Agriculture (A)

III. CONCLUSIONS OF LAW: CONSISTENCY WITH THE ALACHUA COMPREHENSIVE PLAN, RULE 9J-5, AND CHAPTER 163, PART II.

A. Suitability/Natural Resources. A Site Suitability Analysis is one of the principal factors when proposing a land use change (Rule 9J-5.006(2)(b)2). At the Future Land Use Map (FLUM) Amendment stage, a detailed, site-specific analysis should also be completed, utilizing desk top data as well as on-site surveys and field notes. Fundamentally, the intent behind a site-specific suitability analysis is to determine whether or not a FLUM Amendment is appropriate for a given property and its environmental features. As such, consideration of these environmental features should be the first step towards making a determination about the appropriateness of a proposed Future Land Use Map Amendment.

Wetland Assessment

According to materials submitted by the applicant, there are wetland areas located on the subject property. As part of the application submittal, the applicant provided an Environmental Resource Assessment (ERA) conducted by Environmental Research Corporation (ERC). The ERA identifies a total of five (5) wetland areas: Schmidt Creek (3.689 acres); Turkey Creek (3.884 acres); Brook Pointe Creek (1.051 acres); Disturbed Depression Wetlands (0.945 acres); and Disturbed Mixed Hardwoods – Shrub Seepage Wetlands (1.062 acres). These wetland areas were determined by flagging and surveying in accordance with methodologies outlined in Chapter 62-340, F.A.C., and were flagged by ERC in November 2007.

Wetland areas are subject to the applicable protection standards of the City of Alachua Comprehensive Plan and the Land Development Regulations (LDRs), including but not

limited to, buffering requirements as provided in Policy 1.10.g of the Conservation and Open Space Element of the Future Land Use Element and the standards established in Section 6.9.5, *Wetlands Standards*, of the LDRs.

Evaluation: Wetland areas located on the subject property have been field verified and marked in accordance with methodologies outlined in Chapter 62-340, F.A.C. In order to mitigate for any potential impacts to wetland areas, the applicant has placed most wetland areas into the Conservation Future Land Use Map (FLUM) Designation. Given the information above, no issues relating to wetlands have been identified with the proposed amendment.

The applicant has adequately addressed the protection of wetland areas at this time, and has incorporated known data into the proposed FLUM amendment. Any development which occurs on-site must comply with the aforementioned protection standards of the City of Alachua Comprehensive Plan and Land Development Regulations (LDRs).

Map 3. Environmental Features

Strategic Ecosystems

The subject parcel is not located within a Strategic Ecosystem Overlay (areas identified as important ecological corridors).

Evaluation: Given the information above, no issues relating to strategic ecosystems have been identified with the proposed amendment.

Regulated Plant & Animal Species

The Environmental Resource Assessment (ERA) submitted by the applicant and prepared by Environmental Resource Corporation (ERC) indicates that surveys for the occurrence of imperiled species were performed concurrent with plant community surveys from October 2006, November 2007, and April through May 2008. In addition to these field surveys, ERC searched several existing databases to investigate the documented and imperiled species that may be located in and around the project site.

There was one (1) listed plant species found during the field survey. A plant belonging to the genus *Matelea* is found variously in hardwood areas adjacent to creek systems. The plant is either *Matelea floridana*, which is listed as endangered by the State of Florida, or *Matelea gonocarpus*, which is listed as threatened by the State of Florida. The ERA indicates that the precise species could be determined without the presence of flowers, which were not seen during observation. The ERA indicates that these species are common in Alachua County mesic hammock areas, and that the habitat for both species on-site is located within the proposed Conservation Future Land Use Map (FLUM) Designation areas. Therefore, the proposed amendment should have no adverse affect on existing populations, and in fact, may be more protected due to the removal of cattle.

If any development occurs on-site, the applicant must adhere to the provisions of the Tree Ordinance found in the Land Development Regulations (LDRs) if any alterations to the existing vegetation are proposed (i.e. tree removal). Further, should any other regulated plant or animal species be identified during the development process, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and the LDRs.

Evaluation: The Environmental Resource Assessment submitted by the applicant has provided an analysis of the potential for occurrence of threatened and endangered species. One (1) listed plant species was found on-site, however, the habitat for this species is located within areas with a Conservation Future Land Use Map (FLUM) Designation proposed. If any other threatened or endangered species are found to exist on-site, the applicant must adhere to the protection standards of the City of Alachua Comprehensive Plan and Land Development Regulations (LDRs), as well as the regulations of other agencies, including but not limited to, the United States Fish and Wildlife Service (USFWS), the Florida Fish and Wildlife Conservation Commission, the Florida Department of Environmental Protection (FDEP), and Alachua County Environmental Protection Department (EPD). Given the information above, no issues related to regulated plant and animal species have been identified with the proposed amendment.

Soil Survey

Each soil type found on the subject property has been identified below, as well as a discussion of any limitations the soil type may pose. The hydrologic soil group for each soil type is also provided. Additional information regarding on-site soils is contained on pages 95 – 96 of the Environmental Resource Assessment (ERA).

The hydrologic soil group, as defined for each specific soil below, refers to soils grouped according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration. The slope and kind of plant cover are not considered, but are separate factors in predicting runoff. There are four groups: A, B, C, and D. Group A soils have a high infiltration rate when thoroughly wet and have a low runoff potential. Group D soils, at the other extreme, are soils having very low infiltration rates and thus a high runoff potential.

There are six (6) soil types found on the subject property:

(1) Kanapaha Sand (0% - 5% slopes)

This soil has severe limitation for urban uses, including absorptiou fields and for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and local roads and streets. Wetness and sandy texture are the major problems. A good drainage system is needed to remove the excess water during we periods and to adequately control the water table.

Hydrologic Soil Group: B/D

(2) Floridana Sand Depressional

This soil has severe limitations for urban uses, including absorption fields for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and local roads and streets. Wetness and the sandy texture are major problems. A good drainage system is needed to remove the excess water during wet periods and to adequately control the water table.

Hydrologic Soil Group: D

(3) Millhopper Sand (0% - 5% slopes)

This soil has only slight limitations as sites for homes without basements, small commercial buildings, and for local roads and streets.

Hydrologic Soil Group: A

(4) Mulat Sand

This soil has severe limitations for all urban uses. Wetness is the major limitation. A good drainage system is necessary to remove the excess water during wet periods and to adequately control the water table. This soil has severe limitations for recreational uses.

Hydrologic Soil Group: D

(5) Pelham Sand

This soil has severe limitations for urban uses including absorption fields for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and roads and streets. Wetness is a major limitation. A good drainage system is needed to remove the excess water during wet period and to adequately control the water table.

Hydrologic Soil Group: B/D

(6) Pomona Sand

This soil has severe limitations for urban uses, including absorption fields for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and roads and streets. Wetness is the major problem. A good drainage system is needed to remove the excess water during wet periods and to adequately control the water table.

Hydrologic Soil Group: B/D

Evaluation: The applicant has submitted information regarding each soil type present on-site. While some soils pose limitations for development, a Preliminary Subsurface Soil Exploration and Geotechnical Engineering Evaluation conducted by Ardaman & Associates, Inc., and submitted as Attachment 1 to the Environmental Resource Assessment (ERA) indicates that the results of the exploration indicate that, with proper site preparation as recommended by Ardaman & Associates, Inc., the existing soils are suitable for supporting anticipated development. Given the information above, no issues relating to soils types have been identified with the proposed amendment.

Flood Potential

According to Panel 0285D of the most recent Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) series, the subject property is located in Flood Zone A (areas determined to be subject to flooding by the 1% annual chance flood (100-year flood), with no Base Flood Elevation (BFE) determined) and Flood Zone X (areas outside of the 500-year flood zone). Map 3 indicates areas of special flood hazard.

Evaluation: The applicant has acknowledged that portions of the subject property are located in areas of special flood hazard, and that the location of areas of special flood hazard must be considered through site development and incorporated into the overall development. At this time, the applicant has adequately addressed any concerns related to flood potential. If portions of the floodplain are utilized as building area, the applicant will be subject to the standards of Section 6.9.4, *Flood Prone Area Standards*, of the Land Development Regulations (LDRs). Given the information above, no issues related to flood potential have been identified with the proposed amendment.

Karst Sensitive Features

Karst sensitive areas include geology of irregular limestone formation in which erosion has produced fissures, sinkholes, underground streams, and caverns. Materials submitted by the applicant indicate that the subject property is not located within a karst sensitive area. The Preliminary Subsurface Soil Exploration and Geotechnical Engineering Evaluation conducted by Ardaman & Associates, Inc., and submitted as Attachment 1 to the Environmental Resource Assessment (ERA) indicates that the subject property is located over Ocala limestone ranging from twenty (20) feet to seventy-five (75) feet below ground surface. A typical soil profile consists of organic matter from ground surface to one and a half (1 ½) feet below ground surface, and very loose to loose fine sand containing varying amounts of silt and/or clay at depths from three (3) to five (5) feet. Drainage through such soils creates a natural filtering process for percolation into the Floridan Aquifer. The applicant has also indicated that the subject property is located in an area having low-medium aquifer recharge potential. The applicant has indicated that special consideration for stormwater management will be taken at the development stage, thus reducing the likelihood for groundwater contamination.

Evaluation: Given the information above, there are no concerns in this regard. It will be important that the applicant respond appropriately to any significant geologic features that may be identified during development and that stormwater facilities are designed and located with the same level of consideration, subject to approval by the Suwannee River Water Management District (SRWMD).

Wellfield Protection Zone

The subject property is not located within a City of Alachua Wellhead Protection Zone.

Evaluation: Given the information above, no issues have been identified in this regard.

B. Needs Analysis. Pursuant to Rule 9J-5, F.A.C., Future Land Use Map (FLUM) Amendments, in addition to being supported by sufficient data and analysis, must include a discussion that properly justifies the need for the land use change. This analysis should provide data based on an examination of population projections and market conditions within the planning horizon of the Comprehensive Plan, and should indicate that an increase in a certain Future Land Use Map Designation can be justified by this data.

The Needs Analysis should effectively demonstrate the need for an increase in the proposed Future Land Use Map Designation. The applicant is requesting a FLUM Designation of Commercial and Moderate Density Residential; therefore, the Needs Analysis must demonstrate a need for an increased amount of land with a Commercial and Moderate Density Residential FLUM Designations in the City.

The applicant has submitted a Market and Impact Study prepared by Dr. Greg Smersh, Professor of Real Estate at Florida State University. The study provides an evaluation of the urban economic area surrounding the subject property and analyzes the current and potential demand for various property types, including retail, office, and residential. The study was based upon the applicant's proposed development scenario, which consists of up to 400,000 square feet of commercial floor area, up to 80,000 square feet of office space, and up to 175 dwelling units.

The Market and Impact Study defines two (2) market areas: a primary market area and a secondary market area. The primary market area consists of a three (3) mile radial area surrounding the subject property, while the secondary market area consists of a five (5) mile radial area surrounding the subject property.

The Market and Impact Study states that land use and location theory indicate that the demand for real estate is ultimately driven by the local population. To estimate the current populations within each market area, the applicant utilized data obtained from the Alachua County Property Appraiser in June 2008. The number of residential dwelling units in each market area was determined, then a multiplier was applied based on the estimated number of persons per household (2.6 persons per household); vacancy rates were also applied. Based upon this methodology, the Market and Impact Study estimates that 12,941 persons are located within the three (3) mile market area, and 48,023 persons are located within the five (5) mile market area.

The Market and Impact Study provides an estimation of the supply and demand for commercial real estate. This analysis has also been calculated using data obtained from the Alachua County Property Appraiser in June 2008. Using a Geographic Information System (GIS) analysis, the study calculates the total square footage (supply) of retail, restaurant, and office space within the two (2) market areas by selecting properties based on their location. For an initial comparative analysis, the study calculates square feet per person ratios for the City of Alachua, Alachua County, and the City of Gainesville. Upon calculating the demand of retail, restaurant, and office space within the three (3) and five (5) mile market areas, the study subtracts the current demand from the supply to determine the gap between supply and demand. This is referred to as a GAP Analysis. The GAP Analysis provided in the study indicates that there currently is a gap of 442,284 square feet of commercial, 40,753 square feet of restaurant, and 195,830 square feet of office space within the three (3) mile market area. Within the five (5) mile market area, the GAP Analysis indicates that there is a gap of 1,159,358 square feet of commercial and 104,514 square feet of restaurant space. According to the Analysis, office space is currently in oversupply in the five (5) mile market area by 38,430 square feet of floor area.

12

The study continues by providing a discussion regarding the regional economy and future population growth. The study defines Basic Employment as activities that produce goods and services for consumption ***outside*** the community. These employers primarily demand industrial and office space. Basic employees demand goods and services, which in turn creates Non-Basic Employment (activities that produce goods and services ***for*** the local economy). The study continues by utilizing data regarding employment figures for Alachua County for numerous basic employment sectors. These figures were obtained from the Bureau of Economic Analysis, and indicate that the total number of basic employment in Alachua County consists of 59,799 jobs. The total number of employment is 153,434. Dividing the total number of employment by the number of basic jobs yields an economic base multiplier. For Alachua County, the resulting economic base multiplier is 2.57, indicating that for each basic job created, an additional 1.57 jobs is created.

This information can be utilized to assist in estimating population growth. The study indicates that new employment in the area could exceed 1,000 basic jobs. Assuming 1,000 basic jobs are created, utilizing the economic base multiplier discussed above, the total number of jobs created would be 2,570 jobs. Based upon the population-to-employment ratio of 2.05, published by the Bureau of Labor Statistics, this would result in an increase of 5,628 persons.

The study continues by utilizing this estimated increase of population to estimate future demand for commercial space. Based upon an estimated increase in population of 5,000 persons, in addition to the existing 48,000 persons which reside in the five (5) mile market area, the additional demand (gap) for commercial space would be as follows: 1,383,550 square feet of retail; 121,068 square feet of restaurant; and 137,766 square feet of office space.

Evaluation: The Market and Impact Study submitted by the applicant uses several methodologies to show the demand/need for additional commercial and residential uses within the market area. The Study also provides the following information: an inventory of the local retail base, market impacts of potential large-scale retail development, services and capital expenditures required to serve the site, and infrastructure impacts, among other topics. Please refer directly to the Market and Impact Study for specific information regarding these items.

C. **Urban Sprawl Analysis.** Urban sprawl is defined by Rule 9J-5.003, Florida Administrative Code (F.A.C.), as "urban development or uses which are located in predominantly rural areas, or rural areas interspersed with generally low-intensity or low-density urban uses, and which are characterized by one or more of the following conditions: (a) The premature or poorly planned conversion of rural land to other uses; (b) The creation of areas of urban development or uses which are not functionally related to land uses which predominate the adjacent area; or (c) The creation of areas of urban development or uses which fail to maximize the use of existing public facilities or the use of areas within which public services are currently provided. Urban sprawl is typically manifested in one or more of the following land use or development patterns: leapfrog or scattered development; ribbon or strip commercial or other development; or

large expanses of predominantly low-intensity, low-density, or single-use development." Further, Rule 9J-5.006, F.A.C., identifies thirteen primary indicators of urban sprawl, which states that each of the indicators shall consist of an analysis of the plan amendment within the context of the features and characteristics unique to each locality. Each of the thirteen indicators are listed below, with an analysis of the application's consistency with each primary indicator. The applicant's analysis of the primary indicators is located in the materials submitted as an attachment to the application. The applicant contends that the proposed amendment will not encourage urban sprawl.

1. Promotes, allows or designates for development substantial areas of the jurisdiction to develop as low-intensity, low-density, or single-use development or uses in excess of demonstrated need.

Comment: *The application proposes to amend the City of Alachua Future Land Use Map (FLUM) from Agriculture and Commercial to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres) on an overal 131.6 acre subject property, located west of the intersection of US Highway 441 and NW 43rd Street. The Commercial FLUM Designation allows for a variety of commercial uses, such as retail sales and services, commercial shopping centers, office/business parks, and traditional mixed-use neighborhood planned developments, among other uses identified in Policy 1.3.b of the Future Land Use Element of the Comprehensive Plan. The Moderate Density Residential FLUM Designation allows for many uses, including single family dwelling units, duplexes, townhomes, residential planned developments, and supporting services, such as schools, houses of worship, parks, and community centers. The multiple land uses proposed for the subject property provides for a functional mix of inter-related uses. It should also be noted that the subject property* ***currently*** *has approximately 39.37 acres of area designated Commercial FLUM; therefore, the proposed amendment results in a net increase of commercial area of approximately 11.44 acres.*

Policy 1.3.f of the Future Land Use Element of the Comprehensive Plan establishes the US 441 corridor as a Corporate Corridor Activity Area. The intensity of uses is therefore supported by the subject property's proximity to US Highway 441. With respect to the demonstration of need, the applicant has submitted a Market and Impact Study in an effort to provide justification for the need for commercial and residential land uses.

2. Promotes, allows or designates significant amounts of urban development to occur in rural areas at substantial distances from existing urban areas while leaping over undeveloped lands which are available and suitable for development.

Comment: *The subject property is located along US Highway 441, which is designated by Policy 1.3.f of the Future Land Use Element of the Comprehensive Plan as a Corporate Corridor Activity area. Urban uses, and densities and intensities associated with urban development, currently exist in proximity to the subject property. As mentioned, the subject property currently has a Commercial Future Land Use Map (FLUM) Designation on approximately 39.37 acres of the subject property. The*

proposed amendment would only result in an increase of 11.44 acres of commercial area. Lands adjacent to the subject property along US Highway 441 are developed, therefore, the proposed amendment would not leap over undeveloped lands.

Based on the location of the subject property relative to existing surrounding development, the proposed amendment would not promote, allow, or designated significant amounts of urban development to occur in rural areas while leaping over undeveloped land which are available and suitable for development.

3. Promotes, allows or designates urban development in radial, strip, isolated or ribbon patterns generally emanating from existing urban developments.

Comment: *The subject property is located along US Highway 441 between developed lands. US Highway 441 is a roadway defined as a principle arterial by Policy 1.1.a of the Traffic Circulation Element of the Comprehensive Plan. Commercial uses are located in proximity of the subject property along US Highway 441. Based upon properties surrounding the subject property, the proposed amendment would not promote, allow, or designate urban development in radial, strip, isolated, or ribbon patterns generally emanating from existing urban developments.*

4. As a result of premature or poorly planned conversion of rural land to other uses, fails adequately to protect and conserve natural resources, such as wetlands, floodplains, native vegetation, environmentally sensitive areas, natural groundwater aquifer recharge areas, lakes, rivers, shorelines, beaches, bays, estuarine systems, and other significant natural systems.

Comment: *The applicant has submitted an Environmental Resource Assessment (ERA) conducted by Environmental Resource Corporation (ERC) which analyzes natural resources, including wetlands, floodplains, native vegetation, environmentally sensitive area, natural groundwater aquifer recharge areas, lakes, rivers, and other significant natural systems. The subject property is located in Flood Zone A (areas determined to be subject to flooding by the 1% annual chance flood (100-year flood), with no Base Flood Elevation (BFE) determined) and Flood Zone X (areas outside of the 500-year flood zone). The subject property contains wetland areas which have been delineated and flagged as part of the ERA. The subject property is bordered and/or traversed by a total of three (3) streams. With the exception of a small agricultural (man-made) pond, there are no lakes located on-site. The subject property does not contain any sinkholes, champion trees, Alachua County Forever Lands, Strategic Ecosystems, or pits and spoil area. In order to protect the most significant environmental features, the applicant has proposed to designate approximately 37.06 acres of land as Conservation on the Future Land Use Map (FLUM). For a detailed assessment of environmental features, please refer to Section A above and the ERA.*

5. Fails adequately to protect adjacent agricultural areas and activities, including silviculture, and including active agricultural and silvicultural activities as well as passive agricultural activities and dormant, unique and prime farmlands and soils.

Comment: *The subject property is located proximate to existing urban uses. No active*

silvicultural operations occur within the immediate proximity of the subject property. The subject property is located adjacent to properties designated for commercial and residential uses. While there are lands designated as Agriculture on the Future Land Use Map (FLUM) located near the subject property, much of this land is part of a subdivision (Morgan Manor). Therefore, the proposed amendment does not fail to adequately protect any adjacent agricultural areas and activities.

6. Fails to maximize use of existing public facilities and services.

Comment: *The subject property is located along US Highway 441 and NW 43rd Street. Any development which may occur on-site will be able to access both roadways. The subject property is located outside of the City's urban services area, however, the applicant has indicated that any development which occurs on-site will connect to City water and wastewater services by extending existing infrastructure to the subject property. Any costs in upgrading and extending public facilities will be borne by the applicant.*

7. Fails to maximize use of future public facilities and services.

Comment: *If any development occurs on the subject property, the applicant has proposed to connect to City water and wastewater service, and has indicated that any cost associated with upgrading or extending infrastructure to the subject property will be borne by the applicant.*

8. Allows for land use patterns or timing which disproportionately increase the cost in time, money and energy, of providing and maintaining facilities and services, including roads, potable water, sanitary sewer, stormwater management, law enforcement, education, health care, fire and emergency response, and general government.

Comment: *The subject property is located near existing urban uses and land use patterns. While public facilities, including potable water and sanitary sewer, must be extended to service the subject property, the applicant has indicated that any cost associated with any upgrade and extension of infrastructure will be borne by the applicant. While located near the City of Alachua's City limits, the subject property is located in relative proximity to urban uses along US Highway 441. In addition, urban areas of the City of Gainesville are located near the subject property, which renders this location for urban development.*

9. Fails to provide a clear separation between rural and urban uses.

Comment: *The subject property is located in an urbanizing area along US Highway 441 and is in proximity to urban uses, including commercial and residential uses, including residential uses which carry a Moderate Density Residential Future Land Use Map (FLUM) Designation. The application proposes land use designations which can be found adjacent to the subject property, including Commercial and Moderate Density Residential FLUM Designations. As such, the proposed amendment does not fail to provide a clear separation between rural and urban uses.*

16

10. Discourages or inhibits infill development or the redevelopment of existing neighborhoods and communities.

Comment: *While located near the edge of the City of Alachua's corporate limits, the subject property is located in proximity and between to residential and commercial uses of urban densities and intensities. Therefore, the amendment does not discourage or inhibit infill development or the redevelopment of existing neighborhoods and communities.*

11. Fails to encourage an attractive and functional mix of uses.

Comment: *The Commercial Future Land Use Map (FLUM) Designation permits various commercial uses. In addition, the Moderate Density Residential FLUM Designation permits various residential uses. The combination of these land uses, through proper design and planning, can create an attractive and functional mix of uses. Therefore, the amendment does not fail to encourage an attractive and functional mix of uses.*

12. Results in poor accessibility among linked or related land uses.

Comment: *The subject property has direct access to US Highway 441 and NW 43rd Street. Any development which may occur on the subject property could potentially connect to US Highway 441, NW 43rd Street, or both roadways. The applicant has indicated that internal connection points will provide greater accessibility between the proposed land uses and adjacent property. Therefore, the proposed amendment will not result in poor accessibility among linked or related land uses.*

13. Results in the loss of significant amounts of functional open space.

Comment: *The subject property is located along US Highway 441, which is defined as a principle arterial by Policy 1.1.a of the Traffic Circulation Element of the Comprehensive Plan and as a Corporate Corridor Activity Area by Policy 1.3.f of the Future Land Use Element of the Comprehensive Plan. The applicant has proposed to designate approximately 37.06 acres of the subject property as Conservation on the Future Land Use Map (FLUM), in natural areas including creeks, wetlands, and buffer areas to protect these features. Therefore, the applicant has provided protection of the most significant environmental features, and as a result, the proposed amendment should not result in the loss of significant amounts of functional open space.*

D. Consistency with City of Alachua Comprehensive Plan. The applicant has prepared a report detailing the application's consistency with the Comprehensive Plan and outlining specific policies which support and are supported by the application. The applicant has addressed the proposed amendment's consistency with the Comprehensive Plan in the aforementioned report by reviewing the various elements of the Comprehensive Plan and providing an analysis of how the proposed application furthers the goals, objectives, and policies (GOPs) contained therein. Staff has provided

17

an analysis of the application's consistency with the City of Alachua Comprehensive Plan in Section V. of this report.

IV. PUBLIC FACILITIES IMPACT

Future Land Use Map (FLUM) Amendments often result in an increased impact on public facilities, as in most cases a FLUM Amendment intensifies a property's development potential. As such, Comprehensive Plan Amendments, like the one proposed here, should be adequately supported by data and analysis which describes the degree to which the amendment is likely to affect the City's public facilities capacity. The public facilities required of such analysis include roads, sanitary sewer, potable water, solid waste, drainage, recreation, and public schools.

An acceptable analysis will compare the demand for public facilities under the proposed FLUM Designation to the adopted level of service (LOS) standard and the maximum development allowed. The applicant has proposed approximately 50.81 acres of Commercial FLUM Designation, approximately 43.73 acres of Moderate Density Residential FLUM Designation, and approximately 37.06 acres of Conservation FLUM Designation. Pursuant to Policy 1.3.d.11 of the Future Land Use Element of the Comprehensive Plan, the maximum Floor Area Ratio (FAR) for the commercial component of the subject property is 0.50; the density for the residential component is 0 – 4 dwelling units per acre. The existing FLUM Designations consist of approximately 39.37 acres of Commercial FLUM Designation and approximately 92.23 acres of Agriculture FLUM Designation. ***The public facilities impact analysis presented below assesses the net increase in impacts to public facilities, based upon the net increase in density and intensity.*** The net increase in density and intensity for the subject property is determined by subtracting the existing maximum development potential from the proposed maximum development potential. This results in a net increase in commercial floor area of 249,206 square feet and 156 dwelling units.

As part of the submitted application, the applicant was asked to provide a detailed analysis of the site-specific public facilities impacts anticipated from the proposed amendment. This information should be based on the maximum development scenario for the ***net increase*** of public facilities impacts resulting from the proposed FLUM Designations. It is important to note that the impact analysis may not predict the public facilities impacts of a broader range of uses that could be permitted by the Commercial FLUM Designation (see Section II, Background, of this Staff Report).

The tables below represent the applicant's information with any corrections in **green** and any additional information in **blue.**

A. Traffic Impact:

Table 6. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2, 3]	Segment Description	Lanes	Functional Classification	Area Type	LOS
3/4 (61)	US 441 (from NW 126th Ave to SR 235)	4/D	Principle Arterial	Urban Trans	D
5 (63)	US 441 (from SR 235 to NCL of Alachua)	4/D	Principle Arterial	Urban Trans	D
6 (49)	US 441 (From CR 25A to NW 126th Ave)	4/D	Principle Arterial	Urban Trans	D
7 (48)	US 441 (from SW 63rd Ave to CR 25A)	4/D	Principle Arterial	Urban Trans	D

4 Source: City of Alachua Concurrency Book Keeping Tables with revisions through November 5, 2008.

5 Project trip generation is calculated on the net increase in impact (proposed maximum development scenario impacts less existing maximum development scenario impacts). Trip Distribution is as shown in the Land Development Traffic Assessment conducted by GMB Engineers and Planners, Inc.

6 The application is for a Preliminary Development Order, and as such, concurrency will not be reserved at this time.

7 Existing PM Peak Hour Traffic for County Roads is currently unknown. However, as evidenced above, projected Peak Hour Trip Generation impacts along County Roads is negligible.

B. Sanitary Sewer Impact:

Table 12. Net Increase in Projected Sanitary Sewer Impact

Analysis of Current Conditions	Gallons Per Day
Treatment Plant Current Permitted Capacity[1]	937,000
Less Actual Treatment Plant Flows[1]	454,000
Less Reserved Capacity (Demand from all Recent Development Orders)[2]	227,311
Current Available Capacity	**255,689**
Projected Sanitary Sewer Demand from Project[4]	76,381
Current Residual Capacity after Proposed Amendment[5]	**179,308**
Analysis of Spring 2009 Conditions	**Gallons Per Day**
Anticipated Treatment Plant Added Capacity (Spring 2009)[1]	563,000
Anticipated Treatment Plant Permitted Capacity (Spring 2009)[1]	1,500,000
Less Actual Treatment Plant Flows[1]	454,000
Less Reserved Capacity (Demand from all Recent Development Orders)[2]	227,311
Anticipated Available Capacity (Spring 2009)	**818,689**
Projected Sanitary Sewer Demand from Project[4]	76,381
Residual Capacity after Proposed Amendment (Spring 2009)[5]	**742,308**
Analysis of Post Spring 2009 Conditions	**Gallons Per Day**
Anticipated Treatment Plant Added Capacity (Post Spring 2009)[3]	1,500,000
Anticipated Treatment Plant Capacity (Post Spring 2009)[3]	3,000,000
Less Actual Treatment Plant Flows[1]	454,000
Less Reserved Capacity (Demand from all Recent Development Orders)[2]	227,311
Anticipated Available Capacity (Post Spring 2009)	**2,318,689**
Projected Sanitary Sewer Demand from Project[4]	76,381
Residual Capacity after Proposed Amendment (Post Spring 2009)[5]	**2,242,308**

3 Source: July 11, 2007 Cumulative Impacts Analysis, Cycle 1-2007, LSCPA, CPG Consulting, Inc.; the post Spring 2009 planned expansion that increases treatment capacity from 1.5M GPD to 3M GPD will be constructed as warranted by the appropriate system capacity utilization percentage.

4 Source: Policy 4.1.e of the Community Facilities & Natural Groundwater Aquifer Recharge Element, City of Alachua Comprehensive Plan (Formula: 250 gallons per day x 156 dwelling units = 39,000 gpd; 15 gpd/100 square feet x 249,206 square feet = 37,381 gpd; Total = 76,381 gpd).

5 The application is for a Preliminary Development Order, and as such, concurrency will not be reserved at this time.

C. Potable Water Impact:

Table 13. Net Increase in Projected Potable Water Impact

Analysis of Current Conditions	Gallons Per Day
Current Permitted Capacity[1]	2,300,000
Less Actual Potable Water Flows[1]	1,519,000
Less Reserved Capacity[2]	251,951
Current Available Capacity	**529,049**
Projected Potable Water Demand from Project[4]	80,281
Residual Capacity after Proposed Amendment[5]	**448,768**
Analysis of Spring 2009 Conditions	**Gallons Per Day**
Added Capacity FY CIP Program (2009)	1,900,000
Capacity Post Expansion[1]	4,200,000
Less Actual Potable Water Flows[1]	1,519,000
Less Reserved Capacity[2]	251,951
Anticipated Available Capacity (Spring 2009)[3]	**2,429,049**
Projected Potable Water Demand from Project[4]	80,281
Residual Capacity after Proposed Amendment[5]	**2,348,768**

2 Source: City of Alachua Concurrency Book Keeping Tables with revisions through November 5, 2008.

3 Source: June 13, 2007 Water & Wastewater Capacity Memo (Public Services Director) with updates from approved development orders through November 5, 2008.

4 Source: Policy 1.1.d of the Community Facilities & Natural Groundwater Aquifer Recharge Element; City of Alachua Comprehensive Plan (Formula: 275 gallons per day x 156 dwelling units = 42,900 gpd; 15 gpd/100 square feet x 249,206 square feet = 37,381 gpd; Total = 80,281 gpd).

5 The application is for a Preliminary Development Order, and as such, concurrency will not be reserved at this time.

D. Solid Waste Impact:

Table 14. Net Increase in Projected Solid Waste Impact

System Capacity	
Projected Solid Waste Impact from Project[2]	841.9 tons/year
New River Solid Waste Facility Capacity[3]	50 years

1. Source: Policy 2.1.a of the Community Facilities & Natural Groundwater Aquifer Recharge Element, City of Alachua Comprehensive Plan (Formula: 0.73 tons per capita per year x 2.6 persons x 156 dwelling units = 296.1 tons per year; (12 pounds/1,000 square feet per day x 249,206 square feet) x 365 days per year / 2,000 pounds per ton = 545.8 tons/year).

2. Source: Darrell O'Neal, Executive Director, New River Regional Landfill, December 2005.

E. Recreational Impact:

Table 15. Net Increase in Projected Recreation Impact

System Category	Acres
Existing City of Alachua Recreation Acreage[1]	123.00
Acreage Required to Serve Existing Population[1]	37.00
Projected Impacts from Recent Development Orders[1]	6.38
Current Available Recreational Capacity	72.62
Projected Recreational Impact from Amendment[2]	2.03
Residual Recreational Capacity After Amendment	72.52

1. Source: City of Alachua Concurrency Book Keeping Tables with revisions through November 5, 2008.

2. Policy 1.2.b of the Recreation Element of the City of Alachua Comprehensive Plan identifies a Level of Service standard of 5 acres / 1,000 persons (Formula: (156 dwelling units x 2.6 persons per dwelling unit) x (5 acres per 1,000 persons)).

F. Public School Impact:

Table 16. Net Increase in Projected Public School Impact

Impacted School	Permanent Program Capacity 2007-2008[1,2]	Actual COFTE Enrollment 2007-2008[1]	Potential Enrollment from Recent Dev. Orders[3]	Potential Enrollment from Development[4]	Residual Capacity after Development
Elementary Schools					
Alachua	525	462	34	12	17
Irby	595	477	33	12	73
Middle School					
Mebane	778	463	65	20	230
High School					
Santa Fe[4]	1,001	1,230	64	22	-315
Student population from proposed Project[2]	-	-	-	**66**	-

1. *Source: Alachua County Public School Facilities Element Data & Analysis, Revised June 3, 2008.*
2. *"Permanent Program Capacity" means "permanent FISH capacity" as adjusted by the School Board for measurable programmatic changes. **Permanent Program Capacity does not reflect an additional 200 seats at Alachua Elementary and an additional 250 seats at Santa Fe High School included in the SBAC Long Range Program (Five Year Planning Period).***
3. *Source: City of Alachua Concurrency Book Keeping Tables with revisions through November 5, 2008.*
4. *Potential enrollment is calculated based upon the composite multipliers defined in the Alachua County Public School Facilities Element Data & Analysis, Revised June 3, 2008 (Formulas: for elementary schools – 0.153 x 156 dwelling units; for middle schools – 0.130 x 156 dwelling units; for high schools – 0.142 x 156 dwelling units).*

Table 17. Net Increase in Projected Public School Impact (District Wide)

Impacted School	Permanent Program Capacity 2007-2008[1,2]	Actual COFTE Enrollment 2007-2008[1]	Potential Enrollment from Recent Dev. Orders[3]	Potential Enrollment from Development[4]	Residual Capacity after Development
Elementary Schools	13,556	11,831	67	24	1,634
Middle Schools	7,644	5,676	65	20	1,883
High Schools	8,917	8,728	64	22	103
Student population from proposed Project[2]	-	-	-	66	-

2. "Permanent Program Capacity" means "permanent FISH capacity" as adjusted by the School Board for measurable programmatic changes.

3. Source: City of Alachua Concurrency Book Keeping Tables with revisions through November 5, 2008.

4. Potential enrollment is calculated based upon the composite multipliers defined in the Alachua County Public School Facilities Element Data & Analysis, Revised June 3, 2008 (Formulas: for elementary schools – 0.153 x 156 dwelling units; for middle schools – 0.130 x 156 dwelling units; for high schools – 0.142 x 156 dwelling units).

G. Analysis of Impacts Associated with the Proposed Comprehensive Plan Amendment

Traffic Impact

An analysis of the impacts on the transportation system resulting from the proposed Future Land Use Map Designation and the anticipated type of development has been presented by the applicant in a Land Development Traffic Assessment conducted by GMB Engineers & Planners, Inc. The Land Development Traffic Assessment as well as Staff's analysis have utilized trip generation land use codes identified in *Trip Generation, Seventh Edition*, for a "Residential Condominium/Townhouse" and "Shopping Center." These land use codes predict average daily trip count totals and AM and PM peak hour count totals that reflect potential uses of the subject property.

Currently, direct access to the subject property may be provided by a connection to US Highway 441 and/or NW 43rd Street. US Highway 441 is a roadway that is required to be monitored for concurrency by the City of Alachua Comprehensive Plan. Tables 11a and 11b above indicate that there would be roadway capacity remaining on ***all*** affected Comprehensive Plan roadway segments to accommodate the ***net increase*** in potential impact. Therefore, the potential impact resulting from any development of the subject property could exceed the figures identified in Tables 7a and 7b above and in the Land Development Traffic Assessment submitted by the applicant. If development occurs at a later time, the applicant will be required to submit a detailed analysis of potential impacts based upon specific intensities and densities of the proposed development.

Based upon the analysis provided in the Land Development Traffic Assessment submitted by the applicant, Staff's review of this study, and Staff's analysis provided above, adequate information has been provided to determine that no adverse impacts to roadway Level of Service (LOS) would occur as a result of the proposed amendment.

Sanitary Sewer Impact

An analysis of the impacts on the sanitary sewer system resulting from the proposed Future Land Use Map Amendment and the anticipated type of development has been presented by the applicant. Based on the data and analysis provided, Staff's review of such information, and the analysis provided by Staff above, the adopted Level of Service (LOS) Standard for sanitary sewer facilities should not be degraded to an unacceptable level by this amendment.

Potable Water Impact

An analysis of the impacts on the potable water system resulting from the proposed Future Land Use Map Amendment and the anticipated type of development has been presented by the applicant. Based on the data and analysis provided, Staff's review of such information, and the analysis provided by Staff above, the adopted Level of Service (LOS) Standard for potable water facilities should not be degraded to an unacceptable level by this amendment.

Solid Waste Impact

The applicant has provided an analysis of the impacts on solid waste resulting from the proposed Future Land Use Map Amendment and the anticipated type of anticipated development. The applicant has indicated that there is approximately 50 years of capacity at the New River Regional Landfill. Information previously obtained by City Staff confirms this capacity estimate, and as such, the adopted Level of Service (LOS) Standard for solid waste facilities should not be degraded to unacceptable level by this amendment.

Stormwater Impact

While a Future Land Use Map Amendment is conceptual in nature, the applicant has acknowledged the need for design considerations for stormwater management facilities as they relate to the subject property and the intended use. If development occurs on the subject property at a later time, an Environmental Resource Permit will be required by the Suwannee River Water Management District prior to any Site Plan and/or Final Plat approval by the City.

Recreational Impact

The applicant has provided an analysis of the impacts to recreation public facilities anticipated from the residential component of the proposed Future Land Use Map (FLUM) Amendment. This analysis has been based upon the maximum density permitted by the Moderate Density Residential FLUM Designation (0 – 4 dwelling units per acre). Based upon the data and analysis provided, Staff's review of such information, and Staff's analysis provided above, the adopted Level of Service (LOS) Standard should not be degraded to an unacceptable level by this amendment.

Public School Impact

The applicant has provided an analysis of the potential impacts to public schools facilities. This analysis is based upon the Alachua County Public Schools Facilities Element Data and Analysis, which is currently in the process of incorporation into the City of Alachua Comprehensive Plan through the adoption of a new element, the Public Schools Facilities Element. The analysis provided by the applicant and Staff's analysis provided above is consistent with the methodology established by the School Board of Alachua County and in the proposed City of Alachua Public Schools Facilities Element.

Upon review of a final development order, the School Board of Alachua County will provide a determination regarding the impact the development will have on public schools facilities and provide a determination regarding whether or not capacity is available to serve the development. In the event the development would adversely affect public school facilities, the School Board of Alachua County will identify methods by which such deficiencies may be addressed.

The analysis provided at this time is acceptable for a preliminary development order, such as a Future Land Use Map (FLUM) Amendment. If the applicant submits an application for a final development order, a formal determination of public school facilities capacity will be provided by the School Board of Alachua County.

V. COMPATIBLE GOALS, OBJECTIVES, & POLICIES FROM THE CITY OF ALACHUA 2015 COMPREHENSIVE PLAN

The applicant has prepared a report detailing the application's consistency with the Comprehensive Plan and outlining specific policies which support and are supported by the application. The applicant has addressed the proposed amendment's consistency with the Comprehensive Plan in the aforementioned report by reviewing the various elements of the Comprehensive Plan and providing an analysis of how the proposed application furthers the goals, objectives, and policies (GOPs) contained therein.

Below is a list of GOPs with which the application is found to be consistent. The GOPs below are provided as a basis for establishing consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not listed below.

Vision Element

Goal One Economic Development

The City of Alachua has a unique business climate. The City is home to corporations, technology incubators, local businesses, and start-up companies. The US 441 corridor is beginning to develop into a "corporate corridor" with businesses, such as Sabine and JA Webster, and corporate campuses such as the Progress Corporate Park and Alachua Professional

Center. Alachua desires to continue to be a home to innovative businesses that want to be partners with the community.

Future Land Use Element

Policy 1.2.a Moderate density residential (0 to 4 dwelling units per acre): The moderate density residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the moderate density residential land use category:

1. Single family, conventional dwelling units;
2. Accessory dwelling units;
3. Manufactured or modular homes meeting certain design criteria
4. Mobile homes only within mobile home parks;
5. Duplexes and quadplexes;
6. Townhomes;
7. Residential Planned Developments;
8. Supporting community services, such as schools, houses of worship, parks, and community centers

Policy 1.3.b Commercial: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses could locate. The following uses are allowed within the Commercial land use category:

1. Retail sales and services;
2. Personal services;
3. Financial Institutions;
4. Outdoor recreation and entertainment;
5. Tourist-related uses;
6. Hotels, motels;
7. Commercial shopping centers;
8. Auto-oriented uses;
9. Traditional Mixed-use Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/business parks;
13. Limited industrial services;
14. Eating Establishments

Policy 1.3.d(11) Commercial uses shall be limited to an intensity of less than or equal to .50 floor area ratio for parcels 10 acres or greater, .50 floor area ratio for parcels less than 10 acres but 5 acres or greater, a .75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio to parcels 1 acre or less.

29

Policy 1.3.f The City of Alachua shall pursue the establishment of activity centers to guide the placement and design of commercial and business areas.

1. The City of Alachua shall establish a Gateway Activity Center at the interchange of US 441 and Interstate 75. The City shall establish the boundaries of the activity center based on the conceptual map provided herein and relevant regulations through a public planning process that will involve property owners as well as the public at-large. The intent of establishing this activity center is to welcome existing and future residents and visitors to the City of Alachua, and to promote Alachua as an attractive, vibrant, and economically prosperous community.

2. The City of Alachua shall establish the US 441 corridor as a Corporate Corridor Activity Center. The City shall establish the boundaries of the activity center and relevant regulations through a public planning process that will involve property owners as well as the public at-large. The intent of establishing this activity center is to implement the economic development objectives of the Vision 2010 Plan and to promote a coordinated development plan to maximize existing and future land use patterns and preserve the function of the US 441 corridor.

Objective 1.7 Conservation: The City shall create a Conservation land use category for lands on which certain identifiable features, such as flowing surface water bodies, wetland systems, flood plains, wellfield protection areas, unique geologic characteristics, and listed plant and wildlife habitat require enhanced oversight and regulatory protection. Land use regulations for designated conservation areas will consider the vulnerability of susceptible features and vary accordingly. Conservation areas will allow a diverse range of activities and development opportunities, depending on the nature and degree of vulnerability of the susceptible features present.

Goal 5 Development Standards: The City shall include provisions through its comprehensive plan amendment process, development review process and in its land development regulations for development standards that address natural features and availability of facilities and services. These development standards will strive to protect natural resources and public facility resources while allowing for innovative and flexible development patterns.

Objective 5.1 Natural features: The City shall coordinate Future Land Use designations with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.c Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, minimum flood elevations shall be surveyed and established.

30

The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Policy 5.1.e Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The survey shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. A deminimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Objective 5.2 Availability of facilities and services: All new development shall be planned and constructed concurrently with the availability of facilities and services necessary for the development.

Traffic Element

GOAL 1 PROVIDE FOR A TRAFFIC CIRCULATION SYSTEM, WHICH SERVES EXISTING AND FUTURE LAND USES.

Objective 1.1 The City shall establish a safe, convenient and efficient level of service standard for all motorized and non-motorized transportation systems.

Objective 1.2 The City shall establish access management standards and coordinate with Alachua County and the Florida Department of Transportation to maintain access management standards, which promote safe and efficient travel.

Policy 1.2.a The City shall control the number and frequency of connections and access points of driveways and roads to arterial and collector roads by requiring access points for state roads to be in conformance with Chapter 14-96 and 14-97, Florida Administrative Code, or subsequent provision.

Objective 1.5 The City shall require that all traffic circulation improvements be consistent with and complement the future land uses on the Future Land Use Map.

Policy 1.5.c To the extent feasible, the City shall require new developments to interconnect with one another through one of the following methods:

1. Through the extension of a public road from one project to another;
2. Through the extension of a sidewalk from one project to another;
3. Through the extension of a multi-purpose trail from one project to

31

another.

Policy 1.5.d To the extent feasible, the City shall only require new developments to connect with existing developments if the existing neighborhood desires such interconnectivity.

Housing Element

Policy 1.1.a The City shall encourage development of a variety of housing types including conventional single family homes, accessory dwelling units, multi-family units, group homes, assisted living facilities, foster care facilities, mobile homes and manufactured housing, and shall ensure that appropriate land use designations and zoning districts exist to accommodate each type.

Policy 1.1.i The City shall establish land use designations and zoning districts that accommodate mixed-use development consisting of residential with commercial and/or retail.

Policy 1.1.j The City shall provide incentives for mixed-use development that includes housing for extremely low, very low and low-income residents within the Affordable Housing Incentive Program. The City recognizes that mixed-use development reduces transportation costs by placing necessary shopping within close proximity to housing.

Community Facilities & Natural Groundwater Aquifer Recharge Element

Objective 1.2 Wastewater service will be made available to new development in a manner to promote compact urban growth, promoting development where wastewater service is available, and discouraging urban sprawl.

Policy 1.2.a The City shall establish a Community Wastewater Service Area, which includes all areas where wastewater service is available. Wastewater service shall he deemed available if:

1. A gravity water system exists within 100 feet of the property line of any residential subdivision lot or a single family residence and wastewater service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. A gravity wastewater system exists within 500 feet of the property line of any residential subdivision consisting of 5 units or less and the gravity wastewater system can be assessed through public utility easements or rights of way. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

32

3. A gravity wastewater system, wastewater pumping station, or force main exists within ¼ mile of the property line of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and the gravity wastewater system can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Policy 1.2.c The City shall prohibit the installation of in-ground septic tanks in locations with unsuitable soils within wetland areas, or where wastewater service is available within ¼-mile.

GOAL 3 Develop and maintain a stormwater management system that minimizes flooding, protects, preserves and enhances desirable water quality conditions, and, where possible, preserves and utilizes existing natural features.

Objective 3.1 Ensure provision of drainage and stormwater retention through level of service standards and design requirements to minimize flooding and to protect and improve water quality.

Policy 3.1.a The City hereby establishes the following water quantity and quality level of service standards for drainage facilities:

LEVEL OF SERVICE STANDARD

For all projects which fall totally within a stream, or open lake watershed, detention systems must be installed such that the peak rate of post-development runoff will not exceed the peak-rate of pre-development runoff for storm events up through and including either:

1. A design storm with a 10-year, 24-hour rainfall depth with Soil Conservation Service type II distribution falling on average antecedent moisture conditions for projects serving exclusively agricultural, forest, conservation, or recreational uses; or

2. A design storm with 100-year critical duration rainfall depth for projects serving any land use other than agricultural, silvicultural, conservation, or recreational uses.

The LOS standard for water quality treatment shall be treatment for the "first one inch" of runoff, and compliance with the design and performance standards established in Chapter 40C-42.025, FAC, and 42.035, FAC to ensure that the receiving water quality standards of Chapter 62.302.500, FAC are met and to ensure their water quality is not degraded below the minimum conditions necessary to maintain their classifications as established in Chapter 62-302, FAC. These standards

33

shall apply to all new development and redevelopment and any exemptions, exceptions or thresholds in these citations are not applicable. Infill residential development within improved residential areas or subdivisions existing prior to the adoption of this comprehensive plan, must ensure that its post-development stormwater runoff will not contribute pollutants which will cause the runoff from the entire improved area or subdivision to degrade receiving water bodies and their water quality as stated above.

Policy 4.1.b The City shall establish a Community Potable Water Service Area, which includes all areas where potable water service is available. Water service shall be deemed available if:

1. A water main exists within 100 feet of any residential subdivision lot or a single family residence and water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. A water main exists within 500 feet of any residential subdivision consisting of 5 units or less and the water service can be assessed through public utility easements or rights of way. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A water main exists within ¼ mile of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Objective 4.2 Prioritize and execute needed system improvements in a manner which protects existing investments, promotes orderly growth, and is consistent with the Capital Improvements Element and Capital Improvements Program of this Plan.

Policy 4.2.a New urban development will only occur within areas where potable water services are available concurrent with development. For purposes of this policy, new development does not include remodeling of existing developments or additions of less than 33% to existing developments.

Policy 4.2.b The City will continue to require necessary on-site water system improvements to be completed at the expense of the property owner.

Policy 4.2.c The City shall extend water service in a pattern consistent with the policies of the comprehensive plan, especially the Future Land Use Map and the Future Land Use Element, adhering to a compact urban growth area, promoting infill development and discouraging urban sprawl, as defined in Florida Administrative Code.

Conservation & Open Space Element

Policy 1.1.a The City shall create a conservation land use category for publicly or privately owned lands on which certain identifiable features, such as flowing surface water bodies, wetlands, flood plains, wellfield protection areas, unique geologic characteristics, and listed plant and wildlife habitat require enhanced oversight and regulatory protection. Land use regulations for designated conservation areas will consider the vulnerability of susceptible features and vary accordingly.

Objective 1.2 Native Communities and Ecosystems

The City shall preserve and protect native communities and ecosystems, particularly those considered endangered or threatened.

Policy 1.2.a The City shall ensure that land use designations, development practices and regulations protect native communities and ecosystems, and environmentally sensitive lands.

Policy 1.2.j The City shall require all new development to be oriented in a fashion that reduces habitat fragmentation and preserves the largest possible contiguous area of undisturbed habitat, to the extent practicable.

Policy 1.2.l The City shall protect regulated, heritage, and champion trees. The City shall continue to participate in the Florida Champion Tree Program. Additionally the City will require tree removal permits to protect regulated, heritage, and champion trees from accidental removal and other development related disturbances.

Objective 1.3 Listed Species

The City shall protect species listed by State and Federal agencies as endangered, threatened or of special concern, and their habitats.

Policy 1.5.b The City shall require land clearing for development to be phased with construction activity, and to adhere to techniques which minimize soil erosion, minimize removal of native and non-invasive trees and vegetation, and protect champion and designated heritage trees. After clearing, soils shall be stabilized in accordance with best management practices (BMPs) identified in "The Florida Stormwater, Erosion, and Sedimentation Control Inspector's Manual", Chapters 4, 5 and 6.'

Policy 1.5.c The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during

35

development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Objective 1.10 Wetlands

The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.

Policy 1.10.a The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code and regulations adopted by the DEP and the Suwannee River Water Management District.

Policy 1.10.b The City shall conserve wetlands by prohibiting, where the alternative of clustering all structures in the non-wetland portion of the site exists, any development or dredging and filling which would alter their natural functions.

Policy 1.10.g The City shall require natural vegetative buffers around wetlands to protect the fragile ecosystems they sustain. Buffers, measured from the outer edge of the wetland, shall be created as established in the following table.

Resource Addressed	Required Buffer (feet)
Wetlands less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	50' average 35' minimum
Wetlands greater than 0.5 acre that do not support the animal species described above.	75' average 50' minimum
Areas where the animal species described above have been documented within 300 feet of a wetland.	100' average 75' minimum

Objective 1.11 Open and Green Space

The City shall work to preserve native ecosystems and the natural aesthetic beauty and charm of Alachua by ensuring the provision of open spaces and green linkages throughout the City, designed for the enjoyment of the citizenry.

Policy 1.12.d The City shall require the following buffers for development along surface water bodies. Buffers shall be measured from the outer edge of the water body, and created as established in the following table.

36

Resource Addressed	Required Buffer (feet)
Surface waters less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	50' average 35' minimum
Surface waters greater than 0.5 acre that do not support the animal species described above.	75' average 50' minimum
Areas where the animal species described above have been documented within 300 feet of a surface water.	100' average 75' minimum

Policy 1.12.e The City shall protect the natural function of floodplains, recognizing the role of flood patterns in maintaining water quality and quantity. Flood plain regulations will be based on Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM).

Policy 1.12.f The City shall work with FEMA, SRWMD, DEP and the County to strictly regulate development within the 100-year flood hazard zone established by the FEMA. The City will require development activity to occupy only the non-floodplain portion of a site when feasible; allow dredging and filling within floodplains only if it preserves the natural function of the floodplain and adequately provides for stormwater management; require the lowest floor elevation of any structure to be at least one foot above the FIRM base flood elevation; and will prohibit the storage of hazardous materials or waste within the floodplain, and development activity that threatens to raise the 100-year base flood elevation.

Recreation Element

Policy 1.2.b The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

VI. DEVELOPMENT OF REGIONAL IMPACT (DRI) RELATED ISSUES

The applicant has indicated that the proposed development is intended to implement the mixed-use strategies encouraged within Chapter 380.0651(3)h., Florida Statutes (F.S.), and thresholds defined in Chapter 28-24, Florida Administrative Code (F.A.C.). Chapter 380.0651(3)h., F.S., allows multi-use development consisting of three or more uses, one of which is residential, to consist of 160% of the combined land use thresholds. The applicant has indicated an intent to develop the site at a maximum of 399,900 square feet of commercial retail, 44,000 square feet of office, and 174 dwelling units. As evidenced in

Table 18 below, this results in a total of 132% of the combined DRI thresholds. As discussed, Chapter 380.0651(3)h., F.S., permits multi-use development to consist of up to 160% of the combined land use thresholds before a DRI threshold is activated.

Table 18. Evaluation of Development of Regional Impact (DRI) Threshold

Land Use	Chapter 28-24, F.A.C, Threshold	Proposed Development Threshold	Percentage of Chapter 28-24, F.A.C., Threshold
Residential	1,000 dwelling units	174 dwelling units	17%
Commercial	400,000 square feet	399,900 square feet	99.9%
Office	300,000 square feet	44,000 square feet	14.7%
Total			**132%**

VII. CONCLUSION

The proposed Large Scale Comprehensive Plan Amendment (LSCPA) is a request by Causseaux, Hewett, & Walpole, Inc., to amend the City of Alachua Future Land Use Map from Agriculture (±92.23 acres) and Commercial (±39.37 acres) to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres) on an approximate 131.6 acre subject property.

The applicant has provided a Market Impact Study indicating that an increase in the proposed Future Land Use Map (FLUM) Designation is justifiable, considering the general growth of the City and estimated growth, in addition to usable, vacant commercial and residential designated land.

The applicant has also provided an Urban Sprawl Analysis, based on an the thirteen primary indicators identified in Rule 9J-5 of the Florida Administrative Code. Staff's review of the provided by the applicant as well as Staff's assessment provided above indicates that the proposed amendment does not constitute urban sprawl.

The applicant also provided an Environmental Resource Assessment which addresses environmental features located on the subject property. At this time, this assessment adequately addresses potential impacts to environmental features located on the subject property. In addition, the applicant has proposed to place approximately thirty-seven (37) acres of the subject property in the Conservation FLUM Designation, which further protects the most sensitive environmental features located on-site.

Upon review, the applicant has demonstrated that the public facilities impacts likely to be generated by the net increase resulting from the proposed Large Scale Comprehensive Plan Amendment (LSCPA) should not have any adverse impact to any public facilities. If development occurs at a later time, the applicant will be required to submit a detailed analysis of potential impacts based upon specific intensities and densities of the proposed development.

Because Future Land Use Map (FLUM) Amendments are predominantly conceptual, thus preventing an accurate projection of the true public facility impacts, these land actions are ineligible to receive concurrency reservations. As such, the issuance of a development order is necessary to reserve concurrency. For this project, this would not occur until site plan and/or final plat approval.

VIII. RECOMMENDATION

To transmit the proposed Large Scale Comprehensive Plan Amendment (LSCPA) to the City Commission with a recommendation of **APPROVAL**, with a requirement that a text amendment concurrent with the adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development of Regional Impact (DRI) thresholds would be necessary.

Section 1. Environmental Resource Assessment Checklist-Signed

The purpose of this report is to provide an inventory of the natural resources that occur on the proposed **The Market at Schmidt Farms** project site and adjacent properties located within the limits of the City of Alachua, Florida. In this context, this report has been prepared with reference to the Environmental Resource Assessment Checklist required for development review by Alachua County. The City of Alachua, at this time, does not have a standard format for reporting requirements for Environmental Assessment for Development Review or Land Use Change Applications; therefore, the format for Alachua County Environmental Resource Assessment has been used for this report. The report contains a set of figures, tables, and photos that document the existing condition of the proposed project site and to assess, in general terms, the effects of the project on the existing resources. The report format consists of a section addressing each checklist item followed by the respective figures, tables, and photos for that section.

Indianapolis, IN 46208

Natural Resources Checklist: The Environmental Resource Assessment checklist items addressed in this report are, as follows (items marked "yes" specifically apply to this project site; all items are addressed in this report):

Yes	X	N/A	□	Surface Waters (ponds, lakes, streams, springs, etc.)
Yes	X	N/A	□	Wetlands
Yes	X	N/A	□	Surface Water or Wetland Buffers
Yes	X	N/A	□	Floodplains (100-year)
Yes	□	N/A	X	Special Area Study Resource Protection Areas (Cross Creek, Idylwild/Serenola, etc)
Yes	□	N/A	X	Strategic Ecosystems (within or adjacent to mapped areas)
Yes	X	N/A	□	Significant Habitat (biologically diverse natural areas)
Yes	X	N/A	□	Listed Species/Listed Species Habitats (FNAI S1, S2, & S3; State or Federally E, T, SSC)
Yes	□	N/A	X	Recreation/Conservation/Preservation Lands
Yes	X	N/A	□	Significant Geological Features (caves, springs, sinkholes, etc.)
Yes	X	N/A	□	High Aquifer Recharge Areas
Yes	□	N/A	X	Wellfield Protection Areas
Yes	X	N/A	□	Wells
Yes	X	N/A	□	Soils
Yes	□	N/A	X	Mineral Resource Areas
Yes	X	N/A	□	Topography/Steep Slopes
Yes	X	N/A	□	Historical and Paleontological Resources
Yes	X	N/A	□	Hazardous Materials Storage Facilities
Yes	X	N/A	□	Contamination (soil, surface water, ground water)

SIGNED: Peter M. Wallace **PROJECT #** _____ **DATE:** 1 July 2008

Section 2. Project Description/Assessment of Environmental Indicators

Project Description

Mesa-Sand Realty, LLC is making an application to the City of Alachua, Florida, for a large-scale comprehensive plan amendment for a parcel of land to be referred to as **The Market at Schmidt Farms**. The project site is located in northwest Alachua County in the southwest corner of the intersection of US Hwy 441 and NW 43rd Street (**Figure 1**). The project site consists of five (5) Alachua County tax parcels, which total 131.6 acres (**Figure 2**). The parcel numbers and acreages as found on the Alachua County Property Appraiser's website are shown in **Table 1**.

Table 1. Tax parcel numbers, owners, and associated acreages of the tax parcels that comprise The Market at Schmidt Farms project site.

Tax Parcel No.	Owner(s)	Acreage
05936-001-001	Herbert Matilski	3.458
05936-006-000	Nima, Inc.	8.509
05936-001-000	Ann Schmidt	94.165
05945-000-000	Ann Schmidt	11.281
05936-007-000	Jules E. Schmidt	14.193
TOTAL		**131.606**

The site is contained within Sections 2 and 3, Township 9 South, Range 19 East and Sections 34 and 35, Township 8 South, Range 19 East. A large-scale comprehensive plan amendment is presently submitted to propose a change in the Future Land Use for the property to be referred to as The Market at Schmidt Farms, City of Alachua, Florida. The large-scale comprehensive plan amendment (CPA) proposes creating a mixed-use development on a ±131.6-acre parcel located on the south side of US Hwy 441 and west of NW 43rd Street. The site currently carries a Future Land Use designation of Agriculture (Ag) and Commercial (COM) (**Figure 3**). These land use designations have historically resulted in agricultural uses such as cattle ranching. The proposed land use change will create a mixture of urban residential and non-residential uses on the ±131.6-acre site while protecting the significant natural areas in conservation (**Figure 4**). This CPA will allow for a broad range of retail, office, and multi-family and/or single-family development in a manner consistent with the City of Alachua's Comprehensive Plan and Land Development Regulations (LDR). A summary of the comparative acreages contained in each existing and proposed future land use category is summarized in **Table 2**. The existing zoning occurring on the project site is shown in **Figure 5**.

Figure 1. **Project site location map showing location of proposed The Market at Schmidt Farms at the intersection of US Hwy 441 and NW 43rd Street.**

Table 2. **Comparative acreages contained in the existing and proposed Future Land Use categories for The Market at Schmidt Farms project site.**

	Land Use Area (Acres)			
Land Use	**Existing**	**Proposed**	**Acreage Change**	**Percent Change**
Moderate Density	0.00	43.73	43.73	100.00
Commercial	39.37	50.81	11.44	29.06
Agriculture	92.23	0.00	-92.23	-100.00
Conservation	0.00	37.06	37.06	100.00
TOTAL	**131.60**	**131.60**		

Figure 5. **Existing zoning for The Market at Schmidt Farms project site and surrounding area.**

Assessment of Existing Environmental Conditions

To assess the general environmental integrity of the project site, extensive pedestrian surveys of the site were performed by Peter M. Wallace, MS, PWS, and Robert A. Garren, MS, PWS, of Ecosystem Research Corporation. Field surveys were performed in September 2006, November 2007, and May 2008. During the field surveys, site specific data were collected to document the plants and plant community types present. Data collection areas were marked with specific GPS points using a Garmin GPS Map 76CSx hand-held GPS to record position coordinates. GPS locations established during the survey are shown in **Figure 6**. At several locations, photographs were taken to document the existing conditions of the site. Photo stations are shown in **Figure 7** and **all photographs contained in this report are referred to the GPS locations shown in this figure**.

The project site is a rural residential farm site located in a relatively sparsely populated area along US Hwy 441. The site is located within the Turkey Creek drainage basin. The general extent of the Turkey Creek drainage on the project site and surrounding areas is shown on the USGS map in **Figure 8**. The headwaters of Turkey Creek originate on the City of Gainesville Deerhaven property. From the Deerhaven site, the creek is culverted under US Hwy 441 then traverses west across NW 43rd Street where two large circular culverts (**Photo 1**) route water along the southern boundary of the Schmidt Farms property. Turkey Creek forms the southern boundary of the property and extends from NW 43rd Street northwest to the intersection of a second creek that runs southwest along the east boundary of the Brooke Pointe Development. For the purposes of this report, this creek is named Brooke Pointe Creek (**Figure 9**). This creek drainage originates north of US Hwy 441 on the City of Gainesville Deerhaven property, crosses under NW 102nd Place (**Photo 2**), then runs southwest to the confluence with Turkey Creek at the southwest corner of the Schmidt Farms property. A third creek located on the property drains water also from the City of Gainesville Deerhaven property through a culvert located under US Hwy 441 just west of the terminus of NW 43rd Street (**Photo 3**) at US Hwy 441. For the purposes of this report, this creek is referred to as Schmidt Creek. The creek extends through a mixed hardwood swamp (**Photo 4**) that also receives substantial subsurface seepage from the adjacent uplands. The mixed hardwood swamp narrows abruptly where a small agricultural road crossing occurs (**Photos 5 and 6**), which was built prior to 1937. From this point, the creek width becomes substantially narrower (**Photo 7**) and slopes to the adjacent upland are abrupt. The drainage ultimately flows into Turkey Creek at the southwestern corner of Parcel 05936-001-001. A unique mosaic of intermittent seepage and depression wetlands forms a diffuse drainage system in the western third of the project site. This drainage system has the same general northeast to southwest orientation as both Schmidt Creek and Brooke Pointe Creek. Groundwater seeps to the surface at the north end of this system and flows southwest through a small, intermittent stream drainage (**Photo 8**) to a series of small

Figure 6. **GPS location map of site specific survey points established 10/02/06 and 11/15/07.**

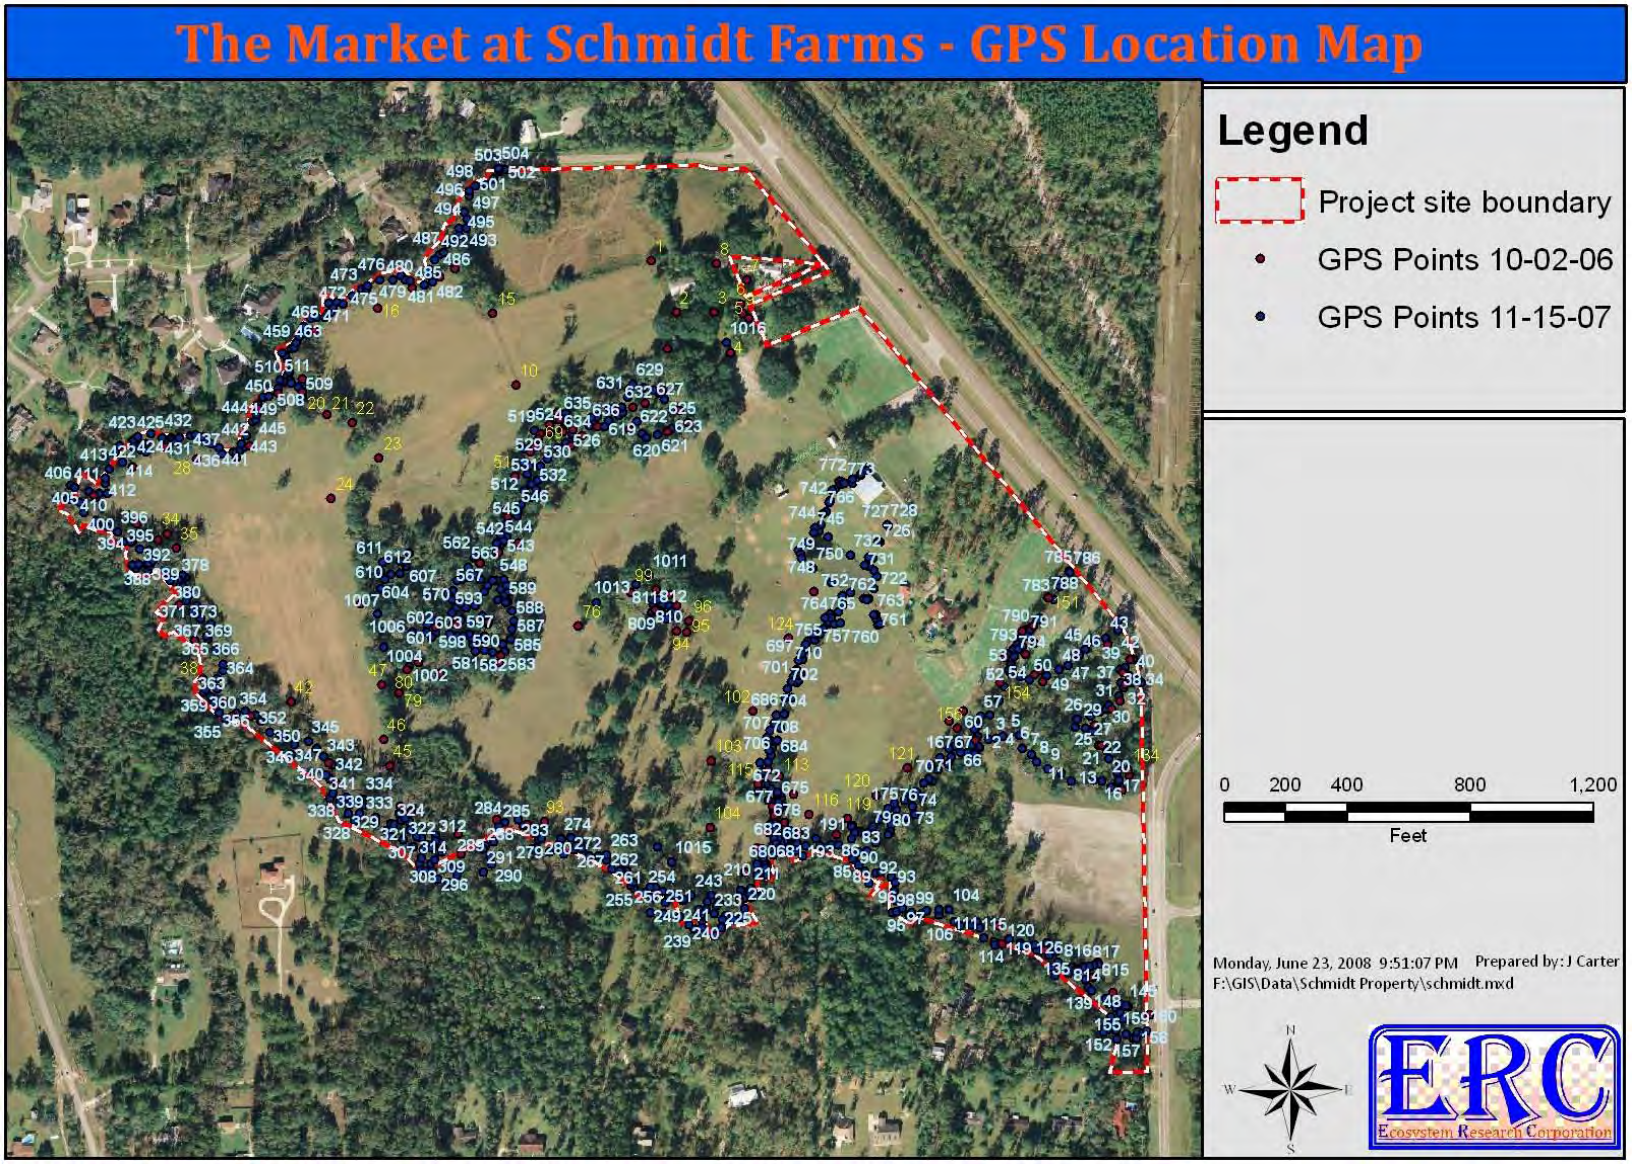

Figure 7. Photo station location map.

depressional wetlands that are probably relic sinkholes where water flows back into the ground. Based on **Rule 62-345 FAC, Delineation of the Landward Extent of Wetlands and Surface Waters,** some of the depressions are upland while others were determined to be wetlands. During periods of excessive rainfall, this system may provide surface water discharge directly to Turkey Creek. There is a small drainage that routes water to Turkey Creek from the excavated agricultural pond located west of the Schmidt residence. This drainage is excavated for most of the distance extending from the pond to Turkey Creek; however, the drainage is natural, extending south from GPS location 672, south to Turkey Creek (Figure 6). The general appearance of this drainage is shown in **Photo 9**.

Photo 9. **Panoramic view of the Disturbed Influent Drainage to Turkey Creek as seen looking southeast across GPS location 663.**

Plant Communities

The plant communities that presently occur on The Market at Schmidt Farms project site are shown in **Figure 10**. A total of seventeen (17) distinct plant community associations occur, all of which are disturbed or intensively managed community types. The total acreage associated with each community type is listed in **Table 3**. The common plant species found within the project site are summarized in **Table 4**. All plant communities occurring on the project site have been disturbed from many years of cattle foraging and related cattle ranching activities. A brief description of each community type is, as follows (all photos, tables and figures follow at the end of this section; all photos are referenced to photo stations shown in Figure 7.

Uplands & Agricultural Areas

Improved Pasture

Acreage: 67.965	**Polygons:** 1, 27	**FLUCCs Code:** 211

The Market at Schmidt Farms project site has been managed primarily as Improved Pasture since prior to 1937. Currently, this plant community is dominated by a host of well-maintained pasture grasses and herbs to include bahiagrass (*Paspalum notatum* Fluegge.), Bermudagrass (*Cynodon dactylon* [L.] Pers.), Asian coinleaf (*Centella asiatica* [L.] Urban.), marsh pennywort (*Hydrocotyle umbellata* L.), retrorse flatsedge (*Cyperus retrorsus* Chapm.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), Mexican tea (*Chenopodium ambrosioides* L.), Canada horseweed (*Conyza canadensis* [Torr. & Gray] Gray), and retrorse flatsedge (*Cyperus retror*sus Chapm.). In some areas, the invasive exotic tropical soda apple (*Solanum viarum* Dunal) is common and is generally distributed throughout the site. Representative views of the Improved Pasture communities found on the project site can be seen in **Photos 10 through 15**.

Oldfield – Mixed Shrub

Acreage: 5.441	**Polygons:** 29, 31	**FLUCCs Code:** 261

The Oldfield – Mixed Shrub area is an improved pasture community that is not currently used to graze cattle and has become invaded by a host of oldfield shrubs, herbs, and grasses to include broomsedge (*Andropogon virginicus* L.), eastern false-willow (*Baccharis halimifolia* L.), persimmon (*Diospryos virginiana* L.*),* sand blackberry (*Rubus cuneifolius* Pursh), saw greenbrier (*Smilax bona-nox* L.), and small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small). Small oaks are in some areas; however, the groundcover is still dominated by bahiagrass (*Paspalum notatum* Fluegge.). The Oldfield – Mixed Shrub area can be seen in **Photos 16 and 17**.

Agricultural Pond & Drainage

Acreage: 0.777	**Polygons:** 17	**FLUCCs Code:** 535

There is an excavated pond located within the site that was dug circa 1979 in an historic forested wetland area. The pond is severely affected by cattle use and water quality has suffered from this use. The surface is variously covered with Lemnoids (*Lemna* sp. and *Spirodella* sp.) and the littoral zone is severely trampled with sparse populations of soft rush (*Juncus effusus* L.), dotted smartweed (*Polygonum punctatum* Ell.), and maidencane (*Panicum hemitomon* Schult.) surviving the daily cattle use. This pond drains south to Turkey Creek through an excavated drainage ditch. This is an intermittent drainage of which only a small portion was considered to be a jurisdictional surface water as per criteria outlined in Chapter 62-340 FAC, *Delineation of the Landward Extent of Wetlands and Surface Waters*. The vegetation in the ditch is dominated primarily by bahiagrass (*Paspalum notatum* Fluegge.) and Bermudagrass (*Cynodon dactylon* [L.] Pers.). The drainage broadens into a natural drainage feature adjacent to Turkey Creek (Photo 9). The Agricultural Pond & Drainage community can be seen in **Photos 18 through 22**.

Pine – Improved Pasture (Residential Yard)

Acreage: 4.659	**Polygons:** 34	**FLUCCs Code:** 265

The Pine – Improved Pasture community is the area that surrounds the Schmidt residence in which a canopy of large slash pine (*Pinus elliottii* Engelm.) and loblolly pine (*Pinus taeda* L.) exists and is underlain by a groundcover of yard and pasture grasses dominated by bahiagrass (*Paspalum notatum* Fluegge.) and Bermudagrass (*Cynodon dactylon* [L.] Pers.). Part of this polygon is maintained as residential yard and part of this area is managed as improved pasture. The area is very well maintained and aesthetically pleasing (**Photo 23**).

Mixed Hardwood – Improved Pasture

Acreage: 9.925	**Polygons:** 37	**FLUCCs Code:** 266

The Mixed Hardwood – Improved Pasture community is a sparsely canopied pasture area with medium to large-size individuals of live oak (*Quercus virginiana* Mill.), laurel oak (*Quercus hemisphaerica* Bartr.), pignut hickory (*Carya* glabra [Mill.] Sweet), and sweetgum (*Liquidambar styraciflua* L.). The dominant groundcover is bahiagrass (*Paspalum notatum* Fluegge.) with Bermudagrass (*Cynodon dactylon* [L.] Pers.) being present. Shrub and ruderal herb species are scattered throughout the area and include common pokeweed (*Phytolacca americana* L.), smutgrass (*Sporobolus indicus* [L.] R. Br.), sand blackberry (*Rubus cuneifolius* Pursh), beggarticks (*Bidens alba* [L.] DC.), tropical soda apple (*Solalum viarum* Dunal), and small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small). This area is shown in **Photo 24**.

Mixed Pine – Mixed Hardwoods Successional Forest

Acreage: 4.982	**Polygons:** 38	**FLUCCs Code:** 414-1

This forested plant community borders the drainage referred to as Schmidt Creek as well as part of the Turkey Creek drainage. This is a mesic forest dominated by loblolly pine (*Pinus taeda* L.) with live oak (*Quercus virginiana* Mill.), sweetgum (*Liquidambar styraciflua* L.), laurel oak (*Quercus hemisphaerica* Bartr.), pignut hickory (*Carya glabra* [Mill.] Sweet), water oak (*Quercus nigra* L.), and slash pine (*Pinus elliottii* Engelm.) being present, but generally are much smaller in size. This pine-dominated community is a successional area where trees are becoming established due to the fencing out of cattle. The groundcover is dominated by bahiagrass (*Paspalum notatum* Fluegge.) but a host of ruderal species are present. The typical habitat of this community is shown in **Photo 25**.

Disturbed Mixed Hardwoods Slope Forest

Acreage: 1.615	**Polygons:** 28, 39	**FLUCCs Code:** 414-2

This community type surrounds the upper basin of the Schmidt Creek swamp area and occurs on the slopes that characterize this basin. The dominant trees are sweetgum (*Liquidambar styraciflua* L.), live oak (*Quercus virginiana* Mill.), laurel oak (*Quercus hemisphaerica* Bartr.), and pignut hickory (*Carya* glabra [Mill.] Sweet), but many trees are diseased with branch death and significant fallen tree debris being present. Much of the area has been severely disturbed by cattle resulting in a damaged, trampled, highly fertilized understory. Common understory species include wax myrtle (*Myrica cerifera* L.), harsh vervain (*Verbena scabra* Vahl.), Florida elephant-foot (*Elephantopus elatus* Bertol.), muscadine grape (*Vitis rotundifolia* Michx.), sand blackberry (*Rubus cuneifolius* Pursh), saw greenbrier (*Smilax bona-nox* L.), common pokeweed (*Phytolacca americana* L.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), American beautybush (*Callicarpa americana* L.), and bahiagrass (*Paspalum notatum* Fluegge.). Nuisance exotic species such as tropical soda apple (*Solanum viarum* Dunal) and popcorntree (*Sapium sebiferum* [L.] Roxb.) are locally abundant. Soils are disturbed in many areas and banks eroded due to cattle foraging. The habit of this community type is shown in **Photo 26**.

Disturbed Mixed Hardwoods – Riparian

Acreage: 7.910	**Polygons:** 36	**FLUCCs Code:** 438-1

This mesic community, which borders the Turkey Creek drainage, has been disturbed by past cattle and agricultural activities. Most of the area is covered by a dense tangle of small oak seedlings and saplings distributed throughout a dense tangle of saw greenbrier (*Smilax bona-nox* L.) and blackberry (*Rubus betulifolius* Small). There are areas where a remnant, mature creek bordering mesic community occurs composed of large sweetgum (*Liquidambar*

styraciflua L.), American basswood (*Tilia americana* L.), spruce pine (*Pinus glabra* Walt.), loblolly pine (*Pinus taeda* L.), live oak (*Quercus virginiana* Mill.), sugarberry (*Celtis laevigata* Willd.), black cherry (*Prunus serotina* Ehrh.), laurel oak (*Quercus hemisphaerica* Bartr.), and pignut hickory (*Carya glabra* [Mill.] Sweet). However, most of the area is a second growth, successional community composed of small individuals of these species that is slowly encroaching into the historically cleared pasture areas. This community type can be seen in **Photo 27**.

Disturbed Mixed Hardwoods – Seepage

Acreage: 9.445	**Polygons:** 32	**FLUCCs Code:** 438-2

The mesic hammock represented by polygon 32 is a very disturbed seepage community that surrounds a series of seepage wetlands and relic sinkhole depressions. The area has been significantly disturbed by cattle foraging and associated mechanical disturbance from agricultural equipment. Significant invasion by tropical soda apple (*Solanum viarum* Dunal), popcorntree (*Sapium sebiferum* [L.] Roxb.), tungoil tree (*Aleurites* fordii Hamsl.), Japanese honeysuckle (*Lonicera japonica* Thunb.), caesar weed (*Urena lobata* L.) as well as Japanese climbing fern (*Lygodium japonicum* [Thunb.] Swartz) has occurred in the groundcover. The canopy is disturbed but has some large individuals of live oak (*Quercus virginiana* Mill.), pignut hickory (*Carya glabra* [Mill.] Sweet), sugarberry (*Celtis laevigata* Willd.), sweetgum (*Liquidambar styraciflua* L.), persimmon (*Diospryos virginiana* L.), and American elm (*Ulmus americana* L.). Other common species include muscadine grape (*Vitis rotundifolia* Michx.), sand blackberry (*Rubus cuneifolius* Pursh), American beautybush (*Callicarpa americana* L.), saw palmetto (*Serenoa repens* [Bartr.] Small), elderberry (*Sambucus canadensis* L.), bastard indigobush (*Amorpha fruiticosa* L.), Virginia buttonweed (*Diodia virginiana* L.), beggarticks (*Bidens alba* [L.] DC.), and small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small). Mechanical disturbance of the soil is widespread and invasion of bahiagrass (*Paspalum notatum* Fluegge.) from the adjacent pasture is common along the fringes of the hammock. Although very disturbed, this is a very unique hydrologic system and is characteristic of only very unique areas in the Alachua County landscape. This area can be seen in **Photos 28 through 30**.

Disturbed Mixed Hardwoods – Drainage

Acreage: 1.566	**Polygons:** 35	**FLUCCs Code:** 438-3

This community is an upland drainage landscape feature that routes runoff from the adjacent pasture into the Brooke Pointe stream system. There is a well-defined drainage channel; however, this area was found not to be a jurisdictional surface water as determined by Chapter 62-340 FAC, *Delineation of the Landward Extent of Wetlands and Surface Waters*. The drainage is intermittent and flows only in response to high rainfall events. The groundcover vegetation is

disturbed by cattle and consists of sand blackberry (*Rubus cuneifolius* Pursh), beggarticks (*Bidens alba* [L.] DC.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), rice button aster (*Aster dumosus* L.), tropical soda apple (*Solanum viarum* Dunal), and maidencane (*Panicum hemitomon* Schult.). Canopy species include sweetgum (*Liquidambar styraciflua* L.), live oak (*Quercus virginiana* Mill.), pignut hickory (*Carya glabra* [Mill.] Sweet), and swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.). This area is shown in **Photo 31**.

Disturbed Mixed Hardwoods

Acreage: 1.855	**Polygons:** 30	**FLUCCs Code:** 438-4

The community represented by polygon 30 is a disturbed successional mixed hardwood forested area with a mixed canopy of live oak (*Quercus virginiana* Mill.), pignut hickory (*Carya glabra* [Mill.] Sweet), swamp chestnut oak (*Quercus michauxii* Nutt.), sugarberry (*Celtis laevigata* Willd.), water oak (*Quercus nigra* L.), laurel oak (*Quercus hemisphaerica* Bartr.), red maple (*Acer rubrum* L.), American basswood (*Tilia americana* L.), and sweetgum (*Liquidambar styraciflua* L.). Many trees are quite large; however, the majority are subcanopy in size ranging from 2 inches to 6 inches diameter at breast height (dbh). The groundcover has a mix of shrub, grass, and herb species to include devil's walkingstick (*Aralia spinosa* L.), buttonweed (*Diodia virginiana* L.), eastern hop-hornbeam (*Ostrya virginiana* [Mill.] K. Koch), saw greenbrier (*Smilax bona-nox* L.), woodsgrass (*Oslismenus hirtellus* [L.] P. Beauv.), trumpet creeper (*Campsis radicans* [L.] Seemann ex Bureau), and tall nutgrass (*Scleria triglomerata* Michx.). Nuisance exotic species present include Japanese climbing fern (*Lygodium japonicum* [Thunb.] Swartz), Japanese honeysuckle (*Lonicera japonica* Thunb.), Chinese privet (*Ligustrum sinense* Lour.), Chinaberrytree (*Melia azedarach* L.), and tungoil tree (*Aleurites fordii* Hemsl.). This area is presently a successional mesic community that has historically been affected by past agricultural management activities. This community type is shown in **Photos 32 & 33.**

Disturbed Live Oak Hammock

Acreage: 4.834	**Polygons:** 33	**FLUCCs Code:** 427-1

The Disturbed Live Oak Hammock community is an area that is dominated by a shaded canopy of specimen live oak (*Quercus virginiana* Mill.) trees. This area was historically used primarily for a cattle management area in which a dilapidated pole barn still remains (**Photo 34**). The area lies adjacent to the historic Schmidt residence, which is now Harmony Gardens. Today, the area is not used for cattle and is a successional community primarily used for deposition of unwanted junk. Common species found within the live oak canopy include sugarberry (*Celtis laevigata* Willd.), water oak (*Quercus nigra* L.), sweetgum (*Liquidambar styraciflua* L.), slash pine (*Pinus elliottii* Engelm.), and loblolly pine (*Pinus taeda* L.). The groundcover is primarily a dense tangle of small saplings of the canopy species mixed with saw greenbrier (*Smilax bona-*

nox L.) and bahiagrass (*Paspalum notatum* Fluegge.). Exotic nuisance species such as Chinese privet (*Ligustrum sinense* Lour.) are present. The large live oak trees are the remarkable characteristic of this community type as shown in **Photo 35**.

Wetlands

Schmidt Creek – Disturbed Mixed Hardwood Stream/Seepage Swamp

Acreage: 3.689	**Polygons:** 18	**FLUCCs Code:** 617-1

Polygon 18 designated as Schmidt Creek is a Disturbed Mixed Hardwood Stream/Seepage Swamp with a canopy dominated by a mix of hardwood species to include live oak (*Quercus virginiana* Mill.), sweetgum (*Liquidambar styraciflua* L.), swamp laurel oak (*Quercus laurifolia* Michx.), water oak (*Quercus nigra* L.), American basswood (*Tilia americana* L.), sweetbay (*Magnolia virginiana* L.), swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.), American elm (*Ulmus americana* L.), and slash pine (*Pinus elliottii* Engelm.). The wetland consists of several stream drainages consisting of clear, non-tannic water. The major flow originates from a drainage source located north of US Hwy 441 on the City of Gainesville Deerhaven properties. Seepage from adjacent uplands is also a significant hydrologic input. A surficial seepage spring originates along the southeast boundary of this polygon in an area represented by GPS location P-7 (Figure 7) and GPS location 21 (Figure 6). The seepage area, shown in **Photo 36** (Photo station P-7), is a wet, mucky herbaceous area dominated by lizard's tail (*Saururus cernuus* L.), golden canna (*Canna flaccida* Salisb.), and whorled beakrush (*Rhynchospora miliacea* [Lam.] Gray). Shrubs include dwarf palmetto (*Sabal minor* [Jacq.] Pers.), wax myrtle (*Myrica cerifera* L.), swamp red-bay (*Persea palustris* [Raf.] Sarg.), and Virginia willow (*Itea virginica* L.). The stream drainages are surrounded by a mosaic of higher elevation upland areas in which live oak (*Quercus virginiana* Mill.), loblolly pine (*Pinus taeda* L.), and pignut hickory (*Carya glabra* [Mill.] Sweet) are common. However, these fringing riparian upland areas all lie within the very well-defined basin in which this wetland occurs. The surrounding pasture and hammock communities are located along a very well-defined steep slope. Except for the stream drainage, the topography within the wetland is relatively flat. This entire system is very disturbed by cattle, resulting in an open, somewhat ruderal understory. Invasive exotic species such as wild taro (*Colocasia esculentum* [L.] Schott.), tropical soda apple (*Solanum viarum* Dunal), Japanese honeysuckle (*Lonicera japonica* Thunb.), Japanese climbing fern (*Lygodium japonicum* [Thunb.] Swartz), and Chinese privet (*Ligustrum sinense* Lour.) are present. These are mixed with a host of desirable wetland species to include royal fern (*Osmunda regalis** L.), Virginia chain fern (*Woodwardia virginica* [L.] Smith), and southern wood fern (*Dryopteris ludoviciana* [Kunze] Small). There is a listed plant species (member of the genus *Matelea*) located along the stream bank. The species is either angularfruit milkvine (*Matelea gonocarpos* [Walter] Shinners) or Florida milkweed (*Matelea floridana**‡ [Vail]

Woodson), but it is not possible to distinguish between these two species when not in flower. To date, no flowers have been seen. The typical habitat of this wetland system is shown in **Photos 36 through 43**.

Turkey Creek – Mixed Hardwood Riparian Wetland

Acreage: 3.884	**Polygons:** 7, 19, 20, 21, 22, 23, 24, 25, 26	**FLUCCs Code:** 615-1

The Turkey Creek system is a highly variable plant community that extends from southeast to northwest along the entire south perimeter of the property. The upland boundary of the Turkey Creek wetland is represented by a flagged wetlands jurisdiction line that was established in November 2007. There are apparent breaks in the wetland community as seen on Figure 10. However, this is the result of the historically surveyed property boundary not truly reflecting the center line of the creek. Presently, in several areas, the north boundary of the Turkey Creek wetland is located south of the property line. The creek is characterized by very steep slopes along the eastern reaches with much of the wetland being restricted to the well-defined surface water boundary of the creek. The topography of the creek flattens as the creek approaches the confluence with Brooke Pointe Creek. In this area, there is a broad floodplain wetland and a dominant canopy of bald cypress (*Taxodium distichum* [L.] L. Rich.), swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.), American elm (*Ulmus americana* L.), red maple (*Acer rubrum* L.), and sweetbay (*Magnolia virginiana* L.). In this area several smaller ox-bow drainages are present and much broader wetland areas are encountered. The riparian uplands that border the creek and form the well-defined buffering communities as evidenced on the aerial photographs have historically been disturbed by cattle foraging and clear-cutting. Residential areas located along the south side of the creek have resulted in clear-cutting of both canopy and groundcover in these buffer areas to enlarge yards, provide gardens, and miscellaneous recreational space. There are several historic crossings that allowed movement of agriculture related vehicles across the creek. An old wooden bridge is still present at GPS location 111 (Figure 6) while an intact (≈52”) culvert is found at GPS location 330 (Figure 7; **Photo 44**). The typical habit of the Turkey Creek drainage is shown in **Photos 44 through 46**.

Brooke Pointe Creek – Mixed Hardwood Riparian Wetland

Acreage: 1.051	**Polygons:** 5, 6	**FLUCCs Code:** 615-1

The Brooke Pointe Creek wetland is a narrow stream system with clear water. Common canopy species include swamp laurel oak (*Quercus laurifolia* Michx.), live oak (*Quercus virginiana* Mill.), bald cypress (*Taxodium distichum* [L.] L. Rich.), swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.), red maple (*Acer rubrum* L.), swamp chestnut oak (*Quercus michauxii* Nutt.), American basswood (*Tilia americana* L.), American elm (*Ulmus americana* L.), and ironwood (*Carpinus caroliniana* Walt.). The stream channel is a meandering, well-defined, abrupt-sided channel bordered on the Schmidt property side by a disturbed, fringing mesic

hardwood community affected by cattle ranching activities. The residents of Brooke Pointe have severely altered the buffering hardwood community on the north side of the creek through a series of land clearing and dredge and fill activities primarily associated with yard expansion. Clearing of the buffer has occurred in many areas all the way to the edge of the stream channel. This results in substantial runoff of applied fertilizers directly into the surface water area. The typical habit of this community is shown in **Photos 47 through 49**.

Disturbed Depression Wetlands

Acreage: 0.945	**Polygons:** 8, 11, 12, 13, 14, 15, 16	**FLUCCs Code:** 615-1

There are several disturbed depression wetlands occurring within the southwest quadrant of the project site. These wetlands are apparently associated with relic sinkhole areas and definitely represent areas where surface water pools for only short periods then disappears into the ground. Onsite geotechnical studies[1] (**Attachment 1**) (specifically for polygons 15 and 16) indicate that these depressions typically have a thin organic surficial layer underlain by various layers of sand with clay and sand with silt with the Hawthorne Formation being encountered at various depths. Ardaman and Associates, Inc. (2008) noted no conditions in the tested depression locations that suggested active sinkhole activity; however, only two of the depressions within the pasture were evaluated. The depression areas either receive seepage as the primary input (polygons 15 and 16) or receive a combination of seepage and surface runoff as the primary hydrologic inflows (polygons 8, 11, 12, 13, and 14). The wetlands are only intermittently wet and all are severely disturbed by ongoing cattle activity. These wetlands are very small with the seven (7) indicated wetland polygons totaling only 0.945 acres.

The wetlands are typically represented by a disturbed groundcover consisting of lizard's tail (*Saururus cernuus* L.), dotted smartweed (*Polygonum punctatum* Ell.), leathery rush (*Juncus coriaceus* Mack.), dwarf palmetto (*Sabal minor* [Jacq.] Pers.), fireweed (*Erechtites hieracifolia* [L.] Raf.), eastern false-willow (*Baccharis halimifolia* L.), wood sage (*Teucrium canadense* L.), and whorled beakrush (*Rhynchospora miliacea* [Lam.] Gray). Because of the intermittent hydrologic regime, many upland species are scattered throughout the wetland areas to include woodsgrass (*Oplismenus hirtellus* [L.] P. Beauv.) and American beautybush (*Callicarpa americana* L.). Exotic species such as popcorntree (*Sapium sebiferum* [L.] Roxb.), tropical soda apple (*Solanum viarum* Dunal), and tungoil tree (*Aleurites fordii* Hemsl.) are common throughout. It should be noted that in the area where the depressional wetlands are found, there are also many adjacent depressional areas that are uplands that occur at similar

[1]Ardaman & Associates, Inc. 2008. Subsurface Soil Exploration and Geotechnical Engineering Evaluation, Proposed Retail Center Market at Schmidt Farm, US 441 and NW 43rd Street, Alachua County, Florida.

elevations as the wetland areas. Photos of these wetland types are shown in **Photos 50 through 55**.

Disturbed Mixed Hardwoods – Shrub Seepage Wetland

Acreage: 1.062	**Polygons:** 9, 10	**FLUCCs Code:** 632

Polygons 9 and 10 represent depressional wetland areas that receive precipitation and subsurface seepage as the primary hydrologic inflows. These two areas have ill-defined surface water features in which water flows on the surface but may disappear into the ground before flowing into adjacent wetlands in the downslope position. These areas are currently seriously affected by cattle and vegetation is disturbed. Canopy species are sparse, but consist of sweetgum (*Liquidambar styraciflua* L.), live oak (*Quercus virginiana* Mill.), slash pine (*Pinus elliottii* Engelm.), swamp laurel oak (*Quercus laurifolia* Michx.), red maple (*Acer rubrum* L.), and sugarberry (*Celtis laevigata* Willd.). Groundcover species consist of lizard's tail (*Saururus cernuus* L.), leathery rush (*Juncus coriaceus* Mack.), capitate beakrush (*Rhynchospora microcephala* Britt. ex Small), whorled beakrush (*Rhynchospora miliacea* [Lam.] Gray), maidencane (*Panicum hemitomon* Schult.), American cupscale (*Sacciolepis striata* [L.] Nash.), and dotted smartweed (*Polygonum punctatum* Ell.). There is a host of sapling size individuals representing the canopy species in addition to significant populations of elderberry (*Sambucus canadensis* L.), eastern false-willow (*Baccharis halimifolia* L.), wax myrtle (*Myrica cerifera* L.), and invasion of tungoil tree (*Aleurites fordii* Hemsl.) and popcorntree (*Sapium sebiferum* [L.] Roxb.) is extensive. The typical habit of this community type is shown in **Photos 56 and 57**.

Section 3. Surface Waters and Wetlands

Surface Water Delineation, Wetland Delineation, Surface Water & Wetland Buffer, 100-Year Floodplains Identification

The 2006 FEMA flood zone map for the project site is shown in **Figure 11** and the delineated wetlands boundary map is presented in **Figure 12**. The wetlands and associated 50-ft and 75-ft buffers distribution is shown in **Figure 13**. It should be stressed that the FEMA flood zone as depicted is grossly erroneous. This can be seen by overlaying the flood zone map on the 2001 Alachua County LiDAR map and wetlands map. There appears to be no correlation of the floodplain with the existing ground topography and the Turkey Creek system in the southeast of the property does not lie within the flood elevation. The FEMA coverage appears to be inaccurate and, in addition, shifted to the north within the GIS coverage provided by FEMA.

The wetlands map presented in Figure 12 represents the flagged and surveyed wetland boundary that was delineated in November 2007 by ERC.

For comparison purposes, the wetland areas on the project site as shown on the Alachua County composite wetlands map and the USFWS National Wetlands Inventory wetlands map are presented in **Figures 14 and 15**, respectively. Historically the project site has not changed to a great degree since 1937. Historic aerials photos showing the development of the site are, as follows:

Figure 16	1937	**Figure 19**	1961	**Figure 22**	1979
Figure 17	1949	**Figure 20**	1968	**Figure 23**	1984
Figure 18	1955	**Figure 21**	1974	**Figure 24**	1999

Prior to 1937, the site had already been cleared for pasture. The buffers that surround the three creek systems appear to be smaller in photos dated 1937 through 1979 than that which exists today. The major change that has occurred in the distribution of the wetland systems is seen on the 1979 aerial in which the rectangular farm pond is shown to have been excavated within the natural wetland area. This excavation occurred prior to the time when any permits would have been required for this activity.

Section 4. Significant Plant and Wildlife Habitat & Listed Plant and Animal Species Habitat

Listed Plant & Animal Species

Summary Information Regarding Threatened & Endangered Species in Florida

There are several agencies that have been delegated the authority to protect and preserve the threatened and endangered flora and fauna that occur within the State of Florida. The United States Fish and Wildlife Service (USFWS) maintains a list of species afforded special protection by the Endangered Species Act of 1973 (16 U.S.C. 1531). The list is published in the List of Endangered and Threatened Wildlife and Plants, 50 CFR 17.11-12. The Florida Fish and Wildlife Conservation Commission maintains a list of the protected animals occurring within the state by authority of the Florida Endangered and Threatened Species Act of 1977 (Section 372.072, Florida Statutes) and the Wildlife Code of the State of Florida (Chapter 68A-27, Florida Administrative Code). The specific policy of the Florida Endangered and Threatened Species Act of 1977 is declared as follows:

> **Subsection 2: Declaration of Policy**-The Legislature recognizes that the State of Florida harbors a wide diversity of fish and wildlife and that it is the policy of this state to conserve and wisely manage these resources, with particular attention to those species defined by the Florida Fish and Wildlife Conservation Commission, the Department of Environmental Protection, or the U.S. Department of Interior, or successor agencies, as being endangered or threatened. As Florida has more endangered and threatened species than any other continental state, it is the intent of the Legislature to provide for research and management to conserve and protect these species as a natural resource.

The list of threatened and endangered animals protected by these laws is published in Section 68-27.003, .004, and .005, Florida Administrative Code. The regulation of listed marine animals was historically delegated to the Florida Department of Natural Resources (FDNR); however, has since been reorganized into the Florida Department of Environmental Protection. The Preservation of Native Flora of Florida Act (Sections 581.185, 581.186 [in part] and 581.201, Florida Statutes) passed in 1978 declares a public policy of the State of Florida with regard to native flora, as follows:

> **Subsection 1: Legislative Declaration**-The Legislature finds and declares that it shall be the public policy of this state to: provide recognition of those plant

> species native to the state that are endangered, threatened, or commercially exploited; protect the native flora from unlawful harvesting on both public and privately owned lands; provide an orderly and controlled procedure for restricted harvesting of native flora from the wild, thus preventing wanton exploitation or destruction of native plant populations; encourage the propagation of native species of flora; and provide the people of this state with the information necessary to legally harvest native plants so as to ultimately transplant those plants with the greatest possible chance of survival.

To this end, the Florida Department of Agriculture and Consumer Services (FDACS) regulates the threatened and endangered plant species occurring within the state. As specifically authorized by **Chapter 5B-40, Preservation of Native Flora of Florida, FAC, the Regulated Plant Index is published in Section 5B-40.0055**. The Game Commission periodically releases a publication that summarizes animal species that are regulated by the Florida Fish and Wildlife Conservation Commission, and the USFWS. The publication is entitled Florida's Endangered Species, Threatened Species, and Species of Special Concern. The federal lists of plants and animals is published in 50CFR 17.11-12 and the list of Florida's federally listed plant species is also published by the Florida Division of Forestry.

Alachua County, by authority of **Article 3 of Chapter 406, Significant Plant and Wildlife Habitat,** and **Article 4, Listed Plant and Animal Species Habitat**, of the Unified Land Development Code regulates the development in habitats where listed species occur or could potentially occur. Provisions within Articles 3 and 4 allow the County to require that up to 25% of the upland portion may be required to be protected and set aside as primary conservation areas. Areas protected under Articles 3 and 4 are designated as Conservation Management Areas and are further regulated via rules outlined in **Article 17, Conservation Management Areas** (ULDC) and potentially require that the property owner establish a conservation easement for the specific areas within the parcel. The owner is further responsible for development of a management plan and perpetual management of the area.

Several other lists of the endangered and threatened fauna and flora are maintained for the State of Florida. The Florida Natural Areas Inventory (FNAI) maintains a list that summarizes the status and distribution of both plant and animal species as well as natural communities occurring within the State of Florida. The FNAI is managed by The Nature Conservancy in cooperation with the Florida Department of Environmental Protection. The lists compiled by the FNAI contain many species that do not occur on the State or Federal lists. The FNAI list as compiled is not subjected to the time-consuming administrative process that is required for

listing for State and Federal protection. Therefore, these lists often reflect the up-to-date true status of species that may be in immediate peril. The FNAI species that are not State or Federally listed are not given legal protection.

An inventory of the statewide distribution of potentially threatened and endangered species was initiated in 1973 by the Florida Committee on Rare and Endangered Plants and Animals (FCREPA). The group published a several-volume series that contains detailed descriptions, distributions, and academic evaluations of species considered to be in peril. The FCREPA list contains many species in addition to the State and Federal lists; however, these additional species are afforded no legal protection. The FCREPA series offers the best compiled review of the biology of the imperiled biota of Florida to date. Beginning in 1986, revisions of the FCREPA volumes were initiated and continue to date.

To aid in review of the imperiled species that occur in Florida and the State and Federal Regulations that govern their management, the following publications are available:

- Endangered and Threatened Species Act of Florida, Chapter 372.072, Florida Statutes
- Rules Relating to Endangered and Threatened Species, Chapter 68A-27, FAC
- The Preservation of Native Flora of Florida, Chapter 581.185, Florida Statutes
- Preservation of Native Flora of Florida, Chapter 5B-40, FAC
- Florida Endangered Species, Threatened Species, and Species of Special Concern, June 2007

Threatened & Endangered Species Survey Methodology

Surveys for the occurrence of imperiled species were performed concurrent with plant community surveys from October 2006, November 2007, and April through May 2008. In addition to field surveys, searches of several existing databases were performed to investigate the documented and potentially occurring imperiled species located in and around the project site. The databases queried were

- Florida Natural Areas Inventory Biodiversity Data Matrix
- Florida Fish and Wildlife Conservation Commission (FWC) Eagle Nest Location Database
- FWC Waterbird Colony Location Database
- FWC 2006 Eagle Nest Census Data

Results of Imperiled Species Literature Review & Field Surveys

Herpetofauna

Common herpetofauna species seen on The Market at Schmidt Farms project site are listed in **Table 5.**

Table 5. Common herpetofauna species seen on The Market at Schmidt Farms project site.

Common Name	Scientific Name
Water Moccasin	*Agkistrodon piscivorous conanti*
Green Anole	*Anolis carolinensis*
Six-Lined Racerunner	*Cnemidophorus sexlineatus sexlineatus*
Southern Black Racer	*Coluber constrictor priapus*
Corn Snake	*Elaphe guttata*
Yellow Rat Snake	*Elaphe obsoleta quadrivittata*
Broadhead Skink	*Eumeces laticpes*
Green Treefrog	*Hyla cinerea*
Southern Spring Peeper	*Hyla crucifer bartramiana*
Eastern Fence Lizard	*Sceloporus undulates*
Ground Skink	*Scincella lateralis*
Florida Box Turtle	*Terrapene carolina bau*

Mammals

Common mammals seen during the field survey of The Market at Schmidt Farms project site are listed in **Table 6.**

Table 6. Common mammals seen during the field survey of The Market at Schmidt Farms project site.

Common Name	Scientific Name
Nine-banded armadillo	*Dasypus novemcinctus*
Opossum	*Didelphis virginiana*
Southern flying squirrel	*Glaucomys volans*
Bobcat (scat)	*Lynx rufus floridanus*
White-tailed deer	*Odocoileus virginianus*
Raccoon	*Procyon lotor*
Gray squirrel	*Sciurus caroliniensis*
Feral hogs	*Sus scrofa*

Common Name	Scientific Name
Eastern cottontail	*Sylvilagus floridanus*
Gray fox	*Urocyon cinereoargenteus*

Birds

Common birds encountered during the field survey of The Market at Schmidt Farms project site are listed in **Table 7.**

Table 7. Common birds encountered during the field survey of The Market at Schmidt Farms project site.

Common Name	Scientific Name
Red-winged blackbird	*Agelaius phoeniceus*
Ruby-throated hummingbird	*Archilochus colubris*
Cedar waxwing	*Bombycilla cedrorum*
Red-tailed hawk	*Buteo jamaicensis*
Red-shouldered hawk	*Buteo lineatus*
Chuck-will's-widow	*Caprimulgus carolinensis*
Northern cardinal	*Cardinalis cardinalis*
American goldfinch	*Carduelis tristis*
Turkey vulture	*Cathartes aura*
Hermit thrush	*Catharus guttata*
Common nighthawk	*Chordeiles minor*
Northern harrier	*Circus cyaneus*
Northern flicker	*Colaptes auratus*
Black vulture	*Coragyps atratus*
American crow	*Corvus brachyrhynchos*
Blue jay	*Cyanocitta cristata*
Black-throated blue warbler	*Dendroica caerulescens*
Pileated woodpecker	*Dryocopus pileatus*
Swallow-tailed kite	*Elanoides forficatus*
White ibis	*Eudocimus albus*
American kestrel	*Falco sparverius*
Sandhill crane	*Grus canadensis*
Mississippi kite	*Ictinia mississippiensis*
Loggerhead shrike	*Lanius ludovicianus*
Red-bellied woodpecker	*Melanerpes carolinus*
Red-headed woodpecker	*Melanerpes erythrocephalus*

Common Name	Scientific Name
Wild turkey	*Meleagris gallopavo*
Northern mockingbird	*Mimus polyglottos*
Brown-headed cowbird	*Molothrus ater*
Great-crested flycatcher	*Myiarchus crinitus*
Northern parula	*Parula americana*
Tufted titmouse	*Parus bicolor*
Carolina chickadee	*Parus carolinensis*
Indigo bunting	*Passerina cyanea*
Downy woodpecker	*Picoides pubescens*
Summer tanager	*Piranga rubra*
Blue-gray gnatcatcher	*Polioptila caerulea*
Common grackle	*Quiscalus quiscula*
American redstart	*Setophaga ruticilla*
Yellow-bellied sapsucker (evidence)	*Sphyrapicus varius*
Chipping sparrow	*Spizella passerina*
Barred owl	*Strix varia*
Carolina wren	*Thryothorus ludovicianus*
American robin	*Turdus migratorius*
Yellow-throated vireo	*Vireo flavifrons*
White-eyed vireo	*Vireo griseus*
Red-eyed vireo	*Vireo olivaceus*
Mourning dove	*Zenaida macroura*

The results of the 2006 eagle nest census data search are shown in **Figure 25**. There is one eagle nest located in the vicinity of the project site. This nest is located 2.5 miles to the west of the site within the San Felasco Hammock Preserve State Park area. The nest nomenclature is AL056, which is listed as active in 2003, 2004, 2005, and 2006. The status for 2007 is unknown. Development of the project site should have no impact on the viability of this nest site.

The results of the water bird rookeries data base search are shown in **Figure 26.** There are three (3) documented water bird nesting sites located in the vicinity of The Market at Schmidt Farm parcels. The nomenclature and activity status of these rookery sites are, as follows:

Nest ID	1970's Survey	1980's Survey	1990's Survey	1999 Survey	Total Nests
605004	Active	Active	Inactive	Inactive	---
605012	Active	Active	Active	Active	50-250
605113	Unknown	Active	Inactive	Inactive	---

Colony 605012 is the only active colony based on recent surveys. The species composition of this colony is approximately 1% great egrets and 99% cattle egrets. Colony 605113 is located within the existing Deerhaven power generating station property. This site was originally used by little blue herons and cattle egrets; however, has shown no activity since the 1980's.

The FNAI element occurrence location map, which shows known listed species locations in the vicinity of the project site is shown in **Figure 27**. The results show that no species are known for this location. It is possible that the timber rattlesnake, eastern diamondback rattlesnake, and eastern indigo snake could be found on the site. The most likely habitat for these species on the project site occurs within the forested buffer areas to the creeks and in the seepage area designated by polygon 32. These areas are designated as conservation in the Future Land Use Amendment proposal; therefore, no direct adverse affects would occur to these priority habitats. There are several species shown on the FNAI element occurrence map that are listed as likely to occur or potentially could occur in areas in the vicinity of the project site. The likelihood of the occurrence of these species on the project site is discussed, as follows.

FNAI LIKELY SPECIES

Eastern Indigo Snake (Drymarchon couperi): the eastern indigo snake has been documented by ERC in the Rocky Creek drainage 0.6 miles east of SR 121 at NW 142nd Avenue. The snake is found in a wide variety of habitats and could potentially occur within the creek and buffer areas, however, has not been documented.

Little Blue Heron (Egretta caerulea) and Woodstork (Mycteria americana): There is only one low-quality wading bird habitat on site and there is a low probability of widespread use of this site by these species.

Timber Rattlesnake (Crotalus horridus): ERC has documented the timber rattlesnake in the Rocky Creek drainage 0.6 miles east of SR 121 at NW 142nd Avenue. This species could potentially inhabit the wetland buffer areas on the project site, but has not been documented.

Short-tailed Snake (Stilosoma extenuatum): The short-tailed snake inhabits xeric habitats primarily longleaf pine-turkey oak sandhills. This project site does not have this habitat type or any type of xeric habitat. It is unlikely that this species occurs on site or that a population can be sustained on site given the present and past land management practices.

Eastern Diamondback Rattlesnake (Crotalus adamanteus): This species has historically been document for the site and habitat currently exists along the creek and within creek buffers. The primary habitat of this species on site is designated for conservation in the future land use amendment.

FNAI POTENTIAL SPECIES

Florida Sandhill Crane (Grus canadensis pratensis): Sandhill cranes were seen on the project site. There is no nesting habitat for this species occurring on site; however, the pastures provide foraging habitat.

Florida Pine Snake (Pituophis melanoleucus mugitus): The pine snake is a rare inhabitant of xeric communities. There are no preferred habitat types for this species on site. Pine snakes prefer pocket gopher burrows and, less frequently, gopher tortoise burrows, for refuge. There are no tortoises on site and no pocket gophers were seen.

Sherman's Fox Squirrels (Sciurus niger shermani): The fox squirrel typically occupies xeric areas that are frequently burned and have numerous mature oaks and pines distributed throughout the habitat. There are no known fox squirrels in this area and there is little suitable habitat present to support this species.

Florida Black Bear (Ursus americanus floridanus): There is a possibility that the Florida black bear is a transient inhabitant of this site. There were no signs of black bear present on the site during the field survey. No tracks were observed or any evidence of bear foraging.

Striped Newt (Notophthalmus perstriatus) and Gopher Frog (Rana capito): The striped newt and gopher frog are xeric-adapted species that typically inhabit scrubby flatwoods, sandhills, and scrub habitats. These species are commonly associated with gopher tortoise habitat and are frequently found within burrows. Both species depend on empheral, isolated wetlands for breeding and reproduction. These species are extremely sensitive to the impacts that are cosmopolitan on this site, which include extensive soil disturbance, fire suppression, and wetland disturbance. There is no habitat for these species on site. It is unlikely that these species occur on the site.

Flatwoods Salamander (Ambystoma cingulatum): The flatwoods salamander is an inhabitant of fire-maintained flatwoods with undisturbed cypress ponds. The flatwoods salamander once inhabited Bradford, Alachua, Marion, and Duval counties in north Florida; however, only one population has been recently verified in the north Florida area (Baker County)[2]. At present, it appears that this species has been extirpated from most of its North Florida range, but still maintains viable populations in several panhandle counties.[2]

[2] Management Plan: Flatwoods Salamander (*Ambystoma cingulatum*), February 21, 2001. Florida Fish and Wildlife Conservation Commission.

Southern Hognose Snake (Heterodon simus): the primary habitat for the southern hognose snake is sandhills and sandy soil, open hammocks and scrub. These habitat types do not occur on the project site. This species has not been reported for the immediate area of the site and it is unlikely that a breeding population is present.

Listed Plant Species

There was only one listed plant species found during the field survey. A plant belonging to the genus *Matelea* is found variously located in the hardwood areas adjacent to the creek systems. The plant is either *Matelea floridana*, which is listed as endangered (State of Florida) or *Matelea gonocarpus*, which is listed as threatened (State of Florida). The specific species cannot be identified without flowers, which have not yet been seen. Both these species are quite common in Alachua County mesic hammock areas. Their habitat on site is proposed for conservation in the Land Use amendment; therefore, the development on the site should have no adverse affects on the existing populations. It is likely that the population will benefit due to the removal of cattle from the proposed buffer areas, which is the primary habitat for this species on site. A photograph of this species is shown below.

Figure 25. **Locations of known eagle nests in the vicinity of the project site in Alachua County.**

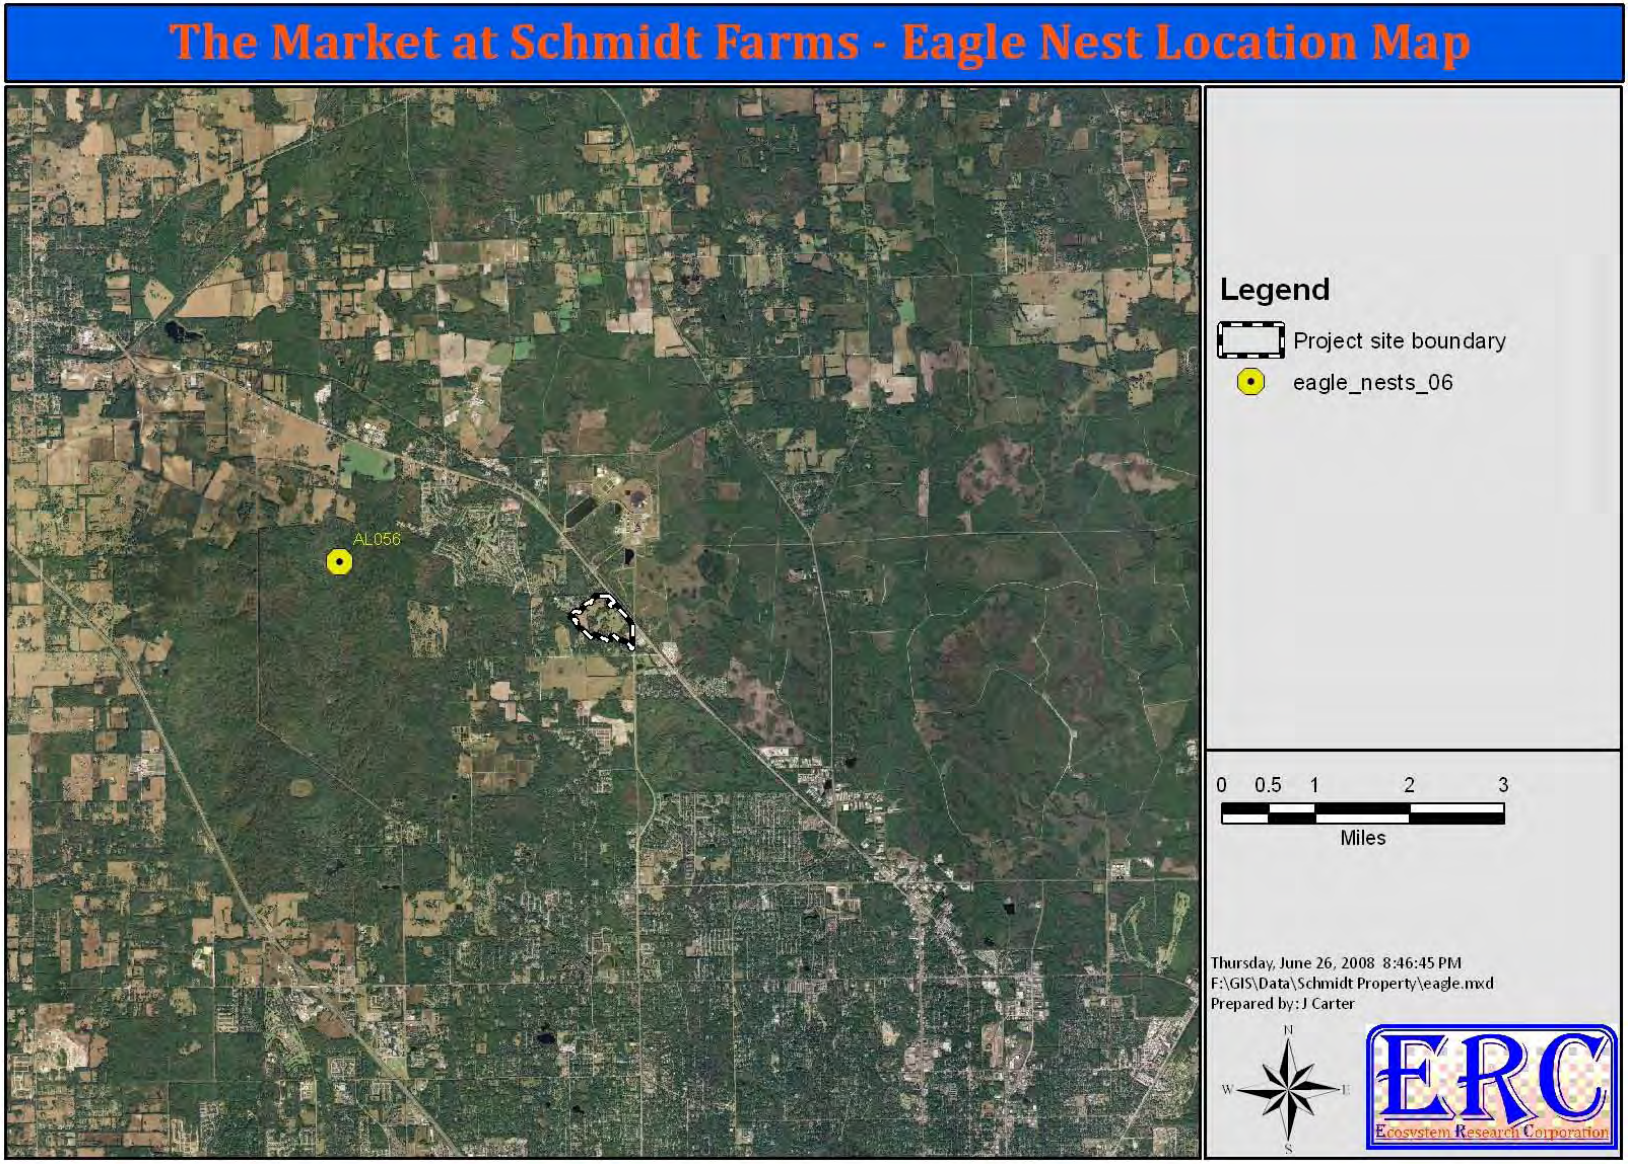

Figure 26. **Locations of water bird rookery sites in the vicinity of the project site in Alachua County.**

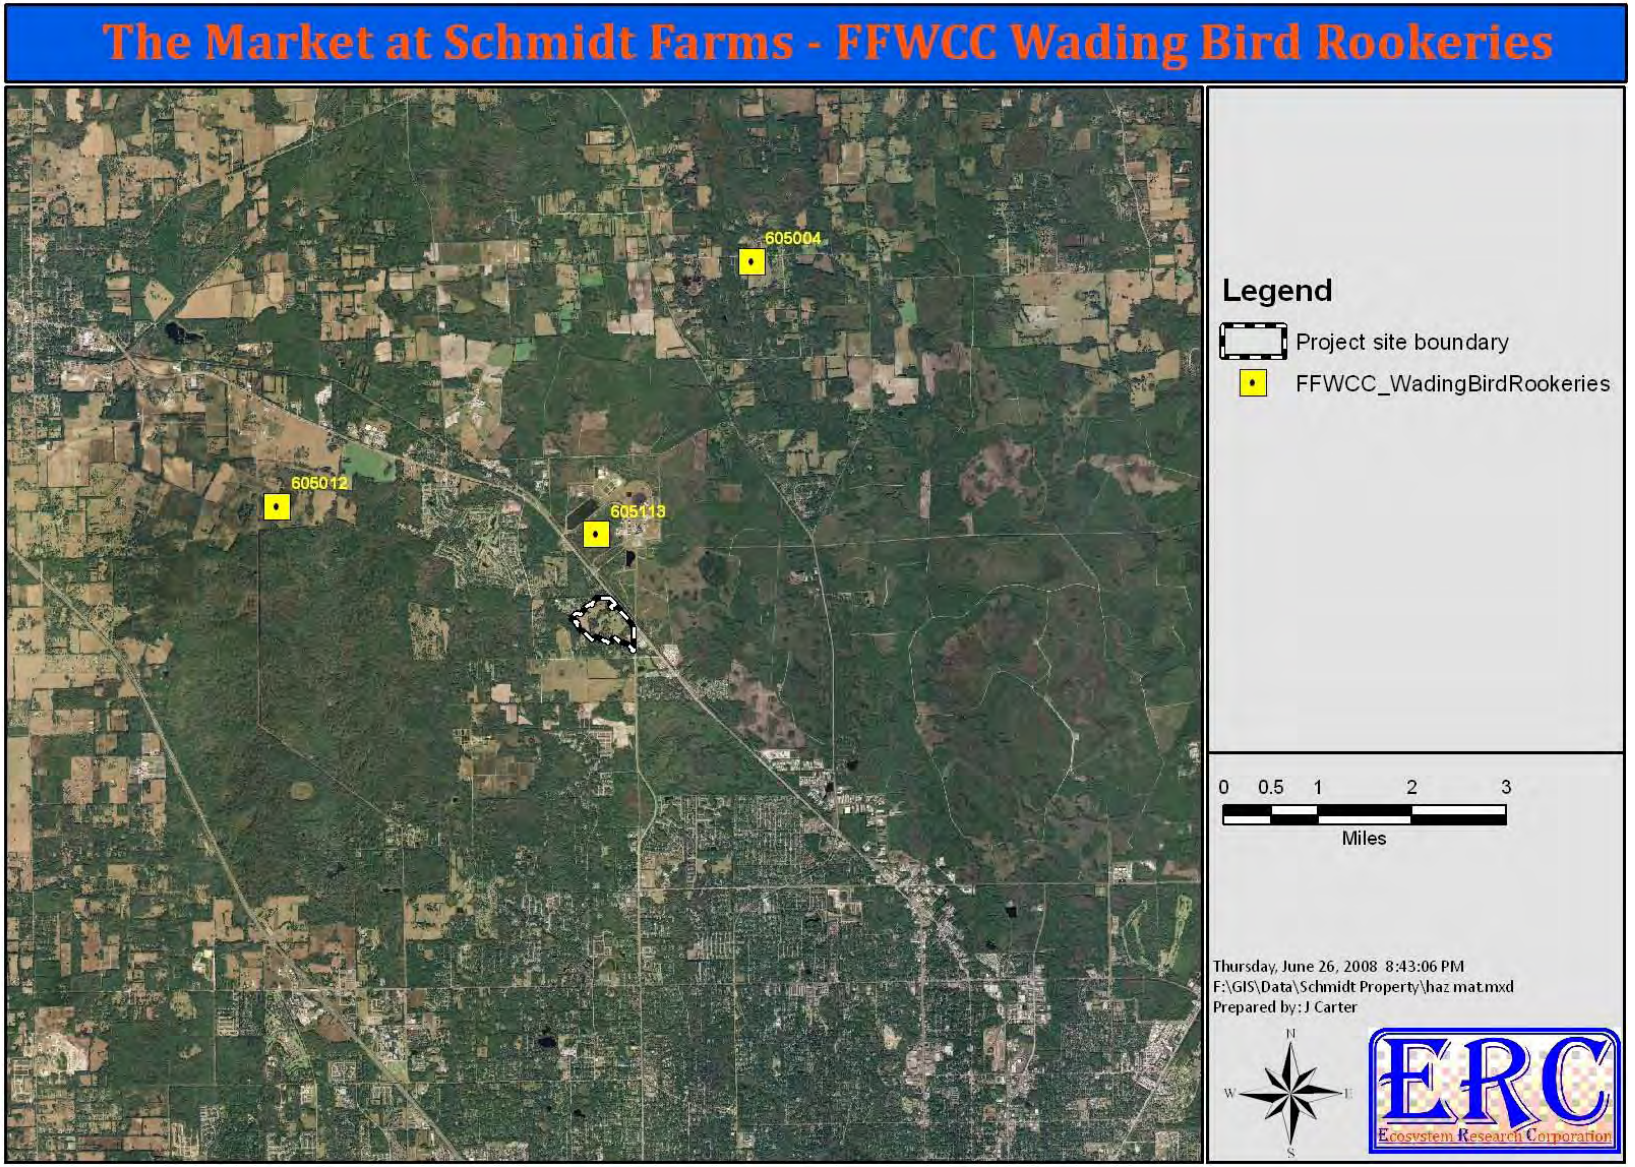

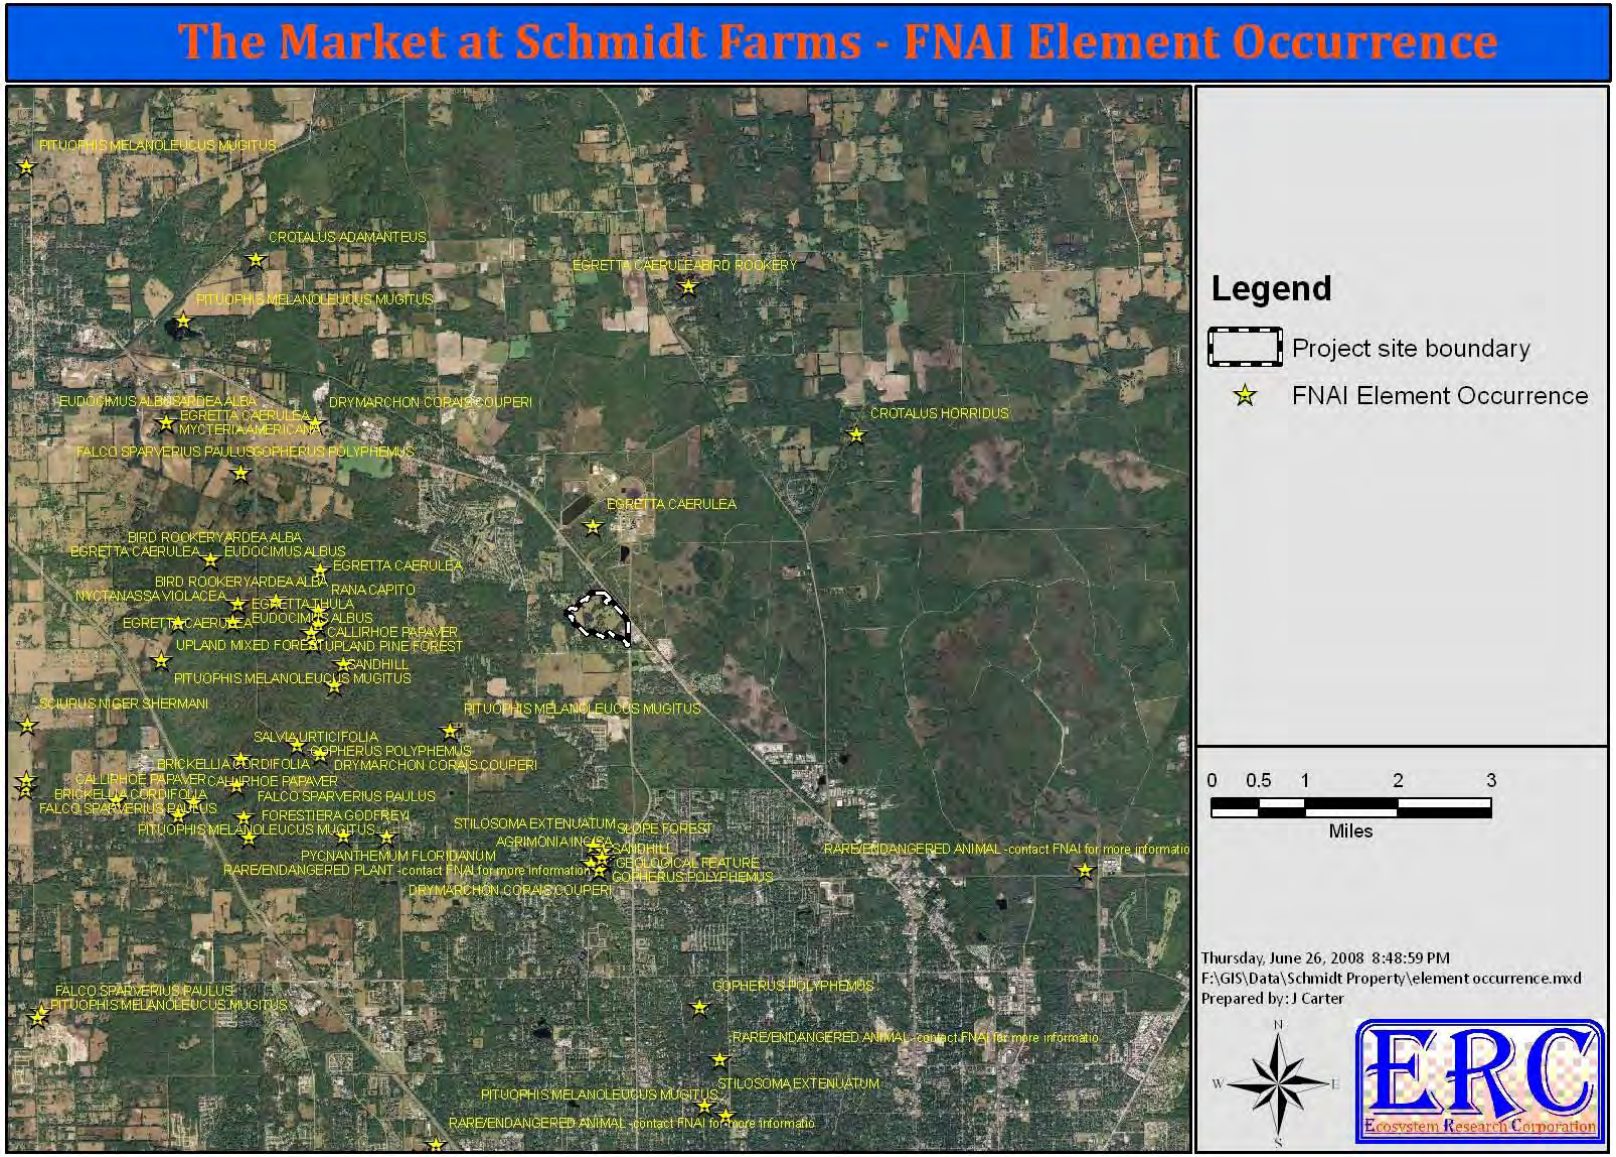

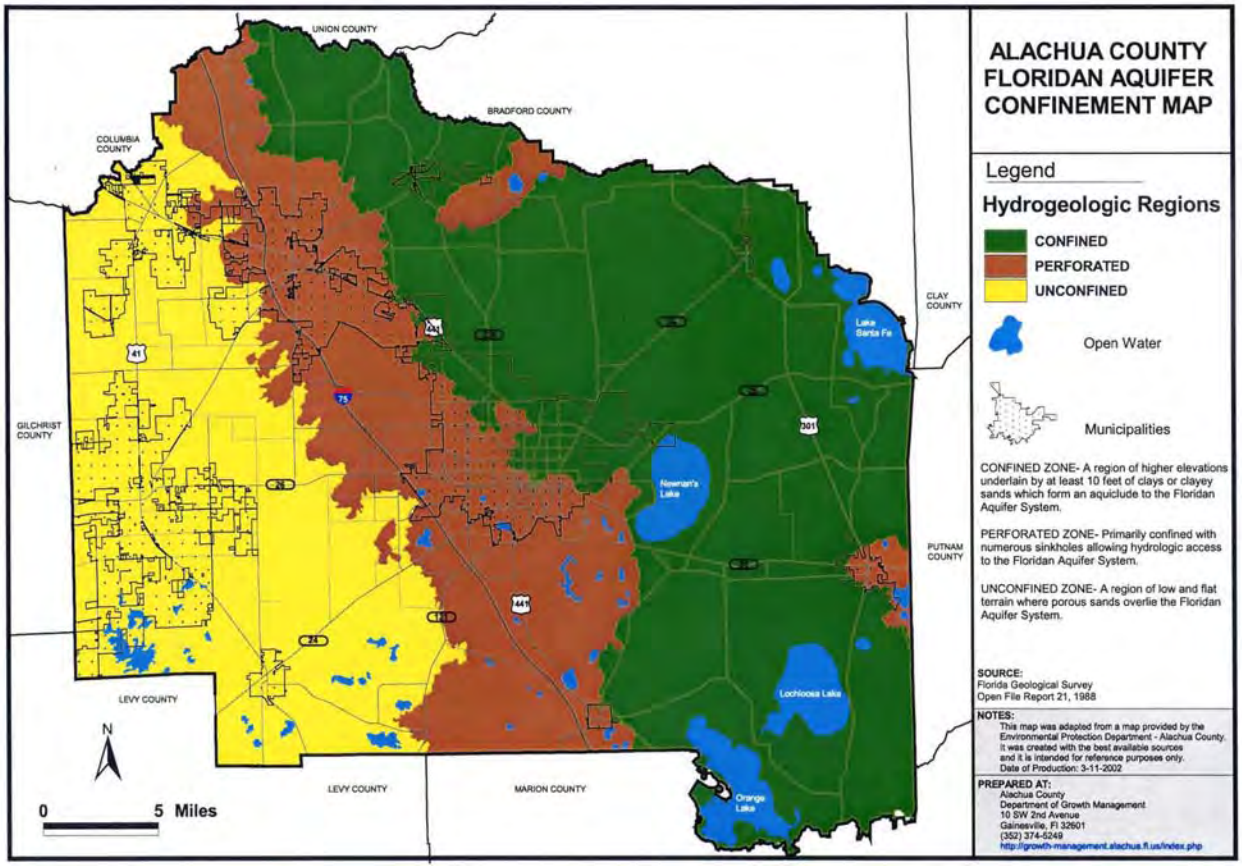

Figure 27. FNAI element occurrence map shown for the project site and surrounding area.

Section 5. High Aquifer Recharge Areas

The project site is located along the boundary of the confined and perforated hydrologic regions of the Floridan Aquifer (**Figure 28**). In this area, the aquifer is expected to be primarily confined by the Hawthorne Formation; however, perforations in the confining layer may be present in the form of sinkholes or relic sinkholes in which direct recharge to the Floridan can occur. A subsurface geotechnical report prepared by Ardaman & Associates is attached for review (Attachment 1).

Figure 28. Alachua County Floridan Aquifer Confinement Map.

Section 6. Soils

There are seven (7) soil mapping units shown to occur on the project site (**Figure 29; Table 8**). The Pomona sand (14), Pelham sand (13), and Mulat sand (23) are typical soils of the flatwoods with Pomona sand having a spodic horizon occurring between 16 inches and 24 inches below the soil surface. The Floridana sand (22) is a depressional mapping unit while Kanapaha (7) and Millhopper (8) sands are soils of gently rolling uplands that typically are colonized by a host of mesic to xeric hardwood species. All soils have a clay confining layer occurring within the top

58 inches of the soil profile. All soils have an expected seasonal high water table that is within 24 inches of the soil surface if only for a brief period of time. The Millhopper sand is the only moderately well-drained soil while the Floridana sand, depressional, is classified as very poorly drained. The remaining mapping units are considered as poorly drained. The Floridana sand, depressional, is the only mapped unit considered to be a hydric soil.

Figure 29. NRCS soils map for The Market at Schmidt Farms project site.

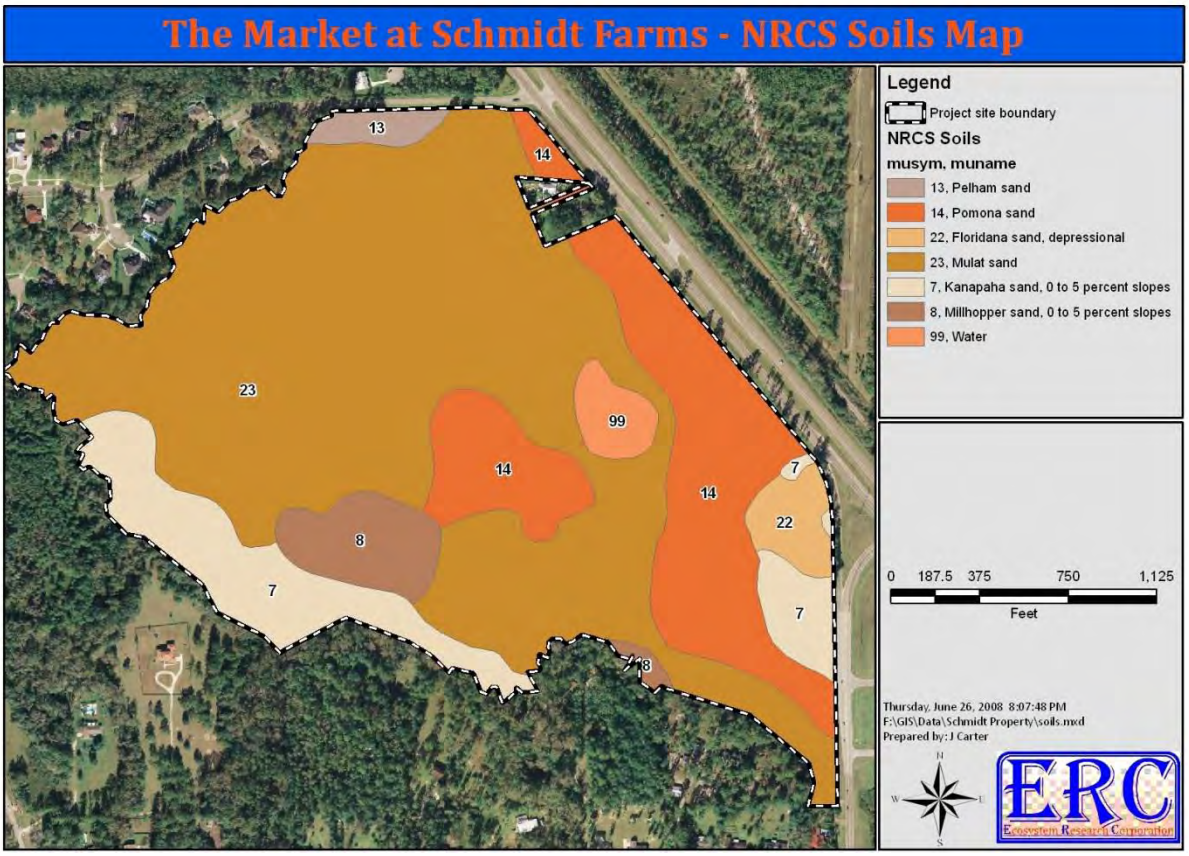

Table 8. Drainage characteristics of the soils mapped within and adjacent to The Market at Schmidt Farms project site.

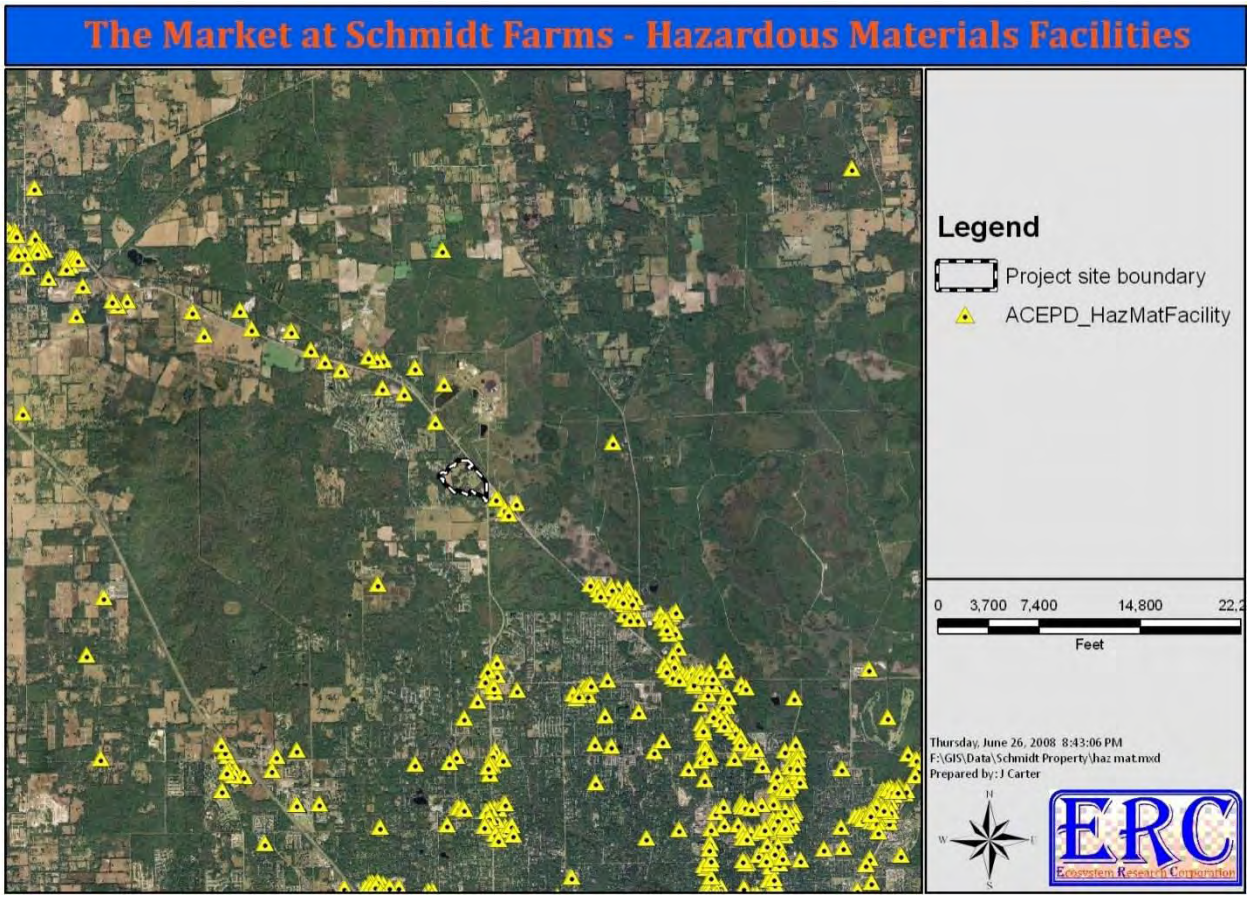
Mapping Unit	Mapping Unit Name	Drainage Class	Hydric	Spodic Horizon	Clay Horizon	General Plant Community Type
7	Kanapaha sand, 0 to 5 percent slopes	Poorly drained	No	---	44 -> 80"	Gentle Upland Slopes
8	Millhopper sand, 0 to 5 percent slopes	Moderately well drained	No	---	58 -> 89"	Gently Rolling Uplands
13	Pelham sand	Poorly drained	No	---	29 -> 80"	Broad Flatwoods
14	Pomona sand	Poorly drained	No	16 - 24"	43 -> 84"	Broad Flatwoods
22	Floridana sand, depressional	Very poorly drained	Yes	---	30 -> 74"	Depressional Areas
23	Mulat sand	Poorly drained	No	---	26 -> 80"	Broad Flatwoods
99	Water	N/A	Unranked	---	---	N/A

Section 7. Hazardous Material Storage Facilities & Contamination (soil, surface water, groundwater)



A Phase 1 Environmental Assessment report was performed for the project site but has not been reviewed by ERC. There were no obvious underground storage facilities located on the site that were observed by ERC. There is an approximately 250 gallon aboveground diesel fuel storage tank located at GPS location P-57 (**Photo 58**). The tank is used to supply fuel to onsite farm equipment. The tank did not appear to be leaking; however, small fuel stains on the ground indicate small spills have occurred. Historically (based on conversations with the property owner) there was a cattle dipping operation located around the pole barn (GPS location P-26). It is not known as to the materials used or the time duration of this operation; however, this may warrant future investigation. The hazardous material storage facilities that are currently monitored by Alachua County are shown in **Figure 30**. There is no indicated storage location for the project site.

Photo 58. Aboveground fuel storage tank located at GPS location P-57.

Figure 30. Hazardous Materials Facility Location Map.

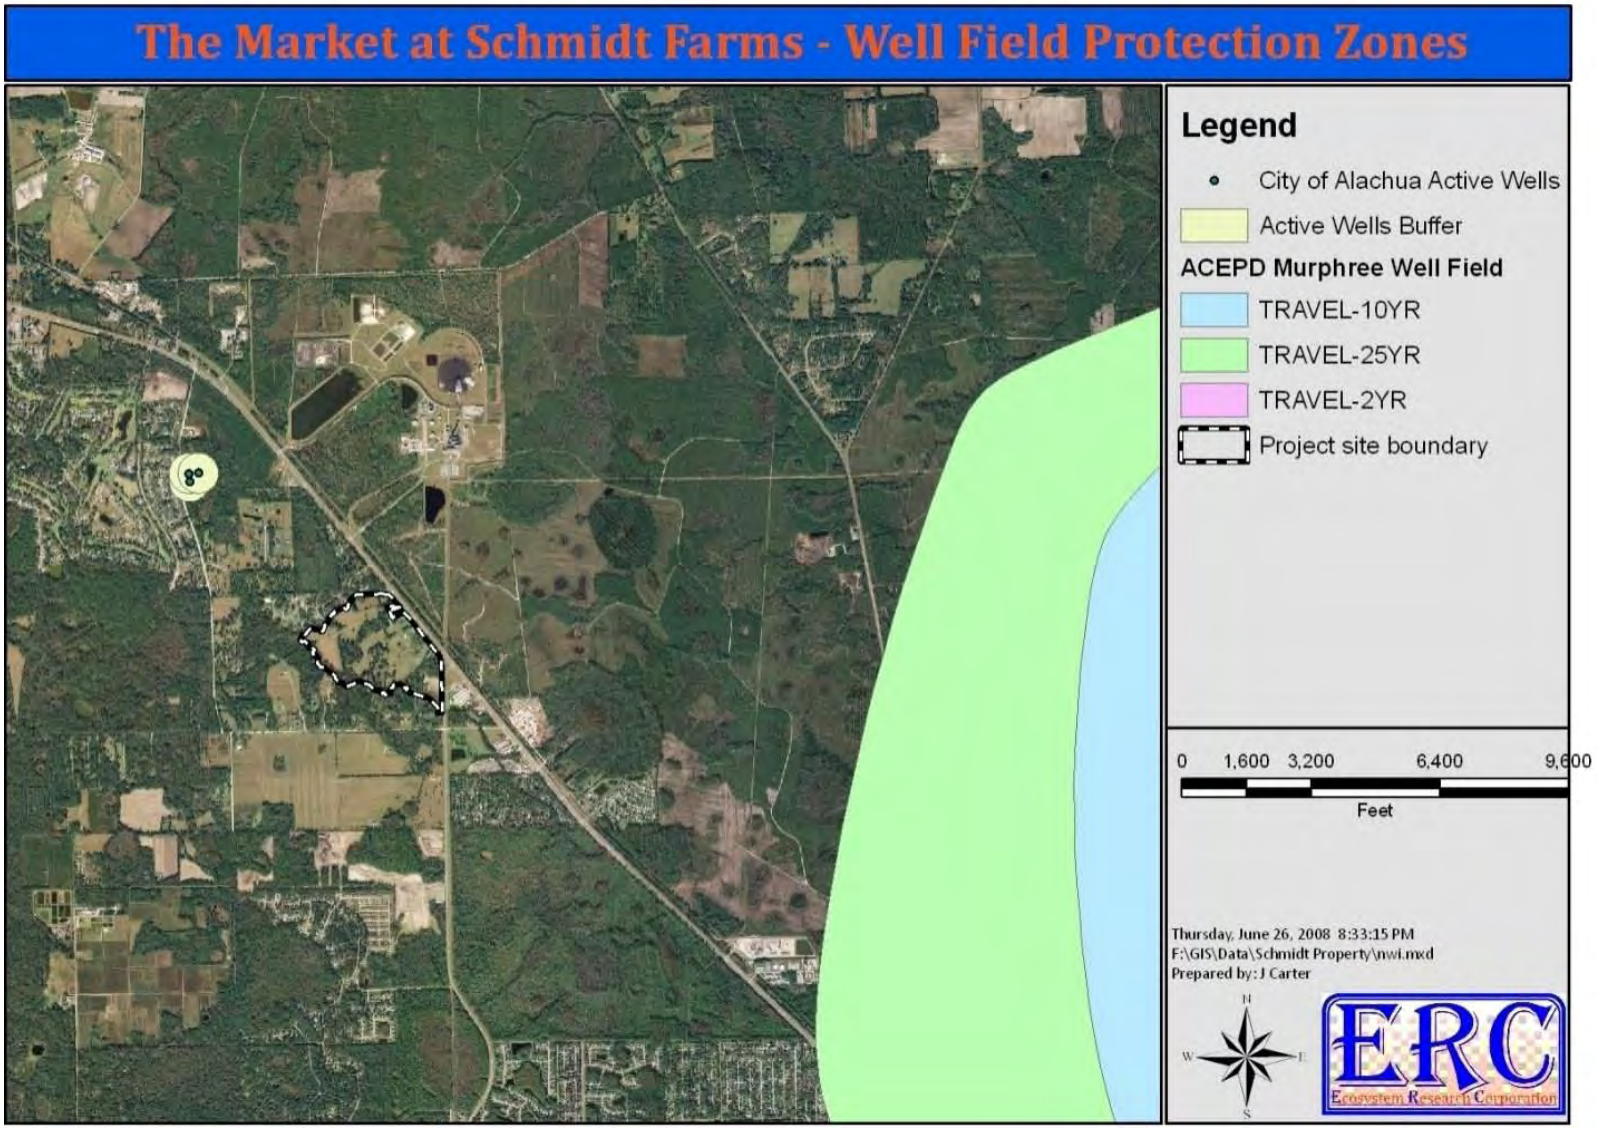
Section 8. Wellfield Protection Areas

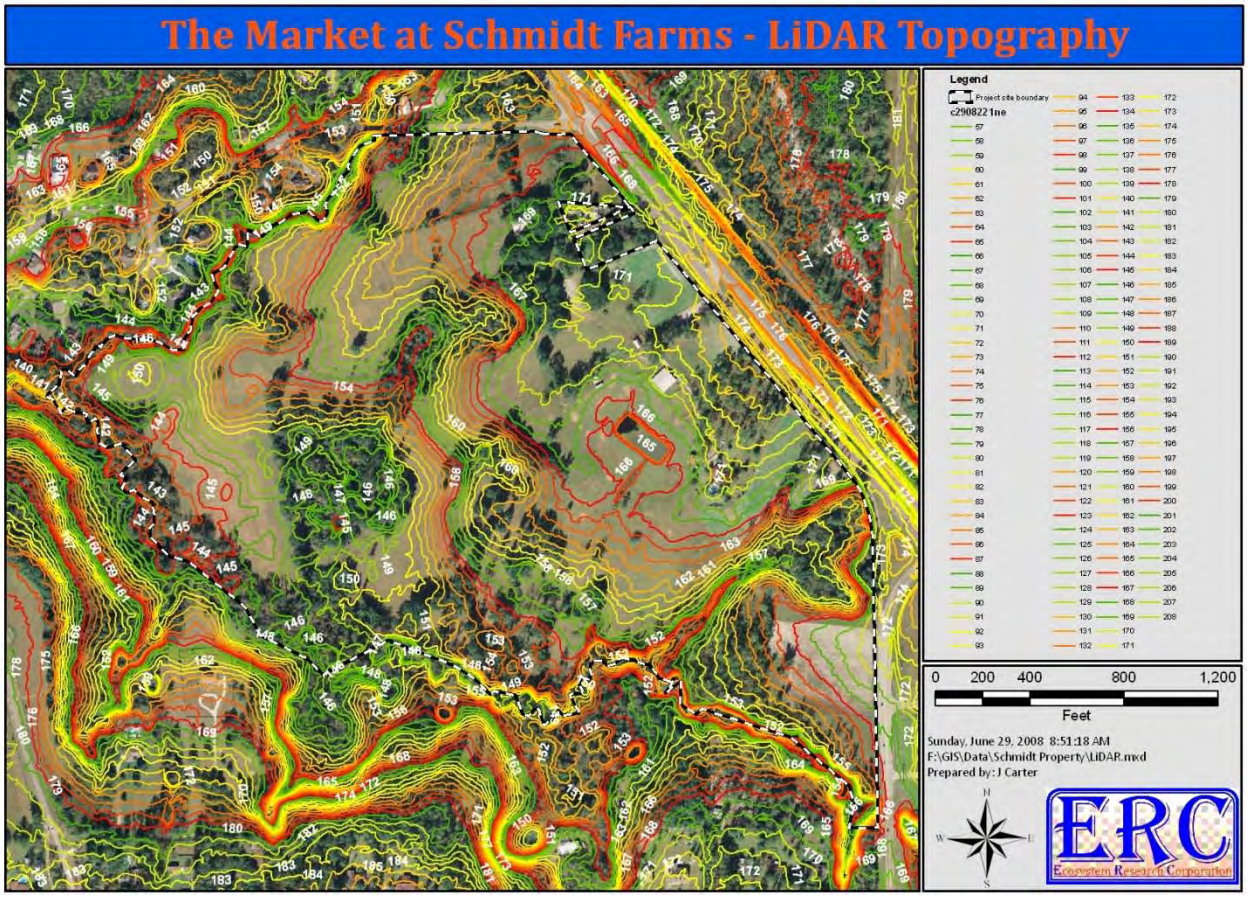
The project site is not located within a primary well field protection zone or secondary well field protection zone as defined by the City of Alachua Comprehensive Plan Future Land Use Element Policy 7.2.1 to 7.2.2. The project site is also not located within the City of Alachua or Alachua County Well Field protection zones (**Figure 31**). Therefore, changes in the intensity of the Future Land Use should not adversely affect any well field protection area.

Section 9. Significant Geologic Features & Topography/Steep Slopes

There are several significant geologic features within the boundaries of the proposed project site. These areas include a) Turkey Creek drainage; b) Brooke Pointe Creek drainage; c) Schmidt Creek drainage; and d) the system of seepage and depressional wetlands that are composed of several relic sinkholes and several additional relic sinkholes located in the southwest quadrant of the project site. These features are easily seen on the Alachua County 2001 LiDAR topo shown in **Figure 32**.

Figure 31. City of Alachua and Alachua County Well Field Protection Zones.





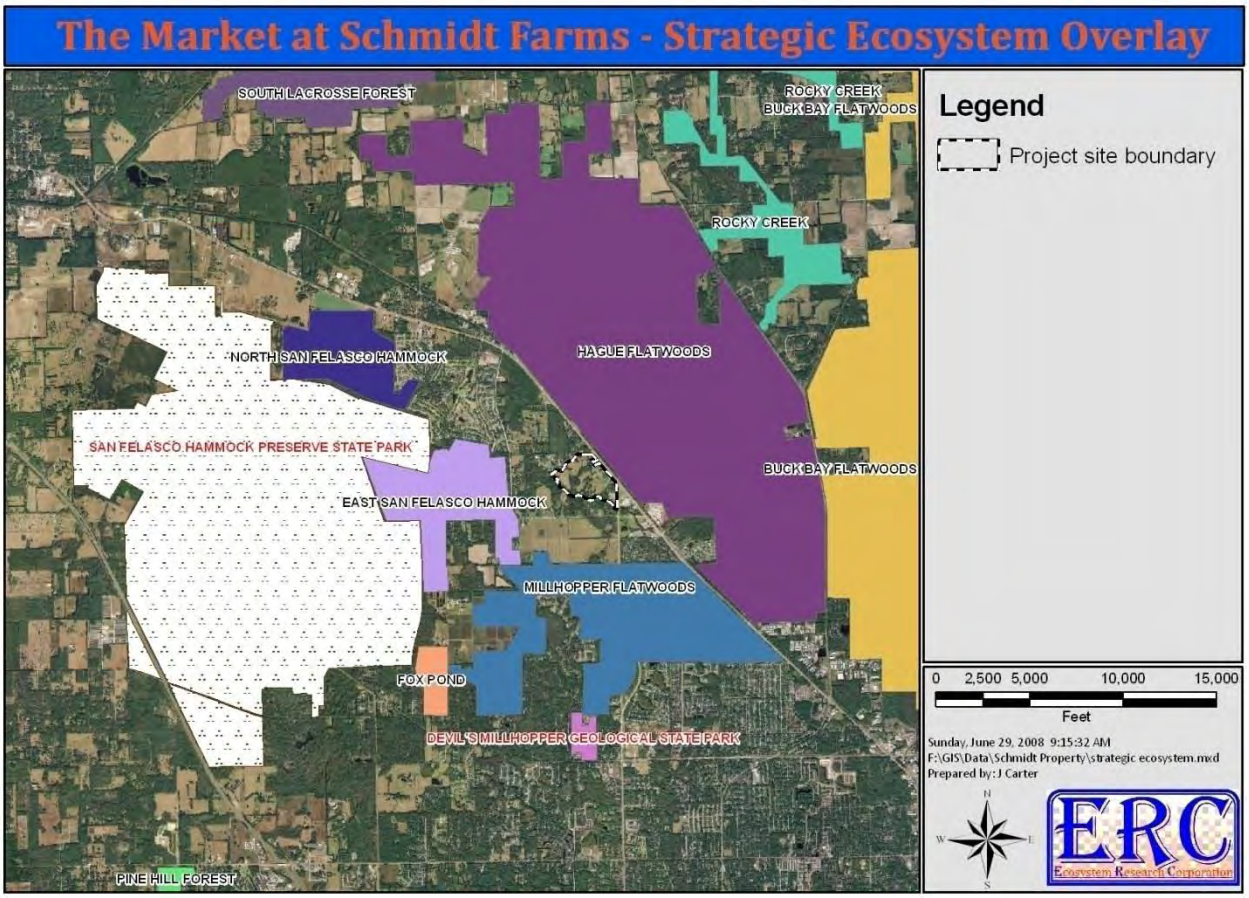


Figure 32. 2001 Alachua County LiDAR Topography Map of the Project Site.

Section 10. Strategic Ecosystems – Significant Ecological Communities District

The project site does not occur within an Alachua County Strategic Ecosystem Overlay to the County's Future Land Use Map. However, there are several mapped strategic ecosystems that totally surround the project site (**Figure 33**). The headwaters to Turkey Creek originate within the Hague Flatwoods Strategic Ecosystem and the creeks eventually flow through the North San Felasco Hammock Strategic Ecosystem and San Felasco Hammock Preserve State Park. Therefore, protection of this system and the other Turkey Creek tributaries located within the boundaries of the project site is critical. The applicant, in consideration of this importance, has designated all creeks and creek buffers as conservations areas. In addition, large open space areas are designated to establish connectivity with the large isolated systems on site and the 100-year floodplain area. This designation will protect the existing and future integrity of this very valuable ecosystem.

Figure 33. **Strategic Ecosystem Overlay and State park boundaries shown in relation to The Market at Schmidt Farms project site.**

Section 11. Wells & Septic

There are several wells in and adjacent to the project site. There are two (2) known 4-in wells located on the Schmidt property. An agricultural supply well is located at GPS location P-60 (Figure 7; **Photo 59**) and the Schmidt residence supply well is located at the southeast corner of the guest cottage at GPS location P-61 (**Photo 60**). On adjacent properties there is a 4-in well that supplies water to Harmony Gardens. This 4-in well is located at GPS location P-53 (**Photo 61**). The Bike Route located adjacent to Harmony Gardens is hooked to the City of Alachua water supply because the previous business was a restaurant in which treated water was needed. There is a residential septic tank located

Photo 59. **View of the agricultural supply well found at GPS**

adjacent to the Schmidt residence. The septic drainfield is located at GPS location P-62 (Figure 7). There are also septic tanks located on the Bike Route and Harmony Garden properties.

Photo 60. View of the Schmidt residence supply well located at GPS location P-61.

Photo 61. View of the 4-in supply well located on the Harmony Gardens property (GPS location P-53).

Section 12. Historic Structures

There are several structures located on the Schmidt property and adjacent properties that warrant some description. The buildings where the Bike Route and Harmony Gardens are presently located are listed as Alachua County Historic Structures AL04361 and AL 04360, respectively (**Figure 34**). The Harmony Gardens house is the original residence used by the Schmidts in the 1950's and was present when they bought the property from the Cellon's at that time. This house was built circa 1915. A photograph of the Harmony Gardens building (formerly Angel Gardens) is shown in **Photo 62**. The garage (also probably built circa 1915) is presently being used as a retail garden shop (**Photo 63**). **Photo 64** shows the Bike Route shop. This building was moved to the present site from Alachua in 1995. This house was built circa 1930. The buildings on the existing Schmidt parcel consist of a brick residence (**Photo 65;** GPS location P-63), a guest cottage (**Photo 66**; GPS location P-61), a concrete block stable (**Photo 67**; GPS location P-56), and a very large concrete block building used for agricultural storage (**Photo 68**; GPS location P-58).

Figure 34. Alachua County historic structures location map.

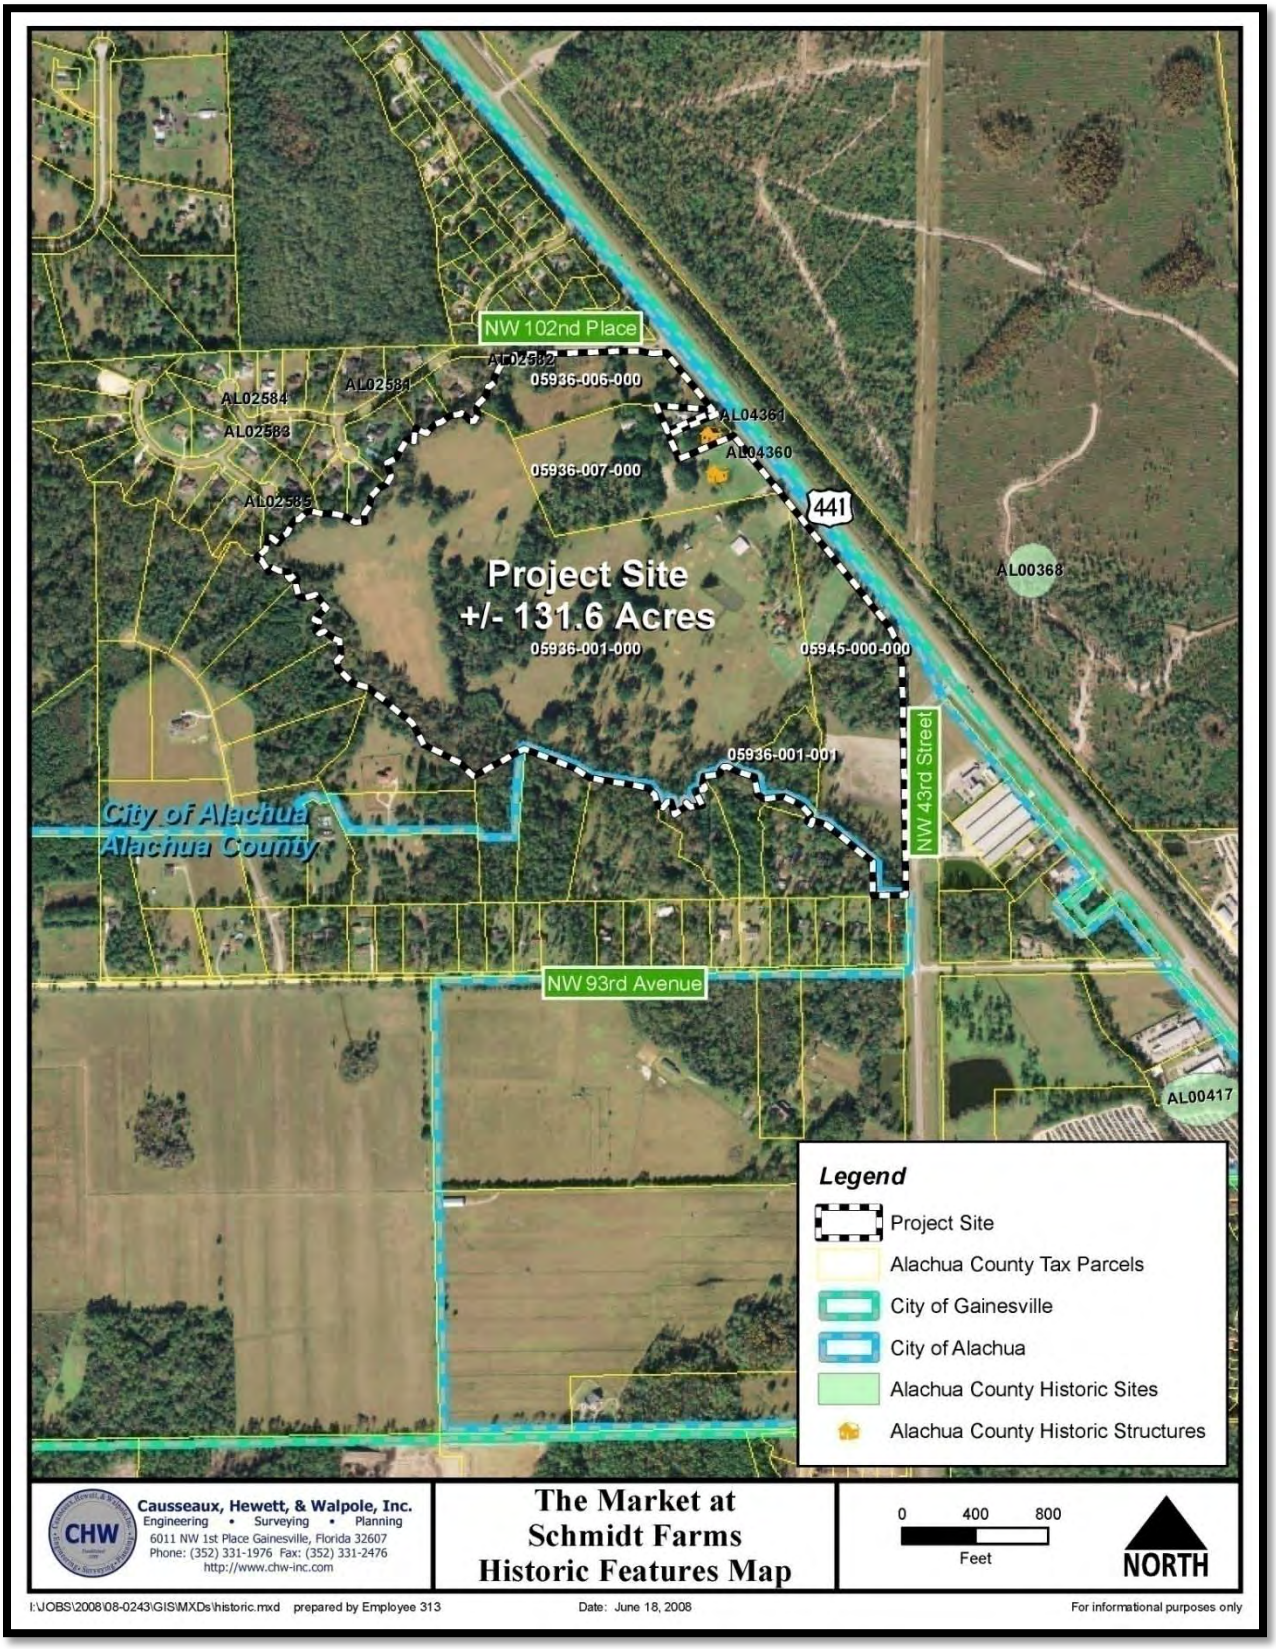

Photo 62. **Panoramic view of the Harmony Gardens building (Historic Structure AL04360) located at GPS location P-52.**

Photo 67. **Panoramic view of the concrete block stable located at GPS location P-56.**

Photo 68. **Panoramic view of the large concrete block storage building that is used for agricultural storage (GPS location P-58).**

Final Statement

This report documents the existing conditions of the proposed project site referred to as The Market at Schmidt Farms. The most valuable natural communities existing on the project site have been included in the Conservation Future Land Use designation where no future development will occur. Therefore, no direct impacts to these systems should occur in the future as a result of the proposed change to the Future Land Use of this area.

Attention: Mr. Brad Combs

Subject: Preliminary Subsurface Soil Exploration and
Geotechnical Engineering Evaluation
Proposed Retail Center
Market at Schmidt Farm
US 441 and NW 43rd Street
Alachua County, Florida

Gentlemen:

As requested and authorized by you, we have completed a shallow subsurface soil exploration and geotechnical engineering evaluation for the subject project. The purposes of performing this exploration were to preliminarily evaluate the general subsurface conditions within the building and parking/drive areas and to provide recommendations for site preparation, foundation support, and pavement design. In addition, we have estimated the normal seasonal high groundwater level at the boring locations. This report documents our findings and presents our engineering recommendations.

We understand that the building locations are not yet finalized. Additional Borings may be required depending on the final building layout.

SITE LOCATION AND SITE DESCRIPTION

The site for the proposed retail center is located on the west side of US 441 between NW 43rd Street and NW 102nd Place in Alachua County, Florida (Section 34, Township 8 South, Range 19 East). The general site location is shown superimposed on the Pine Castle, Florida U.S.G.S. quadrangle map presented on Figure 1.

The site is approximately 132 acres in area. At the time of our exploration, the site was primarily grass covered and sparsely wooded. Based on review of the provided survey prepared by Lochrane Engineers, ground surface elevations on the site in the areas proposed to be developed range between approximately +160 and +174 feet.

PROPOSED CONSTRUCTION AND GRADING

It is our understanding that the proposed development includes a retail/office center which will be approximately 292,000 square feet in plan area and include retail stores, offices and restaurants. The center will also include a major retail store as an anchor which is discussed in a separate report. The proposed buildings will consist of load bearing masonry walls and interior columns with slab-on-grade floors.

For the purposes of our analysis, we have assumed the maximum loading for the structures to be on the order of 3 to 5 kips per linear foot for wall foundations, 100 kips for individual column foundations and 100 pounds per square foot for slab-on-grade floors. Grading plans are not complete at this time, therefore we have assumed that 2 to4 feet of fill is required to raise the building and parking/drive areas to final elevations. If actual building loads or fill height exceed our assumptions, then the recommendations in this report may not be valid.

We understand that the stormwater run-off is to be retained off-site by means of wet retention ponds.

REVIEW OF SOIL SURVEY MAPS

Based on the 1985 Soil Survey for Alachua County, Florida, as prepared by the U.S. Department of Agriculture Soil Conservation Service, the site is located in an area mapped as the following soil series - "Kanapaha sand", "Millhopper sand", "Pelham sand", "Pomona sand" and "Mulat sand" soil series. The type and locations of the individual soils are shown on the Soil Survey Map presented as Figure 2.

The "Kanapaha sand" soil series (Soil Type 7B) consists of nearly level to gently sloping, poorly drained soil on the uplands. The soil permeability of the "Kanapaha sand" soil series is moderately slow to moderately rapid. According to the Soil Survey, the seasonal high water table for the "Kanapaha sand" soil series is typically within 10 inches of the natural ground surface.

The "Millhopper sand" soil series (Soil Type 8B) consists of nearly level to gently sloping, moderately well drained soil on the uplands and broad flatwoods. The soil permeability of the "Millhopper sand" soil series is moderately rapid to rapid. According to the Soil Survey, the seasonal high water table for the "Millhopper sand" soil series is typically 40 to 60 inches below the natural ground surface.

The "Pelham sand" soil series (Soil Type 13) consists of nearly level, poorly drained soil in the flatwoods. The soil permeability of the "Pelham sand" soil series is moderate to rapid. According to the Soil Survey, the seasonal high water table for the "Pelham sand" soil series is typically within 10 inches of the natural ground surface.

The "Pomona sand" soil series (Soil Type 14) consists of nearly level, poorly drained soil in the flatwoods. The soil permeability of the "Pomona sand"soil series is moderate to very rapid. According to the Soil Survey, the seasonal high water table for the "Pomona sand"soil series is typically within 10 inches of the natural ground surface.

The "Mulat sand " soil series (Soil Type 23) consists of nearly level, poorly drained soil in broad areas on the flat woods. The soil permeability is moderately slow to rapid. According to the Soil survey, the seasonal high water table is typically within 10 inches of the natural ground surface.

FIELD EXPLORATION PROGRAM

SPT and Auger Borings

The field exploration program included performing 55 Standard Penetration Test (SPT) borings (TH-16 through TH-70) and 20 auger borings (AB-1 through AB-6 and AB-13 through AB-26). The SPT borings were performed within the proposed "footprint" of the buildings and borings were advanced to depths of 20 to 30 feet below the ground surface using the methodology outlined in ASTM D-1586. A summary of this field procedure is included in Appendix I. Split-spoon soil samples recovered during performance of the borings were visually classified in the field and representative portions of the samples were transported to our laboratory in sealed sample jars.

The auger borings were performed in the proposed parking/drive areas. They were drilled using a truck-mounted, 4-inch diameter, continuous flight auger to a depth of 10 feet below the ground surface. A summary of this field procedure is included in Appendix I. Representative soil samples were recovered from the auger borings and transported to our laboratory for further analysis.

The groundwater level at each of the boring locations was measured upon completion of drilling. The borings were then backfilled with soil cuttings.

Test Locations

The approximate locations of the borings are schematically illustrated on a site plan shown on Figure 3. These locations were determined in the field by tape measurements from existing site features and use of a handheld GPS unit, and should be considered accurate only to the degree implied by the method of measurement used. The ground surface elevations shown on the boring profiles were estimated based on a survey of the site provided by Lochrane Engineering.

LABORATORY PROGRAM

Representative soil samples obtained during our field sampling operation were packaged and transferred to our laboratory for further visual examination and classification. The soil samples were visually classified in general accordance with the Unified Soil Classification System (ASTM D-2488). The resulting soil descriptions are shown on the soil boring profiles presented on Figures 4 through 14.

In addition, we conducted natural moisture content tests (ASTM D2216), percent fines analyses (ASTM D1140), organic limit tests (ASTM D2974-87) and Atterberg limits tests (ASTM D4318) on selected soil samples obtained from the borings to aid in classification. The results of these tests are presented adjacent to the sample depth on the boring profiles on Figures 5 through 14.

GENERAL SUBSURFACE CONDITIONS

General Soil Profile

The results of the field exploration and laboratory programs are graphically summarized on the soil boring profiles presented on Figures 4 through 14. The stratification of the boring profiles represents our interpretation of the field boring logs and the results of laboratory examinations of the recovered samples. The stratification lines represent the approximate boundary between soil types. The actual transitions may be more gradual than implied.

The results of the borings indicate that very loose to loose fine sand containing varying amounts of silt and/or clay was typically encountered from the surface to depths ranging from 3 to 5 feet below the existing ground surface. The borings terminated in loose to medium dense silty clayey fine sand interspersed with layers of medium stiff to very stiff sandy clay.

We note that organic muck was encountered in Boring TH-21 from the ground surface to a depth of 1.5 feet. Organic muck may be present at other location and to deeper depths at unexplored locations within the site.

The above soil profile is outlined in general terms only. Please refer to Figures 4 through 14 for soil profile details and Figure 3 for hand probe details.

Groundwater Level

The groundwater level was measured in the boreholes on the day drilled after stabilization of the downhole water level. As shown on Figures 4 through 14, groundwater was encountered at depths that ranged from 2.6 to 6.5 below the existing ground surface on the dates indicated. Fluctuation in groundwater levels should be anticipated throughout the year primarily due to seasonal variations in rainfall and other factors that may vary from the time the borings were conducted.

NORMAL SEASONAL HIGH GROUNDWATER LEVEL

The normal seasonal high groundwater level each year is the level in the August-September period at the end of the rainy season during a year of normal (average) rainfall. The water table elevations associated with a higher than normal rainfall and in the extreme case, flood, would be higher to much higher than the normal seasonal high groundwater level. The normal high water levels would more approximate the normal seasonal high groundwater levels.

The seasonal high groundwater level is affected by a number of factors. The drainage characteristics of the soils, the land surface elevation, relief points such as drainage ditches, lakes, rivers, swamp areas, etc., and distance to relief points are some of the more important factors influencing the seasonal high groundwater level.

Based on our interpretation of the site conditions using our boring logs, we have estimated the normal seasonal high groundwater level at the boring locations. Estimated seasonal high water table elevations are presented on Table 1, as well as on the boring profiles on Figures 5 to 14.

PRELIMINARY ENGINEERING EVALUATION AND RECOMMENDATIONS

General

The results of our exploration indicate that, with proper site preparation as recommended in this report, the existing soils are suitable for supporting the proposed buildings on a conventional shallow foundation system. Spread footings should provide an adequate support system for the structures.

Because of the clayey soils near the ground surface and some potential for shrink/swell, we recommend hardscape around the perimeter of the building (i.e.; no landscaping adjacent to the buildings) to reduce moisture fluctuation in these soils.

The following are our preliminary recommendations for overall site preparation, foundation support, and pavement construction which we feel are best suited for the proposed facility and existing soil conditions. The recommendations are made as a guide for the design engineer and/or architect, parts of which should be incorporated into the project's specifications. Additional borings may be required depending on the final building layout.

Stripping and Grubbing

The "footprint" of the proposed building and the parking/drive areas, plus a minimum margin of five feet, should be stripped of all surface vegetation, stumps, debris, organic topsoil or other deleterious materials, as encountered.

After stripping, the site should be grubbed or root-raked such that roots with a diameter greater than ½ inch, stumps, or small roots in a dense state, are completely removed. The actual depth(s) of stripping and grubbing must be determined by visual observation and judgment during the earthwork operation.

Demucking

The organic muck encountered in Boring TH-21 should be removed (demucked) to its entire vertical limits and horizontal limits. We note that organic muck may be present in other unexplored areas of the site.

The excavated organic muck/soft sediment must not be used as structural fill material and should be disposed of as directed by the owner or his representative. Demucking and backfilling operations should be monitored continuously by a representative of Ardaman & Associates to verify that all unsuitable material is removed and that backfill soils are suitable and well compacted.

Excavation slopes and/or bracing are the responsibility of the contractor. However, at a minimum, all excavations should be sloped and/or braced to meet the requirements of the Occupational Health and Safety Administration (OSHA) latest Standards.

Excavation will extend below the groundwater table and the control of the groundwater will be required. De-mucking should be conducted "in-the-dry". Dewatering should be accomplished as discussed in the "Dewatering" section of this report.

Proof-rolling

We recommend proof-rolling the cleared surface to locate any unforeseen soft areas or unsuitable surface or near-surface soils, to increase the density of the upper soils, and to prepare the existing surface for the addition of the fill soils (as required). Proof-rolling of the building areas should consist of at least 10 passes of a compactor capable of achieving the density requirements described. Each pass should overlap the preceding pass by 30 percent to achieve complete coverage. If deemed necessary, in areas that continue to "yield", remove all deleterious material and replace with clean, compacted sand backfill. The proof-rolling should occur after cutting and before filling. The number of passes can be reduced to 3 within the proposed parking/drive areas.

A density equivalent to or greater than 95 percent of the modified Proctor (ASTM D-1557) maximum dry density value for a depth of 2 feet in the building areas and 1 foot in the parking/drive areas must be achieved beneath the stripped and grubbed ground surface. Additional passes and/or overexcavation and recompaction may be required if these minimum density requirements are not achieved. The soil moisture should be adjusted as necessary during compaction.

Care should be exercised to avoid damaging any neighboring structures while the compaction operation is underway. Prior to commencing compaction, occupants of adjacent structures should be notified and the existing condition (i.e. cracks) of the structures documented with photographs and survey (if deemed necessary). Compaction should cease if deemed detrimental to adjacent structures, and Ardaman & Associates should be notified immediately.

Suitable Fill Material and the Compaction of Fill Soils

All fill materials should be free of organic materials, such as roots and vegetation. We recommend using fill with less than 12 percent by dry weight of material passing the U.S. Standard No. 200 sieve size. The fine sand and fine sand with silt (Strata No. 1 and 2 without roots, as shown on Figures 4 through 11) are suitable for use as fill materials and, with proper moisture control, should densify using conventional compaction methods. Soils with more than 12 percent passing the No. 200 sieve can be used in some applications, but will be more difficult to compact due to their inherent nature to retain soil moisture.

All structural fill should be placed in level lifts not to exceed 12 inches in uncompacted thickness. Each lift should be compacted to at least 95 percent of the modified Proctor (ASTM D-1557) maximum dry density value. The filling and compaction operations should continue in lifts until the desired elevation(s) is achieved. If hand-held compaction equipment is used, the lift thickness should be reduced to no more than 6 inches.

Foundation Support by Spread Footings and Foundation Compaction Criteria

Excavate the foundations to the proposed bottom of footing elevations and, thereafter, verify the in-place compaction for a depth of 2 feet below the footing bottoms. If necessary, compact the soils at the bottom of the excavations to at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557) for a depth of 2 feet below the footing bottoms. Based on the existing soil conditions and, assuming the above outlined proof-rolling and compaction criteria are implemented, an allowable soil bearing pressure of 2,500 pounds per square foot (psf) may be used in the

foundation design. This bearing pressure should result in foundation settlement within tolerable limits (i.e., 1 inch or less).

All bearing wall foundations should be a minimum of 18 inches wide and column foundations 24 inches wide. A minimum soil cover of 18 inches should be maintained from the bottom of the foundations to the adjacent finished grades.

Floor Slab Moisture Reducer and Slab Compaction Requirements

Compaction beneath all floor slabs should be verified for a depth of 12 inches and meet the 95 percent criteria (modified Proctor, ASTM D-1557).

Precautions should be taken during the slab construction to reduce moisture entry from the underlying subgrade soils. Moisture entry can be reduced by installing a membrane between the subgrade soils and floor slab. Care should be exercised when placing the reinforcing steel (or mesh) and slab concrete such that the membrane is not punctured. We note that the membrane alone does not prevent moisture from occurring beneath or on top of the slab.

If interior columns are isolated from the floor slab, an expansion joint should be provided around the columns and sealed with a water-proof sealant.

Dewatering

Based on the groundwater conditions encountered, the control of the groundwater will likely not be required to achieve the necessary stripping and subsequent construction, backfilling, and compaction requirements presented in the preceding sections. If, however, dewatering becomes necessary, the actual method(s) of dewatering should be determined by the contractor. However, regardless of the method(s) used, we suggest drawing down the water table sufficiently, say 2 to 3 feet, below the bottom of any excavation or compaction surface to preclude "pumping" and/or compaction-related problems with the foundation soils.

Dewatering should be accomplished with the knowledge that the permeability of soil tends to decrease with an increasing silt and clay content. Therefore, a silty fine sand is typically less permeable than a fine sand. The SP, SP-SM, and some SM type soils can usually be dewatered by well pointing or ditch/sump methods.

Typical Asphaltic Concrete Surface Pavement Section

Site Preparation

All areas to be paved should be prepared as previously outlined. Prior to pavement base installation, the subgrade soil compaction should be verified for a depth of 12 inches (i.e.; compacted to at least 95 percent of the modified Proctor (ASTM D-1557, AASHTO T-180) maximum dry density value).

Soil-Cement Base

Install a minimum 6-inch thick soil-cement base compacted to at least 95 percent of the standard Proctor maximum dry density (AASHTO T-134). The soil cement should have a minimum laboratory compressive strength of 300 pounds per square inch (psi) in 7 days. For truck parking and drive areas, increase the minimum thickness to 8 inches. A minimum clearance of 12 inches should be maintained between the bottom of the soil cement base and the normal seasonal high groundwater level.

The term soil-cement applies to a type of base material that utilizes cement mixed with a select soil to develop its strength. We recommend conducting a laboratory soil-cement design to determine the actual cement content necessary. Shrinkage cracking normally occurs during the hydration of a soil-cement base and is reflected through the asphaltic concrete surface. We strongly recommend a curing time period of at least 7 days before applying the overlying asphaltic concrete wearing surface. This waiting period will not eliminate the cracks in the pavement surface, but will help reduce the severity of the cracks. An approved tack coat should be applied on a clean (swept) soil-cement surface to develop a sufficient bond before the paving begins. The base should be inspected and sounded for hardness prior to paving operations. Any soft or otherwise unsuitable areas should be repaired as recommended by Ardaman and Associates.

Cracks in the pavement surface that occur when soil-cement base is used are sometimes unappealing to owners. We recommend that an owner unaccustomed to these cracks observe examples of pavement cracks in actual soil cement applications to verify that cracks are acceptable.

Free-draining subgrade soils (i.e; soils with less than 12 percent fines by dry weight) are recommended beneath soil-cement base to promote drainage of infiltrating water. If the contractor's means and methods include stabilizing soils beneath the soil-cement base, then the stabilizing material should be coarse material (e.g; gravel). Low permeability soils (e.g; silt and/or clay) should not be used as stabilizing material beneath soil cement base.

Limerock Base (Optional)

In lieu of soil cement, a limerock base course 6 inches thick overlying an 8-inch thick stabilized subbase can be used provided that grading and drainage plans preclude periodic saturation of the base material. The periodic saturation of a limerock base material could lead to premature pavement distress. A minimum clearance of 18 inches must be maintained between the bottom of the limerock base and the seasonal high groundwater table.

The limerock should have a minimum Limerock Bearing Ratio (LBR) value of 100 and should be compacted to at least 98 percent of the modified Proctor (ASTM D-1557, AASHTO T-180) maximum density value. For truck parking and drive areas, the base thickness should be a minimum of 8 inches.

An 8-inch thick subbase having a minimum Limerock Bearing Ratio (LBR) value of 40 must be achieved beneath the limerock base. The natural soils may have to be stabilized with suitable clayey soil in order to achieve the required LBR value. The stabilized subbase must be compacted to at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557, AASHTO T-180).

Crushed Concrete Base (Optional)

Crushed concrete base may be used. We recommend that the crushed concrete base course be supported by a free-draining subgrade. Six inches of base should be used in parking areas while 8 inches of crushed concrete base should be used in truck parking and drive areas. A minimum clearance of 12 inches should be maintained between the bottom of the crushed concrete base and the seasonal high groundwater table.

The crushed concrete base should have a minimum Limerock Bearing Ratio (LBR) value of 100 and should be compacted to at least 98 percent of the modified Proctor maximum dry density (ASTM D-1557, AASHTO T-180). The crushed concrete should meet Graded Aggregate Base gradation requirements according to Section 204, of the Florida Department of Transportation Standard Specifications for Road and Bridge Construction, 2004 Edition. The subgrade beneath the crushed concrete base should consist of free draining sand compacted to at least 98 percent of the modified Proctor maximum dry density (ASTM D-1557, AASHTO T-180).

We note that if the contractor's means and methods include stabilizing soils beneath the crushed concrete base, then the stabilizing material should be coarse material (e.g; gravel). Low permeability soils (e.g; silt and/or clay) should not be used as stabilizing material beneath crushed concrete base.

Wearing Surface

A minimum 1½ inch layer of Type SP-9.5 or SP-12.5 asphaltic concrete should be used for a wearing surface in automobile parking areas. For truck parking and drive areas, 2 inches of Type SP-9.5 or SP-12.5 asphaltic concrete should be used. Specific requirements for the Type-SP asphaltic concrete wearing surface are outlined in Section 334 in the Florida Department of Transportation, Standard Specifications for Road and Bridge Construction, 2004 Edition. Equivalent Type S asphaltic concrete may be substituted for Type SP-9.5 or SP-12.5.

The latest specifications of Florida Department of Transportation shall govern the design and placement of the base and asphaltic concrete wearing surface. The above minimum requirements will satisfactorily support Traffic Level A*. If a heavier traffic pattern is anticipated, the design section should be increased accordingly.

QUALITY ASSURANCE

We recommend establishing a comprehensive quality assurance program to verify that all site preparation and foundation and pavement construction is conducted in accordance with the appropriate plans and specifications. Materials testing and inspection services should be provided by Ardaman & Associates.

As a minimum, an on-site engineering technician should monitor all stripping and grubbing to verify that all deleterious materials have been removed and should observe the proof-rolling operation to verify that the appropriate number of passes are applied to the subgrade. In-situ density tests should be conducted during filling activities and below all footings, floor slabs and pavement areas

---

* Reference: "Flexible Pavement Design Manual", Florida Department of Transportation. (2002)

to verify that the required densities have been achieved. In-situ density values should be compared to laboratory Proctor moisture-density results for each of the different natural and fill soils encountered.

Additionally for the pavements, Limerock Bearing Ratio tests should be performed. The base course(s) should be tested for density and thickness. Soil cement base should be inspected and sounded for hardness after a minimum 7-day wearing period. Areas determined during the 7-day inspection to be soft or otherwise insufficient should be removed and replaced or otherwise repaired according to the geotechnical engineer's recommendations. Samples of the asphaltic concrete should be obtained and tested in the laboratory for Marshall stability, flow, asphalt content, and aggregate gradation. Also, the asphaltic concrete thickness should be verified in the field.

Finally, we recommend inspecting and testing the construction materials for the foundations and other structural components.

IN-PLACE DENSITY TESTING FREQUENCY

In Central Florida, earthwork testing is typically performed on an on-call basis when the contractor has completed a portion of the work. The test result from a specific location is only representative of a larger area if the contractor has used consistent means and methods and the soils are practically uniform throughout. The frequency of testing can be increased and full-time construction inspection can be provided to account for variations. We recommend that the following minimum testing frequencies be utilized.

In proposed parking areas, a minimum frequency of one in-place density test for each 5,000 square feet of area should be used. The existing, natural ground should be tested to a depth of 12 inches at the prescribed frequency. Each 12-inch lift of fill, as well as the stabilized subgrade (where applicable) and base should be tested at this frequency. Utility backfill should be tested at a minimum frequency of one in-place density test for each 12-inch lift for each 200 lineal feet of pipe. Additional tests should be performed in backfill for manholes, inlets, etc.

In proposed structural areas, the minimum frequency of in-place density testing should be reduced to one test for each 2,500 square feet of structural area. In-place density testing should be performed at this minimum frequency for a depth of 2 feet below natural ground and for every 1-foot lift of fill placed in the structural area. In addition, density tests should be performed in each column footing for a depth of 2 feet below the bearing surface. For continuous or wall footings, density tests should be performed at a minimum frequency of one test for every 50 lineal feet of footing, and for a depth of 2 feet below the bearing surface.

Representative samples of the various natural ground and fill soils, as well as stabilized subgrade (where applicable) and base materials should be obtained and transported to our laboratory for Proctor compaction tests. These tests will determine the maximum dry density and optimum moisture content for the materials tested and will be used in conjunction with the results of the in-place density tests to determine the degree of compaction achieved.

CLOSURE

The analyses and recommendations submitted herein are based on the data obtained from the soil borings presented on Figures 4 through 14 and the stated loading conditions. This report does not reflect any variations which may occur adjacent to or between the borings. The nature and extent of the variations between the borings may not become evident until during construction. If variations then appear evident, it will be necessary to re-evaluate the recommendations presented in this report after performing on-site observations during the construction period and noting the characteristics of the variations.

This study is based on a relatively shallow exploration and is not intended to be an evaluation for sinkhole potential. Based on the results of all borings conducted for this exploration, no soil conditions resembling sinkhole activity were encountered. This study does not include an evaluation of the environmental (ecological or hazardous/toxic material related) condition of the site and subsurface.

This report has been prepared for the exclusive use of Sandor Development Company and Lochrane Engineering in accordance with generally accepted soil and foundation engineering practices. In the event any changes occur in the design, nature, or location of the proposed facility, we should review the applicability of conclusions and recommendations in this report. We recommend a general review of final design and specifications by our office to verify that earthwork and foundation recommendations are properly interpreted and implemented in the design specifications. Ardaman and Associates should attend the pre-bid and preconstruction meetings to verify that the bidders/contractor understand the recommendations contained in this report.

We are pleased to be of assistance to you on this phase of the project. When we may be of further service to you or should you have any questions, please contact us.

Very truly yours,
ARDAMAN & ASSOCIATES, INC.

WHILE THE BORINGS ARE REPRESENTATIVE OF SUBSURFACE CONDITIONS AT THEIR RESPECTIVE LOCATIONS AND FOR THEIR RESPECTIVE VERTICAL REACHES, LOCAL VARIATIONS CHARACTERISTIC OF THE SUBSURFACE MATERIALS OF THE REGION ARE ANTICIPATED AND MAY BE ENCOUNTERED. THE BORING LOGS AND RELATED INFORMATION ARE BASED ON THE DRILLER'S LOGS AND VISUAL EXAMINATION OF SELECTED SAMPLES IN THE LABORATORY. THE DELINEATION BETWEEN SOIL TYPES SHOWN ON THE LOGS IS APPROXIMATE AND THE DESCRIPTION REPRESENTS OUR INTERPRETATION OF SUBSURFACE CONDITIONS AT THE DESIGNATED BORING LOCATIONS ON THE PARTICULAR DATE DRILLED.

GROUNDWATER ELEVATIONS SHOWN ON THE BORING LOGS REPRESENT GROUNDWATER SURFACES ENCOUNTERED ON THE DATES SHOWN. FLUCTUATIONS IN WATER TABLE LEVELS SHOULD BE ANTICIPATED THROUGHOUT THE YEAR.

APPENDIX I

Standard Penetration Test (SPT) Boring and
Auger Boring Procedures

STANDARD PENETRATION TEST

The standard penetration test is a widely accepted test method of *in situ* testing of foundation soils (ASTM D 1586). A 2-foot long, 2-inch O.D. split-barrel sampler attached to the end of a string of drilling rods is driven 18 inches into the ground by successive blows of a 140-pound hammer freely dropping 30 inches. The number of blows needed for each 6 inches of penetration is recorded. The sum of the blows required for penetration of the second and third 6-inch increments of penetration constitutes the test result or N-value. After the test, the sampler is extracted from the ground and opened to allow visual examination and classification of the retained soil sample. The N-value has been empirically correlated with various soil properties allowing a conservative estimate of the behavior of soils under load.

The tests are usually performed at 5-foot intervals. However, more frequent or continuous testing is done by our firm through depths where a more accurate definition of the soils is required. The test holes are advanced to the test elevations by rotary drilling with a cutting bit, using circulating fluid to remove the cuttings and hold the fine grains in suspension. The circulating fluid, which is a bentonitic drilling mud, is also used to keep the hole open below the water table by maintaining an excess hydrostatic pressure inside the hole. In some soil deposits, particularly highly pervious ones, NX-size flush-coupled casing must be driven to just above the testing depth to keep the hole open and/or prevent the loss of circulating fluid.

Representative split-spoon samples from the soils at every 5 feet of drilled depth and from every different stratum are brought to our laboratory in air-tight jars for further evaluation and testing, if necessary. Samples not used in testing are stored for 30 days prior to being discarded. After completion of a test boring, the hole is kept open until a steady state groundwater level is recorded. The hole is then sealed, if necessary, and backfilled.

AUGER BORINGS

Auger borings are used when a relatively large, continuous sampling of soil strata close to ground surface is desired. A 4-inch diameter, continuous flite, helical auger with a cutting head at its end is screwed into the ground in 5-foot sections. It is powered by the rotating action of the Kelly bar of a rotary drill rig. The sample is recovered by withdrawing the auger out of the ground without rotating it. The soil sample so obtained, is classified and representative samples put in bags or jars and brought back to the laboratory for classification testing.

Project Description/Assessment of Wetland Impacts

Project Description

Mesa-Sand Realty, LLC is making an application to the Suwannee River Water Management District (SRWMD) for a Conceptual Environmental Resource Permit. The project site is currently the subject of a large-scale land use amendment application submitted to the City of Alachua, Florida, for a parcel of land to be referred to as **The Market at Schmidt Farms**. The project site is located in northwest Alachua County in the southwest corner of the intersection of US Hwy 441 and NW 43rd Street (**Figure 1**). The project site consists of five (5) Alachua County tax parcels, which total 131.6 acres (**Figure 2**). The parcel numbers and acreages as found on the Alachua County Property Appraiser's website are shown in **Table 1**.

Table 1. Tax parcel numbers, owners, and associated acreages of the tax parcels that comprise The Market at Schmidt Farms project site.

Tax Parcel No.	Owner(s)	Acreage
05936-001-001	Herbert Matilski	3.458
05936-006-000	Nima, Inc.	8.509
05936-001-000	Ann Schmidt	94.165
05945-000-000	Ann Schmidt	11.281
05936-007-000	Jules E. Schmidt	14.193
TOTAL		**131.606**

The site is contained within Sections 2 and 3, Township 9 South, Range 19 East and Sections 34 and 35, Township 8 South, Range 19 East. A large-scale comprehensive plan amendment is presently submitted to propose a change in the Future Land Use for the property to be referred to as The Market at Schmidt Farms, City of Alachua, Florida. The large-scale comprehensive plan amendment (CPA) proposes creating a mixed-use development on a ±131.6-acre parcel located on the south side of US Hwy 441 and west of NW 43rd Street. The site currently carries a Future Land Use designation of Agriculture (Ag) and Commercial (COM) (**Figure 3**). These land use designations have historically resulted in agricultural uses such as cattle ranching. The proposed land use change will create a mixture of urban residential and non-residential uses on the ±131.6-acre site while protecting the significant natural areas in conservation and open space (**Figure 4**). This CPA will allow for a broad range of retail, office, and multi-family and/or single-family development in a manner consistent with the City of Alachua's Comprehensive Plan and Land Development Regulations (LDR). In addition and directly related to the land use change, this application proposes the creation of a new Future Land Use designation, Open Space. This category represents a hybrid of the existing conservation, recreation, and public, but it is designed for private lands. In addition, this category is appropriately located in areas adjacent to conservation where through best management practices limited development may occur. A summary of the comparative acreages contained in each existing and proposed future land use category is summarized in **Table 2**. The existing zoning occurring on the project site is

Figure 1. Project site location map showing location of proposed The Market at Schmidt Farms at the intersection of US Hwy 441 and NW 43rd Street.

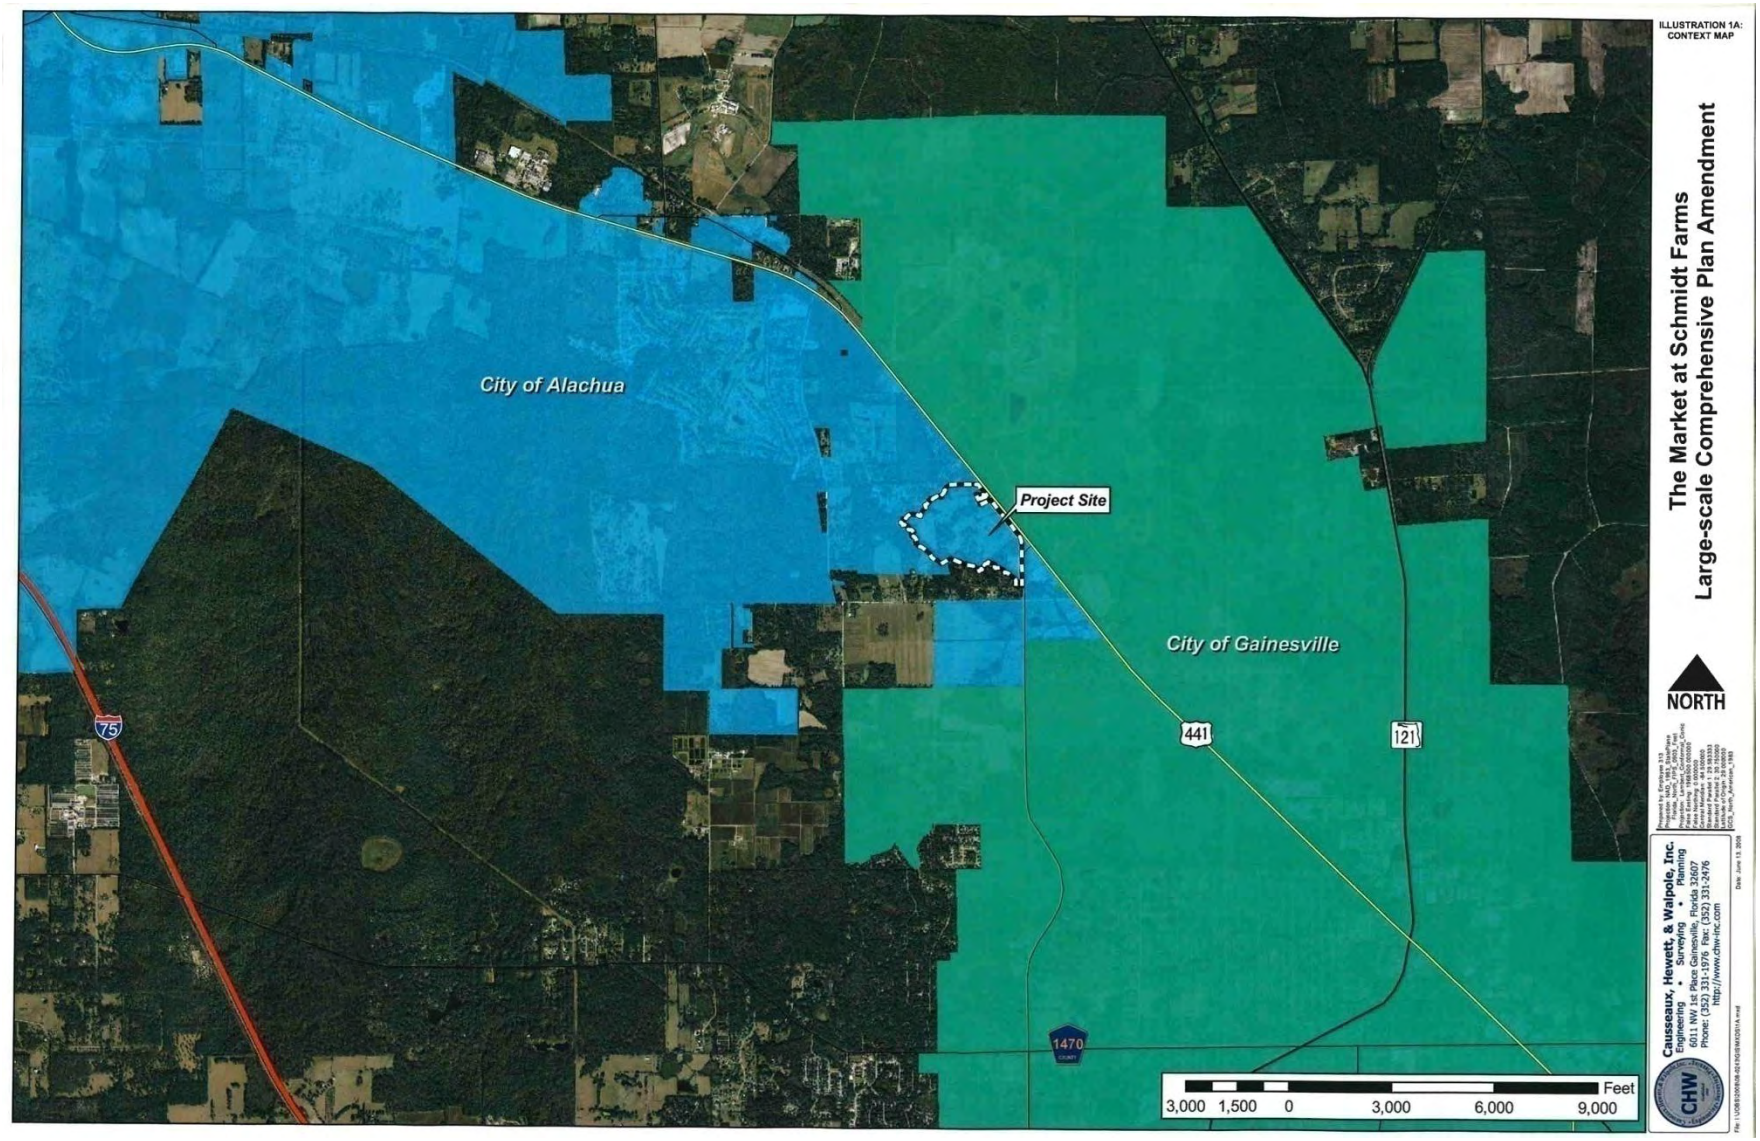

Figure 2. Parcel location map of The Market at Schmidt Farms project site showing surveyed property boundary and Alachua County Property Appraiser's parcel boundaries, and City of Gainesville and City of Alachua municipal boundaries.

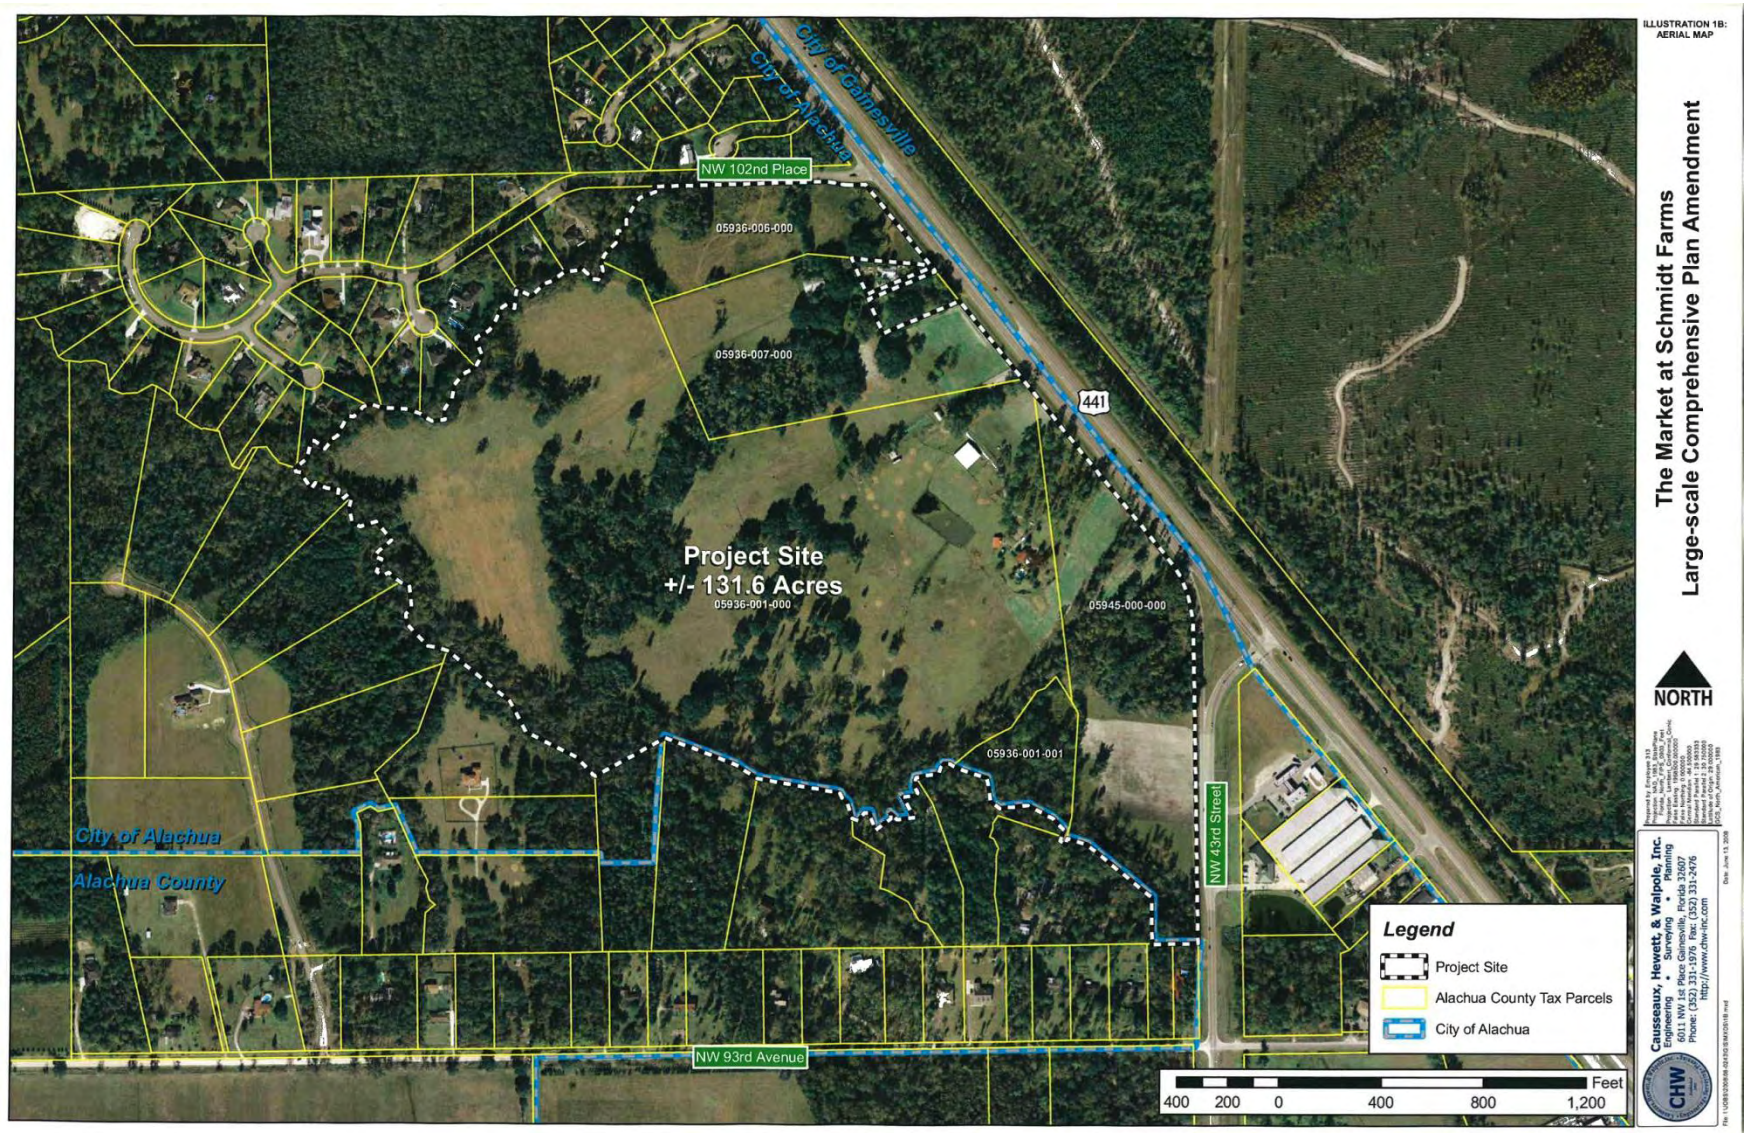

Figure 3. Existing Future Land Use map for The Market at Schmidt Farms.

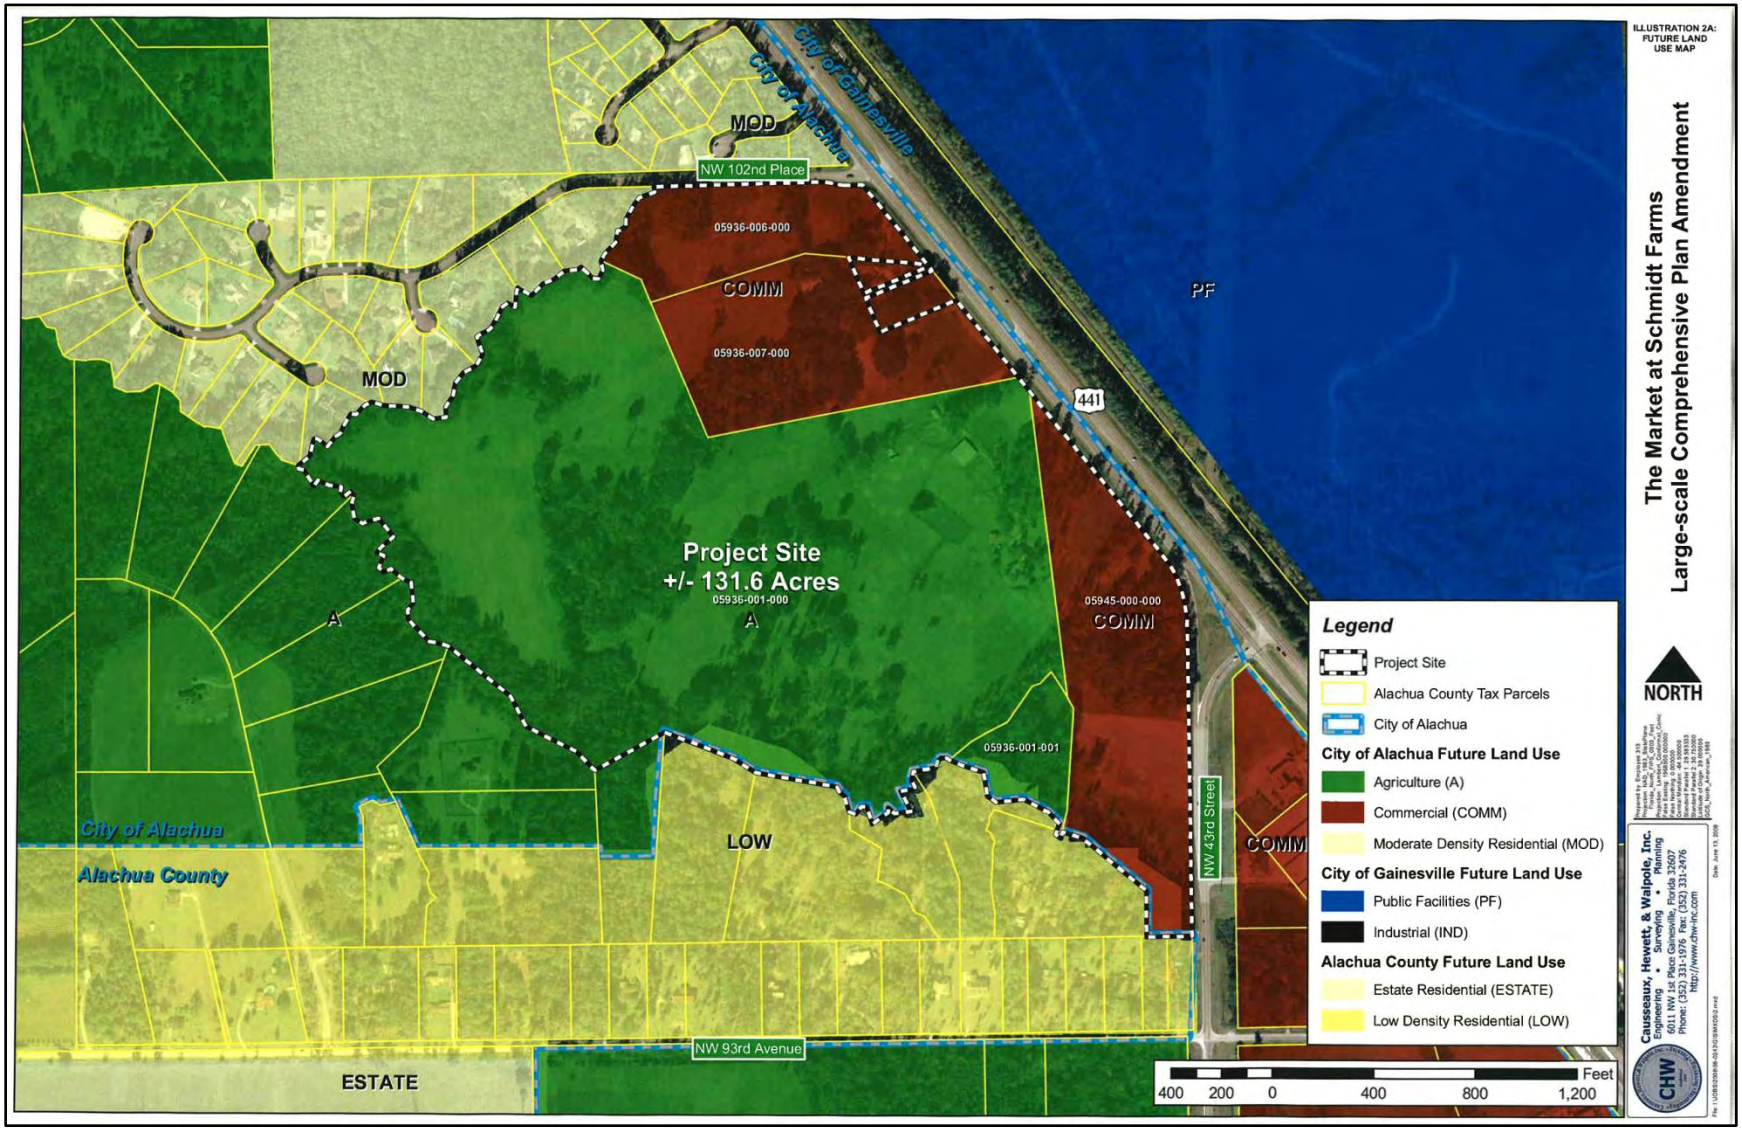

Figure 4. Proposed amendment to the Future Land Use map.

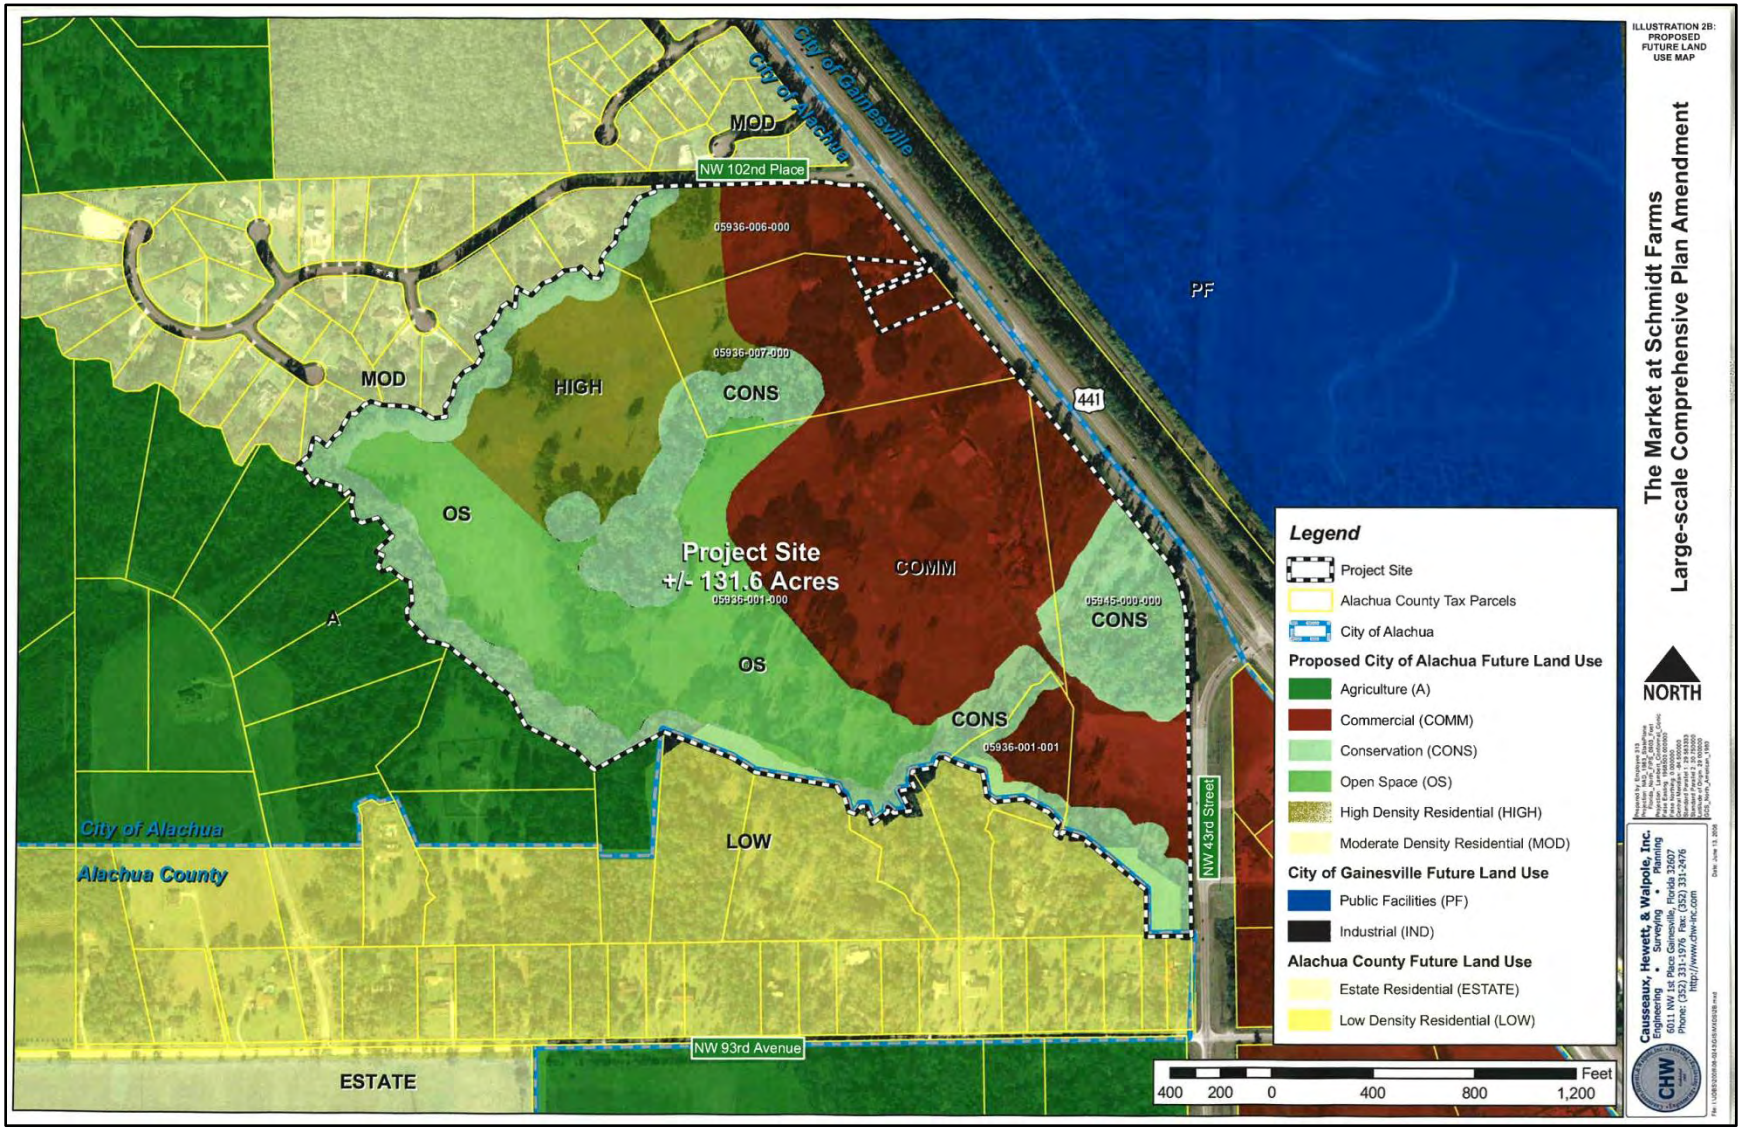

Table 2. Comparative acreages contained in the existing and proposed Future Land Use categories for The Market at Schmidt Farms project site.

Land Use Area (Acres)				
Land Use	**Existing**	**Proposed**	**Acreage Change**	**Percent Change**
Residential	0.00	17.00	17.00	100.00
Commercial	39.37	51.45	12.08	30.68
Agriculture	92.23	0.00	-92.23	-100.00
Conservation	0.00	36.38	36.38	100.00
Open Space	0.00	26.77	26.77	100.00
TOTAL	**131.60**	**131.60**		

shown in **Figure 5**. The conceptual ERP is presented to the District to conceptually address stormwater and wetland mitigation issues that will result during the construction phase of the project.

Assessment of Wetland Impacts

The Conceptual Development Plan for The Market at Schmidt Farms is presented in **Figures 6 and 7**. The proposed conceptual plan will result in 0.882 acres of direct wetland impacts, which will occur in four (4) areas of the project site (Figure 6). The impact areas nomenclature and association acreages are shown in **Table 3**. The plant community map for the project site is shown in **Figure 8.**

Table 3. Nomenclature and associated acreage of the impact areas in the proposed conceptual plan for The Market at Schmidt Farms.

Impact Area	Description	Polygon	FLUCCs Code	Impact Acreage
Area #1	Agricultural Pond & Drainage Ditch	17	535	0.777
Area #2	Existing Road Crossing	18	617.1	0.040
Area #3	Wetland “S”	16	660	0.064
Area #4	Wetland “T”	15	660	0.001
Total				**0.882**

To determine the amount of mitigation needed to offset the direct impacts proposed, the Unified Mitigation Assessment Method (UMAM) was used as described in Chapter 62-345 FAC. The Part II Quantification of Assessment (Impact or Mitigation) forms (Form 62.345.900[2] FAC) are included for each impact area in **Tables 4 through 7**, as follows:

Table 4 UMAM, Impact Area #1 (Agricultural Pond & Drainage Ditch)
Table 5 UMAM, Impact Area #2 (Road Crossing)
Table 6 UMAM, Impact Area #3 (Wetland “S”)
Table 7 UMAM, Impact Area #4 (Wetland “T”)

Table 4. Part II UMAM Assessment for Impact Area #1 - Agricultural Pond.

PART II – Quantification of Assessment Area (impact or mitigation)
(See Sections 62-345.500 and .600, F.A.C.)

Site/Project Name	Application Number	Assessment Area Name or Number
The Market at Schmidt Farms		Impact Area #1 - Agricultural Pond
Impact or Mitigation	Assessment conducted by:	Assessment date:
Impact (0.777 acres)	Peter M. Wallace, P.W.S. Robert A. Garren, P.W.S.	July 7, 2008

Scoring Guidance	Optimal (10)	Moderate(7)	Minimal (4)	Not Present (0)
The scoring of each indicator is based on what would be suitable for the type of wetland or surface water assessed	Condition is optimal and fully supports wetland/surface water functions	Condition is less than optimal, but sufficient to maintain most wetland/surface water functions	Minimal level of support of wetland/surface water functions	Condition is insufficient to provide wetland/surface water functions

.500(6)(a) Location and Landscape Support	w/o pres or current: 6	with: 0	The surrounding area is disturbed, extensively grazed bahiagrass (*Paspalum notatum*) pasture. Cattle use has occurred on the area since the 1940's. There is minimal landscape support for aquatic wildlife that use the pond.
.500(6)(b)Water Environment (n/a for uplands)	w/o pres or current: 6	with: 0	This is a shallow pond excavated from a historic forested wetland. The area was excavated circa 1979. Fecal inputs to the pond are substantial, resulting in degraded water quality.
.500(6)(c)Community structure 1. Vegetation and/or 2. Benthic Community	w/o pres or current: 4	with: 0	The water surface is covered with a variety of lemnids. The littoral zone is only sparsely colonized by the emergent species soft rush (*Juncus effusus*) and dotted smartweed (*Polygonum punctatum*).

Score = sum of above scores/30 (if uplands, divide by 20)		If preservation as mitigation,	For impact assessment areas
current or w/o pres: 0.533	with: 0	Preservation adjustment factor = NA Adjusted mitigation delta = NA	FL = delta x acres = -0.414

Delta = [with-current]	If mitigation	For mitigation assessment areas
-0.533	Time lag (t-factor) = NA Risk factor = NA	RFG = delta/(t-factor x risk) = NA

Form 62-345.900(2), F.A.C. [effective date]

Table 5. Part II UMAM Assessment for Impact Area #2 - Road Crossing.

PART II – Quantification of Assessment Area (impact or mitigation)
(See Sections 62-345.500 and .600, F.A.C.)

Site/Project Name	Application Number	Assessment Area Name or Number
The Market at Schmidt Farms		Impact Area #2 - Road Crossing
Impact or Mitigation	Assessment conducted by:	Assessment date:
Impact (0.040 acres)	Peter M. Wallace, P.W.S. Robert A. Garren, P.W.S.	July 7, 2008

Scoring Guidance	**Optimal (10)**	**Moderate(7)**	**Minimal (4)**	**Not Present (0)**
The scoring of each indicator is based on what would be suitable for the type of wetland or surface water assessed	Condition is optimal and fully supports wetland/surface water functions	Condition is less than optimal, but sufficient to maintain most wetland/surface water functions	Minimal level of support of wetland/surface water functions	Condition is insufficient to provide wetland/surface water functions

.500(6)(a) Location and Landscape Support	w/o pres or current: 7	with: 0
This is a riparian mixed hardwood system that is heavily impacted by cattle use. The wetland area is surrounded by pasture. There is an existing road crossing at this location.		
.500(6)(b)Water Environment (n/a for uplands)	w/o pres or current: 7	with: 0
The wetland in this area is an intermittent clear water stream in a well defined stream channel. Water quality is adversely affected by cattle inputs.		
.500(6)(c)Community structure 1. Vegetation and/or 2. Benthic Community	w/o pres or current: 7	with: 0
The stream in the area has a canopy of live oak (*Quercus virginiana*), laurel oak (*Quercus hemisphaerica*), sweetgum (*Liquidambar styraciflua*), southern magnolia (*Magnolia grandiflora*), pignut hickory (*Carya glabra*), and loblolly pine (*Pinus taeda*). Groundcover vegetation has been adversely affected by cattle grazing.		

Score = sum of above scores/30 (if uplands, divide by 20)	current or w/o pres	with
	0.7	0

If preservation as mitigation,
Preservation adjustment factor = NA
Adjusted mitigation delta = NA

For impact assessment areas
FL = delta x acres = -0.028

Delta = [with-current]
-0.7

If mitigation
Time lag (t-factor) = NA
Risk factor = NA

For mitigation assessment areas
RFG = delta/(t-factor x risk) = NA

Form 62-345.900(2), F.A.C. [effective date]

An extensive Environmental Resource Assessment report was prepared by ERC for this project site. The report details the existing conditions of the project site as related to plant communities, historical ecology, and threatened and endangered species. This report is provided as part of the conceptual ERP application under separate cover.

A brief description of each mitigation area is provided, as follows:

Impact Area #1 – Agricultural Pond & Drainage Area (0.777 Acres)

This is an excavated pond located within the site that was dug circa 1979 in an historic forested wetland area. The pond is severely affected by cattle use and water quality has suffered from this use. The surface is variously covered with Lemnoids (*Lemna* sp. and *Spirodella* sp.) and the littoral zone is severely trampled with sparse populations of soft rush (*Juncus effusus* L.), dotted smartweed (*Polygonum punctatum* Ell.), and maidencane (*Panicum hemitomon* Schult.) surviving the daily cattle use. This pond drains south to Turkey Creek through an excavated drainage ditch. This is an intermittent drainage of which only a small portion was considered to be a jurisdictional surface water as per criteria outlined in Chapter 62-340 FAC, *Delineation of the Landward Extent of Wetlands and Surface Waters*. The vegetation in the ditch is dominated primarily by bahiagrass (*Paspalum notatum* Fluegge.) and Bermudagrass (*Cynodon dactylon* [L.] Pers.). The drainage broadens into a natural drainage feature adjacent to Turkey Creek (Photo 9). The Agricultural Pond & Drainage community can be seen in **Photos 1 and 2**. Removal of this surface water results in a loss of 0.777 acres and functional loss of -0.414 credits (Table 4).

Photo 1. Panoramic view of the Agricultural Pond as seen looking northwest from the east side of the pond.

Photo 2. Panoramic view of the Excavated Ditch as seen looking southwest from the south perimeter of the pond.

Impact Area #2 – Road Crossing (0.040 Acres)

An access road is proposed that will provide access from NW 43rd Street (Figure 6) to the general development area. This access road will cross Schmidt Creek in an area where an existing crossing occurs. This crossing was constructed prior to 1937 and the general characteristics of the area are shown in **Photos 3 through 5.** The crossing occurs in an area where Schmidt Creek Swamp abruptly narrows into a well-defined riparian system (Figure 8). The groundcover vegetation in the area has been extensively disturbed by cattle foraging and water quality is continually affected by cattle waste inputs. The canopy is composed of laurel oak (*Quercus hemisphaerica* Bartr.), water oak (*Quercus nigra* L.), live oak (*Quercus virginiana* Mill.), sweetgum (*Liquidambar styraciflua* L.), sugarberry (*Celtis laevigata* Willd.), pignut hickory (*Carya glabra* [Mill.] Sweet), and southern magnolia (*Magnolia grandiflora* L.). The crossing will be a constructed bridge span to minimize impacts to the creek. Total direct impacts to occur equal 0.040 acres, but this includes all areas under the span, which overestimates the true fill area. The 0.040 presumed acreage loss results in a functional loss of -0.028 credits as calculated by UMAM (Table 5).

Photo 3. Panoramic view of the Agricultural Road Crossing located across Schmidt Creek as seen looking west.

Photo 4. Panoramic view of the Culvert in Schmidt Creek located at the agricultural road crossing as seen looking south.

Photo 5. Panoramic view of the Schmidt Creek Stream Channel south of the road crossing as seen looking southwest from the crossing.

Impact Area #3 – Wetland "S" (0.064 Acres)

This area is a small depressional wetland that is intermittently saturated during times of extensive rainfall. This wetland area occurs in a relic sinkhole area that appears as a small depression in the pasture characterized by gently rolling topography. The vegetation in the area has been adversely affected by more than 60 years of cattle activity. Currently, there is minimal wetland vegetation present that consists of dotted smartweed (*Polygonum punctatum* Ell.), soft rush (*Juncus effusus* L.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), dwarf palmetto (*Sabal minor* [Jacq.] Pers.), elderberry (*Sambucus canadensis* L.), and common pokeweed (*Phytolacca americana* L.). There is extensive coverage of the exotic species tropical soda apple (*Solanum viarum* Dunal). The general habitat appearance of the wetland is shown in **Photos 6 to 7**. The project development will completely remove this wetland, resulting in 0.064 acres of direct impacts and functional loss of -0.030 credits (Table 6).

Photo 6. Panoramic view of the Depressional Wetland Areas 15 & 16 as seen looking west across the wetland (Photo taken November 2007).

Photo 7. Panoramic view of the Small Depressional Wetland 16 as seen looking northwest from the southwest boundary of the wetland (Photo taken June 2008).

Impact Area #4 – Wetland "T" (0.001 Acres)

This is a very small wetland area that lies adjacent to but is isolated from Impact Area #3 (wetlands). The description for Impact Area #3 is sufficient to describe this area but it should be stated that the location of this area is almost imperceptible on the ground, appearing much like the surrounding pasture. The general nature of this wetland is shown in **Photo 8**. The project will result in the removal of this wetland, which results in a wetland loss of 0.001 acres and functional loss of -0.0004 credits (Table 7).

Photo 8. Panoramic view of Small Depressional Wetland 15 as seen looking northeast.

It should be noted that both wetland impact areas #3 and #4 are isolated wetlands and are less than 0.5 acres; therefore, they should be exempt from District mitigation requirements. However, the applicant will mitigate for these areas by wetland creation to ensure that no net loss of wetland acreage occurs in the Turkey Creek drainage basin.

Proposed Mitigation Options

The functional loss for each impact area has been determined based on the methods described in Chapter 62-345 FAC (UMAM). The functional loss for the impact areas is summarized in **Table 8**.

Table 8. Functional loss calculations for the impact areas on The Market at Schmidt Farms.

Impact Area	Description	Wetland Loss	Functional Loss
Area 1	Agricultural Pond & Drainage	0.777	-0.414
Area 2	Road Crossing	0.040	-0.028
Area 3	Wetland "S"	0.064	-0.030
Area 4	Wetland "T"	0.001	-0.0004
Total		0.882	-0.4724

To mitigate for the functional loss of -0.4724, there are several active and passive mitigation components proposed by the applicant to be considered by the District. These components are described, as follows:

Mitigation Component #1: Mitigation for Direct Impacts by Wetland Creation

The applicant proposes to create a 0.882-acre wetland (Figures 6 and 7) to mitigate 1:1 for all direct wetland impacts that occur as a result of the project. The total impacts equal 0.882 acres (Table 8). This mitigation proposal ensures that **no net loss** of wetland acreage occurs as a result of this project. Creation of 0.882 acres of wetland results in a functional gain of 0.344 credits (**Table 9**; i.e., FG = 0.390 RFG x 0.882 acres = 0.344 FG credits). The conceptual plan view and generalized cross-sections of the mitigation area are shown in Figure 7. The wetland cross-sections are shown in close-up in **Figures 9 and 10**.

Table 9. Part II UMAM Assessment for the Wetland Creation Area.

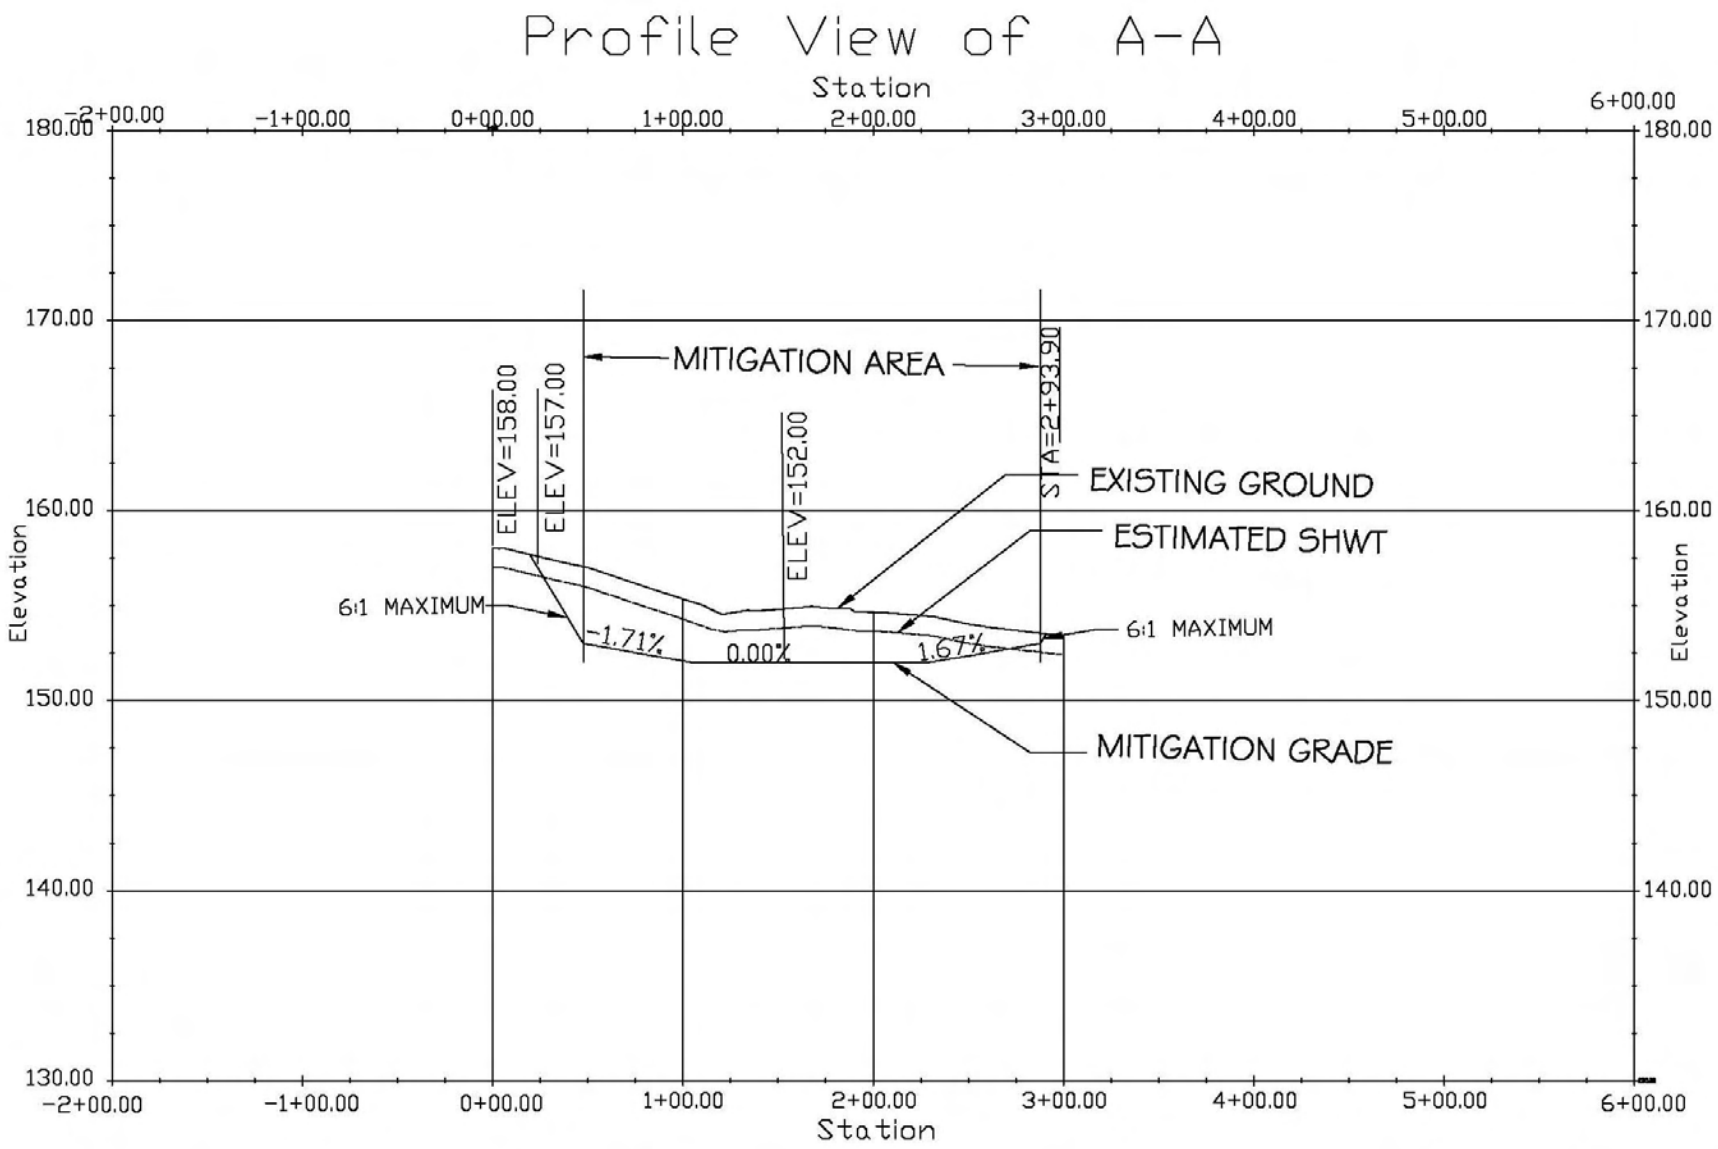
If preservation as mitigation,	For impact assessment areas
Preservation adjustment factor = NA	FL = delta x acres = NA
Adjusted mitigation delta = NA	

Delta = [with-current]	If mitigation	For mitigation assessment areas
0.667	Time lag (t-factor) = 1.14	RFG = delta/(t-factor x risk) = 0.390
	Risk factor = 1.50	

Form 62-345.900(2), F.A.C. [effective date]

Figure 9. Close-up view of the wetland cross-section.



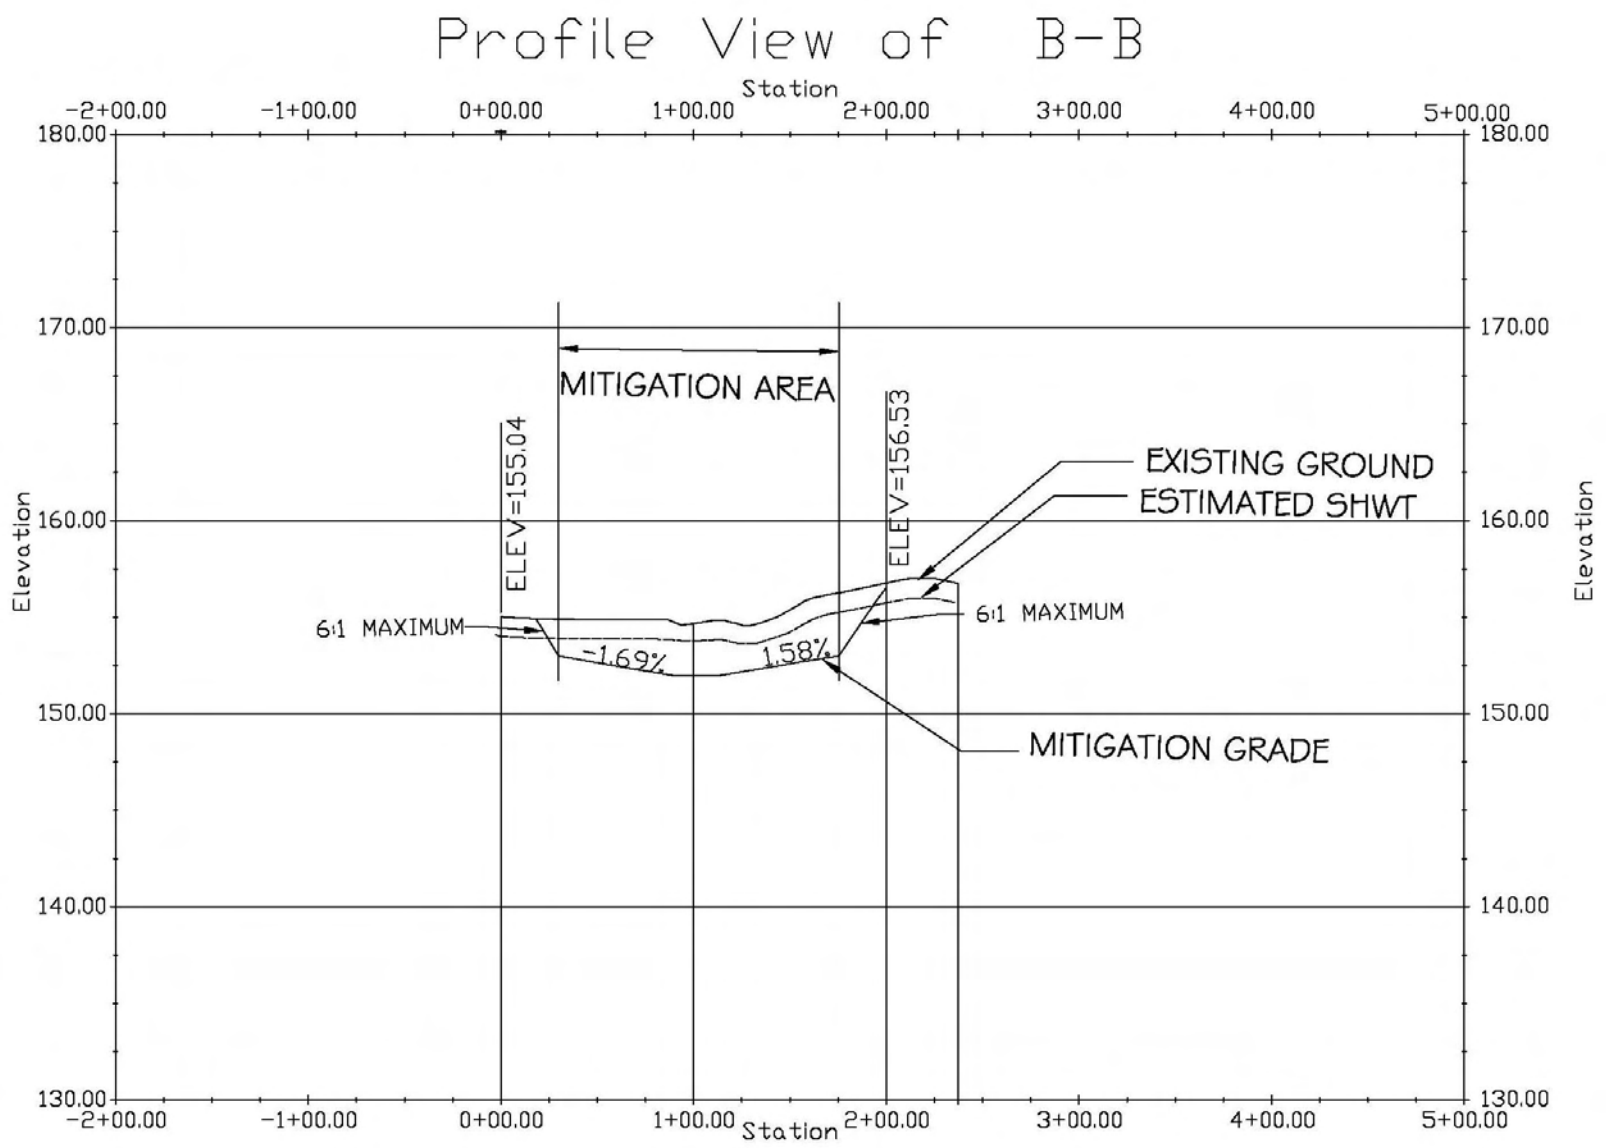


Figure 10. Close-up view of the wetland cross-section.

The mitigation area will be an herbaceous wetland that will be planted at a rate of 800 herbs/acre with a mix of the following species (**Table 10**):

Table 10. Species and planting zones for the mitigation area.

Species	Planting Zone*
Juncus effusus	-0.6 ft to + 1 ft
Spartina bakeri	0 ft to + 1 ft
Muhlenbergia capillaris	0 ft to + 1 ft
Panicum hemitomon	-1.0 ft to 0 ft
Saggitaria lancifolia	-1.5 ft to 0 ft
Pontederia cordata	-1.5 ft to 0 ft
Leersia hexandra	-1.0 ft to 0 ft
Nymphaea odorata	-3.0 ft to 0 ft

*Planting depths are relative to MHW elevations.

A total of 100 trees will be planted around the wetland perimeter to provide for water bird roosting habitat. Tree species will be bald cypress (*Taxodium distichum* [L.] L. Rich.), red maple (*Acer rubrum* L.), sweetgum (*Liquidambar styraciflua* L.) and Carolina ash (*Fraxinus caroliniana* Mill.). This mitigation plan will provide for higher quality and more expansive aquatic habitat than presently exists on site. The wetland will have at least 60% of the area with water depths ranging from 0 ft to -1 ft; 20% of the area will be between 1 and 2 ft deep with 20% being greater than 2 ft deep. This will ensure that both deep water and shallow, littoral zone habitat is provided in the creation area. The creation plan is designed to totally offset all direct impacts for wetland and surface water *acreage* that occurs on site. However, to totally offset all functional loss credits (-0.4724) would require a total of 1.211 acres of creation, calculated as follows:

$$Total\ Acres\ of\ Created\ Wetlands\ Needed = \frac{FL\ (Table\ 8)}{RFG\ (Table\ 9)}$$

$$= 0.4724 \div 0.390$$

$$= 1.211\ acres$$

The proposed creation provides for a total functional gain of *0.882 acres x 0.390 RFG = 0.344 credits*. This results in a deficit of *0.4724 – 0.3440 = 0.1284 credits*. The remaining 0.1284 functional loss credits will be offset passively and provided by the land use contained in the final design of the project. The functional loss will be provided, described as follows:

Mitigation Component #2: Conservation Land Use

The applicant has proposed a land use change to the City of Alachua for this project site. As part of this Land Use Application, all creeks and wetlands on site will be placed in a

conservation land use where no future development activity will be allowed. This conservation land use totals 36.38 acres (**Figure 11; Table 11**), which equals 27.6% of the project site. In addition, 26.77 acres will be placed in an Open Space Land Use where no development is allowed but stormwater management ponds will be placed in certain areas of this land use (Figure 11). The total conservation and open space equals 63.15 acres, or 47.9% of the project area. Examples of the habitat contained in this conservation area is shown in **Photos 9 through 12**. The conservation area includes buffers that extend 75 ft from the wetland line, which is far in excess of the district requirements. The extent of the conservation area is shown in Figure 11 with wetlands and buffers. There are also additional upland areas included in the conservation area that extend landward beyond the 75-ft buffer. These buffers (**Photos 13 and 14**) are now primarily pasture heavily affected by cattle. These buffers and wetlands will be allowed to succeed naturally to develop into native, forested systems. After removal of cattle, groundcover in these areas will recover quickly and forests will grow and water quality will be enhanced due to removal of significant cattle waste inputs.

Because the City of Alachua will not allow future activity in this area, a Conservation Easement should not be required. The enhancement of this area results in a total functional gain of 2.11 credits (0.058 RFG x 36.38 acres) (Table 11), which is scored very conservatively and significantly offsets the deficit of 0.1284 functional loss credits by a factor of 16.4 : 1 (2.110 ÷ 0.1284). This mitigation component also totally offsets the total functional loss for the entire project, which equals -0.4724 (Table 8).

Mitigation Component #3: Extended Wetland Buffers

As previously discussed, the conservation land use area includes all wetlands and buffers extending 75 ft from the wetland boundary. This is far in excess of the 25-ft buffer required by the District. If a UMAM is performed on just the buffer area extending from 25 to 75 ft (Figure 11) from the wetland area, the following functional gain (**Table 12**) is realized:

$$Total\ functional\ gain = 15.65\ acres\ x\ 0.117\ RFG = 1.831$$

Again, this placement of upland buffers (established beyond the District's regulatory boundary) results in a functional gain of 1.831 credits, which offsets the functional loss deficit of 0.1284 by a factor of 14.3 : 1. The functional gain of 1.831 also is sufficient to offset the total functional loss for the project of 0.4724 acres.

Form 62-345.900(2), F.A.C. [effective date]

Mitigation Component #4: Creation of Stormwater Basins

A fourth mitigation component to consider, which is a result of the project development and not an active mitigation plan, is the construction of stormwater basins on the site. The project will result in creation of three (3) storm basins that total 6.883 acres (Figures 6 and 7)

Pond A	0.4794 acres
Pond B	6.2080 acres
Pond C	0.1956 acres
Total	**6.883 acres**

These ponds, which provide for stormwater treatment, will also provide significant on-site aquatic habitat. The impacts that occur on site occur to a very disturbed agricultural pond, or surface water. This pond accounts for 88% (0.777 acres ÷ 0.882 acres = 88%) of the total impacts that occur on site; therefore, some consideration should be given for credit obtained by storm pond construction to mitigate for surface water habitat losses as a result of filling the pond. The UMAM (**Table 13**) calculated for the storm pond construction provides for 1.542 functional gain credits (0.224 RFG x 6.883 acres), which offsets the deficit functional loss credits of 0.1284 by a factor of 12.0 : 1 (1.542 ÷ 0.1284). These ponds will be constructed as wet ponds adjacent to conservation areas and contained in the open space land use. They will provide aquatic dependent animal habitat and provide for aquatic landscape support for the onsite creek systems that are much better than the existing landscape provides for today.

Summary

The proposed project will result in the loss of 0.882 acres of wetlands and surface waters. This acreage loss is equivalent to a functional loss of -0.4724 credits as calculated by UMAM. The loss, as compared to the functional gain described in this report, is summarized as follows:

Impacts	Acreage	Functional Loss
Wetland/Surface Water Impacts	0.882	-0.4724
Mitigation Components		
#1: Creation	0.882	+0.344
#2: Conservation Area	36.38	+2.110
#3: Extended Buffers	15.65	1.831
#4: Storm Pond Creation	6.883	1.542

As can be seen by this summary, Mitigation Components 2, 3, or 4 are individually sufficient to offset mitigation requirements as determined by UMAM. All components are being performed passively as a result of this project. The creation Component is being performed to ensure that ***no net loss of wetlands*** occurs in the drainage basin.

RE: Completeness Review for:
- 121 Acre Traditional Neighborhood Development (TND) Large Scale Comprehensive Plan Amendment (LSCPA)
- 121 Acre Traditional Neighborhood Development (TND) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr. Montalto:

On August 29, 2019 the City of Alachua received your application for a Comprehensive Plan Amendment to the Future Land Use Map for the 121 Acre Traditional Neighborhood Development (TND), which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential on a 121 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Traditional Neighborhood Development (PD-TND) on a 121 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000).

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is complete, conditional upon submission of certain information found below. Unless otherwise noted, this information must be submitted not later than 5 PM on September 12, 2019. If the requested information is not provided within the timeframe provided, the application shall be considered incomplete.

Please note, the comments below are based solely on a preliminary review of your application for completeness. The contents of the applications **have not** been thoroughly reviewed. An in-depth review of the content of the application will be performed subsequently and any further issues with content will be provided to you at

PO Box 9
Alachua, Florida 32616-0009

the Development Review Team meeting, which will be scheduled separately from this letter.

Please address the following:

1. Comprehensive Plan Amendment Application
    a. Application was not signed or notarized. Please submit a signed and notarized application form.
    b. Mailing labels not provided for those organizations and individuals registered with the City to receive notice.
    c. One property owner was identified as being within the 400' notice area, but no mailing label was provided. Property owner: CSX Transportation, Inc. 500 Water Street Tax Department J-910, Jacksonville, FL 32202-4422.
    d. It appears that only one property owner (David Meeks) signed the authorization form. Section 2.4.3 (C), City of Alachua Land Development Regulations requires all property owners to sign the application or authorization form.
2. Rezoning Application:
    a. It appears that only one property owner (David Meeks) signed the authorization form. Section 2.4.3 (C), City of Alachua Land Development Regulations requires all property owners to sign the application or authorization form.
    b. Mailing labels not provided for those organizations and individuals registered with the City to receive notice.
    c. One property owner was identified as being within the 400' notice area, but no mailing label was provided. Property owner: CSX Transportation, Inc. 500 Water Street Tax Department J-910, Jacksonville, FL 32202-4422.
    d. Environmental Reports are dated from 2008. Updated and revised reports are required as conditions have changed on the site. This comment will be included with the Development Review Team comments associated with this application. The updated reports may be submitted with future resubmittal.

Should you have any questions, please feel free to contact me at (386) 418-6100, ext. 108 or via email at ahall@cityofalachua.com.

Sincerely,

Adam Hall, AICP
Planner

RE: -Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
-Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr Potts:

On August 25, 2021 the City of Alachua received your revised, completed application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56-acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your, revised completed Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The proposed rezoning would permit a maximum of 489,400 square feet of non-residential uses and 515 dwelling units on the subject property. A Project Assistance Team meeting is scheduled to be held on October 4, 2021 to discuss this application.

The applications have been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the applications before they may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 5:00 PM on **Monday, October 18, 2021.** A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Submission of an incomplete package may delay your tentative hearing at the Planning and Zoning Board. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB.

PO Box 9
Alachua, Florida 32616-0009

"The Good Life Community"
www.cityofalachua.com

Phone: (386) 418-6120
Fax: (386) 418-6130

Please address the following insufficiencies :

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

LSCPA Review Comments

1. *General*
   a. Revise application cover and application to reflect change in agent for application. It is staff's understanding that Carter Thompson is no longer employed by JBPro.
   b. Revise application signature to reflect actual applicant or agent signature. Currently, Section B of the Application lists the agent as the applicant, however, the owner/ title holder of the property has signed the application.
   c. Identify small triangular shape area located near intersection of US 441 and NW 43rd Street that does not appear to be part of Conservation (D) area.
   d. Application provides legal description of overall property. Please provide legal description for each land use area (legal description for each area to be Moderate Density Residential, Commercial, Community Commercial, and Conservation).

2. *Urban Sprawl Analysis*
   a. Response II. a. located on Page 6 of Justification Report which relates to the application's consistency with Section 163.3177 (6)(a)(1)9.b(I), F.S, states the development abuts Turkey Creek. Please detail design considerations, including placement of lands within Conservation land use category that demonstrates compliance with this Section. Additionally, the response states that the buffer area will be undisturbed, but this area is identified on the related PD Master Plan application as being eligible for development including stormwater management facilities, roadways, utilities, etc.
   b. Response II. h. located on Page 7 of Justification Report which relates to the application's consistency with Section 163.3177 (6)(a)(1)9.b(VII), F.S., is unclear. Please reword to be clearer.

3. *Concurrency Impact Analysis*
   a. Submitted concurrency impact analysis for potable water, wastewater, traffic, solid waste only provides analysis for proposed residential dwelling units and not any of the proposed non-residential area. Please revise.
   b. Recreation impact analysis states that the proposed development will provide 1.29 acres in improved passive park space. Please clarify. Is this area intended to be dedicated to the City as a public park? If so, please provide location and call out in related PD Master Plan application.

4. *Needs Analysis*
   a. Submitted needs analysis provides state level data and analysis showing need for proposed development. Analysis should be more refined and include local analysis

showing need for residential and non-residential uses that would be permitted under this land use action.

5. *Comprehensive Plan Consistency Analysis*
   a. Page 18 of justification report states that the application is requesting medium density residential, however, map submitted with application and application cover indicate the application requesting moderate density residential. Please verify and correct throughout application.
   b. Page 25 of justification report addressed Objective 5.2 of the Future Land Use Element. The analysis states that the application has "clouted" their concurrency requirements. Please clarify or elaborate.
   c. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be necessary to include a portion as medium density residential or high density residential to achieve the 515 units on the subject property.
   d. Application does not address consistency with Objective 1.3 and Policy 1.3.d of the Conservation and Open Space Element. Please address.
   e. Application does not address consistency with Policy 1.10.b of the Conservation and Open Space Element. Please address.
   f. Application does not address consistency with Policy 1.12.d of the Conservation and Open Space Element. Please address.

6. *Outside Review Comments*
   a. See attached comments in an email dated September 13, 2021 from Brian Kanely of Volkert, Inc regarding submitted traffic study. Please revise and resubmit traffic study with corrections.
7. *Completeness Review Comments*
   a. Updated environmental report(s) must be provided.

PD-COMM and PD-R Rezoning Review Comments

1. *Site Specific Amendments to the Official Zoning Atlas (Section 2.4.2) and Planned Development Standards (Section 2.4.3)*
   a. Per Section 2.4.2 (E)(1)(e), the proposed zoning amendment must demonstrate that the uses permitted under the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands. Please provide further detailed analysis including:
      i. Zoning and land use designations of all surrounding lands, regardless of jurisdiction.
      ii. Location of proposed uses proposed in relation to surrounding uses.
      iii. Location of existing uses in vicinity including commercial, industrial, or residential.
      iv. Any other information that address compatibly between proposed uses and existing uses.

b. Per Section 2.4.3 (E)(1)(g), the proposed zoning amendment must demonstrate that the uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located. Please elaborate on development pattern in area. Are there existing commercial or business uses already in the vicinity? Is there substantial residential development in the area?
c. Per Section 2.4.3 (E)(1)(j), the proposed zoning amendment must demonstrate that the proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, stormwater management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development. The rezoning application includes an infrastructure area improvement report that appears to be related to the financing of the needed improvements to serve the development. Please note that this may be a separate matter for the City Administration and Commission to consider. It is ultimately the developer's responsibility to finance and install any required improvements needed to serve the development site. Staff recommends the applicant work with the Public Services Department and/or City Manager's office to obtain feedback on the submitted infrastructure area improvement report.
d. Per Section 2.4.3 (E)(1)(k), the proposed zoning amendment must demonstrate that the proposed amendment would not result in significantly adverse impacts on the natural environment, including, but not limited to, water, air, noise, stormwater management, wildlife, vegetation, wetlands, and the natural functioning of the environment. Please elaborate on protections to be included. Please note the Conservation land use and development area, and permitted uses within those categories.
e. Per Section 2.4.3 (D)(3)(d), an analysis of the site's environmental conditions must be submitted during the rezoning process, as 1) environmental conditions may warrant design considerations and 2) certain standards or conditions may be required based on results of the environmental analysis. Please provide updated environmental analysis.

2. *General Standards for all PD Districts (Section 3.6.2)*
   a. The information provided within the justification narrative for development standards must be incorporated into the PD Master Plan sheets. A PD Master Plan may be multiple sheets.
   b. Per Section 3.6.2 (A)(1), the Master Plan must show the following:
      i. Master Plan must identify location of land use development areas with maximum number, type, and mix of land uses including residential densities and non-residential intensities within each development area. Proposed master plan must address the following:
         1. Additional sub areas should be considered as all uses provided in application materials may not be appropriate when adjacent to single family residential uses or multifamily uses or may require special design considerations. For example, the development area located in the southeast area of the site should not include gasoline sales or restaurants with drive-through/drive-in service. An additional development area within the PD-R zoning district should be

considered to provide for larger lots along the south and west property boundaries adjacent to Turkey Creek.

2. The location of all public facility sites serving the subject property including transportation, potable water, wastewater, parks, fire, police, EMS, storm water, solid waste and schools. This may be in graphical form or through a table displayed on the PD-Master Plan. If in tabular form, the table must show the distance in driving miles from site to public facility.
3. Please address inclusion of agricultural uses in PD-COMM zoning district.
4. Please address inclusion of upper-story dwellings in PD-COMM zoning areas. These are already permitted uses within the PD-Comm district. Does the applicant intend to preclude all other residential development types?
5. As residential is permitted within Development Areas A and B, dimensional standards must be provided for that development type.
6. Dimensional standards for cottage style residential uses located within Development Area C must be adjusted to have minimum width of 25', minimum side setback of 2.5', minimum lot size of 2,250 square feet.
7. For new residential development area to be created within PD-R District, cottage style and single family attached, and townhouses may be not be acceptable. Single family detached and 2 to 4 family may be appropriate.
8. If multiple family is proposed to be permitted in Development Area C, then dimensional standards need to be included.
9. For single family attached uses in any Development Area, please add dimensional standard that the "end cap" units must have a minimum 4,000 square feet lot size. For townhouse uses, please clarify that minimum lot size is 2,000 square per unit plus 4,000 square feet for each end unit.
10. Please revise transportation development area (E), to show how Development Area C will be accessed. If roadways are to be public, please create note that such roadways will be dedicated to the Public via platting process or infrastructure plan process.
11. Please include environmentally sensitive area map with future submittals showing wetlands and water bodies, with appropriate buffers as well as any special flood hazard areas.
12. PD Master Plan should clearly delineate areas to be zoned PD-R and PD-COMM.
13. Pages 23- 25 of the justification report includes multiple notes that relate to or modify the PD Master Plan. These notes, as corrected considering other comments made within this latter, must be incorporated into the PD Master Plan.
14. Note 2, a. -g., of the development standards notes list uses that are already permitted within the PD-COMM. Please clarify why these uses are separated and listed separately.
15. Note E.2), regarding signage. If signage is to vary from requirements of Section 6.5, a master sign plan will be required. Please review signage standards found in Section 6.5, especially 6.5.4 (C)(2)(b)(iii) and Section 6.5.4 (F)(5), which specifically reference signage within PD Districts.

16. Note 3) located page 25 of the justification report references Development Area F, but this area is not located on the PD Master Plan. Please verify/ clarify throughout application.
17. For cottage style uses, include minimum unit size of 600 square feet in dimensional standards.

c. Per Section 3.6.2 (A)(3), development along the perimeter of a PD district must be compatible with adjacent existing or proposed future development. A new development area should be created along south and west area of the subject property to provide for larger lots (minimum 10,000 square feet for single family detached; 15,000 square feet for 2 family; 20,000 square feet for 3 family, 30,000 square feet for 4 family).
d. Per Section 3.6.2 (A)(3), development along the perimeter of a PD district must be compatible with adjacent existing or proposed future development. The portion of development area A located in the southeast quadrant of the site immediately adjacent to NW 43rd Street, is in proximity to single family residential uses. Please include a development or dimensional standard that would require a 25' Type C buffer from all internal and external roadways, and any development area boundary.
e. PD Master Plan does not include a conversion schedule. While not required, a conversion schedule may be useful to ensure maximum flexibility.
f. The PD Master Plan must include a transportation, potable water and wastewater, parks, solid waste and stormwater component demonstrating that concurrency requirements have been met. Generally, this is provided through inclusion of Table from concurrency report into PD Master Plan.

3. *Additional Standards for PD Districts (Section 3.6.3 (A)) – PD-R)*
   a. Per Section 3.6.3 (A)(4)(b), provide minimum setbacks/ separations of Development Areas from adjoining residential uses.
   b. Per Section 3.6.3 (A)(5)(iii), design standards may be reduced where it is found that:
      a. The reduction or modification is necessary as a traffic-calming measure;
      b. The PD Master Plan provides for separation of vehicular, pedestrian, and bicycle traffic;
      c. Access for emergency service vehicles is not substantially impaired;
      d. Adequate off-street parking is provided for the uses proposed; and
      e. Adequate space for public utilities is provided within the right-of-way.
   c. Please include note in PD Master Plan that the alleys permitted will be private/ common area not to be maintained by the City.

4. *Additional Standards for PD Districts (Section 3.6.3 (D)) – PD-COMM*
   a. Note 4) provided on Page 25 of justification report outlines rights-of-way/street standards. These are generally acceptable for the residential areas, but separate standards should be outlined or deferred to best engineering design as a maximum roadway width may not accommodate the retail/ commercial uses allowed in PD-COMM district.
   b. Note 4) i. provides for on street parallel parking to be permitted. This is acceptable, but please clarify if the parking is included in the pavement width or separate from. Will traffic lanes be obstructed?

c. Given the dimensional standards (no maximum lot coverage and reduced setbacks), an alternative landscape plan may be advisable to provide maximum flexibility in internal site design. While no final landscape plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.
d. Given the dimensional standards (no maximum lot coverage and reduced setbacks), a master parking plan may be advisable to provide maximum flexibility in internal site design. While no final detailed parking plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.

5. *Comprehensive Plan Analysis*
   a. Page 11 of justification report states that the application is requesting medium density residential, however, map submitted with application and application cover indicate the application requesting moderate density residential. Please verify and correct throughout application.
   b. Page 18 of justification report addressed Objective 5.2 of the Future Land Use Element. The analysis states that the application has "clouted" their concurrency requirements. Please clarify or elaborate.
   c. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be necessary to include a portion as medium density residential or high density residential.
   d. Application does not address consistency with Objective 1.3 and Policy 1.3.d of the Conservation and Open Space Element. Please address.
   e. Application does not address consistency with Policy 1.10.b of the Conservation and Open Space Element. Please address.
   f. Application does not address consistency with Policy 1.12.d of the Conservation and Open Space Element. Please address
   g. Provide analysis of Objective 3.4, Objective 3.5, and Policy 3.7.a, Future Land Use Element regarding preservation of existing structures located on property.

6. *Concurrency Impact Analysis*
   a. Submitted concurrency impact analysis for potable water, wastewater, traffic, solid waste only provides analysis for proposed residential dwelling units and not any of the proposed non-residential area. Please revise.
   b. Recreation impact analysis states that the proposed development will provide 1.29 acres in improved passive park space. Please clarify. Is this area intended to be dedicated to the City as a public park? If so, please provide location and call out in related PD Master Plan application.

7. *Development and Subdivision Standards*
   a. Section 6.9.4 of the City's LDRs creates the Floodprone Area Standards for the City. Portions of the site appear to be located within Flood Zone A, AE, and X. Please note applicable code subsections within Section 6.9.4 for reference.

b. Section 7.3.9 requires fire protection improvements to be provided when a subdivision is connected to a publicly owned water system. The development must demonstrate compliance with the provisions of Section 7.3.9 prior to the approval of any Final PD Plan (preliminary plat or site plan). Applicant must coordinate with Alachua County Fire Rescue and City Public Services Department concerning compliance with applicable fire protection improvements or design requirements.

8. *Miscellaneous / General Comments*
   a. Certain uses, such as gasoline sales, for example, may be prohibited or conditioned based on environmental constraints of property.
   b. Provide legal descriptions for each area to be zoned PD-COMM and PD-R.
   c. Allowable uses column in Table on Master Plan sheet has typo in column title.
   d. Revise application cover and application to reflect change in agent for application. It is staff's understanding that Carter Thompson is no longer employed by JBPro.
   e. Revise application signature to reflect actual applicant or agent signature. Currently, the applicant lists the agent as the applicant, however, the owner/ title holder of the property has signed the application.
   f. In PD Master Plan Development Area Table, please bullet point or otherwise list the allowed uses for clarification purposes.

9. *Completeness Review Comments*
   a. Please submit updated environmental report(s).

10. *Outside Review*
    a. See attached comments in an email dated September 13, 2021 from Brian Kanely of Volkert, Inc regarding submitted traffic study. Please revise and resubmit traffic study with corrections.

11. Potential Development Conditions
    a. The following are preliminary potential conditions that are in the process of being developed and will be based on submitted data and information as well as consultation with outside experts and other agencies. Other conditions may be incorporated after review of subsequent approvals:
       i. Based on potential impacts to the surrounding roadway network and the recommendations by Brian Kanely, P.E., of Volkert Engineering, a condition may be considered that would require additional traffic studies at determined intervals in the future to ensure that the proposed development is not creating deficiencies, and if deficiencies are identified creating a method by which they will be addressed.
       ii. Because of the location in relation to surrounding wetlands, sustainable landscaping practices including limitations on use of pesticides and irrigation systems must be considered. These practices include:
          1. Requiring Compost fertilizing (as opposed to traditional/ synthetic fertilizers)
          2. Residential lots shall not be irrigated with potable water
          3. No new wells permitted on the property

4. All non-residential development shall be required to utilize Florida Friendly Landscaping practices

iii. Sidewalks will be provided along or within US Highway 441 right-of-way and NW 43rd Street right-of-way. Such sidewalks will be extended to NW 102nd Place and NW 93rd Ave.

iv. A limit of 12 gasoline pump stations located within Development Areas located within PD-COMM district.

v. A maximum 15,000 square feet of restaurant with drive-through use shall be permitted in PD-COMM development areas.

vi. No more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property. A minimum of 40,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district.

vii. Prior to demolition of the existing structures on the property greater than 100 years old, the applicant must provide evidence from a licensed architect or structural engineer that rehabilitating the structures would not be cost feasible. Prior to demolition, the applicant shall supply a historic structure report that includes photos, architectural descriptions of the interior and exterior of the structure, known history of the structures and sites, and locations (longitude/latitude) of the structures.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

Adam Hall, AICP
Principal Planner

Updated US 441 Traditional Neighborhood Traffic Study

From : brian kanely <briank5030@outlook.com> Mon, Sep 13, 2021 02:31 PM
Subject : Updated US 441 Traditional Neighborhood Traffic Study
To : Adam Hall <ahall@cityofalachua.com>, Kathy Winburn <kwinburn@cityofalachua.org>

Adam:
I have reviewed the Traffic Study. There are some presentation errors that need to be cleaned up (listed below). The various calculations in the Study are correct and I agree with the conclusions. The errors that need to be cleaned up are as follows:

1. Study page 2 - the traffic volumes referenced should be 2031 volumes.
2. Figure 3 - this figure is 2019 data; it needs to be replaced with the 2021 data.
3. Figure 4 - this figure is 2019 data; it needs to be replaced with the 2021 data.
4. Figure 5 - this figure is 2019 data; it needs to be replaced with the 2021 data.
5. Figure 6 - this figure is 2019 data; it needs to be replaced with the 2021 data.
6. Figure 7 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
7. Figure 8 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
8. Figure 9 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
9. Figure 10 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
10. Table 13 - the title of this table needs to be changed to SIGNALIZED INTERSECTION CAPACITY RESULTS - US 441/43RD STREET - MINOR MOVEMENTS.
11. Table 14 - the title of this table needs to be changed to UNSIGNALIZED INTESECTION CAPACITY RESULTS - NW 43RD STREET/ SOUTH SITE DRIVE/MARATHON DWY.

To be consistent with other traffic studies submitted to the City, copies of the appropriate pages from the ITE Trip Generation Manual should be included in the Study.

I will proceed to work up the draft Independent Review and submit it to you in the next several days. You can then submit it to Buckholz Traffic with the above minor corrections.

Another issue with this traffic study is has it been submitted to FDOT and Alachua County for review? There are modifications recommended on US 441 and NW 43rd Street that should require review and comment by FDOT and Alachua County. Has there been any coordination with FDOT and the County to date?

Have you received the proposal letter yet?

Call me if you have any questions on the above (352-262-3580).

Brian

CAUTION: This email originated from outside the City.

DO NOT respond, click, or open attachments unless you recognize the sender **(name AND email address)** and know the content is safe.

Should there still be any question on the origin of this email, contact the IT Department immediately.

Jacksonville, FL 32256-7517
Phone: (904) 731-3336 Fax: (904) 731-3045

In Reply Refer To: August 29, 2021
Consultation Code: 04EF1000-2021-SLI-1484
Event Code: 04EF1000-2021-E-02318
Project Name: 121 TND

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List
- Migratory Birds

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

North Florida Ecological Services Field Office
7915 Baymeadows Way, Suite 200
Jacksonville, FL 32256-7517
(904) 731-3336

Project Summary

Consultation Code: 04EF1000-2021-SLI-1484
Event Code: 04EF1000-2021-E-02318
Project Name: 121 TND
Project Type: DEVELOPMENT
Project Description: 121-acre project site in consideration for a Traditional Neighborhood Development

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@29.7441333,-82.39379557863518,14z

Counties: Alachua County, Florida

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Birds

NAME	STATUS
Eastern Black Rail *Laterallus jamaicensis ssp. jamaicensis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10477	Threatened
Wood Stork *Mycteria americana* Population: AL, FL, GA, MS, NC, SC No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/8477	Threatened

Reptiles

NAME	STATUS
Eastern Indigo Snake *Drymarchon corais couperi* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/646	Threatened
Gopher Tortoise *Gopherus polyphemus* Population: eastern No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/6994	Candidate

Amphibians

NAME	STATUS
Frosted Flatwoods Salamander *Ambystoma cingulatum*	Threatened

There is **final** critical habitat for this species. The location of the critical habitat is not available.
Species profile: https://ecos.fws.gov/ecp/species/4981

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
American Kestrel *Falco sparverius paulus* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31

NAME	BREEDING SEASON
Great Blue Heron *Ardea herodias occidentalis* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Jan 1 to Dec 31
Henslow's Sparrow *Ammodramus henslowii* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3941	Breeds elsewhere
Lesser Yellowlegs *Tringa flavipes* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds elsewhere
Magnificent Frigatebird *Fregata magnificens* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Oct 1 to Apr 30
Prairie Warbler *Dendroica discolor* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
Red-headed Woodpecker *Melanerpes erythrocephalus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
Short-billed Dowitcher *Limnodromus griseus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Swallow-tailed Kite *Elanoides forficatus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8938	Breeds Mar 10 to Jun 30

Probability Of Presence Summary

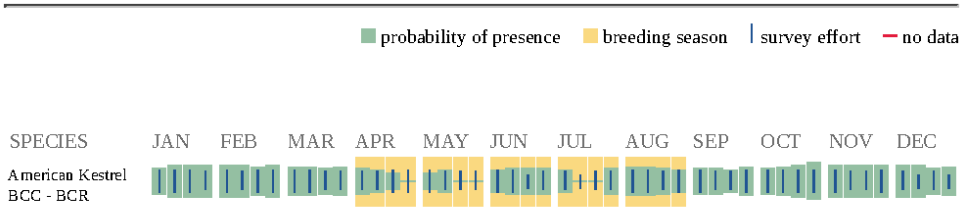
The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

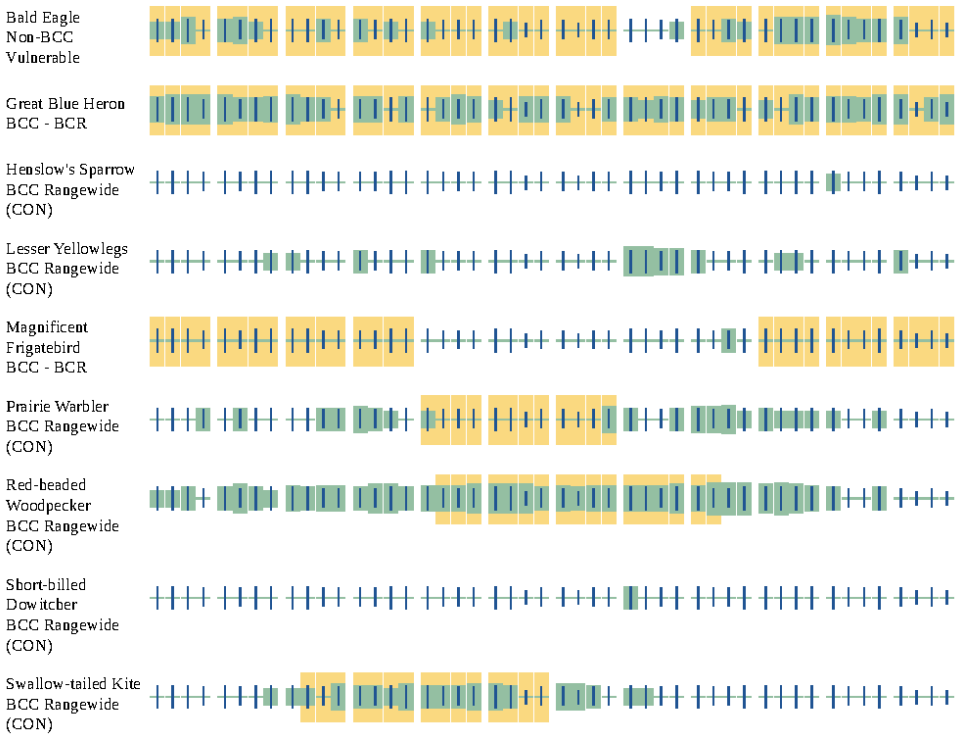
Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 **4**-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see

below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:



1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.



Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding

in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?
The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?
The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);

2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities,

should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

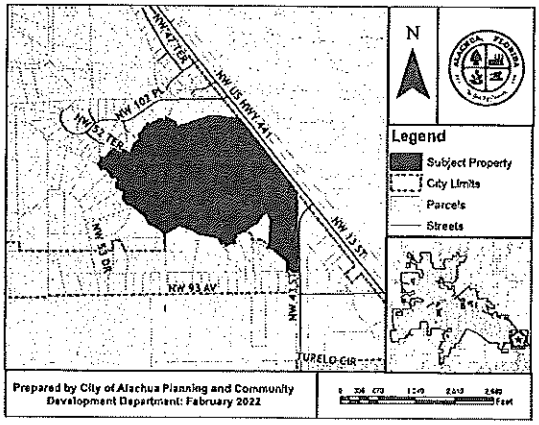
NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning & Zoning Board of the City of Alachua will hold a public hearing on March 8, 2022 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located at 15100 NW 142nd Terrace, Alachua, Florida, to consider the following: A request by David Meeks of DM Alachua Investments, LLC, property owner, for consideration of a Large Scale Comprehensive Plan Amendment to amend the Future Land Use Map (FLUM) on a ±121.1 acre subject property from Agriculture (±81.15 acres) and Commercial (±39.95 acres) to Conservation (±35.63 acres), Moderate Density Residential (±41.33 acres), High Density Residential (±17.8 acres), and Commercial (±14.33 acres); located west of the intersection of US 441 and NW 43rd Street, south of the Brooke Pointe subdivision; consisting of Tax Parcel Numbers 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, 05945-000-000. Existing FLUM: Agriculture and Commercial; Proposed FLUM: Conservation, Moderate Density Residential, High Density Residential and Commercial ; Existing Zoning: Agricultural (A), Commercial Intensive (CI).



At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

8th Mexican journalist killed this year

Country deemed most dangerous place for press

Fabiola Sánchez
ASSOCIATED PRESS

Photos of slain journalists are posted on the gate of Mexico's Attorney General's office during a vigil on Feb. 14. EDUARDO VERDUGO/AP

MEXICO CITY – Another journalist was shot to death in Mexico on Tuesday, the eighth murdered this year in an unprecedented spate of killings that has made Mexico the most dangerous place in the world for the press.

Reporters and photographers have been murdered this year in Mexico at the rate of almost one a week, while the government claims the situation is under control.

Prosecutors in the western state of Michoacan said reporter Armando Linares was shot to death at a home in the town of Zitacuaro. His killing came six weeks after the slaying of a colleague, Roberto Toledo, from the same outlet Monitor Michoacan. It was Linares who announced Toledo's death Jan. 31 in a video posted to social media.

Zitacuaro is one of the closest towns to the monarch butterfly wintering grounds in the mountains west of Mexico City.

The area has been plagued by illegal logging and drug gangs, local governance disputes and deforestation linked to expanding avocado production. Logging has damaged the pine and fir forests where the butterflies spend the winter after migrating from the United States and Canada.

Linares served as director at the Monitor Michoacan website, which on Tuesday continued to show an article he had written about a cultural festival celebrating monarch butterflies.

There was no immediate information on a possible motive in the killing.

Toledo, a camera operator and video editor for Monitor Michoacan, was shot Jan. 31 as he prepared for an interview in Zitacuaro.

At the time of Toledo's death, Linares said he had received several death threats after enrolling in a government journalist protection program.

Asked who he thought was behind the threats, Linares said, "They pass themselves off as an armed group, they pass themselves off as a criminal gang. We can't verify whether it is true or not that they are this armed gang."

Criminals in Mexico often claim they are part of a drug cartel in order to instill fear in their victims, whether or not they really are.

"We have organized crime, just like in the rest of the country, and Monitor worked on a lot of issues like illegal logging, given that we are near the monarch reserve," Linares said in early February. "We wrote a lot about illegal logging and also a lot of issues like corruption in the municipal government."

Drug cartels in Mexico often make money by protecting illegal logging, or extorting protection payments from avocado growers.

"The nightmare continues for the press in Mexico," the press group Reporters Without Borders wrote in its social media accounts.

Mexican President Andrés Manuel López Obrador has reacted angrily to worldwide criticism of the killings.

In February, López Obrador said U.S. Secretary of State Antony Blinken was misinformed, after Blinken wrote "I join those calling for greater accountability and protections for Mexican journalists."

The Inter American Press Association called on Mexican President Andrés Manuel López Obrador to "immediately suspend the aggressions and insults, because such attacks from the top of power encourage violence against the press."

López Obrador claims the government is investigating all of the killings and suggested Blinken received bad information from other U.S. agencies, mentioning the CIA, FBI and Drug Enforcement Administration.

"They're [illegible]cking him," he said. "We don't tolerat[illegible]e impunity of anyone."

And la[illegible] López Obrador issued an irate resp[illegible]o European Parliament criticism [illegible]rnalist killings in Mexico, accusing the Europeans of having a "colonialist mentality."

The Mexican president criticized EU support for Ukraine, and called European Parliament members "sheep."

"It is unfortunate that you vote like sheep to join the reactionary and coup-mongering strategy of the corrupt group opposed to the Fourth Transformation," as López Obrador calls his administration, he wrote in an open letter to the parliament.

The EU Parliament approved a resolution last Thursday urging López Obrador to stop his harsh verbal attacks on reporters who criticize him, and ensure their safety.

Press groups say López Obrador's daily criticisms of journalists, whom he calls "conservatives" and "mercenaries," make them more vulnerable to violence.

In February, the Inter American Press Association called on the president to "immediately suspend the aggressions and insults, because such attacks from the top of power encourage violence against the press."

The EU resolution "calls on the authorities, and in particular the highest ones, to refrain from issuing any communication which could stigmatize human rights defenders, journalists and media workers, exacerbate the atmosphere against them or distort their lines of investigation."

Journalists are often the targets of Mexico's drug cartels, which seek to intimidate and manipulate coverage of their activities and their rivals. Local politicians and government officials are also frequently linked to murders, according to the government, which has acknowledged that impunity in those killings runs above 90%.

In early March, gunmen killed Juan Carlos Muñiz, who covered crime for the online news site Testigo Minero in the state of Zacatecas.

Jorge Camero, the director of an online news site who was until recently a municipal worker in the northern state of Sonora, was killed in late February.

In early February, Heber López, director of the online news site Noticias Web, was shot to death in the southern state of Oaxaca.

Commission Agenda Item

MEETING DATE: 3/28/2022
SUBJECT: Ordinance 22-09, First Reading: Site-Specific Amendment to the Official Zoning Atlas - Schmidt Farms: a request by David Meeks, applicant and agent for DM Alachua Investments, LLC, property owner, for the consideration of the rezoning of the subject property from Agricultural ("A") and Commercial Intensive ("CI") to Planned Development – Residential ("PD-R") and Planned Development – Commercial ("PD-COMM") on a ±121.1 acre subject property. Consisting of Parcel Numbers 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, and 05945-000-000(Quasi-Judicial Hearing).
PREPARED BY: Adam Hall, AICP, Principal Planner

RECOMMENDED ACTION:
Staff recommends that the City Commission approve Ordinance 22-09 on first reading, upon making the following motion:

Based upon the competent substantial evidence presented at this hearing, the presentation before this Commission, and Staff's recommendation, this Commission finds the application for a Site-Specific Amendment to the Official Zoning Atlas for a Planned Development to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and approves Ordinance 22-09 on first reading.

Summary

The proposed Site-Specific Amendment to the City of Alachua Official Zoning Atlas (Rezoning) is a request by David Meeks, on behalf of DM Alachua Investments, LLC, property owner, for the consideration of the rezoning of the subject property from Agricultural ("A") and Commercial Intensive ("CI") to Planned Development – Residential ("PD-R") and Planned Development – Commercial ("PD-COMM").
The subject property is comprised of Tax Parcel Numbers 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, and 05945-000-000, and is approximately 121.1 acres in size. The subject property is located southwest of the intersection of US 441 and NW 42nd Street. The subject property contains two

the intersection of US 441 and NW 43rd Street. The subject property contains two vacant commercial structures, and one residential structure with several associated farm buildings.

The subject property presently has an Agriculture Future Land Use Map (FLUM) Designation on approximately 72.7 acres and a Commercial FLUM Designation on approximately 48.4 acres of the subject property. A companion large scale comprehensive plan amendment (LSCPA) would amend the FLUM to Conservation, Moderate Density Residential, High Density Residential, and Commercial. The Moderate Density Residential FLUM Designation permits a density of 0 – 4 dwelling units per acre (a maximum of 212 dwelling units for the subject property); the High Density Residential FLUM Designation permits a density of 8-15 dwelling units per acre (a maximum of 267 dwelling units for the subject property); the Commercial FLUM designation permits a maximum intensity of 1.0 FAR (a maximum of 627,264 square feet of non-residential development for the subject property). The proposed PD-R zoning district would permit a maximum of 213 residential units, and 2,500 square feet for an amenity center, which is consistent with the maximum density of the proposed FLUM Designations for the overall subject property. The proposed PD-COMM zoning district would permit a maximum of 259 residential units, and 489,400 square feet of non-residential, which is consistent with the maximum density and intensity of the proposed FLUM Designations for the overall subject property.

Development of the subject property would place most of the wetland and associated wetland buffer area within the Conservation Future Land Use Designation and Common Area/Open Space (Development Area E). The only uses allowed within these areas would be recreational facilities such as trails or parks. Typical single family detached uses would be permitted adjacent to these areas (Development Area F). A wider variety of residential uses, including cottage style uses, would be permitted to the east of Development Area F. Development Areas A and B, adjacent to US 441 would permit a variety of residential and commercial uses. Access to the proposed development would be provided at two locations. One ingress/egress would be provided from US 441, and one ingress/egress would be provided from NW 43rd Street.

The proposed development would be constructed in one or more phases. The Planned Development Ordinance and Agreement will be valid for 10 years after date of final approval of the PD Zoning ordinance.

The general purpose of the Planned Development zoning districts is described by Section 3.6.1(A) of the Land Development Regulations (LDRs) as follows:

> The Planned Development (PD) districts are established for the purpose of encouraging innovative land planning and site design concepts that conform to community quality of life benchmarks and that achieve a high quality of

development, environmental sensitivity, energy efficiency, and other City goals by:

(1) Increasing Flexibility
Reducing or diminishing the uniform design that results from the strict application of zoning and development standards that are designed primarily for individual lots;

(2) Greater Freedom to Provide Access, Open Space, and Amenities
Allowing greater freedom in selecting the means to provide access, open space, and design amenities;

(3) Greater Freedom to Provide Mix of Uses and Housing Types
Allowing greater freedom in providing a mix of land uses in the same development, including a mix of housing types, lot sizes, and densities;

(4) Providing Greater Opportunity for More Efficient Land Use Patterns
Providing for an efficient use of land resulting in smaller networks of utilities and streets and thereby lowering development and housing costs;

(5) Promoting Quality Design and Environmentally Sensitive Development Through Site Characteristics
Promoting quality design and environmentally sensitive development by allowing development to take advantage of special site characteristics, locations, and land uses; and

(6) Quality Design Through Density Increases
In specific instances, encouraging quality design and environmentally sensitive development by allowing increases in base densities or floor area ratios when such increases can be justified by superior design or the provision of additional amenities such as public open space.

The purpose of the PD-R zoning district is described by Section 3.6.1(B)(1) of the LDRs as follows:

The purpose of the Planned Development-Residential (PD-R) District is to provide a mix of residential uses using innovative and creative design elements, while at the same time providing an efficient use of open space. Commercial uses may be allowed in the PD-R District primarily to serve the needs of the residents in the development.

The purpose of the PD-COMM zoning district is described by Section 3.6.1(B)(4) of the LDRs as follows:

The purpose and intent of the Planned Development-Commercial (PD-COMM) District is to provide mixed-use retail and office development, with limited moderate and higher density residential uses integrated into the development above street levels and as separate stand-alone uses.

At the March 8, 2022 Planning and Zoning Board hearing, the Board voted 5-0 in favor of forwarding the proposed rezoning application to the City Commission with a recommendation to approve.

After consideration by the Planning and Zoning Board, Staff identified several minor changes needed to the Draft PD Ordinance. These changes have been incorporated into the Ordinance presented with this agenda item and the previously prepared Staff Report. A list of all changes can be found included with the agenda materials for this item.

ORDINANCE 22-09

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS; AMENDING THE OFFICIAL ZONING ATLAS FROM COMMERCIAL INTENSIVE ("CI") AND AGRICULTURAL ("A") TO PLANNED DEVELOPMENT – RESIDENTIAL ("PD-R") AND PLANNED DEVELOPMENT – COMMERCIAL ("PD-COMM") ON AN APPROXIMATELY 121.1 ACRE SUBJECT PROPERTY; LOCATED SOUTHWEST OF THE INTERSECTION OF NW 43RD STREET AND US HWY 441, EAST OF THE MORGAN MANOR SUBDIVISION, NORTH OF THE SANS SOUCI SUBDIVISION AND SOUTH OF THE BROOKE POINTE SUBDIVISION; TAX PARCEL NUMBERS 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, AND 05945-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

RECITALS

WHEREAS, an application for a Site-Specific Amendment to the Official Zoning Atlas ("Amendment"), as described below, has been filed with the City by DM Alachua Investments, LLC, a Florida corporation ("Owner"); and

WHEREAS, the Owner desires to obtain approval for a Planned Development ("PD") in the City known as Schmidt Farms Planned Development ("PD-R", "PD-Comm" or "Project"); and

WHEREAS, the Owner wishes to construct the Project, consisting of a maximum of 472 residential units and a maximum of 489,400 square feet of non-residential uses on the subject property, the legal description for which is attached hereto as Exhibit "A" and is herein referred to as the "Property"; and

WHEREAS, the City advertised a public hearing to be held before the Planning and Zoning Board, sitting as the Local Planning Agency ("LPA"), on February 24, 2022; and

WHEREAS, the LPA conducted a quasi-judicial public hearing on the proposed Amendment on March 8, 2022 , and the LPA reviewed and considered all comments received during the public hearing concerning the proposed Amendment and made its recommendation to the City Commission; and

WHEREAS, the City advertised public hearings to be held before the City Commission on March 17, 2022 and on _____ and

WHEREAS, the City Commission conducted quasi-judicial public hearings on the proposed Amendment on March 28, 2022, and _____, and provided for and received public participation at both public hearings; and

WHEREAS, the City Commission has determined and found the proposed Amendment to be consistent with the City's Comprehensive Plan and the City's Land Development Regulations ("LDRs"); and

WHEREAS, for reasons set forth in this ordinance that is hereby adopted and incorporated as findings of fact, the Alachua City Commission finds and declares that the enactment of this Amendment is in the furtherance of the public health, safety, morals, order, comfort, convenience, appearance, prosperity, or general welfare.

NOW THEREFORE BE IT ORDAINED BY THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA.

Section 1. Findings of Fact and Conclusions of Law

1. The above recitals are true and correct and are incorporated herein by reference.
2. The proposed Amendment is in compliance with the City's LDRs.
3. The proposed Amendment will not cause a reduction in the adopted level of service standards for transportation, water, sewer, waste, stormwater, recreation, and public schools.

Section 2. Official Zoning Atlas Amended

The Official Zoning Atlas is hereby amended from Commercial Intensive ("CI") and Agricultural ("A") to Planned Development–Residential ("PD-R") and Planned Development – Commercial ("PD-COMM") for Tax Parcel Numbers 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, AND 05945-000-000 ("Property"), in accordance with the legal description found in Exhibit "A" and map found in Exhibit "B" attached hereto and incorporated herein.

Section 3. Development Parameters

The development shall consist of single-family and multiple-family residential development, community recreation, non-residential development and stormwater/open space development areas as shown on the PD Master Plan. The density, intensity, allowable uses, acreage, and dimensional standards, where applicable, for each Development Area are as follows:

1. The development shall consist of single–family attached and detached, townhouses, 2 to 4 family, cottage residential, multiple family residential, community recreation, non–residential and stormwater/open space development areas as shown on the PD Master Plan. The density, intensity, allowable uses, acreage, and dimensional standards, where applicable, for each Development Area are as follows:

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
Development Area 'A'	• All allowable uses within the PD–Comm Zoning	489,400 square feet	±11.3		±9.3%

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
15 du/acre .5 FAR for Parcels greater than or equal to 5 acres .75 FAR for Parcels less than 5 acres but more than 1 acre 1.0 FAR for Parcels less than 1 acre	District, per the City of Alachua LDRs • Common area and open space • Stormwater Management Facilities	259 dwelling units 2,500 square feet neighborhood amenity center		*Minimum Lot Area* None *Minimum Lot Width* None *Setbacks, Building* Front (Primary) = 5' Side = 5' Rear=10' *Setbacks, Overall* Front (Primary) = 5' Side = 5' Rear=5'	

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
				Maximum Building Height 65 feet *Maximum Lot Coverage* None *Minimum Parking Spaces* As required by Section 6.1, LDRs Amenity Center: 4 spaces per 1,000 square feet of gross floor area	
Development Area 'B' 15du/acre .5 FAR for Parcels greater than	• All allowable uses within PD-COMM zoning district, except the following: automobile rental and sales, automobile repair and		±17.3	*Minimum Lot Area* 2,000 square feet (single family attached (interior lot), townhouse, and 2-4 family),	±14.3%

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
or equal to 5 acres .75 FAR for Parcels less than 5 acres but more than 1 acre 1.0 FAR for Parcels less than 1 acre	services, automobile service station, boat and marine rental and sales, carwash and auto detailing, recreation vehicle rental and sales, taxicab service, towing service, tire sales and mounting, transmission or muffler shop, pawn shop, light manufacturing, airplane landing strip, helicopter land facilities. • Common area and open space			4,000 square feet (single family attached (end cap lot), 10,000 square feet (multiple- family) None (nonresidential) *Minimum Lot Width* 20 feet (single family attached, townhouse, and 2-4 family) 80 feet (multiple-family) *Setbacks from lot lines (single family attached, townhouse, and 2-4 family)* Front (Primary) = 5' Side = 0' Rear=5'

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
				Maximum Lot Coverage 50% *Minimum Living Area* 800 square feet (per dwelling unit) *Minimum Parking Spaces* As required by Section 6.1, LDRs	

1 Development within Development Areas A and B are subject to the following limitation and conditions:

i. A limit of 1 use that includes gasoline sales located within Development Areas located within PD-COMM district.

ii. A maximum 15,000 square feet of restaurant with drive-through use shall be permitted in PD-COMM development areas.

iii. No more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property. A minimum of 25,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district.

2 Development within Development Area C is subject to the following limitations and conditions:

i. The residential cottage is a group of two or more detached residential units located on individual lots

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD

ii. For purposes of perimeter buffering requirements, the cottage units shall be considered multiple family uses.

3 Within the PD-COMM area, all uses are interchangeable and each allowable use can be located in the specified development areas "A", "B", and "D", except for those uses specifically prohibited in Development Area "B" above.

2. The Project shall be developed in one or more phases. The Planned Development Ordinance and Agreement shall be valid for 10 years from the date of final approval by City Commission.
3. The applicant shall provide a listed species and habitat survey as part of any Final PD Plan for the Project. The survey shall document if any listed species are observed on the Property. If a listed species is observed on the Property, the updated survey shall provide recommendations to address potential impacts to the listed species and to identify any permitting requirements of any local, State, or Federal governmental agencies. Any submitted listed species and habitat survey shall be acceptable to the City for a period of no more than three years from the original date of the survey. All listed species shall be identified, but the survey shall specifically include analysis of the following plants and animals: killdeer (*Charadrius vociferus),* Florida spiny-pod (*Matelea floridana),* and eastern indigo snake (*Drymarchon couperi*).
4. If any wetlands are identified on the Property described in Exhibit "A", such areas shall be field-delineated using professionally accepted methodology. All development in and/or near wetland areas shall be consistent with the City's Comprehensive Plan and in compliance with the City's LDRs, as may be amended from time to time, and shall grant conservation easements or other appropriate protective mechanisms, as determined by the City, to protect wetland areas. Any submitted wetlands delineation shall be acceptable to the City for a period of no more than three years from the original date of the delineation.

5. Any Final PD plan shall include detailed geotechnical mapping and evaluation to identify and address any potential karst features or active ground loss areas.
6. All Final PD Plans shall be consistent with the Goals, Objectives, and Policies of the Comprehensive Plan, as it may be amended from time to time, including, but not limited to those Goals, Objectives, and Policies related to the eradication of invasive exotic plant species.
7. The Owner, or its successors and/or assigns, shall, concurrent with development of the Project, remove and destroy all Category I and II exotic plant species, as published in the most current version of the Florida Exotic Plant Council's List of Invasive Plant Species, located on the Property described in Exhibit "A". Thereafter, the Owner, or its successors and/or assigns, shall assure long-term implementation of an exotic plants management plan approved with the new final development order and which shall be included in covenants and restrictions to be implemented by a properly structured property owner's association or other mechanism acceptable to the City.
8. The planting of any species identified in the most current version of the Florida Exotic Pest Plant Council's List of Invasive Plant Species shall be prohibited. Grasses and sods shall be certified free of noxious weeds by the Florida Department of Agriculture and Consumer Services, Division of Plant Industry.
9. The Owner, or its successors and/or assigns, shall utilize methods of minimizing impacts, such as appropriate Best Management Practices of the Suwannee River Water Management District, in order to reduce the potential for flash flooding, to avoid adverse impacts to water quality, and to incorporate existing drainage patterns to the greatest extent practicable. Upon approval from the City of Alachua and the Suwannee River Water Management District, enhancements may be permitted to the existing, natural conveyance system to mitigate for existing erosion and sedimentation, restoration of historical erosion and sedimentation damage, and preventing future adverse erosion and sedimentation. Because of the location in relation to surrounding water features, sustainable landscaping practices including limitations on use of pesticides and irrigation systems must be considered. These practices include:
    a. Requiring Compost fertilizing (as opposed to traditional/ synthetic fertilizers)
    b. No new wells permitted on the property
    c. All non-residential development shall be required to utilize Florida Friendly Landscaping practices

10. A Final PD Plan consists of development requiring Preliminary Plat or Site Plan review. The Owner, or its successors and/or assigns, shall submit a utility system plan as part of the Construction Plans for the proposed subdivision or site plan.
11. Development on the Property described in Exhibit "A" shall be consistent with PD Master Plan for the Project, and includes the following requirements:
    a. The ingress/egress points to the Property described in Exhibit "A" shall be located as depicted on the PD Master Plan. The design of all proposed roadways shall be consistent with the applicable standards of Article 7 of the City's LDRs and the City's Design and Construction Requirements (latest edition at the time of review of Construction Plans) and the PD Master Plan. The design of the proposed roadway shall be reviewed and approved as part of Construction Plans submitted for the subdivision review process, as further defined in Section 2.4.10 of the City's LDRs, or site plan review process or infrastructure plan review process, as further defined in Section 2.4.9 of the City's LDRs.
    b. The Owner, or its successors and/or assigns, shall design, obtain all applicable permits, and construct a stormwater management system necessary to serve the development. Stormwater management facilities shall be constructed concurrent with development of the Project. Sufficient stormwater capacity consistent with Section 6.9.3 of the City's LDRs must be provided concurrent with site improvements of the Project. On-site soil shall be appropriately prepared so as to alleviate any drainage issues.
    c. Utilities shall be extended throughout the Project within areas designated as public right-of-ways, where practical. Utility infrastructure which must run outside the right-of-way, and which will be maintained by the City, shall be located in easements approved and accepted by the City granting access and maintenance of such infrastructure.
    d. The Owner, or its successors and/or assigns, shall be responsible for the provision of infrastructure for the Project. This shall include all on-site improvements and off-site improvements, including transportation infrastructure improvements, deemed necessary to support the development by the City in the City's sole discretion. Offsite improvements, including transportation infrastructure improvements deemed necessary by the City, shall

be consistent with City's Comprehensive Plan and Land Development Regulations in existence at the time of the proposed development requiring the infrastructure, and shall be supported by appropriate data and analysis that identifies a specific impact from the proposed development. If offsite improvements are required by the City, it shall be limited to the areas or infrastructure impacted by the proposed development. The data and analysis used to justify the requirement for offsite improvements will be provided by traffic study data, reports, or other infrastructure analysis that identifies the development's impact on the affected infrastructure, and determines a reasonable proportional impact from the proposed development. The data and analysis will be provided by the Developer and reviewed by the City. The Developers shall pay for any consultants or experts the City deems necessary to review the data and analysis provided by the Developer.

e. Facilities constructed on-site that are not dedicated to the City for maintenance shall be the responsibility of a legally established property owners' association. The property owners' association shall have the responsibility of maintenance of all common areas. In the event that common areas and required open space areas, as mandated by Sections 6.7.6, 6.9.3(E)(2), and 7.8.1 of the City's LDRs, or any amendments thereto, are not owned by a property owner's association, such areas shall be burdened by an easement that requires a property owner's association or another entity approved by the City to maintain such areas, and that restricts such areas in accordance with the City's requirements for such areas.

12. Electric System Requirements:

a. The Owner, or its successors and/or assigns, shall be responsible for all costs associated with connection to the electric system of the electric service provider as necessary to serve the Project.

13. Water System Requirements:

a. The Owner, or its successors and/or assigns, shall be responsible for all costs associated with connection to the City's potable water system as necessary to serve the Project.

b. Water systems shall be designed to provide fire flow rates that conform to the current standards of the Florida Fire Prevention Code, Chapter 633, Florida Statutes, and the Florida Building Code.

14. Wastewater System Requirements:

a. The Owner, or its successors and/or assigns, shall be responsible to design, permit, and construct wastewater main extensions and any other improvements, including but not limited to any lift station required and necessary to serve the Project.

15. Pedestrian and Street Improvements:

a. The Owner, or its successors and/or assigns, shall be responsible to design, obtain all applicable permits, and construct all pedestrian and street improvements in accordance with Section 7.3, *Required Improvements*, Section 7.2.3, *Block Standards,* and any other pertinent section of the City's LDRs subject to the following:

i. Block lengths may exceed 900 feet when all of the following conditions are met:

1. An easement permitting pedestrian access through blocks longer than 900 feet is provided. This easement shall be a minimum of 10 feet in width and recorded in the Public Records of Alachua County.
2. Where these means of pedestrian access intersect with any rights-of-way, a pedestrian crossing shall be provided across the right-of-way that includes one or more of the following elements intended to serve as traffic calming and clearly delineate pedestrian space: change in materials, bulb-outs, or a raised pedestrian crossing.
3. Any easement intended for pedestrian access through a block shall be improved with concrete, brick pavers, asphalt or similar hard material.
4. In no instance, shall a block length or length of travel through an easement exceed 900 feet.

ii. Pavement widths may not be less than 20 feet, except for privately maintained alleys, which may not be less than 12 feet. Where on street parking is provided, pavement width must be at least 24 feet.

iii. A minimum 5 foot wide sidewalk shall be provided on both sides of all public streets, except where there are no residential lots with frontage along the street.

iv. Minimum curb return radius shall be a minimum of 15' and minimum street centerline shall be a minimum of 50'.

v. Miami curb is permitted in residential areas where lot widths are less than 40' minimum.

b. All roadway improvements to US HWY 441 and NW 43rd Street noted in the submitted traffic study shall be permitted and completed in conjunction with any subdivision, site plan, or infrastructure plan proposed for the subject property. Revised traffic studies shall be submitted as a part of any development application that meets the conditions in accordance with the schedule below.

Study	Cumulative Non-Residential Floor Area Exceeds (square feet)	Cumulative Residential Units Exceeds (Dwelling units)	Date Development Application Submitted
Initial	NA	NA	NA
Update 1	125,000	200	01/01/2025
Update 2	250,000	400	01/01/2028

The traffic study shall be valid for a period of 3 years or until the next Update is required. Unless otherwise required by the City's Land Development Regulations, Alachua County, or Florida Department of Transportation, no more than 2 additional traffic studies shall be required.

c. Per the Independent Review of the Schmidt Farms Traffic Study provided by Brian Kanely, P.E., and communication from the Florida Department of Transportation, a structural analysis of the traffic signal mast arms at the intersection of US Highway 441 and NW 43rd Street must be performed. This analysis shall be performed and submitted in conjunction with a final PD Plan application.

d. Sidewalks will be provided along or within US Highway 441 right-of-way and NW 43rd Street right-of-way. Such sidewalks will be extended to NW 102nd Place and

NW 93rd Ave. Sidewalks shall be installed as adjacent property within the project is developed. Sidewalks within the rights-of-way shall be permitted through the Florida Department of Transportation or Alachua County Public Works, as applicable. If necessary, sidewalks or pedestrian connections may be provided on the subject property with provision of public access/sidewalk easement.

e. The roadway crossing connecting Development Areas A and B is subject to applicable County regulations regarding wetland buffer impacts.

16. Prior to demolition of the existing structures on the property greater than 100 years old, the applicant must provide evidence from a licensed architect or structural engineer that rehabilitating the structures would not be cost feasible. Prior to demolition, the applicant shall supply a historic structure report that includes photos, architectural descriptions of the interior and exterior of the structure, known history of the structures and sites, and locations (longitude/latitude) of the structures.

17. The Owner, or its successors and/or assigns, shall submit a landscaping and buffering plan as part of any Final PD Plan. The landscaping and buffering plan shall meet the requirements established by the adopted PD Master Plan, Section 6.2.2, Landscaping Standards or Section 6.3, Fencing Standards, of the City's LDRs, or any amendments thereto.
18. The Owner, or its successors and/or assigns, shall submit an open space plan as part of any new Final PD Plan. The open space plan shall meet the minimum requirements established by Section 6.7, *Open Space Standards*, of the City's LDRs, or any amendments thereto.
19. Open spaces and conservation areas shall account for a minimum of twenty-five percent (25%) of the complete project.
20. The Owner, or its successors and/or assigns, shall obtain all applicable permits from the Suwannee River Water Management District, Alachua County Public Works, the Florida Department of Environmental Protection, the Florida Fish and Wildlife Commission, and any other Federal, State, or Local agency before the commencement of any development in the Project.

21. The Final PD Plan shall be a Preliminary Plat for single-family detached on platted lots or a Site Plan for single-family detached on unplatted lots and shall adhere to all requirements of this PD Ordinance, the City's Comprehensive Plan, and the City's LDRs. The Final PD Plan shall also adhere to all requirements of the PD Master Plan and the PD Agreement for this Project.
22. Any Final PD Plan shall include the exact number of residential dwelling units, as well as precise information regarding the layout of open space, circulation, and stormwater management.
23. A valid Planned Development Agreement shall be adopted concurrent with the approval of this ordinance and the PD Master Plan.
24. The development parameters defined herein do not inordinately burden the development of the Property described in Exhibit "A", the PD, or the Project.
25. The rezoning of the Property described in Exhibit "A" does not reserve concurrency for the Project.
26. The adoption of this Ordinance does not guarantee the approval of any development permits, including but not limited to, a Preliminary Plat, Construction Plans, Site Plan or a Final Plat for the Project, or for any part or section thereof, for the Owner/Developer or its successors or assigns.
27. All development, including but not limited to any Final PD Plan for the Project, shall be governed by the laws, regulations, comprehensive plan and ordinances in effect at the time of the specific proposed development, and not as of the date of this ordinance.

Section 4. Ordinance to be Construed Liberally

This ordinance shall be liberally construed in order to effectively carry out the purposes hereof which are deemed to be in the best interest of the public health, safety, and welfare of the citizens and residents of Alachua, Florida.

Section 5. Repealing Clause

All ordinances or parts of ordinances in conflict with this ordinance are, to the extent they conflict with this ordinance, repealed.

Section 6. Providing for Severability

It is the declared intent of the Alachua City Commission that, if any section, sentence, clause, phrase, or provision of this ordinance is for any reason held or declared to be unconstitutional, void, or inoperative by a court

or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this ordinance and the remainder of this ordinance, after the exclusion of such part or parts, shall be deemed to be valid.

Section 7. Effective Date

This Ordinance shall be effective upon its passage and adoption on the second and final reading.

PASSED on first reading on the 28th day of March, 2022.

PASSED and **DULY ADOPTED**, in regular session, with a quorum present and voting, by the City Commission, upon second reading this _____ day of _____, 2022.

43RD STREET TND PLANNED DEVELOPMENT (PD) SPECIFICATIONS

1. LAND USES. LAND USES SHALL BE GENERALLY LOCATED AS SHOWN ON THE PD MASTER PLAN. THE MAXIMUM NUMBER OF DWELLING UNITS ALLOWED ON THE SITE SHALL BE 472 AND THE MAXIMUM NON-RESIDENTIAL AREA ALLOWED SHALL BE 489,400 SQ. FT. DWELLING UNITS MAY BE SINGLE-FAMILY DETACHED, ATTACHED, OR MULTI-FAMILY. LAND USES OTHER THAN RESIDENTIAL PERMITTED ON THE SITE ARE IDENTIFIED IN THE TABLE BELOW. THE FOLLOWING USES ARE ALLOWED IN DEVELOPMENT AREAS A, B, C, & D; COMMUNITY CENTER, POST OFFICE, PUBLIC SAFETY USES, RECREATIONAL TRAILS, PARKS, AND STORMWATER MANAGEMENT FACILITIES. USES FOR AREA E ARE AS LISTED BELOW.
2. PHASING. THE DEVELOPMENT SHALL CONSIST OF ONE PHASE AND MAY BE DEVELOPED ACCORDING TO MARKET CONDITIONS. THE DEVELOPMENT MAY BE FURTHER DIVIDED INTO SMALLER UNITS ACCORDING TO THE FINAL PD PLAN TO CREATE A LOGICAL AND/OR FUNCTIONAL DEVELOPMENT OR INFRASTRUCTURE PATTERNS.
3. ROADWAY BUFFERS. A TWENTY FIVE-FOOT (25') BUFFER SHALL BE PROVIDED ADJACENT TO ROADWAYS THAT EXIST ALONG EXTERNAL PROJECT BOUNDARIES. THE BUFFER MAY INCLUDE STORMWATER MANAGEMENT FACILITIES, PEDESTRIAN CIRCULATION, LANDSCAPING, AND SIGNAGE. ROADWAY BUFFERS MAY NOT BE PART OF PLATTED LOTS. LANDSCAPING SHALL BE CONSISTENT WITH APPLICABLE SECTIONS OF THE LAND DEVELOPMENT REGULATIONS (LDRS).
4. LOT SETBACK AND SEPARATIONS. HOUSING UNITS AND DESIGN SHALL AT A MINIMUM MEET THE REQUIREMENT OF THE FLORIDA BUILDING CODE. NOTWITHSTANDING THE SETBACKS ESTABLISHED WITHIN EACH DEVELOPMENT AREA AND DEFINED ON THE PD MASTER PLAN, AN ACCESSORY STRUCTURE, SUCH AS A DETACHED GARAGE, MAY SHARE A COMMON WALL WITH ACCESSORY STRUCTURES ON ADJACENT LOTS. SETBACKS BETWEEN RESIDENTIAL AND NON-RESIDENTIAL DEVELOPMENT AREAS SHALL BE FIVE (5').
5. COMMON AREA. COMMON AREA AND OPEN SPACE, AS DEFINED BY APPLICABLE SECTIONS OF THE LDRS AND THE PD MASTER PLAN, SHALL ACCOUNT FOR A MINIMUM OF 10% OF THE COMPLETED PROJECT, INCLUSIVE OF THE DEPRESSIONAL AREA. OPEN SPACE AREAS MAY EXIST IN ANY LAND USE AREA AND MAY BE DEVELOPED AT ANY RATE. THESE AREAS MAY CONTAIN LOW-INTENSITY PASSIVE OR ACTIVE RECREATION OPPORTUNITIES SUCH AS NATURE TRAILS, WILDLIFE VIEWING AREAS, AND OTHER RECREATION ACTIVITIES.
6. CIRCULATION. THE CIRCULATION CONFIGURATION IS NOT INTENDED TO BE EXACT AND REPRESENTS ONLY A PORTION OF THE OVERALL ROADWAY NETWORK. ROADWAYS INTENDED TO BE DEDICATED TO THE PUBLIC MAY CONSIST OF A MIXTURE OF ROADWAY TYPES AND SHALL BE REQUIRED TO MEET THE APPLICABLE LDRS DESIGN CRITERIA, UNLESS OTHERWISE AUTHORIZED BY THE CITY COMMISSION THROUGH LDR SECTION 3.6.3 (A)(5)(B)(III). THE INTERNAL ROADWAYS NOT SHOWN ON THE PD MASTER PLAN ARE INTENDED TO BE NEIGHBORHOOD STREETS AND MAY NOT MEET THE ARTERIAL OR COLLECTOR ROADWAY DEFINITION.
7. LANDOWNER/DEVELOPER RESPONSIBILITY. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING RIGHT-OF-WAY AND EASEMENTS FOR CONSTRUCTING ON-SITE INFRASTRUCTURE LOCATED IN THE PROPOSED PD-R AND PD-COMM DISTRICTS, INCLUDING BUT NOT LIMITED TO ELECTRICAL UTILITY LINE, TELEPHONE LINES, CABLE TV LINES, OR THE UNDERGROUND CONDUIT FOR SUCH FEATURES. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING AREAS FOR PUBLIC INFRASTRUCTURE AS REQUIRED BY CITY ORDINANCES, TO GUARANTEE CONSTRUCTION OF REQUIRED INFRASTRUCTURE, AND IF REQUESTED BY THE CITY, TO DEDICATE THESE IMPROVEMENTS TO THE CITY IN A FORM THAT COMPLIES WITH CITY REGULATIONS. ALL FACILITIES NOT DEDICATED TO THE CITY SHALL BE OPERATED AND MAINTAINED BY A PROPERTY OWNERS ASSOCIATION FORMED AS PART OF THE SUBDIVISION PROCESS.
8. ALLOWABLE LAND USE CLASSIFICATION DATA. FIGURES FOR ACREAGE ARE ESTIMATES AND HAVE BEEN ROUNDED TO THE NEAREST WHOLE NUMBER.
9. DEVELOPMENT SIGNAGE. ALL ENTRY ROADWAYS INTO THE DEVELOPMENT FROM US 441 AND NW 43RD STREET SHALL HAVE SIGNAGE IDENTIFYING THE DEVELOPMENT AND BUSINESSES WITHIN THE DEVELOPMENT. EACH PARCEL FRONTING US 441 AND NW 43RD STREET SHALL BE ALLOWED ONE SIGN IDENTIFYING THE BUSINESS. ALL SIGNAGE SHALL COMPLY WITH THE CITY OF ALACHUA LAND DEVELOPMENT REGULATIONS.

City of Alachua

Planning & Community Development Department

Staff Report

Planning & Zoning Board Hearing Date: March 8, 2022*
Quasi-Judicial Hearing

SUBJECT:	A request to amend the Official Zoning Atlas from Agricultural ("A") and Commercial Intensive ("CI") to Planned Development – Residential ("PD-R") and Planned Development – Commercial ("PD-COMM")
APPLICANT/AGENT:	David Meeks
PROPERTY OWNER:	DM Alachua Investments, LLC
LOCATION:	Southwest of the intersection of US 441 and NW 43rd Street
PARCEL ID NUMBERS:	05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, and 05945-000-000
ACREAGE:	± 121.1 total
PROJECT PLANNER:	Adam Hall, AICP, Principal Planner
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board transmit the Site-Specific Amendment to the Official Zoning Atlas for a Planned Development to the City Commission with a recommendation to approve the application, subject to the 27 conditions provided in Exhibit "A" of this Staff Report.
RECOMMENDED MOTION:	*Based upon the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, this Board finds the application for a Site-Specific Amendment to the Official Zoning Atlas for a Planned Development to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and transmits the application to the City Commission, with a recommendation to approve, subject to the 27 conditions provided in Exhibit "A" and located on page 44 of the March 8, 2022, Staff Report to the Planning & Zoning Board.*

**After consideration by the Planning and Zoning Board, the Report was amended to address several typographical or formatting issues or to clarify proposed PD Conditions.*

SUMMARY

The proposed Site-Specific Amendment to the City of Alachua Official Zoning Atlas (Rezoning) is a request by David Meeks, on behalf of DM Alachua Investments, LLC, property owner, for the consideration of the rezoning of the subject property from Agricultural ("A") and Commercial Intensive ("CI") to Planned Development – Residential ("PD-R") and Planned Development – Commercial ("PD-COMM").

The subject property is comprised of Tax Parcel Numbers 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, and 05945-000-000, and is approximately 121.1 acres in size. The subject property is located southwest of the intersection of US 441 and NW 43rd Street. The subject property contains two vacant commercial structures, and one residential structure with several associated farm buildings.

The subject property presently has an Agriculture Future Land Use Map (FLUM) Designation on approximately 72.7 acres and a Commercial FLUM Designation on approximately 48.4 acres of the subject property. A companion large scale comprehensive plan amendment (LSCPA) would amend the FLUM to Conservation, Moderate Density Residential, High Density Residential, and Commercial. The Moderate Density Residential FLUM Designation permits a density of 0 – 4 dwelling units per acre (a maximum of 212 dwelling units for the subject property); the High Density Residential FLUM Designation permits a density of 8-15 dwelling units per acre (a maximum of 267 dwelling units for the subject property); the Commercial FLUM designation permits a maximum intensity of 1.0 FAR (a maximum of 627,264 square feet of non-residential development for the subject property). The proposed PD-R zoning district would permit a maximum of 213 residential units, and 2,500 square feet for an amenity center, which is consistent with the maximum density of the proposed FLUM Designations for the overall subject property. The proposed PD-COMM zoning district would permit a maximum of 259 residential units, and 489,400 square feet of non-residential, which is consistent with the maximum density and intensity of the proposed FLUM Designations for the overall subject property.

Development of the subject property would place most of the wetland and associated wetland buffer area within the Conservation Future Land Use Designation and Common Area/Open Space (Development Area E). The only uses allowed within these areas would be recreational facilities such as trails or parks. Typical single family detached uses would be permitted adjacent to these areas (Development Area F). A wider variety of residential uses, including cottage style uses, would be permitted to the east of Development Area F. Development Areas A and B, adjacent to US 441 would permit a variety of residential and commercial uses. Access to the proposed development would be provided at two locations. One ingress/egress would be provided from US 441, and one ingress/egress would be provided from NW 43rd Street.

The proposed development would be constructed in one or more phases. The Planned Development Ordinance and Agreement will be valid for 10 years after date of final approval of the PD Zoning ordinance.

The general purpose of the Planned Development zoning districts is described by Section 3.6.1(A) of the Land Development Regulations (LDRs) as follows:

> The Planned Development (PD) districts are established for the purpose of encouraging innovative land planning and site design concepts that conform to community quality of life benchmarks and that achieve a high quality of development, environmental sensitivity, energy efficiency, and other City goals by:
>
> **(1)** *Increasing Flexibility*
> Reducing or diminishing the uniform design that results from the strict application of zoning and development standards that are designed primarily for individual lots;
>
> **(2)** *Greater Freedom to Provide Access, Open Space, and Amenities*
> Allowing greater freedom in selecting the means to provide access, open space, and design amenities;
>
> **(3)** *Greater Freedom to Provide Mix of Uses and Housing Types*
> Allowing greater freedom in providing a mix of land uses in the same development, including a mix of housing types, lot sizes, and densities;
>
> **(4)** *Providing Greater Opportunity for More Efficient Land Use Patterns*
> Providing for an efficient use of land resulting in smaller networks of utilities and streets and thereby lowering development and housing costs;
>
> **(5)** *Promoting Quality Design and Environmentally Sensitive Development Through Site Characteristics*
> Promoting quality design and environmentally sensitive development by allowing development to take advantage of special site characteristics, locations, and land uses; and
>
> **(6)** *Quality Design Through Density Increases*
> In specific instances, encouraging quality design and environmentally sensitive development by allowing increases in base densities or floor area ratios when such increases can be justified by superior design or the provision of additional amenities such as public open space.

The purpose of the PD-R zoning district is described by Section 3.6.1(B)(1) of the LDRs as follows:

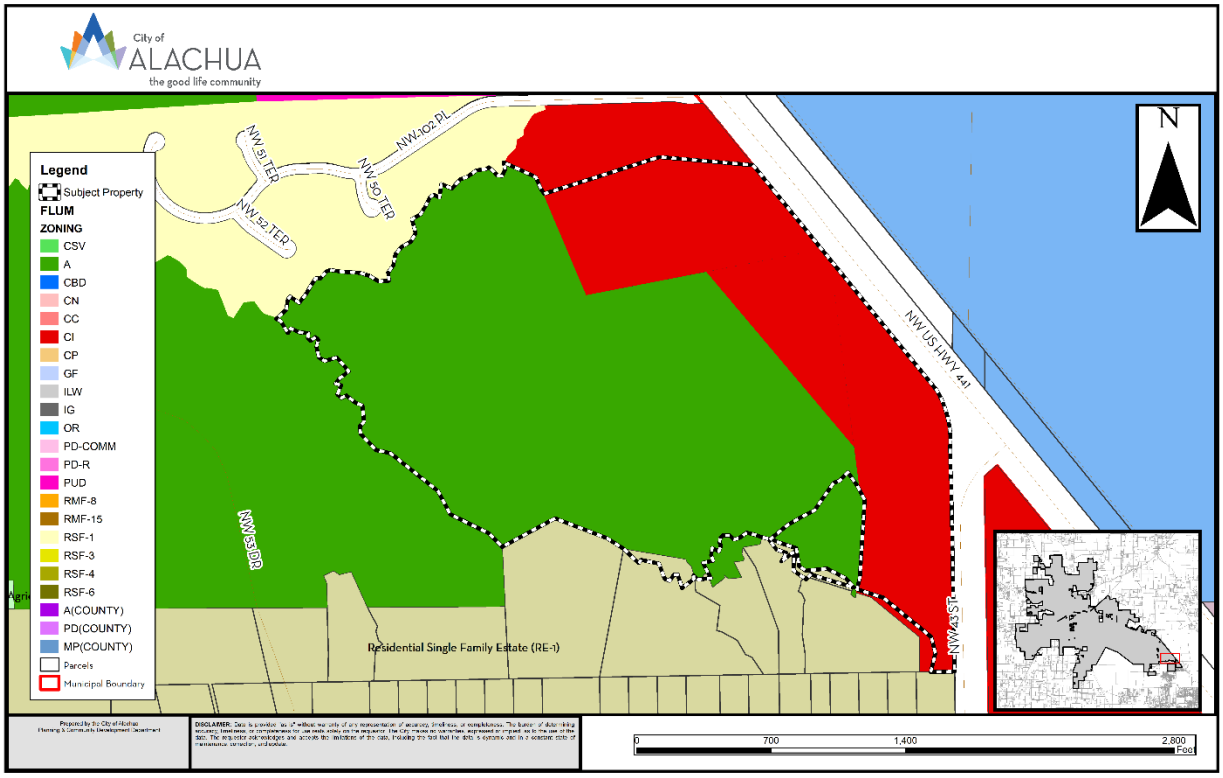
> The purpose of the Planned Development-Residential (PD-R) District is to provide a mix of residential uses using innovative and creative design elements, while at the same time providing an efficient use of open space. Commercial uses may be allowed in the PD-R District primarily to serve the needs of the residents in the development.

The purpose of the PD-COMM zoning district is described by Section 3.6.1(B)(4) of the LDRs as follows:

The purpose and intent of the Planned Development-Commercial (PD-COMM) District is to provide mixed-use retail and office development, with limited moderate and higher density residential uses integrated into the development above street levels and as separate stand-alone uses.

EXISTING USES

The subject property has one single-family residence with several associated accessory farm structures. The subject property also has two vacant commercial structures.



EXISTING/PROPOSED ZONING DISTRICT COMPARISON

The matrix below provides an analysis of the maximum gross density, floor area ratio, and typical uses permitted within the existing and proposed zoning districts:

	Existing Zoning Districts		Proposed Zoning District	
Zoning District:	Agricultural (A) 72.7 acres	Commercial Intensive (CI) 48.4 acres	Planned Development – Residential (PD-R) 79.52 acres	Planned Development – Commercial (PD-COMM) 41.55 acres
Max. Gross Density:	.2 dwelling units per acre *Maximum of 14 dwelling units per acre*	NA	Established by PD Master Plan *213 dwelling units for PD-R Zoned Area*	Established by PD Master Plan *259 dwelling units for PD-Comm Zoned Area*
Floor Area Ratio:	N/A	1.0 FAR 2,108,304 square feet nonresidential	Established by PD Master Plan *2,500 square feet maximum for neighborhood amenity center building*	Established by PD Master Plan *489,400 square feet of non-residential uses for PD- Comm Zoned Area* *2,500 square feet maximum for neighborhood amenity center for PD-Comm Zoned Area*
Typical Permitted Uses:	Residential uses, community services, agricultural activities including agricultural production and education, animal husbandry, horticulture, farmers markets, agriculture support	Retail sales and services, personal services, financial institutions, outdoor recreation and entertainment, tourist-related uses, hotels and motels, commercial shopping centers, auto-oriented uses,	Single family attached and detached, townhouse, two to four family, stormwater management facilities, common areas, open space, and cottage style	Retail sales and services, personal services, financial institutions, outdoor recreation and entertainment, tourist-related uses, hotels and motels, commercial shopping centers, auto-oriented uses,

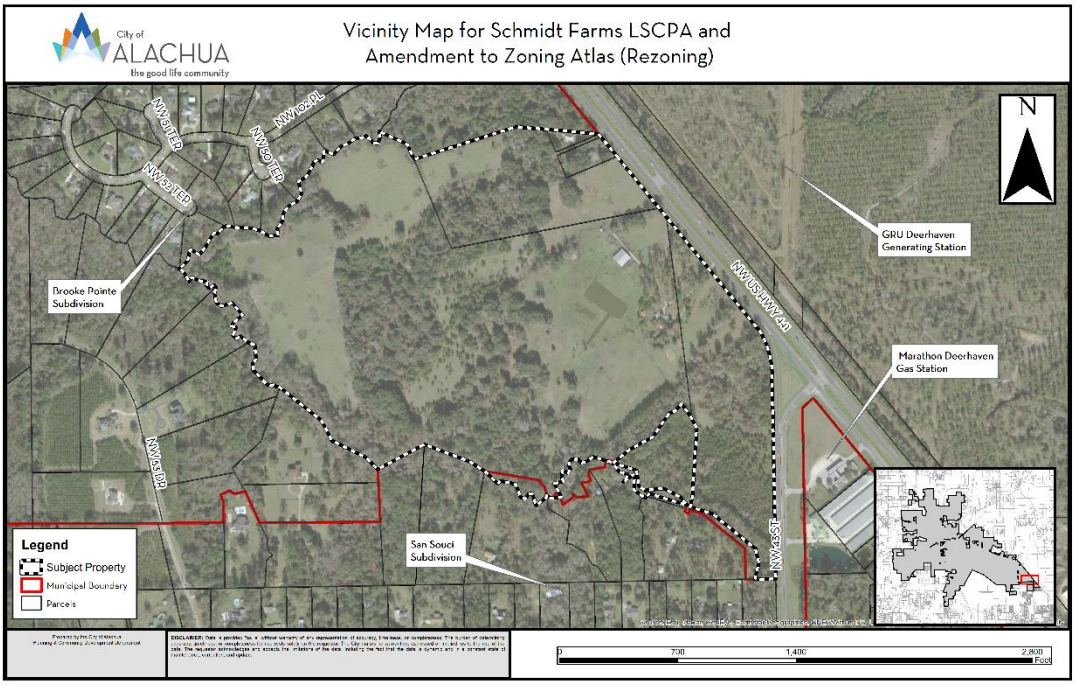
	services, and agri-tourism	office/business parks ,and eating establishments.	detached single family units	office/business parks ,and eating establishments.

Map 1. Existing Official Zoning Atlas with Subject Property

Map 2. Proposed Official Zoning Atlas with Subject Property

SURROUNDING USES

The subject property is located southeast of the intersection of US 441 and NW 43rd Street.



The existing uses, Future Land Use Map ("FLUM") Designations, and zone districts of the surrounding area are identified in Table 1. Map 3 provides an overview of the vicinity of the subject property.

NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. It is not intended to be all-inclusive, and may not identify all existing uses, FLUM Designations, and/or zoning districts surrounding the subject property.

Table 1. Surrounding Land Uses

Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Residential / Major Utility (Deerhaven Generating Plant)/ Vacant Commercial	Moderate Density Residential/ Public Facilities (City of Gainesville)/ Commercial	RSF-1, CI, PS (City of Gainesville)
East	Major Utility (Deerhaven Generating Plant)/ Commercial	Public Facilities (City of Gainesville)/ Commercial	PS (City of Gainesville), CI
West	Residential	Agriculture	A
South	Residential	Low Density (Alachua County)	RE-1 (Alachua County)

Map 3. Vicinity Map

NEIGHBORHOOD MEETING

The purpose of a Neighborhood Meeting is to educate the owners of nearby land and any other interested members of the public about the project and to receive comments regarding the project. As required by Section 2.2.4 of the LDRs, all property owners within 400 feet of the subject property and any organizations or persons who have registered to receive notification of applications for development are notified of the meeting and notice of the meeting is published in a newspaper of general circulation.

A Neighborhood Meeting was held on August 12, 2021, at the Alachua Branch Library, to educate the owners of nearby land and any other interested members of the public about the application. The applicant's agent was present and available to answer questions. As evidenced

by materials submitted by the applicant, the meeting was attended by approximately 30 members of the public.

Concerns included stormwater and flood plain management related to Turkey Creek, impacts to natural resources existing on and near the property, and traffic.

CONSISTENCY WITH THE COMPREHENSIVE PLAN

The Goals, Objectives, and Policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

Through a related application, the applicant proposes to amend the FLUM Designation from Agriculture and Commercial to Conservation, Moderate Density Residential, High Density Residential and Commercial on the subject property. The following Comprehensive Plan Elements have Goals, Objectives, and Policies (GOPs) that support the proposed amendment to the Future Land Use Map of the City of Alachua's Comprehensive Plan:

- Future Land Use Element
- Transportation Element
- Housing Element
- Recreation Element
- Community Facilities Natural Groundwater Aquifer Recharge Element
- Conservation and Open Space Element

The applicant has provided an analysis of the proposed amendment's consistency with the Comprehensive Plan. Based upon the applicant's Comprehensive Plan Consistency Analysis and information presented below, staff finds the application consistent with the Comprehensive Plan and the Goals, Objectives, and Policies (GOPs) therein.

Future Land Use Element

Policy 1.3.b. of the City of Alachua Comprehensive Plan Future Land Use Element (FLUE) establishes the Commercial FLUM Designation, and states the following:

> *Policy 1.3.b: Commercial*: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses may locate. The following uses are allowed within the Commercial land use category:
>
> 1. Retail sales and services;
> 2. Personal services;
> 3. Financial institutions;
> 4. Outdoor recreation and entertainment;

5. Tourist-related uses;
6. Hotels and motels;
7. Commercial shopping centers;
8. Auto-oriented uses;
9. Traditional Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/business parks;
13. Limited industrial services; and,
14. Eating establishments.

Analysis of Consistency with Policy 1.3.b: The proposed Zoning is consistent with the Commercial Future Land Use Category, under Policy 2.1.d of the Future Land Use Element. Should the PD zoning expire or not proceed, any proposed future development or zoning proposals would be required to conform with this Policy.

Policy 1.2.a of the City of Alachua Comprehensive Plan Future Land Use Element (FLUE) establishes the Moderate Density Residential FLUM Designation, and states the following:

Policy 1.2.a: Moderate density residential (0 to 4 dwelling units per acre): The moderate density residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the moderate density residential land use category:

1. Single family, conventional dwelling units;
2. Accessory dwelling units;
3. Manufactured or modular homes meeting certain design criteria
4. Mobile homes only within mobile home parks;
5. Duplexes and quadplexes;
6. Townhomes;
7. Residential Planned Developments;
8. Supporting community services, such as schools, houses of worship, parks, and community centers

Analysis of Consistency with Policy 1.2.a: The proposed zoning to Residential Planned Development is permitted under this policy. Should the PD zoning expire or not proceed, any proposed future development or zoning proposals would be required to conform with this Policy.

Policy 1.2.d of the City of Alachua Comprehensive Plan Future Land Use Element (FLUE) establishes the High Density Residential FLUM Designation, and states the following:

Policy 1.2.d High Density Residential (8 to 15 dwelling units per acre)**:** The High Density Residential land use category allows residential development at a density of 8 dwelling units per acre to 15 dwelling units per acre, as well as certain complementary uses, such as a low intensity neighborhood-scale retail and services. The following

uses are allowed within the High Density Residential land use category:

1. Single family attached and detached dwelling units ;
2. Accessory dwelling units;
3. Apartments and townhomes;
4. Duplexes and quadplexes;
5. Live/work units;
6. Residential Planned Developments;
7. Traditional Neighborhood Planned Developments;
8. Group living;
9. Neighborhood-scale retail and services, where the area dedicated to such uses is less than or equal to 30,000 square feet of floor area and is designed specifically to serve the surrounding neighborhood, including, but not limited to, a convenience stores without gas pumps, dry cleaners, pharmacies, local markets, restaurants, personal services, and professional offices; and,
10. Supporting community services, such as schools, houses of worship, parks, and community centers.

Analysis of Consistency with Policy 1.2.d: The proposed zoning to Commercial Planned Development is permitted under Policy 2.1.d of the Future Land Use Element. Should the PD zoning expire or not proceed, any proposed future development or zoning proposals would be required to conform with this Policy.

Policy 1.8.a. of the City of Alachua Comprehensive Plan Future Land Use Element (FLUE) establishes the Conservation FLUM Designation, and states the following:

Policy 1.8.a: Conservation uses: Conservation uses shall be limited to public access, low-intensity resource-based recreation, (i.e., greenways and trails), native vegetative community restoration, residential and non-residential uses necessary to manage such conservation lands (i.e., ranger stations, research stations, and park amenities).

Analysis of Consistency with Policy 1.8.a: Any proposed future development within the Conservation land use area would be required to conform with this Policy.

Objective 2.1 establishes the standards for Planned Developments (PD), including Residential Planned Developments and Commercial Planned Developments.

Objective 2.1: Planned Development (PD) Standards

In an effort to reduce the impacts of urban sprawl on the community and the region, the City of Alachua shall provide for a wide array of planned developments to encourage the creation of interrelated neighborhoods and districts to increase the quality of life for all residents of the City.

Policy 2.1.a: Residential Planned Developments (PD): The City shall establish flexible development and use regulations for residential PDs for use within

residential land use categories. Those regulations shall be developed to achieve the following:

1. High quality residential development through a mixture of housing types, prices and densities. The allowed uses within a residential PD are not subject to the permitted uses in the underlying land use category. Single-family homes, zero lot line homes, and townhomes are examples of the allowable housing types within residential PDs.
2. The opportunity to improve quality of life by placing activities necessary for daily living in close proximity to residences through the allowance of a limited amount of neighborhood commercial uses, and with special design criteria, community commercial uses, within the residential PD at appropriate densities and intensities.
3. A range of parks and open space, from playgrounds to community gardens to active recreation facilities within the neighborhood.
4. Streets and public spaces that are safe, comfortable, and designed to respect pedestrians, nonvehicular and vehicular modes of transportation.
5. Conservation of materials, financial resources and energy through efficient design of infrastructure.

Policy 2.1.d: Commercial Planned Development: The City shall establish commercial planned development (PD) zoning district regulations as a development option for planned commercial development within commercial and high density residential land use categories. Those regulations shall be developed to achieve the following:

1. A functional mix of mixed-use retail, commercial, and office development. A limited amount of medium to high density residential development may be integrated with commercial and retail uses.

Analysis of Consistency with Goal 2, Objective 2.1, Policy 2.1.a and Policy 2.1.d: This application proposes to rezone the subject property to PD-R and PD-COMM, which are zoning districts established pursuant to Goal 2 of the Future Land Use Element. Goal 2, Objective 2.1, Policy 2.1.a, and Policy 2.1.d are implemented through Section 3.6 of the City's LDRs. An analysis of the application's compliance with Section 3.6 is provided within this Staff Report.

Objective 5.1: Natural features: The City shall coordinate Future Land Use designations with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.a: Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage

slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Policy 5.1.b: Soils: The City shall ensure soil protection and intervention measures are included in the development review process.

Policy 5.1.c: Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d: Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Policy 5.1.e: Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Analysis of Consistency with Objective 5.1 and Policies 5.1.a – e: The subject property has historically been used as a farm with two commercial structures along US 441. The subject property contains surface water bodies, wetlands, special flood hazard areas. A migratory bird species was observed on site (Killdeer). A state regulated plant, Florida shiny-pod (*Matelea floridana)* was observed within the Conservation land use area. As a condition of the associated Planned Development rezoning application, conditions have been added that would require special consideration for these. If any other regulated plant or animal species is identified during development, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and the Land Development Regulations.

Objective 5.2: Availability of facilities and services: All new development shall be planned and constructed concurrently with the availability of facilities and services necessary for the development.

Analysis of Consistency with Objective 5.2: Prior to the issuance of any preliminary or final development order, any development must demonstrate that all necessary facilities or services are in place. Based on the concurrency analysis completed, there are no Public Facilities monitored for concurrency that would be deficient as a result of this development. Prior to any preliminary or final development order, the applicant must

demonstrate how this potential deficiency will be addressed.

GOAL 9: Water and Wastewater Service:

The City will ensure that new development within the corporate limits, where potable water and wastewater service are available, as defined in Policy 1.2.a and Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the Comprehensive Plan, shall connect to the City of Alachua's potable water and wastewater system.

Policy 9.2: Any new residential subdivision within the corporate limits, where potable water service is available, as defined in Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within either a Residential or Agriculture Future Land Use Map Designation shall connect to the City of Alachua's potable water system. Any new residential subdivision within the corporate limits, where wastewater service is available, as defined in Policy 1.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan, regardless of size, that is within a Residential Future Land Use Map Designation shall connect to the City of Alachua's wastewater system.

Analysis of Consistency with Goal 9 and Policy 9.2: Potable water is available to the site, as defined in Policy 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the City of Alachua Comprehensive Plan.

<u>Housing Element</u>

Policy 1.1.a: The City shall encourage development of a variety of housing types including conventional single family homes, accessory dwelling units, multi-family units, group homes, assisted living facilities, foster care facilities, mobile homes and manufactured housing, and shall ensure that appropriate land use designations and zoning districts exist to accommodate each type.

Analysis of Consistency with Policy 1.1.a: This project would support additional housing within the City, thereby furthering Policy 1.1.a.

<u>Recreation Element</u>

Policy 1.2.b: The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

Analysis of Consistency with Policy 1.2.b: An analysis of the impacts to recreation facilities has been provided within this report.

Transportation Element

Objective 1.1: Level of Service: The City shall establish a safe, convenient and efficient level of service standard for all motorized and non-motorized transportation systems.

Analysis of Consistency with Objective 1.1: An analysis of the impacts to transportation facilities has been provided within this report. There are no transportation facilities that would be deficient as a result of this application.

Community Facilities & Natural Groundwater Aquifer Recharge Element

Policy 1.2.a: The City shall establish a Community Wastewater Service Area, which includes all areas where wastewater service is available. Wastewater service shall be deemed available if:

1. A gravity water main exists within 100 feet of the property line of any lot with a residential land use category or an existing single family residence and wastewater service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. Gravity wastewater main exists with 500 feet of the property line of any proposed residential subdivision consisting of 5 units or less and the gravity wastewater system is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A gravity wastewater main, wastewater pumping station, or force main exists within 2,640 feet of the property line of any proposed residential subdivision comprised of more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and the gravity wastewater system, wastewater pumping station, or force main is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 1.2.a: The subject property is located within the wastewater service area, and any future development on the subject property will be required to connect to a wastewater system.

Policy 2.1.a: The City hereby establishes the following level of service standards for

solid waste disposal facilities:

FACILITY TYPE	LEVEL OF SERVICE STANDARD
Solid Waste Landfill	.73 tons per capita per year

Analysis of Consistency with Objective 2.1.a: An analysis of the impacts to solid waste facilities has been provided within this report. The proposed amendment would result in a net reduction in the permitted density of the subject property, thereby reducing impacts to solid waste facilities.

Policy 4.1.b: The City shall establish a Community Potable Water Service Area, which includes all areas where potable water service is available. Water service shall be deemed available if:

1. A water main exists within 100 feet of any lot within a residential land use category or an existing single family residence water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. A water main exists within 500 feet of any proposed residential subdivision consisting of 5 units or less and water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A water main exists within 2,640 feet of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and water service is accessible through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 4.1.b: The subject property is located within the potable water service area, and any future development on the subject property will be required to connect to a potable water system.

Conservation and Open Space Element

OBJECTIVE 1.3: Listed Species

The City shall protect species listed by State and Federal agencies as endangered, threatened or of special concern, and their habitats.

Policy 1.3.a: The City shall ensure that its ordinances, regulations and policies protect listed species and their habitats.

Policy 1.3.b: The City shall utilize the development review process, land acquisition programs, environmental regulatory partnerships,

stewardship programs and public education to protect listed species and their habitat, and prevent extinction of or reduction in populations of listed species.

Policy 1.3.c: The City shall obtain data from the Florida Fish and Wildlife Conservation Commission, Alachua County Environmental Protection Department, Florida Department of Environmental Protection, to maintain a periodically updated inventory of listed species and habitats located within City limits or immediately adjacent to City limits. The City will use the Florida Natural Areas Inventory as a base inventory.

Policy 1.3.d: The City shall require prior to development approval, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The inventory shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. De minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Policy 1.3.e: The City's land use designations shall provide for the protection of threatened and endangered species.

Analysis of Consistency with Objective 1.3 and Policies 1.3.a – e:

An environmental conditions and site suitability analysis has been provided separately in this report. Future development of the site must comply with the environmental protections established in the City of Alachua Comprehensive Plan and Land Development Regulations.

Objective 1.10: Wetlands

The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.

Policy 1.10.a: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code and regulations adopted by the DEP and the Suwannee River Water Management District.

Policy 1.10.b: The City shall conserve wetlands by prohibiting, where the alternative of clustering all structures in the non-wetland portion of the site exists, any development or dredging and filling which would alter their natural functions. If no other alternative for development exists, the City shall allow only minimal development activity in those areas designated as wetlands within this Comprehensive Plan and that such development activity comply with the following performance standards:

I. Residential dwelling units no denser than 1 dwelling unit per 5 acres, subject to the following minimum performance standards:

a. Residences and any support buildings must be built on pilings of sufficient height to exceed by 1 foot the highest recorded flood level in the wetland. If there is not flooding data available, residences and any support buildings must be built at least 2 feet above the highest seasonal water level.
b. Clearing or removal of native vegetation shall not exceed 1/2 acre per 5 acres, except that where a ratio of 1 dwelling unit per 5 acres is utilized, the clearing or removal of native vegetation shall not exceed a total of 1/4 acre per 5 acres. Exotic vegetation may be removed without regard to this limitation provided that, of the area cleared of exotic vegetation exceeds the applicable 1/2 acre or 1/4 acre limitation, or is replanted with native wetland vegetation.
c. No dredging or filling (except for pilings to support the residence and support buildings or poles providing utility services) shall be allowed, except that a walking path or driveway to the residence may use permeable fill of it is designed with a sufficient number and size of culverts to allow the natural flow of water to continue.
d. Drain fields for septic tanks and gray water shall be located outside the wetland.
e. Where a ratio of 1 dwelling unit per 5 acres is employed the following provisions shall also apply:

i. Clustering of units shall be located in the perimeter areas of the wetlands; and

ii. A restrictive or conservation easement to preserve open space shall be established.

OR:

II. Residential dwelling units not more dense that 1 dwelling unit per 3 acres such to the following minimum performance standards:

a. Residences must be built on pilings of sufficient height to exceed by 1 foot the highest recorded flood level in the wetland. If there is no flooding data available, residences must be built at least 2 feet above the highest seasonal water level.
b. All support buildings and other support facilities shall be constructed outside the wetland.
c. Clearing or removal of vegetation shall not exceed 1/4 acre per 3 acres, except that where a ratio of 1 dwelling unit per 3 acres is employed, the clearing or removal of native vegetation shall not exceed a total of 1/8 acre per 3 acres. Exotic vegetation may be

removed without regard to this limitation provided that, if the area is cleared of exotic vegetation exceeds the applicable 1/4 or 1/8 acre limitation, it is replanted with native wetland vegetation.

d. No driveways, paths or other construction requiring fill (other than pilings for the residence or poles for utilities) will be allowed within the wetland.
e. All residences shall be connected to a central sewage system owned and operated by the City.
f. Where a ratio of 1 dwelling unit per 3 acres is utilized, the following provisions shall also apply:
    i. Clustering of units shall be located along the perimeter area of the wetland; and
    ii. A restrictive or conservation easement to preserve the open space shall be required.

OR:

III. Limited development activity with impacts to isolated wetlands (and/or associated buffers) that meet all of the following conditions:

a. Less than .25 acres in size; and,
b. Determined to be of poor quality by a certified environmental specialist; and,
c. The applicant has demonstrated that every reasonable step has been taken to minimize impact to wetland; and,
d. The applicant has provided for appropriate on-site or off-site mitigation for impact to wetland.

Limited development activity includes, but is not limited to, park amenities such as trails or boardwalks, minimum necessary roadways and/or sidewalks for access or internal site connectivity, and underground utility line crossings.

Policy 1.10.c: The City shall review wetland mitigation and monitoring proposals to allow limited development activity in wetlands and wetland buffers. Applicants must provide documentation which indicates that the following steps have been taken: the applicant has attempted every reasonable measure to avoid adverse impacts; the applicant has taken every reasonable measure to minimize unavoidable adverse impacts; the applicant has provided adequate mitigation to compensate for wetland impacts. The property owner shall incur any and all expenses associated with wetland mitigation.

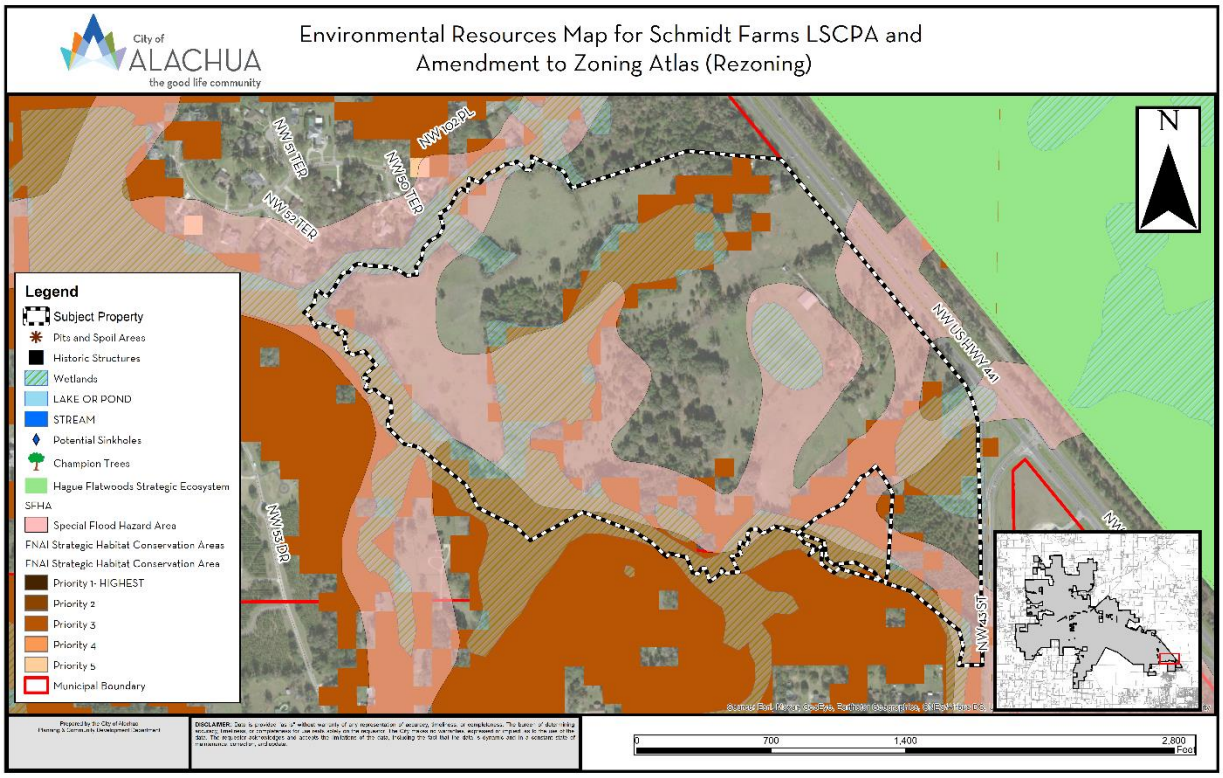
Policy 1.10.d: The City shall provide all wetland mitigation and monitoring proposals for review by the County, Suwannee River Water Management District and any other applicable agencies.

Policy 1.10.e: The City shall encourage the dedication of conservation easements to the State, County, water management district or private conservation trust, for wetland preservation.

Policy 1.10.f: The City shall encourage the creation, restoration and preservation of wetlands through partnerships with public and private entities.

Policy 1.10.g: The City shall require natural vegetative buffers around wetlands to protect the fragile ecosystems they sustain. Buffers, measured from the outer edge of the wetland, shall be created as established in the following table:

Resource Addressed	Required Buffer (feet)
Wetlands less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	50' average 35' minimum
Wetlands greater than 0.5 acre that do not support the animal species described above.	75' average 50' minimum
Areas where the animal species described above have been documented within 300 feet of a wetland.	100' average 75' minimum



Policy 1.10.h: As an alternative to Policy 1.10.g, where scientific data is available, specific buffering requirements may vary according to the nature of the individual wetland and the proposed land use, but in no case will the buffer be less than 35 feet. Buffering requirements will be based on the best available science regarding impacted ecosystems, listed species, wetland function, and hydrologic considerations.

Analysis of Consistency with Objective 1.10:

The existing wetlands and associated wetland buffers required under Policy 1.10.g are primarily located within the Conservation Future Land Use category.

ENVIRONMENTAL CONDITIONS & SITE SUITIBILITY ANALYSIS

Map 4. Environmental Features

Wetlands

According to the wetlands delineation provided by the applicant there are wetlands on the subject property.

Evaluation: Applicable standards in the City's Comprehensive Plan, Land Development Regulations, and Suwannee River Water Management District (SRWMD) regulations would apply to those areas identified as wetlands. The vast majority of wetlands and the associated required buffer areas are being proposed to be placed within the Conservation Future Land Use designation; therefore, there are no issues related to wetland protection.

Strategic Ecosystems

Strategic Ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation: The subject property is not located within a Strategic Ecosystem. The subject property is adjacent to the Hague Flatwoods Strategic Ecosystem. The GRU Deerhaven Generating Station is also located within this Strategic Ecosystem. The

impacts from the proposed Future Land Use Map Amendment are anticipated to not be significant, therefore, the development will have no impact upon any Strategic Ecosystem(s) identified within the ecological inventory report.

Regulated Plant & Animal Species

The subject property is not known to contain any species identified as endangered, threatened, or of special concern, other than those described below. The Florida Natural Areas Inventory (FNAI) has identified areas throughout the State of Florida which may contain good quality natural communities. This data layer is known as the Potential Natural Areas (PNA) data layer, and identifies privately owned lands that are not managed or listed for conservation purposes. These areas were delineated by FNAI scientific staff through interpretation of natural vegetation from 1988-1993 FDOT aerial photographs and from input received during Regional Ecological Workshops held for each regional planning council. These workshops were attended by experts familiar with natural areas in the region. Potential Natural Areas were assigned ranks of Priority 1 through Priority 5 based on size, perceived quality, and type of natural community present. The areas included in Priority 5 are exceptions to the above criteria. These areas were identified through the same process of aerial photographic interpretation and regional workshops as the PNA 1 through 4 ranked sites, but do not meet the standard criteria.

Evaluation: No species identified as endangered, threatened, or of special concern are known to exist on the subject property, other The subject property contains an amount of Priority 3 lands under the Florida Natural Areas inventory. A migratory bird species was observed on site (Killdeer). A state regulated plant, Florida shiny-pod (*Matelea floridana)* was observed within the Conservation land use area. As a condition of the associated Planned Development rezoning application, conditions have been added that would require special consideration for these. If any other regulated plant or animal species is identified during development, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and the Land Development Regulations.

Soil Survey

Each soil type found on the subject property is identified below. The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff). There are four hydrologic groups: A, B, C, and D. "Group A" soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. "Group D" soils have very lower infiltration rates and therefore a higher runoff potential.

There are five (5) soil types found on the subject property:

Soil Type	Hydrologic Group	Drainage Class	Dwellings without basements / small commercial buildings	% of Subject Property (may not total to 100% due to rounding)
Kanapaha sand, 0 to 5 percent slopes	A/D	Poorly drained	Very limited/ Very limited	12.3
Millhopper sand, 0 to 5 percent slopes	A	Moderately well drained	Not limited/ Not limited	4.2
Pomona sand, 0 to 2 percent slopes	A/D	Poorly drained	Very limited/ Very limited	19.7
Floridana sand, frequently ponded, 0 to 2 percent slopes	C/D	Very poorly drained	Very limited/ Very limited	2.3
Mulat sand	C/D	Poorly drained	Very limited/ Very limited	59.4

Evaluation: The soil types located within the subject property pose limitations for development of residential and small commercial buildings. Special engineering, drainage, soil reclamation and foundation design will be required to overcome site limitations.

Flood Potential

Panels 12001C0282E of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated November 2, 2018, indicates that the subject property contains areas with Flood Zone "X" designations (areas determined to be outside of the 500-year floodplain), Flood Zone "A" (areas determined to be in the 500-year floodplain for which base flood elevations have not been established, and Flood Zone "AE" (areas determined to be in the 500-year floodplain for which base flood elevations have been established).

Evaluation: Portions of the subject property contains areas located within Special Flood Hazard Areas (Areas A and AE). Compliance with applicable requirements of the City's Land Development Regulations will be required as a part of any future proposed development.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations. The

subject property is located within an area where sinkholes may potentially allow hydrologic access to the Floridan Aquifer System, however, best available data indicates that no sinkholes or known indicators of sinkhole activity are located on the subject property.

Evaluation: GIS data available from Alachua County does not indicate any karst sensitive areas on the subject property. If any environmentally sensitive lands are found prior to the development of the site, applicable protection standards must be followed for any development within those environmentally sensitive lands.

Wellfield Protection Zone

Policy 7.2.1 of the Future Land Use Element of the Comprehensive Plan establishes a 500 foot radial buffer around city-owned potable water well.

Evaluation: The subject property is not currently located within a City of Alachua wellhead protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the Comprehensive Plan, therefore, there are no issues related to wellfield protection.

Historic Structures and Markers

The subject property does not contain any historic structures or markers as determined by the State of Florida and the Alachua County Historic Resources Inventory.

Evaluation: There are two historic structures located on the subject property, as indicated in the Florida Master Site File. Placement on the Florida Master Site File does not necessarily indicate historic significance, but rather that the structure is documented to be greater than 50 years old. The Site file is not a state historic registry.

COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

REZONING STANDARDS

Section 2.4.2(E)(1) of the Land Development Regulations ("LDRs") establishes standards with which all rezoning applications must be found to be compliant. Staff's evaluation of the application's compliance with the applicable standards of Section 2.4.2(E)(1) is provided below.

(a) ***Consistent with Comprehensive Plan*** – The proposed amendment is consistent with and furthers the goals, objectives, and policies of the Comprehensive Plan.

Evaluation: An analysis of the application's consistency with the Comprehensive Plan has been provided in this report.

(b) ***Consistent with Ordinances*** – The proposed amendment is not in conflict with any portion of these LDRs or any of the City Code of Ordinances.

Evaluation: An analysis of the application's compliance with the LDRs has been provided in this report. Please reference those sections of this report for further analysis of compliance with the City's LDRs.

(c) *Logical Development Pattern* – The proposed amendment would result in a logical and orderly development pattern.

Evaluation: The proposed amendment would be adjacent to existing residential and commercial uses.

(d) *Pre-Mature Development* – The proposed amendment will not create premature development in undeveloped or rural areas.

Evaluation: Lands in the vicinity to the north, east, west, and south are all developed.

(e) *Incompatible with Adjacent Lands* – The uses permitted by the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands.

Evaluation: The uses permitted by the PD-R Zoning and PD-Comm are compatible with adjacent lands or uses or appropriate buffer and separation are provided. The residential lands to the south are separated by Turkey Creek and the associated buffer required. In locations where potential commercial and existing residential uses exist, a 25' Type C landscape buffer is provided. Furthermore, certain uses are not permitted in Development Area B, which is adjacent to proposed single family residential areas. These uses include automotive and light industrial uses.

(f) *Adverse Effect on Local Character* – The proposed amendment will not adversely effect the character of the general area where it is proposed to be located by creating excessive traffic, density and/or intensities of use, building height and bulk, noise, lights, or other physical effects or nuisances.

Evaluation: The proposed amendment would permit single-family residential uses near existing residential development. The proposed amendment would permit Commercial uses along US Highway 441 and NW 43rd Street, both of which are existing major arterials. The proposed PD Ordinance limits the number of gasoline sales in the PD-Comm area to 1 (one). The proposed PD Ordinance limits the amount of drive through restaurant space to 15,000 square feet.

(g) *Not Deviate from Pattern of Development* – The uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by the surrounding zone districts) of the area where the proposed amendment is located.

Evaluation: The typical development pattern within the City of Alachua consists of commercial uses located along US 441 with decreasing density of residential uses as development moves away from the US 441 corridor. The proposed land use

designations support this development pattern and provide adequate protections for wetlands and surface water bodies located on the subject property.

(h) *Encourage Sprawl* – The proposed amendment will not encourage urban sprawl, either by resulting in strip or ribbon commercial development, leap-frog development or low density single dimensional development.

Evaluation: Chapter 163.3164(51), Florida Statues, defines "urban sprawl" as, "a development pattern characterized by low density, automobile-dependent development with either a single use or multiple uses that are not functionally related, requiring the extension of public facilities and services in an inefficient manner, and failing to provide a clear separation between urban and rural uses."

The subject property is located adjacent to developed residential and commercial properties.

The subject property is located proximate to existing water and wastewater facilities, which will be extended to connect the developed property.

The uses proposed by the PD-R and PD-COMM are consistent with surrounding area, which consists primarily of residential and commercial/ industrial uses.

(i) *Spot Zoning* – The proposed amendment will not result in the creation of an isolated zone district unrelated to adjacent and surrounding zone districts (spot zoning).

Evaluation: The lands to the south, north, and west are all developed residential areas; the lands to the east are non-residential (commercial and major utility). The proposed zoning application provides for commercial uses along US 441 and decreasing residential density as development moves away from US 441.

(j) *Public Facilities* – The proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, storm water management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development.

Evaluation: The PD Utility plan indicates that the City's water and wastewater lines will be extended to serve the subject property. Additionally, GRU has existing utilities in the immediate vicinity.

(k) *No Adverse Effect on the Environment* – The proposed amendment would not result in significantly adverse impacts on the natural environment, including but not limited to water, air, noise, storm water management, wildlife, vegetation, wetlands, and the natural functioning of the environment.

Evaluation: The applicant has submitted a letter which delineates the location of wetland areas in accordance with Chapter 62-340, Florida Administrative Code. In addition, the PD Master Plan indicates the location of the proposed wetland buffer. The proposed wetland buffer is consistent with the applicable wetland protection standards established in the City's Comprehensive Plan (Objective 1.10 of the Conservation and Open Space Element) and in the Land Development Regulations (Section 6.9.5.). For more information please see the Environmental Conditions and Site Suitability Analysis found above.

PLANNED DEVELOPMENT STANDARDS

Section 3.6.2(A)(1) of the Land Development Regulations (LDRs) establishes standards with which all Planned Development applications must be found to be compliant. The application has been reviewed for compliance with the standards of Section 3.6.2(A)(1). An evaluation and findings of the application's compliance with the standards of Section 3.6.2(A)(1) is provided below.

(1) *Master Plan*
The PD Master Plan:

(a) Identifies the general location of land uses within individual development areas or development pods and the mix of land uses;

Evaluation: The PD Master Plan identifies six (6) development areas: Commercial (A), Mixed- Use (B), Single Family Residential (C), Circulation (D), Common Area/ Open Space (E), Single Family Residential (F). The allowable uses within each development area have been defined on the PD Master Plan, and the permitted land uses are stated on the PD Master Plan.

(b) Calculates the number, type, and mix of land uses, including the total number of residential units, residential densities, and non-residential intensities within each development area or development pods and the total number, type, and mix of land uses for the entire PD Master Plan;

Evaluation: The PD Master Plan identifies the number, type, and permitted land uses, including the total number of residential units and nonresidential intensities for the Planned Development and each development area.

(c) Identifies the general location of open space;

Evaluation: The applicant has shown the location of open space by a identifying Stormwater/Open Space area on the PD Master Plan.

(d) Identifies the location of environmentally-sensitive lands, wildlife habitat, and stream corridors;

Evaluation: The applicant has submitted a map which delineates the location of wetland areas in accordance with Chapter 62-340, Florida Administrative Code.

In addition, the PD Master Plan indicates the location of the proposed wetland buffer. This area is marked as Area E in the PD Master Plan. The proposed wetland buffer is consistent with the applicable wetland protection standards established in the City's Comprehensive Plan (Objective 1.10 of the Conservation and Open Space Element) and in the Land Development Regulations (Section 6.9.5.). For more information please see the Environmental Conditions and Site Suitability Analysis found above.

(e) Identifies the on-site transportation circulation system including arterial and collector roads, existing or projected transit corridors, and pedestrian and bicycle pathways;

Evaluation: The PD Master Plan identifies the location of the on-site transportation circulation system and connection points to external roadways. No roads within the proposed development are classified as arterial or collector roads.

(f) Identifies on-site potable water and wastewater facilities; and

Evaluation: The PD Master Plan identifies the location of proposed on-site potable water and wastewater facilities, and the location of connection to off-site wastewater facilities.

(g) Identifies the general location of all public facility sites serving the development, including transportation, potable water, wastewater, parks, fire, police, EMS, stormwater, solid waste, and schools.

Evaluation: The applicant has identified on the PD Master Plan the location of internal circulation. The PD Master Plan identifies the general location of stormwater management facilities serving the development. The development will utilize existing public facilities for parks, fire, police, EMS, and schools, as noted on the PD Master Plan.

(2) *Consistency with the Comprehensive Plan*

The PD zone district designation and the PD Master Plan is consistent with the Comprehensive Plan.

Evaluation: An analysis of the application's consistency with the Comprehensive Plan has been provided in this report.

(3) *Compatibility with Surrounding Residential Areas*

Development along the perimeter of a PD District is compatible with adjacent existing or proposed future development. In cases where there are issues of compatibility, the PD Master Plan shall provide for transition areas at the edges of the PD District that provide for appropriate buffering and/or ensure a complimentary character of uses. Complimentary character shall be identified based on densities/intensities; lot size and dimensions; building height; building mass and scale; hours of operation; exterior lighting; and siting of service areas.

Evaluation: The uses permitted by the proposed PD-R and PD-Comm zoning district are comparable to those presently located on nearby properties. Areas to the west and south of the subject property are developed with residential uses. The proposed Development Areas adjacent to existing development have been so designed so as to provide complimentary character. The proposed PD Ordinance limits the number of gasoline sales in the PD-Comm area to 1 (one). The proposed PD Ordinance limits the amount of drive through restaurant space to 15,000 square feet.

(4) *Development Phasing Plan*

If there are phases of development proposed for the PD, a development phasing plan shall be provided for the PD Master Plan that identifies the general sequence or phases in which the land is proposed to be developed, including how residential and non-residential development will be timed, how infrastructure and open space will be provided and timed, and how development will be coordinated with the City's capital improvements program. The phasing plan shall be established at the time of approval of the PD Master Plan. It is permissible for a development phasing plan to include only one phase.

Evaluation: The proposed development may be constructed in one or more phases. Each phase would be required to meet the conditions created by the Planned Development Ordinance, the PD Master Plan, and applicable standards of the City's Comprehensive Plan and Land Development Regulations. The PD Master Plan shall be valid for a period of ten years. The PD Ordinance requires that no more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property, and that a minimum of 25,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district. This condition is intended to ensure a mix of uses as envisioned by the PD-COMM zoning objective.

(5) *Conversion Schedule*

The PD Master Plan may include a conversion schedule that identifies the range of conversion that may occur between different types of residential uses and between different types of non-residential uses (i.e., residential to residential, or non-residential to non-residential) within the PD Master Plan. These conversions may occur within development areas and between development areas, as long as they occur within the same scheduled phase of development in the development phasing plan, and are consistent with established ranges of conversion set down in the conversion schedule.

Evaluation: Use areas may be adjusted by up to 10% during final PD plan approval, but proposed uses must conform to those permitted in the allowable use table in the PD Master Plan.

(6) *Public Facilities*

(a) The PD Master Plan shall include a transportation component that demonstrates there is or will be adequate capacity concurrent with impacts of development on the City's road system to accommodate the development proposed in the PD Master Plan.

Evaluation: The PD Master Plan identifies the location of transportation facilities within the project. In addition, the PD Master Plan calculates the number of trips which would be generated by the proposed development and identifies the project's impact on the two (2) roadway segments affected by this project and monitored for concurrency (US 441 (from MPO to CR25A East) and US 441 (from CR25A East to SR235).

(b) The PD Master Plan shall include a potable water and wastewater component that demonstrates adequate capacity for potable water and wastewater is available or will be available concurrent with impacts of development at the time development occurs to accommodate the development proposed in the PD Master Plan.

Evaluation: The PD Master Plan requires on-site potable water and wastewater facilities to be in public right-of-ways and/or dedicated easements along internal right-of-ways. In addition, the PD Master Plan identifies the project's impact on the water and wastewater systems. This analysis indicates that the project's impacts to potable water and sanitary sewer facilities is acceptable, and would not degrade the Level of Service (LOS) Standard for potable water and sanitary sewer facilities to an unacceptable level. A final determination of facility capacity availability and a concurrency reservation will be made during the final subdivision plat review stage.

(c) The PD Master Plan shall include a parks component that demonstrates that adequate parks and recreation facilities are available or will be available concurrent with impacts of development to accommodate the development proposed in the PD Master Plan.

Evaluation: The PD Master Plan identifies the project's impact on the recreational facilities. This analysis indicates that the project's impact to recreational facilities is acceptable, and would not degrade the Level of Service (LOS) Standard for recreational facilities to an unacceptable level. A final determination of facility capacity availability and a concurrency reservation will be made during the final subdivision plat review stage.

(d) The PD Master Plan shall include a solid waste component that demonstrates that adequate capacity for solid waste is available or will be available concurrent with impacts of development to accommodate the development proposed in the PD Master Plan.

Evaluation: The PD Master Plan identifies the project's impact on the solid waste facilities. This analysis indicates that the project's impact to solid waste facilities

is acceptable, and would not degrade the Level of Service (LOS) Standard for solid waste facilities to an unacceptable level. A final determination of facility capacity availability and a concurrency reservation will be made during the final subdivision plat review stage.

(e) The PD Master Plan shall include a stormwater component that demonstrates that adequate capacity for treatment of stormwater runoff is available or will be available concurrent with impacts of development to accommodate the development proposed in the PD Master Plan.

Evaluation: The applicant has identified the location of development areas where stormwater facilities on the PD Master Plan. All stormwater management facilities shall be designed to comply with the regulations of the City of Alachua and Suwannee River Water Management District (SRWMD). Stormwater management areas shall not be permitted within Development Area E.

(7) *Planned Development Agreement*

Concurrent with the approval of the adopting ordinance for the PD zone district designation and the PD Master Plan, a PD Agreement shall be established binding the PD to any conditions placed in the adopting ordinance and PD Plan. The PD Agreement shall include, but not be limited to:

(a) The PD Master Plan including any PD Standards.

Evaluation: The PD Master Plan will be included as an exhibit to the PD Agreement. PD Standards and conditions of the development will be incorporated into the PD Ordinance (a draft of which is attached to this report in Exhibit "B"). The PD Ordinance will be attached as an Exhibit to the PD Agreement.

(b) Conditions related to the approval of the PD Master Plan.

Evaluation: Conditions related to the approval of the PD Master Plan will be incorporated into the PD Ordinance which will be attached as an Exhibit to the PD Agreement.

(c) Conditions related to the form and design of development in the PD.

Evaluation: Conditions related to the form and design of development in the PD are provided in the PD Master Plan, which will be included as an Exhibit to the PD Agreement.

(d) Provisions addressing how transportation, potable water, wastewater, stormwater management, park, and other public facilities will be provided to accommodate the development proposed for the PD Master Plan, and if phased, how public facilities will be phased accordingly.

Evaluation: Provisions addressing how transportation, potable water, wastewater, stormwater management, parks, and other public facilities will be

provided to accommodate the development are provided in the PD Master Plan as well as in the conditions recommended by Staff, attached as Exhibit "A" to this report. The conditions of the development will be incorporated into the PD Ordinance. These documents will be included as Exhibits to the PD Agreement.

(e) Provisions related to environmental protection and monitoring.

Evaluation: The applicant has submitted a map which delineates the location of wetland areas in accordance with Chapter 62-340, Florida Administrative Code. In addition, the PD Master Plan indicates the location of the proposed wetland buffer. The proposed wetland buffer is consistent with the applicable wetland protection standards established in the City's Comprehensive Plan (Objective 1.10 of the Conservation and Open Space Element) and in the Land Development Regulations (Section 6.9.5.). For more information please see the Environmental Conditions and Site Suitability Analysis found above.

Further Conditions 3, 4, 5, 6, 7 and 8 all provide for provisions related to environmental protection. These provisions include the applicant providing a listed species and habitat survey as part of any Final PD Plan (Condition 3), the developer removing and destroying all Category I and II exotic plants species and assuring a long term exotic plants management plan is in place (Conditions 6 and 7), prohibiting the planting of any invasive plant species (Condition 8), and ensuring that the development utilizes best management practices to avoid flooding and erosion (Condition 9).

(f) Provisions addressing concurrency compliance requirements.

Evaluation: Concurrency will be reevaluated at the time of review of each Final PD Plan and final subdivision plat.

(g) Any other provisions the City Commission determines is relevant and necessary to implement the terms and conditions of the PD Master Plan and any PD terms and conditions statements.

Evaluation: Staff's recommended conditions are provided in Exhibit "A" to this report.

PLANNED DEVELOPMENT – RESIDENTIAL (PD-R) STANDARDS

Section 3.6.3(A) of the Land Development Regulations (LDRs) establishes additional standards for the Planned Development – Residential (PD-R) district. The application has been reviewed for compliance with the standards of the aforementioned section. Staff's evaluation of the application's compliance with the applicable standards of Section 3.6.3(A) is provided below.

(1) *Minimum Area*

A PD-R District shall be a minimum of 10 acres in area. The City Commission may waive the minimum size requirement based on a finding that creative site planning through

zoning to a PD-R District is necessary to address a physical development constraint, protect sensitive natural areas, or promote a community goal when more conventional development or subdivision would be difficult or undesirable given the constraints on development.

Evaluation: The proposed PD-R district is approximately 79.52 acres in area, exceeding the minimum 10 acre size requirement.

(2) *Uses*

The uses allowed in the PD-R District are identified in Table 4.1-1, *Table of Allowed Uses*. Allowed uses are subject to any use regulations applicable to the PD-R District.

Evaluation: The allowable uses are identified on the PD Master Plan, and comply with the uses allowed within the PD-R district as identified in Table 4.1-1.

(3) *Densities/Intensities*

The densities for residential development and the intensities for non-residential development for the PD Master Plan and PD-R District designation shall be established in the PD Master Plan, and shall be consistent with the Comprehensive Plan. Densities and intensities may exceed that allowed in the base zone district(s) being replaced by the PD designation.

Evaluation: The density of the residential development area is established on the PD Master Plan. The density identified on the PD Master Plan is consistent with the proposed Moderate Density Residential Future and Conservation Land Use Map Designation concurrently proposed with this amendment.

(4) *Dimensional Standards*

The dimensional standards of the underlying base zone district being replaced by the PD-R District shall be incorporated into the PD Master Plan and apply to each development area of the PD-R District unless they are modified in ways that are consistent with the general intent and goals for development of the PD-R District and the scale and character of development in the City. Dimensional standards shall include the following:

(a) *Minimum Dimensional Requirements*

The minimum lot area, minimum lot width, minimum setback, maximum lot coverage, and maximum height for development.

Evaluation: The minimum lot area, minimum lot width, minimum setbacks, maximum lot coverage, and maximum height for development within each development area are identified on the PD Master Plan.

(b) *Setbacks from Adjoining Residential Uses*

Minimum setbacks or buffers from adjoining residential development or zone districts.

Evaluation: The PD Master Plan establishes the minimum setbacks for development within the subject property. Turkey Creek and the associated wetland buffer provide for adequate separation from existing residential uses to the west, south, and north.

(5) *Development Standards*

Unless otherwise specifically modified by a PD Master Plan, development in a PD-R District shall comply with the applicable standards Article 6: *Development Standards,* and Article 7: *Subdivision Standards*. All modifications to a development standard in Article 6 or Article 7 shall be consistent with this section, and shall be included as a part of the PD Master Plan.

(a) *General Development Standards*

Table 3.6-1, *Development Standards Applicable in the PD-R District*, specifies the development standards applicable to development in the PD-R District, and the procedure for modifying a development standard.

TABLE 3.6-1: DEVELOPMENT STANDARDS APPLICABLE IN THE PD-R DISTRICT

Development Standard	Procedure for Modification [1]
Off-Street Parking and Loading (Section 6.1)	Inclusion in a Master Parking Plan
Landscape/Tree Protection (Section 6.2)	Inclusion in an Alternative Landscaping Plan
Exterior Lighting (Section 6.4)	Inclusion in a Master Lighting Plan
Signage (Section 6.5)	Inclusion in a Master Sign Plan
Open Space (Section 6.7)	Modifications prohibited
Environmental Protection (Section 6.9)	
Concurrency Management (Section 2.4.14)	
NOTES: [1] Development standards shall only be modified in ways that are consistent with the general intent and purpose for the PD-R District.	

Evaluation: The applicant has not proposed any modifications to the development standards identified in Table 3.6-1. At the time of each Final PD Plan, the applicant shall be required to comply with all applicable standards of Article 6, Development Standards.

(b) *Public Facilities Standards*

The PD Master Plan shall ensure that impacts from the development are addressed for the following public facilities:

Potable Water

The PD Master Plan shall establish the general location of on-site potable water facilities and how they will connect to the City's potable water system consistent with City laws, and how dedication of land, easements, and/or on-site construction of all potable water facilities/ improvements will occur in a manner that complies with City laws.

Wastewater

The PD Master Plan shall establish the general location of on-site wastewater facilities and how they will connect to the City's or other wastewater lines and mains and sewer interceptor lines consistent with City laws, and how dedication of land, easements, and/or on-site construction of all wastewater facilities/ improvements will occur in a manner that complies with City laws.

Streets

The PD Master Plan District shall establish the design of public streets within the PD-R in ways that comply with all applicable City standards, except that right-of-way, pavement widths, street widths, required materials, turning radii, and other design standards may be modified or reduced by the City Commission where it is found that:

a. The reduction or modification is necessary as a traffic-calming measure;

b. The PD Master Plan provides for separation of vehicular, pedestrian, and bicycle traffic;

c. Access for emergency service vehicles is not substantially impaired;

d. Adequate off-street parking is provided for the uses proposed; and

e. Adequate space for public utilities is provided within the right-of-way.

Stormwater

The PD Master Plan District shall establish the design of a stormwater management system within the PD-R in ways that comply with all applicable City standards.

Other

The PD Master Plan shall establish the responsibility of the landowner/developer for providing right-of-way and easements and for constructing on-site facilities for all other infrastructure located on the site of the proposed PD-R District, including but not limited, electrical utility lines, telephone lines, cable TV lines, or the underground conduit for such features. The PD Master Plan shall also establish the responsibility of the landowner/developer to make any other improvements as required by City ordinances, to guarantee construction of all required improvements, and, if requested by the City, to dedicate these improvements to the City in a form that complies with City laws. The PD Master Plan shall also specify the ownership, operation, and maintenance provisions for all on-site facilities not dedicated to the City.

Evaluation: As demonstrated within this report, the applicant has sufficiently addressed public facility standards as provided in Section

3.6.3(A)(5)(b)(i)-(iv). The applicant has requested modifications to Article 7 requirements for required subdivision improvements.

Land Development Regulations Section	Summary of Required Improvement Standard	Summary of Proposed Improvement Standard
7.3.1 (B)(1)(c)(1)	24 foot wide wearing surface	20 foot wide wearing surface
7.2.3 (B)	Maximum block length of 600'	Where block length of 1000' is exceeded a midblock crossing such as a speed table or bulbout must be provided. See condition 14.a.i of proposed PD Ordinance.
7.2.5 (I)(3)	Minimum curb radii of 25'	Minimum curb radii of 15'

The PD Master Plan provides a note which contains the provisions required by this section, and indicates all on-site facilities not dedicated to the City shall be maintained by a property-owner's association.

PLANNED DEVELOPMENT – COMMERCIAL (PD-COMM) STANDARDS

Section 3.6.3(D) of the Land Development Regulations (LDRs) establishes additional standards for the Planned Development –Commercial (PD-Comm) district. The application has been reviewed for compliance with the standards of the aforementioned section. Staff's evaluation of the application's compliance with the applicable standards of Section 3.6.3(D) is provided below.

(1) Minimum area. A PD-COMM district shall be a minimum of ten acres in area. The City Commission may waive the minimum size requirement based on a finding that creative site planning through zoning to a PD-COMM district is necessary to address a physical development constraint, protect sensitive natural areas, or promote a community goal when more conventional development or subdivision would be difficult or undesirable given the constraints on development.

Evaluation: The proposed PD-Comm district is approximately 41.55 acres in area, exceeding the minimum 10 acre size requirement.

(2) ***Uses***

The uses allowed in the PD-COMM district are identified in Table 4.1-1, Table of Allowed Uses. Allowed uses are subject to any use regulations applicable to the PD-COMM district. A mix of retail and office with moderate and higher density residential uses above street levels is encouraged.

Evaluation: The allowable uses are identified on the PD Master Plan, and comply with the uses allowed within the PD-COMM district as identified in Table 4.1-1. The PD Ordinance requires that no more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property, and that a minimum of 25,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district. This condition is intended to ensure a mix of uses as envisioned by the PD-COMM zoning objective.

(3) *Densities/Intensities*

The densities for residential development and the intensities for nonresidential development for the PD Master Plan and PD-COMM district designation shall be established in the PD Master Plan, and shall be consistent with the Comprehensive Plan. Densities and intensities may exceed that allowed in the previously-existing base zoning district being replaced by the PD designation.

Evaluation: The number of residential units and floor area of non-residential development is established on the PD Master Plan. The density identified on the PD Master Plan is consistent with the proposed High Density Residential Future Land Use Map Designation concurrently proposed with this amendment.

(4) *Dimensional Standards*

The dimensional standards of the underlying base zone district being replaced by the PD-COMM district shall be incorporated into the PD Master Plan and apply to each development area of the PD-COMM district unless they are modified in ways that are consistent with the general intent and goals for development of the PD-COMM district and the scale and character of development in the City. Dimensional standards shall include the following:

(a) *Minimum Dimensional Requirements*

The minimum lot area, minimum lot width, minimum setback, maximum lot coverage, and maximum height for development.

Evaluation: The minimum lot area, minimum lot width, minimum setbacks, maximum lot coverage, and maximum height for development within each development area are identified on the PD Master Plan.

(b) *Setbacks from Adjoining Residential Uses*

Minimum setbacks or buffers from adjoining residential development or zone districts.

Evaluation: The PD Master Plan establishes the minimum setbacks for development within the subject property. Further, a 25' Type C landscaped setback is propose where lots adjoin adjacent existing residential development.

Additionally condition 1 of the PD Ordinance limit certain uses, including automotive uses, from being located within Development Area B.

(5) *Development Standards*

Unless otherwise specifically modified by a PD Master Plan, development in a PD-COMM district shall comply with the applicable standards Article 6, Development Standards. All modifications to a development standard in Article 6 shall be consistent with this section, and shall be included as a part of the PD Master Plan.

(a) *General Development Standards*

Table 3.6-3, *Development Standards Applicable in the PD-COMM District*, specifies the development standards applicable to development in the PD-COMM district, and the procedure for modifying a development standard:

TABLE 3.6-1: DEVELOPMENT STANDARDS APPLICABLE IN THE PD-COMM DISTRICT	
Development Standard	**Procedure for Modification [1]**
Off-Street Parking and Loading (Section 6.1)	Inclusion in a Master Parking Plan
Landscape/Tree Protection (Section 6.2)	Inclusion in an Alternative Landscaping Plan
Exterior Lighting (Section 6.4)	Inclusion in a Master Lighting Plan
Signage (Section 6.5)	Inclusion in a Master Sign Plan
Open Space (Section 6.7)	Modifications prohibited
Environmental Protection (Section 6.9)	
Concurrency Management (Section 2.4.14)	
NOTES: [1] Development standards shall only be modified in ways that are consistent with the general intent and purpose for the PD-Comm District.	

Evaluation: The applicant has not proposed any modifications to the development standards identified in Table 3.6-1. At the time of each Final PD Plan, the applicant shall be required to comply with all applicable standards of Article 6, Development Standards.

(b) *Public Facilities Standards*

The PD Master Plan shall ensure that impacts from the development are addressed for the following public facilities:

Potable Water

The PD Master Plan shall establish the general location of on-site potable water facilities and how they will connect to the City's potable water system consistent with City laws, and how dedication of land, easements, and/or on-site construction of all potable water facilities/ improvements will occur in a manner that complies with City laws.

Wastewater

The PD Master Plan shall establish the general location of on-site wastewater facilities and how they will connect to the City's or other wastewater lines and mains and sewer interceptor lines consistent with City laws, and how dedication of land, easements, and/or on-site construction of all wastewater facilities/ improvements will occur in a manner that complies with City laws.

Streets

The PD Master Plan District shall establish the design of public streets within the PD-R in ways that comply with all applicable City standards, except that right-of-way, pavement widths, street widths, required materials, turning radii, and other design standards may be modified or reduced by the City Commission where it is found that:

f. The reduction or modification is necessary as a traffic-calming measure;

g. The PD Master Plan provides for separation of vehicular, pedestrian, and bicycle traffic;

h. Access for emergency service vehicles is not substantially impaired;

i. Adequate off-street parking is provided for the uses proposed; and

j. Adequate space for public utilities is provided within the right-of-way.

Stormwater

The PD Master Plan District shall establish the design of a stormwater management system within the PD-R in ways that comply with all applicable City standards.

Other

The PD Master Plan shall establish the responsibility of the landowner/developer for providing right-of-way and easements and for constructing on-site facilities for all other infrastructure located on the site of the proposed PD-R District, including but not limited, electrical utility lines, telephone lines, cable TV lines, or the underground conduit for such features. The PD Master Plan shall also establish the responsibility of the landowner/developer to make any other improvements as required by City ordinances, to guarantee construction of all required improvements, and, if requested by the City, to dedicate these improvements to the City in a form that complies with City laws. The PD Master Plan shall also specify the ownership, operation, and maintenance provisions for all on-site facilities not dedicated to the City.

Evaluation: As demonstrated within this report, the applicant has sufficiently addressed public facility standards as provided in Section 3.6.3(D)(5)(b)(i)-(iv). The applicant has requested modifications to Article 7 requirements for required subdivision improvements.

Land Development Regulations Section	Summary of Required Improvement Standard	Summary of Proposed Improvement Standard
7.3.1 (B)(1)(c)(1)	24 foot wide wearing surface	20 foot wide wearing surface
7.2.3 (B)	Maximum block length of 600'	Where block length of 1000' is exceeded a midblock crossing such as a speed table or bulbout must be provided. See condition 14.a.i of proposed PD Ordinance.
7.2.5 (I)(3)	Minimum curb radii of 25'	Minimum curb radii of 15'

The PD Master Plan provides a note which contains the provisions required by this section, and indicates all on-site facilities not dedicated to the City shall be maintained by a property-owner's association.

PUBLIC FACILITIES IMPACT

The analysis of each public facility provided below represents an analysis of the gross change in impacts generated by the proposed FLUM Designation. The traffic impact data are obtained from a traffic concurrency report drafted by Buckholz Traffic.

At present, the total impacts generated by the amendment are acceptable and are not anticipated to degrade the Level of Service (LOS) of any public facility. If development is proposed in the future, the applicant will be required to provide a comprehensive analysis of the impacts generated by such development upon public facilities. Facility capacity must be available to support the proposed development prior to the issuance of a final development order.

Per Section 2.4.14, amendments to the Future Land Use Map of the Comprehensive Plan are not preliminary development orders. Prior to any preliminary development order, the applicant will need to demonstrate how any deficiencies will be addressed. No final development order

can be issued if the development would result in a deficiency for any public facility monitored for concurrency.

Traffic Impact

Table 3. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2, 3]	Segment Description	Lanes	Functional Classification	Area Type	LOS
3 (4127)	US 441 (from MPO Boundary to CR 25A East Intersection)	4/D	Principle Arterial	Urban Trans	D
4 (106)	US 441 (from CR25A East Intersection to SR235)	4/D	Principle Arterial	Urban Trans	D

1 *Source: City of Alachua Comprehensive Plan, Traffic Circulation Element.*
2 *For developments generating 1,000 trips or greater, affected roadway segments are identified as all those wholly or partially located within · mile of the development's ingress/egress, or to the nearest intersecting major street, whichever is greater, and all roadway segments for which the proposed development's impacts are 5% or greater on the Maximum Service Volume (MSV) of the roadway [Section 2.4.14(H)(2)(b) of the LDRs].*
3 *FDOT roadway segment number shown in parenthesis. For the purposes of concurrency management, COA Comprehensive Plan segments that make up a portion of a larger FDOT roadway segment will be evaluated together when determining post development roadway capacity*

Table 4. Potential Trip Generation

	Land Use	AADT (Enter/Exit)	AM Peak Hour (Enter/Exit)	PM Peak Hour (Enter/Exit)
Proposed FLUM Amendment	Residential [1]	2,790 (1,395/1,395)	266 (66/200)	133 (84/49)
	Commercial[1]	4,654 (2,327/2,327)	147 (91/56)	412 (198/214)
Potential Trips		**7,444 (3,722/3,722)**	**413 (157/256)**	**545 (282/263)**

1 *Buckholz Concurrency Study, October 2021*

Table 5. Potential Impact of Affected Comprehensive Plan Roadway Segments

Traffic System Category	3 US 441 (from MPO Boundary to CR 25A East Intersection) [1]	4 US 441 (from CR25A East Intersection to SR235)[1]
Maximum Service Volume[2]	43,000	45,700
Existing Traffic[3]	25,536	20,435
Reserved Trips[4]	43	4,323
Available Capacity[4]	19,421	20,942
Potential Impact Generated by Proposed Comprehensive Plan Amendment[5]	7,444	1,712
Residual Capacity after Proposed Comprehensive Plan Amendment[6]	**11,977**	**19,230**
PM Peak Hour Traffic Analysis	3 US 441 (from MPO Boundary to CR 25A East Intersection) [1]	4 US 441 (from CR25A East Intersection to SR235)[1]
Maximum Service Volume[2]	3,870	4,110
Existing Traffic[3]	2,118	1,941
Reserved Trips[4]	5	298
Available Capacity[4]	1,747	1,871
Potential Impact Generated by Proposed Comprehensive Plan Amendment [5]	545	109
Residual Capacity after Proposed Comprehensive Plan Amendment[6]	**1,202**	**1,762**

1 *FDOT roadway segment number shown in parenthesis. For the purposes of concurrency management, COA Comprehensive Plan segments that make up a portion of a larger FDOT roadway segment will be evaluated together when determining post development roadway capacity.*
2 *AADT & Peak Hour MSVs calculated using LOSPLAN 2012. County Facilities reflect a 10 percent reduction in the MSV calculated within LOSPLAN 2012 as set forth in the Generalized Tables for AADT / Peak Hour Volumes, FDOT 2018 Q/LOS Handbook.*
3 *Florida Department of Transportation, District Two, Level of Service Reporting Tool 2019, accessed April 7, 2021*

4 *Source: City of Alachua January 2022 Development Monitoring Report.*
5 *Source: Buckholz Traffic Concurrency Study, October 2021.*
6 *The application is for a Preliminary Development Order. Concurrency will not be reserved.*

Evaluation: As shown in Table 5, affected segments 3 and 4 will not be deficient after the proposed comprehensive plan amendment. Concurrency and impacts to the City's transportation network will be reevaluated when any application for a final development order (site plan or final plat).

Potable Water Impacts

Table 6. Potable Water Impacts

System Category	Gallons Per Day
Current Permitted Capacity*	2,300,000
Less Actual Potable Water Flows*	1,300,250
Reserved Capacity*	200,907
Potential Potable Water Demand from Proposed Amendment **	214,760
Residual Capacity	**584,083**
Percentage of Permitted Design Capacity Utilized	**74.61%**

Sources:
** City of Alachua January 2022 Development Monitoring Report*
***City of Alachua Comprehensive Plan Potable Water Level of Service of 275 gallons/du/ day x 514 units + .15 gallons/ day/ square foot non-residential x 489,400 square feet*

Evaluation: The proposed amendment would increase the maximum potential demand from the development of the subject property by 214,760 gallons per day at build out. This analysis is based on the practicable development potential of 514 residential dwellings and 489,400 square feet of non-residential that would be permitted by the proposed FLUM Designation Concurrency and impacts to the City's utility systems will be reevaluated at the preliminary plat or site plan review stage. It is anticipated that the proposed amendment will not adversely affect the Level of Service ("LOS") for potable water facilities, and the impacts are therefore acceptable.

Sanitary Sewer Impacts

Table 7. Sanitary Sewer Impacts

System Category	Gallons Per Day
Treatment Plant Current Permitted Capacity*	1,500,000
Less Actual Treatment Plant Flows*	677,000
Reserved Capacity*	180,101

Projected Potential Wastewater Demand from Proposed Amendment **	201,910
Residual Capacity	**440,989**
Percentage of Permitted Design Capacity Utilized	**70.60%**

Sources:
** City of Alachua March 2018 Development Monitoring Report*
***City of Alachua Comprehensive Plan Potable Water Level of Service of 250 gallons/du/ day x 514 units + .15 gallons/ day/ square foot non-residential x 489,400 square feet*

Evaluation: The proposed amendment would increase the maximum potential demand from the development of the subject property by 201,910 gallons per day. This analysis is based on the practicable development potential of 514 residential dwellings and 489,400 square feet of non-residential that would be permitted by the proposed FLUM Designation. Concurrency and impacts to the City's utility systems will be reevaluated at the preliminary plat or site plan review stage. It is anticipated that the proposed amendment will not adversely affect the Level of Service ("LOS") for sanitary sewer facilities, and the impacts are therefore acceptable.

Recreational Impacts

Table 8a. Recreational Impacts

System Category	Acreage
Existing City of Alachua Recreation Acreage[1]	135.48
Acreage Required to Serve Existing Population[2]	52.87
Reserved Capacity[1]	3.94
Potential Demand Generated by Development[3]	7.09
Residual Recreational Capacity After Impacts	**71.58**

Sources:
1 *City of Alachua January 2022 Development Monitoring Report.*
2 *University of Florida, Bureau of Economic & Business Research, Estimates of Population by County and City in Florida, April 1, 2016; Policy 1.2.b, Recreation Element (Formula: 9,892 persons / [5 acres/1,000 persons])*
3 *US Census Bureau; Policy 1.2.b, Recreation Element (Formula: 2.76 persons per dwelling x 514 dwellings / [5 acres/1,000 persons])*

Table 8b. Improved Passive Park Space Analysis

Minimum Improved Passive Park Space Required to Serve Existing Population & Reserved Capacity[1]	11.36 acres
Acreage Required to Serve Demand Generated by Development[2]	1.42 acres
Total Area Required to Serve Existing Population, Reserved Capacity, & Demand Generated by Development	12.78 acres
Existing Improved Passive Park Space[1]	34.82 acres
Improved, Passive Park Space Utilized by Existing Population, Reserved Capacity, & Demand Generated by Development[3]	**36.70 %**

1 *Source: City of Alachua January 2022 Development Monitoring Report.*
2 *Formula: Recreation Demand Generated by Development (7.09 acres) x 20%.*
3 *Formula: Total Improved Passive Park Space / (Acreage Required to Serve Existing Population + Reserved Capacity + Acreage Required to Serve Demand Generated by Development.)*

Evaluation: The proposed amendment would increase the maximum potential demand from the development of the subject property by 7.09 recreational acres, and for passive park space by 1.42 acres. Concurrency and impacts to the City's recreation system will be reevaluated at the preliminary plat review stage. It is anticipated that the proposed amendment will not adversely affect the Level of Service ("LOS") of recreational facilities; therefore, the impacts are acceptable.

Solid Waste Impacts

Table 9. Solid Waste Impacts

System Category	Lbs Per Day	Tons Per Year
Existing Demand[1]	42,296	7,719.02
Reserved Capacity[2]	17,754.19	3,240.14
Projected Solid Waste Demand from Application[3]	20,065.75	3,662
New River Solid Waste Facility Capacity[4]	**50 years**	

Sources:
1 *University of Florida, Bureau of Economic & Business Research, Estimates of Population by County and City in Florida, April 1, 2016; Policy 2.1.a, CFNGAR Element (Formula: 10,470persons x 0.73 tons per year)*
2 *City of Alachua January 2022 Development Monitoring Report*
3 *Policy 2.1.a, CFNGAR Element (Formula: .73 tons x 514 dwellings +5.5 lbs per/1ksf nonresidential/ day)*
4 *New River Solid Waste Facility, April 2021*

Evaluation: The proposed amendment would increase the maximum potential demand from the development of the subject property by 3,663 tons per year. Concurrency and impacts to the solid waste system will be reevaluated at the preliminary plat or site plan review stage. It is anticipated that the proposed amendment will not adversely affect the Level of Service ("LOS") of solid waste facilities; therefore, the impacts are acceptable.

Public School Impact

The School Board of Alachua County (SBAC) has not issued a School Capacity Review determination for the proposed amendment. A determination will be required prior to issuance of any final development order in accordance with the City's Comprehensive Plan, specifically Policies 1.1.b, 1.1.c, 1.1.e, and 1.1.f of the Public School Facilities Element. At this time, it is anticipated that the proposed amendment will result in a demand of 189 total student stations (72 for elementary, 76 for middle, and 41 for high school).

Any future determination must find that the students generated by the proposed amendment can be reasonably accommodated for the five, ten, and twenty year planning periods at the elementary, middle, and high school levels.

Upon submittal of any final subdivision plat or site plan, the development will be subject to a concurrency review and determination of the availability of school capacity at the time of such review.

SITE SPECIFIC AMENDMENT TO THE OFFICIAL ZONING ATLAS

SCHMIDT FARMS – PLANNED DEVELOPMENT RESIDENTIAL (PD-R)
PLANNED DEVELOPENT COMMERCIAL (PD-COMM)

STAFF REPORT

1. The development shall consist of single-family attached and detached, townhouses, 2 to 4 family, cottage residential, multiple family residential, community recreation, non-residential and stormwater/open space development areas as shown on the PD Master Plan. The density, intensity, allowable uses, acreage, and dimensional standards, where applicable, for each Development Area are as follows:

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
Development Area 'A' 15 du/acre .5 FAR for Parcels greater than or equal to 5 acres .75 FAR for Parcels less than 5 acres but more than 1 acre 1.0 FAR for Parcels less than 1 acre	• All allowable uses within the PD-Comm Zoning District, per the City of Alachua LDRs • Common area and open space • Stormwater Management Facilities	489,400 square feet 259 dwelling units 2,500 square feet neighborhood amenity center	±11.3	*Minimum Lot Area* None *Minimum Lot Width* None *Setbacks, Building* Front (Primary) = 5' Side = 5' Rear=10' *Setbacks, Overall* Front (Primary) = 5' Side = 5' Rear=5'	±9.3%

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
				Maximum Building Height 65 feet *Maximum Lot Coverage* None *Minimum Parking Spaces* As required by Section 6.1, LDRs Amenity Center: 4 spaces per 1,000 square feet of gross floor area	
Development Area 'B' 15du/acre .5 FAR for Parcels greater than or equal to 5 acres .75 FAR for Parcels less than 5 acres but more than 1 acre 1.0 FAR for Parcels less than 1 acre	• All allowable uses within PD-COMM zoning district, except the following: automobile rental and sales, automobile repair and services, automobile service station, boat and marine rental and sales, carwash and auto detailing, recreation vehicle rental and sales, taxicab service, towing service, tire sales and mounting, transmission or muffler shop, pawn shop, light manufacturing, airplane landing		±17.3	*Minimum Lot Area* 2,000 square feet (single family attached (interior lot), townhouse, and 2-4 family), 4,000 square feet (single family attached (end cap lot), 10,000 square feet (multiple-family) None (nonresidential) *Minimum Lot Width* 20 feet (single family attached, townhouse, and 2-4 family) 80 feet (multiple-family) *Setbacks from lot lines (single family attached, townhouse, and 2-4 family)* Front (Primary) = 5' Side = 0' Rear=5' *Setbacks from lot lines (multiple -family)* Front (Primary) = 15' Side = 10'	±14.3%

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
	strip, helicopter land facilities. • Common area and open space • Neighborhood amenity center building • Stormwater management facilities			Rear=15' *Setbacks from lot lines (non-residential* Front (Primary) = 5' Side = 5' Rear=10' *Maximum Building Height* 45 feet (single family attached, townhouse, and 2-4 family) 55 feet (multiple- family) 65 feet (non-residential) *Maximum Lot Coverage* 90% (single family attached, townhouse, and 2-4 family) 60% (multiple- family) None (non-residential) *Minimum Living Area* 600 square feet (per dwelling unit) *Minimum Parking Spaces* As required by Section 6.1, LDRs	
Development Area 'C' 4du/acre	• All allowed residential uses within the PD-R Zoning District • Common Area/ Open Space • Neighborhood amenity center building • Stormwater management facilities	164 dwelling units (82 of which may be "cottage style") 2,500 square feet neighborhood amenity center	±41.3	*Minimum Lot Area* 2,000 square feet (single family attached (interior lot), townhouse, and 2-4 family), 4,000 square feet (single family attached (end cap lot), 5,000 square feet (single family detached 2,250 square feet (cottage) 10,000 square feet (multiple-family) *Minimum Lot Width*	±34.1%

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
				20 feet (single family attached, townhouse, and 2-4 family) 50 feet (single family detached) 25 feet (cottage) 80 feet (multiple family) *Setbacks from lot lines (single family attached, townhouse, and 2-4 family)* Front = 5' Side = 0' Rear=5' *Setbacks from lot lines (single family detached)* Front = 20' Side = 7.5' Rear=10' *Setbacks from lot lines (cottage)* Front = 10' Side = 2.5' Rear=10' *Setbacks from lot lines (multiple -family)* Front = 15' Side = 10' Rear=15' *Maximum Building Height* 45 feet (single family attached, townhouse, and 2-4 family, cottage, and single family detached) 55 feet (multiple- family)	

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
				Maximum Lot Coverage 90% (single family attached, townhouse, and 2-4 family) 50% (single family detached and cottage) 60% (multiple- family) *Minimum Living Area* 800 square feet (per dwelling unit) (single family attached, townhouse, 2 to 4 family, single family attached, and multiple – family) 600 square feet (cottage) *Minimum Parking Spaces* As required by Section 6.1, LDRs 1.5 spaces per Cottage unit *Cottage Home Common Greens Standards* Must meet Standards for Section 4.3.1 (A)(5)(d) regarding provision of common greens	
Development Area 'D' N/A	• Roadways • Parking • Driveways • Bicycle and pedestrian pathways • Supportive infrastructure such as stormwater management facilities	N/A	±3.6	**Public Streets** Per Article 7 of LDRs other than as varied in Condition 14 **Private Alleys** Access Width – 20' Paved Surface Width – 12'	±3.00%
Development Area 'E'	• Public or Private Parks	N/A	±35.7	N/A	29.5%

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD
N/A	• Recreational Trails • Resource based recreation • Preserved environmentally sensitive wildlife habitat and stream corridors				
Development Area 'F' 4du/acre	Single family detached, Stormwater Management Facilities	49 dwelling units	11.8	*Minimum Lot Area* 10,000 square feet *Minimum Lot Width* 80 feet *Setbacks* Front = 20' Side = 5' Rear=10' *Maximum Building Height* 45 feet *Maximum Lot Coverage* 50% *Minimum Living Area* 800 square feet (per dwelling unit) *Minimum Parking Spaces* As required by Section 6.1, LDRs	9.8%

1 Development within Development Areas A and B are subject to the following limitation and conditions:

i. A limit of 1 use that includes gasoline sales located within Development Areas located within PD-COMM district.

ii. A maximum 15,000 square feet of restaurant with drive-through use shall be permitted in PD-COMM development areas.

Maximum Development Area & Density/ Intensity	Allowable Uses[1, 2]	Maximum Potential Development	Acres	Dimensional Standards	Percentage of PD

iii. No more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property. A minimum of 25,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district.

2 Development within Development Area C is subject to the following limitations and conditions:

i. The residential cottage is a group of two or more detached residential units located on individual lots

ii. For purposes of perimeter buffering requirements, the cottage units shall be considered multiple family uses.

3 Within the PD-COMM area, all uses are interchangeable and each allowable use can be located in the specified development areas "A", "B", and "D", except for those uses specifically prohibited in Development Area "B" above.

2. The Project shall be developed in one or more phases. The Planned Development Ordinance and Agreement shall be valid for 10 years from the date of final approval by City Commission.

3. The applicant shall provide a listed species and habitat survey as part of any Final PD Plan for the Project. The survey shall document if any listed species are observed on the Property. If a listed species is observed on the Property, the updated survey shall provide recommendations to address potential impacts to the listed species and to identify any permitting requirements of any local, State, or Federal governmental agencies. Any submitted listed species and habitat survey shall be acceptable to the City for a period of no more than three years from the original date of the survey. All listed species shall be identified, but the survey shall specifically include analysis of the following plants and animals: killdeer (*Charadrius vociferus),* Florida spiny-pod (*Matelea floridana),* and eastern indigo snake (*Drymarchon couperi*).

4. If any wetlands are identified on the Property described in Exhibit "A", such areas shall be field-delineated using professionally accepted methodology. All development in and/or near wetland areas shall be consistent with the City's Comprehensive Plan and in compliance with the City's LDRs, as may be amended from time to time, and shall grant conservation easements or other appropriate protective mechanisms, as determined by the City, to protect wetland areas. Any submitted wetlands delineation shall be acceptable to the City for a period of no more than three years from the original date of the delineation.

5. Any Final PD plan shall include detailed geotechnical mapping and evaluation to identify and address any potential karst features or active ground loss areas.

6. All Final PD Plans shall be consistent with the Goals, Objectives, and Policies of the Comprehensive Plan, as it may be amended from time to time, including, but not limited to those Goals, Objectives, and Policies related to the eradication of invasive exotic plant species.

7. The Owner, or its successors and/or assigns, shall, concurrent with development of the Project, remove and destroy all Category I and II exotic plant species, as published in the most current version of the Florida Exotic Plant Council's List of Invasive Plant Species,

located on the Property described in Exhibit "A". Thereafter, the Owner, or its successors and/or assigns, shall assure long-term implementation of an exotic plants management plan approved with the new final development order and which shall be included in covenants and restrictions to be implemented by a properly structured property owner's association or other mechanism acceptable to the City.

8. The planting of any species identified in the most current version of the Florida Exotic Pest Plant Council's List of Invasive Plant Species shall be prohibited. Grasses and sods shall be certified free of noxious weeds by the Florida Department of Agriculture and Consumer Services, Division of Plant Industry.

9. The Owner, or its successors and/or assigns, shall utilize methods of minimizing impacts, such as appropriate Best Management Practices of the Suwannee River Water Management District, in order to reduce the potential for flash flooding, to avoid adverse impacts to water quality, and to incorporate existing drainage patterns to the greatest extent practicable. Upon approval from the City of Alachua and the Suwannee River Water Management District, enhancements may be permitted to the existing, natural conveyance system to mitigate for existing erosion and sedimentation, restoration of historical erosion and sedimentation damage, and preventing future adverse erosion and sedimentation. Because of the location in relation to surrounding water features, sustainable landscaping practices including limitations on use of pesticides and irrigation systems must be considered. These practices include:
    a. Requiring Compost fertilizing (as opposed to traditional/ synthetic fertilizers)
    b. No new wells permitted on the property
    c. All non-residential development shall be required to utilize Florida Friendly Landscaping practices

10. A Final PD Plan consists of development requiring Preliminary Plat or Site Plan review. The Owner, or its successors and/or assigns, shall submit a utility system plan as part of the Construction Plans for the proposed subdivision or site plan.

11. Development on the Property described in Exhibit "A" shall be consistent with PD Master Plan for the Project, and includes the following requirements:
    a. The ingress/egress points to the Property described in Exhibit "A" shall be located as depicted on the PD Master Plan. The design of all proposed roadways shall be consistent with the applicable standards of Article 7 of the City's LDRs and the City's Design and Construction Requirements (latest edition at the time of review of Construction Plans) and the PD Master Plan. The design of the proposed roadway shall be reviewed and approved as part of Construction Plans submitted for the subdivision review process, as further defined in Section 2.4.10 of the City's LDRs, or site plan review process or infrastructure plan review process, as further defined in Section 2.4.9 of the City's LDRs.
    b. The Owner, or its successors and/or assigns, shall design, obtain all applicable permits, and construct a stormwater management system necessary to serve the development. Stormwater management facilities shall be constructed concurrent with development of the Project. Sufficient stormwater capacity consistent with Section 6.9.3 of the City's LDRs must be provided concurrent with site

improvements of the Project. On-site soil shall be appropriately prepared so as to alleviate any drainage issues.

c. Utilities shall be extended throughout the Project within areas designated as public right-of-ways, where practical. Utility infrastructure which must run outside the right-of-way, and which will be maintained by the City, shall be located in easements approved and accepted by the City granting access and maintenance of such infrastructure.

d. The Owner, or its successors and/or assigns, shall be responsible for the provision of infrastructure for the Project. This shall include all on-site improvements and off-site improvements, including transportation infrastructure improvements, deemed necessary to support the development by the City in the City's sole discretion. Offsite improvements, including transportation infrastructure improvements deemed necessary by the City, shall be consistent with City's Comprehensive Plan and Land Development Regulations in existence at the time of the proposed development requiring the infrastructure, and shall be supported by appropriate data and analysis that identifies a specific impact from the proposed development. If offsite improvements are required by the City, it shall be limited to the areas or infrastructure impacted by the proposed development. The data and analysis used to justify the requirement for offsite improvements will be provided by traffic study data, reports, or other infrastructure analysis that identifies the development's impact on the affected infrastructure, and determines a reasonable proportional impact from the proposed development. The data and analysis will be provided by the Developer and reviewed by the City. The Developers shall pay for any consultants or experts the City deems necessary to review the data and analysis provided by the Developer.

e. Facilities constructed on-site that are not dedicated to the City for maintenance shall be the responsibility of a legally established property owners' association. The property owners' association shall have the responsibility of maintenance of all common areas. In the event that common areas and required open space areas, as mandated by Sections 6.7.6, 6.9.3(E)(2), and 7.8.1 of the City's LDRs, or any amendments thereto, are not owned by a property owner's association, such areas shall be burdened by an easement that requires a property owner's association or another entity approved by the City to maintain such areas, and that restricts such areas in accordance with the City's requirements for such areas.

12. Electric System Requirements:

a. The Owner, or its successors and/or assigns, shall be responsible for all costs associated with connection to the electric system of the electric service provider as necessary to serve the Project.

13. Water System Requirements:

a. The Owner, or its successors and/or assigns, shall be responsible for all costs associated with connection to the City's potable water system as necessary to serve the Project.

b. Water systems shall be designed to provide fire flow rates that conform to the current standards of the Florida Fire Prevention Code, Chapter 633, Florida Statutes, and the Florida Building Code.

14. Wastewater System Requirements:
    a. The Owner, or its successors and/or assigns, shall be responsible to design, permit, and construct wastewater main extensions and any other improvements, including but not limited to any lift station required and necessary to serve the Project.
15. Pedestrian and Street Improvements:
    a. The Owner, or its successors and/or assigns, shall be responsible to design, obtain all applicable permits, and construct all pedestrian and street improvements in accordance with Section 7.3, *Required Improvements*, Section 7.2.3, *Block Standards,* and any other pertinent section of the City's LDRs subject to the following:
        i. Block lengths may exceed 900 feet when all of the following conditions are met:
            1. An easement permitting pedestrian access through blocks longer than 900 feet is provided. This easement shall be a minimum of 10 feet in width and recorded in the Public Records of Alachua County.
            2. Where these means of pedestrian access intersect with any rights-of-way, a pedestrian crossing shall be provided across the right-of-way that includes one or more of the following elements intended to serve as traffic calming and clearly delineate pedestrian space: change in materials, bulb-outs, or a raised pedestrian crossing.
            3. Any easement intended for pedestrian access through a block shall be improved with concrete, brick pavers, asphalt or similar hard material.
            4. In no instance, shall a block length or length of travel through an easement exceed 900 feet.
        ii. Pavement widths may not be less than 20 feet, except for privately maintained alleys, which may not be less than 12 feet. Where on street parking is provided, pavement width must be at least 24 feet.
        iii. A minimum 5 foot wide sidewalk shall be provided on both sides of all public streets, except where there are no residential lots with frontage along the street.
        iv. Minimum curb return radius shall be a minimum of 15' and minimum street centerline shall be a minimum of 50'.
        v. Miami curb is permitted in residential areas where lot widths are less than 40' minimum.
    b. All roadway improvements to US HWY 441 and NW 43rd Street noted in the submitted traffic study shall be permitted and completed in conjunction with any subdivision, site plan, or infrastructure plan proposed for the subject property. Revised traffic studies shall be submitted as a part of any development application that meets the conditions in accordance with the schedule below.

Study	Cumulative Non-Residential Floor Area Exceeds (square feet)	Cumulative Residential Units Exceeds (Dwelling units)	Date Development Application Submitted
Initial	NA	NA	NA
Update 1	125,000	200	01/01/2025
Update 2	250,000	400	01/01/2028

The traffic study shall be valid for a period of 3 years or until the next Update is required. Unless otherwise required by the City's Land Development Regulations, Alachua County, or Florida Department of Transportation, no more than 2 additional traffic studies shall be required.

c. Per the Independent Review of the Schmidt Farms Traffic Study provided by Brian Kanely, P.E., and communication from the Florida Department of Transportation, a structural analysis of the traffic signal mast arms at the intersection of US Highway 441 and NW 43rd Street must be performed. This analysis shall be performed and submitted in conjunction with a final PD Plan application.

d. Sidewalks will be provided along or within US Highway 441 right-of-way and NW 43rd Street right-of-way. Such sidewalks will be extended to NW 102nd Place and NW 93rd Ave. Sidewalks shall be installed as adjacent property within the project is developed. Sidewalks within the rights-of-way shall be permitted through the Florida Department of Transportation or Alachua County Public Works, as applicable. If necessary, sidewalks or pedestrian connections may be provided on the subject property with provision of public access/sidewalk easement.

e. The roadway crossing connecting Development Areas A and B is subject to applicable County regulations regarding wetland buffer impacts.

16. Prior to demolition of the existing structures on the property greater than 100 years old, the applicant must provide evidence from a licensed architect or structural engineer that rehabilitating the structures would not be cost feasible. Prior to demolition, the applicant shall supply a historic structure report that includes photos, architectural descriptions of the interior and exterior of the structure, known history of the structures and sites, and locations (longitude/latitude) of the structures.

17. The Owner, or its successors and/or assigns, shall submit a landscaping and buffering plan as part of any Final PD Plan. The landscaping and buffering plan shall meet the requirements established by the adopted PD Master Plan, Section 6.2.2, Landscaping Standards or Section 6.3, Fencing Standards, of the City's LDRs, or any amendments thereto.

18. The Owner, or its successors and/or assigns, shall submit an open space plan as part of any new Final PD Plan. The open space plan shall meet the minimum requirements established by Section 6.7, *Open Space Standards*, of the City's LDRs, or any amendments thereto.

19. Open spaces and conservation areas shall account for a minimum of twenty-five percent (25%) of the complete project.

20. The Owner, or its successors and/or assigns, shall obtain all applicable permits from the Suwannee River Water Management District, Alachua County Public Works, the Florida Department of Environmental Protection, the Florida Fish and Wildlife Commission, and any other Federal, State, or Local agency before the commencement of any development in the Project.

21. The Final PD Plan shall be a Preliminary Plat for single-family detached on platted lots or a Site Plan for single-family detached on unplatted lots and shall adhere to all requirements

of this PD Ordinance, the City's Comprehensive Plan, and the City's LDRs. The Final PD Plan shall also adhere to all requirements of the PD Master Plan and the PD Agreement for this Project.

22. Any Final PD Plan shall include the exact number of residential dwelling units, as well as precise information regarding the layout of open space, circulation, and stormwater management.
23. A valid Planned Development Agreement shall be adopted concurrent with the approval of this ordinance and the PD Master Plan.
24. The development parameters defined herein do not inordinately burden the development of the Property described in Exhibit "A", the PD, or the Project.
25. The rezoning of the Property described in Exhibit "A" does not reserve concurrency for the Project.
26. The adoption of this Ordinance does not guarantee the approval of any development permits, including but not limited to, a Preliminary Plat, Construction Plans, Site Plan or a Final Plat for the Project, or for any part or section thereof, for the Owner/Developer or its successors or assigns.
27. All development, including but not limited to any Final PD Plan for the Project, shall be governed by the laws, regulations, comprehensive plan and ordinances in effect at the time of the specific proposed development, and not as of the date of this ordinance.

RE: Notice of Hearing to be Scheduled for:

-Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
-Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr Potts:

On January 18, 2022 the City of Alachua received your updated applications for the above referenced projects.

Based on review of the materials submitted, the City has determined that these applications can now be scheduled for a hearing before the Planning and Zoning Board.

You must provide two (2) *double-sided, three-hole punched, color sets* of each **complete** application package, seven (7) full size sets of site plans, and a digital copy of all materials in PDF format on a CD *no later than 10 business days prior to the PZB Meeting at which your application is scheduled to be heard.* The application has been scheduled for the **March 8, 2022** Planning and Zoning Board meeting; therefore, the above referenced materials must be submitted to the City no later than ***Tuesday, February 22, 2022.*** Materials may be submitted earlier than this date.

In addition, Section 2.2.9(D) of the Land Development Regulations requires the applicant to place posted notice signs on the subject property at least 14 days prior to the public hearing. Therefore, posted notice signs must be placed on the property no later than Thursday, February 17, 2022, as City Hall be closed on Monday, February 21. 2022. These signs will be ready for pick up after 12 PM on Thursday, February 17, 2022.

If you plan to utilize a PowerPoint presentation or would like other materials to be available for reference during the public hearing, please submit the presentation or materials no later than

12:00 PM on the last business day prior the PZB meeting (no later than Monday, February 7, 2022).Any presentation or materials may be submitted by emailing them to planning@cityofalachua.com .

Should you have any questions, please feel free to contact me at (386) 418-6100, ext. 108 or via email at ahall@cityofalachua.com.

Sincerely,

Adam Hall, AICP
Planner

February 28, 2022

RE: ACPS – Schmidt Farms

Alachua County Public Schools ("ACPS") has received notification of a Comprehensive Plan Amendment (CPA) and rezoning within the City of Alachua. The project encompasses 118.2 acres identified as Parcels 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, and 05945-000-000 This project is reviewed in accordance with *Objective 1.1: of the City of Alachua County Comprehensive Plan* and *Section 6 of the Alachua County Public School Interlocal Agreement.*. The proposed amendment will entitle 213 single family units and 301 multi-family units.

Pursuant to Chapter 1003, Florida Statutes, the School Board is charged with the operation and control of public K-12 education within the Alachua County School District. Its responsibilities include school facility planning, construction and maintenance, and student assignment to maintain adequate and efficient utilization of educational facilities.

Please be advised that the School Board may be launching a district wide evaluation of its capital investment priorities and policies and its student assignment policies. This review will involve an examination of school capital financing and the allocation of present and future funds among new construction, renovation and maintenance as required to maintain a uniform level of service throughout the District.

This evaluation will involve a comprehensive review of all public schools, including their attendance zones and the educational programs offered. As a result of anticipated redistricting, areas of the County and the towns/cities currently zoned for a school may no longer be zoned for the same school when the redistricting process is completed. Any new residential development located in an existing school zone is not guaranteed to remain in that same zone after the redistricting process is completed. It is anticipated that a new school zoning plan will be in place for the start of the 2023-2024 school year.

Additionally, please be advised that many of Alachua County Public Schools do not have adequate space for additional students.

The Santa Fe High School CSA currently accommodates an enrollment of 1,193 high students and is operating at 84% of its permanent capacity of 1,414 student stations. At buildout, this project is projected to generate 28 high students. High school capacity is projected to remain adequate during the five year and ten year planning periods.

The **Mebane Middle School CSA** currently accommodates an enrollment of 339 middle students and is operating at 43% of its permanent capacity of 796 student stations. At buildout, this project is projected to generate 22 middle students. Middle school capacity is projected to remain adequate during the five year and ten year planning periods.

The **Northwest Alachua Elementary CSA** currently accommodates an enrollment of 1,307 elementary students and is operating at 80% of its permanent capacity of 1,639 student stations. At buildout, this

project is projected to generate 44 elementary students. Elementary school capacity is projected to remain adequate during the five year and ten year planning periods.

A resolution of capacity issues within the District will not be clear until the comprehensive evaluation noted above has been completed. To facilitate a satisfactory and long term solutions, it is recommended that the City encourage developers to contribute to the expansion of educational facilities through "Capacity Enhancement Agreements" (refer to ILA Section 6.5).

If you have additional questions please contact Suzanne Wynn, Director of Community Planning @ 352-955-7400 x 1445

Sincerely,

Carlee Simon, Ph.D.

RE: -Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
-Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr Potts:

On January 18, 2022 the City of Alachua received your revised, completed application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56-acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your, revised completed Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The proposed rezoning would permit a maximum of 489,400 square feet of non-residential uses and 515 dwelling units on the subject property. A Project Assistance Team meeting was held on October 11, 2021 to discuss this application.

The applications have been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the applications before they may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 5:00 PM on **Tuesday, February 22, 2022.** These materials may be submitted electronically. Submission of an incomplete package may delay your tentative hearing at the Planning and Zoning Board. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB.

Please address the following insufficiencies :

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

PD-COMM and PD-R Rezoning Review Comments

1. *New Comments*
    a. Combine Allowable Use cells for Development Areas A and B to clarify allowable uses. Possible language:
        - All allowed uses in the PD-Comm Zoning District per Table 4.1-1 except that the following uses shall not be allowed in Development Area B: automobile rental and sales, automobile repair and servicing, automobile service station, boat and marine rental and sales, carwash and auto detailing, recreational vehicle rental and sales, taxicab service, tire sales and mounting, towing service, transmission or muffler shop, pawn shop, light manufacturing, airplane landing strip, and helicopter landing facilities.
        - Stormwater Water Management Facilities
        - Common Area and Open Space

    b. Combine cells for maximum development potential for Development Areas and B.
    c. Add additional note to Development Area C Maximum Development Potential limiting number of cottage style homes to 82 (50% of permitted maximum of dwelling units proposed)
    d. If there is going to be a neighborhood amenity center (pool, clubhouse, etc) maximum development potential need to be provided (maximum floor area, parking rate, and permitted development areas (suggest B and C).

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

RE: -Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
-Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr Potts:

On December 13, 2021 the City of Alachua received your revised, completed application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56-acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your, revised completed Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The proposed rezoning would permit a maximum of 489,400 square feet of non-residential uses and 515 dwelling units on the subject property. A Project Assistance Team meeting was held on October 11, 2021 to discuss this application.

The applications have been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the applications before they may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 5:00 PM on **Monday, January 17, 2022.** These materials may be submitted electronically. Submission of an incomplete package may delay your tentative hearing at the Planning and Zoning Board. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB.

Please address the following insufficiencies :

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

LSCPA Review Comments

1. *General*
   a. **New Comment: Revision to proposed land use designations appears to remove "community commercial" designation. However, application narrative and application cover sheet still reference community commercial. Please verify and correct throughout.**

PD-COMM and PD-R Rezoning Review Comments

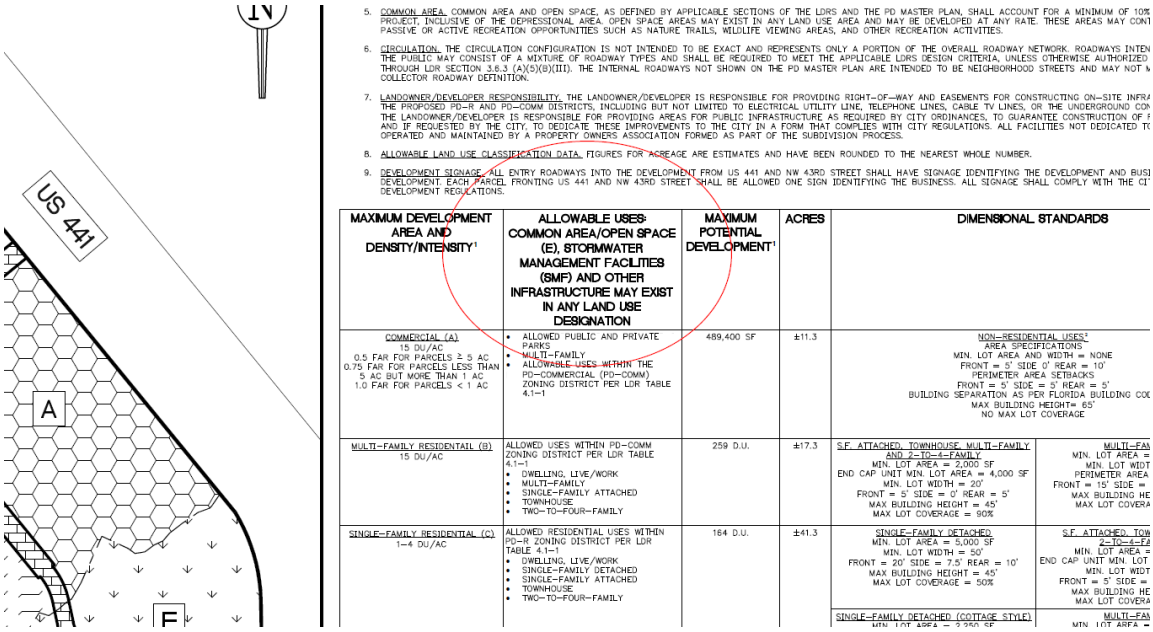
3. *Additional Standards for PD Districts (Section 3.6.3 (A)) – PD-R)*
   a. Per Section 3.6.3 (A)(5)(iii), design standards may be reduced where it is found that:
   a. The reduction or modification is necessary as a traffic-calming measure;
   b. The PD Master Plan provides for separation of vehicular, pedestrian, and bicycle traffic;
   c. Access for emergency service vehicles is not substantially impaired;
   d. Adequate off-street parking is provided for the uses proposed; and
   e. Adequate space for public utilities is provided within the right-of-way.

   New Comment: This comment does not appear to have been addressed. Please provide justification for modification to street design standards that address items a-e above.

   b. **NEW COMMENT: Development Area (B) is named multi-family residential, which may indicate that only that use or similar uses are intended or permitted in that development area. Please consider renaming or modifying allowed uses to match current name of development area. Current maximum development potentials as found in PD Masters plan would indicate that only non-residential would go into Development Area A and only Residential would go into Development Area B.**

   c. **NEW COMMENT: Allowable uses column requires clarification for each development area. Are listed uses exclusive or in addition to? All specific uses listed appear to be permitted within PD-Comm zoning district.**

5. *Comprehensive Plan Analysis*
   a. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be



necessary to include a portion as medium density residential or high density residential.

New Comment: Revision to proposed land use designations appears to remove "community commercial" designation. However, application narrative and application cover sheet still reference community commercial. Please verify and correct throughout.

7. *Miscellaneous / General Comments*

a. Allowable uses column in Table on Master Plan sheet has typo in column title.

New Comment: This does not appear to have been addressed. Please see image below. Please verify column title is correct.

b. **New Comment: In Development Area C, the side setback for the single family detached is 7.5 feet, which would yield a potential maximum building envelope of 35 feet. Please confirm.**

c. **New Comment: A description or definition of cottage style should be included. Staff assumes these would be single family detached structures in appearance on a common parcel. Please confirm.**

d. **New Comment: Please provide legal descriptions (in word format) and sketches for the following:**

i. Overall subject property
ii. Area proposed to be amended to Moderate Density Residential Future Land Use Designation
iii. Area proposed to be amended to High Density Residential Future Land Use Designation
iv. Area proposed to be amended to Commercial Future Land Use Designation
v. Area proposed to be amended to Conservation Future Land Use Designation
vi. Area proposed to be rezoned to PD-Commercial

vii. Area proposed to be rezoned to PD-Residential

If possible, please provide in shapefile format as well.

9. Potential Development Conditions (Revised 01/06/22)
   a. The following are preliminary potential conditions that are in the process of being developed and will be based on submitted data and information as well as consultation with outside experts and other agencies. Other conditions may be incorporated after review of subsequent approvals:
      i. All roadway improvements to US HWY 441 and NW 43rd Street noted in the submitted traffic study shall be permitted and completed in conjunction with any subdivision, site plan, or infrastructure plan proposed for the subject property. Revised traffic studies shall be submitted as a part of any development application that meets the conditions in accordance with the schedule below.

Study	Cumulative Non-Residential Floor Area Exceeds (square feet)	Cumulative Residential Units Exceeds (Dwelling units)	Date Development Application Submitted
Initial	NA	NA	NA
Update 1	125,000	200	01/01/2025
Update 2	250,000	400	01/01/2028

      The traffic study shall be valid for a period of 3 years or until the next Update is required. Unless otherwise required by the City's Land Development Regulations, Alachua County, or Florida Department of Transportation, no more than 2 additional traffic studies shall be required.
      ii. Per the Independent Review of the Schmidt Farms Traffic Study provided by Brian Kanely, P.E., and communication from the Florida Department of Transportation, a structural analysis of the traffic signal mast arms at the intersection of US Highway 441 and NW 43rd Street must be performed. This analysis shall be performed and submitted in conjunction with a final PD Plan application.
      iii. Because of the location in relation to surrounding wetlands, sustainable landscaping practices including limitations on use of pesticides and irrigation systems must be considered. These practices include:
         1. Requiring Compost fertilizing (as opposed to traditional/ synthetic fertilizers)
         2. No new wells permitted on the property
         3. All non-residential development shall be required to utilize Florida Friendly Landscaping practices
      iv. Sidewalks will be provided along or within US Highway 441 right-of-way and NW 43rd Street right-of-way. Such sidewalks will be extended to NW 102nd Place and NW 93rd Ave. Sidewalks shall be installed as adjacent property within the project is developed. Sidewalks within the rights-of-way shall be permitted through the Florida Department of Transportation or Alachua County Public Works, as applicable. If necessary, sidewalks or

pedestrian connections may be provided on the subject property with provision of public access/sidewalk easement.

v. A limit of 1 use that includes gasoline sales located within Development Areas located within PD-COMM district.

vi. A maximum 15,000 square feet of restaurant with drive-through use shall be permitted in PD-COMM development areas.

vii. No more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property. A minimum of 25,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district.

viii. Prior to demolition of the existing structures on the property greater than 100 years old, the applicant must provide evidence from a licensed architect or structural engineer that rehabilitating the structures would not be cost feasible. Prior to demolition, the applicant shall supply a historic structure report that includes photos, architectural descriptions of the interior and exterior of the structure, known history of the structures and sites, and locations (longitude/latitude) of the structures.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

1.0 Introduction

1.1 Purpose

Wood Environment & Infrastructure Solutions, Inc. (Wood) was authorized by the City of Alachua (the City) to perform technical review of the Environmental Resource Assessment report prepared by Ecosystem Research Corporation (ERC) (2021) for the Schmidt Farms Market Site.

1.2 Background

Schmidt Farms– DM Alachua Investments LLC submitted an Environmental Assessment Report for the Schmidt Farms Market Site (October 2021) in support of a City of Alachua Land Use Comprehensive Plan Amendment and Re-zoning Amendments. Wood scientists have reviewed the Environmental Assessment Report to verify if the report findings are professionally acceptable. The findings of the review of the Environmental Assessment are presented in Section 2 and 3.

The 121.56 planned development area is located within the southwest quadrant of the intersection of US 441 and NW 43rd Street. Currently, the majority of the Planning Parcel for the proposed Project Site is undeveloped except for minimal constructed buildings associated with a single-family residence and multiple small agriculture related buildings that have historically been used for dairy, pasture, and silvicultural operations. Parcels **05936-007-001** and **05936-007-002** have historic structures that were associated with small commercial enterprises used on these parcels in the past that include Angel Gardens, a Bike Shop, and a restaurant to name a few.

2.0 Environmental Assessment Review

Wood environmental scientists conducted a desktop review and site assessment to confirm or deny the findings of the Environmental Assessment report. The site assessment included review of wetland delineation lines for consistency with 1987 United States Army Corps of Engineers (USACE) "Corps of Engineers Wetlands Delineation Manual" and the Florida wetland delineation method, "Delineation of the Landward Extent of Wetlands and Surface Waters" (Chapter 62-340). In addition, the site was reviewed for potential presence of protected species or their habitat.

2.1 Wetland Delineation Review

ERC performed a desktop review of readily available geographic information system resources to assess the wetland and upland habitats on and adjacent to the subject property. Resources reviewed included current and historic aerial photographs, national wetland inventory, USGS quadrangle maps, Alachua County 2001 LiDAR Topography maps, FEMA flood zone maps, NRCS soils maps, and FDEP land use maps.

ERC scientists conducted a field delineation in 2008 which was reviewed by SRWMD and approved. A more recent delineation was performed by ERC in 2021 according to the *Delineation of the Landward Extent of Wetlands and Surface Waters* (Chapter 62-340 Florida Administrative Code [F.A.C.]) and the wetlands delineation lines were updated. The 2021 wetland delineation lines were approved by Alachua County.

On December 3, 2021, Wood scientists visited the site, reviewed the wetland delineation, and agreed with the general location of the wetland boundary lines. There were no wetland flags, and Wood scientists did not have access to the GPS points referred to in the ERC report; therefore, it should be noted that this review of the wetland delineation does not constitute a verification. Furthermore, prior to development, the wetland delineation will also need to be verified by Suwannee River Water Management District (SRWMD).

2.2 Threatened & Endangered Species Review

ERC scientists performed a desktop survey for the potential presence of threatened and endangered species using Florida Natural Areas Inventory (FNAI) and USFWS Information for Planning and Consultation (IPaC) Resource List Report (USFWS, 2021a) and performed a site investigation for evidence of listed species and their habitat. Wood scientists reviewed the ERC assessment. The methods used by ERC are consistent with methods that Wood scientists follow for listed species evaluations. **Table 1** outlines the species listed by FNAI and IPaC resource lists, their preferred habitat, if that preferred habitat is found on the subject property, and ERC's effects determination.

In December 2020, the USFWS determined the monarch butterfly (*Danaus plexippus*) should be a candidate for listing under the Endangered Species Act. The monarch butterfly is not yet listed or proposed for listing, and there are no Section 7 of the Endangered Species Act requirements at this time (USFWS, 2021b). This species was not included in the ERC report and has been included in **Table 1**.

On December 3, 2021, Wood scientists evaluated the onsite habitat compared with preferred habitats for the listed species identified by FNAI and IPaC. Wood scientists generally agreed with the habitat assessments made by ERC scientists.

Wood scientists observed killdeer (*Charadrius vociferus)* during the site visit. The killdeer is a migratory bird species that is common and can be found in the project area year round. During breeding season, the project area would be a common area for nesting as the killdeer are ground nesting birds preferring open areas with high visibility such as bare soil or short-grass fields (Audubon, 2021). The Migratory Bird Treaty Act (MBTA) of 1918 protects all migratory birds. MBTA makes it illegal for people to "take" migratory birds, their eggs, feathers or nests.#

No threatened or endangered wildlife species were observed during Wood's site assessment. The state endangered, Florida spiny-pod (*Matelea floridana),* was observed within the project site within the area that will be conservation easement.

2.3 Tree Protection

The ERC report notes that no Champion Trees have been reported for the project area and most of the historical large trees on the site were removed through silvicultural and agricultural practices. Wood scientists observed many large trees on the property. If large trees are to be removed as part of the development, a City of Alachua Tree Removal Permit will be required.

Table 1. Threatened and Endangered Species with Potential for Occurrence on the Project Area

Scientific Name[a]	Common Name[a]	Listing Status [a]	Preferred Habitat [b]	Habitat Present on Project Site[d]	ERC Impact Determination
Laterallus jamaicensis ssp. *jamaicensis*	Eastern Black Rail	PT	Salt, brackish, and freshwater marshes[c]	No	No effect
Mycteria americana	Wood Stork	FT	Nesting: mixed hardwood swamps, sloughs, mangroves, cypress domes/strands; Foraging: freshwater and estuarine marshes	Yes- foraging habitat No-nesting habitat	No effect
Picoides borealis	Red-cockaded Woodpecker	FE	Slash, longleaf, and loblolly pines	Yes	No effect
Aphelocoma coerulescens	Florida Scrub-Jay	FT	Sand pine and xeric oak scrub, and scrubby flatwoods	No	No effect
Falco sparverius paulus	American Kestrel	ST	Primarily open woodlands, sandhill, and fire-maintained savannah pine, pastures and open fields	Yes	Not Likely to Adversely Affect - Most of the nesting habitat is within a Conservation Easement
Egretta caerulea	Little Blue Heron	ST	Swamps, estuaries, ponds, lakes, and river [b]	No	No effect
Grus canadensis pratensis	Florida Sandhill Crane	ST	Freshwater marshes, prairies, and pastures	Yes – Forage habitat No - Nesting habitat	No effect- forage habitat will be maintained in the post development condition
Drymarchon couperi	Eastern Indigo Snake	FT	Pine flatwoods, hardwood forests, edges of cypress swamps, and hydric hammocks	Yes	Not Likely to Adversely Affect
Stilosoma extenuatum	*Short-tailed Snake*	ST	Sandy soils, particularly longleaf pine and xeric oak sandhills, scrub and xeric hammock	No	No effect
Pituophis melanoleucus mugitus	Florida Pine Snake	ST	Well-drained sandy soils with a moderate to open canopy	No	No effect
Gopherus polyphemus	Gopher Tortoise	ST, FC	Well-drained, sandy soils, longleaf pine sandhills, xeric oak hammocks, scrub, pine flatwoods, dry prairies and coastal dunes	No	No effect

Scientific Name[a]	Common Name[a]	Listing Status [a]	Preferred Habitat [b]	Habitat Present on Project Site[d]	ERC Impact Determination
Ambystoma cingulatum	Frosted Flatwoods Salamander	FT	Slash and longleaf pine flatwoods with a wiregrass floor and scattered wetlands	No, subject property outside current range of species	No effect
Notophthalmus perstriatus	Striped Newt	FC	Dry upland habitats. Depression marshes, dome swamps and sinkhole ponds. Natural, ephemeral, isolated Wetlands.	Yes – Natural, ephemeral, isolated Wetlands.	No effect
Danaus plexippus	Monarch Butterfly	FC	Milkweed host plant (primarily *Asclepias spp.*)[c]	No	No effect. Not mentioned in ERC Report
Palaemonetes cummingi	Squirrel Chimney Cave Shrimp	FT	Only found in Squirrel Chimney, a small, deep sinkhole that leads to a flooded cave system of unknown size	No	No effect

Prepared by: JLM Checked by: SEM

Note:

PT = Federally Proposed Threatened
FT = Federally Designated Threatened
FE = Federally Designated Endangered
ST = State Designated Threatened
FC = Federal Candidate

3.0 Geological Assessment

According to the ERC report, depressions caused by sinkhole activity have been observed on site. Whether or not any of these are active will need to be determined by a more thorough site assessment.

The ERC report included discussion of geotechnical investigations including borings. The majority of the borings (90%) have very loose soil conditions at the surface to a depth of approximately 7 ft. This observation is consistent with active ground loss and internal erosion and is often associated with active karst development in this part of Florida. 8 of the 55 borings (about 15%) have very loose conditions at depths ranging from about 12 ft to 22 ft below ground surface. These very loose soils are often found in heavily karstified topographies and could be indicative of active karst development.

Based on a comparison of historical topographic maps (1966 to present), ground loss appears to be occurring.

3.1 Recommendations

Based on the geological investigations provided in the ERC report, Wood recommends the following:

1) Perform a detailed mapping and evaluation of potential sinkhole features
2) Conduct limited geophysical surveys to detect the presence of caverns or other karst features that could affect development
3) Choose building locations based on avoiding any identified active ground loss areas

4.0 Summary and Conclusions

Wood scientists generally agree with the Environmental Resource Assessment Report for the Schmidt Farms property prepared by ERC. Wood environmental scientists conducted a desktop review and site assessment to confirm or deny the findings of the Environmental Resource Assessment Report. The site assessment included review of wetland delineation lines, reviewed the property for potential presence of protected species or their habitat, and review of the geological assessment. In general, Wood agreed with the findings and conclusions made by ERC.

Appendix A
USFWS Information for Planning and Consultation (IPaC) Resource List Report

IPaC resource list

This report is an automatically generated list of species and other resources such as critical habitat (collectively referred to as *trust resources*) under the U.S. Fish and Wildlife Service's (USFWS) jurisdiction that are known or expected to be on or near the project area referenced below. The list may also include trust resources that occur outside of the project area, but that could potentially be directly or indirectly affected by activities in the project area. However, determining the likelihood and extent of effects a project may have on trust resources typically requires gathering additional site-specific (e.g., vegetation/species surveys) and project-specific (e.g., magnitude and timing of proposed activities) information.

Below is a summary of the project information you provided and contact information for the USFWS office(s) with jurisdiction in the defined project area. Please read the introduction to each section that follows (Endangered Species, Migratory Birds, USFWS Facilities, and NWI Wetlands) for additional information applicable to the trust resources addressed in that section.

NOT FOR CONSULTATION

Endangered species

This resource list is for informational purposes only and does not constitute an analysis of project level impacts.

The primary information used to generate this list is the known or expected range of each species. Additional areas of influence (AOI) for species are also considered. An AOI includes areas outside of the species range if the species could be indirectly affected by activities in that area (e.g., placing a dam upstream of a fish population even if that fish does not occur at the dam site, may indirectly impact the species by reducing or eliminating water flow downstream). Because species can move, and site conditions can change, the species on this list are not guaranteed to be found on or near the project area. To fully determine any potential effects to species, additional site-specific and project-specific information is often required.

Section 7 of the Endangered Species Act **requires** Federal agencies to "request of the Secretary information whether any species which is listed or proposed to be listed may be present in the area of such proposed action" for any project that is conducted, permitted, funded, or licensed by any Federal agency. A letter from the local office and a species list which fulfills this requirement can **only** be obtained by requesting an official species list from either the Regulatory Review section in IPaC (see directions below) or from the local field office directly.

For project evaluations that require USFWS concurrence/review, please return to the IPaC website and request an official species list by doing the following:

1. Log in to IPaC.
2. Go to your My Projects list.
3. Click PROJECT HOME for this project.
4. Click REQUEST SPECIES LIST.

Listed species[1] and their critical habitats are managed by the Ecological Services Program of the U.S. Fish and Wildlife Service (USFWS) and the fisheries division of the National Oceanic and Atmospheric Administration (NOAA Fisheries[2]).

Species and critical habitats under the sole responsibility of NOAA Fisheries are **not** shown on this list. Please contact NOAA Fisheries for species under their jurisdiction.

NOT FOR CONSULTATION

1. Species listed under the Endangered Species Act are threatened or endangered; IPaC also shows species that are candidates, or proposed, for listing. See the listing status page for more information. IPaC only shows species that are regulated by USFWS (see FAQ).
2. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

The following species are potentially affected by activities in this location:

Birds

NAME	STATUS

Eastern Black Rail Laterallus jamaicensis ssp. jamaicensis — Threatened
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/10477

Wood Stork Mycteria americana — Threatened
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/8477

Reptiles

NAME	STATUS

Eastern Indigo Snake Drymarchon corais couperi — Threatened
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/646

Gopher Tortoise Gopherus polyphemus — Candidate
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/6994

Amphibians

NAME	STATUS

Frosted Flatwoods Salamander Ambystoma cingulatum — Threatened
Wherever found
There is **final** critical habitat for this species. The location of the critical habitat is not available.
https://ecos.fws.gov/ecp/species/4981

Insects

NAME	STATUS

Monarch Butterfly Danaus plexippus — Candidate
Wherever found
No critical habitat has been designated for this species.
https://ecos.fws.gov/ecp/species/9743

Critical habitats

Potential effects to critical habitat(s) in this location must be analyzed along with the endangered species themselves.

THERE ARE NO CRITICAL HABITATS AT THIS LOCATION.

NOT FOR CONSULTATION

Migratory birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON (IF A BREEDING SEASON IS INDICATED FOR A BIRD ON YOUR LIST, THE BIRD MAY BREED IN YOUR PROJECT AREA SOMETIME WITHIN THE TIMEFRAME SPECIFIED, WHICH IS A VERY LIBERAL ESTIMATE OF THE DATES INSIDE

NOT FOR CONSULTATION

	WHICH THE BIRD BREEDS ACROSS ITS ENTIRE RANGE. "BREEDS ELSEWHERE" INDICATES THAT THE BIRD DOES NOT LIKELY BREED IN YOUR PROJECT AREA.)
American Kestrel Falco sparverius paulus This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
Bald Eagle Haliaeetus leucocephalus This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31
Great Blue Heron Ardea herodias occidentalis This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Jan 1 to Dec 31
Henslow's Sparrow Ammodramus henslowii This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3941	Breeds elsewhere
Lesser Yellowlegs Tringa flavipes This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds elsewhere
Magnificent Frigatebird Fregata magnificens This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Oct 1 to Apr 30
Prairie Warbler Dendroica discolor This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
Red-headed Woodpecker Melanerpes erythrocephalus This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10

NOT FOR CONSULTATION

Short-billed Dowitcher *Limnodromus griseus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Swallow-tailed Kite *Elanoides forficatus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8938	Breeds Mar 10 to Jun 30

Probability of Presence Summary

The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 4-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

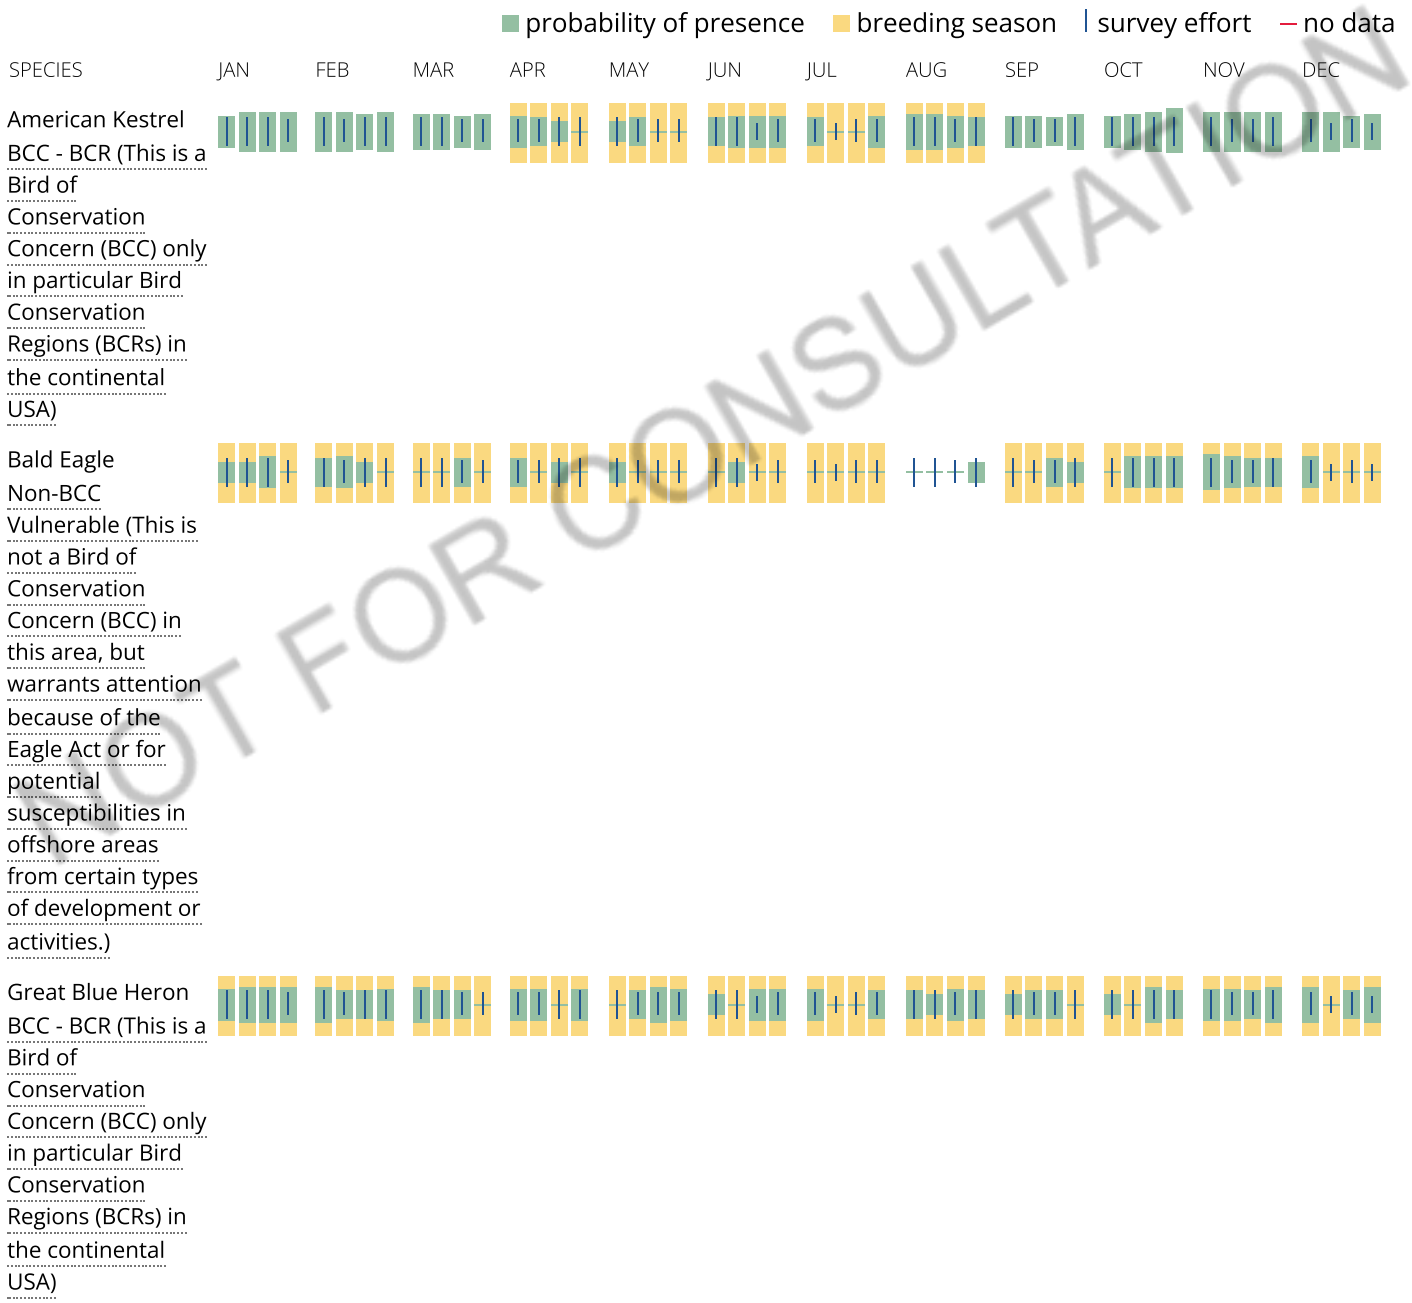
How is the probability of presence score calculated? The calculation is done in three steps:

1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.

To see a bar's probability of presence score, simply hover your mouse cursor over the bar.

Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)



NOT FOR CONSULTATION

Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

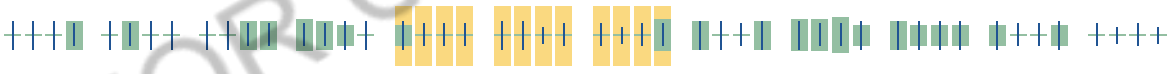
To see a bar's survey effort range, simply hover your mouse cursor over the bar.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

NOT FOR CONSULTATION

Henslow's Sparrow BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

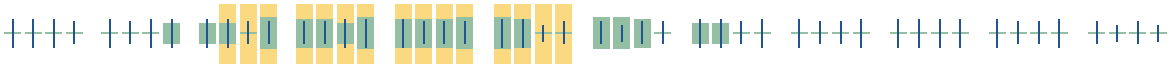


Lesser Yellowlegs BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Magnificent Frigatebird BCC - BCR (This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA)

Prairie Warbler BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Red-headed Woodpecker BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)



NOT FOR CONSULTATION

Short-billed Dowitcher BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

Swallow-tailed Kite BCC Rangewide (CON) (This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.)

NOT FOR CONSULTATION

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?

The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?

The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?

To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?

Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);
2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects

For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?

If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report

The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring

NOT FOR CONSULTATION

in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities, should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

Facilities

National Wildlife Refuge lands

Any activity proposed on lands managed by the National Wildlife Refuge system must undergo a 'Compatibility Determination' conducted by the Refuge. Please contact the individual Refuges to discuss any questions or concerns.

THERE ARE NO REFUGE LANDS AT THIS LOCATION.

Fish hatcheries

THERE ARE NO FISH HATCHERIES AT THIS LOCATION.

Wetlands in the National Wetlands Inventory

Impacts to NWI wetlands and other aquatic habitats may be subject to regulation under Section 404 of the Clean Water Act, or other State/Federal statutes.

For more information please contact the Regulatory Program of the local U.S. Army Corps of Engineers District.

WETLAND INFORMATION IS NOT AVAILABLE AT THIS TIME

This can happen when the National Wetlands Inventory (NWI) map service is unavailable, or for very large projects that intersect many wetland areas. Try again, or visit the NWI map to view wetlands at this location.

NOT FOR CONSULTATION

Data limitations

The Service's objective of mapping wetlands and deepwater habitats is to produce reconnaissance level information on the location, type and size of these resources. The maps are prepared from the analysis of high altitude imagery. Wetlands are identified based on vegetation, visible hydrology and geography. A margin of error is inherent in the use of imagery; thus, detailed on-the-ground inspection of any particular site may result in revision of the wetland boundaries or classification established through image analysis.

The accuracy of image interpretation depends on the quality of the imagery, the experience of the image analysts, the amount and quality of the collateral data and the amount of ground truth verification work conducted. Metadata should be consulted to determine the date of the source imagery used and any mapping problems.

Wetlands or other mapped features may have changed since the date of the imagery or field work. There may be occasional differences in polygon boundaries or classifications between the information depicted on the map and the actual conditions on site.

Data exclusions

Certain wetland habitats are excluded from the National mapping program because of the limitations of aerial imagery as the primary data source used to detect wetlands. These habitats include seagrasses or submerged aquatic vegetation that are found in the intertidal and subtidal zones of estuaries and nearshore coastal waters. Some deepwater reef communities (coral or tuberficid worm reefs) have also been excluded from the inventory. These habitats, because of their depth, go undetected by aerial imagery.

Data precautions

Federal, state, and local regulatory agencies with jurisdiction over wetlands may define and describe wetlands in a different manner than that used in this inventory. There is no attempt, in either the design or products of this inventory, to define the limits of proprietary jurisdiction of any Federal, state, or local government or to establish the geographical scope of the regulatory programs of government agencies. Persons intending to engage in activities involving modifications within or adjacent to wetland areas should seek the advice of appropriate federal, state, or local agencies concerning specified agency regulatory programs and proprietary jurisdictions that may affect such activities.

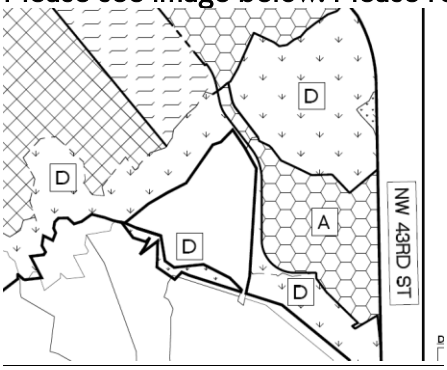
RE: -Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
-Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr Potts:

On October 21, 2021 the City of Alachua received your revised, completed application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56-acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your, revised completed Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The proposed rezoning would permit a maximum of 489,400 square feet of non-residential uses and 515 dwelling units on the subject property. A Project Assistance Team meeting was held on October 11, 2021 to discuss this application.

The applications have been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the applications before they may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 5:00 PM on **Monday, December 6, 2021.** A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Submission of an incomplete package may delay your tentative hearing at the Planning and Zoning Board. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB.



Please address the following insufficiencies :

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

LSCPA Review Comments

1. *General*
   a. **New Comment: Map appears to display development area off of the subject property. Please see image below. Please review and amend map as needed.**

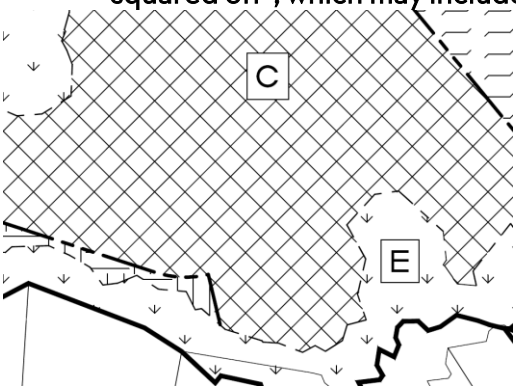
2. *Concurrency Impact Analysis*
   a. **New Comment: Provided traffic analysis appears to be incomplete/ have portions of pages cut off. Please resubmit. Submitted analysis did not appear to reflect impacts to Segment 3 (US 441 from MPO Boundary to CR 25A).**

PD-COMM and PD-R Rezoning Review Comments

1. *Site Specific Amendments to the Official Zoning Atlas (Section 2.4.2) and Planned Development Standards (Section 2.4.3)*
   a. Per Section 2.4.2 (E)(1)(e), the proposed zoning amendment must demonstrate that the uses permitted under the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands. Please provide further detailed analysis including:
      i. Zoning and land use designations of all surrounding lands, regardless of jurisdiction.
      ii. Location of proposed uses proposed in relation to surrounding uses.
      iii. Location of existing uses in vicinity including commercial, industrial, or residential.
      iv. Any other information that address compatibly between proposed uses and existing uses.

      New Comment: Applicant response identifies current uses of property, however, compatibility is based on adjacent land uses not uses on the subject property. Please identify uses near the subject property and characterize those uses in terms of residential densities, land uses (e.g., industrial, commercial, etc).

b. Per Section 2.4.3 (E)(1)(g), the proposed zoning amendment must demonstrate that the uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located. Please elaborate on development pattern in area. Are there existing commercial or business uses already in the vicinity? Is there substantial residential development in the area?



New Comment: Applicant response identifies current uses of property, however, compatibility is based on adjacent land uses not uses on the subject property. Please identify uses near the subject property and characterize those uses in terms of residential densities, land uses (e.g., industrial, commercial, etc).

c. Per Section 2.4.3 (D)(3)(d), an analysis of the site's environmental conditions must be submitted during the rezoning process, as 1) environmental conditions may warrant design considerations and 2) certain standards or conditions may be required based on results of the environmental analysis. Please provide updated environmental analysis.

New Comment: Outside review of environmental impacts are currently underway. Once received, these will be forwarded to the applicant.

2. *General Standards for all PD Districts (Section 3.6.2)*
   a. Per Section 3.6.2 (A)(1), the Master Plan must show the following:
      i. Master Plan must identify location of land use development areas with maximum number, type, and mix of land uses including residential densities and non-residential intensities within each development area. Proposed master plan must address the following:
         1. Additional sub areas should be considered as all uses provided in application materials may not be appropriate when adjacent to single family residential uses or multifamily uses or may require special design considerations. For example, the development area located in the southeast area of the site should not include gasoline sales or restaurants with drive-through/drive-in service. An additional development area within the PD-R zoning district should be considered to provide for larger lots along the south and west property boundaries adjacent to Turkey Creek.

New Comment: A portion of this newly designated development area appears to be narrow and of odd geometry. Staff suggests modifying development area to be more "squared off", which may include enlarging or reducing the size of the development area.

2. Please revise transportation development area (E), to show how Development Area C will be accessed. If roadways are to be public, please create note that such roadways will be dedicated to the Public via platting process or infrastructure plan process.
   New Comment: Response indicates that the transportation/circulation development area is "E" but displayed map indicates that the circulation development area is "D".
3. Note E.2), regarding signage. If signage is to vary from requirements of Section 6.5, a master sign plan will be required. Please review signage standards found in Section 6.5, especially 6.5.4 (C)(2)(b)(iii) and Section 6.5.4 (F)(5), which specifically reference signage within PD Districts.
   New Comment: Unless otherwise modified through the PD Master Plan, the sign regulations regarding multi-tenant development would govern the signage. The standards can be found in Section 6.5.4 (C)(2).

b. Per Section 3.6.2 (A)(3), development along the perimeter of a PD district must be compatible with adjacent existing or proposed future development. A new development area should be created along south and west area of the subject property to provide for larger lots (minimum 10,000 square feet for single family detached; 15,000 square feet for 2 family; 20,000 square feet for 3 family, 30,000 square feet for 4 family).
   New Comment: A portion of this newly designated development area appears to be narrow and of odd geometry. Staff suggests modifying development area to be more "squared off", which may include enlarging or reducing the size of the development area.

3. *Additional Standards for PD Districts (Section 3.6.3 (A)) – PD-R)*
   a. Per Section 3.6.3 (A)(4)(b), provide minimum setbacks/ separations of Development Areas from adjoining residential uses.
      New Comment: Response addresses setbacks from property lines. Please provide separation distances from surrounding residential uses. For example, Development Area C is located, at the closest x' from nearest residential use to the west. Development Area A is located at the closest x' from nearest residential use.
   b. Per Section 3.6.3 (A)(5)(iii), design standards may be reduced where it is found that:
      a. The reduction or modification is necessary as a traffic-calming measure;
      b. The PD Master Plan provides for separation of vehicular, pedestrian, and bicycle traffic;
      c. Access for emergency service vehicles is not substantially impaired;
      d. Adequate off-street parking is provided for the uses proposed; and
      e. Adequate space for public utilities is provided within the right-of-way.
   c. Please include note in PD Master Plan that the alleys permitted will be private/ common area not to be maintained by the City.

4. *Additional Standards for PD Districts (Section 3.6.3 (D)) – PD-COMM*
   a. Note 4) i. provides for on street parallel parking to be permitted. This is acceptable, but please clarify if the parking is included in the pavement width or separate from. Will traffic lanes be obstructed?

New Comment: In locations where on street parallel parking is provided, the minimum right-of-way provided for any subdivision, site plan, or infrastructure plan shall be 60' to provide for adequate spacing of travel lanes, sidewalks, parking areas, and utility infrastructure.

b. Given the dimensional standards (no maximum lot coverage and reduced setbacks), an alternative landscape plan may be advisable to provide maximum flexibility in internal site design. While no final landscape plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.
New Comment: If no alternatives plan is provided, future development will be required to comply with current LDR standards at time of proposed site plan/ infrastructure plan, or subdivision.

c. Given the dimensional standards (no maximum lot coverage and reduced setbacks), a master parking plan may be advisable to provide maximum flexibility in internal site design. While no final detailed parking plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.
New Comment: If no alternatives plan is provided, future development will be required to comply with current LDR standards at time of proposed site plan/ infrastructure plan, or subdivision.

5. *Comprehensive Plan Analysis*

a. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be necessary to include a portion as medium density residential or high density residential.
New Comment: While medium and high density residential development is permitted within the PD-Comm zoning district, there is no minimum or maximum residential density established by the Commercial or Community Commercial land use districts proposed by the associated large scale comprehensive plan amendment. At a high density residential maximum rate of 15 dwelling units per acre, 20.07 acres would be required, leaving 8.53 acres to establish maximum floor to area ratio (FAR). At a FAR of 1.0, the maximum permittable non-residential development would be 371,566 square feet, which exceeds the proposed non-residential of 489,400 square feet of non-residential development in Development Areas A and B. Further, Policy 2.1.d, of the Future Land Use Element states that the Planned Development Commercial zoning is permitted as an options within the commercial and high density residential land use categories, which would indicate that the drafters envisioned a Commercial PD zoning with both residential and commercial uses proposed would require a mix of future land use designations associated with the PD.

b. Application does not address consistency with Policy 1.10.b of the Conservation and Open Space Element. Please address.
New Comment: Proposed allowable use table indicates that stormwater management facilities and public infrastructure are permitted within Development

Area E. Development Area E appears to have been designed to match the minimum water body/ wetland natural buffer area setback requirements per the City's Comprehensive Plan. As such, this area is intended to be left in natural state and not to be developed. Therefore, unless otherwise permitted by the Comprehensive Plan, stormwater management facilities and utilities would not be permitted within Development Area E. Please revise Development Table on Sheet PD-1.

c. Application does not address consistency with Policy 1.12.d of the Conservation and Open Space Element. Please address.
New Comment: Proposed allowable use table indicates that stormwater management facilities and public infrastructure are permitted within Development Area E. Development Area E appears to have been designed to match the minimum water body/ wetland natural buffer area setback requirements per the City's Comprehensive Plan. As such, this area is intended to be left in natural state and not to be developed. Therefore, unless otherwise permitted by the Comprehensive Plan, stormwater management facilities and utilities would not be permitted within Development Area E. Please revise Development Table on Sheet PD-1.

6. *Concurrency Impact Analysis*
   a. New Comment: Provided traffic analysis appears to be incomplete/ have portions of pages cut off. Please resubmit. Submitted analysis did not appear to reflect impacts to Segment 3 (US 441 from MPO Boundary to CR 25A).

7. *Miscellaneous / General Comments*
   a. Allowable uses column in Table on Master Plan sheet has typo in column title.
   New Comment: This does not appear to have been addressed.

8. *Outside Review/ Public Services*
   a. New Comment: See attached review of Traffic Study in a letter dated October 30, 2021 from Brian Kanely, P.E. The City is working to coordinate with FDOT on the issues raised by the letter. Also, please note that the referenced roundabout would require a PD Plan amendment if pursued at a later date.
   b. New Comment: Environmental review is currently underway. We anticipate to have a response from Wood Environmental by December 13, 2021.
   c. New Comment: Please see information from Public Services Department in the attached memo from Rodolfo Valladares, P.E., Public Services Director, and Tom Ridgik, P.E., Engineering Supervisor, dated November 2, 2021.

9. Potential Development Conditions (Revised 11/16/21)
   a. The following are preliminary potential conditions that are in the process of being developed and will be based on submitted data and information as well as consultation with outside experts and other agencies. Other conditions may be incorporated after review of subsequent approvals:
      i. All roadway improvements to US HWY 441 and NW 43rd Street noted in the submitted traffic study shall be permitted and completed in conjunction with any subdivision, site plan, or infrastructure plan proposed for the subject property. Revised traffic studies shall be submitted as a part of any

development application that meets the conditions in accordance with the schedule below.

Study	Cumulative Non-Residential Floor Area Exceeds (square feet)	Cumulative Residential Units Exceeds (Dwelling units)	Date Development Application Submitted
Initial	NA	NA	NA
Update 1	125,000	200	01/01/2025
Update 2	250,000	400	01/01/2028

The traffic study shall be valid for a period of 3 years or until the next Update is required. Unless otherwise required by the City's Land Development Regulations, Alachua County, or Florida Department of Transportation, no more than 2 additional traffic studies shall be required.

ii. Because of the location in relation to surrounding wetlands, sustainable landscaping practices including limitations on use of pesticides and irrigation systems must be considered. These practices include:
    1. Requiring Compost fertilizing (as opposed to traditional/ synthetic fertilizers)
    2. No new wells permitted on the property
    3. All non-residential development shall be required to utilize Florida Friendly Landscaping practices

iii. Sidewalks will be provided along or within US Highway 441 right-of-way and NW 43rd Street right-of-way. Such sidewalks will be extended to NW 102nd Place and NW 93rd Ave.

iv. A limit of 1 use that includes gasoline sales located within Development Areas located within PD-COMM district.

v. A maximum 15,000 square feet of restaurant with drive-through use shall be permitted in PD-COMM development areas.

vi. No more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property. A minimum of 25,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district.

vii. Prior to demolition of the existing structures on the property greater than 100 years old, the applicant must provide evidence from a licensed architect or structural engineer that rehabilitating the structures would not be cost feasible. Prior to demolition, the applicant shall supply a historic structure report that includes photos, architectural descriptions of the interior and exterior of the structure, known history of the structures and sites, and locations (longitude/latitude) of the structures.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

Independent Review of the Schmidt Farms (Updated US 441 Traditional Neighborhood) Traffic Study for the City of Alachua, Florida; Project Located in the Southwest Quadrant of US 441 & NW 43rd Street; Prepared by Volkert, Inc. October 2021

At the request of the City of Alachua, FL, Planning and Community Development Department, Volkert, Inc., conducted an independent review of the Schmidt Farms (Updated US 441 Traditional Neighborhood) Traffic Study located in the southwest quadrant of the intersection of US 441 & NW 43rd Street. The Traffic Study was prepared by Buckholz Traffic in October 2021.

The Schmidt Farms Project is in the southwest quadrant of the signalized intersection of US 441 (FDOT State Highway) and NW 43rd Street (Alachua County highway). The proposed Project contains 214 single family homes, 130 apartment units, 171 "residential-over commercial units", and 300,000 gross square feet of retail space. The Project is expected to generate 9,918 external trips with 763 external trips (386 entering and 377 exiting) during the PM peak hour. The Project anticipates having a driveway onto US 441 (north driveway) and a driveway onto NW 43rd Street (south driveway) that will align with the Marathon Gas Station driveway. The build out year for the project is 2031.

The independent review of the Traffic Study will include the following:

- Review of existing traffic volumes.
- Review of trip generation of site traffic.
- Review of distribution and assignment of site traffic onto US 441 and NW 43rd Street.
- Review of future traffic volumes.
- Review of turn lane analysis.
- Review of signalized intersection capacity analysis.
- Review of non-signalized intersection capacity analysis.
- Review of access management evaluation.
- Review of the traffic study recommendations.
- Additional Volkert comments/recommendations for the Schmidt Farms (Updated US 441 Traditional Neighborhood) Traffic Study.

This project was originally reviewed by Volkert in September 2019. The updated project is similar to the 2019 project with respect to land use. Access to the project from US 441 and NW 43rd Street is identical to the proposed 2019 project.

Review of the Traffic Study

Existing Traffic Volumes

This section of the Traffic Study documents (1) how the existing traffic volumes were obtained and (2) how the directional traffic enter/exit counts were obtained from nearby roadways and driveways. This information is correct and there are no comments or suggestions

Trip Generation of Site Traffic

This section of the Traffic Study describes and documents the trip generation for the Project. The total daily trips, AM peak hour trips and PM peak hour trips are correctly calculated per the ITE *Trip Generation Manual, 10th Edition.* It is important to note that there were no adjustments for pass-by traffic in the trip generation (pass-by traffic is traffic that does not originate in the project, is already on the adjacent roadways and the motorist stops by the project land use for a product or service; a gas station is a good example of pass-by traffic). The primary goal of the traffic study is to analyze the total driveway volumes accessing the site and this includes traffic that originates in the project and pass-by traffic. Not reducing the driveway volumes produces site traffic volumes that are conservatively high. The trip generation information is correct and there are no comments or suggestions.

Distribution and Assignment of Site Traffic

This section of the Traffic Study distributes and assigns site traffic onto the streets adjacent to the Project. Manual traffic counts that were obtained at nearby side streets onto US 441 in the Project area resulted in 75% - 80% of traffic headed south towards Gainesville and 20% - 25% of traffic headed north towards Alachua. This distribution of traffic is consistent with previous traffic studies that Volkert has reviewed for the City of Alachua for projects along this portion of US 441.

The assignment of project southbound traffic to 36% US 441 and 36% to NW 43rd Street is reasonable. The University of Florida, Shands Hospital and city and county government offices are east of NW 43rd Street and the Oaks Mall, Butler Plaza/Celebration Point, I-75, and large residential areas are west of NW 43rd Street. Assigning traffic equally to southbound US 441 and southbound NW 43rd Street is a reasonable assumption.

The distribution and assignment of site traffic is correct and there are no comments or suggestions.

Future Traffic Volumes

This section of the Traffic Study describes and documents how the future traffic volumes were calculated. The existing traffic volumes were adjusted by the appropriate FDOT seasonal adjustment factor and then adjusted forward in time by a growth factor from nearby FDOT historical traffic count stations. Site traffic was then added to the future traffic volumes to produce 2031 total traffic volumes for the project. The future traffic volumes are correctly calculated and there are no comments or suggestions.

Turn Lane Analysis

This section of the Traffic Study describes and documents how the determination for left and/or right turn lanes at the Project north driveway onto US 441 and the Project south driveway onto NW 43rd Street were determined. The documentation and methodology for making the determination for the warrants for right and left turn lanes support the conclusions of the Traffic Study. The turn lane analysis was correctly performed and there are no comments or suggestions.

Signalized Intersection Capacity Analysis

This section of the Traffic Study describes and documents how the capacity calculations were performed for the signalized intersection at US 441 and NW 43rd Street. The traffic volume inputs for the Highway Capacity Software were checked and are accurate. This section of the report documents the capacity calculations for this intersection for the existing (2021), 2031 No Build and 2031 Build conditions; there are no comments or suggestions.

Non-signalized Intersection Capacity Analysis

This section of the Traffic Study describes and documents how the capacity calculations were performed for the non-signalized intersections of NW 43rd Street/Project south driveway/Marathon Gas Station Driveway and the US 441/Project north driveway. The traffic volume inputs for the Highway Capacity Software were checked and are accurate. This section of the report accurately documents the capacity calculations for these intersections for the existing, 2031 No Build and 2031 Build conditions; and there are no comments or suggestions.

Access Management Evaluation

The Traffic Study recommends that the existing full median opening on US 441 just north of the proposed Project north driveway be closed and consideration be given to providing a directional median opening on US 441 at the proposed Project north driveway. A directional median opening allows right in/right out/left in traffic and prohibits left out traffic. Given the high-speed conditions on US 441 at this location, Volkert concurs with the Traffic Study recommendation for a directional median opening at this location.

Volkert also concurs with the Traffic Study recommendation to align the proposed Project south driveway onto NW 43rd street with the existing Marathon Gas Station driveway.

Traffic Study Recommendations

This section of the Traffic Study lists the recommendations for modifications to the adjacent roadways that are needed to accommodate the Project site traffic. These recommendations are:

- Relocate the existing median opening on US 441 that is just north of the proposed Project north driveway to the south, so it aligns with the Project north driveway and construct this median opening as a directional median opening (allows right in/right out/left in traffic and prohibits left out traffic.).
- Construct a southbound right turn lane on US 441 at the Project north driveway.
- Construct a northbound left turn lane on NW 43rd Street at the Project south driveway. The Project south driveway will align with the Marathon Gas Station driveway.
- At the Project south driveway, construct two westbound egress lanes, a right only and left/straight.
- As the Project develops, monitor traffic conditions at the Project south driveway on NW 43rd Street to determine if any additional traffic operational modifications are required.

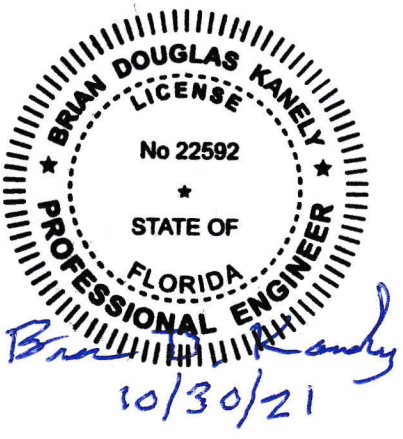
Volkert concurs with these recommendations.

Additional Volkert Comments/Recommendations for the Schmidt Farms (Updated US 441 Traditional Neighborhood) Traffic Study

1. The US 441 Traditional Neighborhood Project is a large project that will most likely be developed in phases. If this is the case, the traffic improvements required by the FDOT for US 441 and by Alachua County for NW 43rd Street may need to be phased as the project develops. The issues of (a) a follow-up traffic study and (b) phasing of roadway improvements on US 441 and NW 43rd Street needs to be discussed between the City of Alachua, the FDOT, Alachua County and the developer as the Project moves forward through the approval process.
2. The Traffic Study mentioned the possibility of a roundabout on NW 43rd Street at the Project south driveway. The right of way required for a roundabout or other roadway modification at the Project south driveway needs to be dedicated at the initial approval stage of the Project. This will guarantee that right of way is available at a future time when the Project trip generation dictates the need for such improvements. A roundabout has significantly different right of way requirements than a standard intersection. The minimum dimension for the inscribed circle of a single lane roundabout on an arterial street like NW 43rd Street is approximately one hundred feet (distance from outside edge of pavement though the central island to the other outside edge of pavement). You then add two feet of curb and gutter, a five-foot grass strip, an eight-foot-wide sidewalk to accommodate bicycles and pedestrians, and a five-foot grass strip for utilities. This results in a right of way width of approximately *one hundred fifty feet* for planning purposes for a one lane roundabout. The minimum dimension for the inscribed circle of a two-lane roundabout is approximately one hundred thirty feet. When you add in the other roadway design features, the right of way width for planning purposes for a two-lane roundabout is approximately *one hundred and eighty feet*. If a roundabout is proposed at the Project south driveway/NW 43rd it is important that the right of way be dedicated when the project is initially approved.
3. As part of the review and approval process for this Project, the FDOT needs to review the issue of adding protected only traffic signal phasing at the US 441/NW 43rd Street traffic signal for the southbound to northbound U-turn maneuver. A protected only traffic signal phasing is the red arrow/yellow arrow/green arrow operation. There is no flashing yellow arrow for permissive left turns. Adding the protected only signal phasing for the southbound to northbound U-turn on US 441 would require adding a three section traffic signal head on the end of the existing mast arm for southbound traffic on US 441. This raises the question as to whether the traffic signal mast arm pole was structurally designed to accommodate the additional traffic signal head that would be needed. Structural design requirements for mast arm poles change over time and what was acceptable when this traffic signal was constructed may not be acceptable with respect to current FDOT structural mast arm pole design requirements and specifications. The City of Gainesville Traffic Operations – Traffic Signals Section maintains all the traffic signals in Alachua County. They were contacted in conjunction with the 2019 traffic study to find out what information was available with respect to the mast arm poles at the US 441/NW 43rd Street traffic signal. Their response was the signal was constructed in August 2004. However, the traffic signal construction plans do not state whether the mast arm

pole for southbound traffic on US 441 was designed to accommodate an additional traffic signal head at the end of the mast arm. A more complete review of the traffic signal plans and whether the existing southbound mast arm pole could accommodate an additional three section traffic signal head needs be explored as part of the approval of the roadway modifications for this project. This is a significant issue due to costs. The current FDOT historical cost information for a seventy (70) foot mast arm pole is approximately $50,000 (this is just the cost for the mast arm pole, it does not include the associated engineering and construction costs). If a new mast arm pole is necessary, the total replacement cost would need to be factored into the costs associated with the highway improvements portion of the project. There is also a traffic safety issue for the U-turn traffic at the traffic signal associated with being able to see northbound oncoming traffic. This section of US 441 would be classified as a high-speed location (greater than 45 mph), plus the left turn lanes on US 441 are offset, which can make it difficult to see oncoming traffic under certain conditions. To summarize this discussion, as part of the review of highway improvements associated with this Project, the City of Alachua should request the FDOT review the following with respect to the traffic signal at US 441/NW 43rd Street:

a. Should the southbound to northbound U-turn be signalized due to the increased volume of traffic from the Project that will be making the U-turn movement and/or due to the high-speed classification of US 441 at NW 43rd Street and the associated traffic safety concerns?



b. If the U-turn movement is signalized, the movement should be a protected only movement. Note: At this traffic signal the existing northbound left turn/U-turn movement is signalized as a protected only movement (three section traffic signal head).

c. If the U-turn movement is signalized, a structural analysis should be performed to determine if the existing mast arm pole can accommodate the additional traffic signal head required for the southbound to northbound U-turn movement

Volkert, Inc. appreciates the opportunity to assist the City of Alachua with this independent review of the Schmidt Farms (Updated US 441 Traditional Neighborhood) Traffic Study. Please contact me if you have any questions or need additional information.

RE: -Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
-Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr Potts:

On August 25, 2021 the City of Alachua received your revised, completed application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56-acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your, revised completed Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The proposed rezoning would permit a maximum of 489,400 square feet of non-residential uses and 515 dwelling units on the subject property. A Project Assistance Team meeting is scheduled to be held on October 4, 2021 to discuss this application.

The applications have been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the applications before they may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 5:00 PM on **Monday, October 18, 2021.** A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Submission of an incomplete package may delay your tentative hearing at the Planning and Zoning Board. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB.

Please address the following insufficiencies :

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

LSCPA Review Comments

1. *General*
   a. Revise application cover and application to reflect change in agent for application. It is staff's understanding that Carter Thompson is no longer employed by JBPro.
   b. Revise application signature to reflect actual applicant or agent signature. Currently, Section B of the Application lists the agent as the applicant, however, the owner/ title holder of the property has signed the application.
   c. Identify small triangular shape area located near intersection of US 441 and NW 43rd Street that does not appear to be part of Conservation (D) area.
   d. Application provides legal description of overall property. Please provide legal description for each land use area (legal description for each area to be Moderate Density Residential, Commercial, Community Commercial, and Conservation).

2. *Urban Sprawl Analysis*
   a. Response II. a. located on Page 6 of Justification Report which relates to the application's consistency with Section 163.3177 (6)(a)(1)9.b(I), F.S, states the development abuts Turkey Creek. Please detail design considerations, including placement of lands within Conservation land use category that demonstrates compliance with this Section. Additionally, the response states that the buffer area will be undisturbed, but this area is identified on the related PD Master Plan application as being eligible for development including stormwater management facilities, roadways, utilities, etc.
   b. Response II. h. located on Page 7 of Justification Report which relates to the application's consistency with Section 163.3177 (6)(a)(1)9.b(VII), F.S., is unclear. Please reword to be clearer.

3. *Concurrency Impact Analysis*
   a. Submitted concurrency impact analysis for potable water, wastewater, traffic, solid waste only provides analysis for proposed residential dwelling units and not any of the proposed non-residential area. Please revise.
   b. Recreation impact analysis states that the proposed development will provide 1.29 acres in improved passive park space. Please clarify. Is this area intended to be dedicated to the City as a public park? If so, please provide location and call out in related PD Master Plan application.

4. *Needs Analysis*
   a. Submitted needs analysis provides state level data and analysis showing need for proposed development. Analysis should be more refined and include local analysis

showing need for residential and non-residential uses that would be permitted under this land use action.

5. *Comprehensive Plan Consistency Analysis*
   a. Page 18 of justification report states that the application is requesting medium density residential, however, map submitted with application and application cover indicate the application requesting moderate density residential. Please verify and correct throughout application.
   b. Page 25 of justification report addressed Objective 5.2 of the Future Land Use Element. The analysis states that the application has "clouted" their concurrency requirements. Please clarify or elaborate.
   c. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be necessary to include a portion as medium density residential or high density residential to achieve the 515 units on the subject property.
   d. Application does not address consistency with Objective 1.3 and Policy 1.3.d of the Conservation and Open Space Element. Please address.
   e. Application does not address consistency with Policy 1.10.b of the Conservation and Open Space Element. Please address.
   f. Application does not address consistency with Policy 1.12.d of the Conservation and Open Space Element. Please address.

6. *Outside Review Comments*
   a. See attached comments in an email dated September 13, 2021 from Brian Kanely of Volkert, Inc regarding submitted traffic study. Please revise and resubmit traffic study with corrections.
7. *Completeness Review Comments*
   a. Updated environmental report(s) must be provided.

PD-COMM and PD-R Rezoning Review Comments

1. *Site Specific Amendments to the Official Zoning Atlas (Section 2.4.2) and Planned Development Standards (Section 2.4.3)*
   a. Per Section 2.4.2 (E)(1)(e), the proposed zoning amendment must demonstrate that the uses permitted under the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands. Please provide further detailed analysis including:
      i. Zoning and land use designations of all surrounding lands, regardless of jurisdiction.
      ii. Location of proposed uses proposed in relation to surrounding uses.
      iii. Location of existing uses in vicinity including commercial, industrial, or residential.
      iv. Any other information that address compatibly between proposed uses and existing uses.

b. Per Section 2.4.3 (E)(1)(g), the proposed zoning amendment must demonstrate that the uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located. Please elaborate on development pattern in area. Are there existing commercial or business uses already in the vicinity? Is there substantial residential development in the area?
c. Per Section 2.4.3 (E)(1)(j), the proposed zoning amendment must demonstrate that the proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, stormwater management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development. The rezoning application includes an infrastructure area improvement report that appears to be related to the financing of the needed improvements to serve the development. Please note that this may be a separate matter for the City Administration and Commission to consider. It is ultimately the developer's responsibility to finance and install any required improvements needed to serve the development site. Staff recommends the applicant work with the Public Services Department and/or City Manager's office to obtain feedback on the submitted infrastructure area improvement report.
d. Per Section 2.4.3 (E)(1)(k), the proposed zoning amendment must demonstrate that the proposed amendment would not result in significantly adverse impacts on the natural environment, including, but not limited to, water, air, noise, stormwater management, wildlife, vegetation, wetlands, and the natural functioning of the environment. Please elaborate on protections to be included. Please note the Conservation land use and development area, and permitted uses within those categories.
e. Per Section 2.4.3 (D)(3)(d), an analysis of the site's environmental conditions must be submitted during the rezoning process, as 1) environmental conditions may warrant design considerations and 2) certain standards or conditions may be required based on results of the environmental analysis. Please provide updated environmental analysis.

2. *General Standards for all PD Districts (Section 3.6.2)*
   a. The information provided within the justification narrative for development standards must be incorporated into the PD Master Plan sheets. A PD Master Plan may be multiple sheets.
   b. Per Section 3.6.2 (A)(1), the Master Plan must show the following:
      i. Master Plan must identify location of land use development areas with maximum number, type, and mix of land uses including residential densities and non-residential intensities within each development area. Proposed master plan must address the following:
         1. Additional sub areas should be considered as all uses provided in application materials may not be appropriate when adjacent to single family residential uses or multifamily uses or may require special design considerations. For example, the development area located in the southeast area of the site should not include gasoline sales or restaurants with drive-through/drive-in service. An additional development area within the PD-R zoning district should be

considered to provide for larger lots along the south and west property boundaries adjacent to Turkey Creek.

2. The location of all public facility sites serving the subject property including transportation, potable water, wastewater, parks, fire, police, EMS, storm water, solid waste and schools. This may be in graphical form or through a table displayed on the PD-Master Plan. If in tabular form, the table must show the distance in driving miles from site to public facility.
3. Please address inclusion of agricultural uses in PD-COMM zoning district.
4. Please address inclusion of upper-story dwellings in PD-COMM zoning areas. These are already permitted uses within the PD-Comm district. Does the applicant intend to preclude all other residential development types?
5. As residential is permitted within Development Areas A and B, dimensional standards must be provided for that development type.
6. Dimensional standards for cottage style residential uses located within Development Area C must be adjusted to have minimum width of 25', minimum side setback of 2.5', minimum lot size of 2,250 square feet.
7. For new residential development area to be created within PD-R District, cottage style and single family attached, and townhouses may be not be acceptable. Single family detached and 2 to 4 family may be appropriate.
8. If multiple family is proposed to be permitted in Development Area C, then dimensional standards need to be included.
9. For single family attached uses in any Development Area, please add dimensional standard that the "end cap" units must have a minimum 4,000 square feet lot size. For townhouse uses, please clarify that minimum lot size is 2,000 square per unit plus 4,000 square feet for each end unit.
10. Please revise transportation development area (E), to show how Development Area C will be accessed. If roadways are to be public, please create note that such roadways will be dedicated to the Public via platting process or infrastructure plan process.
11. Please include environmentally sensitive area map with future submittals showing wetlands and water bodies, with appropriate buffers as well as any special flood hazard areas.
12. PD Master Plan should clearly delineate areas to be zoned PD-R and PD-COMM.
13. Pages 23- 25 of the justification report includes multiple notes that relate to or modify the PD Master Plan. These notes, as corrected considering other comments made within this latter, must be incorporated into the PD Master Plan.
14. Note 2, a. -g., of the development standards notes list uses that are already permitted within the PD-COMM. Please clarify why these uses are separated and listed separately.
15. Note E.2), regarding signage. If signage is to vary from requirements of Section 6.5, a master sign plan will be required. Please review signage standards found in Section 6.5, especially 6.5.4 (C)(2)(b)(iii) and Section 6.5.4 (F)(5), which specifically reference signage within PD Districts.

16. Note 3) located page 25 of the justification report references Development Area F, but this area is not located on the PD Master Plan. Please verify/ clarify throughout application.

17. For cottage style uses, include minimum unit size of 600 square feet in dimensional standards.

c. Per Section 3.6.2 (A)(3), development along the perimeter of a PD district must be compatible with adjacent existing or proposed future development. A new development area should be created along south and west area of the subject property to provide for larger lots (minimum 10,000 square feet for single family detached; 15,000 square feet for 2 family; 20,000 square feet for 3 family, 30,000 square feet for 4 family).

d. Per Section 3.6.2 (A)(3), development along the perimeter of a PD district must be compatible with adjacent existing or proposed future development. The portion of development area A located in the southeast quadrant of the site immediately adjacent to NW 43rd Street, is in proximity to single family residential uses. Please include a development or dimensional standard that would require a 25' Type C buffer from all internal and external roadways, and any development area boundary.

e. PD Master Plan does not include a conversion schedule. While not required, a conversion schedule may be useful to ensure maximum flexibility.

f. The PD Master Plan must include a transportation, potable water and wastewater, parks, solid waste and stormwater component demonstrating that concurrency requirements have been met. Generally, this is provided through inclusion of Table from concurrency report into PD Master Plan.

3. *Additional Standards for PD Districts (Section 3.6.3 (A)) – PD-R)*

a. Per Section 3.6.3 (A)(4)(b), provide minimum setbacks/ separations of Development Areas from adjoining residential uses.

b. Per Section 3.6.3 (A)(5)(iii), design standards may be reduced where it is found that:

a. The reduction or modification is necessary as a traffic-calming measure;

b. The PD Master Plan provides for separation of vehicular, pedestrian, and bicycle traffic;

c. Access for emergency service vehicles is not substantially impaired;

d. Adequate off-street parking is provided for the uses proposed; and

e. Adequate space for public utilities is provided within the right-of-way.

c. Please include note in PD Master Plan that the alleys permitted will be private/ common area not to be maintained by the City.

4. *Additional Standards for PD Districts (Section 3.6.3 (D)) – PD-COMM*

a. Note 4) provided on Page 25 of justification report outlines rights-of-way/street standards. These are generally acceptable for the residential areas, but separate standards should be outlined or deferred to best engineering design as a maximum roadway width may not accommodate the retail/ commercial uses allowed in PD-COMM district.

b. Note 4) i. provides for on street parallel parking to be permitted. This is acceptable, but please clarify if the parking is included in the pavement width or separate from. Will traffic lanes be obstructed?

c. Given the dimensional standards (no maximum lot coverage and reduced setbacks), an alternative landscape plan may be advisable to provide maximum flexibility in internal site design. While no final landscape plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.
d. Given the dimensional standards (no maximum lot coverage and reduced setbacks), a master parking plan may be advisable to provide maximum flexibility in internal site design. While no final detailed parking plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.

5. *Comprehensive Plan Analysis*
   a. Page 11 of justification report states that the application is requesting medium density residential, however, map submitted with application and application cover indicate the application requesting moderate density residential. Please verify and correct throughout application.
   b. Page 18 of justification report addressed Objective 5.2 of the Future Land Use Element. The analysis states that the application has "clouted" their concurrency requirements. Please clarify or elaborate.
   c. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be necessary to include a portion as medium density residential or high density residential.
   d. Application does not address consistency with Objective 1.3 and Policy 1.3.d of the Conservation and Open Space Element. Please address.
   e. Application does not address consistency with Policy 1.10.b of the Conservation and Open Space Element. Please address.
   f. Application does not address consistency with Policy 1.12.d of the Conservation and Open Space Element. Please address
   g. Provide analysis of Objective 3.4, Objective 3.5, and Policy 3.7.a, Future Land Use Element regarding preservation of existing structures located on property.

6. *Concurrency Impact Analysis*
   a. Submitted concurrency impact analysis for potable water, wastewater, traffic, solid waste only provides analysis for proposed residential dwelling units and not any of the proposed non-residential area. Please revise.
   b. Recreation impact analysis states that the proposed development will provide 1.29 acres in improved passive park space. Please clarify. Is this area intended to be dedicated to the City as a public park? If so, please provide location and call out in related PD Master Plan application.

7. *Development and Subdivision Standards*
   a. Section 6.9.4 of the City's LDRs creates the Floodprone Area Standards for the City. Portions of the site appear to be located within Flood Zone A, AE, and X. Please note applicable code subsections within Section 6.9.4 for reference.

b. Section 7.3.9 requires fire protection improvements to be provided when a subdivision is connected to a publicly owned water system. The development must demonstrate compliance with the provisions of Section 7.3.9 prior to the approval of any Final PD Plan (preliminary plat or site plan). Applicant must coordinate with Alachua County Fire Rescue and City Public Services Department concerning compliance with applicable fire protection improvements or design requirements.

8. *Miscellaneous / General Comments*
   a. Certain uses, such as gasoline sales, for example, may be prohibited or conditioned based on environmental constraints of property.
   b. Provide legal descriptions for each area to be zoned PD-COMM and PD-R.
   c. Allowable uses column in Table on Master Plan sheet has typo in column title.
   d. Revise application cover and application to reflect change in agent for application. It is staff's understanding that Carter Thompson is no longer employed by JBPro.
   e. Revise application signature to reflect actual applicant or agent signature. Currently, the applicant lists the agent as the applicant, however, the owner/ title holder of the property has signed the application.
   f. In PD Master Plan Development Area Table, please bullet point or otherwise list the allowed uses for clarification purposes.

9. *Completeness Review Comments*
   a. Please submit updated environmental report(s).

10. *Outside Review*
    a. See attached comments in an email dated September 13, 2021 from Brian Kanely of Volkert, Inc regarding submitted traffic study. Please revise and resubmit traffic study with corrections.

11. Potential Development Conditions
    a. The following are preliminary potential conditions that are in the process of being developed and will be based on submitted data and information as well as consultation with outside experts and other agencies. Other conditions may be incorporated after review of subsequent approvals:
       i. Based on potential impacts to the surrounding roadway network and the recommendations by Brian Kanely, P.E., of Volkert Engineering, a condition may be considered that would require additional traffic studies at determined intervals in the future to ensure that the proposed development is not creating deficiencies, and if deficiencies are identified creating a method by which they will be addressed.
       ii. Because of the location in relation to surrounding wetlands, sustainable landscaping practices including limitations on use of pesticides and irrigation systems must be considered. These practices include:
          1. Requiring Compost fertilizing (as opposed to traditional/ synthetic fertilizers)
          2. Residential lots shall not be irrigated with potable water
          3. No new wells permitted on the property

4. All non-residential development shall be required to utilize Florida Friendly Landscaping practices

iii. Sidewalks will be provided along or within US Highway 441 right-of-way and NW 43rd Street right-of-way. Such sidewalks will be extended to NW 102nd Place and NW 93rd Ave.

iv. A limit of 12 gasoline pump stations located within Development Areas located within PD-COMM district.

v. A maximum 15,000 square feet of restaurant with drive-through use shall be permitted in PD-COMM development areas.

vi. No more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property. A minimum of 40,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district.

vii. Prior to demolition of the existing structures on the property greater than 100 years old, the applicant must provide evidence from a licensed architect or structural engineer that rehabilitating the structures would not be cost feasible. Prior to demolition, the applicant shall supply a historic structure report that includes photos, architectural descriptions of the interior and exterior of the structure, known history of the structures and sites, and locations (longitude/latitude) of the structures.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

Adam Hall, AICP
Principal Planner

Updated US 441 Traditional Neighborhood Traffic Study

From : brian kanely <briank5030@outlook.com> Mon, Sep 13, 2021 02:31 PM

Subject : Updated US 441 Traditional Neighborhood Traffic Study

To : Adam Hall <ahall@cityofalachua.com>, Kathy Winburn <kwinburn@cityofalachua.org>

Adam:
I have reviewed the Traffic Study. There are some presentation errors that need to be cleaned up (listed below). The various calculations in the Study are correct and I agree with the conclusions. The errors that need to be cleaned up are as follows:

1. Study page 2 - the traffic volumes referenced should be 2031 volumes.
2. Figure 3 - this figure is 2019 data; it needs to be replaced with the 2021 data.
3. Figure 4 - this figure is 2019 data; it needs to be replaced with the 2021 data.
4. Figure 5 - this figure is 2019 data; it needs to be replaced with the 2021 data.
5. Figure 6 - this figure is 2019 data; it needs to be replaced with the 2021 data.
6. Figure 7 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
7. Figure 8 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
8. Figure 9 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
9. Figure 10 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
10. Table 13 - the title of this table needs to be changed to SIGNALIZED INTERSECTION CAPACITY RESULTS - US 441/43RD STREET - MINOR MOVEMENTS.
11. Table 14 - the title of this table needs to be changed to UNSIGNALIZED INTESECTION CAPACITY RESULTS - NW 43RD STREET/ SOUTH SITE DRIVE/MARATHON DWY.

To be consistent with other traffic studies submitted to the City, copies of the appropriate pages from the ITE Trip Generation Manual should be included in the Study.

I will proceed to work up the draft Independent Review and submit it to you in the next several days. You can then submit it to Buckholz Traffic with the above minor corrections.

Another issue with this traffic study is has it been submitted to FDOT and Alachua County for review? There are modifications recommended on US 441 and NW 43rd Street that should require review and comment by FDOT and Alachua County. Has there been any coordination with FDOT and the County to date?

Have you received the proposal letter yet?

Call me if you have any questions on the above (352-262-3580).

Brian

CAUTION: This email originated from outside the City.

DO NOT respond, click, or open attachments unless you recognize the sender **(name AND email address)** and know the content is safe.

Should there still be any question on the origin of this email, contact the IT Department immediately.

RE: Completeness Review for:
- Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
- Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Ms Thompson:

On August 25, 2021 the City of Alachua received your revised application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56-acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000).

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. Upon additional review of the submitted applications, the Planning Department has reviewed the aforementioned applications for completeness and finds that the application is incomplete. Failure to respond the identified deficiencies within 45 calendar days will result in administrative withdrawal of the applications.

Please note, the comments below are based solely on a preliminary review of your application for completeness. The contents of the applications **have not** been thoroughly reviewed. An in-depth review of the content of the application will be performed subsequently and any further issues with content will be provided to you at the Project Assistance Team (PAT) meeting.

Please address the following:

1. Comprehensive Plan Amendment Application
    a. Please provide Traffic Impact Analysis or Statement.
    b. Please provide Environmental Assessment or Study.
2. Rezoning Application:
    a. Please provide Traffic Impact Analysis or Statement.
    b. Please provide Environmental Assessment or Study.

RE: Completeness Review for:
- Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
- Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Ms Thompson:

On August 17, 2021 the City of Alachua received your application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000).

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is incomplete, conditional upon submission of certain information found below. Failure to respond the identified deficiencies within 45 calendar days will result in administrative withdrawal of the applications.

Please note, the comments below are based solely on a preliminary review of your application for completeness. The contents of the applications **have not** been thoroughly reviewed. An in-depth review of the content of the application will be performed subsequently and any further issues with content will be provided to you at the Project Assistance Team (PAT) meeting.

Please address the following:

1. Comprehensive Plan Amendment Application
    a. Mailing labels not provided for those organizations and individuals registered with the City to receive notice. The list can be found on the City's website at: https://www.cityofalachua.com/home/showpublisheddocument/535/637473599620070000 .
    b. Proposed application sheet identifies proposed future land use categories as Medium Density Residential and Commercial, but provided application narrative and submitted proposed future land use map identifies Moderate Density Residential, Commercial, Community Commercial, and Conservation as proposed Future Land Use Categories. Please verify and revise.
2. Rezoning Application:
    a. Mailing labels not provided for those organizations and individuals registered with the City to receive notice. The list can be found on the City's website at: https://www.cityofalachua.com/home/showpublisheddocument/535/637473599620070000 .
    b. Per Section 3.6.2 (A)(1), the PD Master Plan:

        (a)Identifies the general location of land uses within individual development areas or development pods and the mix of land uses;
        (b)Calculates the number, type, and mix of land uses, including the total number of residential units, residential densities, and nonresidential intensities within each development area or development pods and the total number, type, and mix of land uses for the entire PD Master Plan;
        (c)Identifies the general location of open space;
        (d)Identifies the location of environmentally sensitive lands, wildlife habitat, and stream corridors;
        (e)Identifies the on-site transportation circulation system including arterial and collector roads, existing or projected transit corridors, and pedestrian and bicycle pathways;
        (f)Identifies on-site potable water and wastewater facilities; and
        (g)Identifies the general location of all public facility sites serving the development, including transportation, potable water, wastewater, parks, fire, police, EMS, stormwater, solid waste and schools.

        The provided PD Master Plan does not appear to identify the location of environmentally sensitive lands, such as wetlands or stream corridors. The PD Master Plan does not appear to identify on-site potable water and wastewater facilities. The PD Master Plan does not appear to identify the general location of all public facility sites serving the development such as potable water, wastewater, parks, fire, police, EMS, storm water, solid waste and schools. Please note that the PD Master Plan may be multiple sheets in order to display all required information. Please provide a revised PD Master Plan.

Should you have any questions, please feel free to contact me at (386) 418-6100 x 1603 or via email at ahall@cityofalachua.com.

PLANNED DEVELOPMENT REGULATORY AGREEMENT
FOR SCHMIDT FARMS PD PROJECT

THIS PLANNED DEVELOPMENT REGULATORY AGREEMENT ("PD Agreement") is made as of _____, by and between the **CITY OF ALACHUA, FLORIDA** ("City"), a political subdivision of the State of Florida, and **DM ALACHUA INVESTMENTS, LLC.**, a Florida corporation, their successors or assigns ("Owner/Developer"). The City and the Owner/Developer may jointly be referred to as the "Parties."

RECITALS

WHEREAS, the Owner/Developer desires to obtain approval for a **Planned Development ("PD")** in the City known as **Schmidt Farms PD ("Project")**, which is proposed to consist of ±121.1 acres;

WHEREAS, the Owner/Developer wishes to improve the land comprising the PD, the legal description for which is described hereto in Exhibit "A," which is incorporated herein by reference ("Property");

WHEREAS, as part of the approval process for the planned development required by the City of Alachua Land Development Regulation Section 2.4.3, an application to rezone the Property from Commercial Intensive ("CI") and Agricultural ("A") to Planned Development – Residential ("PD-R") and Planned Development – Commercial ("PD-Comm") has been filed with the City;

WHEREAS, the Planning & Zoning Board, serving as the Local Planning Agency ("LPA"), recommended approval of the proposed rezoning from Commercial Intensive ("CI") and Agricultural ("A") to Planned Development – Residential ("PD-R") and Planned Development – Commercial ("PD-Comm") at a quasi-judicial public hearing held on March 8, 2022;

WHEREAS, the City Commission held the first of two required quasi-judicial public hearings on March 28, 2022, to consider the proposed rezoning of the Property pursuant to Ordinance Number 22-10;

WHEREAS, the City and the Owner/Developer desire to proceed to the second and final reading on the proposed rezoning of the Property pursuant to Ordinance Number 22-10;

WHEREAS, concurrent with the second and final reading of the proposed rezoning for the Property, a PD Agreement and a PD Master Plan are required to be approved;

NOW, THEREFORE, in consideration of the foregoing premises, the Parties hereby agree as follows:

1. The above RECITALS are true and correct and incorporated as material portions of this PD Agreement by reference.

2. The Owner/Developer shall plan and construct, at the Owner/Developer's sole expense, the Project according to the specifications set forth in the City's LDRs; Ordinance Number 22-10, which is attached hereto as Exhibit "B" and agreed to by the Owner/Developer; and the PD Master Plan documents, which are attached hereto as Exhibit "C."

3. A **Final PD Plan** for the Project (a **Preliminary Plat** or a **Site Plan**) must be submitted to the City within one (1) year from the City Commission's approval of this PD Agreement, Ordinance Number 22-10, and the PD Master Plan, for any part or section of the plan for development shown in the PD Master Plan. If a **Final PD Plan** for the Project is not submitted within the required one (1) year period, it shall result in the expiration of the PD zone district classifications of the Project. If the PD zoning expires, the City shall have the right, but not the obligation, in the City's sole discretion, to conduct any hearings necessary to rezone the lands included within the Project to the previous zoning districts of Commercial Intensive ("CI") and Agricultural ("A").

4. The Owner/Developer shall construct the Project in accordance with its approved PD Master Plan. Deviations from the PD Master Plan that constitute substantial changes as described in Section 2.4.3 of the City's LDRs must be approved in advance by the City Commission.

5. The approval and execution of this PD Agreement does not guarantee the approval of any development permits, including but not limited to a Preliminary Plat, Construction Plans, Final Plat, or a Site Plan for the Project, or for any part or section thereof, for the Owner/Developer or its successors or assigns.

6. Nothing contained in this PD Agreement shall relieve the Owner/Developer, or its successors, assigns, or anyone acting on the Owner/Developer's behalf, from obtaining all local, regional, state, or federal permits or complying with any applicable ordinance, law, rule, or regulation necessary for the development of the Project. In the event that the Owner/Developer, and its contractors, subcontractors, or anyone for whose acts the Owner/Developer or its contractors or subcontractors may be liable or responsible, fails to comply with any applicable ordinance, law, rule, or regulation and such failure tends to or does pose an imminent threat or danger to life or of great bodily injury to any person, the City, through its City Manager or designee, shall have the right to stop work until appropriate corrective measures are taken, in addition to any other remedies available to the City.

7. The Owner/Developer ,or its successors and/or assigns, shall indemnify and hold harmless the City, and its officers, agents, employees, or anyone acting directly or indirectly on behalf of the City, from and against all claims, damages, losses, and expenses, including reasonable attorney's fees, arising out of or resulting from a loss in the performance of work, down time of equipment, or any claim that may arise from bodily injury, sickness, disease or death, or the injury to or destruction of tangible property, including the loss of use resulting therefrom, caused in whole or in part by a negligent or wrongful act or omission on the part of the Owner/Developer, or its successors and/or assigns, and its contractor, subcontractors, or anyone directly or indirectly employed or working on behalf of the Owner/Developer for whose acts the Owner/Developer, or its contractors or subcontractors, may be liable or responsible. The Owner/Developer, or its successors and/or assigns, further agrees that the Owner/Developer, or its successors and/or assigns, shall not insulate itself from liability or responsibility to the City for a default in or failure to perform any of the terms of this PD Agreement, or from responsibility under the indemnification clause contained herein by employment of independent contractors or subcontractors or other entities. The Owner/Developer, or its successors and/or assigns, shall remain liable to the City notwithstanding any attempt by the Owner/Developer, or its successors and/or assigns, to pass any responsibility stated herein to its contractor, subcontractor, or other agent or employee at all times during the existence of this PD Agreement.

8. The Owner/Developer shall pay all costs for the recording of this PD Agreement, the PD Master Plan, and Ordinance Number 22-XX.

9. The City may, in its sole discretion, withhold any and all inspections, permits, certificates, or approvals for the Project if such action is deemed necessary by the City to secure the Owner/Developer's compliance with the terms of this PD Agreement, including all documents attached hereto or referenced herein.

10. Except as otherwise provided in this PD Agreement, any notice, request, or approval from either party to the other party must be in writing and sent by certified mail, return receipt requested; overnight delivery with proof of delivery; or by personal delivery. Such notice shall be deemed to have been received when either deposited in the United States Postal Service mailbox, delivered by the United States Postal Service, delivered to the courier, or personally delivered with a signed proof of delivery. For purposes of notice, the Parties and their respective representatives and addresses are:

City:

City of Alachua
ATTN: Department of Planning & Community Development
P.O. Box 9
Alachua, Florida 32616

Owner/Developer:

DM Alachua Investments, LLC
4045 NW 43rd Street
Gainesville, FL 32609

11. The Parties each bind the other and their respective successors and assigns in all respects to all of the terms, conditions, covenants, and provisions of this PD Agreement.

12. If any section, sentence, clause, phrase, or provision of this PD Agreement is for any reason held or declared to be unconstitutional, void, or inoperative by any court or agency of competent jurisdiction, such holding of invalidity or unconstitutionality shall not affect the remaining provisions of this PD Agreement, and the remainder of the PD Agreement after the exclusions of such part or parts shall be deemed to be valid.

13. The failure of any of the Parties to exercise any right in this PD Agreement shall not constitute a waiver of such right in the event of any future default or noncompliance with it.

14. This PD Agreement is entered into by the City pursuant to the City's home rule powers, including police powers, as set forth in the Florida Constitution and the laws of the State of Florida to regulate the development of land. The City and the Owner/Developer expressly acknowledge and agree that this PD Agreement constitutes a regulatory document, and nothing herein, expressed or implied, is intended or shall be construed as establishing a contract upon which a cause of action for breach, monetary damages, or otherwise may be based. Further, no term or condition of this PD Agreement shall be construed

as to proscribe, limit, or affect the ability of the City to enforce its Comprehensive Plan, its Land Development Regulations, or any other authority granted by law with respect to The Project, and nothing herein, expressed or implied, contracts away any of the City's police powers, regulatory authority, and/or immunities.

15. The Parties may amend this PD Agreement only by mutual written agreement of the Parties and including the City Commission.

16. This PD Agreement shall not be construed more strictly against one party than against the other party merely by virtue of the fact that it may have been prepared by one of the Parties. It is recognized that all Parties have contributed to the preparation of this PD Agreement and have had the opportunity to consult with legal counsel before signing it.

17. The Owner/Developer agrees that the terms and requirements of this PD Agreement, PD Master Plan, and Ordinance Number 22-10 do not inordinately burden the Property described in Exhibit "A", the PD, or the Project.

18. This PD Agreement constitutes the entire agreement of the Parties and supersedes all prior written or oral agreements, understandings, or representations.

19. In the event of any question or dispute arising out of or related to this PD Agreement or action to interpret this PD Agreement, the Owner/Developer shall exhaust any and all administrative remedies under the City's Lan Development Regulations. Thereafter, Owner/Developer's remedies in filing a lawsuit shall be limited solely to an action for declaratory judgment. In no event shall Owner/Developer have any cause of action for monetary damages against the City for any question or dispute arising out of or related to this PD Agreement or any action to interpret this PD Agreement, and nothing herein, expressed or implied, waives or should be construed as a waiver or attempted waiver by the City of its sovereign immunity under the Florida Constitution and the laws of the State of Florida.

20. This PD Agreement is governed in accordance with the laws of the State of Florida. Venue for any action arising out of or related to this PD Agreement shall be in the Circuit Court of Alachua County, Florida.

IN WITNESS WHEREOF, the Parties have hereunto set their hands and seals the day and year first above written.

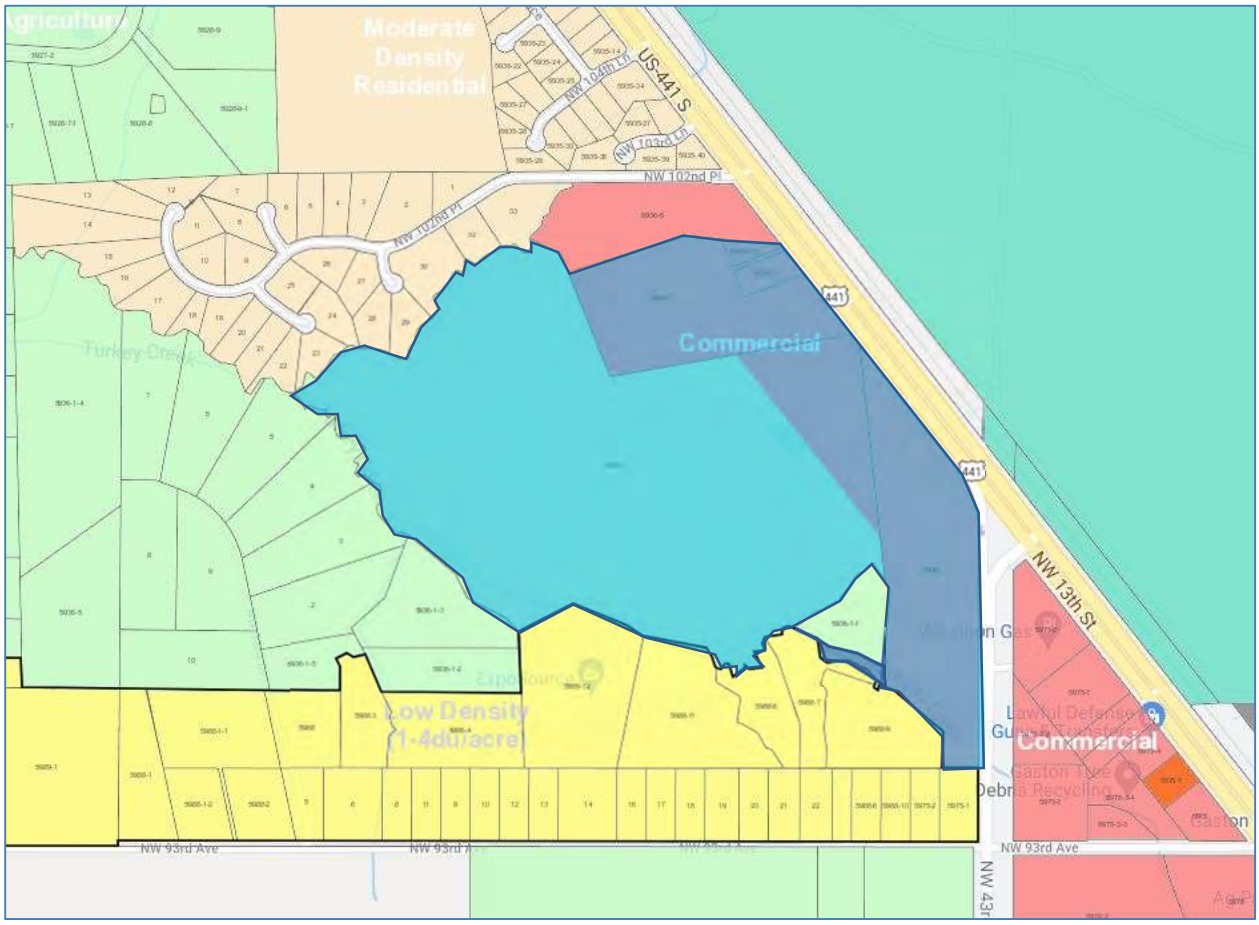
XV. List of Attachments 40

I. Statement of Proposed Change:

The proposed project is located near the intersection of HWY 441 and NW 43rd Street. Turkey Creek abuts the rear of the property. There are five lots that make up the proposed development. The largest lot is 96.69 acres and has a house and barn on it. The the are two other lots are 17.78 and 14.13 acres, that are vacant as well. Two of the smallest lots, 05936-007-002 and 05936-007-001 have structures on them a 1,444 SF restaurant and a 2,135 SF retail store. Both former businesses are closed.



The applicant is requesting a Large-Scale Comprehensive Plan Amendment to the 121. 1 acres that encompasses, parcels 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001 and 05945-000-000. The current Future Land Use Designations are agriculture to the back and commercial to the front along Highway 441. The residential portion of the comprehensive plan amendment will request moderate density, which allows for 1 to 4 dwelling units per acre, as well as small-scale neighborhood commercial and mixed-use developments.

The Commercial portion of the Comprehensive Plan Amendment will request High-Density Residential for the interior and Commercial along Highway 441. The High-Density Residential Land Use Category intent is to provide multi-family residential as well as neighborhood and community scale goods and services to adjacent neighborhood and residential areas. The Commercial Land Use intent is to provide for general commercial uses, as well as more intense commercial highway commercial uses and largescale and regional commercial uses. Commercial uses shall be limited to an intensity of not more than 0.50 floor area ratio for parcels 5 acres or larger. The allowed uses for the Future Land Uses Designations are provided as ***Table 1*** on the following page.

The Development is proposing a rezone to a Planned Development containing both commercial and mixture of residential uses. The rezone will request Planned Development Commercial District (PD-COMM) and Planned Development Residential (PD-R). The Planned Development will have a mixture of retail uses and commercial square footage that will what be dictated by market demand.

As shown in the following figures, the property has a current Future Land Use designation of Agriculture and Commercial.

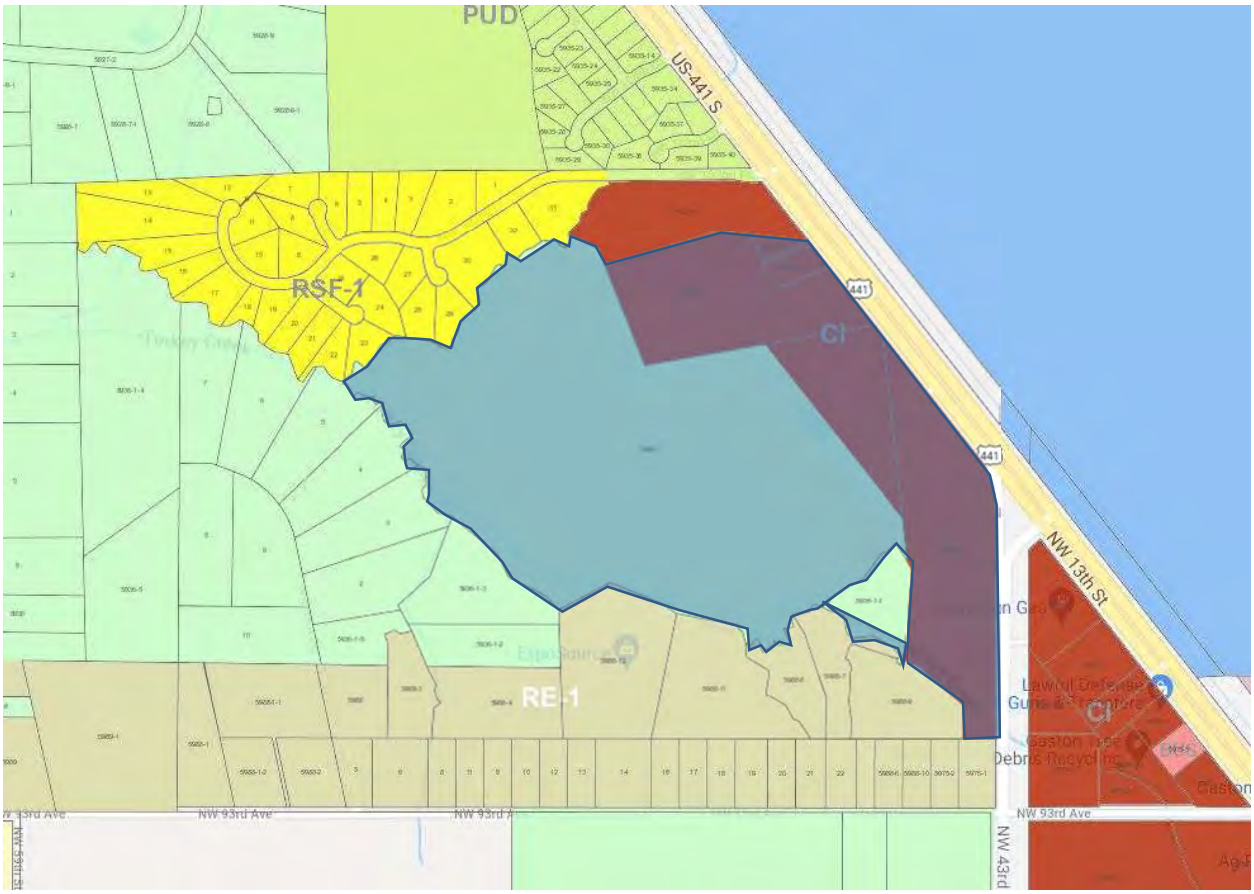


FIGURE 1: EXISTING FUTURE LAND USE MAP

Alachua County GIS

The proposed land uses, and the existing land uses will be consistent. Commercial land uses as shown in the above **Figure 1** are along the US 441 and the eastern NW 43rd Street corridor while Moderate Density Residential (0-4 du/ac), Agriculture, and Low Density Residential (0-1 du/ac) are located along the northwest, west, and southern boundaries of the proposed development. The proposed land use of Moderate Density Residential (0-4 du/ac) along those boundaries of the development will be consistent with the existing residential and agriculture land uses.

FIGURE 2: EXISTING ZONING MAP

Alachua County GIS

LOCATION	EXISTING USE	LAND USE	ZONING
North	Commercial/Single Family Units	Commercial/Moderate Density Residential	Commercial Intensive/RSF-1
South	Single Family Units	Low Density (Alachua County)	RE-1 (Alachua County)
East	Commercial	Commercial	Commercial Intensive
West	Single Family Units	Agriculture	Agriculture

The proposed zoning and uses will be consistent with existing development pattern of the area. Commercial uses are proposed along the US 441 and NW 43rd Street corridor which mimics the existing uses and the uses on the east side of NW 43rd Street within the City's limits. Existing residential uses are located along the western and southern boundaries of the proposed development. The proposed development proposed residential uses along those boundaries for consistency.

II. Concurrency Impact Analysis

Concurrency is a shorthand expression for a set of land use regulations that local governments are required (by the Florida Legislature) to ensure that new development does not outstrip local government's ability to provide services or strain current level of service. In the following paragraphs, the proposed Comprehensive Plan Amendment will discuss the impacts to potable water, wastewater, stormwater, school student projection needs, stormwater, and transportation.

Potable Water

Policy 4.1.c of the Community Facilities and Natural Groundwater Aquifer Recharge (CFNGAR) Element of the Comprehensive Plan establishes a potable water LOS Standard of 275 gallons per day per equivalent residential dwelling unit on an average annual basis. Policy 4.1.c of the CFNGAR Element if the City's potable water facility reaches 85% of the permitted design capacity, no further development orders or permits will be issued until additional capacity becomes available. The current level of capacity for the City is 62.88%, therefore the City has 22.12% capacity for proposed developments. Table 4.2 was provided by the City's 2021 Annual Concurrency Status Report. Table 4.2 shows the City's current utilization rate is 62.88% and a residual rate of 853,649 gallons per day.

Potable Water Available Capacity

Table 4.2 Potable Water Public Facilities Impacts	
System Category	**Gallons Per Day**
Current Permitted Capacity[1]	2,300,000
Less Actual Potable Water Flows[1]	1,300,250
Reserved Capacity[2]	**146,101**
Residual Capacity	**853,649**
Percentage of Permitted Design Capacity Utilized	**62.88%**
Sources: *1. City of Alachua Public Services Department, April 2021* *2. City of Alachua May 2021 Development Monitoring Report*	

Potable Water Project Impact

Below in Table 1 that utilizes a 275 gallons per day for residential potable water and 0.15 gallons per day for office/retail. The proposed development will utilize 275 gallons per day for each residential unit, with a total of 514 residential units. The total gallons per day for residential development of potable water will be 141,350 gallons and 73,410 gallons for non-residential. The total potential development potable water is 214,760 gallons, which leaves 638,889 gallons of residual capacity remaining.

Table 1 - Potable Water	Density	Gallons Per Day
Single Family Detached	213 units	58,575
Multi-Family	301 units	82,775
Office/Retail	489,400 sf	73,410
Totals	-	214,760
Based off a LOS of 275 gallons per day for Residential Units and 0.15 gallons per day for office/retail.		

Wastewater

Policy 1.1.d of the CFNGAR Element of the Comprehensive Plan establishes a sanitary sewer LOS Standard of 250 gallons per day per equivalent residential dwelling unit on an average annual basis. Table 4.3 shows a sanitary sewer capacity Policy 1.1.d of the CFNGAR Element reaches 85% of the permitted design capacity, no further development orders or permits will be issued until additional capacity becomes available. Table 4.3 below shows capacity at 53.61%, therefore there 695, 850 gallons or 31.39%.

Wastewater Available Capacity

Table 4.3 Wastewater Public Facilities Impacts	
System Category	**Gallons Per Day**
Treatment Plant Current Permitted Capacity[1]	1,500,000
Less Actual Treatment Plant Flows[2]	677,000
Reserved Capacity[2]	**127,140**
Residual Capacity	**695,860**
Percentage of Permitted Design Capacity Utilized	**53.61%**
Sources: *1. City of Alachua Public Services Department, April 2021* *2. City of Alachua May 2021 Development Monitoring Report*	

Wastewater Project Impact

Table 2 that utilizes a 250 gallons per day for residential wastewater. The proposed development will utilize 250 gallons per day for each residential unit, with a total of 514 residential units and 0.15 gallons per day for non-residential. The total potential development wastewater is 201,910 gallons, which leaves 493,950 gallons of residual capacity remaining.

Table 2 - Wastewater	Density	Gallons Per Day
Single Family Detached	213 units	53,250
Multi-Family	301 units	75,250
Office/Retail	489,400 sf	73,410
Totals	-	201,910
Based off a LOS of 250 gallons per day for Residential Units and 0.15 gallons per day for office/retail.		

Transportation

In June 2020, the City of Alachua adopted amendments to the Comprehensive Plan as part of the seven-year evaluation and appraisal update to the City's Comprehensive Plan. As part of this update, Policy 1.1.a was amended to establish additional road segments to be monitored for concurrency, to assign segment numbers to County roads, and to update the Comprehensive Plan Road segments to be consistent with the segments defined by the Florida Department of Transportation. These updates provide an enhancement to the structure of the

City's transportation concurrency monitoring system.

Table 4.1 below identifies each monitored roadway segment, as well as the adopted LOS Standard for each segment, existing traffic, reserved trips, available capacity, and the percentage of capacity utilized. Table 4.1 indicates that presently there are no imminent deficiencies for any monitored roadway segments. However, Segment 6 – US 441 from Interstate 75 to County Road 235A – is presently at 90.66 percent of the capacity of the segment and is therefore approaching a potential imminent deficiency. Continued monitoring of this segment will be required to evaluate if the segment exceeds 95 percent of the capacity of the segment and thus presents an imminent deficiency.

Transportation Available Capacity

Table 4.1
Transportation Public Facilities Impacts

Roadway Segment (FDOT Segment #, CoA Comp Plan #)	Segment Description	AADT/ Peak Hour	Comp Plan MSV^^	Existing Traffic*^	Reserved Trips	Available Capacity**	Percentage of Capacity Utilized

Solid Waste

Policy 2.1.a of the CFNGAR Element of the Comprehensive Plan establishes a LOS Standard for solid waste facilities of 0.73 tons per capita per year for residential development. The demand generated by nonresidential uses can vary substantially between different use types, therefore a LOS Standard for nonresidential uses is not adopted in the Comprehensive Plan.

Table 4.7
Solid Waste Public Facilities Impacts

System Category	Pounds Per Day	Tons Per Year
Existing Demand[1]	41,960.00	7,657.70
Reserved Capacity[2]	15,609.14	2,848.67
New River Solid Waste Facility Capacity[3]	**50 years**	

1. Bureau of Economic & Business Research, University of Florida, Estimates of Population by County and City in Florida (2020); Policy 2.1.a, CFNGAR Element
Formula: 10,490 persons x 0.73 tons per year
2. City of Alachua May 2021 Development Monitoring Report
3. New River Solid Waste Association, April 2021

Solid Waste Project Impact

Table 3 utilizes a .73 tons level of service per day for residential solid waste and 5.5 pounds per thousand square feet of non-residential.

Table 3 – Solid Waste	Density	Tons Per Year
Residential	514 units	968
Non-Residential	489,400 sq.ft.	2,692
Totals	-	3,662
Based off a LOS of .73 tons per capita per day for residential and 5.5 pounds per thousand sf of non-residential		

Recreation

Policy 1.2.b of the Recreation Element of the Comprehensive Plan establishes a LOS Standard for recreational facilities of five (5) acres of community,

neighborhood, or pocket park area per 1,000 persons, with a minimum of 20 percent of the required acreage consisting of improved, passive parks.

The US Census Bureau estimates the number of persons per household for the City to be 2.76 persons per household (2015-2019). The method to determine recreational impacts, multiple the total number of units proposed by the level of service standard (0.005) and the total number of persons per household (2.76).

Recreation Available Capacity

Table 4.6 Improved Passive Park Space Analysis	
System Category	**Acreage**
Minimum Improved Passive Park Space Required to Serve Existing Population and Reserved Capacity[1]	10.91
Existing Improved Passive Park Space Provided[2]	34.82
Improved Passive Park Space Utilized by Existing Population & Reserved Capacity[3]	**31.33%**

1. Policy 1.2.b, Recreation Element, City of Alachua May 2021 Development Monitoring Report
2. Area consists all improved passive lands which are part of San Felasco Conservation Corridor (27.73 acres), Swick House (3.84 acres), Legacy Park (3.18 acres, and Theater Park (0.07 acres)
3. Formula: Total Improved Passive Park Space / Acreage Required to Serve Existing Population + Projected Impacts from Recent Development Orders

Recreation Project Impact

The proposed development will potentially utilize 2.58 acres of recreational impact per Table 4 below. The proposed development will provide passive recreational and open space areas for the development's residential units but these facilities will not be open to the public.

Table 4 – Recreational	Residential Units	Acres
Single Family Detached	213	1.07
Multi-Family	301	1.51
Totals	514	2.58
Based off a LOS of .0.005		

Stormwater

Policy 3.1.a of the CFNGAR Element of the Comprehensive Plan adopts the LOS Standard for stormwater facilities. Policy 3.1.a requires that the peak rate of post-development not exceed the peak rate of pre-development runoff for storm events up to the 100- year critical duration rainfall depth for all development (with the exception of agricultural, silvicultural, conservation, or recreational uses, which are subject to a different standard). Additionally, stormwater basins must be designed to treat the first inch of runoff and must be designed in accordance with and to perform to the standards established in Chapters 40C-42.025 and 40C-42.035, Florida Administrative Code.

Stormwater Impact

The proposed development will comply with Chapters 40C-42.025 and 40C-42.03 of the Florida Administrative Code and all of the permitting requirements for the Suwannee River Water Management District.

Public Schools Impact

The proposed development in in the following school concurrency areas. The Elementary School is NW Alachua, the Middle School is Mebane the High School, and the High School is Santa Fe concurrency area. The proposed development shows a generation rate for total students at 189. The multi-family developments generates more students overall than single-family developments. The greatest need will be at the elementary school level and middle school level at 42 students each. The Public-School Generation form is provided as Attachment H.

Table 5 – School	Density	Elementary (.14)	Middle (.16)	High School (.08)	Grand Total
Single Family Detached	213	30	34	17	81
Multi-Family	301	42	42	24	108
Totals	514	72	76	41	189

III. Comprehensive Plan Consistency:

Future Land Use Element

Objective 1.2: Residential: The City shall establish four Residential land use categories to ensure an orderly urban growth pattern that will provide a variety of housing options to its residents and provides for the best use of available lands for residential development.

Response: The proposed development is requesting Moderate Density Residential, which allows for 0 to 4 units per acre and High-Density Residential, which allows for 8-15 units per acre. and will be in accordance with the City of Alachua Comprehensive Plan.

Policy 1.2b: Moderate Density Residential (0 to 4 dwelling units per acre): The Moderate Density Residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the Moderate Density Residential land use category: 1. Single family detached dwelling units; 2. Accessory dwelling units; 3. Manufactured or modular homes meeting certain design criteria; 4. Mobile homes only within mobile home parks; 5. Duplexes and quadplexes; 6. Townhomes; 7. Residential Planned Developments; and 8. Supporting community services such as schools, houses of worship, parks, and community centers.

Response: The proposed development is requesting moderate density residential, which allows for 0 to 4 units per acre and will be in accordance with the City of Alachua Comprehensive Plan.

Policy 1.2.d: High Density Residential (8 to 15 dwelling units per acre): The High Density Residential land use category allows residential development at a density of 8 dwelling units per acre to 15 dwelling units per acre, as well as certain complementary uses, such as a low intensity neighborhood-scale Future Land Use Element | 4-4 City of Alachua Comprehensive Plan Effective July 31, 2020 retail and services. The following uses are allowed within the High Density Residential land use category: 1. Single family attached and detached dwelling units ; 2. Accessory dwelling units; 3. Apartments and townhomes; 4. Duplexes and quadplexes; 5. Live/work units; 6. Residential Planned Developments; 7. Traditional Neighborhood Planned Developments; 8. Group living; 9. Neighborhood-scale retail and services, where the area dedicated to such uses is less than or equal to 30,000 square feet of floor area and is designed specifically to serve the surrounding neighborhood, including, but not limited to, a convenience stores without gas pumps, dry cleaners, pharmacies, local markets, restaurants, personal services, and professional offices; and, 10.Supporting community services, such as schools, houses of worship, parks, and community centers.

Response: The proposed development is requesting high-density residential, which allows for 8 to 15 units per acre and will be in accordance with the City of Alachua Comprehensive Plan.

Objective 1.3: Commercial: The City shall establish three commercial land use categories: Community Commercial, Commercial, and Central Business District. These land use categories shall provide a broad range of commercial uses, including retail sales and services, personal services, offices, and tourist-oriented uses, to provide for the availability of goods and services, both to the citizens and visitors of Alachua and to the citizens of the North Central Florida region.

Response: The proposed development is requesting Moderate Density Residential, High-Density Residential, and Commercial in accordance with the City of Alachua Comprehensive Plan.

Policy 1.3.b: Commercial: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which largescale, regional commercial uses may locate. The following uses are allowed within the Commercial land use category: 1. Retail sales and services; 2. Personal services; 3. Financial institutions; 4. Outdoor recreation and entertainment; 5. Tourist-

related uses; 6. Hotels and motels; 7. Commercial shopping centers; 8. Auto-oriented uses; 9. Traditional Neighborhood Planned Developments; 10.Employment Center Planned Developments; 11.Commercial recreation centers; 12.Office/business parks; 13.Limited industrial services; and, 14.Eating establishments.

Response: The proposed development will be in compliance with the uses that are allowed under the Commercial Land Use Category and in accordance with the City of Alachua Comprehensive Plan.

Policy 1.3.d: Design and performance standards: The following criteria shall apply when evaluating commercial development proposals:
1. Integration of vehicular and non-vehicular access into the site and access management features of site in terms of driveway cuts and cross access between adjacent sites, including use of frontage roads and/or shared access;
2. Buffering from adjacent existing/potential uses;
3. Open space provisions and balance of proportion between gross floor area and site size;
4. Adequacy of pervious surface area in terms of drainage requirements;
5. Placement of signage;
6. Adequacy of site lighting and potential impacts of lighting upon the surrounding area. Lighting should be designed to minimize impacts to preserve the ambiance and quality of the nighttime sky by reducing light trespass and light pollution on adjacent properties by utilizing lighting at appropriate intensities, directions and times to ensure light is not overused or impacting areas where it is not intended;
7. Safety of on-site circulation patterns (patron, employee, and delivery vehicles), including parking layout, drive aisles, and points of conflict;
8. Landscaping, as it relates to the requirements and goals of the Comprehensive Plan and Land Development Regulations;
9. Unique features and resources which may constrain site development such as soils, existing vegetation, and historic significance;
10. Performance based zoning requirements, which may serve as a substitute for or accompany land development regulations in attaining acceptable site design; and,
11.Commercial uses shall be limited to an intensity of less than or equal to 0.50 floor area ratio for parcels 5 acres or greater, 0.75 floor area ratio for parcels less

than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less.

Response: All the standards will be evaluated and met when the proposed development will submit for Site Plan Review of Phase 1 of the project.

Goal 2: Innovative Design Standards: The City shall utilize innovative design standards to discourage urban sprawl, provide aesthetic standards, promote open space, and preserve rural character.

Response: Planned Development by their very nature allows for more creative design that will still have to comply with the land development regulations.

Objective 2.1: Planned Development (PD) Standards In an effort to reduce the impacts of urban sprawl on the community and the region, the City shall provide for a wide array of planned developments to encourage the creation of interrelated neighborhoods and districts to increase the quality of life for all residents of the City

Response: The applicant is proposing a mixed-use development that will be rezoned to Planned Development. The mixed use, walkable communities character creates and external and internal interrelated neighborhoods.

Policy 2.1.a: Residential Planned Developments (PD): The City shall establish flexible development and use regulations for residential PDs for use within residential land use categories. Those regulations shall be developed to achieve the following:
1. Residential development through a mixture of housing types, prices, and densities. The allowed uses within a residential PD are not subject to the permitted uses in the underlying land use category but shall be subject to the permitted uses as set forth in the Land Development Regulations or Ordinance adopting the PD. Single-family homes, zero lot line homes, and townhomes are examples of the allowable housing types within residential PDs.
2. The opportunity to improve quality of life by placing activities necessary for daily living in close proximity to residences through the allowance of a limited amount of neighborhood commercial uses, and with special design criteria, community commercial uses, within the residential PD at appropriate densities and intensities.

3. A range of parks and open space, from playgrounds to community gardens to active recreation facilities within the neighborhood.
4. Streets and public spaces that are safe, comfortable, and designed to respect pedestrians, non-vehicular and vehicular modes of transportation.

Response: The proposed development will be a mixed-use development that will provide moderate density residential, high-density residential and commercial use near residential uses. The proposed development will also have open spaces and passive uses for the enjoyment to the residents.

5. Conservation of materials, financial resources, and energy through efficient design of infrastructure

Response: The applicant is proposing a mixed-use development that will be rezoned to Planned Development. The mixed use, walkable communities character creates walkability to different land uses such as residential, commercial, conservation, open space areas, which not only improves the quality for internal residents, but also improves the quality of life for the City of Alachua by reducing dependency on vehicles and allows residents to walk to adjacent uses, provides job creation and economic development opportunities, as well as the ability for residents to work from home.

Policy 2.1.d: Commercial Planned Development: The City shall establish commercial planned development (PD) zoning district regulations as a development option for planned commercial development within commercial and high-density residential land use categories. Those regulations shall be developed to achieve the following: 1. A functional mix of mixed-use retail, commercial, and office development. A limited amount of medium to high density residential development may be integrated with commercial and retail uses.

Response: The applicant is proposing a mixed-use development that will provide variety of commercial and residential in accordance with the allowable densities under the moderate residential, commercial, and high-density residential land uses.

Objective 2.5: Open Space Standards: The City shall utilize open space requirements to preserve the rural character of Alachua, protect natural resources, and provide spaces for people to recreate and gather.

Response: The proposed development will provide the 10% Open Space as provided by Section 6.7.

Policy 2.5.a: There shall be a minimum of 10% percent open space required. The City shall establish incentives for the provision of open space beyond minimum requirements.

Response: The proposed development will provide the 10% Open Space as provided by Section 6. 7 of the City of Alachua Land Development Regulations.

Policy 2.5.b: Open space shall not be limited to unusable portions of project sites. A portion of open space shall be usable and functional.

Response: The proposed development will comply all sections of Section 6.7 of the City of Alachua Land Development Regulations.

Objective 2.4: Landscaping and Tree Protection Standards: The City shall adopt landscaping and tree protection standards in order to achieve the aesthetic design values of the community and preserve tree canopies, as well as to protect exceptional specimens and champion trees.

Response: The proposed development has acknowledged and will comply.

Policy 2.4.a: Landscaping: General – The City shall require landscaping plans to be submitted with each nonresidential and multiple family residential site plan. The minimum landscaped area shall be 10% of the development site, not inclusive of any designated open space areas. Landscaping designs shall incorporate principles of xeriscaping, where feasible. The City shall develop a list of preferred planting materials to assist in the landscape design. Landscape plans shall include perimeter and internal site landscaping.

Response: The proposed development has acknowledged and will comply with this requirement.

Policy 2.4.b: Landscaping: Buffering – A buffer consists of horizontal space (land) and vertical elements (plants, berms, fences, walls) that physically separate and visually screen adjacent land uses. The City shall establish buffer yard requirements that are based on the compatibility of the adjacent uses and the desired result of the buffer.

Response: The property abuts RSF-1, Agriculture and property that is located in Alachua County. A wetland buffer is being proposed along the perimeter abutting adjacent residential and agriculture zoning.

Policy 2.4.c: Tree Protection: Heritage Trees and Champion Trees – The City shall require the preservation of heritage trees and champion trees when possible. Standards shall be set for determining the health and safety risks associated with heritage and champion trees both on individual residential lots, and existing and proposed developments.

Response: The proposed development has acknowledged and will comply with the requirement.

Policy 2.4.d: Tree Protection: Regulated Trees – The City shall establish standards for the preservation of regulated trees. Particular attention shall be given to preserving specimen and preferred species of regulated trees, where feasible.

Response: The proposed development has acknowledged and will comply with the requirement.

Policy 2.4.e Tree Protection: Removal and Mitigation – Along with establishing standards for tree removal and mitigation, the City shall establish a tree banking program to provide flexibility for re-planting trees through the mitigation process. Funds within the tree bank may be utilized to plant landscaping on city-owned properties, in public parks, and in road rights of way, where appropriate.

Response: The proposed development has acknowledged and will comply with the requirement.

Objective 2.7: Discouragement of Urban Sprawl: The City shall discourage the proliferation of urban sprawl as set for the in Chapter 163, Florida Statutes.

Response: The project is proposed as a mixed used development. By virtue of its nature, a mixed used development is a planning principle that deters Urban Sprawl.

Policy 2.7.a.: The City shall discourage the proliferation of urban sprawl. Applications for an amendment to the land use category of a property shall include an analysis of the application's discouragement of the proliferation of urban sprawl. Such analysis shall consider the primary indicators or the urban form criteria as set forth in Chapter 163.317(6)(a) 9.a. and b., Florida Statutes, respectively.

Response: The proposed development has acknowledged and will comply with the requirement and State Statute 163.317(6)(a) 9.a. and b.

Objective 5.2: Availability of facilities and services The City shall utilize a concurrency management system to ensure that the adopted levels of service standards are maintained. Policy 5.2.a: All new development shall meet level of service requirements for roadways, potable water, sanitary sewer, stormwater, solid waste, and public schools in accordance with LOS standards adopted in the elements addressing these facilities. Policy 5.2.b: The concurrency management system shall specify the period for which certification of level of service compliance shall be valid until actual development pursuant to a final development order or Chapter 163 Development Agreement has commenced. Policy 5.2.c: The City shall prepare and annually update the 5-year Capital Improvement Program as an implementation mechanism of this document in accordance with the Capital Improvements Element of this Plan. The 5-year Capital Improvement Program shall be incorporated by reference into the Capital Improvements Element.

Response: The proposed development will meet the level of service of the City of Alachua.

Goal 9: Water and Wastewater Service: The City will ensure that new development and redevelopment within the corporate limits shall connect to the City's potable water and wastewater systems, where potable water and wastewater service are available, as defined in Policy 1.2.a and Policy 4.2.b of the Community Facilities Element of the Comprehensive Plan.

Response: The proposed mixed-use development will connect to the City's water and wastewater systems.

Economic Development Element

Objective 1.6: Mixed Use, Workforce Housing: The City shall encourage the development of quality workforce housing, proximate to employment locations, at affordable prices to create opportunities for corporate investment in the City of Alachua. In order to accomplish this goal, the City of Alachua may, by way of illustration, but not by way of limitation:

Response: The proposed mixed-use development will provide a variety of housing and adjacent commercial uses that will generate new employment opportunities.

Policy 1.6.b: Consider a mix of owner-occupied and rental housing for employees that will maintain the neighborhood character and community fabric.

Response: The Development is proposing a variety of housing types, single family detached, townhomes multifamily and perhaps live work units. This will allow for ownership and rental opportunities.

Policy 1.6.c: Allow single-family and multi-family residential housing in close proximity to employment centers within appropriate land use categories and zoning districts.

Response: The proposed mixed-use development will provide a variety of housing and adjacent commercial uses that will generate new employment opportunities. The commercial uses within the planned development could be considered an employment centers, upon full build out.

Policy 1.6.d: Encourage planned neighborhoods that have amenities such as sidewalks and other recreational opportunities that achieve walkable communities in close proximity to employers.

Response: The proposed development will provide passive recreational opportunities.

Policy 1.6.e: Forge partnerships with private and public sectors to create an atmosphere that attracts employers to our community by planning for the availability of safe and energy efficient workforce housing.

Response: The Developer is current and is currently marketing for tenants for commercial out parcels.

Policy 1.6.f: Consider incentives for investors, who develop workforce housing for diverse housing types and prices, by supporting grant proposals and funding requests to various agencies and organizations.

Response: The developer has acknowledged this statement. Market demand and other factors will influence the price and housing types as well as commercial tenant.

Conservation and Open Space Element

Objective 1.3: Listed Species The City shall protect species listed by State and Federal agencies as endangered, threatened or of special concern, and their habitats.

Response: An environmental assessment has been performed on the mixed-use development and the proposed development will protect all listed species. The existing wetlands and upland buffers will be protected and remain undisturbed.

Policy 1.3.d: The City shall require prior to development approval, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The inventory shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. De-minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Response: An environmental assessment has been performed on the mixed-use development which will identify all listed species that shall be protected.

Objective 1.8: Conservation: The City shall create a Conservation land use category for lands on which certain identifiable features, such as flowing surface

water bodies, wetland systems, flood plains, wellfield protection areas, unique geologic characteristics, and listed plant and wildlife habitat require enhanced oversight and regulatory protection. Land use regulations for designated conservation areas will consider the vulnerability of susceptible features and vary accordingly. Conservation areas will allow a diverse range of activities and opportunities, depending on the nature and degree of vulnerability of the susceptible features present.

Response: There are four (4) wetlands along with required buffer along Turkey Creek. The proposed development will follow State procedures for wetlands preservation and water of the State.

Policy 1.8.a: Conservation uses: Conservation uses shall be limited to public access, low-intensity resource-based recreation, (i.e., greenways and trails), native vegetative community restoration, residential and non-residential uses necessary to manage such conservation lands (i.e., ranger stations, research stations, and park amenities).

Response: The proposed development acknowledged this regulation and will comply. The proposed development will have 36.7 acres of open spaces that will include conservation areas.

Policy 1.10.b: The City shall conserve wetlands by prohibiting, where the alternative of clustering all structures in the non-wetland portion of the site exists, any development or dredging and filling which would alter their natural functions. If no other alternative for development exists, the City shall allow only minimal development activity in those areas designated as wetlands within this Comprehensive Plan and that such development activity comply with the following performance standards:

I. Residential dwelling units no denser than 1 dwelling unit per 5 acres, subject to the following minimum performance standards:
a. Residences and any support buildings must be built on pilings of sufficient height to exceed by 1 foot the highest recorded flood level in the wetland. If there is not flooding data available, residences and any support buildings must be built at least 2 feet above the highest seasonal water level.
b. Clearing or removal of native vegetation shall not exceed 1/2 acre per 5 acres, except that where a ratio of 1 dwelling unit per 5 acres is utilized, the clearing or

removal of native vegetation shall not exceed a total of 1/4 acre per 5 acres. Exotic vegetation may be removed without regard to this limitation provided that, of the area cleared of exotic vegetation exceeds the applicable 1/2 acre or 1/4 acre limitation, or is replanted with native wetland vegetation.

c. No dredging or filling (except for pilings to support the residence and support buildings or poles providing utility services) shall be allowed, except that a walking path or driveway to the residence may use permeable fill of it is designed with a sufficient number and size of culverts to allow the natural flow of water to continue.

d. Drain fields for septic tanks and gray water shall be located outside the wetland.

e. Where a ratio of 1 dwelling unit per 5 acres is employed the following provisions shall also apply:

i. Clustering of units shall be located in the perimeter areas of the wetlands; and

ii. A restrictive or conservation easement to preserve open space shall be established.

OR:

II. Residential dwelling units not more dense that 1 dwelling unit per 3 acres such to the following minimum performance standards:

a. Residences must be built on pilings of sufficient height to exceed by 1 foot the highest recorded flood level in the wetland. If there is no flooding data available, residences must be built at least 2 feet above the highest seasonal water level.

b. All support buildings and other support facilities shall be constructed outside the wetland.

c. Clearing or removal of vegetation shall not exceed 1/4 acre per 3 acres, except that where a ratio of 1 dwelling unit per 3 acres is employed, the clearing or removal of native vegetation shall not exceed a total of 1/8 acre per 3 acres. Exotic vegetation may be removed without regard to this limitation provided that, if the area is cleared of exotic vegetation exceeds the applicable 1/4 or 1/8 acre limitation, it is replanted with native wetland vegetation.

d. No driveways, paths or other construction requiring fill (other than pilings for the residence or poles for utilities) will be allowed within the wetland.

e. All residences shall be connected to a central sewage system owned and operated by the City.

f. Where a ratio of 1 dwelling unit per 3 acres is utilized, the following provisions shall also apply:

i. Clustering of units shall be located along the perimeter area of the wetland; and

ii. A restrictive or conservation easement to preserve the open space shall be required.

OR:

III. Limited development activity with impacts to isolated wetlands (and/or associated buffers) that meet all of the following conditions: a. Less than .25 acres in size; and, b. Determined to be of poor quality by a certified environmental specialist; and, c. The applicant has demonstrated that every reasonable step has been taken to minimize impact to wetland; and, d. The applicant has provided for appropriate on-site or off-site mitigation for impact to wetland. Limited development activity includes, but is not limited to, park amenities such as trails or boardwalks, minimum necessary roadways and/or sidewalks for access or internal site connectivity, and underground utility line crossings.

Response: The proposed development will comply with the City's wetland impacts. If wetlands are impacted, the environmental report will identify the quality and reasonable assurances for the impact.

Policy 1.12.d: The City shall require the following buffers for development along surface water bodies. Buffers shall be measured from the outer edge of the water body, and created as established in the following table.

Resource Addressed	Required Buffer (feet)
Surface waters less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	50' average 35' minimum
Surface waters greater than 0.5 acre that do not support the animal species described above.	75' average 50' minimum
Areas where the animal species described above have been documented within 300 feet of a surface water.	100' average 75' minimum

Response: The proposed development will comply with the City's wetland buffers and will provide a minimum 50' buffer and average 75' buffer.

Recreation Element

Objective 1.3: New Development Recreation Requirements: The City shall consider providing incentives for new development to enhance the City's recreation lands and facilities.

Response: The proposed development acknowledges this statement and will comply with the City's recommendations.

Policy 1.3.a: The City may investigate using recreation impact fees on new residential developments to offset the demand created by the new development to the extent allowed in 163.31801.

Response: The proposed development acknowledges this statement and will comply with the City's recommendations.

Policy 1.3.b: The City shall consider incentives for new industrial, institutional, and commercial development to encourage the inclusion of linear and pocket parks, particularly within proximity to the downtown core.

Response: The proposed development will provide commercial uses and will include a pocket park.

Policy 1.3.c: The City shall consider incentives for new development to provide pedestrian and bicycle paths, connecting to a network of like paths, wherever possible. The City shall consider establishing a sidewalk/pathway fund as an alternative to the provision of onsite paths within new developments. Policy 1.3.d: The City shall consider providing a density bonus for developments that include onsite recreation set asides and/or developed recreation.

Response: The proposed development will provide walking path and sidewalks and passive recreation uses that can be utilized by the citizen of the City of Alachua.

IV. Compliance with Land Development Regulations (LDRs):

The planned development (PD) districts are established for the purpose of encouraging innovative land planning and site design concepts that conform to community quality of life benchmarks and that achieve a high quality of development, environmental sensitivity, energy efficiency, and other City goals by:

(1) Increasing flexibility. Reducing or diminishing the uniform design that results from the strict application of zoning and development standards that are designed primarily for individual lots;
(2) Greater freedom to provide access, open space and amenities. Allowing greater freedom in selecting the means to provide access, open space, and design amenities;
(3) Greater freedom to provide mix of uses and housing types. Allowing greater freedom in providing a mix of land uses in the same development, including a mix of housing types, lot sizes, and densities;
(4) Providing greater opportunity for more efficient land use patterns. Providing for an efficient use of land resulting in smaller networks of utilities and streets and thereby lowering development and housing costs;
(5) Promoting quality design and environmentally sensitive development through site characteristics. Promoting quality design and environmentally sensitive development by allowing development to take advantage of special site characteristics, locations, and land uses; and
(6) Quality design through density increases. In specific instances, encouraging quality design and environmentally sensitive development by allowing increases in base densities or floor area ratios when such increases can be justified by superior design or the provision of additional amenities such as public open space.

Proposed Development Regulations

Please see the Planned Development Master Plan Provided as **Attachment C.** The maximum number of residential units are 514 and 489,400 SF of non-residential development.

NOTES:

1) Alleys are allowable in Single Family Residential Attached land use area
2) Allowable uses within the non-residential land use area per LDR table 4.1-1 for PD-COMM.

E. Development Standards

Development standards may be modified in ways consistent with the general intent and purpose for the PD-R and PD-COMM Districts. The applicant is requesting the following modifications to development standards:

1) In Development Area A, B, and C, the parking criteria shall be one space per 2 bedrooms.
2) Entrance signage at roadway access connections shall be allowed adjacent to the rights-of-way. Directional signage may be allowed within the right-of-way medians.

3) Rights-of-way/street standards: generally, the goals and objectives of the Schmidt Farms PD are to provide a roadway/street network that promotes safety and reduced speeds throughout the residential neighborhoods. Traffic calming measures shall be provided at mid-blocks where streets are longer than 1,000 feet. Such measures may include, but not be limited to, speed humps, speed cushions, speed tables, bulbouts, raised pedestrian crossings, and changes in the surface material or texture.

   a. Minimum roadway pavement width equals 20 feet; Maximum roadway pavement width equals 24 feet (except at entrances where 36 feet is allowable) for residential streets.

   b. Minimum right-of-way width equals 50 feet; Maximum right-of-way width equals 60 feet (except at entrances where 80 feet is allowable) for residential streets. A minimum 60' right-of-way is required if the roadway will have on-street parking.

   c. Streets within PD-COMM shall conform to the City of Alachua Land Development Regulations Article 7.

   d. Alleys are optional in Single Family Residential Detached. Minimum alley pavement width equals 12 feet; Minimum alley right-of-way/common area width equals 20 feet.

   e. Minimum street centerline radius equals 50 feet.

   f. Minimum curb return radius equals 15 feet (measured at back of curb).

   g. Sidewalks are required on one side of the street where fronting residential lots. Sidewalks are optional on street sides with no lot frontages.

   h. Miami curb is allowed on all residential streets. Type F curb and gutter is required on all streets within the non-residential developments.

   i. Sidewalks shall be placed a minimum of 7 feet off back of curb to allow for street tree plantings.

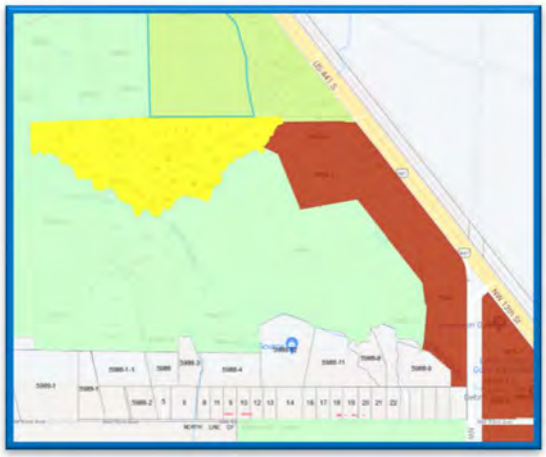
   j. Minimum sidewalk width equals 5 feet.

   k. On street parallel parking is allowed on all streets within the development.

l. The roadway crossing over wetland Area E is required to connect Development Area C to Development Area B and connect NW 43rd Street to US 441 through the project.

m. The design standards of the PD shall comply with Section 3.6.3(A)(5)(iii) of the land development regulations. All traffic-calming measures, emergency services access, off-street parking, and adequate spacing for public infrastructure shall be provided. At time of development review the above items will be met.

F. Development Phasing Plan



This PD shall be valid for 10 years from the date of final zoning approval.

G. Conversion Schedule

All use areas, including the PD-R/PD-COMM boundary line, may be adjusted during the phased buildout of the PD by up to 10.0%.

V. Logical Development Pattern:

Response: The proposed development will be located on a major thoroughfare, Highway 441, and is abutted Planned Development, RSF – 1 and Agriculture. The lots that abut Highway 441 are already zoned commercial. Please see current adjacent zoning as Attachment C.

VI. Pre-Mature Development:

The proposed amendment will not create premature development in undeveloped or rural areas.

Response: The area is not undeveloped or would be considered rural in nature, therefore the definition of pre-mature development does not apply.

VII. Incompatible with Adjacent Lands:

The uses permitted by the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands.

Response: The area's land uses are currently commercial, residential and a section of agriculture. The development is proposing residential units at 0 to 4 units per acre and commercial uses. The uses are not incompatible with current uses.

VIII. Adverse Effect on Local Character:

The proposed amendment will not adversely affect the character of the general area where it is proposed to be located by creating excessive traffic, density and/or intensities of use, building height and bulk, noise, lights, or other physical effects or nuisances.

Response: The proposed development will not adversely affect the area. Some traffic will be created, but not so substantial that the local character will be affected. The proposed development will provide necessary housing variety as well as create jobs and provide tax revenue for the City of Alachua.

IX. Not Deviate from Pattern of Development:

The uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located.

Response: The area's land uses are currently commercial, residential and a section of agriculture. The development is proposing residential units at 0- to 4 units per acre and 8-15 units per acre and commercial uses. The uses are not incompatible with current uses.

X. Encourage Sprawl:

The project is proposed as a mixed used development that by virtue of its nature this planning principle was created to deter Urban Sprawl.

a. Directs growth and development to areas of the community in a manner that does not adversely impact natural resources.

   Response: The proposed development does abut Turkey Creek. The applicant will be required to have the surface water delineation and provide an undisturbed buffer and leave the area will be maintained as green space.

b. Promotes the efficient and cost-effective provision or extension of public infrastructure and service.

   Response: The proposed development will improve the area and contribute to the infrastructure of the City of Alachua. The applicant will be proposing a lift station and the necessary potable water and service extensions as well fire hydrants. The applicant has submitted an infrastructure plan that demonstrates that other users near the Development will benefit from the lift station

c. Promotes walkable and connected communities and provides for compact development and a mix of uses at densities and intensities that support a range of housing choices and a multimodal transportation system.

   Response: The Development will be a mixed-use community with walkable areas from residential to commercial uses. The applicant is exploring multiple types of residential uses, such as multi-family, single family, live work units, townhomes, and smaller cluster homes. Commercial uses will be mostly neighborhood commercial uses, but market demand and company interests in the area will dictate final users.

d. Promotes conservation of water and energy.

   Response: The Development will follow all of the building regulations for the City of Alachua for water and energy conservation.

e. Preserves agricultural areas and activities.

Response: The property is vacant, and it not being used for any uses.

f. Preserves open space and natural lands and provides for public open space and recreation needs.

Response: The Development will provide the required amount of open space and buffers as required with the PD-R and PD-Comm.

g. Creates a balance of land uses based on demands of residential population for the nonresidential needs of an area.

Response: Residential population demands are the driving factor for the residential and commercial markets. The proposed development will have a direct effect of attracting new businesses by adding to the City of Alachua population overall. In addition, commercial industries use a term called "roof tops" to decide where they will open new locations or franchises. These secondary affects will generate more jobs and tax revenue for the City of Alachua.

h. Provides uses, densities and intensities of use and urban form that would remediate an existing or planned sprawl development pattern or provides for an innovative development pattern such as transit-oriented development or new towns.

Response: The Development will be a compact, mixed-use, walkable community. Mixed-use developments by design discourage urban sprawl.

XI. Spot Zoning:

The "classic" definition of spot zoning is "the process of singling out a small parcel of land for a use classification totally different from that of the surrounding area for the benefit of the owner of such property and to the detriment of other owners.

Response: The proposed development will not result in spot zoning as the adjacent properties are zoned residential and portions of the property are currently zoned commercial. Rezoning to Planned Development with mixed uses will not be a detriment to the adjacent property owners.

XII. Public Facilities:

The proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, storm water management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development.

Response: The proposed development is proposing new infrastructure improvements for the development. There are five parcels that comprise the proposed development which are 05945-000-000, 05936-001-000, 05936-007-000, 05936-007-001 and 05936-007-002. This document will evaluate internal and external potential users for the infrastructure improvements, which include a wastewater force main extension, a wastewater lift station, and a potable water main extension, within the city.
Methodology

The Infrastructure Improvement Area Analysis evaluated all the potential users for the infrastructure improvements based on adjacent and vacant properties within the City limits in proximity to the proposed development and the allowed density under the Future Land Use designation. The proposed development is zoned Agriculture and Commercial Intensive. Verification of property vacancy was through the Alachua County Property Appraisers website. Current zoning was confirmed using City of Map Genius. Proposed zoning was calculated based on the maximum density afforded by the Future Land Use Designation.

Commercial land use designation was calculated based off an intensity of less than or equal to 0.50 floor area ratio for parcels 5 acres or greater or 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less. Agriculture was calculated at a density of 3.5 dwelling units per acre. The Moderate Density Residential land use designation was calculated maximum density of 0.93 dwelling units per acre.

Analysis of Infrastructure Users

There are five parcels within the proposed development and eight parcels outside of the proposed development that the infrastructure improvements could potentially serve. Of those thirteen parcels, 121 acres would be located within the proposed development and 153 acres would be located outside of the proposed development. The analysis shows that the proposed infrastructure improvements could serve up to 854 potential residential units and 1,252,728 sq.ft. of commercial. The total daily estimated flow to potentially be served is 390,800 gpd. The estimated construction cost for the infrastructure improvements is $1,200,201.00. Based on the calculated ERCs for wastewater and water, the developer should receive connection credits of $765.92 per wastewater ERC and $844.02 per water ERC for the infrastructure improvements.

XIII. No Adverse Effect on the Environment:

The proposed amendment would not result in significantly adverse impacts on the natural environment, including but not limited to water, air, noise, storm water management, wildlife, vegetation, wetlands, and the natural functioning of the environment.

Response: The proposed development will have no adverse impacts to the environment and will follow all the environmental regulations for the City of Alachua and the State of Florida.

XIV. Conclusions:

Job Creation

The proposed development will contribute to the housing variety for the City of Alachua. As well as will contribute to the local job growth with potential for direct creation of 656 jobs from the development of the single family detached component. Jobs are generated in the industries where lumber, concrete, lighting fixtures, heating equipment, and other products that go into a home are produced. Secondary and tertiary jobs are created when real estate agents,

lawyers, and brokers provide services to home builders, home buyers as well as building supplies required for building of those homes.

Tax Revenue Generation

The proposed development will contribute to the tax rolls based anywhere from $1,670,324.25 to $3,816,680.00 for the 215 units single family detached homes. The commercial component of the proposed development is more difficult to quantify, because there is a such a large variance based on commercial uses.

For single family detached residential uses and based on the 2020 millage rate of 22.1970:

At a 350K Valuation = $7,768.95 annual property tax per unit

- 215 Units X $7,768.95 = $1,670,324.25 in annual property taxes at residential single family detached full build out

At an 800K Valuation = $17,757.00 annual property tax per unit

- 215 Units x $17,757.00 = $3,816,680.00 in annual property taxes at full residential single family detached build out

Housing Variety

According to Angie Di Michele from the Sarasota Herald Tribune, nearly 1,000 people move to Florida every day, making Florida the second fastest-growing state in the country. One problem that popularity has created is housing demand increases and that there are not enough options to meet the demand of those who need affordable housing.

One way to address housing shortages and cost burdened households is through supply and a variety of housing choices. According to American Planning Association, is to support the development of mixed use, mixed income livable communities where people choose to live, work, and play because they are attractive and economical options rather than forced decisions. Smart Growth is largely about retrofitting communities to offer more choices both in terms of housing types and prices but also in terms of transportation options.

Because of the benefits to the infrastructure, job creation, housing variety and job created by the project, JBPro on behalf DM Alachua Investments, LLC, JBPro is

requesting approval of a Large-Scale Comprehensive Plan Amendment to the 121. 1 acres to change the Future Land Use designations, from Agriculture and Commercial to Moderate Density Residential (0 to 4 units), as well as High-Density Residential (8 to 15 units) and Commercial designation.

Local Analysis

Parcel 05936-001-000 is planned to be a part of the Schmidt Farms PD. Currently 80 acres +/- of that parcel has a land use designation of Rural / Agriculture and Agriculture (A) zoning. Typically, Agriculture zoned lands are allowed to have 1 unit per 5 acres of property. The existing Agriculture zoned property will have the right for 16 residential units.

The proposed moderate density residential land use amendment would allow up to 4 units per acre. 53.4 acres of the 80 acres is proposed to have the moderate density residential land use and would therefore allow by right 53.4 * 4 = 213 units. Based on information provided within the City of Alachua's Data and Analysis for Evaluation and Appraisal, the population of Alachua currently could be estimated at approximately 11,911. The projected growth in the population by 2025 is estimated to be approximately 12,950 and 14,985 in year 2030. Per the 2010 US Census Bureau the average American home is approximately 2.65 persons, meaning in the next 9 years the City of Alachua could have an expected need of approximately 1,160 homes. As a result, the potential of up to 213 new homes within the Schmidt Farms development will provide much needed opportunities for market rate housing availability within the City to meet the needs of the growing population.

To support the growing population of the City, there is only approximately 570 acres (2.58%) of developable land for commercial. The proposed land use amendment proposes a total of 29.1 acres for commercial land use which is 26.6% of the proposed Schmidt Farms development. This will expand the available land for commercial development to serve the residents of the City.

A. PROJECT

1. Project Name: _____
2. Address of Subject Property: _____
3. Parcel ID Number(s): _____
4. Existing Use of Property: _____
5. Future Land Use Map Designation : _____
6. Existing Zoning Designation: _____
7. Proposed Zoning Designation: _____
8. Acreage: _____

B. APPLICANT

1. Applicant's Status ☐ Owner (title holder) ☐ Agent
2. Name of Applicant(s) or Contact Person(s): _____ Title: _____
   Company (if applicable): _____
   Mailing address: _____
   City: _____ State: _____ ZIP: _____
   Telephone: (___) _____ FAX: (___) _____ e-mail: _____
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): _____
   Mailing Address: _____
   City: _____ State: _____ ZIP: _____
   * Must provide executed Property Owner Affidavit authorizing the agent to act on behalf of the property owner.

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☐ Yes ☐ No
   If yes, list names of all parties involved: _____
   If yes, is the contract/option contingent or absolute? ☐ Contingent ☐ Absolute

D. ATTACHMENTS

1. Statement of proposed change, including a map showing the proposed zoning change and zoning designations on surrounding properties
2. A current aerial map or plat of the property. (may be obtained from the Alachua County Property Appraiser.)
3. Concurrency Impact Analysis showing the impact on public facilities, including potable water, sanitary sewer, transportation, solid waste, recreation, stormwater, and public schools in accordance with Article 2.4.14 of the Land Development Regulations.
4. Analysis of Consistency with the City of Alachua Comprehensive Plan (analysis must identify specific Goals, Objectives, and Policies and describe in detail how the application complies with the noted Goal, Objective, or Policy.)

5. Analysis of compliance with the Standards for Site Specific Amendments to the Official Zoning Atlas, as defined in Section 2.4.2 of the Land Development Regulations (LDRs), and listed below:

   i. Consistent with Comprehensive Plan
   The proposed amendment is consistent with and furthers the goals, objectives, and policies of the Comprehensive Plan.

   ii. Consistent with Ordinances
   The proposed amendment is not in conflict with any portion of these LDRs or any of the City Code of Ordinances.

   iii. Logical Development Pattern
   The proposed amendment would result in a logical and orderly development pattern.

   iv. Pre-Mature Development
   The proposed amendment will not create premature development in undeveloped or rural areas.

   v. Incompatible with Adjacent Lands
   The uses permitted by the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands.

   vi. Adverse Effect on Local Character
   The proposed amendment will not adversely effect the character of the general area where it is proposed to be located by creating excessive traffic, density and/or intensities of use, building height and bulk, noise, lights, or other physical effects or nuisances.

   vii. Not Deviate from Pattern of Development
   The uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located.

   viii. Encourage Sprawl
   The proposed amendment will not encourage urban sprawl, either by resulting in strip or ribbon commercial development, leap-frog development or low density single dimensional development.

   ix. Spot Zoning
   The proposed amendment will not result in the creation of an isolated zone district unrelated to adjacent and surrounding zone districts (spot zoning).

   x. Public Facilities
   The proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, storm water management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development.

   xi. No Adverse Effect on the Environment
   The proposed amendment would not result in significantly adverse impacts on the natural environment, including but not limited to water, air, noise, storm water management, wildlife, vegetation, wetlands, and the natural functioning of the environment.

6. Three (3) sets of labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits. (Obtain from the Alachua County Property Appraiser).

7. Neighborhood Meeting Materials, including:
   i. Copy of the required published notice (advertisement) – must be published a newspaper of general circulation, as defined in Article 10 of the City's Land Development Regulations
   ii. Copy of written notice (letter) sent to all property owners within 400 feet, and mailing labels or list of those who received written notice
   iii. Written summary of meeting – must include (1) those in attendance; (2) a summary of the issues related to the development proposal discussed; (3) comments by those in attendance about the development proposal; and, (4) any other information deemed appropriate.

8. For applications requesting a zoning which permits residential uses, Public School Student Generation Form.

9. Legal description with tax parcel number.

10. Proof of ownership.

11. Proof of payment of taxes.

12. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any necessary technical review will be billed to the applicant at the rate of the reviewing entity. The invoice shall be paid in full prior to any legislative and/or quasi-judicial action of any kind on the petition, appeal, or development application.

All 12 attachments are required for a complete application. A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

I/We certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

Planned Development Master Plan

(Document on Next Page)

43RD STREET TND PLANNED DEVELOPMENT (PD) SPECIFICATIONS

1. LAND USES. LAND USES SHALL BE GENERALLY LOCATED AS SHOWN ON THE PD MASTER PLAN. THE MAXIMUM NUMBER OF DWELLING UNITS ALLOWED ON THE SITE SHALL BE 472 AND THE MAXIMUM NON-RESIDENTIAL AREA ALLOWED SHALL BE 489,400 SQ. FT. DWELLING UNITS MAY BE SINGLE-FAMILY DETACHED, ATTACHED, OR MULTI-FAMILY. LAND USES OTHER THAN RESIDENTIAL PERMITTED ON THE SITE ARE IDENTIFIED IN THE TABLE BELOW. THE FOLLOWING USES ARE ALLOWED IN DEVELOPMENT AREAS A, B, C, & D; COMMUNITY CENTER, POST OFFICE, PUBLIC SAFETY USES, RECREATIONAL TRAILS, PARKS, AND STORMWATER MANAGEMENT FACILITIES. USES FOR AREA E ARE AS LISTED BELOW.
2. PHASING. THE DEVELOPMENT SHALL CONSIST OF ONE PHASE AND MAY BE DEVELOPED ACCORDING TO MARKET CONDITIONS. THE DEVELOPMENT MAY BE FURTHER DIVIDED INTO SMALLER UNITS ACCORDING TO THE FINAL PD PLAN TO CREATE A LOGICAL AND/OR FUNCTIONAL DEVELOPMENT OR INFRASTRUCTURE PATTERNS.
3. ROADWAY BUFFERS. A TWENTY FIVE-FOOT (25') BUFFER SHALL BE PROVIDED ADJACENT TO ROADWAYS THAT EXIST ALONG EXTERNAL PROJECT BOUNDARIES. THE BUFFER MAY INCLUDE STORMWATER MANAGEMENT FACILITIES, PEDESTRIAN CIRCULATION, LANDSCAPING, AND SIGNAGE. ROADWAY BUFFERS MAY NOT BE PART OF PLATTED LOTS. LANDSCAPING SHALL BE CONSISTENT WITH APPLICABLE SECTIONS OF THE LAND DEVELOPMENT REGULATIONS (LDRS).
4. LOT SETBACK AND SEPARATIONS. HOUSING UNITS AND DESIGN SHALL AT A MINIMUM MEET THE REQUIREMENT OF THE FLORIDA BUILDING CODE. NOTWITHSTANDING THE SETBACKS ESTABLISHED WITHIN EACH DEVELOPMENT AREA AND DEFINED ON THE PD MASTER PLAN, AN ACCESSORY STRUCTURE, SUCH AS A DETACHED GARAGE, MAY SHARE A COMMON WALL WITH ACCESSORY STRUCTURES ON ADJACENT LOTS. SETBACKS BETWEEN RESIDENTIAL AND NON-RESIDENTIAL DEVELOPMENT AREAS SHALL BE FIVE (5').
5. COMMON AREA. COMMON AREA AND OPEN SPACE, AS DEFINED BY APPLICABLE SECTIONS OF THE LDRS AND THE PD MASTER PLAN, SHALL ACCOUNT FOR A MINIMUM OF 10% OF THE COMPLETED PROJECT, INCLUSIVE OF THE DEPRESSIONAL AREA. OPEN SPACE AREAS MAY EXIST IN ANY LAND USE AREA AND MAY BE DEVELOPED AT ANY RATE. THESE AREAS MAY CONTAIN LOW-INTENSITY PASSIVE OR ACTIVE RECREATION OPPORTUNITIES SUCH AS NATURE TRAILS, WILDLIFE VIEWING AREAS, AND OTHER RECREATION ACTIVITIES.
6. CIRCULATION. THE CIRCULATION CONFIGURATION IS NOT INTENDED TO BE EXACT AND REPRESENTS ONLY A PORTION OF THE OVERALL ROADWAY NETWORK. ROADWAYS INTENDED TO BE DEDICATED TO THE PUBLIC MAY CONSIST OF A MIXTURE OF ROADWAY TYPES AND SHALL BE REQUIRED TO MEET THE APPLICABLE LDRS DESIGN CRITERIA, UNLESS OTHERWISE AUTHORIZED BY THE CITY COMMISSION THROUGH LDR SECTION 3.6.3 (A)(5)(B)(III). THE INTERNAL ROADWAYS NOT SHOWN ON THE PD MASTER PLAN ARE INTENDED TO BE NEIGHBORHOOD STREETS AND MAY NOT MEET THE ARTERIAL OR COLLECTOR ROADWAY DEFINITION.
7. LANDOWNER/DEVELOPER RESPONSIBILITY. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING RIGHT-OF-WAY AND EASEMENTS FOR CONSTRUCTING ON-SITE INFRASTRUCTURE LOCATED IN THE PROPOSED PD-R AND PD-COMM DISTRICTS, INCLUDING BUT NOT LIMITED TO ELECTRICAL UTILITY LINE, TELEPHONE LINES, CABLE TV LINES, OR THE UNDERGROUND CONDUIT FOR SUCH FEATURES. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING AREAS FOR PUBLIC INFRASTRUCTURE AS REQUIRED BY CITY ORDINANCES, TO GUARANTEE CONSTRUCTION OF REQUIRED INFRASTRUCTURE, AND IF REQUESTED BY THE CITY, TO DEDICATE THESE IMPROVEMENTS TO THE CITY IN A FORM THAT COMPLIES WITH CITY REGULATIONS. ALL FACILITIES NOT DEDICATED TO THE CITY SHALL BE OPERATED AND MAINTAINED BY A PROPERTY OWNERS ASSOCIATION FORMED AS PART OF THE SUBDIVISION PROCESS.
8. ALLOWABLE LAND USE CLASSIFICATION DATA. FIGURES FOR ACREAGE ARE ESTIMATES AND HAVE BEEN ROUNDED TO THE NEAREST WHOLE NUMBER.
9. DEVELOPMENT SIGNAGE. ALL ENTRY ROADWAYS INTO THE DEVELOPMENT FROM US 441 AND NW 43RD STREET SHALL HAVE SIGNAGE IDENTIFYING THE DEVELOPMENT AND BUSINESSES WITHIN THE DEVELOPMENT. EACH PARCEL FRONTING US 441 AND NW 43RD STREET SHALL BE ALLOWED ONE SIGN IDENTIFYING THE BUSINESS. ALL SIGNAGE SHALL COMPLY WITH THE CITY OF ALACHUA LAND DEVELOPMENT REGULATIONS.

Warranty Deed

This Warranty Deed made this **10th** day of **May, 2017** between **Jule L. Schmidt, a single man,** whose post office address is **960 Oak Street, Merritt Island, FL 32953, Thomas Alan Schmidt and Mary Lynn Schmidt, his wife**, whose post office address is **1103 North Washington, Nevada, MO 64772**, and **Patricia M. Schmidt Richard and Shepherd Richard, her husband**, whose post office address is **7305 Mystic Way, Port St. Lucie, FL 34986**, together, grantor, and **DM Alachua Investments, LLC, a Florida limited liability company,** whose post office address is **4045 NW 43rd St, Gainesville, FL 32606**, grantee:

(Whenever used herein the terms "grantor" and "grantee" include all the parties to this instrument and the heirs, legal representatives, and assigns of individuals, and the successors and assigns of corporations, trusts and trustees)

Witnesseth, that said grantor, for and in consideration of the sum of TEN AND NO/100 DOLLARS ($10.00) and other good and valuable considerations to said grantor in hand paid by said grantee, the receipt whereof is hereby acknowledged, has granted, bargained, and sold to the said grantee, and grantee's heirs and assigns forever, the following described land, situate, lying and being in **Alachua County, Florida** to-wit:

See legal description attached as Exhibit A.

NOTE: The property herein described is not the homestead of the grantor(s) and neither the grantor(s) nor the grantor(s) spouse(s), nor anyone for whose support the grantor is responsible, resides on or adjacent to said land. AND, THE DEED WAS PREPARED WITHOUT BENEFIT OF A SURVEY.

Together with all the tenements, hereditaments and appurtenances thereto belonging or in anywise appertaining.

To Have and to Hold, the same in fee simple forever.

And the grantor hereby covenants with said grantee that the grantor is lawfully seized of said land in fee simple; that the grantor has good right and lawful authority to sell and convey said land; that the grantor hereby fully warrants the title to said land and will defend the same against the lawful claims of all persons whomsoever; and that said land is free of all encumbrances, except taxes accruing subsequent to **December 31, 2016**.

In Witness Whereof, grantor has hereunto set grantor's hand and seal the day and year first above written.

□ *Revised*	

10. School Concurrency Service Areas (SCSA): Based on the project location, identify the corresponding SCSA for each school type. Maps of the SCSAs can be obtained from the Alachua County Growth Management Department Map Gallery by clicking on the "Public Schools" tab: http://growth-management.alachuacounty.us/gis_services/map_gallery/
    Elementary: NW Alachua CSA
    Middle: Mebane CSA
    High: Santa Fe CSA

Explanation of Student Generation Calculation: Student Generation is calculated based on the type of residential development and the type of schools. The number of students stations (by school type – Elementary, Middle and High School) used for calculating the school concurrency impacts is equal to the number of dwelling units by housing type multiplied by the student generation multiplier (for housing type & school type) established by the School Board. **Calculations are rounded to the nearest whole number.** Student Generation for each school type is calculated individually, in order to correctly assess the impact on the School Concurrency Service Area (SCSA) for each school type (Elementary, Middle and High School).

# of Elementary School Student Stations = # of housing units x Elementary school student generation multiplier
# of Middle School Student Stations = # of housing units x Middle school student generation multiplier
# of High School Student Stations = # of housing units x High school student generation multiplier

Student Generation Calculations: Single Family Residential Development

Elementary School	213	units	x	0.14	Elementary School Multiplier*	30	Student Stations**
Middle School	213	units	x	0.06	Middle School Multiplier*	13	Student Stations**
High School	213	units	x	0.08	High School Multiplier*	17	Student Stations**

Student Generation Calculations: Multi-Family Residential Development

Elementary School	301	units	x	0.09	Elementary School Multiplier*	27	Student Stations**
Middle School	301	units	x	0.03	Middle School Multiplier*	9	Student Stations**
High School	301	units	x	0.03	High School Multiplier*	9	Student Stations**

** Student generation multipliers may be obtained from SBAC at:*
http://www.sbac.edu/pages/ACPS/Departments_Programs/DepartmentsAF/D_thru_F/FacilitiesMainConstr/Local_Certification_Packets/City_of_Alachua
*** Round to the nearest whole number*

EXEMPT DEVELOPMENTS (check all that apply):

- ☐ Existing legal lots eligible for a building permit.
- ☐ Development that includes residential uses that has received final development plan approval prior to the effective date for public school concurrency, or has received development plan approval prior to June 24, 2008, provided the development approval has not expired.
- ☐ Amendments to final development orders for residential development approved prior to the effective date of public school concurrency, and which do not increase the number of students generated by the development.
- ☐ Age-restricted developments that prohibit permanent occupancy by persons of school age, provided this condition is satisfied in accordance with the standards of the Public Schools Facilities Element or the ILA.
- ☐ Group quarters that do not generate public school students, as described in the ILA.

A completeness review of the application will be conducted within 5 business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

I/We certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

Neighborhood Meeting Advertisement For NW 43rd Street Planned Development and Large-Scale Comprehensive Plan Amendment

As a property owner located within the required 400-foot radius of a proposed development, you are hereby being notified of a proposal for a Rezoning and a Large-Scale Comprehensive Plan Amendment as required by, Section 2.2.4 Neighborhood Meetings, of the City of Alachua Land Development Regulations. DM Alachua Investments, LLC, 914 SW 131 ST, Newberry, FL, 32669 is requesting a Large-Scale Comprehensive Plan Amendment and a rezoning to Planned Development for 121. 56 acres, located the intersection of 441 and NW 43rd Street in the City of Alachua. The proposed Rezoning and Comprehensive Plan amendment will encompass, parcels numbers 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001 and 05945-000-000.

The Neighborhood Meeting will discuss the proposed development, share a conceptual plan, and receive comments from the public and adjacent property owners. The neighborhood meeting will be held at City of Alachua Public Library located at 14913 NW 140 Street Alachua, FL 32615 on August 12th , 2021 from 5:00PM to 5:45PM. You may also submit your comments electronically to the Representative for the Developer of the project, JBPro, Carter Maria Thompson, Director of Land Planning, 3530 NW 43rd Street Gainesville FL 32606, 352-375-8999 or by email at carter.thompson@jbpro.com.

08/12/2021
NW 43rd St TND - Neighborhood WORKshop

Presenter: Chris Potts, P.E.
Meeting Start: 5pm

1. Wastewater disposal question. Required to connect to City utilities. Lift station required.

2. Roadway Improvents paid for by who?
Developer pays for improvements. Municipalities paid for maintenance

3. Which WMD are we in? SRWMD. Flows to Gulf of Mexico.

4. Traffic concerns w/ flow off 441. Neighbor requests traffic light instead of RABs.

5. Wetland encroachment concerns. Buffer per County Code + SRWMD.

6. Traffic Study will be required

7. How has GRU impacted wetlands?
impacts occured 50ish years ago

8. How many homes? 140 ≈
Size, price? $1200 sf min $300K - $600K
Retail/Com area 500K sf.

9. Wet basin design.

10. Buffers between developments

11. How many MF? 2000 sf / unit.
4 unit / bldg.

12. Timeline?

NW 43rd Street TND Neighborhood Workshop Summary

Meeting Location: Alachua Branch Library
Meeting Date and Time: August 12th at 5pm
Meeting Presenter: Chris Potts, P.E., JBPro

The neighborhood meeting began on time, with approximately 30 neighbors in attendance. Mr. Potts gave a PowerPoint presentation which described the nature of the application for a rezoning and land use change and provided a visual representation of the Concept Layout for the development at this stage of the permitting and review process. Many questions were asked, and sparked a good discussion on topics like utility connections, wetland and environmental impacts, traffic concerns, and flooding impacts to adjacent properties. The timeline to final buildout was also discussed. Specific questions are listed below, with responses.

1. What is the breakdown of the types of developments, i.e. single family homes, multi-family homes, and commercial/retail area?
   Response: There are approximately 140 single family homes and 24 multi-family buildings proposed, along with approximately 500,000 sf set aside for commercial use. The single family homes will likely be about 1,200 sf in size, the multi-family units will be approximately 2,000 sf, and the homes will most likely sell for anywhere between $300,000-$800,000. Additionally, due to the existing wetlands on site, buffers will be provided between this development and neighboring communities.

2. How will the development dispose of wastewater?
   Response: Because this project is within the limits of the City of Alachua, all homes will be required to connect to City of Alachua Public Services utilities. A lift station will be required for the development to pump wastewater to the treatment plant.

3. What water management district is the project located in, and where does the treated water eventually end? Many neighbors voiced concerns regarding current and future flooding of their property and the adjacent wetlands.
   Response: This project is located in the SRWMD, and waters eventually discharge to the Gulf of Mexico. Mr. Potts explained the local and state standards of design regarding treatment and discharge of any stormwater runoff that makes its way onto the proposed development. This will likely include wet detention basins to attenuate the runoff, and if discharge from the

basins is necessary the development will comply with volume and rate control regulations. Mr. Potts explained that as developers and engineers, we cannot create a worse situation than what is existing; however, improvements to the development may or may not improve offsite conditions depending on the existing topography.

4. Many neighbors voiced concerns regarding impacts to the wildlife and wetlands on the development property.
   Response: Mr. Potts explained the local and state regulations regarding impacts to wetlands and the ecosystems they support. He explained that being in Alachua County, this development must maintain an average 75-foot minimum buffer from all wetland limits as delineated by an Environmental Specialist and that wetlands cannot be disturbed or changed. Many neighbors voiced concerns regarding the flooding occurring from Turkey Creek, so a brief history and description of the potential causes was discussed, including the impacts from the GRU plant nearby. Mr. Potts explained that it is not the intent of this development to adjust or manipulate any runoff coming from or directed to US 441, but that any impacts due to the proposed development will be mitigated against and designed for with this development.

5. Many neighbors voiced concerns regarding the additional traffic load this development will generate, and expressed a lack of faith in the ability of a roundabout to calm traffic and mitigate for the additional volume. Additionally, cost of construction and maintenance was discussed.
   Response: Mr. Potts explained that a Traffic Study is a requirement for a development of this size, and that all roadway improvements will adhere to the recommendations of the traffic study once it is obtained. Concerns regarding speed of traffic coming to the proposed roundabout from US 441 were expressed, as well as pedestrian safety concerns. Mr. Potts explained that this development will undergo review by FDOT and Alachua County as it connects to roads falling within the jurisdiction of both entities, and that any improvements will be approved by each agency in accordance with their standards for design and safety. Neighbors requested a traffic light in lieu of a roundabout, and Mr. Potts explained that the roundabout was a suggestion by both Alachua County and FDOT, but more discussions will be had prior to final approval. Lastly, Mr. Potts explained that any improvements to existing roads, as well as construction of new roads, will be the responsibility of the developer. Once constructed, Mr. Potts explained that maintenance responsibilities fall to the jurisdiction having authority for each roadway.

Attachment 2 - Infrastructure Potential Users 5

TABLE OF FIGURES

Figure 1 - Map of Parcels of Potential Users 6

Gainesville | St. Augustine
3530 NW 43rd Street
Gainesville, FL 32606

General Description

The proposed development is 121-acre mixed use development that will have a residential, commercial and an open spaces element. There are five parcels that comprise the proposed development which are 05945-000-000, 05936-001-000, 05936-007-000, 05936-007-001 and 05936-007-002. This document will evaluate internal and external potential users for the infrastructure improvements, which include a wastewater forcemain extension, a wastewater lift station, and a potable water main extension, within the city.

Methodology

The Infrastructure Improvement Area Analysis evaluated all the potential users for the infrastructure improvements based on adjacent and vacant properties within the City limits in proximity to the proposed development and the allowed density under the Future Land Use designation. The proposed development is zoned Agriculture and Commercial Intensive. Verification of property vacancy was through the Alachua County Property Appraisers website. Current zoning was confirmed using City of Map Genius. Proposed zoning was calculated based on the maximum density afforded by the Future Land Use Designation.

Commercial land use designation was calculated based off an intensity of less than or equal to 0.50 floor area ratio for parcels 5 acres or greater or 0.75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio for parcels 1 acre or less. Agriculture was calculated at a density of 3.5 dwelling units per acre. The Moderate Density Residential land use designation was calculated maximum density of 0.93 dwelling units per acre.

Analysis of Infrastructure Users

There are five parcels within the proposed development and eight parcels outside of the proposed development that the infrastructure improvements could potentially serve. Of those thirteen parcels, 121 acres would be located within the proposed development and 153 acres would be located outside of the proposed development. The analysis shows that the proposed infrastructure improvements could serve up to 854 potential residential units and 1,252,728 sq.ft. of commercial. The total daily estimated flow to potentially be served is 390,800 gpd. The estimated construction cost for the infrastructure improvements is $1,390,170.00. Each new or existing non-residential establishment that connects to the Improvements shall contribute $0.90 per square foot of the gross building square footage at the time it connects to the improvements. Each new or existing residential establishment that connects to the improvements contribute $300.00 at the time it connects to the improvements.

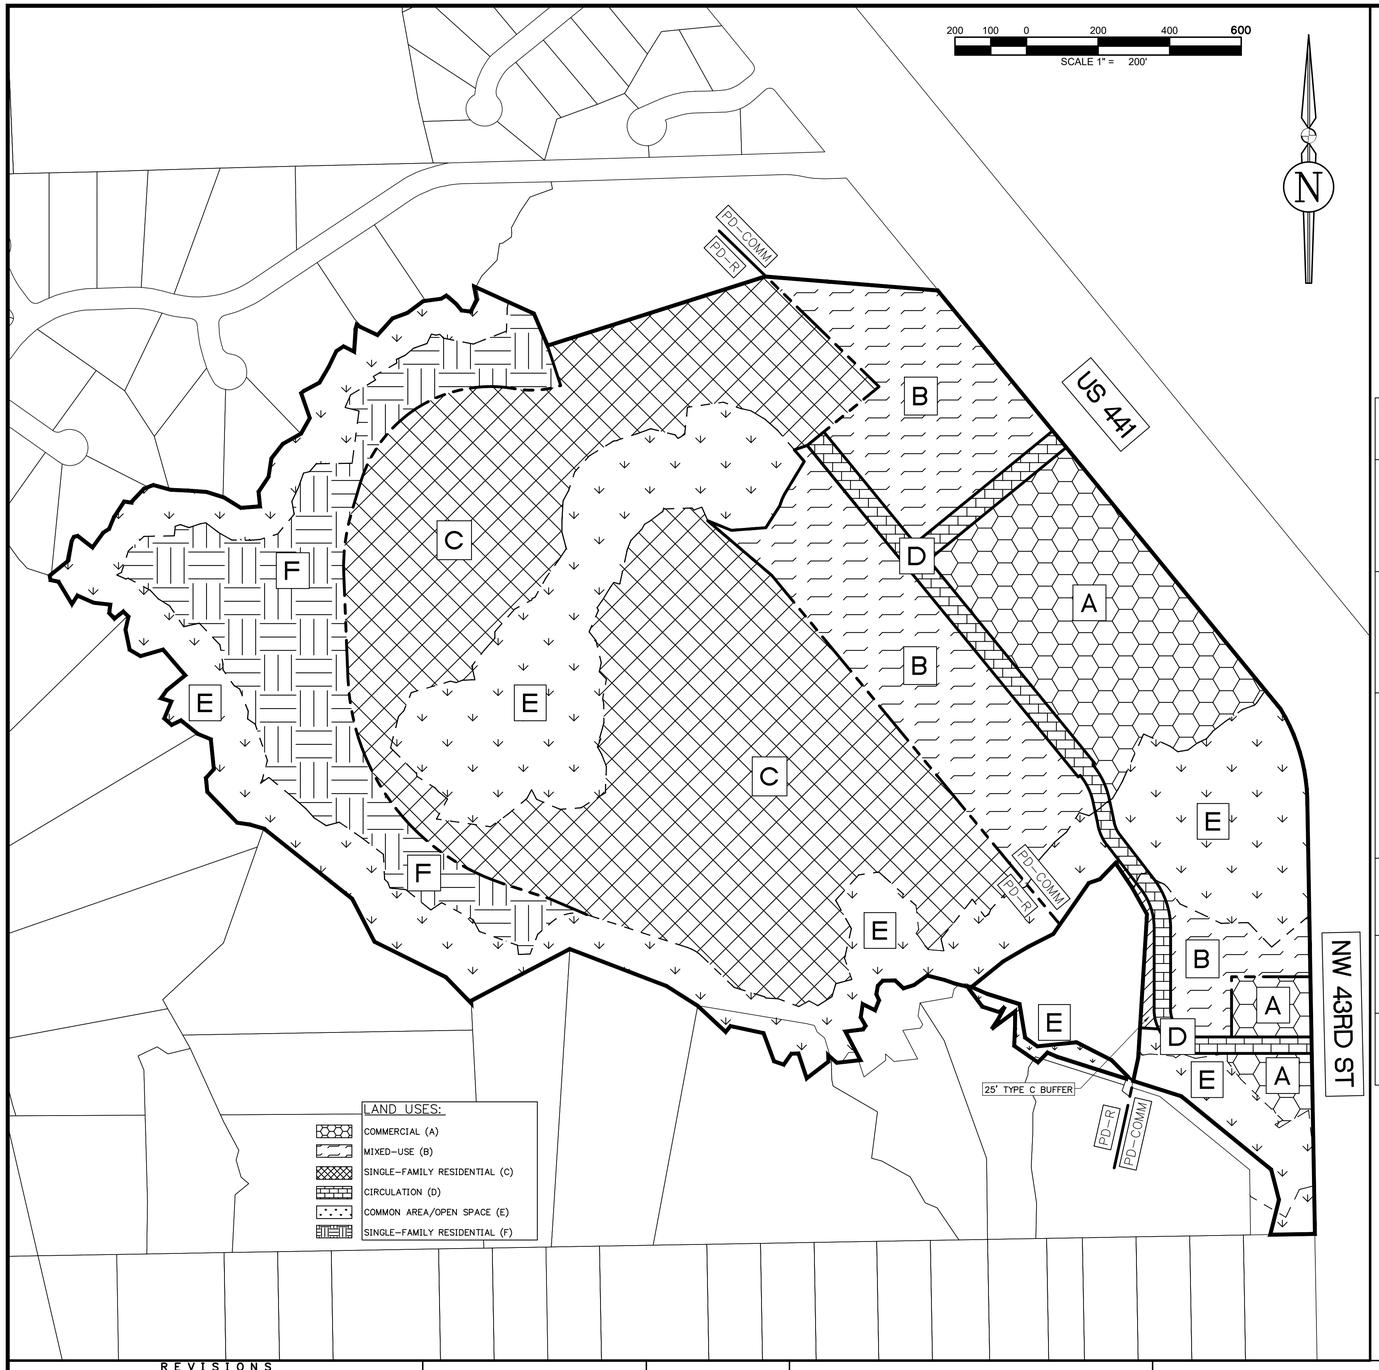
SHEET TITLE: INFRASTRUCTURE SERVICE AREA



DATE: JULY 2021

PROJECT NO: 373-21-03

CLIENT: DM ALACHUA INVESTMENTS LLC

PROJECT: SCHMIDT FARMS

SHEET NO: SA-1

43RD STREET TND PLANNED DEVELOPMENT (PD) SPECIFICATIONS

1. LAND USES. LAND USES SHALL BE GENERALLY LOCATED AS SHOWN ON THE PD MASTER PLAN. THE MAXIMUM NUMBER OF DWELLING UNITS ALLOWED ON THE SITE SHALL BE 472 AND THE MAXIMUM NON-RESIDENTIAL AREA ALLOWED SHALL BE 489,400 SQ. FT. DWELLING UNITS MAY BE SINGLE-FAMILY DETACHED, ATTACHED, OR MULTI-FAMILY. LAND USES OTHER THAN RESIDENTIAL PERMITTED ON THE SITE ARE IDENTIFIED IN THE TABLE BELOW. THE FOLLOWING USES ARE ALLOWED IN DEVELOPMENT AREAS A, B, C, & D; COMMUNITY CENTER, POST OFFICE, PUBLIC SAFETY USES, RECREATIONAL TRAILS, PARKS, AND STORMWATER MANAGEMENT FACILITIES. USES FOR AREA E ARE AS LISTED BELOW.
2. PHASING. THE DEVELOPMENT SHALL CONSIST OF ONE PHASE AND MAY BE DEVELOPED ACCORDING TO MARKET CONDITIONS. THE DEVELOPMENT MAY BE FURTHER DIVIDED INTO SMALLER UNITS ACCORDING TO THE FINAL PD PLAN TO CREATE A LOGICAL AND/OR FUNCTIONAL DEVELOPMENT OR INFRASTRUCTURE PATTERNS.
3. ROADWAY BUFFERS. A TWENTY FIVE-FOOT (25') BUFFER SHALL BE PROVIDED ADJACENT TO ROADWAYS THAT EXIST ALONG EXTERNAL PROJECT BOUNDARIES. THE BUFFER MAY INCLUDE STORMWATER MANAGEMENT FACILITIES, PEDESTRIAN CIRCULATION, LANDSCAPING, AND SIGNAGE. ROADWAY BUFFERS MAY NOT BE PART OF PLATTED LOTS. LANDSCAPING SHALL BE CONSISTENT WITH APPLICABLE SECTIONS OF THE LAND DEVELOPMENT REGULATIONS (LDRS).
4. LOT SETBACK AND SEPARATIONS. HOUSING UNITS AND DESIGN SHALL AT A MINIMUM MEET THE REQUIREMENT OF THE FLORIDA BUILDING CODE. NOTWITHSTANDING THE SETBACKS ESTABLISHED WITHIN EACH DEVELOPMENT AREA AND DEFINED ON THE PD MASTER PLAN, AN ACCESSORY STRUCTURE, SUCH AS A DETACHED GARAGE, MAY SHARE A COMMON WALL WITH ACCESSORY STRUCTURES ON ADJACENT LOTS. SETBACKS BETWEEN RESIDENTIAL AND NON-RESIDENTIAL DEVELOPMENT AREAS SHALL BE FIVE (5').
5. COMMON AREA. COMMON AREA AND OPEN SPACE, AS DEFINED BY APPLICABLE SECTIONS OF THE LDRS AND THE PD MASTER PLAN, SHALL ACCOUNT FOR A MINIMUM OF 10% OF THE COMPLETED PROJECT, INCLUSIVE OF THE DEPRESSIONAL AREA. OPEN SPACE AREAS MAY EXIST IN ANY LAND USE AREA AND MAY BE DEVELOPED AT ANY RATE. THESE AREAS MAY CONTAIN LOW-INTENSITY PASSIVE OR ACTIVE RECREATION OPPORTUNITIES SUCH AS NATURE TRAILS, WILDLIFE VIEWING AREAS, AND OTHER RECREATION ACTIVITIES.
6. CIRCULATION. THE CIRCULATION CONFIGURATION IS NOT INTENDED TO BE EXACT AND REPRESENTS ONLY A PORTION OF THE OVERALL ROADWAY NETWORK. ROADWAYS INTENDED TO BE DEDICATED TO THE PUBLIC MAY CONSIST OF A MIXTURE OF ROADWAY TYPES AND SHALL BE REQUIRED TO MEET THE APPLICABLE LDRS DESIGN CRITERIA, UNLESS OTHERWISE AUTHORIZED BY THE CITY COMMISSION THROUGH LDR SECTION 3.6.3 (A)(5)(B)(III). THE INTERNAL ROADWAYS NOT SHOWN ON THE PD MASTER PLAN ARE INTENDED TO BE NEIGHBORHOOD STREETS AND MAY NOT MEET THE ARTERIAL OR COLLECTOR ROADWAY DEFINITION.
7. LANDOWNER/DEVELOPER RESPONSIBILITY. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING RIGHT-OF-WAY AND EASEMENTS FOR CONSTRUCTING ON-SITE INFRASTRUCTURE LOCATED IN THE PROPOSED PD-R AND PD-COMM DISTRICTS, INCLUDING BUT NOT LIMITED TO ELECTRICAL UTILITY LINE, TELEPHONE LINES, CABLE TV LINES, OR THE UNDERGROUND CONDUIT FOR SUCH FEATURES. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING AREAS FOR PUBLIC INFRASTRUCTURE AS REQUIRED BY CITY ORDINANCES, TO GUARANTEE CONSTRUCTION OF REQUIRED INFRASTRUCTURE, AND IF REQUESTED BY THE CITY, TO DEDICATE THESE IMPROVEMENTS TO THE CITY IN A FORM THAT COMPLIES WITH CITY REGULATIONS. ALL FACILITIES NOT DEDICATED TO THE CITY SHALL BE OPERATED AND MAINTAINED BY A PROPERTY OWNERS ASSOCIATION FORMED AS PART OF THE SUBDIVISION PROCESS.
8. ALLOWABLE LAND USE CLASSIFICATION DATA. FIGURES FOR ACREAGE ARE ESTIMATES AND HAVE BEEN ROUNDED TO THE NEAREST WHOLE NUMBER.
9. DEVELOPMENT SIGNAGE. ALL ENTRY ROADWAYS INTO THE DEVELOPMENT FROM US 441 AND NW 43RD STREET SHALL HAVE SIGNAGE IDENTIFYING THE DEVELOPMENT AND BUSINESSES WITHIN THE DEVELOPMENT. EACH PARCEL FRONTING US 441 AND NW 43RD STREET SHALL BE ALLOWED ONE SIGN IDENTIFYING THE BUSINESS. ALL SIGNAGE SHALL COMPLY WITH THE CITY OF ALACHUA LAND DEVELOPMENT REGULATIONS.

CONCURRENCY IMPACT ANALYSIS

CONCURRENCY IS A SHORTHAND EXPRESSION FOR A SET OF LAND USE REGULATIONS THAT LOCAL GOVERNMENTS ARE REQUIRED (BY THE FLORIDA LEGISLATURE) TO ENSURE THAT NEW DEVELOPMENT DOES NOT OUTSTRIP LOCAL GOVERNMENT'S ABILITY TO PROVIDE SERVICES OR STRAIN CURRENT LEVEL OF SERVICE. IN THE FOLLOWING PARAGRAPHS, THE PROPOSED COMPREHENSIVE PLAN AMENDMENT WILL DISCUSS THE IMPACTS TO POTABLE WATER, WASTEWATER, STORMWATER, SCHOOL STUDENT PROJECTION NEEDS, STORMWATER, AND TRANSPORTATION.

POTABLE WATER

POLICY 4.1.C OF THE COMMUNITY FACILITIES AND NATURAL GROUNDWATER AQUIFER RECHARGE (CFNGAR) ELEMENT OF THE COMPREHENSIVE PLAN ESTABLISHES A POTABLE WATER LOS STANDARD OF 275 GALLONS PER DAY PER EQUIVALENT RESIDENTIAL DWELLING UNIT ON AN AVERAGE ANNUAL BASIS. POLICY 4.1.C OF THE CFNGAR ELEMENT IF THE CITY'S POTABLE WATER FACILITY REACHES 85% OF THE PERMITTED DESIGN CAPACITY, NO FURTHER DEVELOPMENT ORDERS OR PERMITS WILL BE ISSUED UNTIL ADDITIONAL CAPACITY BECOMES AVAILABLE. THE CURRENT LEVEL OF CAPACITY FOR THE CITY IS 62.88%, THEREFORE THE CITY HAS 22.12% CAPACITY FOR PROPOSED DEVELOPMENTS. TABLE 4.2 WAS PROVIDED BY THE CITY'S 2021 ANNUAL CONCURRENCY STATUS REPORT. TABLE 4.2 SHOWS THE CITY'S CURRENT UTILIZATION RATE IS 62.88% AND A RESIDUAL RATE OF 853,649 GALLONS PER DAY.

POTABLE WATER AVAILABLE CAPACITY

Table 4.2
Potable Water Public Facilities Impacts

System Category	Gallons Per Day
Current Permitted Capacity[1]	2,300,000
Less Actual Potable Water Flows[1]	1,300,250
Reserved Capacity[2]	**146,101**
Residual Capacity	**853,649**
Percentage of Permitted Design Capacity Utilized	**62.88%**

Sources:
1. City of Alachua Public Services Department, April 2021
2. City of Alachua May 2021 Development Monitoring Report

POTABLE WATER PROJECT IMPACT

BELOW IN TABLE 1 THAT UTILIZES A 275 GALLONS PER DAY FOR RESIDENTIAL POTABLE WATER AND 0.15 GALLONS PER DAY FOR OFFICE/RETAIL. THE PROPOSED DEVELOPMENT WILL UTILIZE 275 GALLONS PER DAY FOR EACH RESIDENTIAL UNIT, WITH A TOTAL OF 514 RESIDENTIAL UNITS. THE TOTAL GALLONS PER DAY FOR RESIDENTIAL DEVELOPMENT OF POTABLE WATER WILL BE 141,350 GALLONS AND 73,410 GALLONS FOR NON–RESIDENTIAL. THE TOTAL POTENTIAL DEVELOPMENT POTABLE WATER IS 214,760 GALLONS, WHICH LEAVES 638,889 GALLONS OF RESIDUAL CAPACITY REMAINING.

TABLE 1 – POTABLE WATER	DENSITY	GALLONS PER DAY
SINGLE FAMILY DETACHED	213 UNITS	58,575
MULTI–FAMILY	301 UNITS	82,775
OFFICE/RETAIL	489,400 SF	73,410
TOTALS	–	214,760
BASED OFF A LOS OF 275 GALLONS PER DAY FOR RESIDENTIAL UNITS AND 0.15 GALLONS PER DAY FOR OFFICE/RETAIL.		

WASTEWATER

POLICY 1.1.D OF THE CFNGAR ELEMENT OF THE COMPREHENSIVE PLAN ESTABLISHES A SANITARY SEWER LOS STANDARD OF 250 GALLONS PER DAY PER EQUIVALENT RESIDENTIAL DWELLING UNIT ON AN AVERAGE ANNUAL BASIS. TABLE 4.3 SHOWS A SANITARY SEWER CAPACITY POLICY 1.1.D OF THE CFNGAR ELEMENT REACHES 85% OF THE PERMITTED DESIGN CAPACITY, NO FURTHER DEVELOPMENT ORDERS OR PERMITS WILL BE ISSUED UNTIL ADDITIONAL CAPACITY BECOMES AVAILABLE. TABLE 4.3 BELOW SHOWS CAPACITY AT 53.61%, THEREFORE THERE 695, 850 GALLONS OR 31.39%.

WASTEWATER AVAILABLE CAPACITY

Table 4.3
Wastewater Public Facilities Impacts

System Category	Gallons Per Day
Treatment Plant Current Permitted Capacity[1]	1,500,000
Less Actual Treatment Plant Flows[2]	677,000
Reserved Capacity[2]	**127,140**
Residual Capacity	**695,860**
Percentage of Permitted Design Capacity Utilized	**53.61%**

Sources:
1. City of Alachua Public Services Department, April 2021
2. City of Alachua May 2021 Development Monitoring Report

WASTEWATER PROJECT IMPACT

TABLE 2 THAT UTILIZES A 250 GALLONS PER DAY FOR RESIDENTIAL WASTEWATER. THE PROPOSED DEVELOPMENT WILL UTILIZE 250 GALLONS PER DAY FOR EACH RESIDENTIAL UNIT, WITH A TOTAL OF 514 RESIDENTIAL UNITS AND 0.15 GALLONS PER DAY FOR NON–RESIDENTIAL. THE TOTAL POTENTIAL DEVELOPMENT WASTEWATER IS 201,910 GALLONS, WHICH LEAVES 493,950 GALLONS OF RESIDUAL CAPACITY REMAINING.

TABLE 2 – WASTEWATER	DENSITY	GALLONS PER DAY
SINGLE FAMILY DETACHED	213 UNITS	53,250
MULTI–FAMILY	301 UNITS	75,250
OFFICE/RETAIL	489,400 SF	73,410
TOTALS	–	241,910
BASED OFF A LOS OF 250 GALLONS PER DAY FOR RESIDENTIAL UNITS AND 0.15 GALLONS PER DAY FOR OFFICE/RETAIL.		

TRANSPORTATION

IN JUNE 2020, THE CITY OF ALACHUA ADOPTED AMENDMENTS TO THE COMPREHENSIVE PLAN AS PART OF THE SEVEN–YEAR EVALUATION AND APPRAISAL UPDATE TO THE CITY'S COMPREHENSIVE PLAN. AS PART OF THIS UPDATE, POLICY 1.1.A WAS AMENDED TO ESTABLISH ADDITIONAL ROAD SEGMENTS TO BE MONITORED FOR CONCURRENCY, TO ASSIGN SEGMENT NUMBERS TO COUNTY ROADS, AND TO UPDATE THE COMPREHENSIVE PLAN ROAD SEGMENTS TO BE CONSISTENT WITH THE SEGMENTS DEFINED BY THE FLORIDA DEPARTMENT OF TRANSPORTATION. THESE UPDATES PROVIDE AN ENHANCEMENT TO THE STRUCTURE OF THE CITY'S TRANSPORTATION CONCURRENCY MONITORING SYSTEM.

TABLE 4.1 BELOW IDENTIFIES EACH MONITORED ROADWAY SEGMENT, AS WELL AS THE ADOPTED LOS STANDARD FOR EACH SEGMENT, EXISTING TRAFFIC, RESERVED TRIPS, AVAILABLE CAPACITY, AND THE PERCENTAGE OF CAPACITY UTILIZED. TABLE 4.1 INDICATES THAT PRESENTLY THERE ARE NO IMMINENT DEFICIENCIES FOR ANY MONITORED ROADWAY SEGMENTS. HOWEVER, SEGMENT 6 – US 441 FROM INTERSTATE 75 TO COUNTY ROAD 235A – IS PRESENTLY AT 90.66 PERCENT OF THE CAPACITY OF THE SEGMENT AND IS THEREFORE APPROACHING A POTENTIAL IMMINENT DEFICIENCY. CONTINUED MONITORING OF THIS SEGMENT WILL BE REQUIRED TO EVALUATE IF THE SEGMENT EXCEEDS 95 PERCENT OF THE CAPACITY OF THE SEGMENT AND THUS PRESENTS AN IMMINENT DEFICIENCY.

TRANSPORTATION AVAILABLE CAPACITY

SOLID WASTE

POLICY 2.1.A OF THE CFNGAR ELEMENT OF THE COMPREHENSIVE PLAN ESTABLISHES A LOS STANDARD FOR SOLID WASTE FACILITIES OF 0.73 TONS PER CAPITA PER YEAR FOR RESIDENTIAL DEVELOPMENT. THE DEMAND GENERATED BY NONRESIDENTIAL USES CAN VARY SUBSTANTIALLY BETWEEN DIFFERENT USE TYPES, THEREFORE A LOS STANDARD FOR NONRESIDENTIAL USES IS NOT ADOPTED IN THE COMPREHENSIVE PLAN.

Table 4.7
Solid Waste Public Facilities Impacts

System Category	Pounds Per Day	Tons Per Year
Existing Demand[1]	41,960.00	7,657.70
Reserved Capacity[2]	15,609.14	2,848.67
New River Solid Waste Facility Capacity[3]	**50 years**	

1. Bureau of Economic & Business Research, University of Florida, Estimates of Population by County and City in Florida (2020); Policy 2.1.a, CFNGAR Element
Formula: 10,490 persons x 0.73 tons per year
2. City of Alachua May 2021 Development Monitoring Report
3. New River Solid Waste Association, April 2021

SOLID WASTE PROJECT IMPACT

TABLE 3 UTILIZES A .73 TONS LEVEL OF SERVICE PER DAY FOR RESIDENTIAL SOLID WASTE AND 5.5 POUNDS PER THOUSAND SQUARE FEET OF NON–RESIDENTIAL.

TABLE 3 – SOLID WASTE	DENSITY	TONS PER YEAR
RESIDENTIAL	514 UNITS	968
NON–RESIDENTIAL	489,400 SF	2,692
TOTALS	–	3,662
BASED OFF A LOS OF .73 TONS PER DAY FOR RESIDENTIAL UNITS AND 5.5 POUNDS PER THOUSAND SF FOR OFFICE/RETAIL.		

RECREATION

POLICY 1.2.B OF THE RECREATION ELEMENT OF THE COMPREHENSIVE PLAN ESTABLISHES A LOS STANDARD FOR RECREATIONAL FACILITIES OF FIVE (5) ACRES OF COMMUNITY, NEIGHBORHOOD, OR POCKET PARK AREA PER 1,000 PERSONS, WITH A MINIMUM OF 20 PERCENT OF THE REQUIRED ACREAGE CONSISTING OF IMPROVED, PASSIVE PARKS.

THE US CENSUS BUREAU ESTIMATES THE NUMBER OF PERSONS PER HOUSEHOLD FOR THE CITY TO BE 2.76 PERSONS PER HOUSEHOLD (2015–2019). THE METHOD TO DETERMINE RECREATIONAL IMPACTS, MULTIPLE THE TOTAL NUMBER OF UNITS PROPOSED BY THE LEVEL OF SERVICE STANDARD (0.005) AND THE TOTAL NUMBER OF PERSONS PER HOUSEHOLD (2.76).

RECREATION AVAILABLE CAPACITY

Table 4.6
Improved Passive Park Space Analysis

System Category	Acreage
Minimum Improved Passive Park Space Required to Serve Existing Population and Reserved Capacity[1]	10.91
Existing Improved Passive Park Space Provided[2]	34.82
Improved Passive Park Space Utilized by Existing Population & Reserved Capacity[3]	**31.33%**

1. Policy 1.2.b. Recreation Element, City of Alachua May 2021 Development Monitoring Report
2. Area consists all improved passive lands which are part of San Felasco Conservation Corridor (27.73 acres), Swick House (3.84 acres), Legacy Park (3.18 acres, and Theater Park (0.07 acres)
3. Formula: Total Improved Passive Park Space / Acreage Required to Serve Existing Population = Projected Impacts from Recent Development Orders

RECREATION PROJECT IMPACT

THE PROPOSED DEVELOPMENT WILL POTENTIALLY UTILIZE 2.58 ACRES OF RECREATIONAL IMPACT PER TABLE 4 BELOW. THE PROPOSED DEVELOPMENT WILL PROVIDE PASSIVE RECREATIONAL AND OPEN SPACE AREAS FOR THE DEVELOPMENT'S RESIDENTIAL UNITS BUT THESE FACILITIES WILL NOT BE OPEN TO THE PUBLIC.

TABLE 4 – RECREATIONAL	RESIDENTIAL UNITS	ACRES
SINGLE FAMILY DETACHED	213	1.07
MULTI–FAMILY	301	1.51
TOTALS	514	2.58
BASED OFF A LOS OF 0.005.		

STORMWATER

POLICY 3.1.A OF THE CFNGAR ELEMENT OF THE COMPREHENSIVE PLAN ADOPTS THE LOS STANDARD FOR STORMWATER FACILITIES. POLICY 3.1.A REQUIRES THAT THE PEAK RATE OF POST–DEVELOPMENT NOT EXCEED THE PEAK RATE OF PRE–DEVELOPMENT RUNOFF FOR STORM EVENTS UP TO THE 100– YEAR CRITICAL DURATION RAINFALL DEPTH FOR ALL DEVELOPMENT (WITH THE EXCEPTION OF AGRICULTURAL, SILVICULTURAL, CONSERVATION, OR RECREATIONAL USES, WHICH ARE SUBJECT TO A DIFFERENT STANDARD). ADDITIONALLY, STORMWATER BASINS MUST BE DESIGNED TO TREAT THE FIRST INCH OF RUNOFF AND MUST BE DESIGNED IN ACCORDANCE WITH AND TO PERFORM TO THE STANDARDS ESTABLISHED IN CHAPTERS 40C–42.025 AND 40C–42.035, FLORIDA ADMINISTRATIVE CODE.

STORMWATER IMPACT

THE PROPOSED DEVELOPMENT WILL COMPLY WITH CHAPTERS 40C–42.025 AND 40C–42.03 OF THE FLORIDA ADMINISTRATIVE CODE AND ALL OF THE PERMITTING REQUIREMENTS FOR THE SUWANNEE RIVER WATER MANAGEMENT DISTRICT.

PUBLIC SCHOOLS IMPACT

THE PROPOSED DEVELOPMENT IN IN THE FOLLOWING SCHOOL CONCURRENCY AREAS. THE ELEMENTARY SCHOOL IS NW ALACHUA, THE MIDDLE SCHOOL IS MEBANE THE HIGH SCHOOL, AND THE HIGH SCHOOL IS SANTA FE CONCURRENCY AREA. THE PROPOSED DEVELOPMENT SHOWS A GENERATION RATE FOR TOTAL STUDENTS AT 189. THE MULTI–FAMILY DEVELOPMENTS GENERATES MORE STUDENTS OVERALL THAN SINGLE–FAMILY DEVELOPMENTS. THE GREATEST NEED WILL BE AT THE ELEMENTARY SCHOOL LEVEL AND MIDDLE SCHOOL LEVEL AT 42 STUDENTS EACH. THE PUBLIC–SCHOOL GENERATION FORM IS PROVIDED AS ATTACHMENT H.

TABLE 5 – SCHOOL	DENSITY	ELEMENTARY (0.14)	MIDDLE (0.16)	HIGH SCHOOL (0.08)	GRAND TOTAL
SINGLE FAMILY DETACHED	213	30	34	17	81
MULTI–FAMILY	301	42	48	24	108
TOTALS	514	72	82	41	195

PUBLIC FACILITY LOCATIONS AND DISTANCES

PUBLIC FACILITY	LOCATION	DISTANCE

PUBLIC SCHOOL	ALACHUA ELEMENTARY SCHOOL	7.3 MI

DEVELOPMENT STANDARDS

DEVELOPMENT STANDARDS MAY BE MODIFIED IN WAYS CONSISTENT WITH THE GENERAL INTENT AND PURPOSE FOR THE PD–R AND PD–COMM DISTRICTS.
THE APPLICANT IS REQUESTING THE FOLLOWING MODIFICATIONS TO DEVELOPMENT STANDARDS:

1) IN DEVELOPMENT AREA A, B, AND C, THE PARKING CRITERIA SHALL BE ONE SPACE PER 2 BEDROOMS;
2) ENTRANCE SIGNAGE AT ROADWAY ACCESS CONNECTIONS SHALL BE ALLOWED ADJACENT TO THE RIGHTS–OF–WAY. DIRECTIONAL SIGNAGE MAY BE ALLOWED WITHIN THE RIGHT–OF–WAY MEDIANS.
3) RIGHTS–OF–WAY/STREET STANDARDS: GENERALLY, THE GOALS AND OBJECTIVES OF THE SCHMIDT FARMS PD ARE TO PROVIDE A ROADWAY/STREET NETWORK THAT PROMOTES SAFETY AND REDUCED SPEEDS THROUGHOUT THE RESIDENTIAL NEIGHBORHOODS. TRAFFIC CALMING MEASURES SHALL BE PROVIDED AT MID–BLOCKS WHERE STREETS ARE LONGER THAN 1,000 FEET. SUCH MEASURES MAY INCLUDE, BUT NOT BE LIMITED TO, SPEED HUMPS, SPEED CUSHIONS, SPEED TABLES, BULBOUTS, RAISED PEDESTRIAN CROSSINGS, AND CHANGES IN THE SURFACE MATERIAL OR TEXTURE.
   a. MINIMUM ROADWAY PAVEMENT WIDTH EQUALS 24 FEET; MAXIMUM ROADWAY PAVEMENT WIDTH EQUALS 24 FEET (EXCEPT AT ENTRANCES WHERE 36 FEET IS ALLOWABLE) FOR RESIDENTIAL STREETS.
   b. MINIMUM RIGHT–OF–WAY WIDTH EQUALS 50 FEET; MAXIMUM RIGHT–OF–WAY WIDTH EQUALS 60 FEET (EXCEPT AT ENTRANCES WHERE 80 FEET IS ALLOWABLE) FOR RESIDENTIAL STREETS.
   c. STREETS WITHIN PD–COMM SHALL CONFORM TO THE CITY OF ALACHUA LAND DEVELOPMENT REGULATIONS ARTICLE 7.
   d. ALLEYS ARE OPTIONAL IN SINGLE FAMILY RESIDENTIAL DETACHED. MINIMUM ALLEY PAVEMENT WIDTH EQUALS 12 FEET; MINIMUM ALLEY RIGHT–OF–WAY/COMMON AREA WIDTH EQUALS 20 FEET.
   e. MINIMUM STREET CENTERLINE RADIUS EQUALS 50 FEET.
   f. MINIMUM CURB RETURN RADIUS EQUALS 15 FEET (MEASURED AT BACK OF CURB).
   g. SIDEWALKS ARE REQUIRED ON ONE SIDE OF THE STREET WHERE FRONTING RESIDENTIAL LOTS. SIDEWALKS ARE OPTIONAL ON STREET SIDES WITH NO LOT FRONTAGES.
   h. MIAMI CURB IS ALLOWED ON ALL RESIDENTIAL STREETS. TYPE F CURB AND GUTTER IS REQUIRED ON ALL STREETS WITHIN THE NON–RESIDENTIAL DEVELOPMENTS.
   i. SIDEWALKS SHALL BE PLACED A MINIMUM OF 7 FEET OFF BACK OF CURB TO ALLOW FOR STREET TREE PLANTINGS.
   j. MINIMUM SIDEWALK WIDTH EQUALS 5 FEET.
   k. ON STREET PARALLEL PARKING IS ALLOWED ON ALL STREETS WITHIN THE DEVELOPMENT.
   l. THE ROADWAY CROSSING OVER WETLAND AREA E IS REQUIRED TO CONNECT DEVELOPMENT AREA C TO DEVELOPMENT AREA B AND CONNECT NW 43RD STREET TO US 441 THROUGH THE PROJECT.

Introduction and Project Description

Ecosystem Research Corporation (ERC) was retained by DM Alachua Investments LLC **(DMAI)** to perform an Environmental Resource Assessment (ERA) and Listed Species Survey of a Planning Parcel designated for a City of Alachua Land Use Comprehensive Plan Amendment and various Re-zoning Amendments. These administrative and planning activities are being implemented to facilitate future effective development within the Planning Parcel. DMAI currently owns the designated Planning Parcel, which represents the extent of the contiguous lands owned by the LLC in this specific area. **DMAI** proposes to develop the Planning Parcel consistent with the Land Use and Zoning guidelines that are established pursuant to this Land Use and Rezoning Application.

The Planning Parcel lies within the southwest quadrant of the intersection of US 441 and NW 43rd Street (**Figure 1**). The northern perimeter of the Planning Parcel is formed by the US 441 Right-of-Way (ROW) while the east boundary of the Site lies adjacent to the NW 43rd Street ROW. Currently, land uses in the vicinity of the Planning Parcel are described, as follows:

NORTH	ROW–US 441: a high volume local & regional access road
	Gainesville Regional Utilities and City of Gainesville owned Agricultural Zoned Properties
	Silvicultural Land Use
EAST	Commercial Land Use: individual Fuel and Gasoline Supply and Sales
	Convenience Store
	Small-volume Storge Facilities for Individuals and Businesses
	Vacant Land
SOUTH and Southwest	ROW—low volume local access road: NW 93rd Avenue
	Vacant land: Natural Area of Turkey Creek Stream Channel and Floodplain
	South: Low Density Rural single family residential. Southwest: Morgan Manor, Agricultural (Low Density Single Family Residential)
WEST	ROW—low volume local & regional access road: ROW NW 102nd Place
	Moderate Density Single Family Residential Development: Brooke Pointe Subdivision
	Natural Drainage Feature: Brooke Pointe Creek
	Small scale commercial development: Angel Gardens
	Vacant lands

The Planning Parcel consists of five (5) Alachua County tax parcels defined as follows (**Figure 2**):

Parcel No. 05945-000-000	17.78
Parcel No. 05936-001-000	88.14
Parcel No. 05936-007-000	14.13
Parcel No. 05936-007-001	1.00
Parcel No. 05936-007-002	0.51
Total Acreage	**121.56**

The total acreage of the Tax Parcels as indicated within the Alachua County Property Appraiser's website equals **121.56** acres. The total acreage of the five (5) Tax Parcels as determined by the Site-Specific Professional Survey equals **121.09** acres. For the purposes of this report presentation and all data calculations contained in this assessment, the surveyed acreage of **121.09** acres is used and is provided on all report maps.

The five (5) Tax Parcels represent the "Planning Parcel," which is the concept for the area of environmental resource studies used by the City of Gainesville and Alachua County. In the Gainesville Code, "Planning Parcel" is defined within ***Chapter 30: City of Gainesville Land Development Code – Section 30-2.1. Definitions (Planning Parcel), as follows:***

> Planning parcel means a land area within city limits made up of the parcel on which development or alteration is proposed and all contiguous parcels within city limits under common ownership or control as of the date of application submittal. Common ownership or control means the contiguous parcels that are owned by the owner/applicant or by entities owned or controlled by the owner/applicant.

"Planning Parcel" is also the concept study area used by Alachua County for the basis of study for determination of the occurrence of Regulated Natural Resources as defined within ***Chapter 406. Natural and Historic Resources Protection*** of the Unified Land Development Code (ULDC). The "Planning Parcel" as described within the County Code is defined in ***Chapter 410. Definitions as*** follows,

> Planning parcel: The parcels included within the entire contiguous land area under common ownership or control as of May 2, 2005, even if the project proposal or application includes only a portion of such lands.

"Planning Parcel" represents the "Project Site or Project Area" where all activities described in this report, to include Land Use and Zoning Amendments as well as development activities, are proposed. The "Planning Parcel" in both the Gainesville and Alachua County Codes may be further defined as the Resource Assessment Area (RAA),

which is the total area encompassed by the ground verification process that is used in the site review. The City of Alachua Comprehensive Plan does not define a comparable concept to the "Planning Parcel" for Environmental Resource Assessments. Neither does the Comp Plan describe a detailed Comprehensive Environmental Resource Assessment Methodology to be used for preparation of Land Use, Re-zoning, or Development Applications within the City limits. Therefore, the Environmental Checklist Methodology described by Alachua Conty and the City of Gainesville was used as a template for this Resource Assessment.

In addition to the requirements for environmental review defined in the City of Alachua Comp Plan, the Gainesville Land Development Code, and the Alachua County Unified Land Development Code, Alachua County has recently adopted two (2) Natural Resource Protection Codes that apply to Land Use, Re-Zoning, and Development Applications submitted within Municipalities (i.e., Cities of Gainesville, Alachua, Newberry, Hawthorn, and others). These Codes provide for County Staff review of all Proposed Projects at the discretion of County Staff and provide for County protection of existing Regulated Natural Resources that are affected by the proposed activity. These codes are listed and described, as follows:

Chapter 77. Alachua County Water Quality and Management Practices Code that was recently *amended* (23 January 2018) with ***"Article II–Countywide Wetland Protection Code."***

> This code provides for protections of all floodplains, surface waters, and wetlands and other resources that occur within the municipal limits of Towns and Cities within Alachua County. It provides most of the protections that are described within ***Chapter 406. Natural and Historic Resources Protection (ULDC***) for the municipal areas within the county.

Chapter 78. Countywide Natural Resources Protection Code

> This is an Upland Protection Code that provides resource protections for upland habitat areas within County Municipal Areas and is similar to the protection standards defined in ***Chapter 406. Natural and Historic Resources Protection (ULDC)***

Currently, the majority of the Planning Parcel for the proposed Project Site is undeveloped except for minimal constructed buildings associated with a single-family residence and multiple small agriculture related buildings that have historically been used for dairy, pasture, and silvicultural operations. Parcels **05936-007-001** and **05936-007-002** have historic structures that were associated with small commercial enterprises used on these parcels in the past to include Angel Gardens, a Bike Shop, and a restaurant to name a few.

History of Land Use and Zoning Amendments for the "Planning Parcel"

The Planning Parcel in the past has been the subject of several proposed Land Use and Zoning Amendments. In 2007–2008, Mesa-Sand Realty LLC (Indianapolis, Indiana) retained Ecosystem Research Corporation to provide an Environmental Resource Assessment and Listed Species Survey in support of a Large-Scale Comprehensive Plan Amendment for the Project Site. In addition, they applied for Site-Specific Amendments to the Official Zoning Atlas. The Large-Scale Comprehensive Plan Amendment (CPA) proposed creating a Mixed-Use Development on a ±131.6-acre Planning Parcel. The site at that time carried a Future Land Use designation of Agriculture (Ag) and Commercial (COM). The proposal involved amending the Future Land Use Map classification from Agriculture and Commercial to Commercial, Conservation, and Moderate Density Residential. As part of the application, certain Site-Specific Amendments to the Official Zoning Atlas were also requested. The Application was reviewed by the City and **Ordinance 09 12** describing the Land Use Amendment was prepared, and a Public Notice was issued 26 January 2009. The application was withdrawn prior to final approval. The Public Notice is provided as **Attachment 1** to this ERA.

As part of this application, the City as well as the applicants' consultants evaluated the effects that a Conceptual Development Plan instituting the policies of the Comp Plan and Zoning amendments would have on the adjacent communities as well as the onsite Regulated Natural Resources. At that time, proposed construction on the site would remove **0.882 acres** of very disturbed man-made Surface Water habitat. To evaluate if the proposed plan were permittable and the mitigation for the proposed surface water impacts were acceptable, a Conceptual Environmental Resource Permit Application was submitted to the Suwannee River Water Management District (SRWMD) for approval of the proposed impacts that would occur, and mitigation activities proposed to offset the impacts. **Conceptual ERP08-0278** was issued to Mesa-Sand Realty LLC on 13 January 2009. The Permit expired 13 January 2014, but it did establish that the requested impacts were minimal, and the Mitigation was consistent with the Requirements of ***Chapter 62-345. F.A.C. Uniform Mitigation Assessment Method.*** The Conceptual ERP also provides at least a guideline for all reviewing municipalities with reference to Surface Water Impacts in case there is disagreement among the City, County, and District about what is determined to be acceptable surface water impacts and subsequent acceptable mitigation to offset impacts for this Project. ***Chapter 373.414. Florida Statutes. Additional Criteria for Activities in Surface Waters and Wetlands,*** which is the legislation that mandates the creation of the Uniform Mitigation Assessment Method, establishes in ***Section 414(1)(b)(4)*** that if mitigation for impacts required by a Municipal interest cannot be reconciled with mitigation established by an ERP, then the criteria defined in the ERP takes precedent.

For the current proposed activity, impacts to impaired Surface Waters will occur consistent with those defined in the **ERP08-0278** previously issued and the previous

Comp Plan Amendment proposed by Mesa-Sand Realty. Therefore, the impacts and mitigation proposed to offset those impacts were totally consistent with all State criteria. In addition, within the City Staff report they state that the proposed impacts and mitigation were consistent with the Comprehensive Plan requirements for Wetland and Surface Water protections. The ERP and District Staff report are included as **Attachment 2** to this document. The City of Alachua Staff report submitted 16 December 2008 is provided as **Attachment 3.**

As part of the Comp Plan Amendment submittal in 2008, ERC prepared a comprehensive ERA Report that was submitted to the City and reviewed by City of Alachua staff and staff from the SRWMD. The ERA Report entitled "*Environmental Resource Assessment: Large-Scale Comprehensive Plan Amendment, The Market at Schmidt Farms, City of Alachua, Alachua County Florida (Date: 7 July 2008)* is provided as **Attachment 4.** Also, as part of the submittal documents, a Mitigation Plan document was also prepared and submitted to the City and District. The document is entitled *"Conceptual Environmental Resource Permit Application: Description of the Uniform Mitigation Assessment (UMAM) to Assess Wetland Impacts Associated with the Conceptual Development Plan for the Market at Schmidt Farms, City of Alachua, Florida (Date: 3 August 2008)* and is provided as **Attachment 5**.

On 29 August 2019, JMJ Consulting Engineering LLC representing **DMAI** applied to the City of Alachua for Land Use and Rezoning amendments for the "Planning Parcel." The Project was named "121 Traditional Neighborhood Development" and two (2) actions were requested from the City, as follows:

1. *Large-Scale Comprehensive Plan Amendment (LSCPA)*

   This amendment proposed amending the Future Land Use Designations from Agriculture and Commercial to Moderate Density Residential.

2. *Site-Specific Amendment to the Official Zoning Atlas (Rezoning)*

   The rezoning application proposed rezoning from Agriculture (A) and Commercial Intensive (CI) to Planned Development–Traditional Neighborhood Development (PD-TND)

A copy of the completeness summary issued 5 September 2019 by the City of Alachua for the proposed activity is provided as **Attachment 6.**

On 25 August 2021, JBPro applied to the City of Alachua on behalf of **DMAI** for Land Use and Rezoning amendments for the Planning Parcel. The Project is named "Schmidt Farms Planned Development" and the application requests two (2) actions from the City, as follows:

1. *Large-Scale Comprehensive Plan Amendment (LSCPA)*

   This amendment proposes to change the existing land use from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial and Conservation.

2. *Site-Specific Amendments to the Official Zoning Atlas (Rezoning)*

   This amendment proposes to rezone the site from Agriculture (A) and Commercial Intensive (CI) to Planned Development-Residential (PD-R) and Planned Development-Commercial (PD-COMM).

A copy of the Completeness Summary issued 30 September 2021 is provided as **Attachment 7.**

Environmental Resource Assessment Methodology

Field Survey

Field surveys of the Planning Parcel were performed 4–6 November 2019, 22–23 November 2019, 23 November 2020, and 4 October 2021 to determine the general ecological condition of the area and determine if any listed plant or animal species or other environmental constraints were present within the boundaries of the Planning Parcel or immediately adjacent habitat areas. Surveys were performed by Peter M. Wallace, MS (Certified Gopher Tortoise Agent #GTA-14-00037A), and Robert A. Garren, MS (Certified Gopher Tortoise Agent #GTA-09-00057E), of ERC. Surveys were performed by repeatedly traversing the site with a series of pedestrian transects. Observations regarding plant species composition were recorded at **2,721** locations within the Project Site and adjacent areas. At each location, plant species, plant habitat type, observations of animal occurrences, and GPS position coordinates were recorded with a hand-held Garmin GPSmap 76CSx unit. Photographs were taken to document the general plant communities, land uses, and historical activities within the Project Site as determined during the survey. Photographs that show the general physical appearance of the Project Site are contained within **Appendix A**.

Data Search

To complement the data obtained from the field surveys, published GIS databases were queried to obtain site-specific information for the Project Site and surrounding areas. These databases include:

1. USGS Gainesville West Quadrangle Map
2. Geologic Regions of Florida
3. Physiographic Divisions of Florida
4. Surficial Geologic Formations of Florida
5. Alachua County 2001 LiDAR Topography (NAVD 88)
6. USGS Closed Topographic Depressions Database

7. Natural Resource Conservation Service (NRCS) Soils
8. NRCS Soils Feature Point Database
9. Federal Emergency Management Agency (FEMA)
10. National Wetland Inventory (NWI) Database and Alachua County Composite Wetlands Database
11. Alachua County Aquifer Recharge Areas
12. Floridan Aquifer Drastic Vulnerability Areas within Alachua County
13. Alachua County Sinkholes and Stream-to-Sink GIS Coverage
14. Hydrologic Basins of Alachua County
15. Level IV Ecoregions of Florida
16. Florida Department of Environmental Protection Statewide Florida Land Use, Cover and Forms Classification Systems (FLUCCS)
17. Florida Game Commission Cooperative Florida Land Cover Classification System
18. Alachua County Strategic Ecosystems Overlay
19. Alachua County Conservation Lands and Parks and Recreation Areas
20. Alachua County Historical Structures Database
21. Alachua County Hazardous Materials Monitoring Database
22. Alachua County Well/Wellfield Protection Areas
23. Florida Fish and Wildlife Conservation Commission (FWC) Eagle Nest Locator
24. FWC Water Bird and Wading Bird Rookery and Nest Sites Locator
25. United States Fish & Wildlife Service (FWS) Federally Listed Species Database
26. FWS Wood Stork Regulated Buffers Database
27. FWS Red-cockaded Woodpecker Consultation Area and Observation Locations Database
28. FWS Scrub-Jay Consultation Area, Habitat, and Observation Locations Database
29. FWC 2016 Florida Black Bear Forage Range and Habitat Database and Bear Nuisance Report records
30. Florida Natural Areas Inventory (FNAI) Element Occurrence Database
31. Alachua County Champion Trees
32. State of Florida Biodiversity Hot-Spots

The field assessment and data review assessment performed for the Planning Parcel addresses the specific requirements of the Alachua County and City of Gainesville Comprehensive Plan and Unified Land Development Regulations and Alachua County's ***Article II Countywide Wetlands Protection Code*** defined within ***Chapter 77 Water Quality Standards and Management Practices*** of the Alachua County Land Development Code. In addition, the assessment addressed the Environmental Resource Protection requirements outlined within the City of Alachua ***Conservation and Open***

Space Element Specifically ***Objective 1.10: Wetlands*** and ***Objective 1.12: Water Resources.*** As part of this survey, the entire limits of the Planning Parcel were evaluated. For the ERA described, the total Project Area as described on Figure 2 represents the entire holdings proposed for evaluation by the Applicant. Therefore, the Planning Parcel represents the Resource Assessment Area (RAA).

In addition to the GIS databases evaluated above, several site-specific Professional Land Surveys and Geotechnical Investigations were performed in support of future development activities proposed for the Planning Parcel. These technical reports were reviewed by ERC for evaluation of Regulated Natural Resources that are described by each investigation. The references for these reports are as follows:

1. A Boundary Survey of the Schmidt Farms Property dated 27 March 2018, Prepared by Lochrane Engineering, Inc., 3008 NW 13th Street, Suite B, Gainesville, Florida 32609.
2. Summary Report of a Geotechnical Site Exploration: Proposed 121-Acre TND Stormwater, City of Alachua, Alachua County, Florida. GSE Project No. 13967, Certificate of Authorization No. 27430, May 2019.

Results of Data Review

Published Geographic, Hydrologic, Ecological, and Historical Data Review

USGS Gainesville West Quadrangle Map–Site Topography and Site-Specific Drainage

The Planning Parcel lies within the geographic area defined by the USGS Gainesville West Quadrangle map (**Figure 3**). The Planning Parcel lies along the north boundary of the Arredondo Grant within Fractional Sections 2 and 3, Township 9 South, and Range 19 East and within Sections 34 and 35, Township 8 South, Range 19 East. As shown on the Quad Map the Planning Parcel is a rural residential farm site located in a relatively sparsely populated area along US 441 southeast of Hague.

The site is located within the Turkey Creek Drainage Basin. There are three (3) flowing water creeks that lie within or form the perimeter of the Planning Parcel **(Figure 4).** Turkey Creek forms the south and southwest perimeter of the Site. An un-named tributary to Turkey Creek that originates on the GRU-Deerhaven Property located north of the Site across US 441 forms the northwest boundary of the Planning Parcel. This creek also forms a partial boundary of the Brooke Pointe Subdivision; therefore, for the purposes of this assessment, this creek is referred to as Brooke Pointe Creek. There are several headwater areas of Turkey Creek that originate on the City of Gainesville Deerhaven property that flow into Brooke Pointe Creek. From the Deerhaven site, the

main branch of Turkey Creek originates east of the Planning Parcel, is culverted under US 441, then traverses west under NW 43rd Street via two large circular culverts (see **Photo 1** in Attachment 4) that route water along the southern boundary of the Schmidt Farms property. Turkey Creek forms the south and southwest boundary of the property and extends from NW 43rd Street northwest to the intersection of Brooke Pointe Creek that runs southwest along the east boundary of the Brooke Pointe Development. This creek drainage originates in multiple large wetland areas north of US 441 on the City of Gainesville Deerhaven property, crosses under NW 102nd Place (**Photo 2** in Attachment 4), then runs southwest to the confluence with Turkey Creek at the southwest corner of the Schmidt Farms property. A third creek located within the Planning Parcel boundaries also drains water from the City of Gainesville Deerhaven property through a culvert located under US 441 just west of the terminus of NW 43rd Street (**Photo 3** in Attachment 4) at US 441. For the purposes of this report, this creek is referred to as Schmidt Creek. The creek extends through a Mixed Hardwood Swamp (**Photo 4** in Attachment 4) that also receives substantial subsurface seepage from the adjacent uplands. The Mixed Hardwood Swamp narrows abruptly where a small agricultural road crossing occurs (**Photos 5** and **6**, Attachment 4), which was built prior to 1937. This road is proposed for widening to allow development to take place on the property and access lands east of Schmidt Creek. From this point, the creek width becomes substantially narrower (**Photo 7**, Attachment 4) and slopes to the adjacent upland are abrupt. The drainage ultimately flows into Turkey Creek at the southwestern corner of Parcel 05936-001-001 (Figure 2).

A unique mosaic of intermittent seepage and depression Surface Waters and Wetlands forms a diffuse drainage system in the western third of the Project Site. This system is described as an Isolated Seepage/Drainage as shown on Figure 4. This drainage system has the same general northeast to southwest orientation as both Schmidt Creek and Brooke Pointe Creek. Groundwater seeps to the surface at the north end of this system and flows southwest through a small, intermittent, and partially excavated stream drainage (**Photo 8**, Attachment 4) to a series of small depressional Surface Waters that are probably relic sinkholes where water flows back into the ground. Based on **Rule 62-340 FAC. Delineation of the Landward Extent of Wetlands and Surface Waters,** in 2008 some of the depressions within this system were determined to be Uplands while others were determined to be Wetlands or intermittent Surface Waters. The Wetlands are in the north extent of the system, which have dense clay soils and where muck accumulates. The Surface Water areas are in the south half of the system closer to Turkey Creek. In this area the depressions are relic sand-filled depressions that flood intermittently during periods of extreme rainfall. During periods of excessive rainfall causing floods, this system may provide Surface Water discharge directly to Turkey Creek. In 2007–2008 all these areas were extremely dry, and vegetation consisted of pasture grasses, pasture herbs, shrubs, and briers. Extensive flooding in the area occurred following Hurricane Irma in 2017, which caused Surface Waters to flood several feet above the ground surface. Extensive rains in 2021 have resulted in more recent

intermittent flooding of the southern depressions. Following these extensive rainfall periods, these areas dry down quickly and substantially.

There is a small, excavated drainage ditch that routes water to Turkey Creek from an excavated agricultural pond located west of the Schmidt residence (Figure 4). The pond area has been variously disturbed and excavated since 1937 however a final major excavation occurred circa 1979. The drainage ditch is excavated for most of the distance extending from the pond to Turkey Creek. The general appearance of this drainage is shown in **Photo 9** (Attachment 4). All Wetland and Surface Water areas on the Planning Parcel have historically received substantial direct impacts from cattle use. Cattle grazing has resulted in removal of native vegetation, intense invasion by exotic species, and disturbance of the ground surface to a point that no naturally occurring native vegetation groundcover currently exists. All Surface Waters within depressions as well as the creeks have historically and are presently contaminated with cattle wastes such that waters are eutrophic and filled with algae and floating aquatic plants characteristic of contaminated waters.

The USGS Quad Map (Figure 3) shows the Planning Parcel lies in a prominent Geographic Valley ranging in elevation from 174 ft (NGVD 29) at the northeast boundary of the site adjacent to US 441 to approximately 142 ft at the southwest corner of the Site at the confluence of Turkey Creek and Brooke Pointe Creek. The “Creek Valley” lies between two very prominent, large, elevated landscape ridges or plateaus that are broad and generally flat and extend to elevations of 190 ft to the north and 195 ft to the south. These are among some of the higher elevations in the County and create several large headwater creek systems associated with Turkey Creek, Cellon Creek, Rocky Creek, and Blues Creek. The slope on the south side of Turkey Creek is much dryer and steeper than the creek slope that extends north from the creek onto the Planning Parcel. The ridge tops are associated with the Hawthorn Formation, which would extend from 150 ft in elevation and above, while the Cody Escarpment, which is evident on the topo, extends from 150 ft and below.

The Cody Escarpment is the western erosional face of the Hawthorn Formation that extends from 150 ft downslope to below 100 ft and represents the boundary of the Wicomico Terrace or shoreline that existed in Florida from 1.8 million years ago to 11,800 years ago. The Turkey Creek Valley and neighboring prominent ridge tops are more easily observed on the 2001 Alachua County LiDAR Topography provided on **Figure 5.** On this coverage the lower elevation areas at the confluence of Brooke Pointe Creek and Turkey Creek are easily seen as well as the 32-ft elevation range that occurs within the boundaries of the Planning Parcel. The LiDAR topo datum is represented by NAVD 88 as compared to the NGVD 29 vertical datum shown on the USGS coverage.

To supplement the data provided on the USGS quad map, the USGS Closed Depression Database is provided on **Figure 6.** This database shows the general location of closed-contour drainage depressions in and around the Project Site based on the USGS

topographic data. The closed depressions on this map are generally represented by small, isolated Wetland drainages; however, most Wetlands in this area are associated with the numerous headwater creek systems that typically flow downhill to lower elevations within well-defined channels. The occurrence of closed depressions within the landscape increases substantially westward of the Planning Parcl represented by the eroded areas of the Hawthorn Formation and development of relic and active sinkholes or landscape depressions. In this area underlying clay may be continuous, which results in persistent Surface Waters, or clays may be perforated, which results in direct recharge to the underlying Ocala Limestone.

Surface Water and Groundwater Drainage Basins and Potentiometric Groundwater Contours

The Planning Parcel shown in relation to the delineated drainage basins within Alachua County is shown on **Figure 7**. The Planning Parcel lies within the Sanchez Prairie Drainage Basin, which includes the Turkey Creek and Blues Creek systems. Both these creeks disappear into a large sinkhole within Sanchez Prairie. There are many sub-basins of Turkey Creek that flow into Brooke Pointe Creek, Schmidt Creek, and Turkey Creek on the Planning Parcel. A large amount of this drainage comes into the creeks from North of US 441. Based on previous work performed by ERC in the drainage basins within and surrounding the Project Site, a basin map was constructed for the GRU property and is provided for review with respect to this Project Site **(Figure 8)**. As shown on Figure 8, there are more than 20 sub-basins north of US 441 that contribute flow to the creeks on the Planning Parcel. Sub-basin **TC-4D** is the sub-basin that directly discharges to Brooke Pointe Creek. Sub-basin **TC-3** discharges to Schmidt Creek. Multiple sub-basins discharge into Turkey Creek prior to its entrance to the Site at NW 43rd Street. Sub-basins **TC-1** and **TC-2** discharge into Turkey Creek under US 441 from the GRU property east of the Site. Farther east, sub-basins **TC-1A**, **TC-8**, **TC-8A**, and **TC-9** through **14** direct waters to Turkey Creek west from the drainage divide adjacent to the Rocky Creek Drainage Basin. This is a substantial drainage basin that provides water to the Planning Parcel, and compared to the onsite drainage area, represents substantially more flow that would affect adjacent neighborhoods than would be expected as run-off from the Project Site.

The potentiometric contours of the surface of the Floridan aquifer as determined in a 2010 hydrologic study are shown as schematic on **Figure 9** and on a 2017 aerial photograph on **Figure 10**. This study shows the elevations of the Floridan in the vicinity of the site to be at approximately the 40-ft contour interval, or 102 ft below the lowest contour of 142 ft found on the Planning Parcel. A hydrologic study conducted in 1980 showed the Floridan aquifer surface at 45 ft (**Figure 11**) in the area of the Planning Parcel. Both contour maps show a substantial depression in the aquifer level of below 40 ft that occurs at the Murphree Wellfield east of the site. The Tertiary Wellfield Protective Buffer shown on **Figure 12** is at least **4.0** miles east of the Planning Parcel. The groundwater contours shown on the springshed map on **Figure 13** show the Planning

Parcel is located within the Hornsby-Treehouse Springshed near the boundary of the Wellfield Capture Zone. On this figure, the Planning Parcel is shown in relation to the County Springshed and Wellfield Protective Zone and Recapture Area. The contours, at least suggest, that Floridan flows in the vicinity of the Planning Parcel may flow to the east to the Capture Zone or northwest into the Hornsby-Treehouse Springshed (Figure 13). Please note that these data are not provided to suggest any avenue of unconfined aquifer flows but are provided to summarize the general data available in the County. The small commercial wells that are monitored in the County are shown on **Figure 14**. There are several wells located northwest of the Planning Parcel along US 441 that have associated protective buffers.

Geographic Setting of the Planning Parcel

Geologically, the eastern quarter of Alachua County is covered with variable surface deposits of undifferentiated Pleistocene sediments that reflect the geologic time-period and ancient sea level terraces (**Figure 15**) when they were deposited. In the vicinity of the Planning Parcel, the Coosahatchee Formation typically occurs at elevations extending higher than 100 ft and overlies the Hawthorn Formation. This layer is of Miocene origin and consists of unconsolidated clayey and phosphatic sands. The underlying Hawthorn Formation is composed of dense variously layered silts and clays. The western boundary of the Coosahatchee Formation (Figure15) more or less corresponds to the western base of slope of the Cody Scarp. The Cody Scarp is the most prominent geological erosional feature in Florida. The Scarp corresponds to the westward facing erosional slope of the Hawthorn Formation that was eroded during the sea level rise of the Wicomico Shoreline that existed from 1.8 million years ago to 11,800 years ago.

On Figure15, the surficial geology of the area of Alachua County occurring west of the Planning Parcel is shown as Ocala Limestone. In these geological areas, the Crystal River Formation of the Ocala Limestone Group of Eocene origin is overlain by a thin veneer of undifferentiated Pliocene and Pleistocene sandy sediments. In Alachua County, this geologic area typically extends westward from elevations of ±100 ft to elevations of 60 ft or below. The overburden covering the limestone layer typically extends from elevations of 50 ft to the surface, is highly variable and can consist of coarse sands as well as having discontinuous layers of dense clays that are remnants of the eroded Hawthorn Formation or can be clastic clays from the Pleistocene Period. In many areas, dense clay and limerock pinnacles extend upward from the limerock base of 50 ft to the surface. These dense clays are remnants of the Hawthorn Formation that historically extended westward across the entire County prior to the Pleistocene Sea level rise. The elevation of the Planning Parcel of 142–175 ft (Figures 3 and 5) indicates that the Site occurs within the upper boundary of the Cody Scarp.

Geologically and topographically, Florida is divided into several physiographic subdivisions to delineate the natural ecological surface features that occur in response to the underlying geology. Alachua County is divided into several well-defined

Physiographic Sections, Districts, and Subdivisions (based on H. K. Brooks, 1981[1]) as shown on **Figures 16** and **17**. In this coverage, the Planning Parcel lies along the boundary of the San Felasco Hammock Subdivision, which is the westward facing erosional boundary of the Cody Scarp and the Northern Highlands Plateau. The San Felasco Hammock Subdivision typically extends from elevations ranging from 100 ft to an estimated 150 ft. The Northern Highlands Plateau occurs at elevations exceeding 150 ft. The Project Site as shown on Figure 17 lies along the boundary of the Sea Island District and the Ocala Uplift District. The Sea Island District extends through North Florida into coastal Georgia and South Carolina. The Ocala Uplift District extends west and southwest to the Gulf of Mexico. Historically the Area of the Planning Parcel lies along a very historically active geologic interface.

Historically, Williams et al. (1977) divided Alachua County into physiographic zones or provinces to define geologic development (**Figure 18**). Within this classification, the western boundary of the Northern Highlands is defined as the Northern Highlands Marginal Zone. The zone represents the western facing slope of the Cody Scarp. Within this coverage, the Planning Parcel is located on the Cody Scarp on the boundary of the Marginal Zone and Northern Highlands. Brooks (1981) somewhat redefined the boundaries of those presented by Williams et al. (1977) and appears to have moved the base of the Cody Scarp farther to the north. The onsite elevation of 142–174 ft and presence of streams in the area indicates that the Hawthorn Formation exists within the Planning Parcel. West of the site is designated as the Western Valley Province (Figure18), which corresponds to the Haile Limestone Plain Subdivision (Figure 16). The existing vegetation on the site is typically dominated by species associations that inhabit dense clay soils characteristic of the Marginal Zone slopes and **NOT** vegetation characteristic of deeper sands of the Western Valley Formation.

The elevation profiles that represent west to east cross-sections through the County as provided by Williams et al. (1977)[2] are shown on **Figure 19**. These show the significant elevation changes that occur along the Cody Scarp represented by the Northern Highlands Marginal Zone that separates the Northern Highlands to the east and the Western Valley lying to the west. The Cross County Fracture Zone located within the Marginal Zone travels northwest to southeast through the entire County (**Figure 20)**. The Planning Parcel lies along the eastern boundary of the fracture zone. In this area, large stream-to-sink systems occur, which are further defined on **Figure 21.** These stream-to-sink systems include Turkey Creek, Blues Creek, Cellon Creek, and Mill Creek, all of which occur in the area of the Planning Parcel. There are small depressions on the Planning Parcel specifically within the western Isolated Seepage/Drainage System defined on Figure 4 that function as small surficial stream-to-sink areas but is not comparable in size to the systems mentioned above, which all flow into the ground

[1] Brooks, H. K. 1981. *Physiographic subdivisions of Florida.* Map. IFAS, University of Florida.
[2] Williams, Kenneth E., David Nicol, and Anthony F. Randazzo. 1977. *Report of Investigation No. 85, The Geology of the Western Part of Alachua County, Florida.* Bureau of Geology. Florida Department of Natural Resources, Tallahassee.

farther west of the Project Site. The onsite system is most likely a series of shallow sinks that route surface and subsurface flows into the ground then toward Turkey Creek along the top of the dense subsurface clays. These areas probably do not route water into limestone of the Floridan aquifer. The headwater areas of the major stream-to-sink systems originate within the Northern Highlands and flow west into the fracture zone represented by the Northern Highlands Marginal Zone and the Cody Scarp then into the large sinkhole areas. No streams in Alachua County flow across the fracture zone and into the Western Valley; they disappear into the ground first.

High Aquifer Recharge Areas

The Planning Parcel shown in relation to the confinement and recharge areas of the Floridan aquifer is provided on **Figure 22**. A shown, the Planning Parcel occurs along the boundary of the confined and perforated zones. Within the confined zone, varying layers of clayey surface sands and dense subsurface Hawthorn clays overlay the Floridan and surficial aquifers. For sites underlain by these dense clays, downward percolation of Surface Waters to underlying aquifer layers is retarded or prevented. Typically, waters falling on the surface in these areas flow downhill to wetlands or flowing Surface Waters and are transported down hill to larger bodies of water before vertical movement in subsurface aquifer systems occurs. In this situation, the Floridan aquifer is generally protected from direct inflows of contaminated Surface Waters. Within the Perforated Zone, subsurface clays are discontinuous with large depressions often filled with permeable sand or intermittent layers of clay. In this situation typically recharge of the aquifer can occur but downward percolation rates are often slow.

The general area of the Project Site is shown to be in a High Aquifer Recharge Area of greater than 12 inches per year (Figure 22). However, these results are somewhat misleading in that the entire Planning Parcel and surrounding area has substantial coverage of surficial clays, and in these areas, water tends to run off and not percolate. The presence of dense subsurface clay suggests that rainwaters falling on a site enter the ground and travel laterally across the top of the underlying subsurface clays to down hill low lying, depressional, or excavated drainage systems and do not generally result in vertical flow to the Floridan in the immediate area of the Planning Parcel.

Within the unconfined area of the Floridan aquifer where Pleio–Pleistocene sands overlay the Ocala Limestone group, Hawthorn erosional clays are present, but clay coverage is discontinuous allowing some flows through sand to occur directly to the aquifer. Within the perforated zone shown on Figure 22, the clay layers associated within the dense Hawthorn clay formation are perforated and layered; however, pinnacles of limerock and clay can reach the surface. In those areas, sinkholes quite often form, and surface water steadily flows directly to the Floridan aquifer. The perforated zone that is, in part, associated with the western sloping face of the Hawthorn Formation (Cody Scarp) gives rise to several large stream-to-sink systems such as the Santa Fe River, Hogtown Creek, Mill Creek, and Turkey Creek, which receives drainage from the Project Site. Due to the general absence of continuous clay within the unconfined area (Western Valley Region),

characteristic streams do not form but sinkholes are numerous. In these areas, drastic vulnerability to detrimental surface inflows or runoff, precipitation, and other direct inflows to the underlying aquifers occur.

On the Project Site, the Site-Specific Geotech investigation showed that in areas where borings were performed that dense clays were present throughout the boring profile and these clays generally began within 2 ft of the ground surface. The close-up view of the Aquifer Zones for the Project Site is shown on **Figure 23** with the delineated onsite Wetlands and Surface Waters overlain on the aquifer protection zone coverage. This coverage generally shows that the perforated zone occupies the lower one-third of the site extending from the confluence of Schmidt Creek to along Turkey Creek to Brooke Pointe Creek (see Figure 4). In the central to west-central area of the Site there are two isolated seepage areas shown as Seepage Areas 1 and 2 (Figure 4). The schematic of the perforated zone boundary shown on Figure 23 more or less encompasses the bottom third of Seepage Area 1 and most of Seepage Area 2. Both Seepage Areas flow only during extreme rain events, but they flow north (wet) to south (dry) (Area 1) and east (wet) to west (dry) (Area 2). Water flows into the ground in the south end of Area 1 and in the west end of Area 2. Where water disappears into the ground, the habitat is much dryer than the upstream habitats. Flow in both systems originates on the designated confined layer and terminates into the ground within the designated perforated area. How accurate these graphical representations are can certainly be questioned; however, the graphic does correlate well with the hydrologic condition that has been observed on the ground.

The drastic vulnerability areas of the surficial and Floridan aquifers are shown on **Figure 24**. The Project Site is shown along the boundary where thick clastic marine sediments occur at the surface east of the site while the areas west of the site have Karst Limestone at or near the surface. A close-up view is provided as **Figure 25**, which shows a unique situation in the Site where limerock occurs near the surface within the Surficial Aquifer system. The Geotech borings did not reveal any rock present within the depth of the borings but limerock could be present and exposed within Turkey Creek, Brooke Pointe Creek, and Schmidt Creek. What is apparent on this site is that rainwaters that fall on the site generally run across the land surface to the creeks or filter into the ground and create shallow subsurface flows into the seepage depressions. Within the seepage areas there are very shallow relic sinks (as previously described) that have either dense clay at the surface or are sand filled with varying depths of surface sands. In the clay-filled depressions, water is retained at the surface for extended periods, but percolation does occur. In the sandy depressions, water percolates into the ground rapidly. In both depression types it is unlikely that Surface Waters flow into the Floridan in the vicinity of the Project Site. It is more likely that where waters flow into the ground, lateral subsurface flows occur along the top of the densest clays until water is directed to one of the perimeter Creeks. From the creeks, water flows to Sanchez Prairie where Floridan aquifer recharge occurs. A generalized schematic showing the general recharge conditions within the unconfined, perforated, and confined areas of the County and on the Project Site are shown on **Figure 26**. The locations of large known sinkholes and stream-

to-sink systems in the region are shown on Figure 21, but this coverage does **NOT** by any means include all the features in the area.

NRCS Soils Mapping

There are seven (7) soil mapping units shown to occur on the Project site (**Figure 27; Table 1**). The Pomona sand (14), Pelham sand (13), and Mulat sand (23) are typical soils of the flatwoods with Pomona sand having a spodic horizon occurring between 16 inches and 24 inches below the soil surface. The Floridana sand (22) is a depressional mapping unit while Kanapaha (7) and Millhopper (8) sands are soils of gently rolling uplands that are typically colonized by a host of mesic to xeric hardwood species. All soils have a clay confining layer occurring within the top 58 inches of the soil profile. All soils in the undrained condition have an expected seasonal high-water table that is within 24 inches of the soil surface if only for a brief period. The Millhopper sand is the only moderately well-drained soil while the Floridana sand, depressional, is classified as very poorly drained. The remaining mapping units are considered as poorly drained. The Floridana sand, depressional, is the only mapped unit considered to be a hydric soil.

Table 1. Drainage Characteristics of the Soils Mapped Within and Adjacent to the Project Site

Map Unit	Mapping Unit Name	Drainage Class	Hydric	Spodic Horizon	Clay Horizon	General Plant Community Type
7	Kanapaha sand, 0 to 5 percent slopes	Poorly drained	No	—	44–80"	Gentle Upland Slopes
8	Millhopper sand, 0 to 5 percent slopes	Moderately well drained	No	—	58–89"	Gently Rolling Uplands
13	Pelham sand	Poorly drained	No	—-	29– 80"	Broad Flatwoods
14	Pomona sand	Poorly drained	No	16–24"	43–84"	Broad Flatwoods
22	Floridana sand, depressional	Very poorly drained	Yes	—	30–74"	Depressional Areas
23	Mulat sand	Poorly drained	No	—	26–80"	Broad Flatwoods
99	Water	N/A	Unranked	—	—	N/A

The NRCS Feature Point Database is provided on **Figure 28**. The mapped coverage shows the location of many designated wet areas in the figure view as well as numerous sinkholes west and south of the Planning Parcel oriented in a northwest to southeast direction.

FEMA Coverage

The FEMA coverage (dated: October 2020) for the Planning Parcel and surrounding area is shown on **Figure 29.** The mapped coverage shows that the locally occurring FEMA areas designated as Zones “A” and “AE” overlay the areas of the onsite creek drainages. The present FEMA floodplain map is substantially reduced in coverage area of the site as compared to the 2004 FEMA database that was provided within the 2008 ERA (Attachment 4, Figure 11).

National Wetlands Inventory (NWI) and Alachua County Composite Wetlands Database

The NWI and Alachua County Composite Wetlands Database coverages are provided on **Figure 30**. Both coverages shown currently underestimate the existing extent of the onsite depressions and drainages on the Planning Parcel. All creeks are shown generally in the incorrect location by a dimensionless line instead of a polygon. The excavated agricultural pond and Schmidt Creek wetland are shown but offset from the correct location. The Alachua County coverage, which includes mapped hydric soil mapping units, shows more wetland acreage onsite; however, it overestimates the AG excavated pond coverage. Neither database identifies the small, isolated surface water depressions that occur and neither identifies the isolated seepage depressions designated as Areas 1 and 2 (Figure 4).

Ecological Setting of the Project Area Based on Published GIS Data

The Level IV Ecoregion mapping designations for Alachua County are provided on **Figure 31**. Within this coverage, the two (2) dominant general plant community associations in Alachua County are defined as Central Florida Ridges and Uplands (75c) and Eastern Florida Flatwoods (75d). The Central Florida Ridges and Uplands community is located east of the Brooksville Ridge (Figure17) and extends east to the Cody Scarp. This ecological community has also been described as Upland Hardwood Hammocks (Community #11) as defined within the *26 Ecological Communities of Florida* (Soil Conservation Service). These communities are typically dominated by evergreen and deciduous hardwood species such as sand live oak (*Quercus geminata* Small), southern magnolia (*Magnolia grandiflora* L.), black cherry (*Prunus serotina* var. *serotina* Ehrh.), pignut hickory (*Carya glabra* [Mill.] Sweet), sweetgum (*Liquidambar styraciflua* L.), and others.

The Planning Parcel is within the Eastern Florida Flatwoods Community (75D) and extends east of the Project Site. This community is also designated as Community #7– North Florida Flatwoods within the *26 Ecological Communities of Florida* (Soil Conservation Service). Typically, these areas are characterized by a generally flat landscape covered with a dense groundcover of saw palmetto (*Serenoa repens* [Bartr.] Small) and gallberry (*Ilex glabra* [L.] A. Gray) under a canopy of longleaf pine (*Pinus palustris* Mill.) or slash pine (*Pinus elliottii* Engelm.). This community type includes a mosaic of shallow cypress depressions and sloughs with acidic tannic water. The Planning Parcel lies along the boundary of two general community types and was historically dominated by “Mesic Hammock” vegetation occurring along the slopes of the three (3) creek systems, which is characteristic of the Cody Scarp and is not similar to the “Flatwoods” vegetation that historically extended away from the Creek margins across the broader slopes of the Site.

Florida Land Use, Cover and Forms Classification System (FLUCCS) and FWC Cooperative Land Cover Classification

The FLUCCS classification provided by the Florida Department of Environmental Protection (DEP) for the Planning Parcel and surrounding areas is provided as **Figure 32**, and the FNAI/FWC Cooperative Land Cover Map is provided on **Figure 33**. Both coverages divided the site into approximately the same general polygon coverages and habitat types. The polygon boundaries more or less correspond to the transition between pasture and forest or shrub habitats. The two coverages are defined differently, but the areas mapped are similar. The polygons are described in **Table 2**.

Table 2. Florida Land Use, Cover and Forms Classification System and FWC Cooperative Land Cover Classification Designations for the Project Site and Surrounding Area

FLUCCS	Category	FWC	Category
1100	Residential Low Density	**1110**	Upland Hardwood Forest
2100	Cropland and Pastureland	**1400**	Mixed Hardwood-Coniferous
3200	Shrubs and Brushland	**1830**	Rural
4200	Upland Hardwood Forests	**183313**	Improved Pasture
6100	Wetland Hardwood Forests	**2200**	Freshwater Forested Wetlands
—	——	**3200**	Cultural-Lacustrine

The coverages provided on Figures 32 and 33 and summarized in Table 2 represent plant communities delineated from aerial photography without ground verification. Both coverages in general reflect the Agricultural characteristics that occur on site.

Strategic Ecosystem Overlay Coverage

The Alachua County Strategic Ecosystem Overlay coverage for the Planning Parcel and surrounding area is provided as **Figure 34**. This coverage is based on the coverages provided by KBN/Golder (1996)[3]. The coverage shows that the Planning Parcel is not encumbered by a Strategic Ecosystem; however, several overlays surround the Site. The Hague Flatwoods Strategic Ecosystem is located north of the Site across US 441. The East San Felasco Hammock Strategic Ecosystem lies west of the Site and the Millhopper Flatwoods Strategi Ecosystem lies south of the Site.

The plant communities mapped by KBN/Golder (1987) that occur in the Strategic Ecosystems adjacent to the Project Site are shown on **Figure 35**. The KBN/Golder (1987) coverage defines the plant communities within the Hague Flatwoods and the eastern area of the Millhopper Flatwoods Strategic Ecosystems as Pine Flatwoods with Wetlands dispersed throughout the Flatwoods. These communities typically occupy the Physiographic Subdivision defined as the Northern Highlands (Figure 18) as previously

[3] KBN, A Golder Associates Company. 1996. Alachua County Ecological Inventory Project. Prepared for Alachua County Department of Growth Management, City of Planning and Development, Gainesville, FL.

discussed. The East San Felasco Strategic Ecosystem is shown as having primarily Mesic Deciduous Hardwood Uplands, which is the characteristic communities found on the Cody Scarp within the Northern Highlands Marginal Zone as shown on Figure 18. The Project Site historically was covered with Pine Flatwoods in the northern half of the site that transitioned to Mesic Uplands that occurred along the slopes to the Creeks. This is characteristic of sites that occur along the transitional boundary of the Cody Scarp and Northern Highlands Plateau. Unfortunately, the Planning Parcel has been extensively managed for cattle since prior to 1937 and there are currently **NO** habitats on site that would be defined as native, naturally occurring plant associations. The onsite habitats do not have groundcover, shrub, subcanopy, or canopy components indicative of the native type habitats. All habitats are significantly altered and successional Pine and Oak habitats. Similarly, all wetland habits have been significantly altered by cattle and logging and do not have the species composition that would be expected in native undisturbed forested Wetlands.

Alachua County Conservation Lands and City of Gainesville Parks and Conservation Lands

The Alachua County Conservation Areas that occur in the vicinity of the Project Site are shown on **Figure 36**. The coverage provided indicates **NO** County-owned Conservation Areas occur in the vicinity or directly adjacent to the Planning Parcel. The Alachua County Parks and Recreation Areas coverage is provided on **Figure 3**7. Based on the data, there are **NO** public recreation lands adjacent to the Planning Parcel.

Alachua County Historic Structures Database

The Historic Listed Houses and Structures that occur within the vicinity of the Planning Parcel are shown on **Figure 38.** The database shows that there are two (2) structures in the north corner of the Planning Parcel. These structures are designated as **AL04360** and **AL04361**. Structure AL04360 is described as a rectangular wood frame cottage referred to as Angel Gardens. The structure is described as "one of the few neoclassical cottages found in unincorporated Alachua County" and was constructed circa 1915. Structure AL04361 is described as a Folk-Victorian, wood frame, frame-vernacular cottage that was constructed circa 1930. From the database it does not appear either building is registered in a State or Federal Registry.

Alachua County Hazardous Materials Storage Facilities

The Hazardous Materials Storage Facilities currently monitored by Alachua County are shown on **Figure 39**. The coverage shows there are **NO** monitored facilities within this Planning Parcel. There are many monitored facilities associated with commercial businesses located US 441 northwest and southeast of the site. There is, however, an abandoned cattle dipping vat that is partially buried in the pasture located southwest of the historic structures locations (see Photos 11–15 and Figure A-1, Appendix A). There was a large barn in this area and cattle management facilities from prior to 1937 to circa 1974. Between 1915 and 1965 "cattle dipping vats" were used to dip cows in an arsenic solution to prevent a tick-borne disease called "southern cattle fever." Descriptions of

uses and remediation for “Cattle Dipping Vats” copied from the FDEP website are included, as follows (provided as written with format and grammar errors):

History of Cattle Dipping
Between the years of about 1915 to 1960, cattle dipping vats (CDVs) were constructed and used across the state of Florida as part of state and federal government initiatives to address the widespread occurrence of Cattle Tick Fever, an infectious disease caused by microbes that were spread by the cattle fever tick. This basic treatment program was carried out within most of the southern United States, Florida included, until the cattle fever tick was eradicated. The last infestation of cattle fever ticks in Florida was reported in the year 1960 on cattle from Palm Beach County. In 1961, the eradication program in Florida reached a successful conclusion.

How Did the Process Work?
In order to eradicate cattle fever ticks within areas where Cattle Tick Fever was prevalent, herds of cattle were subjected to periodic dipping in vats filled with water-based solutions containing arsenic or other pesticides at concentrations sufficient to destroy the ticks but not injure the cattle. Typical CDVs were elongate trenches between 4 to 6 feet in depth and having a drop-off entry on one end with a ramp at the exit end so that, once immersed or “dipped,” cattle could then easily walk out of the CDV. There was typically a drip pad and pen area for staging of the cattle where they were kept until their hides no longer dripped any solution.

Environmental Impacts of Cattle Dipping Vats
The environmental concern today is in regard to the residuals of treatment products used in the CDVs. When no longer needed, many CDVs were simply left in place, or at most were filled in with dirt and dried vat sludge that may have contained highly concentrated pesticides which can persist in the environment. At the conclusion of the cattle fever tick eradication program, there was no requirement to restore CDV sites to pre-construction condition, and so today former CDV sites may have environmental conditions that are not compatible with certain land uses. The most common pesticide associated with CDVs is arsenic, although DDT and toxaphene were also sometimes used. Any contaminated soil tends to be close to the vat, and groundwater plumes, if any, are typically not extensive but it is not possible to know the full extent of contamination without a field investigation.

Regulations for Cleanup in the State of Florida
There is no requirement in the state of Florida for a private landowner having a CDV on their property to take corrective action to address possible environmental impacts. However, a landowner can voluntarily take corrective actions (Section 376.306, F.S.) to address any potential environmental impacts. The department is available to provide guidance on properly assessing a CDV and on strategies for cleaning it up. If the landowner desires a Site Rehabilitation Completion Order from the department for such cleanup action, then the corrective action must be

conducted in accordance with the applicable requirements found in Chapter 62-780, Florida Administrative Code.

The current condition and location of the cattle vats is provided in the Photographic Atlas of the 2008 ERA report and are shown in the Photographic Atlas in Appendix 1 (see photo station location map [Figure A-1] and Photos 11–15).

Published Listed Species Occurrence Data and On-site Species Observations

Federal Review Pursuant to Section 7 of the Clean Water Act (CWA) U.S. and Department of Housing and Urban Development (HUD) Review

The proposed future development of the Schmidt Planning Parcel will involve very minor impacts to altered and constructed (man-made) degraded Surface Water Habitats. If Federal Wetland review of this site were required pursuant to **Section 404 of the Clean Water Act (CWA),** then review by the U.S. Army Corp of Engineers (ACOE) of the impacts would be required and the ACOE would request consultation with the U.S. Fish and Wildlife Service (FWS) through **Section 7 of the Endangered Species Act (ESA)** to address possible effects on Federally Listed Wildlife species. Turkey Creek is not a navigable water therefore is not considered as **Waters of the United States (WOTUS)** thus the ACOE has **NO** regulatory jurisdiction over Wetlands or Surface Waters on this Site.

All Wetland and Surface Water impacts proposed would be reviewed by the SRWMD and through the **Environmental Resource Permit (ERP)** process. Review by the Florida Game Commission (FWC) and subsequently by the FWS may occur if the development would *likely adversely affect* Listed Species that use the site. These reviews are conducted during the development review process and not during Land Use or Rezoning activities. However, during non-development application procedures, the Planning Parcel is required to be reviewed with respect to the potential effects that the future development would potentially have on Federal or State Listed Plant and Animal Species that occur or potentially occur within the boundaries of the Planning Parcel or adjacent offsite habitats.

The following report format specifically addresses Endangered Species review of the Planning Parcel and adjacent areas that would be specifically required by HUD for application requiring federal assistance for low-income housing, etc. This Project has no planned low-income housing provisions, but the HUD review procedure provide a template for Listed Species review of Projects of this size and ecological location. This Project may require alterations to the FEMA floodplain and subsequent map revisions. The Listed Species review required by HUD is also the same procedure required by FEMA for Map Revisions; therefore, the procedure provided below has multiple applications for Federal and State development applications. No City in Alachua County or the County itself has a specific procedure outlined for review of Listed Species Impacts. The procedure followed here, and the summary information provided, has been

used by ERC for successful permitting review of many Projects within Alachua County and other counties in North Florida.

With respect to the requirements for Listed Species Review defined by FWS, the Florida Fish and Wildlife Conservation Commission (FWC), and the Development Regulations of the City of Gainesville, City of Alachua, and Alachua County, most listed species regulations involve occurrence and protection of unique, high-quality, undisturbed native habitats or habitat that retain the characteristic of the historical native plant communities. As such it can be stated that,

> The Planning Parcel or any Parcels directly adjacent to the Planning Parcel do not contain any remaining Native or Natural Plant Communities or associated habitats that do support or could support any long-term viable populations for any large range requiring endangered or imperiled species known to occur within Alachua County, Florida that would be adversely affected by the proposed Project Development. This does not mean that transient use of the site by Listed Species does not occur. However, the site does not contain suitable forage or nesting habitat to support populations that have very specific habitat requirements or have large ranges for mating or forage. The Site and all habitats have been significantly managed for cattle since before 1937. All habitats have been significantly altered by cattle use and conversion to pasture such that **NO** true resemblance to the native habitat and species occurrence exists. Further the animal species that use the site and adjacent floodplains will continue to use the site after development occurs as all Creek and associated Riparian and Upland buffer habitats will be placed in a **Conservation Easement.**

The onsite habitats were historically dominated by two primary native Florida plant communities to include:

(1) **Longleaf Pine-Slash Pine-Wiregrass Flatwoods:** This is a Mesic-Pine Flatwood habitat that is fire maintained by natural fire occurrence on a 2–3-year cycle. This habitat type has historically been removed from this site and the surrounding area by past construction activities as well as clearing for pasture and silvicultural activities. In Alachua County, once the plow layer is disturbed and the roots of the historical vegetation are cleared and burned, these historical habitats never return to its native form. Instead, the sites become invaded by laurel oak (*Quercus hemisphaerica*), which is a native nuisance species that becomes the dominant canopy, subcanopy, and groundcover components and excludes colonization of the more desirable native species. Loblolly pine (*Pinus taeda*) replaces longleaf pine (*Pinus palustris*) as the dominant pine species. The groundcover is almost 100% covered by seedlings and saplings of the woody canopy species; therefore, there are **NO** areas of diverse herbaceous cover present. These successional communities are the dominant plant communities that now exist in the County and on this site. Their succession and persistence are evident by examination of historical aerial photo coverages and have been verified by performance of field surveys that confirm the successional, persistent, and widespread distribution of this community.

(2) **Mesic-Hammock:** This is natural native Mixed-Hardwood Mesic plant community that is characterized by a diverse mix of deciduous hardwood species to include swamp chestnut oak (*Quercus michauxii*), pignut hickory (*Carya glabra*), sweetgum (*Liquidambar styraciflua*), black cherry (*Prunus serotina*), sugar hackberry (*Celtis laevigata*), box elder (*Acer negundo*), American hornbeam (*Carpinus caroliniana*), eastern hop hornbeam (*Ostyra virginiana*), Carolina holly (*Ilex ambigua*), and eastern roughleaf dogwood (*Cornus asperifolia*). Evergreen canopy species are present but at low densities and include redbay (*Persea borbonia*), sweetbay (*Magnolia virginiana*), cabbage palm (*Sabal palmetto*), and spruce pine (*Pinus glabra*). These communities rarely burn, are mesic in nature, and often occur on slopes. Within Alachua County, these communities are uniquely associated with the Hawthorn Formation along the Cody Escarpment extending from elevations of 75 to 150 ft. Typical soils include the Arredondo fine sand and Bonneau fine sand, which are Ultisols and have a discontinuous subsurface clay layer. In addition, Cadillac and Jonesville soils (Alfisols), which have subsurface clay layers, also occur within this plant community. The Pedro soils (Ultisols), which have limestone exposed at the surface or is close to the surface mixed with clay, occur in these habitat areas located to the west of the Project Area. These soils are in areas of limerock outcrops, sinkholes, caves, and chimneys and support Mesic-Calcareous Hammock vegetation. Similar to Sandhill and Flatwoods habitats, when these areas are plowed and converted to pasture the historical community does not regain dominance and the habitat generally becomes overrun with laurel oak (*Quercus hemisphaerica*) or water oak (*Quercus nigra*).

Many of the imperiled reptile species in Alachua County are associated with native Sandhill habitats, which are currently now only very rarely found in its historical pristine condition, and these natural historical habitats have been totally removed from the area of the Project Site and did not historically occur within the boundaries of the Planning Parcel. *"Therefore, development of the site as proposed will not disturb or destroy any Critical Habitat in this area or adversely affect any naturally occurring native habitat."*

The remaining sections of this Listed Species review will provide documentation to support this conclusion. The documentation includes onsite pedestrian review of all areas of the Planning Parcel on multiple field days as well as extensive review of all Listed Species GIS databases that have been prepared by the Local, State, and Federal governments for Alachua County, Florida. In addition, a list of the potentially occurring listed species that may be present on the site and surrounding areas as well as a list of Migratory Birds known for the area was obtained via an online **IPaC** (Information for Planning and Consultation) consultation performed for the Project area on 29 August 2021. The results of this consultation are discussed in this report and are provided in its entirety as received from the FWS in **Attachment 7.**

General Review of City, County, State, Federal, and HUD Regulations that Govern Development with Respect to Imperiled Species, Significant Natural Communities, and Critical Habitat Areas

DMAI is applying for Land Use and Re-zoning Amendments to allow construction of new residential and commercial development within the developable areas of the Planning Parcel. Permits for new construction requires that State, Federal, and Local Listed Species Regulations are considered to assess the new development with respect to realized or potential Species or Habitat Impacts. All agencies as described must review all proposed applications with respect to determination of compliance with established Endangered Species Protection Policy.

The Federal Regulations Legislation that governs Listed Species impacts are defined within **Section 7 of the Endangered Species Act of 1973 (16 USC1531 et seq.)** particularly **Section 7 (16 USC1536)** and regulated via **Title 50 CFR Part 402.** This legislation is specifically implemented pursuant to **HUD Title 24 CFR §50.4 Related Federal Laws and Authorities (e) Endangered Species**. Further, HUD is required to evaluate the effects of the Project on **Critical Habitat** pursuant to **50 CFR Part 17 and Part 226.** HUD is also required to minimize any potential impacts of the Proposed Project on **Migratory Birds**. To implement the Federal Code, HUD developed a Manual[4] to provide guidance and direction for analysis of regulated resources that must be developed in compliance with HUD policy. To this end the Manual details the guidelines to follow for environmental review requirements for HUD projects.

Specifically, within this manual **Chapter 9. Environmental Review and Requirements** defines environmental procedures and **Section 9.5** defines specific **Environmental Report** requirements. Reference to Endangered Species is provided in the Manual, as follows:

G. Endangered Species (24 CFR 50.4(e))

1. Under Section 7 of the Endangered Species Act, HUD must consult with the U.S. Fish and Wildlife Service or the National Marine Fisheries Service (the Services) whenever a proposal may affect an endangered or threatened species or its habitat. A required consultation should be assumed for any site within the critical habitat (as defined in 50 CFR Part 17 and Part 226) of a listed species; consultation may also be required even if no critical habitat is present.

2. In areas where impacts on endangered or threatened species are a concern, all appropriate information regarding possible impacts of the project should be provided to HUD as early as possible. The Environmental Report should include review of published information, including but not limited to information on the Services websites regarding the possible presence and associated critical habitat of any listed species in the vicinity of the proposal and provide HUD with the results of the research. Furthermore, if a proposal is in an area of potential impacts

[4] *US Department of Housing and Urban Development. 2016. Multifamily Accelerated Processing (MAP) Guide. Office of the Assistant Secretary for Housing, FHA Commissioner.*

on a listed species or its critical habitat, any possible associated impacts caused by the proposal should be discussed in the Environmental Report. The lender and/or Environmental Report preparer should not contact the Services directly.

3. If the project activity could affect an endangered/threatened species or its habitat, HUD must make a determination of effect. HUD must seek concurrence of the Services on any "may affect, not likely to affect" determination and associated mitigation measures. HUD must initiate formal consultation under Section 7 of the Endangered Species Act for a "may affect, likely to adversely affect" determination. The lender may be required to obtain special studies such as habitat assessments, surveys, or biological assessments at the borrower's cost.

4. Consultation under Section 7 of the Endangered Species Act may result in more stringent conservation measures than would otherwise be imposed. The Regional staff can advise the lender where information on endangered species may be obtained.

5. The cost of mitigation to accommodate endangered species would likely be deducted from the warranted price of the land as an unusual site condition.

Requirements for Listed Species Review and Critical Habitat Impact Review

Section 7 of the **Endangered Species Act of 1973** (ESA) requires all Federal agencies to use their authorities to conserve endangered and threatened species in consultation with USFWS. This 'proactive conservation mandate' for Federal agencies is articulated in **Section 7(a)(1)**. **Section 7(a)(2)** contains a complementary consultation mandate for Federal agencies, as follows:

Section 7(a)(2) Mandate

Section 7(a)(2) directs all Federal agencies to insure that the actions they authorize, fund, or carry out do not jeopardize the continued existence of endangered or threatened species or destroy or adversely modify critical habitat. The Section 7 implementing regulations (50 CFR Part 402) specify how Federal agencies are to fulfill their section 7(a)(2) consultation requirements.

Section 7(a)(2) Responsibilities

Under the Section 7 implementing regulations (50 CFR Part 402), Federal agencies must review their actions to determine whether they may affect endangered or threatened species or critical habitat. To accomplish this, Federal agencies must determine whether any listed species may be present in the Project Area and whether that area overlaps with critical habitat. If one or more listed species may be present in the action area—or if critical habitat overlaps with the action area—agencies must evaluate the potential effects of their action. If no species or their critical habitat are present or affected, no consultation is required. Consultation will be either informal, ending with written concurrence from USFWS, or formal. Formal consultation concludes when USFWS delivers its biological opinion to the Federal agency.

Agencies must confer with the USFWS per **Section 7(a)(4)** of the ESA if any action is likely to jeopardize a species proposed for listing or to destroy or adversely modify proposed critical habitat. Critical habitat is a term used to define specific geographic areas that contain habitat features that are essential to the survival and conservation of Endangered or Threatened Species. Critical habitat areas often require specific management strategies to maintain or establish an existing habitat in a condition that supports or potentially supports an imperiled species. To determine whether either of these are likely, agencies may follow the same approach that is used for listed species and designated critical habitat (that is, evaluate the likely effects of their actions on any proposed species that may be present in the Project Area and on any proposed critical habitat that lies within or adjacent to the Project Area). To this end, this report is provided to evaluate the potential effects that the Project may have on listed species using extensive field analysis integrated with multiagency GIS data review of the Project Area and the local vicinity surrounding the Project Area.

Summary Information Regarding Regulation of Threatened & Endangered Species in Florida

There are several agencies that have been delegated the authority to protect and preserve the threatened and endangered flora and fauna that occur within the State of Florida. The FWS maintains a list of species afforded special protection by the ***Endangered Species Act of 1973 (16 U.S.C. 1531)***. The list is published in the ***List of Endangered and Threatened Wildlife and Plants, 50 CFR 17.11-12***. FWC maintains a list of the protected animals occurring within the state by authority of the ***Florida Endangered and Threatened Species Act of 1977 (Section 372.072, Florida Statutes [FS])*** and ***Chapter 68A-27, Florida Administrative Code (FAC), Rules Relating to Endangered and Threatened Species***. The specific policy of the Florida Endangered and Threatened Species Act of 1977 is declared as follows:

> **Section 373.072(2): Declaration of Policy**—The Legislature recognizes that the State of Florida harbors a wide diversity of fish and wildlife and that it is the policy of this state to conserve and wisely manage these resources, with particular attention to those species defined by the Florida Fish and Wildlife Conservation Commission, the Department of Environmental Protection, or the U.S. Department of Interior, or successor agencies, as being endangered or threatened. As Florida has more endangered and threatened species than any other continental state, it is the intent of the Legislature to provide for research and management to conserve and protect these species as a natural resource.

The list of threatened and endangered animals protected by these laws is published in ***Section 68-27.003, .004, and .005, FAC***. The regulation of listed marine animals was historically delegated to the Florida Department of Natural Resources (FDNR); however, has since been reorganized into the Florida Department of Environmental Protection. The ***Preservation of Native Flora of Florida Act (Sections 581.185, 581.186 [in part] and 581.201, FS)*** passed in 1978 declares a public policy of the State of Florida regarding native flora, as follows:

> **Subsection 1: Legislative Declaration**—The Legislature finds and declares that it shall be the public policy of this state to: provide recognition of those plant species native to the state that are endangered, threatened, or commercially exploited; protect the native flora from unlawful harvesting on both public and privately owned lands; provide an orderly and controlled procedure for restricted harvesting of native flora from the wild, thus preventing wanton exploitation or destruction of native plant populations; encourage the propagation of native species of flora; and provide the people of this state with the information necessary to legally harvest native plants so as to ultimately transplant those plants with the greatest possible chance of survival.

To this end, the Florida Department of Agriculture and Consumer Services (FDACS) regulates the threatened and endangered plant species occurring within the state. As specifically authorized by ***Chapter 5B-40, Preservation of Native Flora of Florida, FAC,*** the ***Regulated Plant Index*** is published in ***Section 5B-40.0055***. The Game Commission periodically releases a publication that summarizes animal species regulated by the Florida Fish and Wildlife Conservation Commission and the USFWS. The publication is titled *Florida's Endangered Species, Threatened Species, and Species of Special Concern*. The federal lists of plants and animals are published in ***50CFR 17.11-12,*** and the list of Florida's federally listed plant species is also published by the Florida Division of Forestry.

Several other lists of the endangered and threatened fauna and flora are maintained for the State of Florida. The Florida Natural Areas Inventory (FNAI) maintains a list that summarizes the status and distribution of both plant and animal species and natural communities within Florida. The FNAI is managed by The Nature Conservancy in cooperation with DEP. The lists compiled by the FNAI contain many species that do not occur on the State or Federal lists. The FNAI list as compiled is not subjected to the time-consuming administrative process required for listing for State and Federal protection. Therefore, these lists often reflect the up-to-date true status of species that may be in immediate peril. The FNAI species that are not State or Federally listed are not given legal protection.

An inventory of the statewide distribution of potentially threatened and endangered species was initiated in 1973 by the Florida Committee on Rare and Endangered Plants and Animals (FCREPA). The group published a several-volume series that contains detailed descriptions, distributions, and academic evaluations of species considered to be in peril. The FCREPA list contains many species in addition to the State and Federal lists; however, these additional species are afforded no legal protection. The FCREPA series offers the best compiled review of the biology of the imperiled biota of Florida to date. Beginning in 1986, revisions of the FCREPA volumes were initiated and continue to date.

To aid in review of the imperiled species that occur in Florida and the State and Federal Regulations that govern their management, these publications are available:

- Endangered and Threatened Species Act of Florida, Chapter 372.072, FS
- Rules Relating to Endangered and Threatened Species, Chapter 68A-27, FAC
- The Preservation of Native Flora of Florida, Chapter 581.185, FS
- Preservation of Native Flora of Florida, Chapter 5B-40, FAC
- Florida's Endangered and Threatened Species, December 2018

Alachua County, by authority of **Chapter 406.Natural and Historic Resources Protection** Specifically **Article *3, Significant Plant and Wildlife Habitat,*** and ***Article 4, Listed Plant and Animal Species Habitat***, of the Unified Land Development Code (ULDC) regulates development in habitats where listed species occur or could potentially occur. Provisions within Articles 3 and 4 allow the County to require that up to 25% of the upland portion may be required to be protected and set aside as primary conservation or Critical Habitat. Areas protected under Articles 3, 4, and 5 are designated as Conservation Management Areas and are further regulated via rules outlined in ***Article 17, Conservation Management Areas (ULDC)*** and potentially require that the property owner establish a Conservation Easement for the specific areas within the Project Site. The owner is further responsible for development of a Management Plan and perpetual management of the area.

The City of Gainesville via provisions of **Article VIII. Protection of Resources. Division 2. Natural and Archeological Resources** regulates development within Listed Species Habitats and native plant communities defined as Critical Habitats. ***Sections 30-8.13 (D) (1-3). Significant Natural Communities*** provides specific guidelines for protection of unique native plant communities and ***30-8.13(E) (1-4). Listed Species.*** has adopted the County's template for listed species protection and provides protection of listed species and listed species habitats. Protective mechanisms include provision of Conservation Management Areas with associated management plans as described in ***Section 30-8. 14(A-L).*** Neither the County's nor the City's land development codes describes the protections warranted for individual species or habitats. These protections are defined on a case-by-case basis often in cooperation with the responsible federal or state regulatory entity.

The County through **Chapter 78. Countywide Natural Resources Protection Code (ULDC)** has designated large habitat zoning overlays defined as Strategic Ecosystem with regulations that now extend into all Municipal Boundaries. Strategic Ecosystems are outstanding examples of Natural Plant Communities of sufficient size that they warrant protection through establishment of Wildlife Corridors or Conservation Management Areas. Within Strategic Ecosystems that have been ground verified to establish community quality, set asides of up to 50% of the upland area occurring on a Project Site may be required to be conserved and eliminated from any development activity. The County regulates Strategic Ecosystems pursuant to **Chapter 406. Article 5. Strategic Ecosystems**. The City of Gainesville adopted the County Code and regulates Strategic Ecosystems pursuant to **Section 30-8.13. (F) (1-3).** The County recently amended its upland protection Code to apply to all municipal areas within the County to include the

City of Gainesville. On 15 July 2021, the County adopted **Chapter 78. Countywide Natural Resources Protection Code** for application within the limits of all towns and cities within the County to include the City of Alachua. This code also addresses protections for Listed Species Habitats, Significant Upland Communities and Strategic Ecosystems.

Results of City, County, State, and Federal Listed and Imperiled Species Database Reviews

Eagle Nest Locator and Wading and Waterbird Rookery Databases

- American Bald Eagle (FNAI G5/S3)

The results of the query of the Eagle Nest Locator Database and Water and Wading Bird Rookery Sites Database are provided on **Figure 40**. The results show that there are **NO** nests or extant rookeries within one (1) mile of the Project Area. Construction of the site will **NOT** disturb any primary or secondary protective buffers for these features. There are Wetlands or Surface Waters on site that provide forage habitat for listed wading or waterbirds; however, there is **NO** nesting habitat on site for these species. There was an historical wading bird rookery **No. 605113** north of the Project Site within the GRU-Deerhaven Power Plant Site; however, this site is considered extirpated with **NO** activity reported since the 1970s. Rookery **No. 605012** is northwest of the Planning Parcel; NO activity status is available, but no protective buffer would affect the Project Site. Eagle nest **AL056** west of the Project Site was last reported active in 2009. However, the Project Site lies well outside the distance of any Primary or Secondary Protective Buffers established by law for these nests. Development of the Site will have minimal impacts to severely altered Surface Water areas that will be offset by creation of large storm ponds that will be used by any water-requiring species.

Bald Eagles Nesting Sites—Project Effect: "No Effect"
Wading and Waterbirds
Rookeries / Forage Areas—Project Effect: "No Effect"

Federally Listed Species Occurrence Range Database

Federally Listed Bird Species

- Red-cockaded Woodpecker (Federally Endangered; FNAI G3/S2)
- Florida Scrub-Jay (Federally Threatened; FNAI G2?/S2)
- Wood Stork (Federally Threatened; FNAI G4/S2)
- Eastern Black Rail (Federally Threatened; FNAI G3G4/S2)

Results of the FWS Federally Listed Bird Species database search for the Project Site and surrounding area are presented in **Figure 41**. Effects determinations are provided for each species, as follows:

Red-cockaded Woodpecker

The known existing and historical ranges of the red-cockaded woodpecker (RCW) in relation to the Project Site are shown on **Figure 42**. RCWs require well-managed, fire-maintained old growth pine flatwoods habitats for nesting and forage. In addition, relatively large expanses of this habitat type are required to support a breeding population. RCWs require large mature trees with red heart fungus within the heartwood for successful nesting. There are large pine trees in the area that may provide a suitable nesting area; however, the habitat to support this species, which is typically very specific, **DOES NOT** occur within the Planning Parcel or adjacent areas. Both the data from the FWS Observation Database and the FNAI Element Occurrence Tracking List indicate **NO** RCWs have been observed on the Planning Parcel or in this area of the County. The existing FWS RCW occurrence observations are shown in relation to the Project Site on Figure 42. The database shows that RCWs historically occurred in areas of the County north of the airport and south of Waldo. However, these are historical colonies that have been extirpated. There are **NO** known colonies remaining in Alachua County. There is **NO** habitat on site to support this species. These data show that the current range of RCWs lies a considerable distance from the Project Site with a population occurring on Fort Blanding in Bradford and Clay counties northeast of Alachua County. RCWs were not indicated in the IPaC Consultation (Attachment 7).

Red-cockaded Woodpecker—Project Effect: "No Effect"

Florida Scrub-Jay

The Florida Scrub-Jay Consultation Area along with delineated habitats and known observation locations is provided as **Figure 43.** The observations provided refer to studies performed during a 1992–1993 statewide survey. With respect to the Project Site, the closest historical known location lies within the Cedar Key Scrub located ±80 miles southwest from the Project Site. There is a large population within the Ocala National Forest within Marion County southeast of Alachua County. There is **NO** scrub-jay habitat on the Project Site and the Project will **NOT** affect any scrub-jay roosting or nesting habitat.

Florida Scrub-Jay—Project Effect: "No Effect"

Wood Stork

There were **NO** wood storks seen foraging on the site or any area around the site during the field review. However, wood storks will occasionally frequent this site, but the onsite Surface Waters offer minimal temporary habitat for forage for this species and **No** nesting habitat is available. The Planning Parcel lies west of the Historical Regulated Forage Buffer for the River Styx Wood Stork Colony **(Figure 44)**. However, this colony is **NO** longer active and is considered extirpated. Wood storks forage in several habitat types to include local stormwater basins. The Surface Water habitats that will be removed because of the Project are man-made Agricultural ponds and intermittent, very small depressions all of which have received substantial historical pollutant loads from cattle and Ag runoff. The habitat loss is minimal but will be offset by large storm basins

creation, which will provide littoral areas that do provide forage for this species when designed correctly. Therefore, there will be **"No Net Loss"** of available habitat for this species in response to development of the Project Site.

Wood Stork—Project Effect: "No Effect"

Eastern Black Rail

The eastern black rail was listed as a Federally Threatened Species on 9 November 2020. This species is distributed within the eastern and southeastern United States and requires wetland habitats and transitional habitats between wetland and upland grasslands for forage and reproduction. The eastern black rail has been reported in Alachua County in the past, primarily associated with Paynes Prairie and adjacent emergent ponds and wet prairies. The most recent reports of eastern black rail sightings in Alachua County are summarized in the *"Checklist of the Birds of Alachua County"* maintained by the Alachua Audubon Society, which contains results through 21 September 2020 and contains the following summary:

> BLACK RAIL—Unknown status, possibly rare resident, e.g., Paynes Prairie, 9 Apr 1986, 1 Jun 1988, 18 Dec 1991, 5 Sep 1997. One breeding report, early 1900s: adult with three young, Paynes Prairie, early June.

There are **NO** reported listings after September 1997. There are **NO** Wetlands or Surface Waters located on the Project Site that support forage or breeding for this species.

Eastern Black Rail—Project Effect: "No Effect"
Project Effect: "No Effect" on Federally Listed Bird Species.

Federally Listed Reptile Species

- Eastern Indigo Snake (Federally Threatened, State Threatened; FNAI G3/S3)
- Gopher Tortoise (Federally Listed as Candidate Species in Florida Range, State Threatened; FNAI G3/S3)

Eastern Indigo Snake

The Project Site is within the historical and extant distribution range of the eastern indigo snake (**Figure 45**). The indigo snake inhabits a broad range of habitats in Florida but prefers gopher tortoise burrows or pocket gopher burrows within xeric habitats. There is **NO** natural native Xeric habitat within the Project Site with all historical Mesic to Xeric areas within and adjacent to the Project Area being significantly disturbed, and the native habitat type **NO** longer exists. There are **NO** gopher tortoise or pocket gopher burrows that occur on the Project Site. The Project Site is surrounded by low-density residential development along the southeast, south, and west perimeters. The Project Site is surrounded by residential access roads as well as a high-volume regional access road along the north and east perimeters designated as US 441 and NW 43rd Street, respectively. Turkey Creek, Schmidt Creek, Brook Pointe Creek, and their associated Wetlands and Floodplains all provide habitat for indigo snakes. However, all areas are subject to predatory activities by dogs from adjacent residences, as well as extensive

cattle, hog, and coyote activity all of which have deleterious effects on indigo snake populations. However, all these habitat areas will be protected from development and placed within a Conservation Easement.

There is also a likelihood that indigo snakes may be transient occupants on this site using the Creeks as transit corridors between off site habitats. Indigo snakes are seen along the margins of prairies and Wetlands and within the well-defined Hydric and Mesic Hammocks that occur along the margins of the onsite creek systems but travel to and from these habitats is unlikely and significant roadways act as a major barrier between the Project Site and offsite habitats. It is probable that indigo snakes occur on site; therefore, the site should be developed consistent with the ***Standard Protection Measures for the Eastern Indigo Snake*** *(USFWS August 13, 2013).* To determine the probable EFFECT that development of the Project would have on the eastern indigo snake, the FWS "**Eastern Indigo Snake Programmatic Effect Determination Key"** was consulted. Use of the key indicates that the Project would **"Not Likely Adversely Affect" (NLAA)** the eastern indigo snake. The Project is covered with relatively poor successional habitat that has substantially less than 25 acres of natural Xeric Habitat and **NO** Occupied, Potentially Occupied, or Abandoned gopher tortoise burrows present; therefore, the potential effects on the population are minimal or insignificant.

Eastern Indigo Snake—Project Effect: "Not Likely to Adversely Affect" (NLAA)

Gopher Tortoise (Gopherus polyphemus)

In Florida, the gopher tortoise and its burrow are protected under state law. This species has now been designated as a Candidate Species for Listing in its range located east of the Mobile River and Tombigbee River in Alabama. West of these rivers, the gopher tortoise is listed as Threatened in areas of Alabama, Mississippi, and Louisiana. Gopher tortoises generally occur in sandy, dry habitats with sparse canopy and abundant low growing herbaceous vegetation. They are commonly found in sandhills, pine flatwoods, scrub, scrubby flatwoods, dry prairies, and several other generally dry habitats. On sites where natural fire has been suppressed, growth of dense woody trees and shrubs make it difficult for gopher tortoises to move about and find suitable food sources. Because gopher tortoises share their burrows with over 350 other species of animals, they are considered a keystone species. There is **NO** gopher tortoise habitat located within the Planning Parcel and no tortoises were found during several field surveys. Dense clay soils near the surface substantially inhibits burrowing by tortoises on this Site.

Gopher Tortoise—Project Effect: "No Effect"

Federally Listed Amphibian Species

- Striped Newt (*Notophthalmus perstriatus*) (FNAI G2G3/S2)
- Frosted Flatwoods Salamander (*Ambystoma cingulatum*) (Federal Threatened, FNAI G2; S1/S2)

Striped Newt

The Project Site occurs within the historical range occurrence of the striped newt and has historically been reported in Alachua County and adjacent counties (**Figure 46).** The striped newt is a Xeric-adapted species that typically inhabits fire-maintained scrubby flatwoods, sandhill, and scrub habitats. The striped newt is commonly associated with gopher tortoise habitat and is frequently found within burrows. This species depends on natural, ephemeral, isolated Wetlands for breeding and reproduction and is extremely sensitive to the impacts that are cosmopolitan in this area, which include extensive soil disturbance, fire suppression, road construction, and disturbance of gopher tortoise burrows. It is unlikely this species occurs on site due to the absence of natural, ephemeral, emergent Wetlands on the site or in adjacent areas due to the past disturbance in the area.

Striped Newt—Project Effect: "No Effect"

Frosted Flatwoods Salamander

The frosted flatwoods salamander is not designated as occurring within the Project Area. This species is not shown to occur within Alachua County or adjacent counties in any State or Federal Database for Alachua County or the Project Area. There are **NO** historical reported species occurrences shown on any database within the Project Site boundaries and **NO** known occurrences have been reported in the area of the Project Site. The habitat for this species does not occur in the Project Area.

The frosted flatwoods salamander is a federally listed threatened species. The salamander inhabits Slash and Longleaf Pine Flatwoods having a wiregrass (*Aristida stricta*) groundcover with breeding occurring in small ephemeral ponds. Historically, two (2) occurrences reported closest to Project Site have occurred in Bradford County, which is many miles north and east of the Site north of the Santa Fe River. The frosted flatwoods salamander was reported from Cypress Domes in Bradford County on 5 May and 1 December 1979. Subsequent sampling of the site where the species was reported occurred in 1993; however, **NO** individuals of the species could be found. Although the historical distribution of the species included Alachua and Bradford counties, the species is considered as extirpated from these counties with **NO** known extant populations occurring within Alachua, Marion, Duval, or Bradford counties. Within Florida, the current known distribution is believed to only include Franklin, Wakulla, Liberty, Jefferson, and Baker counties. Regardless of the current distribution, there is currently **NO** onsite habitat that will be disturbed that is suitable to maintain this species.

Frosted Flatwoods Salamander—Project Effect: "No Effect"

Federally Listed Crustacean Species

- Squirrel Chimney Cave Shrimp (Federally Threatened; FNAI G1/S1)

The squirrel chimney cave shrimp is a transparent cave-dwelling crustacean that is about 1.2 inches long. It was found in Squirrel Chimney in Alachua County in 1953. Since that time, it has been collected less than a dozen times and was last collected in 1973.

Collection efforts in 1994–1996 of Squirrel Cave and several local cave systems revealed no sign or traces of the shrimp. Squirrel Chimney is a nearly vertical limerock chimney within the Haile Limestone Plain geographic subdivision in northwestern Alachua County. This chimney has several possible undocumented connections to other underground systems. This habitat is very specialized in the County and requires surface connections to subterranean caves. There are **NO** comparable habitats in the vicinity of the Project Site.

Squirrel Chimney Cave Shrimp—Project Effect: "No Effect"

Migratory Birds

The following migratory birds were documented within the **IPaC** consultation provided as **Attachment 7**. Migratory birds are designated for FWS consultation and require protection for projects subject to Federal Jurisdiction. During Section 7 consultation, the FWS must evaluate the potential effects the project may have on migratory birds that potentially use the areas in and surrounding the Project Site. The birds that occur on this list are of particular concern because either (1) the birds are listed on the FWS "Birds of Conservation Concern list" or (2) they warrant special concern in the area of the proposed Project Site. Based on the information contained within the **IPaC** Report, there are **NO** Critical Habitats in the area of the Project Site under the jurisdiction of the FWS. Brief comments related to the potential occurrence of the Migratory Species that potentially occur in the County are provided within each species' section, as follows:

- **American Kestrel (*Falco sparverius paulus*) (State Threatened, FNAI G5S2):** This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA. Breeds Apr 1 to Aug 31.

  Comment: The southeastern American kestrel is a State-listed species, and a permit is required to take a nesting location; it has a 450-ft Protective No Disturbance Buffer extending from nesting locations. Several kestrels were seen on and adjacent to the Project Site during the field surveys. Onsite habitats provide dead snags, and oldfield areas exist that support forage for this species. There are open habitats that provide forage for this species. Adjacent residential properties surrounding the Project Site also provide habitat for this species. Development of the Site will occur primarily in pasture areas or dense early successional habitats that provide limited forage for this species. Development will result in large open space areas and areas that provide stormwater treatment. These habitats will provide continual forage area for these species. Most of the nesting habitat for the onsite kestrels occurs within the boundaries and buffers of the streams. These areas will not be developed and will be maintained in its current condition within a Conservation Easement.

  American Kestrel—Project Effect: "Not Likely to Adversely Affect"

- **Bachman's Sparrow (*Aimophila aestivalis*) (FNAI G3S3):** This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. Breeds May 1 to Sep 30.

  Comment: from the "Checklist of the Birds of Alachua County," Bachman's sparrow is an uncommon resident of Alachua County that is considered vulnerable in the State of Florida. This habitat specialist generally requires fire-maintained mature to old growth natural longleaf pine forests that are not significantly affected by forest management. Sites that have mature, well-maintained pine forests both on the site and in adjacent areas are the required preferred habitat. These birds also require a well-developed mature herbaceous groundcover with limited shrub and hardwood groundcover and mid-story components. This habitat type does **NOT** occur on the Project Site or in surrounding areas.

  Bachman's Sparrow—Project Effect: "No Effect"

- **Bald Eagle (*Haliaeetus leucocephalus*) (FNAI G5S3):** This is not a Bird of Conservation Concern (BCC) in this area but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. Breeds Sep 1 to Jul 31.

  Comment: there are **NO** eagle nests that will be affected by the project. There is **NO** forage habitat on the Project Site that support feeding and foraging of eagles. See discussion in Bald Eagle Nest section above.

  Bald Eagle—Project Effect: "No Effect"

- **Great Blue Heron (*Ardea herodias occidentalis*):** This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA. Breeds Jan 1 to Dec 31.

  Comment: The great blue heron is commonly found throughout wetland habitats in Alachua County. It requires wet habitats for forage and nesting. The great blue heron is present on site and primarily uses the man-made agricultural pond as forage habitat. This pond will be replaced by larger acreage stormwater ponds that also provide substantial habitat for forage for this species. The proposed project will result in a net gain of open water surface water habitat.

  Great Blue Heron—Project Effect: "No Effect"

- **Henslow's Sparrow (*Ammodramus henslowii*):** This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. Breeds elsewhere.

  Comment: Henslow's sparrow is a rare winter visitor in Alachua County and requires well-developed coastal marshes for breeding. In addition, the sparrow

may use natural uncultivated grasslands for forage and breeding. The habitat requirements for this species do not exist on the Project Site.

Henslow's Sparrow—Project Effect: "No Effect"

- **Lesser Yellowlegs (*Tringa flavipes*):** This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. Breeds elsewhere.

  Comment: This species is a waterbird that forages and breeds in brackish and freshwater Wetlands. Additionally, the species will use wet ponds, mud flats, and a wide variety of wetland habitats. The proposed Project will not result in a net loss of forage habitat for these infrequent transient visitors.

  Lesser Yellowlegs—Project Site: "No Effect"

- **Prairie Warbler (*Dendroica discolor*) (G5T3S3):** This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. Breeds May 1 to Jul 31.

  Comment: This species is defined as a common fall transient that is uncommon in spring and rare in winter in Alachua County. This species prefers upland shrub habitats or other successional habitats such as oldfield; however, open space appears to be the significant requirement of the habitat. The Project does not provide this habitat type. This Project Site contains successional shrub habitat and substantial areas of open pasture. The shrub habitats will primarily be preserved as well as a substantial amount of oldfield and pasture within buffers preserved in the Conservation Easement.

  Prairie Warbler—Project Effect: "No effect"

- **Red-headed Woodpecker (*Melanerpes erythrocephalus*):** This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. Breeds May10 to Sep 10.

  Comment: The red-headed woodpecker prefers open savannah type deciduous woodlands with open understories as its primary nesting and forage habitat. In Alachua County it is defined as a common summer resident but is uncommon in winter. The Project Site has a subcanopy and canopy that is evergreen or tardily deciduous, is very dense, and a groundcover that is, in areas, impassable. This is not the required or preferred habitat of this woodpecker.

  Red-headed Woodpecker—Project Effect: "No Effect"

- **Short-billed Dowitcher (*Limnodromus griseus*):** This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. Breeds elsewhere.

  Comment: This species is described in Alachua County as a rare spring transient and irregular transient in late summer and fall. These are primarily saltwater and

brackish waterbirds that do not breed in Alachua County. These birds prefer habitats unavailable on the Project Site or within the County.

Short-billed Dowitcher—Project Effect: "No Effect"

- **Swallow-tailed Kite (*Elanoides forficatus*):** This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. Breeds Mar 10 to Jun 30.

  Comment: The swallow-tailed kite is described in Alachua County as a rare spring resident. In Alachua County, the kite prefers nesting and hunting along riparian systems with tall mature trees and is often in competition in these areas with red-shouldered hawks and barred owls. They frequently visit and nest at the same sites from year to year with several pairs nesting in close proximity. The Project Site provides **significant** forage or nesting habitat for this species along the three (3) creek systems. As a part of the development agreement, these habitats will be placed in a Conservation Easement.

  Swallow-tailed Kite—Project Effect: "No Effect"

Additional Imperiled Species Listed by the State of Florida and the Florida Natural Areas Inventory (FNAI) Element Occurrence Database for Federal, State, and Non-Listed Imperiled Species

To provide for additional and more thorough review of imperiled species not listed by the Federal Government, additional data resources are evaluated to provide potential "Effects" analysis that the Project Development may have on locally occurring imperiled species. The Alachua County **"Summary of Rare and Regulated Plants"** provides habitat and listing information. It should be noted that in addition to species listed by the State and Federal governments, Alachua County through **Chapter 406** and **Chapter 78** and the City of Gainesville also consider species designated as **S1**, **S2** and **S3** by **FNAI** to be regulated pursuant to the Listed Species and Listed Species Habitats Land Development Regulations. **FWC** periodically publishes a comprehensive list of all State regulated plant and animal species. This publication entitled **"Florida's Endangered and Threatened Species"** (most recent publication Date: December 2018)

The FNAI maintains a list of all animals and plants that are listed or considered as imperiled in the State of Florida. This list, which includes all Federal and State Listed Species, is designated as the "Element Occurrence Database." The graphical results of the FNAI Element Occurrence Database search for the Project Site and adjacent areas is shown on **Figures 47.** The database shows **NO** listed species have historically been reported from the designated Project Site. There is **NO** onsite habitat that supports species with requirements for large ranges of native habitat or require very specific native habitat types. **NO** significant habitat areas occur on site that are known to support imperiled species. From the data collected throughout the State, FNAI has created probability polygons that show the potential ranges of species occurring in the area (**Figure 48**). These ranges of occurrence should only be interpreted considering that the

required habitat for the species exist in the area of interest (e.g., the Project Site). A Project Site may occur within a designated probability area but if the habitat does not occur then there is reduced chance of encounters with or occurrence of the designated species.

There are several imperiled species that may have been historically present within the Project Site and adjacent areas or may be potentially present as transient visitors to the site. However, the habitat requirements for these species no longer exist in the area. The FNAI database shown on Figures 47 and 48 does not show any reported species on the Planning Parcel. There is a host of reported beetle and ant species shown off-site east of the Project Site in the FMAI database. This is an unusual occurrence of reports and tends to suggest an entomologist lives, lived, or has had a monitoring Project in that area. However, with Conservation Easements that are establish in the post-project condition with provide substantial un- disturbed habitat to provide for continued existence of these bugs if they do indeed occur on the Planning Parcel. Species that may have historically occurred on the Planning Parcel or in adjacent areas are briefly described, as follows:

Mammals

- **Sherman's Fox Squirrel (*Sciurus niger shermani*) (State Species of Special Concern, FNAI G5T5/S3):** The fox squirrel typically occupies Xeric areas that are frequently burned and have numerous mature oaks and pines distributed throughout the habitat. They can also inhabit residential yards with large oaks and pines. They will move to avoid the direct impacts of development. Fox squirrels in disturbed Xeric habitats such as pastures are often found in large fence row trees where water troughs are located for cattle. If the water source is removed the squirrels may vacate the area in areas where surface water sources are not available. Fox squirrels **DO NOT** occur on sites located in the vicinity of the Project Site or within the Project Site. None were seen during the site survey.

  Sherman's Fox Squirrel—Project Effect: "No Effect"

- **Florida Black Bear (FNAI G5T4/S4):** The general forage range of the Florida black bear in and around the Project Site is provided on **Figure 49**. Within the area, due to the large areas of undeveloped habitats south and north of the Project Area, encounters with black bears would be considered as occasional to common. Areas where nuisance encounters with black bears have been reported are also shown on Figure 49. Several nuisance reports are shown for the general Project Area, and several reports are shown for the area in the vicinity of the Planning Parcel. On the Project Site, it is likely that chance encounters with transient black bears may occur but there is **minimal** black bear habitat present, and the development of the parcels will not affect Black Bears. Black bears are common on the City Property north of US 441.

  Florida Black Bear—Project Effect: "No Effect"

Reptiles

- **Eastern Diamondback Rattlesnake (*Crotalus adamanteus*) (FNAI G4/S3):** The eastern diamondback rattlesnake is found throughout Florida and generally may occur anywhere on the Project Site, especially within armadillo or other mammal burrows. There is suitable habitat on site to support growth and reproduction of this species. There is a substantial population of fruit-producing blackberry vines that attract ground-dwelling birds like quail that are prey for this species. There is habitat to effectively support small to medium size mammals and there is surface water on site to support small mammal and reptile species. In addition, the site is adequately covered with a groundcover of herbaceous species that provide food for small mammals and birds. The habitat is present for this species and will still be present following development of the site as proposed.

  Eastern Diamondback Rattlesnake—Project Effect: "No Effect"

- **Short-tailed Snake (*Stilosoma extenuatum*) (State Threatened, FNAI G3/S3):** The short-tailed snake inhabits xeric habitats, primarily Longleaf Pine-Turkey Oak Sandhills. The Project Site does **NOT** have native Xeric habitat types with open sandy soil. It is unlikely this species occurs on site or that a population can be sustained on site given the present and past land management practices. The species has not been documented on site (FNAI database), but the snakes live primarily underground and are difficult to census. Currently there is **NO** onsite habitat to support this species and significant residential and road development within the local area precludes the maintenance of a viable reproducing population in the area.

  Short-tailed Snake—Project Effect: "No Effect"

- **Florida Pine Snake (*Pituophis melanoleucus mugitus*) (State Threatened, FNAI G4/S3):** The pine snake is a rare inhabitant of xeric communities. There are **NO** preferred natural habitat types for this species remaining on site and there are **NO** areas of the site that have a population of gopher tortoise or pocket gopher burrows. Pine snakes prefer pocket gopher burrows and, less frequently, gopher tortoise burrows for refuge. There is **NO** onsite habitat to support this species and all habitat on adjacent sites have been removed.

  Florida Pine Snake—Project Effect: "No Effect"

- **Southern Hognose Snake (*Heterodon simus*) (FNAI G2/S2S3):** The primary habitat for the southern hognose snake is sandhill and sandy soil, open hammocks, and scrub. These native habitat types **DO NOT** occur on site or remains in areas surrounding the Project Site. This species has not been reported for the immediate area of the site and it is unlikely that a breeding population is present near the proposed development.

  Southern Hognose Snake—Project Effect: "No Effect"

- **Striped Newt (*Notophthalmus perstriatus*) (FNAI G2G3/S2)**
- **Gopher Frog (*Rana capito*) (FNAI G3/S3)**
  The Project Area occurs within the historical range of the striped newt and gopher frog. The striped newt and gopher frog are Xeric-adapted species that typically inhabit scrubby flatwoods, sandhill, and scrub habitats. These species are commonly associated with gopher tortoise habitat and are frequently found within burrows. Both species depend on natural, ephemeral, isolated Wetlands for breeding and reproduction. These species are extremely sensitive to the impacts that are cosmopolitan in this area, which include extensive soil disturbance, fire suppression, road construction, and disturbance of gopher tortoise burrows. It is unlikely these species occur on site due to the absence of natural ephemeral emergent Wetlands on the site or in adjacent areas and the absence of suitable fire maintained xeric habitat and absence of gopher tortoise burrows.

  Striped Newt—Project Effect: "No Effect"
  Gopher Frog—Project Effect: "No Effect"

Birds

- **Little Blue Heron (*Egretta caerulea*) (State Threatened, FNAI G5/S4):** This wading bird uses wetland emergent or wet prairies for habitats but is commonly found in excavated ponds or roadside ditches. There are wading bird habitats within the site or immediately adjacent areas. Stormwater ponds provide habitat for this species, and these will be abundant on site in the post development condition.

  Little Blue Heron—Project Effect: "No Effect"

- **Florida Sandhill Crane (*Grus canadensis pratensis*) (State Threatened, FNAI G5T2/S2):** Sandhill cranes are seen frequently around lakes and Wetlands in residential areas or roadside areas with maintained yard grass perimeters. There is nesting habitat for this species in the regional area but not on the site or adjacent properties. Sandhill cranes will forage extensively in well-maintained pastures and low-profile grasses is essential in forage areas for young sandhill cranes. There is **NO** nesting habitat for this species on the Project Site; however, forage habitat exists and will be maintained in the post development condition.

  Florida Sandhill Crane—Project Effect: "No Effect"

- **Southeastern American Kestrel (*Falco sparverius paulus*) (State Threatened, FNAI G5T4/S3:** The southeastern American kestrel is a State-listed species, and a permit is required to take a nesting location; it has a 450-ft Protective No Disturbance Buffer extending from nesting locations. Several kestrels were seen on and adjacent to the Project Site during the field surveys. Onsite habitats provide dead snags, and large oldfield areas exist that support forage for this species. There are open habitats that provide forage for this species. Adjacent residential properties surrounding the Project Site also provide habitat for this species.

Development of the Site will occur primarily in pasture areas or dense early successional habitats that provide limited forage for this species. Development will result in large open space areas and areas that provide stormwater treatment. These habits will provide for continual forage for these species. Most of the nesting habitat for the onsite kestrels will not be developed and will be maintained in its current condition within a *Conservation Easement.*

- ***Southeastern American Kestrel—Project Effect: "Not Likely to Adversely Affect"***

Plants

- **Godfrey's Swampprivet (*Forestiera godfreii*: FNAIG2S2; State Endangered):** This is an endangered shrub to small subcanopy tree that is found within the historical extent of Sugarfoot Hammock within the County. This is the historical plant community that once expanded south and north of SW 24th Avenue in the area of the intersection with I-75. Remnants of this Mesic-Calcareous Hammock still exist but the areal extent has been substantially reduced in recent years. Godfrey's swamprivet is currently found in the vicinity of SW 24th Avenue extending south into Celebration Pointe within the Hogtown Prairie and Sugarfoot Hammock Systems. It is not known to occur in the vicinity of the Planning Parcel however extensive searches were performed of the Project Site as part of this ERA and **NO** individuals were found.

  Godfrey's Swampprivet—Project Effect: "No Effect"

- **Variable-leaf Crownbeard (*Verbena heterophylla*; G2/S2; State Endangered):** This listed plant species, a member of the Asteraceae (composite) family, is found in mesic flatwoods and dry woods in several north-central and northeast Florida counties and is considered endemic to northeast Florida. It is listed as Facultative Wet by both the FWS and FDEP. This species occurs within the Northern Highlands Province of the County north and east of the Project Site. There is **NO** mesic or wet habitat on site that supports this species, and none were seen during the site survey.

  Variable-leaf Crownbeard—Project Effect: "No Effect"

- **Florida Spiny-pod (*Matelea floridana*; G2/S2; State Endangered):** This vine species, a member of the dogbane family (Apocynaceae), is typically found in mesic habitats. Florida spiny-pod may be encountered within various habitats throughout the County. This species is relatively common in Alachua County and occurs on the Project Site in several areas **(Figure 50)**.The locations where the plant is found will be protected by a *Conservation Easement.*

  Florida Spiny-pod—Project Effect: "No Effect"

- **Angularfruit Milkvine (*Gonolobus suberosus;* State Threatened):** This species is in the dogbane family and is a vine often found in the same habitats as Florida spiny-pod (they are, in fact, very morphologically similar when not in flower). This species occurs within various habitats throughout the County generally in drier sites than Florida spiney-pod. This species occurs in the area of the Planning Parcel, but none were observed during the field survey.

  Angularfruit Milkvine—Project Effect: "No Effect"

- **Cardinalflower (*Lobelia cardinalis*; State Threatened):** This species is found in wetland areas and is listed as Facultative Wet (FWS) and Obligate (FDEP). This imperiled species is rare within Alachua County but occurs within the northern areas of the Northern Highlands Province within the GRU Property. The plant has not been reported as far south as the Project Site in the County. It is a rare inhabitant of herbaceous and forested Wetlands.

  Cardinalflower—Project Effect: "No Effect"

- **Hooded Pitcherplant (*Sarracenia minor*; State Threatened):** This species is a wetland taxon and is listed as Obligate (FWS) and Facultative Wet (FDEP) by the federal and state regulatory agencies. This species occurs within the Flatwoods of the Northern Highlands Province located in the north and eastern areas of the County north of the Project Site.

  Hooded Pitcherplant—Project Effect: "No Effect"

- **Florida Toothachegrass (*Ctenium floridanum*; G2/S2; State Endangered):** This grass has been recorded and vouchered in several northeast Florida counties including Alachua County, which appears to be the southwestern limit of its range. It is a wetland species and is classified as Facultative Wet by the FWS and FDEP. It was not seen on the Project Site.

  Florida Toothachegrass—Project Effect: "No Effect"

- **Eastern Sweetshrub (*Calycanthus floridus*; G5/S2; State Endangered):** This small shrub has been found in the county within the Northern Highlands Marginal Zone. It is also identified around residential areas where it is planted for ornamental use. This plant species was not encountered on the Project Site but occurs around an old cemetery west of Hague.

  Eastern Sweetshrub—Project Effects: "No Effect"

- **Silver Buckthorn (*Sideroxylon alachuense*; G1/S1; State Endangered):** Silver buckthorn occurs in upland hardwood forests around limerock sinks and on shell mounds. Lack of suitable habitat greatly reduces the probability of this species occurring in the area of the Planning Parcel. It was not seen during the Site

surveys nor has been encountered during adjacent site surveys conducted in the past.

Silver Buckthorn—Project Effect: "No Effect"

- **Flyr's Nemesis (*Brickellia cordifolia*; G2G3/S2; State Endangered):** This upland species has been recorded within several miles west of the Planning Parcel on the SpringHill Properties and in San Felasco Hammock; however, it has not been observed on site. It grows in dry, upland pine-oak woods but it does not thrive in areas that have been clear-cut and converted to pine plantations as are common on the Project Site.

  Flyr's Nemesis—Project Effect: "No Effect"

- **Red-margin Zephyrlily (*Zephyranthes simpsonii*; G2G3/S2S3; State Threatened):** This species is a central and south Florida species and has not been vouchered for Alachua County; however, it has the potential to occur along roadside ditches and other damp grassy areas and has been reported as far north as Marion County. It is listed as Facultative by the FWS.

  Red-margin Zephyrlily—Project Effect: "No Effect"

- **Rainlily (*Zephyranthes atamasca var. treatiae*; State Threatened):** This wetland species is classified as Facultative Wet by the FWS and FDEP and has been vouchered in Alachua County; however, it has not been recorded in the area of the Planning Parcel. This taxon also includes the formerly separate species Treat's rainlily (*Z. treatiae*), which has been taxonomically subsumed into *Z. atamasca* var. *treatiae*.

  Rainlily—Project Effect: "No Effect"

- **Cinnamon Fern (*Osmundastrum cinnamomeum*; State Commercially Exploited):** Cinnamon fern is found in many of the wetland areas throughout the County and is a commonly found plant species in north Florida Wetlands and wet flatwoods. This is not an imperiled species; however, it is listed as Commercially Exploited in the Regulated Plant Index (Chapter 5B-40.0055 FAC). This fern is found on site.

  Cinnamon Fern—Project Effect: "No Effect"

- **Royal Fern (*Osmunda regalis var. spectabilis*; State Commercially Exploited):** Royal fern is equally as common as cinnamon fern and occurs in wetland areas throughout Florida. This is not an imperiled species; however, it is listed as Commercially Exploited in the Regulated Plant Index (Chapter 5B-40.0055 FAC). This fern is found in the onsite Wetlands.

  Royal Fern—Project Effect: "No Effect"

- **Needle Palm (*Rhapidophyllum hystrix*; State Commercially Exploited):** Needle palm is a wetland taxon that occurs in Hydric Hammocks, Mesic Hammocks, and Forested Wetlands. It is classified as Facultative Wet by the FWS and FDEP. It has not been recorded on the Project Site. This is not an imperiled species; however, it is listed as Commercially Exploited in the Regulated Plant Index (Chapter 5B-40.0055 FAC). It was not seen on the Project Site.

  Needle Palm—Project Effect: "No Effect"

Invertebrates

- ***Sugarfoot Moth Fly (Nemopalpus nearcticus):*** This is an unlisted but very rare insect that was originally found in the Sugarfoot Hammock area and hence was named for the site. Sugarfoot Hammock was a large expanse of Mesic Hammock habitat that historically occurred within and surrounding the Project Site. This habitat no longer exists on site. This moth has not been found in the area since it was originally described; however, it has subsequently been reported in the Gulf Hammock area.

  Sugarfoot Moth Fly—Project Effect: "No Effect"

Champion Trees

The locations of Florida Champion Trees documented for Alachua County are provided on **Figure 51**. The data indicates that **NO** champion trees have been reported for the area. Most of the historical large trees on the site have been removed through silvicultur3al and agricultural practices.

Biodiversity Hot Spots

The general distribution and probability of Biodiversity Hot Spots are shown on **Figure 52**. In this coverage, most data points are single species occurrence records, and predicted total species occurrences are based on habitat and observed species. The Planning Parcel lies within a mapped polygon area where biodiversity is considered normal background levels consisting of 0 to 4 focal species. This is primarily due to the extensive agricultural and silvicultural use that has historically occurred in the area.

Results of Field Survey

The general results of the field survey are provided on **Figure 53** where the GPS locations where site-specific data were recorded are categorized with respect to the general type of data recorded. The GPS icons on Figure 53 represent data collected at **2,721** locations within the Planning Parcel. The general existing conditions found on the Proposed Project Site are shown in **Appendix A** (**Photos 1** through **109**) as referenced to photo stations provided on **Figure A–1**. The common and botanical names of all plant species encountered during the survey are provided in **Table 3**. Listed species surveys to include gopher tortoise surveys were performed in all areas where GPS icons are shown on Figure 53.

Plant Communities and Land Use Occurring within the Project Site

From the GPS mapping data provided on Figure 53, an Upland and Wetland and Surface Water Plant Community map was constructed as shown on **Figure 54** for the entire Planning Parcel. The Plant community acreages for all polygons within the Planning Parcel are provided in **Table 4**. In general, all onsite plant communities are significantly altered from silviculture, drainage, excavation, filling, and historical development activities. Prior to 1937, the entire Planning Parcel had been cleared of all natural native Plant Associations for dairy and grazing operations. There are **NO** undisturbed Natural Communities remaining on the Project Site. To illustrate the past historical disturbance that has occurred within the Planning Parcel, the plant communities have been overlain on historical aerial photographs, as follows:

Figure Number	Flight Year
55	1937 aerial
56	1949 aerial
57	1955 aerial
58	1961 aerial
59	1968 aerial
60	1974 aerial
61	1979 aerial
62	2000 aerial
63	2005 aerial

A detailed summary of the Plant Communities and Land Use present on the Site was described and discussed with reference to photographs in the 2008 ERA report (Attachment 4). Based on the 2019 site-specific field review there were NO significant changes in the upland habitats or nomenclature that occurred since 2008. Therefore the 2008 descriptions of the general ecology and characteristics of the upland communities was determined to be sufficiently representative of the 2019 ecological associations and therefore will not be repeated in this ERA. Except for very few areas, the habitats occurring on the Site in 2021 are not significantly different than those found on Site in 1937 (see Figures 55–63) when clearing of the site for pasture was completed in most areas. From 2008 to 2021, the changes in the upland communities are related to decreased cattle grazing pressures, which has resulted in invasion of Pines and Oldfield vegetation such as briers into the fringes of the pasture. However, the dominant groundcover remains Bahiagrass. In 2008, rainfall had been significantly less from 2000 to 2008 than has occurred from 2017 to 2021, and this has affected the appearance of the various depressions on the Site compared to the previous time period. The 2008 Report contains descriptions of all wetland and upland plant communities as well as photographs of the habits and buildings and other structures that are present on the Planning Parcel.

Changes in Acreage of Wetland and Surface Water Habitats and Plant Community Associations from 2008 to 2021

Extensive surveys of all onsite surface water and wetland habitats were performed in 2019–2021 to assess the changes that occurred in these habitats since 2008. In 2008 an extensive delineation procedure was performed on the Planning Parcel to delineate the boundaries of all Wetlands and Surface Waters pursuant to Chapter **62-340. Delineation of the Landward Extent of Wetlands and Surface Waters. F.A.C.** The boundaries of all Wetlands and Surface Waters were staked or flagged and marked with sequential numbers, and position coordinates were located by professional surveyors. The surveyed lines were reviewed in the filed by the staff of SRWMD and approved. These lines were accepted by issuance of Conceptual **ERP08-0278** described previously. The jurisdiction flag's locations placed in the field in 2008 are shown on **Figure 64** with the delineated wetland and surface water polygons shown on **Figure 65** and tabulated in **Table 5** for the 2008 delineation procedure. At that time, the District did not exert jurisdiction on excavated ditches or flow channels constructed in uplands that had a mean seasonal water table located beneath the ground surface generally and by rule these features do not require mitigation to offset impacts. All these features were flagged and surveyed but the exempt features were not evaluated in the Mitigation Assessment. Currently by State rule, excavated ditches in uplands are exempt from mitigation. Within the County, City of Gainesville, and Countywide Wetland Ordinance rules, all constructed or man-made or created Wetlands and Surface Waters are exempt from regulation and mitigation. A discussion with respect to how the City of Alachua regulates Wetlands and Surface Waters will follow review and discussion of the 2021 field data.

The geographic and topographic position of Wetlands and Surface Waters on the Site did not change from 2008 to 2021. However, since 2008 there has been significantly more rainfall than in the decade prior to 2008. Following Hurricane Irma in 2017, which exceeded 100-year flood levels, all wetland and surface water areas on site were flooded to the maximum water levels possible. Small depressions in the pasture that were covered with Bahiagrass, pasture herbs, and oldfield vegetation in 2007 were flooded in 2017 and remained saturated or flooded at various levels throughout 2021. Extensive rainfall in the summer of 2021 has kept these depressions wet. The current jurisdictional map defined in 2021 is shown as **Figure 66** in relation to the 2008 boundaries. The 2021 Surface Water and Wetlands plant community polygon map is provided as **Figure 67**. The acreages for all Wetlands and Surface Waters are provided in **Table 6**.

The jurisdiction line along the Creeks did not change from 2008 to 2021 because the adjacent uplands are steeply sloped and very dry. Therefore, changes in rainfall from year to year do not affect the jurisdictional boundary. The jurisdiction line shown for the **Isolated Seepage/Drainages 1** (**Areas A** and **B**) and **2** (**Wet** and **Dry)** (Figure 4) changed within the area covered by the tree canopy simply because the floods in 2017 flooded previously dry depressions and killed the upland groundcover vegetation. So, the 2021 line shown reflects the 100-year flood boundary and high surface water elevations

that have occurred in these two (2) habitats since 2017. **Area 1** is composed of numerous small depressions situated within various thicknesses of clay soil that historically was not cleared for pasture. The depressions are connected by intermittent stream flow that arises from rainfall and seepage located in the north part **(Area 1-A)** of this system. The 2017 to present floodwaters connected previously isolated depressions that were determined to be upland in 2008. There are Wetlands (**polygons 30 and 31**: Figure 67) with muck soils north of the dry swale shown as **Polygon 6**. These wetland polygons have a water table continuously perched at or above the ground surface. The depressions located below **Polygon 6** are intermittently flooded only during periods of very high rainfall, have various thicknesses of sandy surface soils, and drain rapidly during periods of low rainfall. This Polygon area is defined as **Wetland 32,** but several depressions are best termed as Intermittent Surface Waters because there is no groundcover vegetation and soils may or may not be hydric, and during low rainfall, these depressions can become covered with upland vegetation. The boundary of these areas was defined by the obvious flood boundary that occurred. During the 2017–2021 re-delineation of the areas, the boundaries were not reflagged, but the jurisdiction boundary was established using the existing 2008 shapefiles and modified by ground verification with handheld GPS coordinates in combination with use of 1-ft LiDAR topo contours. This procedure was approved by Alachua County staff who field reviewed the new line and approved the location for County review permit purposes. Since all stream and designated wetland areas will be placed in a **Conservation Easement** as part of a development agreement, the District should have no issue with this approach as the provided buffer is generally 75 ft or greater and their regulated buffer is 25 ft average with a 15-ft minimum. Any discrepancy in the jurisdiction line would be more than accounted for in the average buffer provided.

To provide a basis for ERP permitting in the future, the Wetlands and Surface Waters were grouped into categories to describe the type of Wetland or Surface Water feature present in each designated polygon described on Figure 67. The descriptive Polygons are tabulated within Table 5 and photographs of each polygon are provided in Appendix A. These categories are briefly described, as follows:

1. **Brooke Pointe Creek:** The onsite areas of Brooke Pointe Creek are best described as *Disturbed Mixed Hardwood Riparian Surface Waters*. The Creek and banks are occupied by a host of deciduous hardwood species; however, there is very little wetland acreage associated with the Creek on site and is best referred to as a Surface Water. Most of the historical upper onsite floodplain has been converted to pasture. There are **NO** natural floodplain areas remaining on site. The north and west boundary of the Creek has been significantly altered by single family residents who have converted most the historical floodplains to intensively managed yards and planted with yard grasses.
2. **Turkey Creek:** The onsite areas of Turkey Creek consist of eight (8) mapped polygons that are best described as *Disturbed Mixed Hardwood Riparian Surface*

Waters. There are **NO** true wetland areas associated with the Creek on site. There are wetland habitats off site south of the Creek. The onsite areas have been substantially impacted by cattle and pasture management. Road crossings occur in several areas and residential construction and yard management south of the Creek have affected the type, nature, and function of the Creek in these areas.

3. **Schmidt Creek:** Schmidt Creek, as mapped on Figure 67, consists of a well-defined surface water stream represented by **Polygon 18**. This polygon extends from a west to east road crossing that has been in place since before 1937 south to the confluence with Turkey Creek. From the road crossing north Schmidt Creek is composed of several well-defined creek channels that flow in various directions through a *Disturbed Mixed Hardwood Seepage Wetland*. Muck soils are present throughout and the creeks route surface water from north of US 441 to Turkey Creek and originate in an upland Mixed Hardwood Seepage Slope that is located around the south and east perimeters of the Wetlands.
4. **Isolated Mixed Hardwood Seepage Wetlands: Polygons 30 and 31** are within a long landscape depression that is oriented northeast to southwest within the western third of the Project Site. Surface Waters originate in the area from upland runoff and groundwater seepage that seeps out of the ground and runs along a muck surface into several small defined stream channels. From **Polygons 30** and **31** water flows south into a partially excavated swale **(Polygon 6)** that was in part created by digging and scouring of Surface Waters during high rain events. Stream flows in this area are diminished by natural seepage into the ground throughout the extent of the polygons. **Polygon 13** is a small narrow surface water drainage that has historically been enhanced that routes water from **Polygon 31 to 30.**
5. **Isolated Mixed Hardwood Intermittently Flooded Seepage Wetlands and Surface Waters (Polygon 32):** This system has been designated as **Polygon 32** and during extreme flood events this floods into **Polygons 14 and 5**. The area is characterized by a series of isolated and connected shallow landscape expressions significantly affected by cattle. The vegetation in the area is primarily dominated by a dense subcanopy cover of deciduous hardwood species that are generally very small. Groundcover vegetation is sparse throughout all areas of the delineated polygon areas. During normal rain years, most of the area does not have surface water. Water seeps into the ground rapidly, and during periods of low rainfall upland vegetation quickly colonizes the entire ground surface. In periods of extreme rains, the area is differentially flooded as the numerous depressions drain at variable rates. Some hold water for extended periods while others drain rapidly. Only during extreme flood stages that are substantially above the average annual flood event would water flow south to Turkey Creek. There was no evidence in 2019–2021 that flow across the pasture had occurred.
6. **Non-Wetland Intermittent Surface Waters**: This broad descriptive category has been used to describe several small depressions, excavated ditches, small man-made ponds, and eroded swales created from overflow waters during periods of

high rainfall. These generally cannot be delineated pursuant to **Section 62-340.300. Delineation of Wetlands** and do not have characteristics of Wetlands but are delineated pursuant to **Section. 62-340.600(2) (b-d)**. **Surface Waters,** which primarily defines a flood boundary or excavation boundary. Typically, most of these areas are exempt from State mitigation because they are less than 0.50 acres, are isolated, and/or are excavated in uplands The majority of these areas were covered in upland vegetation in 2008 and are only intermittently flooded during periods of very high rain and can remain dry for several years even during periods of normal rainfall.

7. **Non-Wetland Swales:** The name of these features is intended to indicate that these areas are typically non-jurisdictional areas that direct water flow for a short distance and water flows into the ground. They only flow in response to rainfall. These areas were not claimed by the District as jurisdictional features in 2008.They shows signs of erosion and deposition but do not have wetland vegetation and have a normal seasonal groundwater table that lies below the surface except during flood events.
8. **Man-Made Surface Waters:** This category includes all Surface Waters that were excavated in uplands to include the three (3) drainage ditches defined as **Polygons 49, 50,** and **51**, an excavated fishpond **(Polygon 4**), and an excavated agricultural pond **(Polygon 3).** All are minimal quality habitats that have several surface water inflows of pollutants to include cattle wastes, greenhouse discharges, detergents from laundry facilities, and fertilizer inputs. The areas are characterized as Surface Waters and have little to no aquatic or wetland vegetation within the surface water or rooted in the ground. Direct impacts from cattle grazing, cattle walking, and uses of the areas as a drinking water source are apparent.

Surface Water Impacts Proposed in Response to Site Development

A Preliminary Site Development Plan proposed for the Site is provided as **Figure 69** Based on the Preliminary Site Development Plan there are surface water impacts proposed that total **1.551 acres** (**Figure 69**, **Table7**). No impacts occur to wetland habitats with impacts primarily restricted to significantly altered man-made and non-wetland surface water habitats. No Mitigation Assessment is provided at this time; however, the developer has agreed that to partially mitigate for the impacts, all naturally occurring Wetlands on the Site and the entire limits of the jurisdictional areas of Schmidt Creek, Brooke Pointe Creek, and Turkey Creek will be placed into a **Conservation Easement**. The draft Conservation Area is shown on **Figure 70** and totals **36.29** acres, which is 30% of the total Planning Parcel acreage. In addition to the Conservation Areas, there will be creation of substantial onsite Surface Waters maintained as stormwater basins (**Figure 71**). These basins, although not candidate to provide mitigation, provide a significant amount of surface water habitat that does compensate for the loss of the agricultural pond and other small intermittent Surface Waters. Therefore, there certainly will be **NO NET LOSS** of surface water habitat on the Site and that cannot be argued. For example, within the City of Gainesville, several hundred acres of treatment basins

have been created within Paynes Prairie for Wastewater Treatment. The Wetlands are referred to as the ***Sweetwater Branch Wetlands Park***. These areas would have substantially more nutrients, metals, etc., in the water due to the inflow of wastewater from the Sweetwater Branch Sewage Treatment Facility, which in this area, has a very high phosphorus concentration. No one would argue that this *Wetlands Park* did not provide substantial habitat for water birds and wading birds or any animals that require aquatic habitat for forage. These onsite stormwater basins will have a similar function. In addition, the basins provide substantial buffer for the conserved riparian and wetland systems.

Compliance of the Preliminary Development Plan with Environmental Regulation Requirements defined in the Objectives of the Conservation and Open Space Element of the City of Alachua Comprehensive Plan

The City of Alachua regulations protecting *Wetlands* are defined within **Comprehensive Plan Conservation and Open Space Element, Objective 1.10**, defined (in part) as follows:

> **Objective 1.10: *Wetlands***
>
> The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.
>
> *Policy 1.10.a:* The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code and regulations adopted by the DEP and the Suwannee River Water Management District.
>
> *Policy 1.10.b:* The City shall conserve wetlands by prohibiting, where the alternative of clustering all structures in the non-wetland portion of the site exists, any development or dredging and filling which would alter their natural functions. If no other alternative for development exists, the City shall allow only minimal development activity in those areas designated as wetlands within this Comprehensive Plan and that such development activity comply with the following performance standards:

Policy 1.10.a specifically refers to *Wetlands* as those areas that would be identified using the Statewide Delineation Methodology that is defined in **Rule 62-340, FAC. Delineation of the Landward Extent of Wetlands and Surface Waters.** This methodology and its associated definitions are binding on all Municipal and County governments in the State of Florida. The regulations defined in*: **Objective 1.10: Wetlands*** specifically refers to Regulation of "*Wetlands." Wetlands* in **Chapter 62-340** are defined differently and delineated differently than *Surface Waters.* Within this chapter it is specifically stated that "all Wetlands are Surface Waters but not all Surface Waters are Wetlands." Wetlands are a specifically defined subset of surface waters that have different delineation procedures, different permitting exemptions, and very different regulatory treatment throughout the Florida Administrative Code.

The City Comprehensive Plan regulates Surface Waters, in part, through the provisions of **Objective 1.12: Water Resources**, as follows:

> **Objective 1.12: Water Resources**
>
> The City shall protect and conserve the quantity and quality of water resources, not only for the benefit of residents of the City, but for all in North Florida who depend on the Floridan aquifer for drinking water, and for the benefit of all connected springs, streams, and rivers which may be impacted by the City's land use and development practices.

This Objective specifically references connected surface waters such as springs, streams, and rivers, which are all *natural connected water systems*.

and,

Policy 1.12 b further defines the Objective in the context of *flowing Surface Water bodies,* as follows:

> *Policy 1.12.b:* The City shall inventory flowing surface water bodies within the City, utilizing topographic maps, or obtain an established inventory from an appropriate government agency. The inventory utilized should not identify water bodies in isolation; water bodies should be identified relative to their watersheds and basins.

Nowhere within **Objective 1.10: Wetlands** or **Objective 1.12: Water Resources** are regulations described for prohibition of development in or around man-made or non-natural surface waters or isolated natural surface waters. There are NO prohibitions described for development in or around these surface water types. These surface water types are the surface water categories that are proposed for impact on the Schmidt Planning Parcel.

Chapter 62-340 is very specific in its treatment and delineation of Surface Waters versus Wetlands. Wetlands are defined, as follows,

> (19) "Wetlands," as defined in Section 373.019(25), F.S., means those areas that are inundated or saturated by surface water or ground water at a frequency and a duration sufficient to support, and under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soils. Soils present in wetlands generally are classified as hydric or alluvial, or possess characteristics that are associated with reducing soil conditions. The prevalent vegetation in wetlands generally consists of facultative or obligate hydrophytic macrophytes that are typically adapted to areas having soil conditions described above. These species, due to morphological, physiological, or reproductive adaptations, have the ability to grow, reproduce or persist in aquatic environments or anaerobic soil conditions. Florida wetlands generally include swamps, marshes, bayheads, bogs,

cypress domes and strands, sloughs, wet prairies, riverine swamps and marshes, hydric seepage slopes, tidal marshes, mangrove swamps and other similar areas. Florida wetlands generally do not include longleaf or slash pine flatwoods with an understory dominated by saw palmetto.

Within the Florida Administrative Code , *Surface Waters* are defined, as follows.

Chapter 62-340.600 Surface Waters.

(1) For the purposes of Section 373.421, F.S., surface waters are waters on the surface of the earth, contained in bounds created naturally or artificially, including, the Atlantic Ocean, the Gulf of Mexico, bays, bayous, sounds, estuaries, lagoons, lakes, ponds, impoundments, rivers, streams, springs, creeks, branches, sloughs, tributaries, and other watercourses. However, state water quality standards apply only to those waters defined in Section 403.031(13), F.S.

Delineation of Surface Waters and Wetlands are described within **Section 62-340.600(2) (a-d)**, as follows:

(2) The landward extent of a surface water in the State for the purposes of implementing Section 373.414, F.S., shall be the more landward of the following:
(a) Wetlands as located by Rule 62-340.300, F.A.C., of this chapter;
(b) The mean high water line elevation for tidal water bodies;
(c) The ordinary high water line for non-tidal natural water bodies;
(d) The top of the bank for artificial lakes, borrow pits, canals, ditches and other artificial water bodies with side slopes of 1 foot vertical to 4 feet horizontal or steeper, excluding spoil banks when the canals and ditches have resulted from excavation into the ground, or
(e) The seasonal high water line for artificial lakes, borrow pits, canals, ditches, and other artificial water bodies with side slopes flatter than 1 foot vertical to 4 feet horizontal along with any artificial water body created by diking or impoundment above the ground.
(3) Determinations made pursuant to paragraphs (2)(b) and (2)(c), shall be for regulatory purposes and are not intended to be a delineation of the boundaries of lands for the purposes of title.

Rulemaking Authority 373.421 FS. Law Implemented 373.421, 373.4211, 403.031(13) FS. History–New 7-1-94, Formerly 17-340.600.

Natural Flowing Surface Waters are further defined in the context, of streams (creeks, rivers, etc.), as follows,

Section 373.019 F.S. (20) Stream

(20) "Stream" means any river, creek, slough, or natural watercourse in which water usually flows in a defined bed or channel. It is not essential that the flowing be uniform or uninterrupted. The fact that some part of the bed or channel has been dredged or improved does not prevent the watercourse from being a stream.

The ***Florida Statutes*** **(Section 373.019 FS. Definitions)** defines '*man-made drainage features'* in the context of *'Other Watercourses',* as follows,

> *(14) 'Other Watercourse***'** means any canal, ditch, or other artificial watercourse in which water usually flows in a defined bed or channel. It is not essential that the flowing be uniform or uninterrupted.

Therefore, for State permitting purposes flowing natural surfaces waters such as streams are defined and treated differently than artificial man-made drainages such as excavated ditches and canals.

The Objectives within the City Comp Plan defined above that deal with Wetlands and Surface Water specifically separate Wetland regulations from Surface Water regulations pursuant to guidelines established in **Chapter 62-340** as related to their delination. In addition, regulations in **Objective 1.12** are defined in terms of *Natural Surface Waters* and exclude *Artitfically Created Surface Waters.* City development regulations within *Policcy 1.10b* specifically define and distinguish between allowable and limited development in *Isoslated Wetlands* as opposed to *Connected Wetlands* howver no such definition exists for isolated and man-made Surface Water areas where allowable impacts remain largely undefined and prohitions for development impacts are also not defined.

Based on the context of these regulations, the impacts proposed for the Schmidt Farms Planning Parcel are consistent with any prohibitions defined within **Objectives 1.10 and 1.12**. Since the Surface Water impacts are not specicifally addressed in these regulations, the impacts would be regulated pursuant to the requirements of the Water Manaagement District as defined in the Applicant's Handbook and **Chapter 62-345. Uniform Mitigation Assessment Method, FAC**. Further, when local municipal regulations are less restrictive or do not address specific Wetland or Surface water impacts in Alachua County, then the provisions of ***Article II Countywide Wetlands Protection Code*** defined within ***Chapter 77, Water Quality Standards and Management Practices*** (ULDC)would take precedent. Within this Code, **Section 77.21. Exemptions** defines several exemptions, as follows:

> **Sec. 77.21. - Exemptions**.
>
> (a) The following activities are allowed on regulated surface waters, wetlands, and wetland buffers, subject to municipal regulations, if any, and any specified limitations, restrictions, and conditions:
>
> (11) *Artificial wetlands.* All man-made impoundments, lakes, streams, ponds, artificial or created wetlands, and all stormwater management facilities, provided that alteration in these areas will not adversely impact natural or mitigation surface waters and wetlands. If these facilities were required as a mitigation project they shall not be exempt from this chapter. If any wetlands or surface waters are part of a stormwater management facility approved by a city or the county, the same function must be provided, and any modifications shall be subject to approval by the applicable city or county engineer.

Based on this Code, the largest acreage of impacts proposed on Schmidt Planning Parcel involves created agricultural ponds and excavated drainage ditches, which are low-quality habitats that have received significant historical impacts as a result of intense cattle management. These ponds and ditches currently act as a continual pollution source to downstream areas of Turkey Creek, Brooke Pointe Creek, and Schmidt Creek. The *Conservation Easement* as proposed by the applicant would more than account for mitigation for the loss of these constructed Surface Waters, and by rule, these appear to be exempt from County and City Mitigation. As previously described, the impacts proposed for this site were approved during the 2008 application process by the City and District. The impacts proposed then are the same as those proposed for the current Project. Hence, the proposed impacts must also be considered in context of the following Code,

> **Sec. 77.21. - Exemptions**.
>
> (9) *Previously approved permits.*
> a. *Dredge and fill permits:* Specifically permitted dredge and fill or surface water management activities that were approved by a federal or state agency or a water management district, prior to the effective date of this code. Failure to comply with operating conditions of such permits shall nullify this exemption.
> b. *Other permits:* Projects for which the applicant demonstrates that final site plan or development plan approvals have been issued prior to the effective date of this code. Failure to comply with operating conditions of such permits shall nullify this exemption.

and,

> (10) *Altered wetlands.* In instances where the water regime of a wetland has been artificially altered, but the dominant vegetation of the area in question continues to be comprised of listed species, a feasibility of hydrologic restoration shall be made by county staff. Hydrologic restoration that can be accomplished by minor earth work or drainage controls, and would not be contrary to the public health, safety, and welfare, shall be viewed as the preferable alternative to the proposed alteration. This provision for exemption is not intended to apply in the case where a surface water and/or wetland has been filled or altered in violation of any rule, regulation, statute, or this chapter.

Summary

In summary, this ERA report documents the existing conditions found on the Planning Parcel. From this review, it can be stated that the Planning Parcel does not contain any natural native Upland or Wetland habitats that have not been significantly altered by past and ongoing agricultural and cattle management practices. As part of the proposed development, the following statements apply:

1. All Regulated Natural Resources that include Wetlands and natural Surface Waters on the site will be protected in perpetuity by Conservation Easements.
2. Development will **NOT** adversely affect Regulated Resources on the Planning Parcel or on adjacent sites.
3. **NO** known listed species will be adversely affected by development of the Planning Parcel.
4. Future development will be consistent with environmental regulations specified within the City Comprehensive Plan, the Alachua County Unified Land Development Code, and all set-aside required by Code will be established prior to any development activity of the Planning Parcel.

Table 3. Plant species recorded at the Schmidt Farms Planned Development Site, Alachua County.

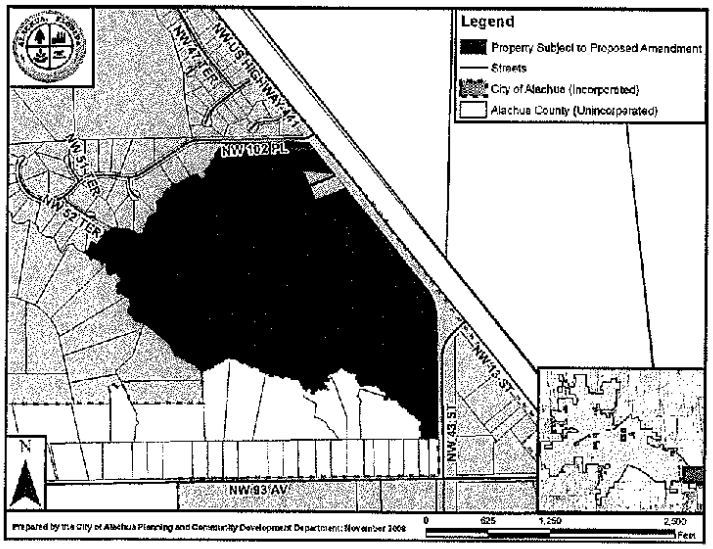
ATTACHMENT 1: Public Notice Issued 26 January 2009

City of Alachua



PUBLIC NOTICE
NOTICE OF ENACTMENT OF AN ORDINANCE
OF THE CITY OF ALACHUA, FLORIDA

The City of Alachua City Commission will hold a public hearing on a proposed ordinance on January 26, 2009 at 7:00 p.m. The hearing will be held in the Commission Chambers of City Hall, at 15100 NW 142nd Terrace, Alachua, Florida.

The ordinance title is as follows:

ORDINANCE 09 12

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE LARGE SCALE AMENDMENT OF THE CITY OF ALACHUA COMPREHENSIVE PLAN FUTURE LAND USE MAP, 2015; AMENDING THE FUTURE LAND USE MAP CLASSIFICATION FROM AGRICULTURE (±92.23 ACRES) AND COMMERCIAL (±39.37 ACRES) TO COMMERCIAL (±50.81 ACRES), CONSERVATION (±37.06 ACRES), AND MODERATE DENSITY RESIDENTIAL (±43.73 ACRES) ON FIVE PARCELS OF LAND THAT TOTAL ±131.6 ACRES; LOCATED AT 9900 NW US HIGHWAY 441, ALACHUA, FLORIDA, WEST OF THE INTERSECTION OF NW US HIGHWAY 441 AND NW 43RD STREET AND THE DEERHAVEN POWER PLANT. TAX PARCEL NUMBERS 05936-001-000; 05936-001-001; 05936-006-000; 05936-007-000; 05945-000-000; PROVIDING A REPEALING CLAUSE; PROVIDING SEVERABILITY; PROVIDING AN EFFECTIVE DATE.

P.O. Box 9 ❖ Alachua, Florida 32616-0009
Phone: (386) 418-6121 ❖ Fax: (386) 418-6130

City of Alachua

At the public hearing, all interested parties may appear and be heard with respect to the proposed ordinance. Copies of the proposed ordinance, the Staff Report, and related materials are available for public inspection at the Planning and Community Development Department or at the Office of the City Clerk, 15100 NW 142nd Terrace, on any regular business day between the hours of 8:00 a.m. to 4:30 p.m. the Thursday prior to the City Commission meeting. **Written comments on the proposed ordinance may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua FL 32616.** Notice is given pursuant to Section 286.0105, Florida Statutes, that in order to appeal any decision made at these public hearings, you will need to ensure that a verbatim record is made. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 101 at least 48 hours prior to the public hearing.

VII. COMMENTS FROM CITY MANAGER

VIII. COMMISSION COMMENTS/DISCUSSION

ADJOURN

Mr. Stubbs confirms for Vice-Mayor Burgess that a wetland pond is located on the subject property, but there are no springs. Mr. Stubbs notes there are protection standards in the Comprehensive Plan and the Land Development Regulations. Miss Portal states the City of Alachua has excellent policies and a lot of opportunity for setback and environmental resource protection in the planning process.

Vice-Mayor Burgess moves to approve Ordinance 09 11 on First Reading stating this Commission finds this application for a Large Scale Comprehensive Plan Amendment (LSCPA) to be consistent with the City of Alachua Comprehensive Plan and with a requirement that a text amendment concurrent with adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development of Regional Impact (DRI) threshold would be necessary, and authorize staff to transmit the proposed LSCPA to the Florida Department of Community Affairs; Commissioner Coerper seconds the motion.

Motion carries 4-0 on roll call vote.

C. **FIRST READING AND FIRST PUBLIC HEARING OF ORDINANCE 09 12: A REQUEST BY CAUSSEAUX, HEWETT, & WALPOLE, INC., AGENT FOR MESA-SAND REALTY, LLC, JULE L. SCHMIDT, AS CO-PERSONAL REPRESENTATIVE AND AS SUCCESSOR CO-TRUSTEE, PATRICIA M. i. FIRST READING, ORDINANCE 09 12; CONSIDERATION OF APPROVAL OF THE ABOVE STATED ORDINANCE
ii. PUBLIC HEARING TO CONSIDER ADOPTION OF THE ABOVE-REFERENCED ORDINANCE

First reading of Ordinance 09 12 by title only for public record by City Attorney Rush.

City Planner Justin Tabor gives a brief overview of the above-referenced item noting the subject property contains one single family residence and accessory structures typical of agricultural activities, and has most recently been used for cattle grazing. According to the applicant, the proposed land use change would result in a mix of residential and non-residential uses and provide for the protection of the most significant natural areas. Mr. Tabor reviews maps showing the adjacent properties and their land use. The Planning and Zoning Board held a public hearing on

this item on December 16, 2008 and voted 5-0 for approval and transmittal to the City Commission with a requirement that a text amendment concurrent with the adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development (DRI) thresholds would be necessary. Mr. Tabor notes that the concerns of the citizens in attendance at the Planning and Zoning Board meeting are summarized and in the Agenda packets, staff report, and the minutes from the meeting.

Gerry Dedenbach, with Causseaux, Hewett, & Walpole, Inc., agent for the applicant, gives a Power Point presentation outlining what is being proposed for this property beginning with a timeline of the land use change process. He notes a neighborhood meeting was held on the proposed changes, as well as a subsequent meeting. By moving the commercial areas away from the residential areas and into the core, large conservation areas were created. He notes three main concerns: 1) Surface water flow; 2) Conservation area behind Brooke Point; and 3) NW 102nd Place access.

Mr. Tabor continues with the staff report reviewing site suitability, needs analysis, urban sprawl analysis, public facilities impacts, consistency with the Comprehensive Plan, and DRI related issues.

Commissioner Coerper comments on the drainage on the subject property.

Mayor Calderwood notes for the record that they have received William Burger's letter, respectfully submitted by the Brooke Pointe Home Owners Association, noting three (3) concerns.

William Burger states the Commission has effectively raised the major concerns that the homeowners have about the subject property, especially potential flooding and the entrance to Brooke Pointe. He commends Mr. Dedenbach for the neighborhood meetings.

Pam Connolly respectively requests that maximum consideration be given to the conservation area, light pollution, and noise abatement, as well as the setback from wetlands, buffering, and stormwater management.

Richard Beardsley presents a letter to the Commission and comments on what draws people to this part of Alachua County. He is against approval of this Ordinance.

Karen Arington presents a letter to the Commission. She states the proposed development should not be approved.

Rupert Murphy states he is opposed to this development; he sees their way of life being destroyed and he objects to it.

Amy Ellis comments she is glad to see the Commission is looking closely at the creek on the subject property; she would like to see where it goes.

Shanna Johnson presents a letter to the Commission and reads it aloud. She requests that the Commission consider other options that bring better benefits to this area.

Mr. Dedenbach addresses the concerns that were noted by the citizens.

Commissioner Coerper moves to extend the meeting tonight until it ends no matter what time that is; Vice-Mayor Burgess seconds the motion.

Passed by unanimous consent.

Pete Wallace comments on the wetlands on the subject property noting they had put every possible place in conservation and this will be allowed to naturally succeed.

Commissioner Hills moves to approve Ordinance 09 12 on First Reading stating this Commission finds this application for a Large Scale Comprehensive Plan Amendment (LSCPA) to the City of Alachua Future Land Use Map to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations, with a requirement that a text amendment concurrent with the adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development of Regional Impact (DRI) thresholds would be necessary, and authorize staff to transmit the proposed amendment to the Florida Department of Community Affairs; Commissioner Coerper seconds the motion.

Motion carries 4-0 on roll call vote.

D. FIRST READING AND FIRST PUBLIC HEARING, ORDINANCE 09 13: A REQUEST BY CAUSSEAUX, HEWETT & WALPOLE, INC. FOR CONSIDERATION OF A TEXT AMENDMENT TO THE CITY OF ALACHUA COMPREHENSIVE PLAN TO AMEND OBJECTIVE 1.6 OF THE FUTURE LAND USE ELEMENT TO ALLOW PRIVATELY OWNED RECREATIONAL LANDS IN THE RECREATION FUTURE LAND USE MAP CATEGORY, AND AMEND POLICY 1.6.D OF THE FUTURE LAND USE ELEMENT TO LIMIT THE FLOOR AREA RATIO FOR PRIVATELY OWNED RECREATIONAL LANDS IN THE FUTURE LAND USE MAP CATEGORY

i. FIRST READING, ORDINANCE 09 13; CONSIDERATION OF APPROVAL OF THE ABOVE STATED ORDINANCE
ii. PUBLIC HEARING TO CONSIDER ADOPTION OF THE ABOVE-REFERENCED ORDINANCE

First reading of Ordinance 09 13 by title only for public record by City Attorney Rush.

Planning Director Kathy Winburn gives a brief overview of the above-referenced item noting Objective 1.6 currently reads as follows: Recreation: the City of Alachua shall designate a Recreation land use category for all publicly owned recreational lands, however, in order to provide the opportunity for recreation activities, recreational uses may be allowed outside of the Recreation land use category. The new language, underlined and in bold text, for the proposed Objective 1.6 is "...for all publicly **or privately** owned recreational lands...". Mrs. Winburn notes it is common in other local governments to allow privately owned recreational lands in a Recreation Future Land Use Map category and states the proposed amendment would bring the

Subject: Approval of Conceptual Environmental Resource Permit Application Number ERP08-0278, The Market at Schmidt Farms, Alachua County

Dear Applicant:

The Suwannee River Water Management District (District) proposes to issue Conceptual Environmental Resource Permit Number 08-0278 for your project located in Township 8 South, Range 19 East, Sections 34 and 35 26, in Alachua County. This proposed action is subject to final Governing Board approval at their regularly scheduled meeting on January 13, 2009.

Persons considered to be potentially affected by this proposed agency action may request an administrative hearing. The request must be in writing and must adhere to the guidelines set forth in Chapter 28-106, Florida Administrative Code. Please see the enclosed Notice of Rights. All requests for administrative hearings are required to be sent to the Suwannee River Water Management District, 9225 County Road 49, Live Oak, Florida 32060. Questions regarding the proposed action should be directed to the Department of Resource Management, 386.362.1001.

Sincerely,

Jon Dinges, P.E.

Subject: Approval of Environmental Resource Permit Application Number ERP08-0278, The Market at Schmidt Farms, Alachua County

Dear Applicant:

Enclosed is your permit for the above referenced project. This permit was issued for a period of five years. Please pay close attention to the conditions of your permit.

Substantially affected persons are entitled to request an administrative hearing pursuant to ss.120.57 (1), Florida Statutes (F.S.), and Chapter 28, Florida Administrative Code, if they object to the Suwannee River Water Management District's (District) actions. Failure to request a hearing within 21 days will constitute a waiver of your right to request such a hearing. In addition, the District will presume that permittee waives Chapter 120, F.S., rights to object or appeal the action upon commencement of construction authorized by the permit. This permit does not alleviate you from having to obtain all other clearances, permits, or authorizations required by any unit of local, state, or federal government.

If you wish, we will visit with you on site to discuss the terms of the permit, review existing pre-construction conditions, and answer any questions you may have prior to beginning work. To schedule a pre-construction meeting, please contact me.

If you have any questions regarding this, please call me at 386.362.1001.

Sincerely,

Jon Dinges, P.E.
Director, Resource Management

PROJECT: THE MARKET AT SCHMIDT FARMS

Approved entity to whom operation and maintenance may be transferred pursuant to rule 40B-4.1130, Florida Administrative Code (F.A.C.):

MYERS SAND REALTY, LLC
2220 N. MERIDIAN ST.
INDIANAPOLIS, IN 46208

Based on information provided, the Suwannee River Water Management District's (District) rules have been adhered to and an environmental resource conceptual permit is in effect for the permitted activity description below:

This permit authorizes a 0.882-acre wetland creation area, and 36.38 acres of wetlands and upland buffers to be placed in a conservation easement as mitigation for 0.88 acres of wetland impacts. The project will be completed in a manner consistent with the application package completed on December 3, 2008, by Myers Sand Realty, LLC, and satisfying the criteria in Chapters 40B-4 and 40B-400, Florida Administrative Code.

It is your responsibility to ensure that adverse off-site impacts do not occur either during or after construction. Any additional construction or alterations not authorized by this permit may result in flood control or water quality problems both on and off site and will be a violation of District rule.

You or any other substantially affected persons are entitled to request an administrative hearing or mediation. Please refer to enclosed notice of rights.

This permit is issued under the provisions of chapter 373, F.S., chapter 40B-4, and chapter 40B-400,

F.A.C. A general permit authorizes the construction, operation, maintenance, alteration, abandonment, or removal of certain minor surface water management systems. This permit authorizes the permittee to perform the work necessary to construct, operate, and maintain the surface water management system shown on the application and other documents included in the application. This is to notify you of District's agency action concerning Notice Of Intent. This action is taken pursuant to rule 40B-4 and 40B-400, F.A.C.

Standard Conditions for All General Permits:

1. The permittee shall perform all construction authorized in a manner so as to minimize adverse impacts to fish, wildlife, natural environmental values, and water quality. The permittee shall institute necessary measures during construction including riprap, reinforcement, or compaction of any fill materials placed around newly installed structures, to minimize erosion, turbidity, nutrient loading, and sedimentation in the receiving waters.

2. Water quality data representative of the water discharged from the permitted system, including, but not limited to, the parameters in chapter 62-3, F.A.C., shall be submitted to the District as required. If water quality data are required, the permittee shall provide data as required on the volume and rate of discharge including the total volume discharged during the sampling period. All water quality data shall be in accordance with and reference the specific method of analysis in "Standard Methods for the Examination of Water and Wastewater" by the American Public Health Association or "Methods for Chemical Analysis of Water and Wastes" by the U.S. Environmental Protection Agency.

3. The operational and maintenance phase of a surfacewater management permit will not become effective until the owner or his authorized agent certifies that all facilities have been constructed in accordance with the design permitted by the District. If required by the District, such as-built certification shall be made by an engineer or surveyor. Within 30 days after the completion of construction of the system, the permittee shall notify the District that the facilities are complete. If appropriate, the permittee shall request transfer of the permit to the responsible entity approved by the District for operation and maintenance. The District may inspect the system and, as necessary, require remedial measures as a condition of transfer of the permit or release for operation and maintenance of the system.

4. Off-site discharges during and after construction shall be made only through the facilities authorized by the permit. Water discharged from the project shall be through structures suitable for regulating upstream stage if so required by the District. Such discharges may be subject to operating schedules established by the District.

5. The permit does not convey to the permittee any property right nor any rights or privileges other

than those specified in the permit and chapter 40B-1, F.A.C.

6. The permittee shall hold and save the District harmless from any and all damages, claims, or liabilities which may arise by reason of the construction, operation, maintenance, alteration, abandonment, or development in a Works of the District which is authorized by the permit.

7. The permit is issued based on the information submitted by the applicant which reasonably demonstrates that adverse off-site water resource impacts will not be caused by the permitted activity. It is the responsibility of the permittee to insure that such adverse impacts do not in fact occur either during or after construction.

8. It is the responsibility of the permittee to obtain all other clearances, permits, or authorizations required by any unit of local, state, or federal government.

9. The surfacewater management system shall be constructed prior to or concurrent with the development that the system is intended to serve and the system shall be completed within 30 days of substantial completion of the development which the system is intended to serve.

10. Except for General Permits After Notice or permits issued to a unit of government, or unless a different schedule is specified in the permit, the system shall be inspected at least once every third year after transfer of a permit to operation and maintenance by the permittee or his agent to ascertain that the system is being operated and maintained in a manner consistent with the permit. A report of inspection is to be sent to the District within 30 days of the inspection date. If required by chapter 471, F.S., such inspection and report shall be made by an engineer.

11. As-built certification shall be made by an engineer or surveyor.

12. The permittee shall allow reasonable access to District personnel or agents for the purpose of inspecting the system to insure compliance with the permit. The permittee shall allow the District, at its expense, to install equipment or devices to monitor performance of the system authorized by their permit.

13. The surfacewater management system shall be operated and maintained in a manner which is consistent with the conditions of the permit and chapter 40B-4.2040, F.A.C.

14. The permittee is responsible for the perpetual operation and maintenance of the system unless the operation and maintenance is transferred pursuant to chapter 40B-4.1130, F.A.C., or the permit is modified to authorize a new operation and maintenance entity pursuant to chapter 40B-4.1110, F.A.C.

Permit No.: ERP08-0278

Project: THE MARKET AT SCHMIDT FARMS

Page 4 of 7

15. Notwithstanding any reference herein made, no construction is authorized by this conceptual plan permit.

16. Each phase shall require a general environmental resource permit.

Special limiting conditions made part of this permit are as follows:

17. Prior to issuance of future environmental resource permits for construction, the proposed conservation easement shall be accepted by the District Governing Board and recorded with the Alachua County Clerk of Courts.

WITHIN 30 DAYS AFTER COMPLETION OF THE PROJECT, THE PERMITTEE SHALL NOTIFY THE DISTRICT, IN WRITING, THAT THE FACILITIES ARE COMPLETE.

NOTICE OF RIGHTS

1. A person whose substantial interests are or may be determined has the right to request an administrative hearing by filing a written petition with the Suwannee River Water Management District (District), or may choose to pursue mediation as an alternative remedy under Section 120.569 and 120.573, Florida Statutes, before the deadline for filing a petition. Choosing mediation will not adversely affect the right to a hearing if mediation does not result in a settlement. The procedures for pursuing mediation are set forth in Sections 120.569 and 120.57 Florida Statutes. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). A petition must comply with Chapter 28-106, Florida Administrative Code.

2. If the Governing Board takes action which substantially differs from the notice of District decision to grant or deny the permit application, a person whose substantial interests are or may be determined has the right to request an administrative hearing or may chose to pursue mediation as an alternative remedy as described above. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). Such a petition must comply with Chapter 28-106, Florida Administrative Code.

3. A substantially interested person has the right to a formal administrative hearing pursuant to Section 120.569 and 120.57(1), Florida Statutes, where there is a dispute between the District and the party regarding an issue of material fact. A petition for formal hearing must comply with the requirements set forth in Rule 28-106.201, Florida Administrative Code.

4. A substantially interested person has the right to an informal hearing pursuant to Section 120.569 and 120.57(2), Florida Statutes, where no material facts are in dispute. A petition for an informal hearing must comply with the requirements set forth in Rule 28-106.301, Florida Administrative Code.

5. A petition for an administrative hearing is deemed filed upon receipt of the petition by the Office of the District Clerk at the District Headquarters in Live Oak, Florida.

6. Failure to file a petition for an administrative hearing within the requisite time frame shall constitute a waiver of the right to an administrative hearing pursuant to Rule 28-106.111, Florida Administrative Code.

Permit No.: ERP08-0278

Project: THE MARKET AT SCHMIDT FARMS

Page 6 of 7

7. The right to an administrative hearing and the relevant procedures to be followed is governed by Chapter 120, Florida Statutes, and Chapter 28-106, Florida Administrative Code.

8. Pursuant to Section 120.68, Florida Statutes, a person who is adversely affected by final District action may seek review of the action in the District Court of Appeal by filing a notice of appeal pursuant to the Florida Rules of Appellate Procedure, within 30 days of the rendering of the final District action.

9. A party to the proceeding before the District who claims that a District order is inconsistent with the provisions and purposes of Chapter 373, Florida Statutes, may seek review of the order pursuant to Section 373.114, Florida Statutes, by the Florida Land and Water Adjudicatory Commission, by filing a request for review with the Commission and serving a copy of the Department of Environmental Protection and any person named in the order within 20 days of adoption of a rule or the rendering of the District order.

10. For appeals to the District Courts of Appeal, a District action is considered rendered after it is signed on behalf of the District, and is filed by the District Clerk.

11. Failure to observe the relevant time frames for filing a petition for judicial review, or for Commission review, will result in waiver of the right to review.

A person whose substantial interests are or may be determined has the right to request an administrative hearing by filing a written petition with the Suwannee River Water Management District (District), or may choose to pursue mediation as an alternative remedy under Section 120.569 and 120.573, Florida Statutes, before the deadline for filing a petition. Choosing mediation will not adversely affect the right to a hearing if mediation does not result in a settlement. The procedures for pursuing mediation are set forth in Sections 120.569 and 120.57 Florida Statutes. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). A petition must comply with Chapter 28-106, Florida Administrative Code.

2. If the Governing Board takes action which substantially differs from the notice of District decision to grant or deny the permit application, a person whose substantial interests are or may be determined has the right to request an administrative hearing or may chose to pursue mediation as an alternative remedy as described above. Pursuant to Rule 28-106.111, Florida Administrative Code, the petition must be filed at the office of the District Clerk at District Headquarters, 9225 C.R. 49, Live Oak, Florida 32060 within twenty-one (21) days of receipt of written notice of the decision or within twenty-one (21) days of newspaper publication of the notice of District decision (for those persons to whom the District does not mail actual notice). Such a petition must comply with Chapter 28-106, Florida Administrative Code.

3. A substantially interested person has the right to a formal administrative hearing pursuant to Section 120.569 and 120.57(1), Florida Statutes, where there is a dispute between the District and the party regarding an issue of material fact. A petition for formal hearing must comply with the requirements set forth in Rule 28-106.201, Florida Administrative Code.

4. A substantially interested person has the right to an informal hearing pursuant to Section 120.569 and 120.57(2), Florida Statutes, where no material facts are in dispute. A petition for an informal hearing must comply with the requirements set forth in Rule 28-106.301, Florida Administrative Code.

5. A petition for an administrative hearing is deemed filed upon receipt of the petition by the Office of the District Clerk at the District Headquarters in Live Oak, Florida.

6. Failure to file a petition for an administrative hearing within the requisite time frame shall constitute a waiver of the right to an administrative hearing pursuant to Rule 28-106.111, Florida Administrative Code.

7. The right to an administrative hearing and the relevant procedures to be followed is governed by Chapter 120, Florida Statutes, and Chapter 28-106, Florida Administrative Code.

8. Pursuant to Section 120.68, Florida Statutes, a person who is adversely affected by final District action may seek review of the action in the District Court of Appeal by filing a notice of appeal pursuant to the Florida Rules of Appellate Procedure, within 30 days of the rendering of the final District action.

9. A party to the proceeding before the District who claims that a District order is inconsistent with the provisions and purposes of Chapter 373, Florida Statutes, may seek review of the order pursuant to Section 373.114, Florida Statutes, by the Florida Land and Water Adjudicatory Commission, by filing a request for review with the Commission and serving a copy of the Department of Environmental Protection and any person named in the order within 20 days of adoption of a rule or the rendering of the District order.

10. For appeals to the District Courts of Appeal, a District action is considered rendered after it is signed on behalf of the District, and is filed by the District Clerk.

11. Failure to observe the relevant time frames for filing a petition for judicial review described in paragraphs no. 11 and 12, or for Commission review as described in paragraph no. 13, will result in waiver of the right to review.

CERTIFICATE OF SERVICE

I hereby certify that a copy of the foregoing Notice of Rights has been sent by U.S. Mail to:

Myers Sand Realty, LLC
2220 N. Meridian St.
Indianapolis, IN 46208

At 4:00 p.m. this 23 day of December, 2008

Jon Dinges

STAFF REPORT
CONCEPTUAL ENVIRONMENTAL RESOURCE PERMIT APPLICATION

DATE: **December 23, 2008**

PROJECT: **The Market at Schmidt Farms**

APPLICANT:
Myers Sand Realty, LLC
2220 N. Meridian Street
Indianapolis, IN 46208

PERMIT APPLICATION NO.: ERP08-0278
DATE OF APPLICATION: 08/07/08
APPLICATION COMPLETE: 12/03/08
DEFAULT DATE: 03/03/09

Corporate Officers of Myers Sand Realty, LLC

Registered Agent	NRAI Services, Inc
Manager	David N. Eskenazi
Manager	Jay Stein

Corporate Officers of NRAI Services, Inc

Registered Agent	GEC Group, LLC
President/Director	Dennis Howarth
Vice President /Treasurer/Director	Dennis Tarzian
Vice President/Secretary/Director	Charles Baclet
Assistant Secretary	Eileen Ash
Vice President/Director	Kent Rockwell
Vice President/Director	Robert Rowell

Corporate Officers for GEC Group, Inc.

Registered Agent	Karen L. Redman
Manager	Karen L. Redman

Recommended Agency Action

Staff recommends issuance of a conceptual permit with sixteen standard conditions and one special limiting condition. A draft permit containing the conditions is attached to this staff report.

SRWMD Project Review Staff

Louis Mantini, P.W.S, Environmental Specialist; and Tim Sagul, P.E., Assistant Director, Resource Management, reviewed the project application.

Approved By: _____
Jon Dinges, P.E., Director, Resource Management

Project Location

The project is located at the intersection of US 441 and NW 43rd Street in Township 8 South, Range 19 East, Sections 34 and 35, in Alachua County

Project Description

The applicant requests a permit to mitigate for 0.88 acres of direct wetland impacts as part of a conceptual development with a combined 17.00 acres of residential development, 26.77 acres of open space, and 51.54 acres of commercial development.

Interagency Coordination

Staff notified the following: Alachua County Board of Commissioners, the United States Army Corps of Engineers, and the Florida Fish and Wildlife Conservation Commission, and the Florida Department of State – Historical Resources.

Review of Resource Impacts and District Permitting Criteria

Will the project increase flood hazards outside the project area?
[ref. 40B-4.2030(2)(a) and 40B-4.2030(5)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the project increase flood hazards that may affect the health, safety and general welfare of persons residing within the project area?
[ref. 40B-4.2030(2)(b) and 40B-4.2030(5)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the project create excessive drainage of surfacewaters or permanent dewatering of surficial aquifers?
[ref. 40B-4.2030(2)(a)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will erosion be controlled to avoid sedimentation, which would render the proposed system unserviceable; or to avoid sedimentation that would degrade receiving waters?
[ref. 40B-4.2030(2)(d)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the waters discharged or percolated from the surfacewater management system receive at least the minimum level of stormwater treatment necessary to comply with state water quality standards?
[ref. 40B-4.2030(2)(e) and 40B-4.2030(7)]

This criterion will be addressed in detail during review of environmental resource permit applications for construction.

Will the system have adverse environmental impacts including impacts to fish, wildlife, wetlands, and other natural resources?
[ref. 40B-4.2030(2)(f)]

No. In order to offset 0.88 acres of direct wetland impacts, the applicant is proposing to mitigate on-site with a 0.882-acre wetland creation area and 36.38 acres of wetland buffers, the latter to be placed in a conservation easement to the benefit of the district. The conservation easement will be brought to the Governing Board at a later time for consideration, and is proposed in concept only at this time.

Will the new surfacewater management system convert wetlands to uplands through drainage, filling, or other means? (If yes, describe mitigation for loss of storage, wetland mitigation, and effects on aquifer recharge.)
[ref. 40B-4.2030(3)]

Yes. The applicant proposes 0.777 acres of direct impacts to a livestock pond and associated overland drainage ditches; 0.040 acres of streamside wetlands associated with a proposed road crossing; and 0.065 acres of impacts to two isolated wetlands.

In order to offset 0.88 acres of direct wetland impacts, the applicant is proposing to mitigate on-site with a 0.882-acre wetland creation area and 36.38 acres of wetlands and upland buffers, the latter to be placed in a conservation easement to the District.

The proposed conservation easement will preserve 36.38 acres of wetlands and upland buffers currently under agricultural land use, including 15.65 acres of extended wetland and streamside buffers associated with Turkey Creek, Brooke Pointe Creek, and an unnamed tributary of Turkey Creek.

Monitoring will not be required for the created wetland, since mitigation will be satisfied by the proposed conservation easement.

Will the new surfacewater management system result in development within a work of the district that has the potential for reducing floodway conveyance?
[ref. 40B-4.2030(4) and 40B-4.2030(6)]

The project is not in a Work of the District.

Who is the authorized Operation and Maintenance Entity?

Myers Sand Realty, LLC, is the proposed operation and maintenance entity.

WETLAND MITIGATION STAFF REPORT

CONCEPTUAL ENVIRONMENTAL RESOURCE PERMIT APPLICATION

DATE: December 23, 2008

PROJECT: The Market at Schmidt Farms

APPLICANT:
Myers Sand Realty, LLC
2220 N. Meridian Street
Indianapolis, IN 46208

PERMIT APPLICATION NO.: ERP08-0278
DATE OF APPLICATION: 08/07/08
APPLICATION COMPLETE: 12/03/08
DEFAULT DATE: 03/03/09

The applicant requests a permit to mitigate for 0.88 acres of direct wetland impacts as part of a conceptual planned development with a combined 17.00 acres of residential development, 26.77 acres of open space, and 51.54 acres of commercial development.

The Uniform Mitigation Assessment Method (UMAM) in 62-345, Florida Administrative Code, was used to determine the amount of wetland function lost by the 0.88 acres of wetland impacts. The functional loss associated with the 0.88 acres of wetland impacts is 0.4724 functional loss units. The applicant is proposing to mitigate on-site with a 0.882-acre wetland creation area and 36.38 acres of wetlands and upland buffers, the latter to be placed in a conservation easement. The wetland buffers will be an average of 75 feet and minimum of 50 feet from the jurisdictional wetland boundary. The proposed conservation easement will preserve 36.38 acres of upland and wetland areas currently under agricultural land use, including 15.65 acres of extended wetland and streamside buffers associated with Turkey Creek, Brooke Pointe Creek, and an unnamed tributary of Turkey Creek.

A total of 0.4724 functional loss units will be offset by 0.3440 and 2.110 units of functional gain associated with wetland creation and conservation easement, respectively. Monitoring will not be required for the creation wetland, since mitigation will be completely satisfied by the easement.

MARKET AT SCHMIDT FARMS – LARGE SCALE COMPREHENSIVE PLAN AMENDMENT

December 16, 2008

I. OVERVIEW

Large Scale Comprehensive Plan Amendment (LSCPA). A request by Causseaux, Hewett, & Walpole, Inc., agent for Mesa-Sand Realty, LLC, Jule L. Schmidt, as co-personal representative and as successor co-trustee, Patricia M. Schmidt Richard, as co-personal representative and as successor co-trustee, Thomas Alan Schmidt, as co-personal representative and as successor co-trustee, Herbert Matilsky and Barbara Matilsky, owners, for consideration of a Large Scale Comprehensive Plan Amendment (LSCPA) to the City of Alachua Future Land Use Map from Agriculture (±92.23 acres) and Commercial (±39.37 acres) to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres). The ±131.6 acre subject property for the proposed amendment is located at 9900 NW US Highway 441, Alachua, Florida. Existing FLUM: Agriculture and Commercial; Zoning: Agriculture and Commercial Intensive (CI); Tax Parcel Nos. 05936-001-000; 05936-001-001; 05936-006-000; 05936-007-000; 05945-000-000.

Map 1. Future Land Use Map with Subject Property

II. BACKGROUND

The proposed Large Scale Comprehensive Plan Amendment (LSCPA) is a request by Causseaux, Hewett, & Walpole, Inc., to amend the City of Alachua Future Land Use Map from Agriculture (±92.23 acres) and Commercial (±39.37 acres) to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres) on an approximate 131.6 acre subject property. The subject property contains one single family residence and accessory structures typical of agricultural activities, and has most recently been used for cattle grazing. According to the applicant, the proposed land use change would result in a mix of residential and non-residential uses and provide for the protection of the most significant natural areas.

The subject property is located west of the intersection of US Highway 441 and NW 43rd Street. The Deerhaven Power plant is located to the north of the subject property. Located to the east of the subject property is Deerhaven Citgo and NW 43rd Street Storage, among other commercial and office uses. Single family residences are located to the south, west, and north of the subject property.

Best available data and the Environmental Resource Assessment submitted by the applicant indicate that the subject property contains wetland areas and that the subject property is in Flood Zone A (areas determined to be inside of the 100-year floodplain, with no Base Flood Elevation (BFE) determined) and Flood Zone X (areas determined to be outside of the 500-year floodplain). Turkey Creek is located along the western and southern property boundary. An unnamed creek is located north of the subject property and adjacent to a portion of the northern and western property boundary. This unnamed creek flows to and joins with Turkey Creek along the western property boundary. A third creek (also unnamed) runs through a portion of the eastern part of the subject property. This creek also flows to Turkey Creek. One lake is located on the subject property, which, according to the Environmental Resource Assessment submitted by the applicant, is an excavated pond that was dug circa 1979 in an historic forested wetland area. The pond has been degraded due to agricultural activity that has occurred on-site. The subject property does not contain any champion trees, sinkholes, Alachua County Forever Lands, Florida Natural Area Inventory areas, Strategic Ecosystems, or pits and spoil areas.

The ***Commercial Future Land Use Map (FLUM) Designation*** is described as follows in Policy 1.3.b of the Future Land Use Element of the Comprehensive Plan:

> The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses could locate. The following uses are allowed within the Commercial land use category:
>
> 1. Retail sales and services;
> 2. Personal services;
> 3. Financial Institutions;
> 4. Outdoor recreation and entertainment;
> 5. Tourist-related uses;
> 6. Hotels, motels;

7. Commercial shopping centers;
8. Auto-oriented uses;
9. Traditional Mixed-use Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/business parks;
13. Limited industrial services;
14. Eating Establishments

The ***Moderate Density Residential Future Land Use Map (FLUM) Designation*** is described as follows in Policy 1.2.a of the Future Land Use Element of the Comprehensive Plan:

Moderate density residential (0 to 4 dwelling units per acre): The moderate density residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the moderate density residential land use category:

1. Single family, conventional dwelling units;
2. Accessory dwelling units;
3. Manufactured or modular homes meeting certain design criteria
4. Mobile homes only within mobile home parks;
5. Duplexes and quadplexes;
6. Townhomes;
7. Residential Planned Developments;
8. Supporting community services, such as schools, houses of worship, parks, and community centers

The ***Conservation Future Land Use Map (FLUM) Designation*** is described as follows in Objective 1.7 of the Future Land Use Element of the Comprehensive Plan:

Conservation: The City shall create a Conservation land use category for lands on which certain identifiable features, such as flowing surface water bodies, wetland systems, flood plains, wellfield protection areas, unique geologic characteristics, and listed plant and wildlife habitat require enhanced oversight and regulatory protection. Land use regulations for designated conservation areas will consider the vulnerability of susceptible features and vary accordingly. Conservation areas will allow a diverse range of activities and development opportunities, depending on the nature and degree of vulnerability of the susceptible features present.

3

In addition, Policy 1.7.a of the Future Land Use Element of the Comprehensive Plan elaborates upon Objective 1.7, and states:

> Conservation uses: Conservation uses shall be limited to public access, low-intensity resource-based recreation, (i.e., greenways and trails), native vegetative community restoration, residential and non-residential uses necessary to manage such conservation lands (i.e., ranger stations, research stations, and park amenities).

Under the existing FLUM Designations of Agriculture and Commercial, the subject property currently consists of the following maximum development potential:

Table 1. Existing Future Land Use Map Designation Maximum Densities & Intensities

Existing Future Land Use Map Designation	Acreage	Maximum Permitted Density/Intensity	Subject Property Maximum Density/Intensity
Commercial	39.37	0.5 FAR	857,479 square feet
Agriculture	92.23	1 DU / 5 Acres	18 dwelling units

Under the proposed FLUM Designations of Commercial, Conservation, and Moderate Density Residential, the subject property would consist of the following maximum development potential:

Table 2. Proposed Future Land Use Map Designation Maximum Densities & Intensities

Proposed Future Land Use Map Designation	Acreage	Maximum Permitted Density/Intensity	Subject Property Maximum Density/Intensity
Commercial	50.81	0.5 FAR	1,106,685 square feet
Conservation	37.06	N/A	N/A
Moderate Density Residential	43.73	4 DU / Acre	174 dwelling units

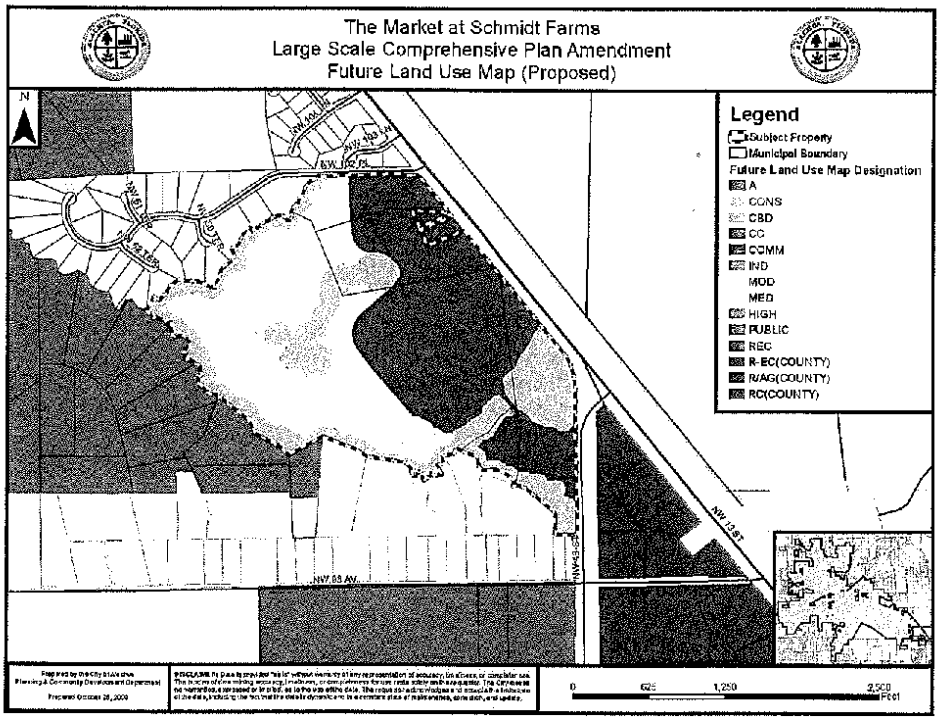
The net increase in maximum permitted densities and intensities is as shown in Table 3 below:

Table 3. Net Increase in Maximum Permitted Densities & Intensities

	Commercial Future Land Use Map Designation	"Residential" FLUM Designations[1]
Proposed Future Land Use Map Designations	1,106,685 square feet	174 dwelling units
Existing Future Land Use Map Designations	857,479 square feet	18 dwelling units
Net Increase	**249,206 square feet**	**156 dwelling units**

1. "Residential" FLUM Designations represent Agriculture and Moderate Density Residential FLUM Designations.

The applicant has also provided a proposed maximum development scenario. This development scenario would limit the development below Development of Regional Impact (DRI) thresholds.



The maximum development potential under the applicant's proposed maximum development scenario is as follows:

Table 4. Proposed Future Land Use Map Designation Maximum Densities & Intensities

Proposed Future Land Use Map Designation	Acreage	Proposed Maximum Density/Intensity
Moderate Density Residential	43.73	174 dwelling units
Commercial	50.81	399,900 square feet (retail)
		44,000 square feet (office)

The existing uses, Future Land Use Map (FLUM) Designations, and Zone Districts of the surrounding area are outlined in Table 5. Map 2 shows the amended Future Land Use Map, if the proposed amendment is approved.

Map 2. Proposed Amendment to the Future Land Use Map

A. Surrounding Uses.

Table 5. Surrounding Land Uses

Direction	Existing Use	Land Use	Zoning
North	Brook Pointe Subdivision, Staghorn Subdivision, Deerhaven Power Plant	Moderate Density Residential; Public Facilities (City of Gainesville Des.)	Residential Single Family – 1 (RSF-1); Planned Unit Development (PUD); Public Services (City of Gainesville Des.)
South	Single Family Residences	Residential Low Density (Alachua Co. Des.)	Residential Single Family Estate (RE-1) (Alachua Co. Des.)
East	Deerhaven Citgo, 43rd Street Storage, Deerhaven Power Plant	Commercial; Public Facilities (City of Gainesville Des.)	Commercial Intensive (CI); Public Services (City of Gainesville Des.)
West	Morgan Manor Subdivision, Brook Pointe Subdivision	Moderate Density Residential; Agriculture	Residential Single Family – 1 (RSF-1); Agriculture (A)

III. CONCLUSIONS OF LAW: CONSISTENCY WITH THE ALACHUA COMPREHENSIVE PLAN, RULE 9J-5, AND CHAPTER 163, PART II.

A. Suitability/Natural Resources. A Site Suitability Analysis is one of the principal factors when proposing a land use change (Rule 9J-5.006(2)(b)2). At the Future Land Use Map (FLUM) Amendment stage, a detailed, site-specific analysis should also be completed, utilizing desk top data as well as on-site surveys and field notes. Fundamentally, the intent behind a site-specific suitability analysis is to determine whether or not a FLUM Amendment is appropriate for a given property and its environmental features. As such, consideration of these environmental features should be the first step towards making a determination about the appropriateness of a proposed Future Land Use Map Amendment.

Wetland Assessment

According to materials submitted by the applicant, there are wetland areas located on the subject property. As part of the application submittal, the applicant provided an Environmental Resource Assessment (ERA) conducted by Environmental Research Corporation (ERC). The ERA identifies a total of five (5) wetland areas: Schmidt Creek (3.689 acres); Turkey Creek (3.884 acres); Brook Pointe Creek (1.051 acres); Disturbed Depression Wetlands (0.945 acres); and Disturbed Mixed Hardwoods – Shrub Seepage Wetlands (1.062 acres). These wetland areas were determined by flagging and surveying in accordance with methodologies outlined in Chapter 62-340, F.A.C., and were flagged by ERC in November 2007.

Wetland areas are subject to the applicable protection standards of the City of Alachua Comprehensive Plan and the Land Development Regulations (LDRs), including but not

limited to, buffering requirements as provided in Policy 1.10.g of the Conservation and Open Space Element of the Future Land Use Element and the standards established in Section 6.9.5, *Wetlands Standards*, of the LDRs.

Evaluation: Wetland areas located on the subject property have been field verified and marked in accordance with methodologies outlined in Chapter 62-340, F.A.C. In order to mitigate for any potential impacts to wetland areas, the applicant has placed most wetland areas into the Conservation Future Land Use Map (FLUM) Designation. Given the information above, no issues relating to wetlands have been identified with the proposed amendment.

The applicant has adequately addressed the protection of wetland areas at this time, and has incorporated known data into the proposed FLUM amendment. Any development which occurs on-site must comply with the aforementioned protection standards of the City of Alachua Comprehensive Plan and Land Development Regulations (LDRs).

Map 3. Environmental Features

Strategic Ecosystems

The subject parcel is not located within a Strategic Ecosystem Overlay (areas identified as important ecological corridors).

Evaluation: Given the information above, no issues relating to strategic ecosystems have been identified with the proposed amendment.

Regulated Plant & Animal Species

The Environmental Resource Assessment (ERA) submitted by the applicant and prepared by Environmental Resource Corporation (ERC) indicates that surveys for the occurrence of imperiled species were performed concurrent with plant community surveys from October 2006, November 2007, and April through May 2008. In addition to these field surveys, ERC searched several existing databases to investigate the documented and imperiled species that may be located in and around the project site.

There was one (1) listed plant species found during the field survey. A plant belonging to the genus *Matelea* is found variously in hardwood areas adjacent to creek systems. The plant is either *Matelea floridana*, which is listed as endangered by the State of Florida, or *Matelea gonocarpus*, which is listed as threatened by the State of Florida. The ERA indicates that the precise species could be determined without the presence of flowers, which were not seen during observation. The ERA indicates that these species are common in Alachua County mesic hammock areas, and that the habitat for both species on-site is located within the proposed Conservation Future Land Use Map (FLUM) Designation areas. Therefore, the proposed amendment should have no adverse affect on existing populations, and in fact, may be more protected due to the removal of cattle.

If any development occurs on-site, the applicant must adhere to the provisions of the Tree Ordinance found in the Land Development Regulations (LDRs) if any alterations to the existing vegetation are proposed (i.e. tree removal). Further, should any other regulated plant or animal species be identified during the development process, the applicant must adhere to the applicable standards in the City of Alachua Comprehensive Plan and the LDRs.

Evaluation: The Environmental Resource Assessment submitted by the applicant has provided an analysis of the potential for occurrence of threatened and endangered species. One (1) listed plant species was found on-site, however, the habitat for this species is located within areas with a Conservation Future Land Use Map (FLUM) Designation proposed. If any other threatened or endangered species are found to exist on-site, the applicant must adhere to the protection standards of the City of Alachua Comprehensive Plan and Land Development Regulations (LDRs), as well as the regulations of other agencies, including but not limited to, the United States Fish and Wildlife Service (USFWS), the Florida Fish and Wildlife Conservation Commission, the Florida Department of Environmental Protection (FDEP), and Alachua County Environmental Protection Department (EPD). Given the information above, no issues related to regulated plant and animal species have been identified with the proposed amendment.

Soil Survey

Each soil type found on the subject property has been identified below, as well as a discussion of any limitations the soil type may pose. The hydrologic soil group for each soil type is also provided. Additional information regarding on-site soils is contained on pages 95 – 96 of the Environmental Resource Assessment (ERA).

The hydrologic soil group, as defined for each specific soil below, refers to soils grouped according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration. The slope and kind of plant cover are not considered, but are separate factors in predicting runoff. There are four groups: A, B, C, and D. Group A soils have a high infiltration rate when thoroughly wet and have a low runoff potential. Group D soils, at the other extreme, are soils having very low infiltration rates and thus a high runoff potential.

There are six (6) soil types found on the subject property:

(1) Kanapaha Sand (0% - 5% slopes)

This soil has severe limitation for urban uses, including absorptiou fields and for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and local roads and streets. Wetness and sandy texture are the major problems. A good drainage system is needed to remove the excess water during we periods and to adequately control the water table.

Hydrologic Soil Group: B/D

(2) Floridana Sand Depressional

This soil has severe limitations for urban uses, including absorption fields for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and local roads and streets. Wetness and the sandy texture are major problems. A good drainage system is needed to remove the excess water during wet periods and to adequately control the water table.

Hydrologic Soil Group: D

(3) Millhopper Sand (0% - 5% slopes)

This soil has only slight limitations as sites for homes without basements, small commercial buildings, and for local roads and streets.

Hydrologic Soil Group: A

(4) Mulat Sand

This soil has severe limitations for all urban uses. Wetness is the major limitation. A good drainage system is necessary to remove the excess water during wet periods and to adequately control the water table. This soil has severe limitations for recreational uses.

Hydrologic Soil Group: D

(5) Pelham Sand

This soil has severe limitations for urban uses including absorption fields for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and roads and streets. Wetness is a major limitation. A good drainage system is needed to remove the excess water during wet period and to adequately control the water table.

Hydrologic Soil Group: B/D

(6) Pomona Sand

This soil has severe limitations for urban uses, including absorption fields for septic tanks, dwellings, small commercial buildings, sewage lagoons, trench landfills, and roads and streets. Wetness is the major problem. A good drainage system is needed to remove the excess water during wet periods and to adequately control the water table.

Hydrologic Soil Group: B/D

Evaluation: The applicant has submitted information regarding each soil type present on-site. While some soils pose limitations for development, a Preliminary Subsurface Soil Exploration and Geotechnical Engineering Evaluation conducted by Ardaman & Associates, Inc., and submitted as Attachment 1 to the Environmental Resource Assessment (ERA) indicates that the results of the exploration indicate that, with proper site preparation as recommended by Ardaman & Associates, Inc., the existing soils are suitable for supporting anticipated development. Given the information above, no issues relating to soils types have been identified with the proposed amendment.

Flood Potential

According to Panel 0285D of the most recent Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) series, the subject property is located in Flood Zone A (areas determined to be subject to flooding by the 1% annual chance flood (100-year flood), with no Base Flood Elevation (BFE) determined) and Flood Zone X (areas outside of the 500-year flood zone). Map 3 indicates areas of special flood hazard.

Evaluation: The applicant has acknowledged that portions of the subject property are located in areas of special flood hazard, and that the location of areas of special flood hazard must be considered through site development and incorporated into the overall development. At this time, the applicant has adequately addressed any concerns related to flood potential. If portions of the floodplain are utilized as building area, the applicant will be subject to the standards of Section 6.9.4, *Flood Prone Area Standards*, of the Land Development Regulations (LDRs). Given the information above, no issues related to flood potential have been identified with the proposed amendment.

Karst Sensitive Features

Karst sensitive areas include geology of irregular limestone formation in which erosion has produced fissures, sinkholes, underground streams, and caverns. Materials submitted by the applicant indicate that the subject property is not located within a karst sensitive area. The Preliminary Subsurface Soil Exploration and Geotechnical Engineering Evaluation conducted by Ardaman & Associates, Inc., and submitted as Attachment 1 to the Environmental Resource Assessment (ERA) indicates that the subject property is located over Ocala limestone ranging from twenty (20) feet to seventy-five (75) feet below ground surface. A typical soil profile consists of organic matter from ground surface to one and a half (1 ½) feet below ground surface, and very loose to loose fine sand containing varying amounts of silt and/or clay at depths from three (3) to five (5) feet. Drainage through such soils creates a natural filtering process for percolation into the Floridan Aquifer. The applicant has also indicated that the subject property is located in an area having low-medium aquifer recharge potential. The applicant has indicated that special consideration for stormwater management will be taken at the development stage, thus reducing the likelihood for groundwater contamination.

Evaluation: Given the information above, there are no concerns in this regard. It will be important that the applicant respond appropriately to any significant geologic features that may be identified during development and that stormwater facilities are designed and located with the same level of consideration, subject to approval by the Suwannee River Water Management District (SRWMD).

Wellfield Protection Zone

The subject property is not located within a City of Alachua Wellhead Protection Zone.

Evaluation: Given the information above, no issues have been identified in this regard.

B. Needs Analysis. Pursuant to Rule 9J-5, F.A.C., Future Land Use Map (FLUM) Amendments, in addition to being supported by sufficient data and analysis, must include a discussion that properly justifies the need for the land use change. This analysis should provide data based on an examination of population projections and market conditions within the planning horizon of the Comprehensive Plan, and should indicate that an increase in a certain Future Land Use Map Designation can be justified by this data.

The Needs Analysis should effectively demonstrate the need for an increase in the proposed Future Land Use Map Designation. The applicant is requesting a FLUM Designation of Commercial and Moderate Density Residential; therefore, the Needs Analysis must demonstrate a need for an increased amount of land with a Commercial and Moderate Density Residential FLUM Designations in the City.

The applicant has submitted a Market and Impact Study prepared by Dr. Greg Smersh, Professor of Real Estate at Florida State University. The study provides an evaluation of the urban economic area surrounding the subject property and analyzes the current and potential demand for various property types, including retail, office, and residential. The study was based upon the applicant's proposed development scenario, which consists of up to 400,000 square feet of commercial floor area, up to 80,000 square feet of office space, and up to 175 dwelling units.

The Market and Impact Study defines two (2) market areas: a primary market area and a secondary market area. The primary market area consists of a three (3) mile radial area surrounding the subject property, while the secondary market area consists of a five (5) mile radial area surrounding the subject property.

The Market and Impact Study states that land use and location theory indicate that the demand for real estate is ultimately driven by the local population. To estimate the current populations within each market area, the applicant utilized data obtained from the Alachua County Property Appraiser in June 2008. The number of residential dwelling units in each market area was determined, then a multiplier was applied based on the estimated number of persons per household (2.6 persons per household); vacancy rates were also applied. Based upon this methodology, the Market and Impact Study estimates that 12,941 persons are located within the three (3) mile market area, and 48,023 persons are located within the five (5) mile market area.

The Market and Impact Study provides an estimation of the supply and demand for commercial real estate. This analysis has also been calculated using data obtained from the Alachua County Property Appraiser in June 2008. Using a Geographic Information System (GIS) analysis, the study calculates the total square footage (supply) of retail, restaurant, and office space within the two (2) market areas by selecting properties based on their location. For an initial comparative analysis, the study calculates square feet per person ratios for the City of Alachua, Alachua County, and the City of Gainesville. Upon calculating the demand of retail, restaurant, and office space within the three (3) and five (5) mile market areas, the study subtracts the current demand from the supply to determine the gap between supply and demand. This is referred to as a GAP Analysis. The GAP Analysis provided in the study indicates that there currently is a gap of 442,284 square feet of commercial, 40,753 square feet of restaurant, and 195,830 square feet of office space within the three (3) mile market area. Within the five (5) mile market area, the GAP Analysis indicates that there is a gap of 1,159,358 square feet of commercial and 104,514 square feet of restaurant space. According to the Analysis, office space is currently in oversupply in the five (5) mile market area by 38,430 square feet of floor area.

12

The study continues by providing a discussion regarding the regional economy and future population growth. The study defines Basic Employment as activities that produce goods and services for consumption ***outside*** the community. These employers primarily demand industrial and office space. Basic employees demand goods and services, which in turn creates Non-Basic Employment (activities that produce goods and services ***for*** the local economy). The study continues by utilizing data regarding employment figures for Alachua County for numerous basic employment sectors. These figures were obtained from the Bureau of Economic Analysis, and indicate that the total number of basic employment in Alachua County consists of 59,799 jobs. The total number of employment is 153,434. Dividing the total number of employment by the number of basic jobs yields an economic base multiplier. For Alachua County, the resulting economic base multiplier is 2.57, indicating that for each basic job created, an additional 1.57 jobs is created.

This information can be utilized to assist in estimating population growth. The study indicates that new employment in the area could exceed 1,000 basic jobs. Assuming 1,000 basic jobs are created, utilizing the economic base multiplier discussed above, the total number of jobs created would be 2,570 jobs. Based upon the population-to-employment ratio of 2.05, published by the Bureau of Labor Statistics, this would result in an increase of 5,628 persons.

The study continues by utilizing this estimated increase of population to estimate future demand for commercial space. Based upon an estimated increase in population of 5,000 persons, in addition to the existing 48,000 persons which reside in the five (5) mile market area, the additional demand (gap) for commercial space would be as follows: 1,383,550 square feet of retail; 121,068 square feet of restaurant; and 137,766 square feet of office space.

Evaluation: The Market and Impact Study submitted by the applicant uses several methodologies to show the demand/need for additional commercial and residential uses within the market area. The Study also provides the following information: an inventory of the local retail base, market impacts of potential large-scale retail development, services and capital expenditures required to serve the site, and infrastructure impacts, among other topics. Please refer directly to the Market and Impact Study for specific information regarding these items.

C. **Urban Sprawl Analysis.** Urban sprawl is defined by Rule 9J-5.003, Florida Administrative Code (F.A.C.), as "urban development or uses which are located in predominantly rural areas, or rural areas interspersed with generally low-intensity or low-density urban uses, and which are characterized by one or more of the following conditions: (a) The premature or poorly planned conversion of rural land to other uses; (b) The creation of areas of urban development or uses which are not functionally related to land uses which predominate the adjacent area; or (c) The creation of areas of urban development or uses which fail to maximize the use of existing public facilities or the use of areas within which public services are currently provided. Urban sprawl is typically manifested in one or more of the following land use or development patterns: leapfrog or scattered development; ribbon or strip commercial or other development; or

large expanses of predominantly low-intensity, low-density, or single-use development." Further, Rule 9J-5.006, F.A.C., identifies thirteen primary indicators of urban sprawl, which states that each of the indicators shall consist of an analysis of the plan amendment within the context of the features and characteristics unique to each locality. Each of the thirteen indicators are listed below, with an analysis of the application's consistency with each primary indicator. The applicant's analysis of the primary indicators is located in the materials submitted as an attachment to the application. The applicant contends that the proposed amendment will not encourage urban sprawl.

1. Promotes, allows or designates for development substantial areas of the jurisdiction to develop as low-intensity, low-density, or single-use development or uses in excess of demonstrated need.

Comment: *The application proposes to amend the City of Alachua Future Land Use Map (FLUM) from Agriculture and Commercial to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres) on an overal 131.6 acre subject property, located west of the intersection of US Highway 441 and NW 43rd Street. The Commercial FLUM Designation allows for a variety of commercial uses, such as retail sales and services, commercial shopping centers, office/business parks, and traditional mixed-use neighborhood planned developments, among other uses identified in Policy 1.3.b of the Future Land Use Element of the Comprehensive Plan. The Moderate Density Residential FLUM Designation allows for many uses, including single family dwelling units, duplexes, townhomes, residential planned developments, and supporting services, such as schools, houses of worship, parks, and community centers. The multiple land uses proposed for the subject property provides for a functional mix of inter-related uses. It should also be noted that the subject property* ***currently*** *has approximately 39.37 acres of area designated Commercial FLUM; therefore, the proposed amendment results in a net increase of commercial area of approximately 11.44 acres.*

Policy 1.3.f of the Future Land Use Element of the Comprehensive Plan establishes the US 441 corridor as a Corporate Corridor Activity Area. The intensity of uses is therefore supported by the subject property's proximity to US Highway 441. With respect to the demonstration of need, the applicant has submitted a Market and Impact Study in an effort to provide justification for the need for commercial and residential land uses.

2. Promotes, allows or designates significant amounts of urban development to occur in rural areas at substantial distances from existing urban areas while leaping over undeveloped lands which are available and suitable for development.

Comment: *The subject property is located along US Highway 441, which is designated by Policy 1.3.f of the Future Land Use Element of the Comprehensive Plan as a Corporate Corridor Activity area. Urban uses, and densities and intensities associated with urban development, currently exist in proximity to the subject property. As mentioned, the subject property currently has a Commercial Future Land Use Map (FLUM) Designation on approximately 39.37 acres of the subject property. The*

proposed amendment would only result in an increase of 11.44 acres of commercial area. Lands adjacent to the subject property along US Highway 441 are developed, therefore, the proposed amendment would not leap over undeveloped lands.

Based on the location of the subject property relative to existing surrounding development, the proposed amendment would not promote, allow, or designated significant amounts of urban development to occur in rural areas while leaping over undeveloped land which are available and suitable for development.

3. Promotes, allows or designates urban development in radial, strip, isolated or ribbon patterns generally emanating from existing urban developments.

Comment: *The subject property is located along US Highway 441 between developed lands. US Highway 441 is a roadway defined as a principle arterial by Policy 1.1.a of the Traffic Circulation Element of the Comprehensive Plan. Commercial uses are located in proximity of the subject property along US Highway 441. Based upon properties surrounding the subject property, the proposed amendment would not promote, allow, or designate urban development in radial, strip, isolated, or ribbon patterns generally emanating from existing urban developments.*

4. As a result of premature or poorly planned conversion of rural land to other uses, fails adequately to protect and conserve natural resources, such as wetlands, floodplains, native vegetation, environmentally sensitive areas, natural groundwater aquifer recharge areas, lakes, rivers, shorelines, beaches, bays, estuarine systems, and other significant natural systems.

Comment: *The applicant has submitted an Environmental Resource Assessment (ERA) conducted by Environmental Resource Corporation (ERC) which analyzes natural resources, including wetlands, floodplains, native vegetation, environmentally sensitive area, natural groundwater aquifer recharge areas, lakes, rivers, and other significant natural systems. The subject property is located in Flood Zone A (areas determined to be subject to flooding by the 1% annual chance flood (100-year flood), with no Base Flood Elevation (BFE) determined) and Flood Zone X (areas outside of the 500-year flood zone). The subject property contains wetland areas which have been delineated and flagged as part of the ERA. The subject property is bordered and/or traversed by a total of three (3) streams. With the exception of a small agricultural (man-made) pond, there are no lakes located on-site. The subject property does not contain any sinkholes, champion trees, Alachua County Forever Lands, Strategic Ecosystems, or pits and spoil area. In order to protect the most significant environmental features, the applicant has proposed to designate approximately 37.06 acres of land as Conservation on the Future Land Use Map (FLUM). For a detailed assessment of environmental features, please refer to Section A above and the ERA.*

5. Fails adequately to protect adjacent agricultural areas and activities, including silviculture, and including active agricultural and silvicultural activities as well as passive agricultural activities and dormant, unique and prime farmlands and soils.

Comment: *The subject property is located proximate to existing urban uses. No active*

silvicultural operations occur within the immediate proximity of the subject property. The subject property is located adjacent to properties designated for commercial and residential uses. While there are lands designated as Agriculture on the Future Land Use Map (FLUM) located near the subject property, much of this land is part of a subdivision (Morgan Manor). Therefore, the proposed amendment does not fail to adequately protect any adjacent agricultural areas and activities.

6. Fails to maximize use of existing public facilities and services.

Comment: *The subject property is located along US Highway 441 and NW 43rd Street. Any development which may occur on-site will be able to access both roadways. The subject property is located outside of the City's urban services area, however, the applicant has indicated that any development which occurs on-site will connect to City water and wastewater services by extending existing infrastructure to the subject property. Any costs in upgrading and extending public facilities will be borne by the applicant.*

7. Fails to maximize use of future public facilities and services.

Comment: *If any development occurs on the subject property, the applicant has proposed to connect to City water and wastewater service, and has indicated that any cost associated with upgrading or extending infrastructure to the subject property will be borne by the applicant.*

8. Allows for land use patterns or timing which disproportionately increase the cost in time, money and energy, of providing and maintaining facilities and services, including roads, potable water, sanitary sewer, stormwater management, law enforcement, education, health care, fire and emergency response, and general government.

Comment: *The subject property is located near existing urban uses and land use patterns. While public facilities, including potable water and sanitary sewer, must be extended to service the subject property, the applicant has indicated that any cost associated with any upgrade and extension of infrastructure will be borne by the applicant. While located near the City of Alachua's City limits, the subject property is located in relative proximity to urban uses along US Highway 441. In addition, urban areas of the City of Gainesville are located near the subject property, which renders this location for urban development.*

9. Fails to provide a clear separation between rural and urban uses.

Comment: *The subject property is located in an urbanizing area along US Highway 441 and is in proximity to urban uses, including commercial and residential uses, including residential uses which carry a Moderate Density Residential Future Land Use Map (FLUM) Designation. The application proposes land use designations which can be found adjacent to the subject property, including Commercial and Moderate Density Residential FLUM Designations. As such, the proposed amendment does not fail to provide a clear separation between rural and urban uses.*

16

10. Discourages or inhibits infill development or the redevelopment of existing neighborhoods and communities.

Comment: *While located near the edge of the City of Alachua's corporate limits, the subject property is located in proximity and between to residential and commercial uses of urban densities and intensities. Therefore, the amendment does not discourage or inhibit infill development or the redevelopment of existing neighborhoods and communities.*

11. Fails to encourage an attractive and functional mix of uses.

Comment: *The Commercial Future Land Use Map (FLUM) Designation permits various commercial uses. In addition, the Moderate Density Residential FLUM Designation permits various residential uses. The combination of these land uses, through proper design and planning, can create an attractive and functional mix of uses. Therefore, the amendment does not fail to encourage an attractive and functional mix of uses.*

12. Results in poor accessibility among linked or related land uses.

Comment: *The subject property has direct access to US Highway 441 and NW 43rd Street. Any development which may occur on the subject property could potentially connect to US Highway 441, NW 43rd Street, or both roadways. The applicant has indicated that internal connection points will provide greater accessibility between the proposed land uses and adjacent property. Therefore, the proposed amendment will not result in poor accessibility among linked or related land uses.*

13. Results in the loss of significant amounts of functional open space.

Comment: *The subject property is located along US Highway 441, which is defined as a principle arterial by Policy 1.1.a of the Traffic Circulation Element of the Comprehensive Plan and as a Corporate Corridor Activity Area by Policy 1.3.f of the Future Land Use Element of the Comprehensive Plan. The applicant has proposed to designate approximately 37.06 acres of the subject property as Conservation on the Future Land Use Map (FLUM), in natural areas including creeks, wetlands, and buffer areas to protect these features. Therefore, the applicant has provided protection of the most significant environmental features, and as a result, the proposed amendment should not result in the loss of significant amounts of functional open space.*

D. Consistency with City of Alachua Comprehensive Plan. The applicant has prepared a report detailing the application's consistency with the Comprehensive Plan and outlining specific policies which support and are supported by the application. The applicant has addressed the proposed amendment's consistency with the Comprehensive Plan in the aforementioned report by reviewing the various elements of the Comprehensive Plan and providing an analysis of how the proposed application furthers the goals, objectives, and policies (GOPs) contained therein. Staff has provided

17

an analysis of the application's consistency with the City of Alachua Comprehensive Plan in Section V. of this report.

IV. PUBLIC FACILITIES IMPACT

Future Land Use Map (FLUM) Amendments often result in an increased impact on public facilities, as in most cases a FLUM Amendment intensifies a property's development potential. As such, Comprehensive Plan Amendments, like the one proposed here, should be adequately supported by data and analysis which describes the degree to which the amendment is likely to affect the City's public facilities capacity. The public facilities required of such analysis include roads, sanitary sewer, potable water, solid waste, drainage, recreation, and public schools.

An acceptable analysis will compare the demand for public facilities under the proposed FLUM Designation to the adopted level of service (LOS) standard and the maximum development allowed. The applicant has proposed approximately 50.81 acres of Commercial FLUM Designation, approximately 43.73 acres of Moderate Density Residential FLUM Designation, and approximately 37.06 acres of Conservation FLUM Designation. Pursuant to Policy 1.3.d.11 of the Future Land Use Element of the Comprehensive Plan, the maximum Floor Area Ratio (FAR) for the commercial component of the subject property is 0.50; the density for the residential component is 0 – 4 dwelling units per acre. The existing FLUM Designations consist of approximately 39.37 acres of Commercial FLUM Designation and approximately 92.23 acres of Agriculture FLUM Designation. ***The public facilities impact analysis presented below assesses the net increase in impacts to public facilities, based upon the net increase in density and intensity.*** The net increase in density and intensity for the subject property is determined by subtracting the existing maximum development potential from the proposed maximum development potential. This results in a net increase in commercial floor area of 249,206 square feet and 156 dwelling units.

As part of the submitted application, the applicant was asked to provide a detailed analysis of the site-specific public facilities impacts anticipated from the proposed amendment. This information should be based on the maximum development scenario for the ***net increase*** of public facilities impacts resulting from the proposed FLUM Designations. It is important to note that the impact analysis may not predict the public facilities impacts of a broader range of uses that could be permitted by the Commercial FLUM Designation (see Section II, Background, of this Staff Report).

The tables below represent the applicant's information with any corrections in **green** and any additional information in **blue.**

A. Traffic Impact:

Table 6. Affected Comprehensive Plan Roadway Segments[1]

Segment Number[2, 3]	Segment Description	Lanes	Functional Classification	Area Type	LOS
3/4 (61)	US 441 (from NW 126th Ave to SR 235)	4/D	Principle Arterial	Urban Trans	D
5 (63)	US 441 (from SR 235 to NCL of Alachua)	4/D	Principle Arterial	Urban Trans	D
6 (49)	US 441 (From CR 25A to NW 126th Ave)	4/D	Principle Arterial	Urban Trans	D
7 (48)	US 441 (from SW 63rd Ave to CR 25A)	4/D	Principle Arterial	Urban Trans	D
8 (64)	SR 235 (from CR 2054 to US 441)	2/U Bays	Major Collector	Comm	D

Residual Capacity after Proposed Amendment[6]	463	810		

1 FDOT roadway segment number shown in parenthesis. For the purposes of concurrency management, COA Comprehensive Plan segments that make up a portion of a larger FDOT roadway segment will be evaluated together when determining post development roadway capacity.

2 Source: FDOT 2002 Quality/Level of Service Handbook. Maximum Service Volume is based on a Class II State Two-Way Arterial, LOS D, for an area with a population over 5,000 not in an Urbanized Area.

3 FDOT LOS Report 2007.

4 Source: City of Alachua Concurrency Book Keeping Tables with revisions through November 5, 2008.

5 Project trip generation is calculated on the net increase in impact (proposed maximum development scenario impacts less existing maximum development scenario impacts). Trip Distribution is as shown in the Land Development Traffic Assessment conducted by GMB Engineers and Planners, Inc.

6 The application is for a Preliminary Development Order, and as such, concurrency will not be reserved at this time.

7 Existing PM Peak Hour Traffic for County Roads is currently unknown. However, as evidenced above, projected Peak Hour Trip Generation impacts along County Roads is negligible.

B. Sanitary Sewer Impact:

Table 12. Net Increase in Projected Sanitary Sewer Impact

Analysis of Current Conditions	Gallons Per Day
Treatment Plant Current Permitted Capacity[1]	937,000
Less Actual Treatment Plant Flows[1]	454,000
Less Reserved Capacity (Demand from all Recent Development Orders)[2]	227,311
Current Available Capacity	**255,689**
Projected Sanitary Sewer Demand from Project[4]	76,381
Current Residual Capacity after Proposed Amendment[5]	**179,308**
Analysis of Spring 2009 Conditions	**Gallons Per Day**
Anticipated Treatment Plant Added Capacity (Spring 2009)[1]	563,000
Anticipated Treatment Plant Permitted Capacity (Spring 2009)[1]	1,500,000
Less Actual Treatment Plant Flows[1]	454,000
Less Reserved Capacity (Demand from all Recent Development Orders)[2]	227,311
Anticipated Available Capacity (Spring 2009)	**818,689**
Projected Sanitary Sewer Demand from Project[4]	76,381
Residual Capacity after Proposed Amendment (Spring 2009)[5]	**742,308**
Analysis of Post Spring 2009 Conditions	**Gallons Per Day**
Anticipated Treatment Plant Added Capacity (Post Spring 2009)[3]	1,500,000
Anticipated Treatment Plant Capacity (Post Spring 2009)[3]	3,000,000
Less Actual Treatment Plant Flows[1]	454,000
Less Reserved Capacity (Demand from all Recent Development Orders)[2]	227,311
Anticipated Available Capacity (Post Spring 2009)	**2,318,689**
Projected Sanitary Sewer Demand from Project[4]	76,381
Residual Capacity after Proposed Amendment (Post Spring 2009)[5]	**2,242,308**

3 Source: July 11, 2007 Cumulative Impacts Analysis, Cycle 1-2007, LSCPA, CPG Consulting, Inc.; the post Spring 2009 planned expansion that increases treatment capacity from 1.5M GPD to 3M GPD will be constructed as warranted by the appropriate system capacity utilization percentage.

4 Source: Policy 4.1.e of the Community Facilities & Natural Groundwater Aquifer Recharge Element, City of Alachua Comprehensive Plan (Formula: 250 gallons per day x 156 dwelling units = 39,000 gpd; 15 gpd/100 square feet x 249,206 square feet = 37,381 gpd; Total = 76,381 gpd).

5 The application is for a Preliminary Development Order, and as such, concurrency will not be reserved at this time.

C. Potable Water Impact:

Table 13. Net Increase in Projected Potable Water Impact

Analysis of Current Conditions	Gallons Per Day
Current Permitted Capacity[1]	2,300,000
Less Actual Potable Water Flows[1]	1,519,000
Less Reserved Capacity[2]	251,951
Current Available Capacity	**529,049**
Projected Potable Water Demand from Project[4]	80,281
Residual Capacity after Proposed Amendment[5]	**448,768**
Analysis of Spring 2009 Conditions	**Gallons Per Day**
Added Capacity FY CIP Program (2009)	1,900,000
Capacity Post Expansion[1]	4,200,000
Less Actual Potable Water Flows[1]	1,519,000
Less Reserved Capacity[2]	251,951
Anticipated Available Capacity (Spring 2009)[3]	**2,429,049**
Projected Potable Water Demand from Project[4]	80,281
Residual Capacity after Proposed Amendment[5]	**2,348,768**

1 Source: June 13, 2007 Water & Wastewater Capacity Memo (Public Services Director).

4. Potential enrollment is calculated based upon the composite multipliers defined in the Alachua County Public School Facilities Element Data & Analysis, Revised June 3, 2008 (Formulas: for elementary schools – 0.153 x 156 dwelling units; for middle schools – 0.130 x 156 dwelling units; for high schools – 0.142 x 156 dwelling units).

G. Analysis of Impacts Associated with the Proposed Comprehensive Plan Amendment

Traffic Impact

An analysis of the impacts on the transportation system resulting from the proposed Future Land Use Map Designation and the anticipated type of development has been presented by the applicant in a Land Development Traffic Assessment conducted by GMB Engineers & Planners, Inc. The Land Development Traffic Assessment as well as Staff's analysis have utilized trip generation land use codes identified in *Trip Generation, Seventh Edition*, for a "Residential Condominium/Townhouse" and "Shopping Center." These land use codes predict average daily trip count totals and AM and PM peak hour count totals that reflect potential uses of the subject property.

Currently, direct access to the subject property may be provided by a connection to US Highway 441 and/or NW 43rd Street. US Highway 441 is a roadway that is required to be monitored for concurrency by the City of Alachua Comprehensive Plan. Tables 11a and 11b above indicate that there would be roadway capacity remaining on ***all*** affected Comprehensive Plan roadway segments to accommodate the ***net increase*** in potential impact. Therefore, the potential impact resulting from any development of the subject property could exceed the figures identified in Tables 7a and 7b above and in the Land Development Traffic Assessment submitted by the applicant. If development occurs at a later time, the applicant will be required to submit a detailed analysis of potential impacts based upon specific intensities and densities of the proposed development.

Based upon the analysis provided in the Land Development Traffic Assessment submitted by the applicant, Staff's review of this study, and Staff's analysis provided above, adequate information has been provided to determine that no adverse impacts to roadway Level of Service (LOS) would occur as a result of the proposed amendment.

Sanitary Sewer Impact

An analysis of the impacts on the sanitary sewer system resulting from the proposed Future Land Use Map Amendment and the anticipated type of development has been presented by the applicant. Based on the data and analysis provided, Staff's review of such information, and the analysis provided by Staff above, the adopted Level of Service (LOS) Standard for sanitary sewer facilities should not be degraded to an unacceptable level by this amendment.

Potable Water Impact

An analysis of the impacts on the potable water system resulting from the proposed Future Land Use Map Amendment and the anticipated type of development has been presented by the applicant. Based on the data and analysis provided, Staff's review of such information, and the analysis provided by Staff above, the adopted Level of Service (LOS) Standard for potable water facilities should not be degraded to an unacceptable level by this amendment.

Solid Waste Impact

The applicant has provided an analysis of the impacts on solid waste resulting from the proposed Future Land Use Map Amendment and the anticipated type of anticipated development. The applicant has indicated that there is approximately 50 years of capacity at the New River Regional Landfill. Information previously obtained by City Staff confirms this capacity estimate, and as such, the adopted Level of Service (LOS) Standard for solid waste facilities should not be degraded to unacceptable level by this amendment.

Stormwater Impact

While a Future Land Use Map Amendment is conceptual in nature, the applicant has acknowledged the need for design considerations for stormwater management facilities as they relate to the subject property and the intended use. If development occurs on the subject property at a later time, an Environmental Resource Permit will be required by the Suwannee River Water Management District prior to any Site Plan and/or Final Plat approval by the City.

Recreational Impact

The applicant has provided an analysis of the impacts to recreation public facilities anticipated from the residential component of the proposed Future Land Use Map (FLUM) Amendment. This analysis has been based upon the maximum density permitted by the Moderate Density Residential FLUM Designation (0 – 4 dwelling units per acre). Based upon the data and analysis provided, Staff's review of such information, and Staff's analysis provided above, the adopted Level of Service (LOS) Standard should not be degraded to an unacceptable level by this amendment.

Public School Impact

The applicant has provided an analysis of the potential impacts to public schools facilities. This analysis is based upon the Alachua County Public Schools Facilities Element Data and Analysis, which is currently in the process of incorporation into the City of Alachua Comprehensive Plan through the adoption of a new element, the Public Schools Facilities Element. The analysis provided by the applicant and Staff's analysis provided above is consistent with the methodology established by the School Board of Alachua County and in the proposed City of Alachua Public Schools Facilities Element.

Upon review of a final development order, the School Board of Alachua County will provide a determination regarding the impact the development will have on public schools facilities and provide a determination regarding whether or not capacity is available to serve the development. In the event the development would adversely affect public school facilities, the School Board of Alachua County will identify methods by which such deficiencies may be addressed.

The analysis provided at this time is acceptable for a preliminary development order, such as a Future Land Use Map (FLUM) Amendment. If the applicant submits an application for a final development order, a formal determination of public school facilities capacity will be provided by the School Board of Alachua County.

V. COMPATIBLE GOALS, OBJECTIVES, & POLICIES FROM THE CITY OF ALACHUA 2015 COMPREHENSIVE PLAN

The applicant has prepared a report detailing the application's consistency with the Comprehensive Plan and outlining specific policies which support and are supported by the application. The applicant has addressed the proposed amendment's consistency with the Comprehensive Plan in the aforementioned report by reviewing the various elements of the Comprehensive Plan and providing an analysis of how the proposed application furthers the goals, objectives, and policies (GOPs) contained therein.

Below is a list of GOPs with which the application is found to be consistent. The GOPs below are provided as a basis for establishing consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not listed below.

Vision Element

Goal One Economic Development

The City of Alachua has a unique business climate. The City is home to corporations, technology incubators, local businesses, and start-up companies. The US 441 corridor is beginning to develop into a "corporate corridor" with businesses, such as Sabine and JA Webster, and corporate campuses such as the Progress Corporate Park and Alachua Professional

Center. Alachua desires to continue to be a home to innovative businesses that want to be partners with the community.

Future Land Use Element

Policy 1.2.a Moderate density residential (0 to 4 dwelling units per acre): The moderate density residential land use category allows residential development at a maximum density of 4 dwelling units per acre. The following uses are allowed in the moderate density residential land use category:

1. Single family, conventional dwelling units;
2. Accessory dwelling units;
3. Manufactured or modular homes meeting certain design criteria
4. Mobile homes only within mobile home parks;
5. Duplexes and quadplexes;
6. Townhomes;
7. Residential Planned Developments;
8. Supporting community services, such as schools, houses of worship, parks, and community centers

Policy 1.3.b Commercial: The Commercial land use category is established to provide for general commercial uses, as well as more intense commercial and highway commercial uses. This is the land use category in which large-scale, regional commercial uses could locate. The following uses are allowed within the Commercial land use category:

1. Retail sales and services;
2. Personal services;
3. Financial Institutions;
4. Outdoor recreation and entertainment;
5. Tourist-related uses;
6. Hotels, motels;
7. Commercial shopping centers;
8. Auto-oriented uses;
9. Traditional Mixed-use Neighborhood Planned Developments;
10. Employment Center Planned Developments;
11. Commercial recreation centers;
12. Office/business parks;
13. Limited industrial services;
14. Eating Establishments

Policy 1.3.d(11) Commercial uses shall be limited to an intensity of less than or equal to .50 floor area ratio for parcels 10 acres or greater, .50 floor area ratio for parcels less than 10 acres but 5 acres or greater, a .75 floor area ratio for parcels less than 5 acres but greater than 1 acre, and 1.0 floor area ratio to parcels 1 acre or less.

29

Policy 1.3.f The City of Alachua shall pursue the establishment of activity centers to guide the placement and design of commercial and business areas.

1. The City of Alachua shall establish a Gateway Activity Center at the interchange of US 441 and Interstate 75. The City shall establish the boundaries of the activity center based on the conceptual map provided herein and relevant regulations through a public planning process that will involve property owners as well as the public at-large. The intent of establishing this activity center is to welcome existing and future residents and visitors to the City of Alachua, and to promote Alachua as an attractive, vibrant, and economically prosperous community.

2. The City of Alachua shall establish the US 441 corridor as a Corporate Corridor Activity Center. The City shall establish the boundaries of the activity center and relevant regulations through a public planning process that will involve property owners as well as the public at-large. The intent of establishing this activity center is to implement the economic development objectives of the Vision 2010 Plan and to promote a coordinated development plan to maximize existing and future land use patterns and preserve the function of the US 441 corridor.

Objective 1.7 Conservation: The City shall create a Conservation land use category for lands on which certain identifiable features, such as flowing surface water bodies, wetland systems, flood plains, wellfield protection areas, unique geologic characteristics, and listed plant and wildlife habitat require enhanced oversight and regulatory protection. Land use regulations for designated conservation areas will consider the vulnerability of susceptible features and vary accordingly. Conservation areas will allow a diverse range of activities and development opportunities, depending on the nature and degree of vulnerability of the susceptible features present.

Goal 5 Development Standards: The City shall include provisions through its comprehensive plan amendment process, development review process and in its land development regulations for development standards that address natural features and availability of facilities and services. These development standards will strive to protect natural resources and public facility resources while allowing for innovative and flexible development patterns.

Objective 5.1 Natural features: The City shall coordinate Future Land Use designations with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments to the Future Land Use map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.c Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, minimum flood elevations shall be surveyed and established.

30

The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Policy 5.1.e Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species. The survey shall include detailed information regarding type, quantity, location and habitat requirements for any listed species identified. A deminimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Objective 5.2 Availability of facilities and services: All new development shall be planned and constructed concurrently with the availability of facilities and services necessary for the development.

Traffic Element

GOAL 1 PROVIDE FOR A TRAFFIC CIRCULATION SYSTEM, WHICH SERVES EXISTING AND FUTURE LAND USES.

Objective 1.1 The City shall establish a safe, convenient and efficient level of service standard for all motorized and non-motorized transportation systems.

Objective 1.2 The City shall establish access management standards and coordinate with Alachua County and the Florida Department of Transportation to maintain access management standards, which promote safe and efficient travel.

Policy 1.2.a The City shall control the number and frequency of connections and access points of driveways and roads to arterial and collector roads by requiring access points for state roads to be in conformance with Chapter 14-96 and 14-97, Florida Administrative Code, or subsequent provision.

Objective 1.5 The City shall require that all traffic circulation improvements be consistent with and complement the future land uses on the Future Land Use Map.

Policy 1.5.c To the extent feasible, the City shall require new developments to interconnect with one another through one of the following methods:

1. Through the extension of a public road from one project to another;
2. Through the extension of a sidewalk from one project to another;
3. Through the extension of a multi-purpose trail from one project to

31

another.

Policy 1.5.d To the extent feasible, the City shall only require new developments to connect with existing developments if the existing neighborhood desires such interconnectivity.

Housing Element

Policy 1.1.a The City shall encourage development of a variety of housing types including conventional single family homes, accessory dwelling units, multi-family units, group homes, assisted living facilities, foster care facilities, mobile homes and manufactured housing, and shall ensure that appropriate land use designations and zoning districts exist to accommodate each type.

Policy 1.1.i The City shall establish land use designations and zoning districts that accommodate mixed-use development consisting of residential with commercial and/or retail.

Policy 1.1.j The City shall provide incentives for mixed-use development that includes housing for extremely low, very low and low-income residents within the Affordable Housing Incentive Program. The City recognizes that mixed-use development reduces transportation costs by placing necessary shopping within close proximity to housing.

Community Facilities & Natural Groundwater Aquifer Recharge Element

Objective 1.2 Wastewater service will be made available to new development in a manner to promote compact urban growth, promoting development where wastewater service is available, and discouraging urban sprawl.

Policy 1.2.a The City shall establish a Community Wastewater Service Area, which includes all areas where wastewater service is available. Wastewater service shall he deemed available if:

1. A gravity water system exists within 100 feet of the property line of any residential subdivision lot or a single family residence and wastewater service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. A gravity wastewater system exists within 500 feet of the property line of any residential subdivision consisting of 5 units or less and the gravity wastewater system can be assessed through public utility easements or rights of way. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

32

3. A gravity wastewater system, wastewater pumping station, or force main exists within ¼ mile of the property line of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and the gravity wastewater system can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Policy 1.2.c The City shall prohibit the installation of in-ground septic tanks in locations with unsuitable soils within wetland areas, or where wastewater service is available within ¼-mile.

GOAL 3 Develop and maintain a stormwater management system that minimizes flooding, protects, preserves and enhances desirable water quality conditions, and, where possible, preserves and utilizes existing natural features.

Objective 3.1 Ensure provision of drainage and stormwater retention through level of service standards and design requirements to minimize flooding and to protect and improve water quality.

Policy 3.1.a The City hereby establishes the following water quantity and quality level of service standards for drainage facilities:

LEVEL OF SERVICE STANDARD

For all projects which fall totally within a stream, or open lake watershed, detention systems must be installed such that the peak rate of post-development runoff will not exceed the peak-rate of pre-development runoff for storm events up through and including either:

1. A design storm with a 10-year, 24-hour rainfall depth with Soil Conservation Service type II distribution falling on average antecedent moisture conditions for projects serving exclusively agricultural, forest, conservation, or recreational uses; or

2. A design storm with 100-year critical duration rainfall depth for projects serving any land use other than agricultural, silvicultural, conservation, or recreational uses.

The LOS standard for water quality treatment shall be treatment for the "first one inch" of runoff, and compliance with the design and performance standards established in Chapter 40C-42.025, FAC, and 42.035, FAC to ensure that the receiving water quality standards of Chapter 62.302.500, FAC are met and to ensure their water quality is not degraded below the minimum conditions necessary to maintain their classifications as established in Chapter 62-302, FAC. These standards

33

shall apply to all new development and redevelopment and any exemptions, exceptions or thresholds in these citations are not applicable. Infill residential development within improved residential areas or subdivisions existing prior to the adoption of this comprehensive plan, must ensure that its post-development stormwater runoff will not contribute pollutants which will cause the runoff from the entire improved area or subdivision to degrade receiving water bodies and their water quality as stated above.

Policy 4.1.b The City shall establish a Community Potable Water Service Area, which includes all areas where potable water service is available. Water service shall be deemed available if:

1. A water main exists within 100 feet of any residential subdivision lot or a single family residence and water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
2. A water main exists within 500 feet of any residential subdivision consisting of 5 units or less and the water service can be assessed through public utility easements or rights of way. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.
3. A water main exists within ¼ mile of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Objective 4.2 Prioritize and execute needed system improvements in a manner which protects existing investments, promotes orderly growth, and is consistent with the Capital Improvements Element and Capital Improvements Program of this Plan.

Policy 4.2.a New urban development will only occur within areas where potable water services are available concurrent with development. For purposes of this policy, new development does not include remodeling of existing developments or additions of less than 33% to existing developments.

Policy 4.2.b The City will continue to require necessary on-site water system improvements to be completed at the expense of the property owner.

Policy 4.2.c The City shall extend water service in a pattern consistent with the policies of the comprehensive plan, especially the Future Land Use Map and the Future Land Use Element, adhering to a compact urban growth area, promoting infill development and discouraging urban sprawl, as defined in Florida Administrative Code.

Conservation & Open Space Element

Policy 1.1.a The City shall create a conservation land use category for publicly or privately owned lands on which certain identifiable features, such as flowing surface water bodies, wetlands, flood plains, wellfield protection areas, unique geologic characteristics, and listed plant and wildlife habitat require enhanced oversight and regulatory protection. Land use regulations for designated conservation areas will consider the vulnerability of susceptible features and vary accordingly.

Objective 1.2 Native Communities and Ecosystems

The City shall preserve and protect native communities and ecosystems, particularly those considered endangered or threatened.

Policy 1.2.a The City shall ensure that land use designations, development practices and regulations protect native communities and ecosystems, and environmentally sensitive lands.

Policy 1.2.j The City shall require all new development to be oriented in a fashion that reduces habitat fragmentation and preserves the largest possible contiguous area of undisturbed habitat, to the extent practicable.

Policy 1.2.l The City shall protect regulated, heritage, and champion trees. The City shall continue to participate in the Florida Champion Tree Program. Additionally the City will require tree removal permits to protect regulated, heritage, and champion trees from accidental removal and other development related disturbances.

Objective 1.3 Listed Species

The City shall protect species listed by State and Federal agencies as endangered, threatened or of special concern, and their habitats.

Policy 1.5.b The City shall require land clearing for development to be phased with construction activity, and to adhere to techniques which minimize soil erosion, minimize removal of native and non-invasive trees and vegetation, and protect champion and designated heritage trees. After clearing, soils shall be stabilized in accordance with best management practices (BMPs) identified in "The Florida Stormwater, Erosion, and Sedimentation Control Inspector's Manual", Chapters 4, 5 and 6.'

Policy 1.5.c The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during

35

development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Objective 1.10 Wetlands

The City shall protect and preserve wetland values and functions from adverse, human caused, physical and hydrologic disturbances.

Policy 1.10.a The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code and regulations adopted by the DEP and the Suwannee River Water Management District.

Policy 1.10.b The City shall conserve wetlands by prohibiting, where the alternative of clustering all structures in the non-wetland portion of the site exists, any development or dredging and filling which would alter their natural functions.

Policy 1.10.g The City shall require natural vegetative buffers around wetlands to protect the fragile ecosystems they sustain. Buffers, measured from the outer edge of the wetland, shall be created as established in the following table.

Resource Addressed	Required Buffer (feet)
Wetlands less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	50' average 35' minimum
Wetlands greater than 0.5 acre that do not support the animal species described above.	75' average 50' minimum
Areas where the animal species described above have been documented within 300 feet of a wetland.	100' average 75' minimum

Objective 1.11 Open and Green Space

The City shall work to preserve native ecosystems and the natural aesthetic beauty and charm of Alachua by ensuring the provision of open spaces and green linkages throughout the City, designed for the enjoyment of the citizenry.

Policy 1.12.d The City shall require the following buffers for development along surface water bodies. Buffers shall be measured from the outer edge of the water body, and created as established in the following table.

36

Resource Addressed	Required Buffer (feet)
Surface waters less than or equal to 0.5 acre that do not support federally and/or state regulated vertebrate wetland/aquatic dependent animal species.	50' average 35' minimum
Surface waters greater than 0.5 acre that do not support the animal species described above.	75' average 50' minimum
Areas where the animal species described above have been documented within 300 feet of a surface water.	100' average 75' minimum

Policy 1.12.e The City shall protect the natural function of floodplains, recognizing the role of flood patterns in maintaining water quality and quantity. Flood plain regulations will be based on Federal Emergency Management Agency (FEMA) Flood Insurance Rate Maps (FIRM).

Policy 1.12.f The City shall work with FEMA, SRWMD, DEP and the County to strictly regulate development within the 100-year flood hazard zone established by the FEMA. The City will require development activity to occupy only the non-floodplain portion of a site when feasible; allow dredging and filling within floodplains only if it preserves the natural function of the floodplain and adequately provides for stormwater management; require the lowest floor elevation of any structure to be at least one foot above the FIRM base flood elevation; and will prohibit the storage of hazardous materials or waste within the floodplain, and development activity that threatens to raise the 100-year base flood elevation.

Recreation Element

Policy 1.2.b The City shall adhere to a minimum level of service of five (5.0) acres of community, neighborhood or pocket park, per 1,000 persons, with a minimum of 20 percent of this in improved, passive parks.

VI. DEVELOPMENT OF REGIONAL IMPACT (DRI) RELATED ISSUES

The applicant has indicated that the proposed development is intended to implement the mixed-use strategies encouraged within Chapter 380.0651(3)h., Florida Statutes (F.S.), and thresholds defined in Chapter 28-24, Florida Administrative Code (F.A.C.). Chapter 380.0651(3)h., F.S., allows multi-use development consisting of three or more uses, one of which is residential, to consist of 160% of the combined land use thresholds. The applicant has indicated an intent to develop the site at a maximum of 399,900 square feet of commercial retail, 44,000 square feet of office, and 174 dwelling units. As evidenced in

Table 18 below, this results in a total of 132% of the combined DRI thresholds. As discussed, Chapter 380.0651(3)h., F.S., permits multi-use development to consist of up to 160% of the combined land use thresholds before a DRI threshold is activated.

Table 18. Evaluation of Development of Regional Impact (DRI) Threshold

Land Use	Chapter 28-24, F.A.C, Threshold	Proposed Development Threshold	Percentage of Chapter 28-24, F.A.C., Threshold
Residential	1,000 dwelling units	174 dwelling units	17%
Commercial	400,000 square feet	399,900 square feet	99.9%
Office	300,000 square feet	44,000 square feet	14.7%
Total			**132%**

VII. CONCLUSION

The proposed Large Scale Comprehensive Plan Amendment (LSCPA) is a request by Causseaux, Hewett, & Walpole, Inc., to amend the City of Alachua Future Land Use Map from Agriculture (±92.23 acres) and Commercial (±39.37 acres) to Commercial (±50.81 acres), Conservation (±37.06 acres), and Moderate Density Residential (±43.73 acres) on an approximate 131.6 acre subject property.

The applicant has provided a Market Impact Study indicating that an increase in the proposed Future Land Use Map (FLUM) Designation is justifiable, considering the general growth of the City and estimated growth, in addition to usable, vacant commercial and residential designated land.

The applicant has also provided an Urban Sprawl Analysis, based on an the thirteen primary indicators identified in Rule 9J-5 of the Florida Administrative Code. Staff's review of the provided by the applicant as well as Staff's assessment provided above indicates that the proposed amendment does not constitute urban sprawl.

The applicant also provided an Environmental Resource Assessment which addresses environmental features located on the subject property. At this time, this assessment adequately addresses potential impacts to environmental features located on the subject property. In addition, the applicant has proposed to place approximately thirty-seven (37) acres of the subject property in the Conservation FLUM Designation, which further protects the most sensitive environmental features located on-site.

Upon review, the applicant has demonstrated that the public facilities impacts likely to be generated by the net increase resulting from the proposed Large Scale Comprehensive Plan Amendment (LSCPA) should not have any adverse impact to any public facilities. If development occurs at a later time, the applicant will be required to submit a detailed analysis of potential impacts based upon specific intensities and densities of the proposed development.

Because Future Land Use Map (FLUM) Amendments are predominantly conceptual, thus preventing an accurate projection of the true public facility impacts, these land actions are ineligible to receive concurrency reservations. As such, the issuance of a development order is necessary to reserve concurrency. For this project, this would not occur until site plan and/or final plat approval.

VIII. RECOMMENDATION

To transmit the proposed Large Scale Comprehensive Plan Amendment (LSCPA) to the City Commission with a recommendation of **APPROVAL**, with a requirement that a text amendment concurrent with the adoption of the proposed LSCPA limiting the development potential of the property to less than the current Development of Regional Impact (DRI) thresholds would be necessary.

Section 1. Environmental Resource Assessment Checklist-Signed

The purpose of this report is to provide an inventory of the natural resources that occur on the proposed **The Market at Schmidt Farms** project site and adjacent properties located within the limits of the City of Alachua, Florida. In this context, this report has been prepared with reference to the Environmental Resource Assessment Checklist required for development review by Alachua County. The City of Alachua, at this time, does not have a standard format for reporting requirements for Environmental Assessment for Development Review or Land Use Change Applications; therefore, the format for Alachua County Environmental Resource Assessment has been used for this report. The report contains a set of figures, tables, and photos that document the existing condition of the proposed project site and to assess, in general terms, the effects of the project on the existing resources. The report format consists of a section addressing each checklist item followed by the respective figures, tables, and photos for that section.

Indianapolis, IN 46208

Natural Resources Checklist: The Environmental Resource Assessment checklist items addressed in this report are, as follows (items marked "yes" specifically apply to this project site; all items are addressed in this report):

Yes	X	N/A	□	Surface Waters (ponds, lakes, streams, springs, etc.)
Yes	X	N/A	□	Wetlands
Yes	X	N/A	□	Surface Water or Wetland Buffers
Yes	X	N/A	□	Floodplains (100-year)
Yes	□	N/A	X	Special Area Study Resource Protection Areas (Cross Creek, Idylwild/Serenola, etc)
Yes	□	N/A	X	Strategic Ecosystems (within or adjacent to mapped areas)
Yes	X	N/A	□	Significant Habitat (biologically diverse natural areas)
Yes	X	N/A	□	Listed Species/Listed Species Habitats (FNAI S1, S2, & S3; State or Federally E, T, SSC)
Yes	□	N/A	X	Recreation/Conservation/Preservation Lands
Yes	X	N/A	□	Significant Geological Features (caves, springs, sinkholes, etc.)
Yes	X	N/A	□	High Aquifer Recharge Areas
Yes	□	N/A	X	Wellfield Protection Areas
Yes	X	N/A	□	Wells
Yes	X	N/A	□	Soils
Yes	□	N/A	X	Mineral Resource Areas
Yes	X	N/A	□	Topography/Steep Slopes
Yes	X	N/A	□	Historical and Paleontological Resources
Yes	X	N/A	□	Hazardous Materials Storage Facilities
Yes	X	N/A	□	Contamination (soil, surface water, ground water)

SIGNED: Peter M. Wallace **PROJECT #** _____ **DATE:** 1 July 2008

Section 2. Project Description/Assessment of Environmental Indicators

Project Description

Mesa-Sand Realty, LLC is making an application to the City of Alachua, Florida, for a large-scale comprehensive plan amendment for a parcel of land to be referred to as **The Market at Schmidt Farms**. The project site is located in northwest Alachua County in the southwest corner of the intersection of US Hwy 441 and NW 43rd Street (**Figure 1**). The project site consists of five (5) Alachua County tax parcels, which total 131.6 acres (**Figure 2**). The parcel numbers and acreages as found on the Alachua County Property Appraiser's website are shown in **Table 1**.

Table 1. Tax parcel numbers, owners, and associated acreages of the tax parcels that comprise The Market at Schmidt Farms project site.

Tax Parcel No.	Owner(s)	Acreage
05936-001-001	Herbert Matilski	3.458
05936-006-000	Nima, Inc.	8.509
05936-001-000	Ann Schmidt	94.165
05945-000-000	Ann Schmidt	11.281
05936-007-000	Jules E. Schmidt	14.193
TOTAL		**131.606**

The site is contained within Sections 2 and 3, Township 9 South, Range 19 East and Sections 34 and 35, Township 8 South, Range 19 East. A large-scale comprehensive plan amendment is presently submitted to propose a change in the Future Land Use for the property to be referred to as The Market at Schmidt Farms, City of Alachua, Florida. The large-scale comprehensive plan amendment (CPA) proposes creating a mixed-use development on a ±131.6-acre parcel located on the south side of US Hwy 441 and west of NW 43rd Street. The site currently carries a Future Land Use designation of Agriculture (Ag) and Commercial (COM) (**Figure 3**). These land use designations have historically resulted in agricultural uses such as cattle ranching. The proposed land use change will create a mixture of urban residential and non-residential uses on the ±131.6-acre site while protecting the significant natural areas in conservation (**Figure 4**). This CPA will allow for a broad range of retail, office, and multi-family and/or single-family development in a manner consistent with the City of Alachua's Comprehensive Plan and Land Development Regulations (LDR). A summary of the comparative acreages contained in each existing and proposed future land use category is summarized in **Table 2**. The existing zoning occurring on the project site is shown in **Figure 5**.

Figure 1. **Project site location map showing location of proposed The Market at Schmidt Farms at the intersection of US Hwy 441 and NW 43rd Street.**

Table 2. **Comparative acreages contained in the existing and proposed Future Land Use categories for The Market at Schmidt Farms project site.**

	Land Use Area (Acres)			
Land Use	**Existing**	**Proposed**	**Acreage Change**	**Percent Change**
Moderate Density	0.00	43.73	43.73	100.00
Commercial	39.37	50.81	11.44	29.06
Agriculture	92.23	0.00	-92.23	-100.00
Conservation	0.00	37.06	37.06	100.00
TOTAL	**131.60**	**131.60**		

Figure 5. **Existing zoning for The Market at Schmidt Farms project site and surrounding area.**

Assessment of Existing Environmental Conditions

To assess the general environmental integrity of the project site, extensive pedestrian surveys of the site were performed by Peter M. Wallace, MS, PWS, and Robert A. Garren, MS, PWS, of Ecosystem Research Corporation. Field surveys were performed in September 2006, November 2007, and May 2008. During the field surveys, site specific data were collected to document the plants and plant community types present. Data collection areas were marked with specific GPS points using a Garmin GPS Map 76CSx hand-held GPS to record position coordinates. GPS locations established during the survey are shown in **Figure 6**. At several locations, photographs were taken to document the existing conditions of the site. Photo stations are shown in **Figure 7** and **all photographs contained in this report are referred to the GPS locations shown in this figure**.

The project site is a rural residential farm site located in a relatively sparsely populated area along US Hwy 441. The site is located within the Turkey Creek drainage basin. The general extent of the Turkey Creek drainage on the project site and surrounding areas is shown on the USGS map in **Figure 8**. The headwaters of Turkey Creek originate on the City of Gainesville Deerhaven property. From the Deerhaven site, the creek is culverted under US Hwy 441 then traverses west across NW 43rd Street where two large circular culverts (**Photo 1**) route water along the southern boundary of the Schmidt Farms property. Turkey Creek forms the southern boundary of the property and extends from NW 43rd Street northwest to the intersection of a second creek that runs southwest along the east boundary of the Brooke Pointe Development. For the purposes of this report, this creek is named Brooke Pointe Creek (**Figure 9**). This creek drainage originates north of US Hwy 441 on the City of Gainesville Deerhaven property, crosses under NW 102nd Place (**Photo 2**), then runs southwest to the confluence with Turkey Creek at the southwest corner of the Schmidt Farms property. A third creek located on the property drains water also from the City of Gainesville Deerhaven property through a culvert located under US Hwy 441 just west of the terminus of NW 43rd Street (**Photo 3**) at US Hwy 441. For the purposes of this report, this creek is referred to as Schmidt Creek. The creek extends through a mixed hardwood swamp (**Photo 4**) that also receives substantial subsurface seepage from the adjacent uplands. The mixed hardwood swamp narrows abruptly where a small agricultural road crossing occurs (**Photos 5 and 6**), which was built prior to 1937. From this point, the creek width becomes substantially narrower (**Photo 7**) and slopes to the adjacent upland are abrupt. The drainage ultimately flows into Turkey Creek at the southwestern corner of Parcel 05936-001-001. A unique mosaic of intermittent seepage and depression wetlands forms a diffuse drainage system in the western third of the project site. This drainage system has the same general northeast to southwest orientation as both Schmidt Creek and Brooke Pointe Creek. Groundwater seeps to the surface at the north end of this system and flows southwest through a small, intermittent stream drainage (**Photo 8**) to a series of small

Figure 6. **GPS location map of site specific survey points established 10/02/06 and 11/15/07.**

depressional wetlands that are probably relic sinkholes where water flows back into the ground. Based on **Rule 62-345 FAC, Delineation of the Landward Extent of Wetlands and Surface Waters,** some of the depressions are upland while others were determined to be wetlands. During periods of excessive rainfall, this system may provide surface water discharge directly to Turkey Creek. There is a small drainage that routes water to Turkey Creek from the excavated agricultural pond located west of the Schmidt residence. This drainage is excavated for most of the distance extending from the pond to Turkey Creek; however, the drainage is natural, extending south from GPS location 672, south to Turkey Creek (Figure 6). The general appearance of this drainage is shown in **Photo 9**.

Photo 9. **Panoramic view of the Disturbed Influent Drainage to Turkey Creek as seen looking southeast across GPS location 663.**

Plant Communities

The plant communities that presently occur on The Market at Schmidt Farms project site are shown in **Figure 10**. A total of seventeen (17) distinct plant community associations occur, all of which are disturbed or intensively managed community types. The total acreage associated with each community type is listed in **Table 3**. The common plant species found within the project site are summarized in **Table 4**. All plant communities occurring on the project site have been disturbed from many years of cattle foraging and related cattle ranching activities. A brief description of each community type is, as follows (all photos, tables and figures follow at the end of this section; all photos are referenced to photo stations shown in Figure 7.

Uplands & Agricultural Areas

Improved Pasture

Acreage: 67.965	**Polygons:** 1, 27	**FLUCCs Code:** 211

The Market at Schmidt Farms project site has been managed primarily as Improved Pasture since prior to 1937. Currently, this plant community is dominated by a host of well-maintained pasture grasses and herbs to include bahiagrass (*Paspalum notatum* Fluegge.), Bermudagrass (*Cynodon dactylon* [L.] Pers.), Asian coinleaf (*Centella asiatica* [L.] Urban.), marsh pennywort (*Hydrocotyle umbellata* L.), retrorse flatsedge (*Cyperus retrorsus* Chapm.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), Mexican tea (*Chenopodium ambrosioides* L.), Canada horseweed (*Conyza canadensis* [Torr. & Gray] Gray), and retrorse flatsedge (*Cyperus retror*sus Chapm.). In some areas, the invasive exotic tropical soda apple (*Solanum viarum* Dunal) is common and is generally distributed throughout the site. Representative views of the Improved Pasture communities found on the project site can be seen in **Photos 10 through 15**.

Oldfield – Mixed Shrub

Acreage: 5.441	**Polygons:** 29, 31	**FLUCCs Code:** 261

The Oldfield – Mixed Shrub area is an improved pasture community that is not currently used to graze cattle and has become invaded by a host of oldfield shrubs, herbs, and grasses to include broomsedge (*Andropogon virginicus* L.), eastern false-willow (*Baccharis halimifolia* L.), persimmon (*Diospryos virginiana* L.*),* sand blackberry (*Rubus cuneifolius* Pursh), saw greenbrier (*Smilax bona-nox* L.), and small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small). Small oaks are in some areas; however, the groundcover is still dominated by bahiagrass (*Paspalum notatum* Fluegge.). The Oldfield – Mixed Shrub area can be seen in **Photos 16 and 17**.

Agricultural Pond & Drainage

Acreage: 0.777	**Polygons:** 17	**FLUCCs Code:** 535

There is an excavated pond located within the site that was dug circa 1979 in an historic forested wetland area. The pond is severely affected by cattle use and water quality has suffered from this use. The surface is variously covered with Lemnoids (*Lemna* sp. and *Spirodella* sp.) and the littoral zone is severely trampled with sparse populations of soft rush (*Juncus effusus* L.), dotted smartweed (*Polygonum punctatum* Ell.), and maidencane (*Panicum hemitomon* Schult.) surviving the daily cattle use. This pond drains south to Turkey Creek through an excavated drainage ditch. This is an intermittent drainage of which only a small portion was considered to be a jurisdictional surface water as per criteria outlined in Chapter 62-340 FAC, *Delineation of the Landward Extent of Wetlands and Surface Waters*. The vegetation in the ditch is dominated primarily by bahiagrass (*Paspalum notatum* Fluegge.) and Bermudagrass (*Cynodon dactylon* [L.] Pers.). The drainage broadens into a natural drainage feature adjacent to Turkey Creek (Photo 9). The Agricultural Pond & Drainage community can be seen in **Photos 18 through 22**.

Pine – Improved Pasture (Residential Yard)

Acreage: 4.659	**Polygons:** 34	**FLUCCs Code:** 265

The Pine – Improved Pasture community is the area that surrounds the Schmidt residence in which a canopy of large slash pine (*Pinus elliottii* Engelm.) and loblolly pine (*Pinus taeda* L.) exists and is underlain by a groundcover of yard and pasture grasses dominated by bahiagrass (*Paspalum notatum* Fluegge.) and Bermudagrass (*Cynodon dactylon* [L.] Pers.). Part of this polygon is maintained as residential yard and part of this area is managed as improved pasture. The area is very well maintained and aesthetically pleasing (**Photo 23**).

Mixed Hardwood – Improved Pasture

Acreage: 9.925	**Polygons:** 37	**FLUCCs Code:** 266

The Mixed Hardwood – Improved Pasture community is a sparsely canopied pasture area with medium to large-size individuals of live oak (*Quercus virginiana* Mill.), laurel oak (*Quercus hemisphaerica* Bartr.), pignut hickory (*Carya* glabra [Mill.] Sweet), and sweetgum (*Liquidambar styraciflua* L.). The dominant groundcover is bahiagrass (*Paspalum notatum* Fluegge.) with Bermudagrass (*Cynodon dactylon* [L.] Pers.) being present. Shrub and ruderal herb species are scattered throughout the area and include common pokeweed (*Phytolacca americana* L.), smutgrass (*Sporobolus indicus* [L.] R. Br.), sand blackberry (*Rubus cuneifolius* Pursh), beggarticks (*Bidens alba* [L.] DC.), tropical soda apple (*Solalum viarum* Dunal), and small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small). This area is shown in **Photo 24**.

Mixed Pine – Mixed Hardwoods Successional Forest

Acreage: 4.982	**Polygons:** 38	**FLUCCs Code:** 414-1

This forested plant community borders the drainage referred to as Schmidt Creek as well as part of the Turkey Creek drainage. This is a mesic forest dominated by loblolly pine (*Pinus taeda* L.) with live oak (*Quercus virginiana* Mill.), sweetgum (*Liquidambar styraciflua* L.), laurel oak (*Quercus hemisphaerica* Bartr.), pignut hickory (*Carya glabra* [Mill.] Sweet), water oak (*Quercus nigra* L.), and slash pine (*Pinus elliottii* Engelm.) being present, but generally are much smaller in size. This pine-dominated community is a successional area where trees are becoming established due to the fencing out of cattle. The groundcover is dominated by bahiagrass (*Paspalum notatum* Fluegge.) but a host of ruderal species are present. The typical habitat of this community is shown in **Photo 25**.

Disturbed Mixed Hardwoods Slope Forest

Acreage: 1.615	**Polygons:** 28, 39	**FLUCCs Code:** 414-2

This community type surrounds the upper basin of the Schmidt Creek swamp area and occurs on the slopes that characterize this basin. The dominant trees are sweetgum (*Liquidambar styraciflua* L.), live oak (*Quercus virginiana* Mill.), laurel oak (*Quercus hemisphaerica* Bartr.), and pignut hickory (*Carya* glabra [Mill.] Sweet), but many trees are diseased with branch death and significant fallen tree debris being present. Much of the area has been severely disturbed by cattle resulting in a damaged, trampled, highly fertilized understory. Common understory species include wax myrtle (*Myrica cerifera* L.), harsh vervain (*Verbena scabra* Vahl.), Florida elephant-foot (*Elephantopus elatus* Bertol.), muscadine grape (*Vitis rotundifolia* Michx.), sand blackberry (*Rubus cuneifolius* Pursh), saw greenbrier (*Smilax bona-nox* L.), common pokeweed (*Phytolacca americana* L.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), American beautybush (*Callicarpa americana* L.), and bahiagrass (*Paspalum notatum* Fluegge.). Nuisance exotic species such as tropical soda apple (*Solanum viarum* Dunal) and popcorntree (*Sapium sebiferum* [L.] Roxb.) are locally abundant. Soils are disturbed in many areas and banks eroded due to cattle foraging. The habit of this community type is shown in **Photo 26**.

Disturbed Mixed Hardwoods – Riparian

Acreage: 7.910	**Polygons:** 36	**FLUCCs Code:** 438-1

This mesic community, which borders the Turkey Creek drainage, has been disturbed by past cattle and agricultural activities. Most of the area is covered by a dense tangle of small oak seedlings and saplings distributed throughout a dense tangle of saw greenbrier (*Smilax bona-nox* L.) and blackberry (*Rubus betulifolius* Small). There are areas where a remnant, mature creek bordering mesic community occurs composed of large sweetgum (*Liquidambar*

styraciflua L.), American basswood (*Tilia americana* L.), spruce pine (*Pinus glabra* Walt.), loblolly pine (*Pinus taeda* L.), live oak (*Quercus virginiana* Mill.), sugarberry (*Celtis laevigata* Willd.), black cherry (*Prunus serotina* Ehrh.), laurel oak (*Quercus hemisphaerica* Bartr.), and pignut hickory (*Carya glabra* [Mill.] Sweet). However, most of the area is a second growth, successional community composed of small individuals of these species that is slowly encroaching into the historically cleared pasture areas. This community type can be seen in **Photo 27**.

Disturbed Mixed Hardwoods – Seepage

Acreage: 9.445	**Polygons:** 32	**FLUCCs Code:** 438-2

The mesic hammock represented by polygon 32 is a very disturbed seepage community that surrounds a series of seepage wetlands and relic sinkhole depressions. The area has been significantly disturbed by cattle foraging and associated mechanical disturbance from agricultural equipment. Significant invasion by tropical soda apple (*Solanum viarum* Dunal), popcorntree (*Sapium sebiferum* [L.] Roxb.), tungoil tree (*Aleurites* fordii Hamsl.), Japanese honeysuckle (*Lonicera japonica* Thunb.), caesar weed (*Urena lobata* L.) as well as Japanese climbing fern (*Lygodium japonicum* [Thunb.] Swartz) has occurred in the groundcover. The canopy is disturbed but has some large individuals of live oak (*Quercus virginiana* Mill.), pignut hickory (*Carya glabra* [Mill.] Sweet), sugarberry (*Celtis laevigata* Willd.), sweetgum (*Liquidambar styraciflua* L.), persimmon (*Diospryos virginiana* L.), and American elm (*Ulmus americana* L.). Other common species include muscadine grape (*Vitis rotundifolia* Michx.), sand blackberry (*Rubus cuneifolius* Pursh), American beautybush (*Callicarpa americana* L.), saw palmetto (*Serenoa repens* [Bartr.] Small), elderberry (*Sambucus canadensis* L.), bastard indigobush (*Amorpha fruiticosa* L.), Virginia buttonweed (*Diodia virginiana* L.), beggarticks (*Bidens alba* [L.] DC.), and small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small). Mechanical disturbance of the soil is widespread and invasion of bahiagrass (*Paspalum notatum* Fluegge.) from the adjacent pasture is common along the fringes of the hammock. Although very disturbed, this is a very unique hydrologic system and is characteristic of only very unique areas in the Alachua County landscape. This area can be seen in **Photos 28 through 30**.

Disturbed Mixed Hardwoods – Drainage

Acreage: 1.566	**Polygons:** 35	**FLUCCs Code:** 438-3

This community is an upland drainage landscape feature that routes runoff from the adjacent pasture into the Brooke Pointe stream system. There is a well-defined drainage channel; however, this area was found not to be a jurisdictional surface water as determined by Chapter 62-340 FAC, *Delineation of the Landward Extent of Wetlands and Surface Waters*. The drainage is intermittent and flows only in response to high rainfall events. The groundcover vegetation is

disturbed by cattle and consists of sand blackberry (*Rubus cuneifolius* Pursh), beggarticks (*Bidens alba* [L.] DC.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), rice button aster (*Aster dumosus* L.), tropical soda apple (*Solanum viarum* Dunal), and maidencane (*Panicum hemitomon* Schult.). Canopy species include sweetgum (*Liquidambar styraciflua* L.), live oak (*Quercus virginiana* Mill.), pignut hickory (*Carya glabra* [Mill.] Sweet), and swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.). This area is shown in **Photo 31**.

Disturbed Mixed Hardwoods

Acreage: 1.855	**Polygons:** 30	**FLUCCs Code:** 438-4

The community represented by polygon 30 is a disturbed successional mixed hardwood forested area with a mixed canopy of live oak (*Quercus virginiana* Mill.), pignut hickory (*Carya glabra* [Mill.] Sweet), swamp chestnut oak (*Quercus michauxii* Nutt.), sugarberry (*Celtis laevigata* Willd.), water oak (*Quercus nigra* L.), laurel oak (*Quercus hemisphaerica* Bartr.), red maple (*Acer rubrum* L.), American basswood (*Tilia americana* L.), and sweetgum (*Liquidambar styraciflua* L.). Many trees are quite large; however, the majority are subcanopy in size ranging from 2 inches to 6 inches diameter at breast height (dbh). The groundcover has a mix of shrub, grass, and herb species to include devil's walkingstick (*Aralia spinosa* L.), buttonweed (*Diodia virginiana* L.), eastern hop-hornbeam (*Ostrya virginiana* [Mill.] K. Koch), saw greenbrier (*Smilax bona-nox* L.), woodsgrass (*Oslismenus hirtellus* [L.] P. Beauv.), trumpet creeper (*Campsis radicans* [L.] Seemann ex Bureau), and tall nutgrass (*Scleria triglomerata* Michx.). Nuisance exotic species present include Japanese climbing fern (*Lygodium japonicum* [Thunb.] Swartz), Japanese honeysuckle (*Lonicera japonica* Thunb.), Chinese privet (*Ligustrum sinense* Lour.), Chinaberrytree (*Melia azedarach* L.), and tungoil tree (*Aleurites fordii* Hemsl.). This area is presently a successional mesic community that has historically been affected by past agricultural management activities. This community type is shown in **Photos 32 & 33.**

Disturbed Live Oak Hammock

Acreage: 4.834	**Polygons:** 33	**FLUCCs Code:** 427-1

The Disturbed Live Oak Hammock community is an area that is dominated by a shaded canopy of specimen live oak (*Quercus virginiana* Mill.) trees. This area was historically used primarily for a cattle management area in which a dilapidated pole barn still remains (**Photo 34**). The area lies adjacent to the historic Schmidt residence, which is now Harmony Gardens. Today, the area is not used for cattle and is a successional community primarily used for deposition of unwanted junk. Common species found within the live oak canopy include sugarberry (*Celtis laevigata* Willd.), water oak (*Quercus nigra* L.), sweetgum (*Liquidambar styraciflua* L.), slash pine (*Pinus elliottii* Engelm.), and loblolly pine (*Pinus taeda* L.). The groundcover is primarily a dense tangle of small saplings of the canopy species mixed with saw greenbrier (*Smilax bona-*

nox L.) and bahiagrass (*Paspalum notatum* Fluegge.). Exotic nuisance species such as Chinese privet (*Ligustrum sinense* Lour.) are present. The large live oak trees are the remarkable characteristic of this community type as shown in **Photo 35**.

Wetlands

Schmidt Creek – Disturbed Mixed Hardwood Stream/Seepage Swamp

Acreage: 3.689	**Polygons:** 18	**FLUCCs Code:** 617-1

Polygon 18 designated as Schmidt Creek is a Disturbed Mixed Hardwood Stream/Seepage Swamp with a canopy dominated by a mix of hardwood species to include live oak (*Quercus virginiana* Mill.), sweetgum (*Liquidambar styraciflua* L.), swamp laurel oak (*Quercus laurifolia* Michx.), water oak (*Quercus nigra* L.), American basswood (*Tilia americana* L.), sweetbay (*Magnolia virginiana* L.), swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.), American elm (*Ulmus americana* L.), and slash pine (*Pinus elliottii* Engelm.). The wetland consists of several stream drainages consisting of clear, non-tannic water. The major flow originates from a drainage source located north of US Hwy 441 on the City of Gainesville Deerhaven properties. Seepage from adjacent uplands is also a significant hydrologic input. A surficial seepage spring originates along the southeast boundary of this polygon in an area represented by GPS location P-7 (Figure 7) and GPS location 21 (Figure 6). The seepage area, shown in **Photo 36** (Photo station P-7), is a wet, mucky herbaceous area dominated by lizard's tail (*Saururus cernuus* L.), golden canna (*Canna flaccida* Salisb.), and whorled beakrush (*Rhynchospora miliacea* [Lam.] Gray). Shrubs include dwarf palmetto (*Sabal minor* [Jacq.] Pers.), wax myrtle (*Myrica cerifera* L.), swamp red-bay (*Persea palustris* [Raf.] Sarg.), and Virginia willow (*Itea virginica* L.). The stream drainages are surrounded by a mosaic of higher elevation upland areas in which live oak (*Quercus virginiana* Mill.), loblolly pine (*Pinus taeda* L.), and pignut hickory (*Carya glabra* [Mill.] Sweet) are common. However, these fringing riparian upland areas all lie within the very well-defined basin in which this wetland occurs. The surrounding pasture and hammock communities are located along a very well-defined steep slope. Except for the stream drainage, the topography within the wetland is relatively flat. This entire system is very disturbed by cattle, resulting in an open, somewhat ruderal understory. Invasive exotic species such as wild taro (*Colocasia esculentum* [L.] Schott.), tropical soda apple (*Solanum viarum* Dunal), Japanese honeysuckle (*Lonicera japonica* Thunb.), Japanese climbing fern (*Lygodium japonicum* [Thunb.] Swartz), and Chinese privet (*Ligustrum sinense* Lour.) are present. These are mixed with a host of desirable wetland species to include royal fern (*Osmunda regalis** L.), Virginia chain fern (*Woodwardia virginica* [L.] Smith), and southern wood fern (*Dryopteris ludoviciana* [Kunze] Small). There is a listed plant species (member of the genus *Matelea*) located along the stream bank. The species is either angularfruit milkvine (*Matelea gonocarpos* [Walter] Shinners) or Florida milkweed (*Matelea floridana**‡ [Vail]

Woodson), but it is not possible to distinguish between these two species when not in flower. To date, no flowers have been seen. The typical habitat of this wetland system is shown in **Photos 36 through 43**.

Turkey Creek – Mixed Hardwood Riparian Wetland

Acreage: 3.884	**Polygons:** 7, 19, 20, 21, 22, 23, 24, 25, 26	**FLUCCs Code:** 615-1

The Turkey Creek system is a highly variable plant community that extends from southeast to northwest along the entire south perimeter of the property. The upland boundary of the Turkey Creek wetland is represented by a flagged wetlands jurisdiction line that was established in November 2007. There are apparent breaks in the wetland community as seen on Figure 10. However, this is the result of the historically surveyed property boundary not truly reflecting the center line of the creek. Presently, in several areas, the north boundary of the Turkey Creek wetland is located south of the property line. The creek is characterized by very steep slopes along the eastern reaches with much of the wetland being restricted to the well-defined surface water boundary of the creek. The topography of the creek flattens as the creek approaches the confluence with Brooke Pointe Creek. In this area, there is a broad floodplain wetland and a dominant canopy of bald cypress (*Taxodium distichum* [L.] L. Rich.), swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.), American elm (*Ulmus americana* L.), red maple (*Acer rubrum* L.), and sweetbay (*Magnolia virginiana* L.). In this area several smaller ox-bow drainages are present and much broader wetland areas are encountered. The riparian uplands that border the creek and form the well-defined buffering communities as evidenced on the aerial photographs have historically been disturbed by cattle foraging and clear-cutting. Residential areas located along the south side of the creek have resulted in clear-cutting of both canopy and groundcover in these buffer areas to enlarge yards, provide gardens, and miscellaneous recreational space. There are several historic crossings that allowed movement of agriculture related vehicles across the creek. An old wooden bridge is still present at GPS location 111 (Figure 6) while an intact (≈52”) culvert is found at GPS location 330 (Figure 7; **Photo 44**). The typical habit of the Turkey Creek drainage is shown in **Photos 44 through 46**.

Brooke Pointe Creek – Mixed Hardwood Riparian Wetland

Acreage: 1.051	**Polygons:** 5, 6	**FLUCCs Code:** 615-1

The Brooke Pointe Creek wetland is a narrow stream system with clear water. Common canopy species include swamp laurel oak (*Quercus laurifolia* Michx.), live oak (*Quercus virginiana* Mill.), bald cypress (*Taxodium distichum* [L.] L. Rich.), swamp black gum (*Nyssa sylvatica* Marsh. var. *biflora* [Walt.] Sarg.), red maple (*Acer rubrum* L.), swamp chestnut oak (*Quercus michauxii* Nutt.), American basswood (*Tilia americana* L.), American elm (*Ulmus americana* L.), and ironwood (*Carpinus caroliniana* Walt.). The stream channel is a meandering, well-defined, abrupt-sided channel bordered on the Schmidt property side by a disturbed, fringing mesic

hardwood community affected by cattle ranching activities. The residents of Brooke Pointe have severely altered the buffering hardwood community on the north side of the creek through a series of land clearing and dredge and fill activities primarily associated with yard expansion. Clearing of the buffer has occurred in many areas all the way to the edge of the stream channel. This results in substantial runoff of applied fertilizers directly into the surface water area. The typical habit of this community is shown in **Photos 47 through 49**.

Disturbed Depression Wetlands

Acreage: 0.945	**Polygons:** 8, 11, 12, 13, 14, 15, 16	**FLUCCs Code:** 615-1

There are several disturbed depression wetlands occurring within the southwest quadrant of the project site. These wetlands are apparently associated with relic sinkhole areas and definitely represent areas where surface water pools for only short periods then disappears into the ground. Onsite geotechnical studies[1] (**Attachment 1**) (specifically for polygons 15 and 16) indicate that these depressions typically have a thin organic surficial layer underlain by various layers of sand with clay and sand with silt with the Hawthorne Formation being encountered at various depths. Ardaman and Associates, Inc. (2008) noted no conditions in the tested depression locations that suggested active sinkhole activity; however, only two of the depressions within the pasture were evaluated. The depression areas either receive seepage as the primary input (polygons 15 and 16) or receive a combination of seepage and surface runoff as the primary hydrologic inflows (polygons 8, 11, 12, 13, and 14). The wetlands are only intermittently wet and all are severely disturbed by ongoing cattle activity. These wetlands are very small with the seven (7) indicated wetland polygons totaling only 0.945 acres.

The wetlands are typically represented by a disturbed groundcover consisting of lizard's tail (*Saururus cernuus* L.), dotted smartweed (*Polygonum punctatum* Ell.), leathery rush (*Juncus coriaceus* Mack.), dwarf palmetto (*Sabal minor* [Jacq.] Pers.), fireweed (*Erechtites hieracifolia* [L.] Raf.), eastern false-willow (*Baccharis halimifolia* L.), wood sage (*Teucrium canadense* L.), and whorled beakrush (*Rhynchospora miliacea* [Lam.] Gray). Because of the intermittent hydrologic regime, many upland species are scattered throughout the wetland areas to include woodsgrass (*Oplismenus hirtellus* [L.] P. Beauv.) and American beautybush (*Callicarpa americana* L.). Exotic species such as popcorntree (*Sapium sebiferum* [L.] Roxb.), tropical soda apple (*Solanum viarum* Dunal), and tungoil tree (*Aleurites fordii* Hemsl.) are common throughout. It should be noted that in the area where the depressional wetlands are found, there are also many adjacent depressional areas that are uplands that occur at similar

[1]Ardaman & Associates, Inc. 2008. Subsurface Soil Exploration and Geotechnical Engineering Evaluation, Proposed Retail Center Market at Schmidt Farm, US 441 and NW 43rd Street, Alachua County, Florida.

elevations as the wetland areas. Photos of these wetland types are shown in **Photos 50 through 55**.

Disturbed Mixed Hardwoods – Shrub Seepage Wetland

Acreage: 1.062	**Polygons:** 9, 10	**FLUCCs Code:** 632

Polygons 9 and 10 represent depressional wetland areas that receive precipitation and subsurface seepage as the primary hydrologic inflows. These two areas have ill-defined surface water features in which water flows on the surface but may disappear into the ground before flowing into adjacent wetlands in the downslope position. These areas are currently seriously affected by cattle and vegetation is disturbed. Canopy species are sparse, but consist of sweetgum (*Liquidambar styraciflua* L.), live oak (*Quercus virginiana* Mill.), slash pine (*Pinus elliottii* Engelm.), swamp laurel oak (*Quercus laurifolia* Michx.), red maple (*Acer rubrum* L.), and sugarberry (*Celtis laevigata* Willd.). Groundcover species consist of lizard's tail (*Saururus cernuus* L.), leathery rush (*Juncus coriaceus* Mack.), capitate beakrush (*Rhynchospora microcephala* Britt. ex Small), whorled beakrush (*Rhynchospora miliacea* [Lam.] Gray), maidencane (*Panicum hemitomon* Schult.), American cupscale (*Sacciolepis striata* [L.] Nash.), and dotted smartweed (*Polygonum punctatum* Ell.). There is a host of sapling size individuals representing the canopy species in addition to significant populations of elderberry (*Sambucus canadensis* L.), eastern false-willow (*Baccharis halimifolia* L.), wax myrtle (*Myrica cerifera* L.), and invasion of tungoil tree (*Aleurites fordii* Hemsl.) and popcorntree (*Sapium sebiferum* [L.] Roxb.) is extensive. The typical habit of this community type is shown in **Photos 56 and 57**.

Section 3. Surface Waters and Wetlands

Surface Water Delineation, Wetland Delineation, Surface Water & Wetland Buffer, 100-Year Floodplains Identification

The 2006 FEMA flood zone map for the project site is shown in **Figure 11** and the delineated wetlands boundary map is presented in **Figure 12**. The wetlands and associated 50-ft and 75-ft buffers distribution is shown in **Figure 13**. It should be stressed that the FEMA flood zone as depicted is grossly erroneous. This can be seen by overlaying the flood zone map on the 2001 Alachua County LiDAR map and wetlands map. There appears to be no correlation of the floodplain with the existing ground topography and the Turkey Creek system in the southeast of the property does not lie within the flood elevation. The FEMA coverage appears to be inaccurate and, in addition, shifted to the north within the GIS coverage provided by FEMA.

The wetlands map presented in Figure 12 represents the flagged and surveyed wetland boundary that was delineated in November 2007 by ERC.

For comparison purposes, the wetland areas on the project site as shown on the Alachua County composite wetlands map and the USFWS National Wetlands Inventory wetlands map are presented in **Figures 14 and 15**, respectively. Historically the project site has not changed to a great degree since 1937. Historic aerials photos showing the development of the site are, as follows:

Figure 16	1937	**Figure 19**	1961	**Figure 22**	1979
Figure 17	1949	**Figure 20**	1968	**Figure 23**	1984
Figure 18	1955	**Figure 21**	1974	**Figure 24**	1999

Prior to 1937, the site had already been cleared for pasture. The buffers that surround the three creek systems appear to be smaller in photos dated 1937 through 1979 than that which exists today. The major change that has occurred in the distribution of the wetland systems is seen on the 1979 aerial in which the rectangular farm pond is shown to have been excavated within the natural wetland area. This excavation occurred prior to the time when any permits would have been required for this activity.

Figure 11. **FEMA 100-yr floodplain map shown for The Market at Schmidt Farms project site and surround areas.**

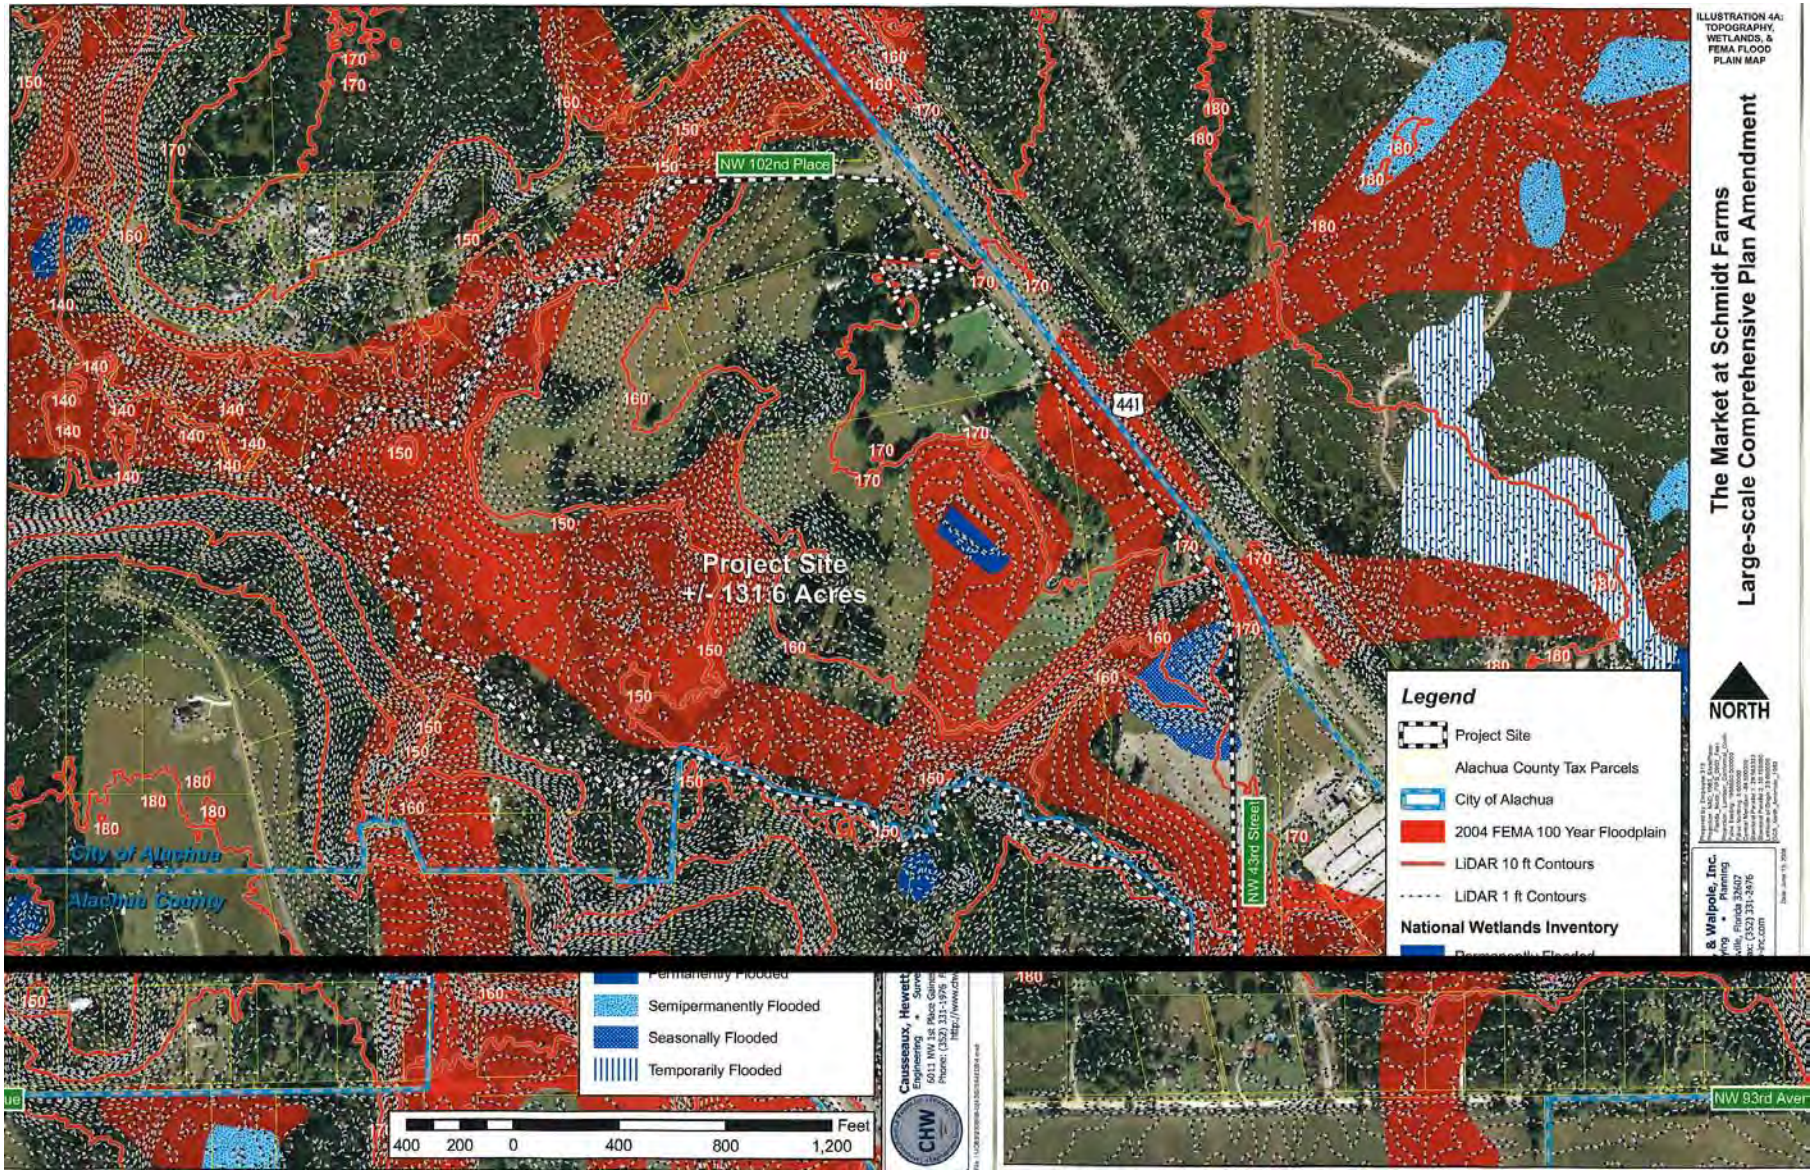

Figure 12. **The wetlands occurring on The Market at Schmidt Farms project site as determined by flagging and surveying of wetlands in accordance with methodologies outlined in Chapter 62-340 FAC (wetlands flagged by ERC November 2007)**

Section 4. Significant Plant and Wildlife Habitat & Listed Plant and Animal Species Habitat

Listed Plant & Animal Species

Summary Information Regarding Threatened & Endangered Species in Florida

There are several agencies that have been delegated the authority to protect and preserve the threatened and endangered flora and fauna that occur within the State of Florida. The United States Fish and Wildlife Service (USFWS) maintains a list of species afforded special protection by the Endangered Species Act of 1973 (16 U.S.C. 1531). The list is published in the List of Endangered and Threatened Wildlife and Plants, 50 CFR 17.11-12. The Florida Fish and Wildlife Conservation Commission maintains a list of the protected animals occurring within the state by authority of the Florida Endangered and Threatened Species Act of 1977 (Section 372.072, Florida Statutes) and the Wildlife Code of the State of Florida (Chapter 68A-27, Florida Administrative Code). The specific policy of the Florida Endangered and Threatened Species Act of 1977 is declared as follows:

> **Subsection 2: Declaration of Policy**-The Legislature recognizes that the State of Florida harbors a wide diversity of fish and wildlife and that it is the policy of this state to conserve and wisely manage these resources, with particular attention to those species defined by the Florida Fish and Wildlife Conservation Commission, the Department of Environmental Protection, or the U.S. Department of Interior, or successor agencies, as being endangered or threatened. As Florida has more endangered and threatened species than any other continental state, it is the intent of the Legislature to provide for research and management to conserve and protect these species as a natural resource.

The list of threatened and endangered animals protected by these laws is published in Section 68-27.003, .004, and .005, Florida Administrative Code. The regulation of listed marine animals was historically delegated to the Florida Department of Natural Resources (FDNR); however, has since been reorganized into the Florida Department of Environmental Protection. The Preservation of Native Flora of Florida Act (Sections 581.185, 581.186 [in part] and 581.201, Florida Statutes) passed in 1978 declares a public policy of the State of Florida with regard to native flora, as follows:

> **Subsection 1: Legislative Declaration**-The Legislature finds and declares that it shall be the public policy of this state to: provide recognition of those plant

> species native to the state that are endangered, threatened, or commercially exploited; protect the native flora from unlawful harvesting on both public and privately owned lands; provide an orderly and controlled procedure for restricted harvesting of native flora from the wild, thus preventing wanton exploitation or destruction of native plant populations; encourage the propagation of native species of flora; and provide the people of this state with the information necessary to legally harvest native plants so as to ultimately transplant those plants with the greatest possible chance of survival.

To this end, the Florida Department of Agriculture and Consumer Services (FDACS) regulates the threatened and endangered plant species occurring within the state. As specifically authorized by **Chapter 5B-40, Preservation of Native Flora of Florida, FAC, the Regulated Plant Index is published in Section 5B-40.0055**. The Game Commission periodically releases a publication that summarizes animal species that are regulated by the Florida Fish and Wildlife Conservation Commission, and the USFWS. The publication is entitled Florida's Endangered Species, Threatened Species, and Species of Special Concern. The federal lists of plants and animals is published in 50CFR 17.11-12 and the list of Florida's federally listed plant species is also published by the Florida Division of Forestry.

Alachua County, by authority of **Article 3 of Chapter 406, Significant Plant and Wildlife Habitat,** and **Article 4, Listed Plant and Animal Species Habitat**, of the Unified Land Development Code regulates the development in habitats where listed species occur or could potentially occur. Provisions within Articles 3 and 4 allow the County to require that up to 25% of the upland portion may be required to be protected and set aside as primary conservation areas. Areas protected under Articles 3 and 4 are designated as Conservation Management Areas and are further regulated via rules outlined in **Article 17, Conservation Management Areas** (ULDC) and potentially require that the property owner establish a conservation easement for the specific areas within the parcel. The owner is further responsible for development of a management plan and perpetual management of the area.

Several other lists of the endangered and threatened fauna and flora are maintained for the State of Florida. The Florida Natural Areas Inventory (FNAI) maintains a list that summarizes the status and distribution of both plant and animal species as well as natural communities occurring within the State of Florida. The FNAI is managed by The Nature Conservancy in cooperation with the Florida Department of Environmental Protection. The lists compiled by the FNAI contain many species that do not occur on the State or Federal lists. The FNAI list as compiled is not subjected to the time-consuming administrative process that is required for

listing for State and Federal protection. Therefore, these lists often reflect the up-to-date true status of species that may be in immediate peril. The FNAI species that are not State or Federally listed are not given legal protection.

An inventory of the statewide distribution of potentially threatened and endangered species was initiated in 1973 by the Florida Committee on Rare and Endangered Plants and Animals (FCREPA). The group published a several-volume series that contains detailed descriptions, distributions, and academic evaluations of species considered to be in peril. The FCREPA list contains many species in addition to the State and Federal lists; however, these additional species are afforded no legal protection. The FCREPA series offers the best compiled review of the biology of the imperiled biota of Florida to date. Beginning in 1986, revisions of the FCREPA volumes were initiated and continue to date.

To aid in review of the imperiled species that occur in Florida and the State and Federal Regulations that govern their management, the following publications are available:

- Endangered and Threatened Species Act of Florida, Chapter 372.072, Florida Statutes
- Rules Relating to Endangered and Threatened Species, Chapter 68A-27, FAC
- The Preservation of Native Flora of Florida, Chapter 581.185, Florida Statutes
- Preservation of Native Flora of Florida, Chapter 5B-40, FAC
- Florida Endangered Species, Threatened Species, and Species of Special Concern, June 2007

Threatened & Endangered Species Survey Methodology

Surveys for the occurrence of imperiled species were performed concurrent with plant community surveys from October 2006, November 2007, and April through May 2008. In addition to field surveys, searches of several existing databases were performed to investigate the documented and potentially occurring imperiled species located in and around the project site. The databases queried were

- Florida Natural Areas Inventory Biodiversity Data Matrix
- Florida Fish and Wildlife Conservation Commission (FWC) Eagle Nest Location Database
- FWC Waterbird Colony Location Database
- FWC 2006 Eagle Nest Census Data

Results of Imperiled Species Literature Review & Field Surveys

Herpetofauna

Common herpetofauna species seen on The Market at Schmidt Farms project site are listed in **Table 5.**

Table 5. Common herpetofauna species seen on The Market at Schmidt Farms project site.

Common Name	Scientific Name
Water Moccasin	*Agkistrodon piscivorous conanti*
Green Anole	*Anolis carolinensis*
Six-Lined Racerunner	*Cnemidophorus sexlineatus sexlineatus*
Southern Black Racer	*Coluber constrictor priapus*
Corn Snake	*Elaphe guttata*
Yellow Rat Snake	*Elaphe obsoleta quadrivittata*
Broadhead Skink	*Eumeces laticpes*
Green Treefrog	*Hyla cinerea*
Southern Spring Peeper	*Hyla crucifer bartramiana*
Eastern Fence Lizard	*Sceloporus undulates*
Ground Skink	*Scincella lateralis*
Florida Box Turtle	*Terrapene carolina bau*

Mammals

Common mammals seen during the field survey of The Market at Schmidt Farms project site are listed in **Table 6.**

Table 6. Common mammals seen during the field survey of The Market at Schmidt Farms project site.

Common Name	Scientific Name
Nine-banded armadillo	*Dasypus novemcinctus*
Opossum	*Didelphis virginiana*
Southern flying squirrel	*Glaucomys volans*
Bobcat (scat)	*Lynx rufus floridanus*
White-tailed deer	*Odocoileus virginianus*
Raccoon	*Procyon lotor*
Gray squirrel	*Sciurus caroliniensis*
Feral hogs	*Sus scrofa*

Common Name	Scientific Name
Eastern cottontail	*Sylvilagus floridanus*
Gray fox	*Urocyon cinereoargenteus*

Birds

Common birds encountered during the field survey of The Market at Schmidt Farms project site are listed in **Table 7.**

Table 7. Common birds encountered during the field survey of The Market at Schmidt Farms project site.

Common Name	Scientific Name
Red-winged blackbird	*Agelaius phoeniceus*
Ruby-throated hummingbird	*Archilochus colubris*
Cedar waxwing	*Bombycilla cedrorum*
Red-tailed hawk	*Buteo jamaicensis*
Red-shouldered hawk	*Buteo lineatus*
Chuck-will's-widow	*Caprimulgus carolinensis*
Northern cardinal	*Cardinalis cardinalis*
American goldfinch	*Carduelis tristis*
Turkey vulture	*Cathartes aura*
Hermit thrush	*Catharus guttata*
Common nighthawk	*Chordeiles minor*
Northern harrier	*Circus cyaneus*
Northern flicker	*Colaptes auratus*
Black vulture	*Coragyps atratus*
American crow	*Corvus brachyrhynchos*
Blue jay	*Cyanocitta cristata*
Black-throated blue warbler	*Dendroica caerulescens*
Pileated woodpecker	*Dryocopus pileatus*
Swallow-tailed kite	*Elanoides forficatus*
White ibis	*Eudocimus albus*
American kestrel	*Falco sparverius*
Sandhill crane	*Grus canadensis*
Mississippi kite	*Ictinia mississippiensis*
Loggerhead shrike	*Lanius ludovicianus*
Red-bellied woodpecker	*Melanerpes carolinus*
Red-headed woodpecker	*Melanerpes erythrocephalus*

Common Name	Scientific Name
Wild turkey	*Meleagris gallopavo*
Northern mockingbird	*Mimus polyglottos*
Brown-headed cowbird	*Molothrus ater*
Great-crested flycatcher	*Myiarchus crinitus*
Northern parula	*Parula americana*
Tufted titmouse	*Parus bicolor*
Carolina chickadee	*Parus carolinensis*
Indigo bunting	*Passerina cyanea*
Downy woodpecker	*Picoides pubescens*
Summer tanager	*Piranga rubra*
Blue-gray gnatcatcher	*Polioptila caerulea*
Common grackle	*Quiscalus quiscula*
American redstart	*Setophaga ruticilla*
Yellow-bellied sapsucker (evidence)	*Sphyrapicus varius*
Chipping sparrow	*Spizella passerina*
Barred owl	*Strix varia*
Carolina wren	*Thryothorus ludovicianus*
American robin	*Turdus migratorius*
Yellow-throated vireo	*Vireo flavifrons*
White-eyed vireo	*Vireo griseus*
Red-eyed vireo	*Vireo olivaceus*
Mourning dove	*Zenaida macroura*

The results of the 2006 eagle nest census data search are shown in **Figure 25**. There is one eagle nest located in the vicinity of the project site. This nest is located 2.5 miles to the west of the site within the San Felasco Hammock Preserve State Park area. The nest nomenclature is AL056, which is listed as active in 2003, 2004, 2005, and 2006. The status for 2007 is unknown. Development of the project site should have no impact on the viability of this nest site.

The results of the water bird rookeries data base search are shown in **Figure 26.** There are three (3) documented water bird nesting sites located in the vicinity of The Market at Schmidt Farm parcels. The nomenclature and activity status of these rookery sites are, as follows:

Nest ID	1970's Survey	1980's Survey	1990's Survey	1999 Survey	Total Nests
605004	Active	Active	Inactive	Inactive	---
605012	Active	Active	Active	Active	50-250
605113	Unknown	Active	Inactive	Inactive	---

Colony 605012 is the only active colony based on recent surveys. The species composition of this colony is approximately 1% great egrets and 99% cattle egrets. Colony 605113 is located within the existing Deerhaven power generating station property. This site was originally used by little blue herons and cattle egrets; however, has shown no activity since the 1980's.

The FNAI element occurrence location map, which shows known listed species locations in the vicinity of the project site is shown in **Figure 27**. The results show that no species are known for this location. It is possible that the timber rattlesnake, eastern diamondback rattlesnake, and eastern indigo snake could be found on the site. The most likely habitat for these species on the project site occurs within the forested buffer areas to the creeks and in the seepage area designated by polygon 32. These areas are designated as conservation in the Future Land Use Amendment proposal; therefore, no direct adverse affects would occur to these priority habitats. There are several species shown on the FNAI element occurrence map that are listed as likely to occur or potentially could occur in areas in the vicinity of the project site. The likelihood of the occurrence of these species on the project site is discussed, as follows.

FNAI LIKELY SPECIES

Eastern Indigo Snake (Drymarchon couperi): the eastern indigo snake has been documented by ERC in the Rocky Creek drainage 0.6 miles east of SR 121 at NW 142nd Avenue. The snake is found in a wide variety of habitats and could potentially occur within the creek and buffer areas, however, has not been documented.

Little Blue Heron (Egretta caerulea) and Woodstork (Mycteria americana): There is only one low-quality wading bird habitat on site and there is a low probability of widespread use of this site by these species.

Timber Rattlesnake (Crotalus horridus): ERC has documented the timber rattlesnake in the Rocky Creek drainage 0.6 miles east of SR 121 at NW 142nd Avenue. This species could potentially inhabit the wetland buffer areas on the project site, but has not been documented.

Short-tailed Snake (Stilosoma extenuatum): The short-tailed snake inhabits xeric habitats primarily longleaf pine-turkey oak sandhills. This project site does not have this habitat type or any type of xeric habitat. It is unlikely that this species occurs on site or that a population can be sustained on site given the present and past land management practices.

Eastern Diamondback Rattlesnake (Crotalus adamanteus): This species has historically been document for the site and habitat currently exists along the creek and within creek buffers. The primary habitat of this species on site is designated for conservation in the future land use amendment.

FNAI POTENTIAL SPECIES

Florida Sandhill Crane (Grus canadensis pratensis): Sandhill cranes were seen on the project site. There is no nesting habitat for this species occurring on site; however, the pastures provide foraging habitat.

Florida Pine Snake (Pituophis melanoleucus mugitus): The pine snake is a rare inhabitant of xeric communities. There are no preferred habitat types for this species on site. Pine snakes prefer pocket gopher burrows and, less frequently, gopher tortoise burrows, for refuge. There are no tortoises on site and no pocket gophers were seen.

Sherman's Fox Squirrels (Sciurus niger shermani): The fox squirrel typically occupies xeric areas that are frequently burned and have numerous mature oaks and pines distributed throughout the habitat. There are no known fox squirrels in this area and there is little suitable habitat present to support this species.

Florida Black Bear (Ursus americanus floridanus): There is a possibility that the Florida black bear is a transient inhabitant of this site. There were no signs of black bear present on the site during the field survey. No tracks were observed or any evidence of bear foraging.

Striped Newt (Notophthalmus perstriatus) and Gopher Frog (Rana capito): The striped newt and gopher frog are xeric-adapted species that typically inhabit scrubby flatwoods, sandhills, and scrub habitats. These species are commonly associated with gopher tortoise habitat and are frequently found within burrows. Both species depend on empheral, isolated wetlands for breeding and reproduction. These species are extremely sensitive to the impacts that are cosmopolitan on this site, which include extensive soil disturbance, fire suppression, and wetland disturbance. There is no habitat for these species on site. It is unlikely that these species occur on the site.

Flatwoods Salamander (Ambystoma cingulatum): The flatwoods salamander is an inhabitant of fire-maintained flatwoods with undisturbed cypress ponds. The flatwoods salamander once inhabited Bradford, Alachua, Marion, and Duval counties in north Florida; however, only one population has been recently verified in the north Florida area (Baker County)[2]. At present, it appears that this species has been extirpated from most of its North Florida range, but still maintains viable populations in several panhandle counties.[2]

[2] Management Plan: Flatwoods Salamander (*Ambystoma cingulatum*), February 21, 2001. Florida Fish and Wildlife Conservation Commission.

Southern Hognose Snake (Heterodon simus): the primary habitat for the southern hognose snake is sandhills and sandy soil, open hammocks and scrub. These habitat types do not occur on the project site. This species has not been reported for the immediate area of the site and it is unlikely that a breeding population is present.

Listed Plant Species

There was only one listed plant species found during the field survey. A plant belonging to the genus *Matelea* is found variously located in the hardwood areas adjacent to the creek systems. The plant is either *Matelea floridana*, which is listed as endangered (State of Florida) or *Matelea gonocarpus*, which is listed as threatened (State of Florida). The specific species cannot be identified without flowers, which have not yet been seen. Both these species are quite common in Alachua County mesic hammock areas. Their habitat on site is proposed for conservation in the Land Use amendment; therefore, the development on the site should have no adverse affects on the existing populations. It is likely that the population will benefit due to the removal of cattle from the proposed buffer areas, which is the primary habitat for this species on site. A photograph of this species is shown below.

Figure 25. **Locations of known eagle nests in the vicinity of the project site in Alachua County.**

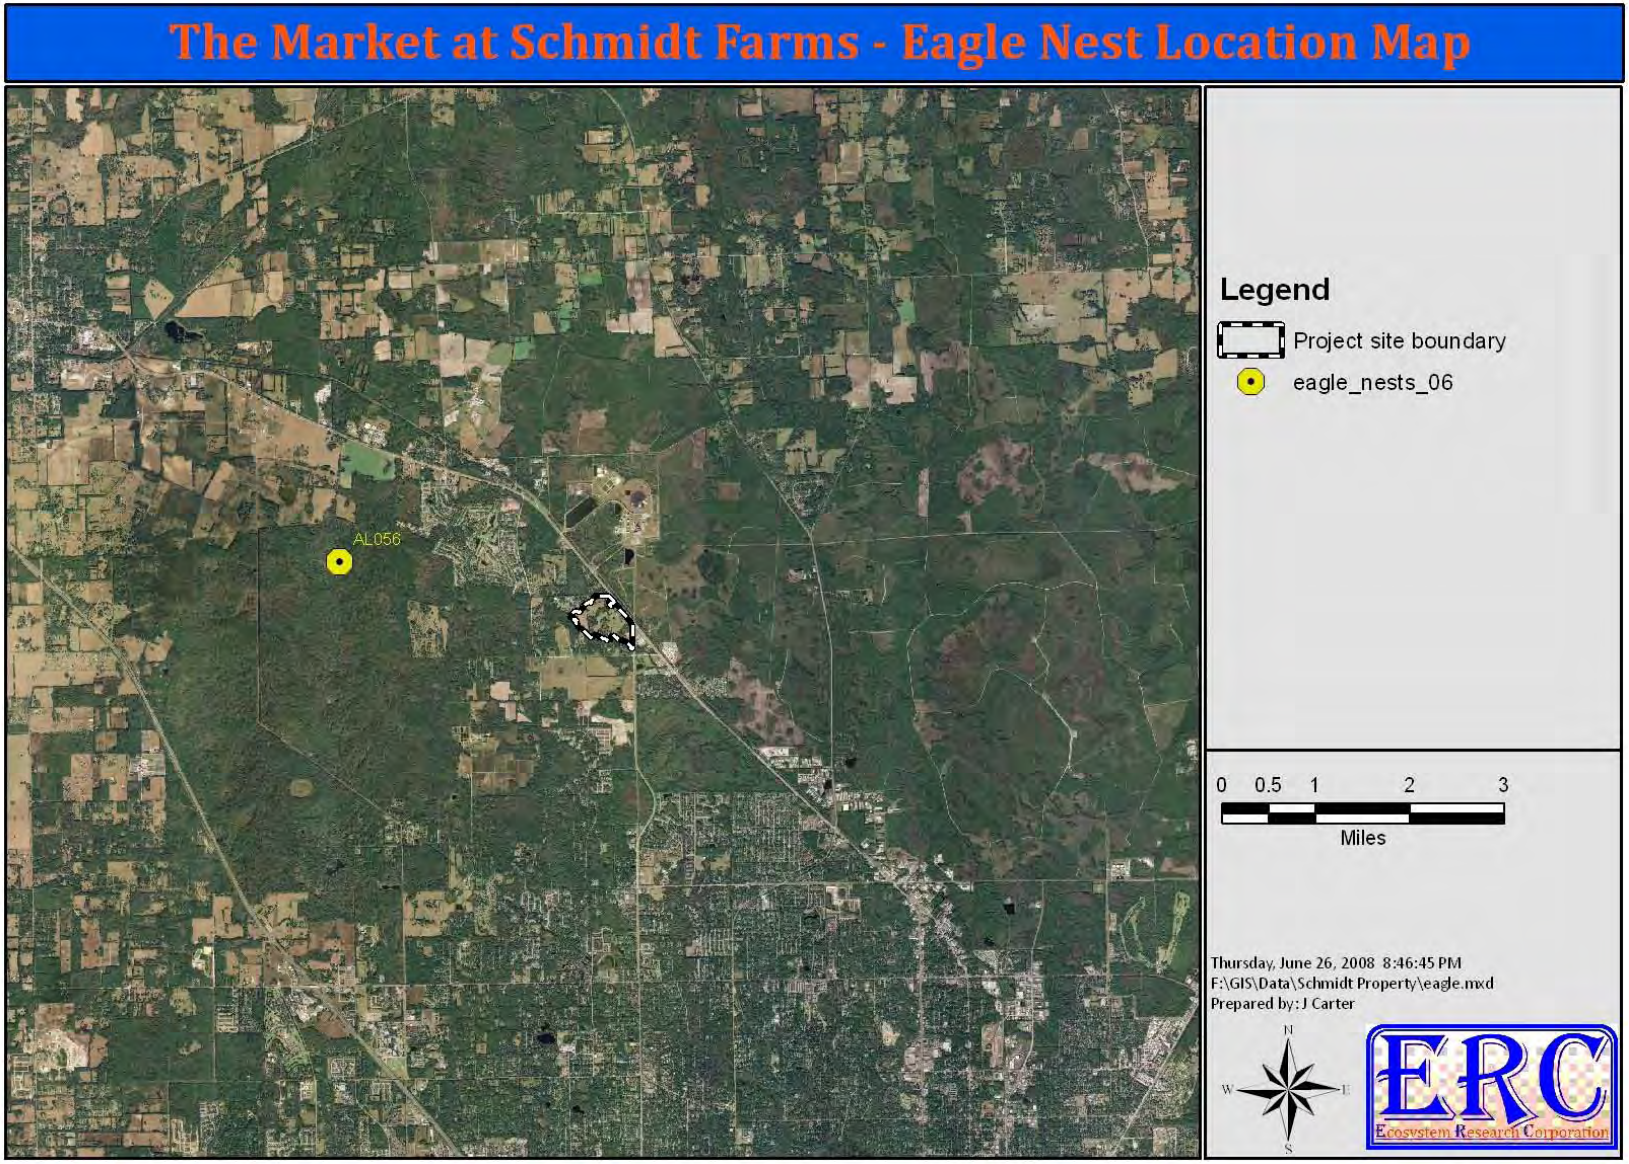

Figure 26. **Locations of water bird rookery sites in the vicinity of the project site in Alachua County.**

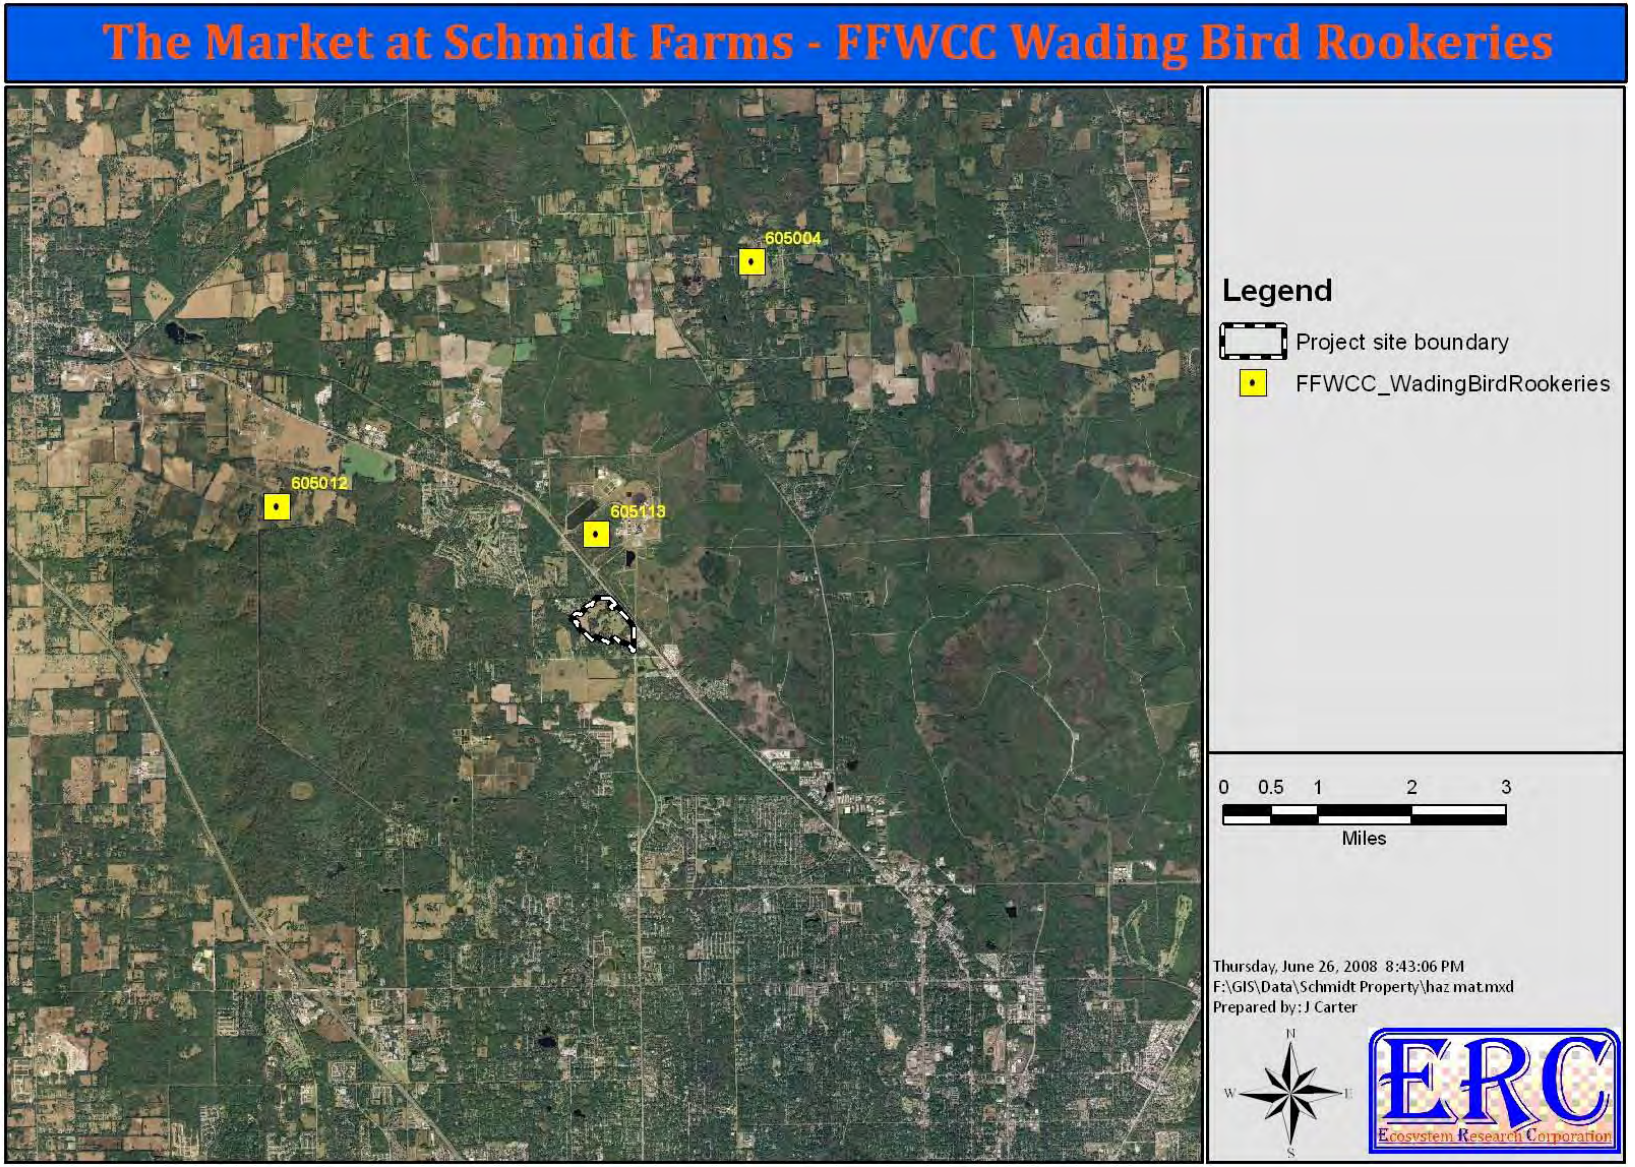

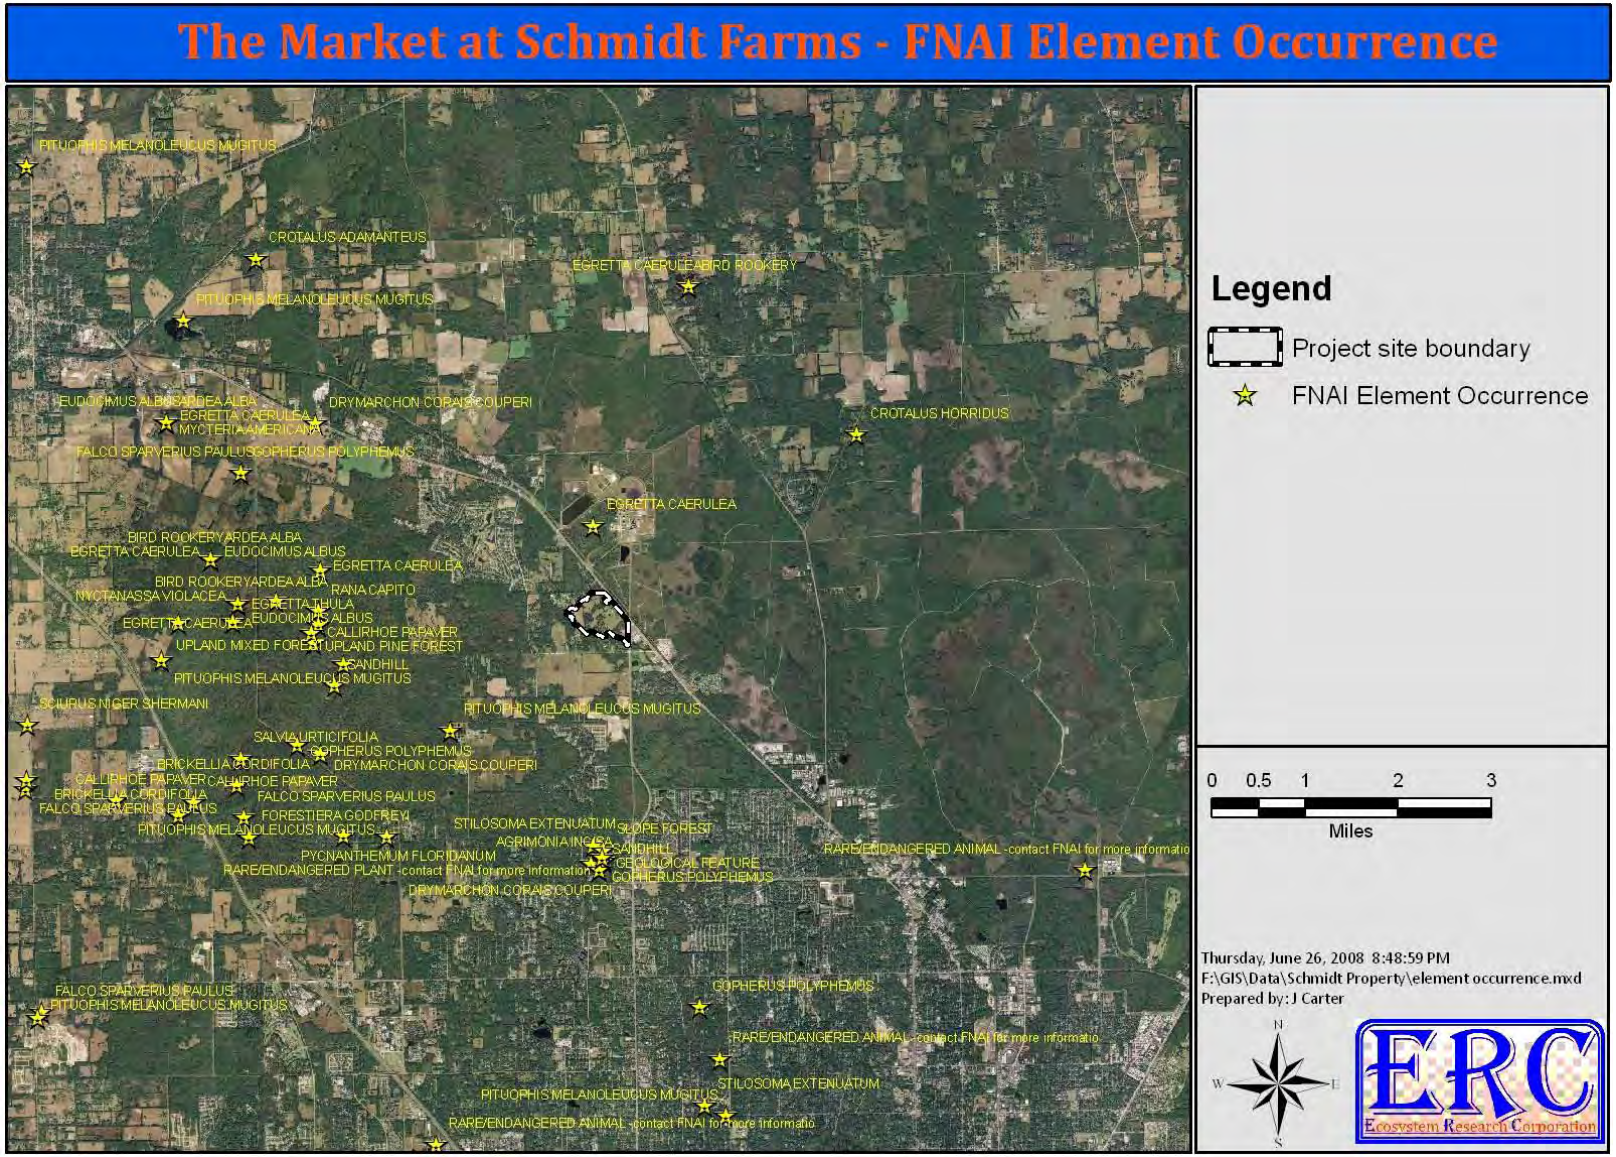

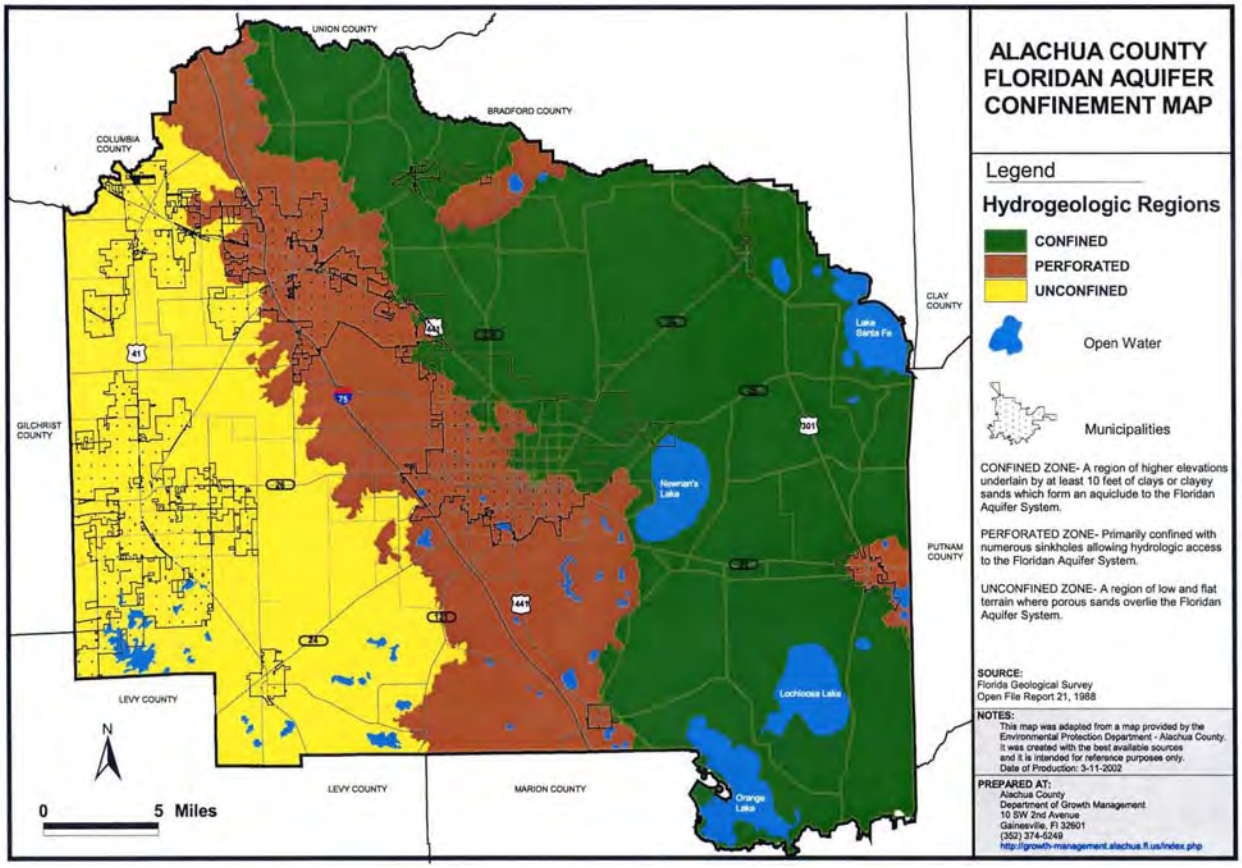

Figure 27. FNAI element occurrence map shown for the project site and surrounding area.

Section 5. High Aquifer Recharge Areas

The project site is located along the boundary of the confined and perforated hydrologic regions of the Floridan Aquifer (**Figure 28**). In this area, the aquifer is expected to be primarily confined by the Hawthorne Formation; however, perforations in the confining layer may be present in the form of sinkholes or relic sinkholes in which direct recharge to the Floridan can occur. A subsurface geotechnical report prepared by Ardaman & Associates is attached for review (Attachment 1).

Figure 28. Alachua County Floridan Aquifer Confinement Map.

Section 6. Soils

There are seven (7) soil mapping units shown to occur on the project site (**Figure 29; Table 8**). The Pomona sand (14), Pelham sand (13), and Mulat sand (23) are typical soils of the flatwoods with Pomona sand having a spodic horizon occurring between 16 inches and 24 inches below the soil surface. The Floridana sand (22) is a depressional mapping unit while Kanapaha (7) and Millhopper (8) sands are soils of gently rolling uplands that typically are colonized by a host of mesic to xeric hardwood species. All soils have a clay confining layer occurring within the top

58 inches of the soil profile. All soils have an expected seasonal high water table that is within 24 inches of the soil surface if only for a brief period of time. The Millhopper sand is the only moderately well-drained soil while the Floridana sand, depressional, is classified as very poorly drained. The remaining mapping units are considered as poorly drained. The Floridana sand, depressional, is the only mapped unit considered to be a hydric soil.

Figure 29. NRCS soils map for The Market at Schmidt Farms project site.

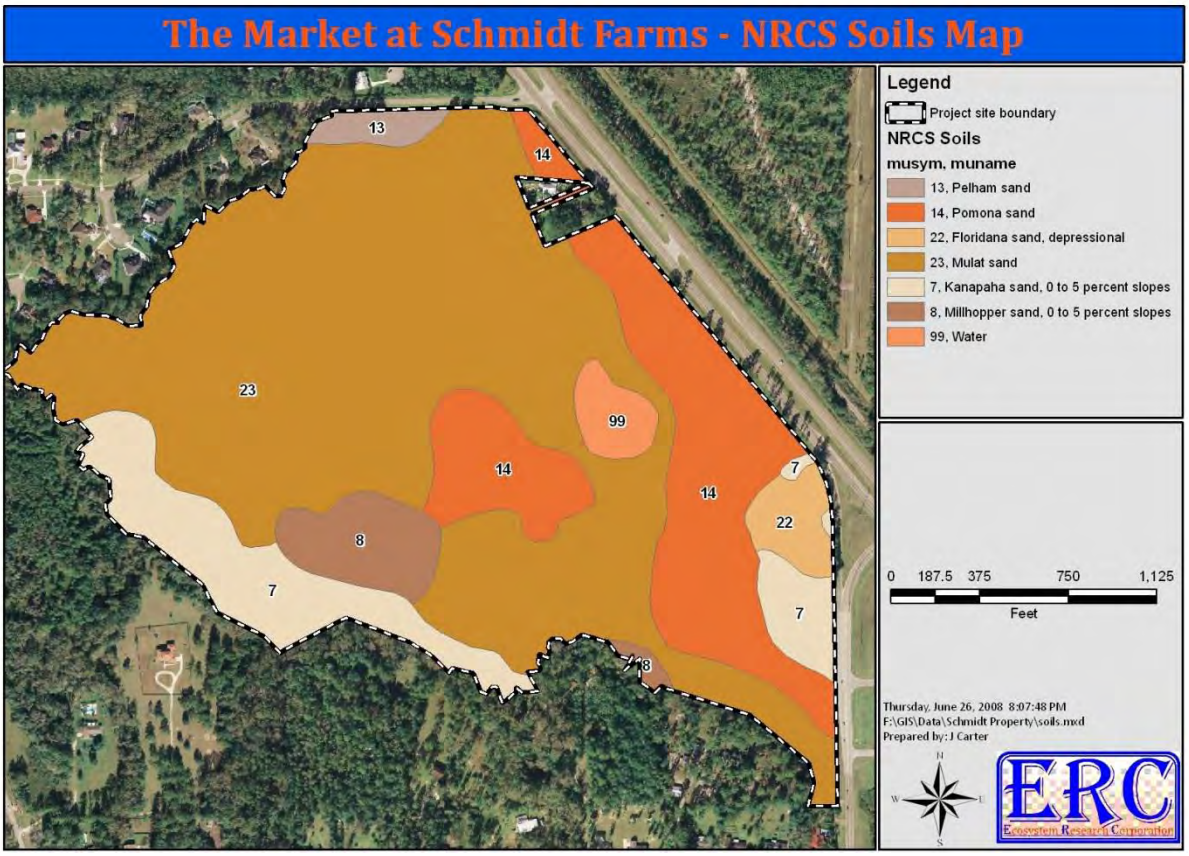

Table 8. Drainage characteristics of the soils mapped within and adjacent to The Market at Schmidt Farms project site.

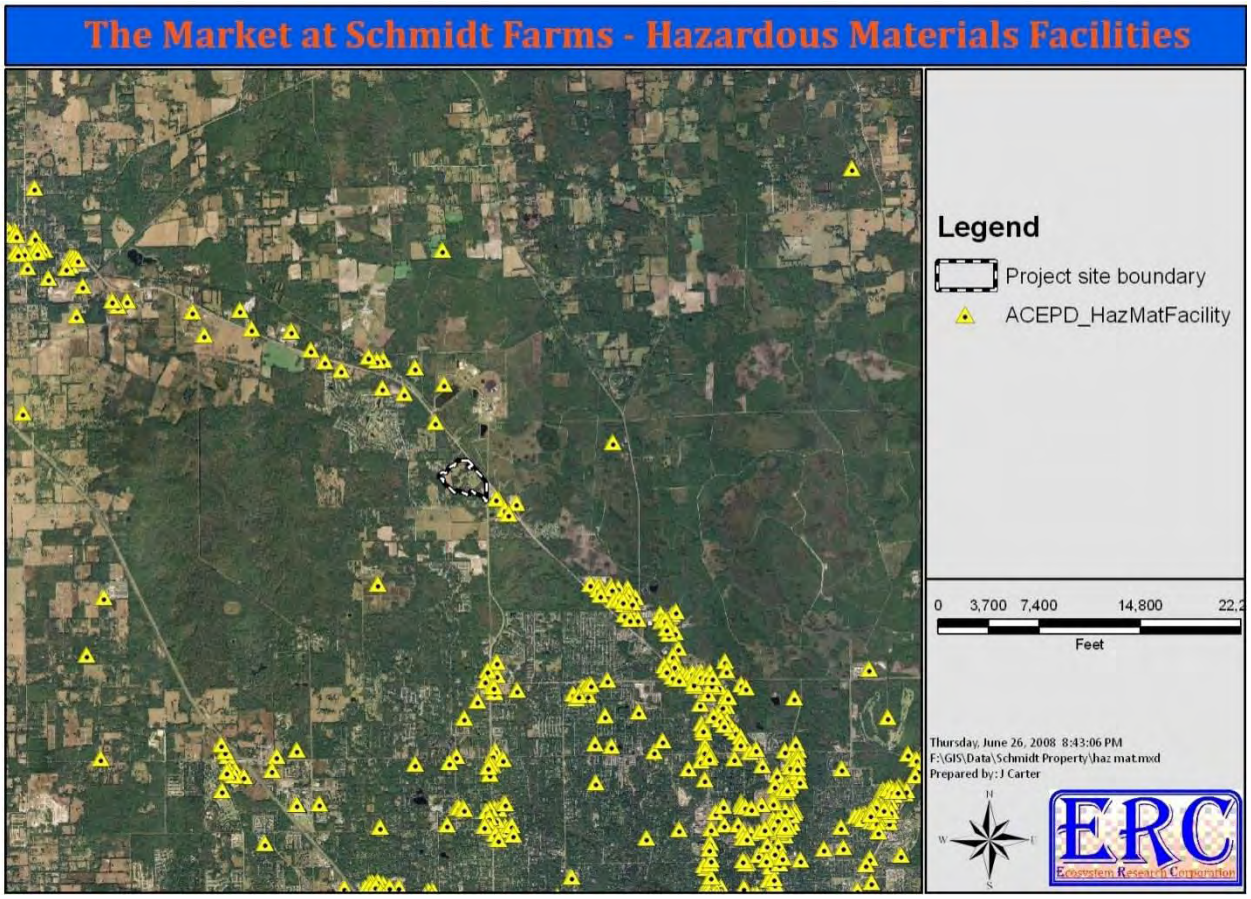
Mapping Unit	Mapping Unit Name	Drainage Class	Hydric	Spodic Horizon	Clay Horizon	General Plant Community Type
7	Kanapaha sand, 0 to 5 percent slopes	Poorly drained	No	---	44 -> 80"	Gentle Upland Slopes
8	Millhopper sand, 0 to 5 percent slopes	Moderately well drained	No	---	58 -> 89"	Gently Rolling Uplands
13	Pelham sand	Poorly drained	No	---	29 -> 80"	Broad Flatwoods
14	Pomona sand	Poorly drained	No	16 - 24"	43 -> 84"	Broad Flatwoods
22	Floridana sand, depressional	Very poorly drained	Yes	---	30 -> 74"	Depressional Areas
23	Mulat sand	Poorly drained	No	---	26 -> 80"	Broad Flatwoods
99	Water	N/A	Unranked	---	---	N/A

Section 7. Hazardous Material Storage Facilities & Contamination (soil, surface water, groundwater)



A Phase 1 Environmental Assessment report was performed for the project site but has not been reviewed by ERC. There were no obvious underground storage facilities located on the site that were observed by ERC. There is an approximately 250 gallon aboveground diesel fuel storage tank located at GPS location P-57 (**Photo 58**). The tank is used to supply fuel to onsite farm equipment. The tank did not appear to be leaking; however, small fuel stains on the ground indicate small spills have occurred. Historically (based on conversations with the property owner) there was a cattle dipping operation located around the pole barn (GPS location P-26). It is not known as to the materials used or the time duration of this operation; however, this may warrant future investigation. The hazardous material storage facilities that are currently monitored by Alachua County are shown in **Figure 30**. There is no indicated storage location for the project site.

Photo 58. Aboveground fuel storage tank located at GPS location P-57.

Figure 30. Hazardous Materials Facility Location Map.

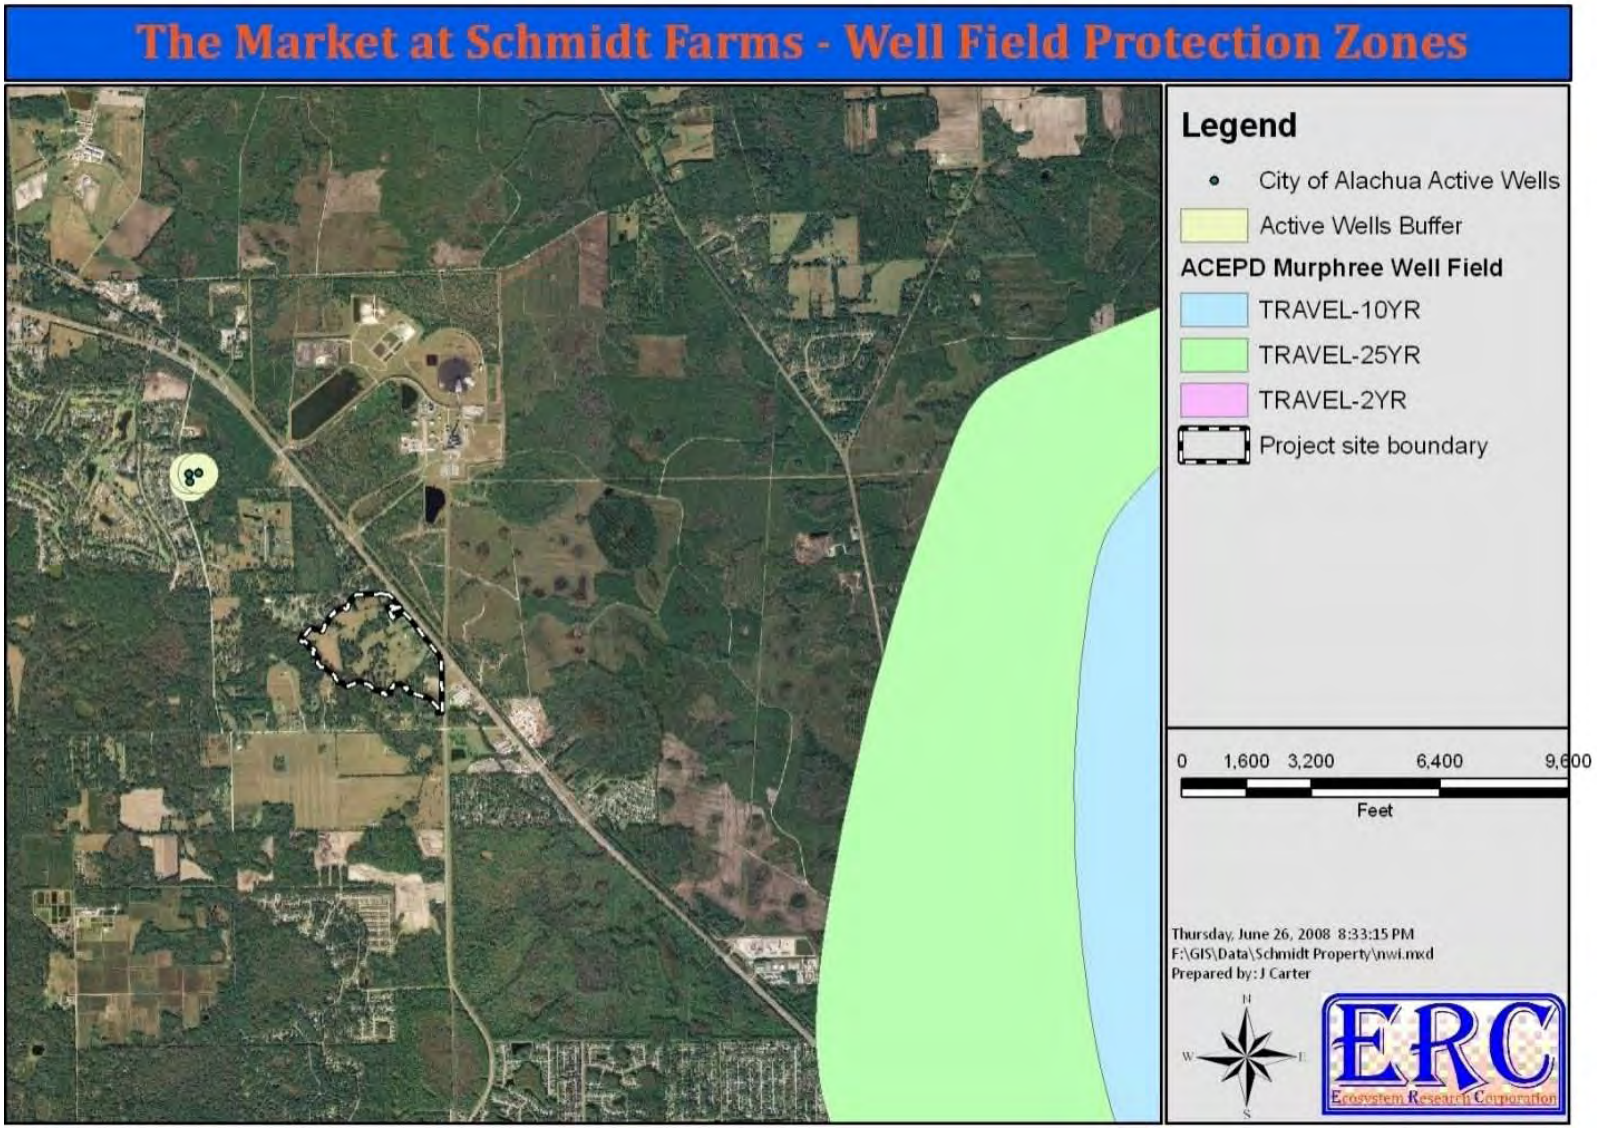
Section 8. Wellfield Protection Areas

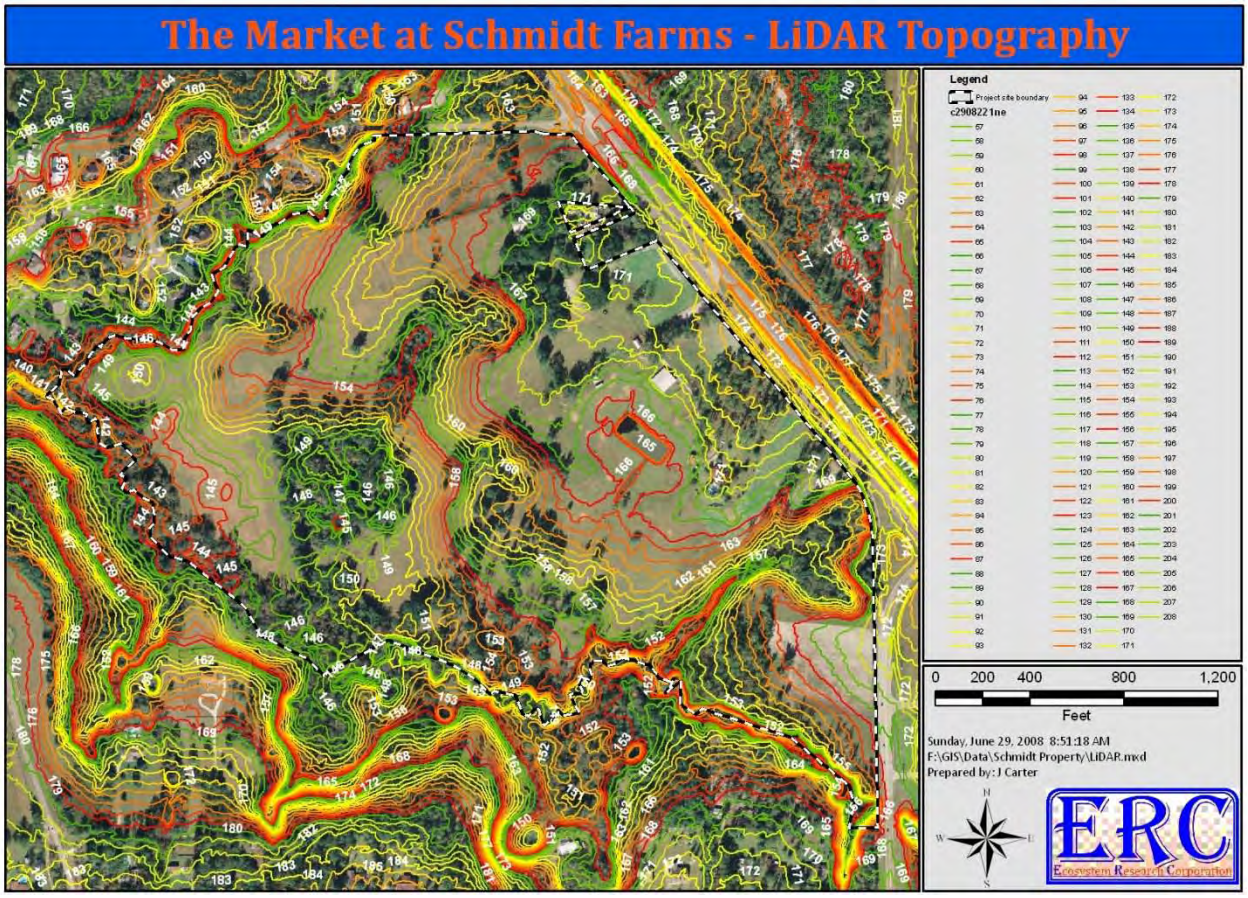
The project site is not located within a primary well field protection zone or secondary well field protection zone as defined by the City of Alachua Comprehensive Plan Future Land Use Element Policy 7.2.1 to 7.2.2. The project site is also not located within the City of Alachua or Alachua County Well Field protection zones (**Figure 31**). Therefore, changes in the intensity of the Future Land Use should not adversely affect any well field protection area.

Section 9. Significant Geologic Features & Topography/Steep Slopes

There are several significant geologic features within the boundaries of the proposed project site. These areas include a) Turkey Creek drainage; b) Brooke Pointe Creek drainage; c) Schmidt Creek drainage; and d) the system of seepage and depressional wetlands that are composed of several relic sinkholes and several additional relic sinkholes located in the southwest quadrant of the project site. These features are easily seen on the Alachua County 2001 LiDAR topo shown in **Figure 32**.

Figure 31. City of Alachua and Alachua County Well Field Protection Zones.





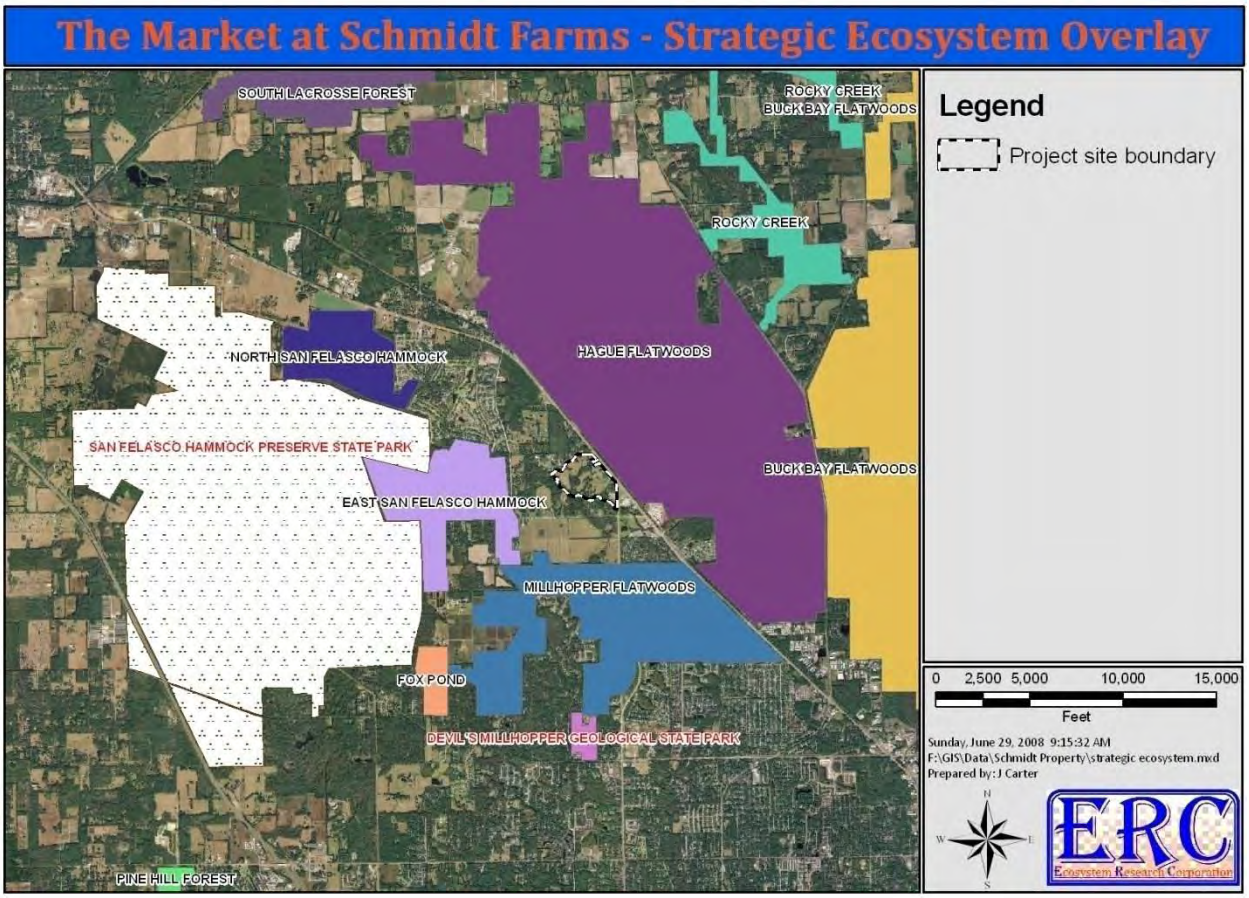


Figure 32. 2001 Alachua County LiDAR Topography Map of the Project Site.

Section 10. Strategic Ecosystems – Significant Ecological Communities District

The project site does not occur within an Alachua County Strategic Ecosystem Overlay to the County's Future Land Use Map. However, there are several mapped strategic ecosystems that totally surround the project site (**Figure 33**). The headwaters to Turkey Creek originate within the Hague Flatwoods Strategic Ecosystem and the creeks eventually flow through the North San Felasco Hammock Strategic Ecosystem and San Felasco Hammock Preserve State Park. Therefore, protection of this system and the other Turkey Creek tributaries located within the boundaries of the project site is critical. The applicant, in consideration of this importance, has designated all creeks and creek buffers as conservations areas. In addition, large open space areas are designated to establish connectivity with the large isolated systems on site and the 100-year floodplain area. This designation will protect the existing and future integrity of this very valuable ecosystem.

Figure 33. **Strategic Ecosystem Overlay and State park boundaries shown in relation to The Market at Schmidt Farms project site.**

Section 11. Wells & Septic

There are several wells in and adjacent to the project site. There are two (2) known 4-in wells located on the Schmidt property. An agricultural supply well is located at GPS location P-60 (Figure 7; **Photo 59**) and the Schmidt residence supply well is located at the southeast corner of the guest cottage at GPS location P-61 (**Photo 60**). On adjacent properties there is a 4-in well that supplies water to Harmony Gardens. This 4-in well is located at GPS location P-53 (**Photo 61**). The Bike Route located adjacent to Harmony Gardens is hooked to the City of Alachua water supply because the previous business was a restaurant in which treated water was needed. There is a residential septic tank located

Photo 59. **View of the agricultural supply well found at GPS**

adjacent to the Schmidt residence. The septic drainfield is located at GPS location P-62 (Figure 7). There are also septic tanks located on the Bike Route and Harmony Garden properties.

Photo 60. View of the Schmidt residence supply well located at GPS location P-61.

Photo 61. View of the 4-in supply well located on the Harmony Gardens property (GPS location P-53).

Section 12. Historic Structures

There are several structures located on the Schmidt property and adjacent properties that warrant some description. The buildings where the Bike Route and Harmony Gardens are presently located are listed as Alachua County Historic Structures AL04361 and AL 04360, respectively (**Figure 34**). The Harmony Gardens house is the original residence used by the Schmidts in the 1950's and was present when they bought the property from the Cellon's at that time. This house was built circa 1915. A photograph of the Harmony Gardens building (formerly Angel Gardens) is shown in **Photo 62**. The garage (also probably built circa 1915) is presently being used as a retail garden shop (**Photo 63**). **Photo 64** shows the Bike Route shop. This building was moved to the present site from Alachua in 1995. This house was built circa 1930. The buildings on the existing Schmidt parcel consist of a brick residence (**Photo 65;** GPS location P-63), a guest cottage (**Photo 66**; GPS location P-61), a concrete block stable (**Photo 67**; GPS location P-56), and a very large concrete block building used for agricultural storage (**Photo 68**; GPS location P-58).

Figure 34. Alachua County historic structures location map.

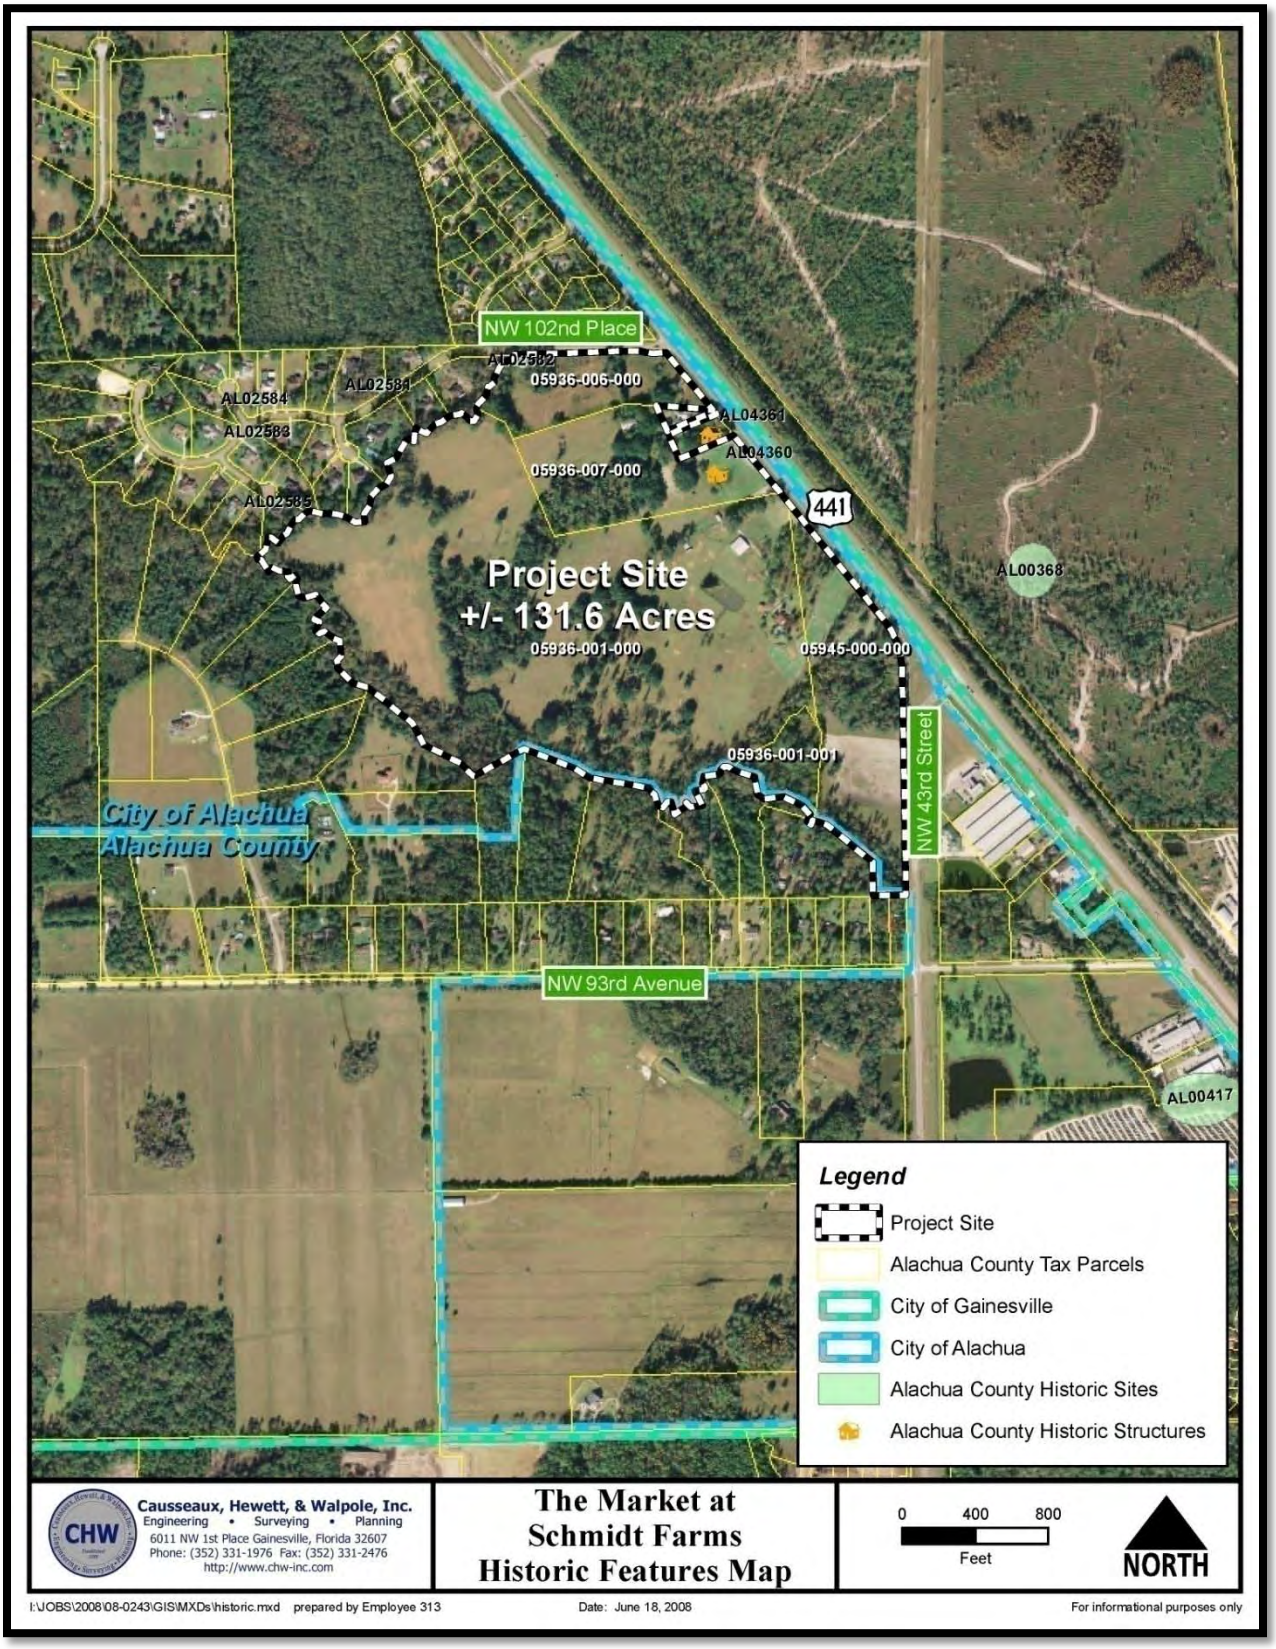

Photo 62. **Panoramic view of the Harmony Gardens building (Historic Structure AL04360) located at GPS location P-52.**

Photo 65. **Panoramic view of the brick residence located at GPS location P-63.**

Photo 66. **Panoramic view of the guest cottage located at GPS location P-61.**

Photo 67. **Panoramic view of the concrete block stable located at GPS location P-56.**

Photo 68. **Panoramic view of the large concrete block storage building that is used for agricultural storage (GPS location P-58).**

Final Statement

This report documents the existing conditions of the proposed project site referred to as The Market at Schmidt Farms. The most valuable natural communities existing on the project site have been included in the Conservation Future Land Use designation where no future development will occur. Therefore, no direct impacts to these systems should occur in the future as a result of the proposed change to the Future Land Use of this area.

Attention: Mr. Brad Combs

Subject: Preliminary Subsurface Soil Exploration and
Geotechnical Engineering Evaluation
Proposed Retail Center
Market at Schmidt Farm
US 441 and NW 43rd Street
Alachua County, Florida

Gentlemen:

As requested and authorized by you, we have completed a shallow subsurface soil exploration and geotechnical engineering evaluation for the subject project. The purposes of performing this exploration were to preliminarily evaluate the general subsurface conditions within the building and parking/drive areas and to provide recommendations for site preparation, foundation support, and pavement design. In addition, we have estimated the normal seasonal high groundwater level at the boring locations. This report documents our findings and presents our engineering recommendations.

We understand that the building locations are not yet finalized. Additional Borings may be required depending on the final building layout.

SITE LOCATION AND SITE DESCRIPTION

The site for the proposed retail center is located on the west side of US 441 between NW 43rd Street and NW 102nd Place in Alachua County, Florida (Section 34, Township 8 South, Range 19 East). The general site location is shown superimposed on the Pine Castle, Florida U.S.G.S. quadrangle map presented on Figure 1.

The site is approximately 132 acres in area. At the time of our exploration, the site was primarily grass covered and sparsely wooded. Based on review of the provided survey prepared by Lochrane Engineers, ground surface elevations on the site in the areas proposed to be developed range between approximately +160 and +174 feet.

PROPOSED CONSTRUCTION AND GRADING

It is our understanding that the proposed development includes a retail/office center which will be approximately 292,000 square feet in plan area and include retail stores, offices and restaurants. The center will also include a major retail store as an anchor which is discussed in a separate report. The proposed buildings will consist of load bearing masonry walls and interior columns with slab-on-grade floors.

For the purposes of our analysis, we have assumed the maximum loading for the structures to be on the order of 3 to 5 kips per linear foot for wall foundations, 100 kips for individual column foundations and 100 pounds per square foot for slab-on-grade floors. Grading plans are not complete at this time, therefore we have assumed that 2 to4 feet of fill is required to raise the building and parking/drive areas to final elevations. If actual building loads or fill height exceed our assumptions, then the recommendations in this report may not be valid.

We understand that the stormwater run-off is to be retained off-site by means of wet retention ponds.

REVIEW OF SOIL SURVEY MAPS

Based on the 1985 Soil Survey for Alachua County, Florida, as prepared by the U.S. Department of Agriculture Soil Conservation Service, the site is located in an area mapped as the following soil series - "Kanapaha sand", "Millhopper sand", "Pelham sand", "Pomona sand" and "Mulat sand" soil series. The type and locations of the individual soils are shown on the Soil Survey Map presented as Figure 2.

The "Kanapaha sand" soil series (Soil Type 7B) consists of nearly level to gently sloping, poorly drained soil on the uplands. The soil permeability of the "Kanapaha sand" soil series is moderately slow to moderately rapid. According to the Soil Survey, the seasonal high water table for the "Kanapaha sand" soil series is typically within 10 inches of the natural ground surface.

The "Millhopper sand" soil series (Soil Type 8B) consists of nearly level to gently sloping, moderately well drained soil on the uplands and broad flatwoods. The soil permeability of the "Millhopper sand" soil series is moderately rapid to rapid. According to the Soil Survey, the seasonal high water table for the "Millhopper sand" soil series is typically 40 to 60 inches below the natural ground surface.

The "Pelham sand" soil series (Soil Type 13) consists of nearly level, poorly drained soil in the flatwoods. The soil permeability of the "Pelham sand" soil series is moderate to rapid. According to the Soil Survey, the seasonal high water table for the "Pelham sand" soil series is typically within 10 inches of the natural ground surface.

The "Pomona sand" soil series (Soil Type 14) consists of nearly level, poorly drained soil in the flatwoods. The soil permeability of the "Pomona sand"soil series is moderate to very rapid. According to the Soil Survey, the seasonal high water table for the "Pomona sand"soil series is typically within 10 inches of the natural ground surface.

The "Mulat sand " soil series (Soil Type 23) consists of nearly level, poorly drained soil in broad areas on the flat woods. The soil permeability is moderately slow to rapid. According to the Soil survey, the seasonal high water table is typically within 10 inches of the natural ground surface.

FIELD EXPLORATION PROGRAM

SPT and Auger Borings

The field exploration program included performing 55 Standard Penetration Test (SPT) borings (TH-16 through TH-70) and 20 auger borings (AB-1 through AB-6 and AB-13 through AB-26). The SPT borings were performed within the proposed "footprint" of the buildings and borings were advanced to depths of 20 to 30 feet below the ground surface using the methodology outlined in ASTM D-1586. A summary of this field procedure is included in Appendix I. Split-spoon soil samples recovered during performance of the borings were visually classified in the field and representative portions of the samples were transported to our laboratory in sealed sample jars.

The auger borings were performed in the proposed parking/drive areas. They were drilled using a truck-mounted, 4-inch diameter, continuous flight auger to a depth of 10 feet below the ground surface. A summary of this field procedure is included in Appendix I. Representative soil samples were recovered from the auger borings and transported to our laboratory for further analysis.

The groundwater level at each of the boring locations was measured upon completion of drilling. The borings were then backfilled with soil cuttings.

Test Locations

The approximate locations of the borings are schematically illustrated on a site plan shown on Figure 3. These locations were determined in the field by tape measurements from existing site features and use of a handheld GPS unit, and should be considered accurate only to the degree implied by the method of measurement used. The ground surface elevations shown on the boring profiles were estimated based on a survey of the site provided by Lochrane Engineering.

LABORATORY PROGRAM

Representative soil samples obtained during our field sampling operation were packaged and transferred to our laboratory for further visual examination and classification. The soil samples were visually classified in general accordance with the Unified Soil Classification System (ASTM D-2488). The resulting soil descriptions are shown on the soil boring profiles presented on Figures 4 through 14.

In addition, we conducted natural moisture content tests (ASTM D2216), percent fines analyses (ASTM D1140), organic limit tests (ASTM D2974-87) and Atterberg limits tests (ASTM D4318) on selected soil samples obtained from the borings to aid in classification. The results of these tests are presented adjacent to the sample depth on the boring profiles on Figures 5 through 14.

GENERAL SUBSURFACE CONDITIONS

General Soil Profile

The results of the field exploration and laboratory programs are graphically summarized on the soil boring profiles presented on Figures 4 through 14. The stratification of the boring profiles represents our interpretation of the field boring logs and the results of laboratory examinations of the recovered samples. The stratification lines represent the approximate boundary between soil types. The actual transitions may be more gradual than implied.

The results of the borings indicate that very loose to loose fine sand containing varying amounts of silt and/or clay was typically encountered from the surface to depths ranging from 3 to 5 feet below the existing ground surface. The borings terminated in loose to medium dense silty clayey fine sand interspersed with layers of medium stiff to very stiff sandy clay.

We note that organic muck was encountered in Boring TH-21 from the ground surface to a depth of 1.5 feet. Organic muck may be present at other location and to deeper depths at unexplored locations within the site.

The above soil profile is outlined in general terms only. Please refer to Figures 4 through 14 for soil profile details and Figure 3 for hand probe details.

Groundwater Level

The groundwater level was measured in the boreholes on the day drilled after stabilization of the downhole water level. As shown on Figures 4 through 14, groundwater was encountered at depths that ranged from 2.6 to 6.5 below the existing ground surface on the dates indicated. Fluctuation in groundwater levels should be anticipated throughout the year primarily due to seasonal variations in rainfall and other factors that may vary from the time the borings were conducted.

NORMAL SEASONAL HIGH GROUNDWATER LEVEL

The normal seasonal high groundwater level each year is the level in the August-September period at the end of the rainy season during a year of normal (average) rainfall. The water table elevations associated with a higher than normal rainfall and in the extreme case, flood, would be higher to much higher than the normal seasonal high groundwater level. The normal high water levels would more approximate the normal seasonal high groundwater levels.

The seasonal high groundwater level is affected by a number of factors. The drainage characteristics of the soils, the land surface elevation, relief points such as drainage ditches, lakes, rivers, swamp areas, etc., and distance to relief points are some of the more important factors influencing the seasonal high groundwater level.

Based on our interpretation of the site conditions using our boring logs, we have estimated the normal seasonal high groundwater level at the boring locations. Estimated seasonal high water table elevations are presented on Table 1, as well as on the boring profiles on Figures 5 to 14.

PRELIMINARY ENGINEERING EVALUATION AND RECOMMENDATIONS

General

The results of our exploration indicate that, with proper site preparation as recommended in this report, the existing soils are suitable for supporting the proposed buildings on a conventional shallow foundation system. Spread footings should provide an adequate support system for the structures.

Because of the clayey soils near the ground surface and some potential for shrink/swell, we recommend hardscape around the perimeter of the building (i.e.; no landscaping adjacent to the buildings) to reduce moisture fluctuation in these soils.

The following are our preliminary recommendations for overall site preparation, foundation support, and pavement construction which we feel are best suited for the proposed facility and existing soil conditions. The recommendations are made as a guide for the design engineer and/or architect, parts of which should be incorporated into the project's specifications. Additional borings may be required depending on the final building layout.

Stripping and Grubbing

The "footprint" of the proposed building and the parking/drive areas, plus a minimum margin of five feet, should be stripped of all surface vegetation, stumps, debris, organic topsoil or other deleterious materials, as encountered.

After stripping, the site should be grubbed or root-raked such that roots with a diameter greater than ½ inch, stumps, or small roots in a dense state, are completely removed. The actual depth(s) of stripping and grubbing must be determined by visual observation and judgment during the earthwork operation.

Demucking

The organic muck encountered in Boring TH-21 should be removed (demucked) to its entire vertical limits and horizontal limits. We note that organic muck may be present in other unexplored areas of the site.

The excavated organic muck/soft sediment must not be used as structural fill material and should be disposed of as directed by the owner or his representative. Demucking and backfilling operations should be monitored continuously by a representative of Ardaman & Associates to verify that all unsuitable material is removed and that backfill soils are suitable and well compacted.

Excavation slopes and/or bracing are the responsibility of the contractor. However, at a minimum, all excavations should be sloped and/or braced to meet the requirements of the Occupational Health and Safety Administration (OSHA) latest Standards.

Excavation will extend below the groundwater table and the control of the groundwater will be required. De-mucking should be conducted "in-the-dry". Dewatering should be accomplished as discussed in the "Dewatering" section of this report.

Proof-rolling

We recommend proof-rolling the cleared surface to locate any unforeseen soft areas or unsuitable surface or near-surface soils, to increase the density of the upper soils, and to prepare the existing surface for the addition of the fill soils (as required). Proof-rolling of the building areas should consist of at least 10 passes of a compactor capable of achieving the density requirements described. Each pass should overlap the preceding pass by 30 percent to achieve complete coverage. If deemed necessary, in areas that continue to "yield", remove all deleterious material and replace with clean, compacted sand backfill. The proof-rolling should occur after cutting and before filling. The number of passes can be reduced to 3 within the proposed parking/drive areas.

A density equivalent to or greater than 95 percent of the modified Proctor (ASTM D-1557) maximum dry density value for a depth of 2 feet in the building areas and 1 foot in the parking/drive areas must be achieved beneath the stripped and grubbed ground surface. Additional passes and/or overexcavation and recompaction may be required if these minimum density requirements are not achieved. The soil moisture should be adjusted as necessary during compaction.

Care should be exercised to avoid damaging any neighboring structures while the compaction operation is underway. Prior to commencing compaction, occupants of adjacent structures should be notified and the existing condition (i.e. cracks) of the structures documented with photographs and survey (if deemed necessary). Compaction should cease if deemed detrimental to adjacent structures, and Ardaman & Associates should be notified immediately.

Suitable Fill Material and the Compaction of Fill Soils

All fill materials should be free of organic materials, such as roots and vegetation. We recommend using fill with less than 12 percent by dry weight of material passing the U.S. Standard No. 200 sieve size. The fine sand and fine sand with silt (Strata No. 1 and 2 without roots, as shown on Figures 4 through 11) are suitable for use as fill materials and, with proper moisture control, should densify using conventional compaction methods. Soils with more than 12 percent passing the No. 200 sieve can be used in some applications, but will be more difficult to compact due to their inherent nature to retain soil moisture.

All structural fill should be placed in level lifts not to exceed 12 inches in uncompacted thickness. Each lift should be compacted to at least 95 percent of the modified Proctor (ASTM D-1557) maximum dry density value. The filling and compaction operations should continue in lifts until the desired elevation(s) is achieved. If hand-held compaction equipment is used, the lift thickness should be reduced to no more than 6 inches.

Foundation Support by Spread Footings and Foundation Compaction Criteria

Excavate the foundations to the proposed bottom of footing elevations and, thereafter, verify the in-place compaction for a depth of 2 feet below the footing bottoms. If necessary, compact the soils at the bottom of the excavations to at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557) for a depth of 2 feet below the footing bottoms. Based on the existing soil conditions and, assuming the above outlined proof-rolling and compaction criteria are implemented, an allowable soil bearing pressure of 2,500 pounds per square foot (psf) may be used in the

foundation design. This bearing pressure should result in foundation settlement within tolerable limits (i.e., 1 inch or less).

All bearing wall foundations should be a minimum of 18 inches wide and column foundations 24 inches wide. A minimum soil cover of 18 inches should be maintained from the bottom of the foundations to the adjacent finished grades.

Floor Slab Moisture Reducer and Slab Compaction Requirements

Compaction beneath all floor slabs should be verified for a depth of 12 inches and meet the 95 percent criteria (modified Proctor, ASTM D-1557).

Precautions should be taken during the slab construction to reduce moisture entry from the underlying subgrade soils. Moisture entry can be reduced by installing a membrane between the subgrade soils and floor slab. Care should be exercised when placing the reinforcing steel (or mesh) and slab concrete such that the membrane is not punctured. We note that the membrane alone does not prevent moisture from occurring beneath or on top of the slab.

If interior columns are isolated from the floor slab, an expansion joint should be provided around the columns and sealed with a water-proof sealant.

Dewatering

Based on the groundwater conditions encountered, the control of the groundwater will likely not be required to achieve the necessary stripping and subsequent construction, backfilling, and compaction requirements presented in the preceding sections. If, however, dewatering becomes necessary, the actual method(s) of dewatering should be determined by the contractor. However, regardless of the method(s) used, we suggest drawing down the water table sufficiently, say 2 to 3 feet, below the bottom of any excavation or compaction surface to preclude "pumping" and/or compaction-related problems with the foundation soils.

Dewatering should be accomplished with the knowledge that the permeability of soil tends to decrease with an increasing silt and clay content. Therefore, a silty fine sand is typically less permeable than a fine sand. The SP, SP-SM, and some SM type soils can usually be dewatered by well pointing or ditch/sump methods.

Typical Asphaltic Concrete Surface Pavement Section

Site Preparation

All areas to be paved should be prepared as previously outlined. Prior to pavement base installation, the subgrade soil compaction should be verified for a depth of 12 inches (i.e.; compacted to at least 95 percent of the modified Proctor (ASTM D-1557, AASHTO T-180) maximum dry density value).

Soil-Cement Base

Install a minimum 6-inch thick soil-cement base compacted to at least 95 percent of the standard Proctor maximum dry density (AASHTO T-134). The soil cement should have a minimum laboratory compressive strength of 300 pounds per square inch (psi) in 7 days. For truck parking and drive areas, increase the minimum thickness to 8 inches. A minimum clearance of 12 inches should be maintained between the bottom of the soil cement base and the normal seasonal high groundwater level.

The term soil-cement applies to a type of base material that utilizes cement mixed with a select soil to develop its strength. We recommend conducting a laboratory soil-cement design to determine the actual cement content necessary. Shrinkage cracking normally occurs during the hydration of a soil-cement base and is reflected through the asphaltic concrete surface. We strongly recommend a curing time period of at least 7 days before applying the overlying asphaltic concrete wearing surface. This waiting period will not eliminate the cracks in the pavement surface, but will help reduce the severity of the cracks. An approved tack coat should be applied on a clean (swept) soil-cement surface to develop a sufficient bond before the paving begins. The base should be inspected and sounded for hardness prior to paving operations. Any soft or otherwise unsuitable areas should be repaired as recommended by Ardaman and Associates.

Cracks in the pavement surface that occur when soil-cement base is used are sometimes unappealing to owners. We recommend that an owner unaccustomed to these cracks observe examples of pavement cracks in actual soil cement applications to verify that cracks are acceptable.

Free-draining subgrade soils (i.e; soils with less than 12 percent fines by dry weight) are recommended beneath soil-cement base to promote drainage of infiltrating water. If the contractor's means and methods include stabilizing soils beneath the soil-cement base, then the stabilizing material should be coarse material (e.g; gravel). Low permeability soils (e.g; silt and/or clay) should not be used as stabilizing material beneath soil cement base.

Limerock Base (Optional)

In lieu of soil cement, a limerock base course 6 inches thick overlying an 8-inch thick stabilized subbase can be used provided that grading and drainage plans preclude periodic saturation of the base material. The periodic saturation of a limerock base material could lead to premature pavement distress. A minimum clearance of 18 inches must be maintained between the bottom of the limerock base and the seasonal high groundwater table.

The limerock should have a minimum Limerock Bearing Ratio (LBR) value of 100 and should be compacted to at least 98 percent of the modified Proctor (ASTM D-1557, AASHTO T-180) maximum density value. For truck parking and drive areas, the base thickness should be a minimum of 8 inches.

An 8-inch thick subbase having a minimum Limerock Bearing Ratio (LBR) value of 40 must be achieved beneath the limerock base. The natural soils may have to be stabilized with suitable clayey soil in order to achieve the required LBR value. The stabilized subbase must be compacted to at least 95 percent of the modified Proctor maximum dry density (ASTM D-1557, AASHTO T-180).

Crushed Concrete Base (Optional)

Crushed concrete base may be used. We recommend that the crushed concrete base course be supported by a free-draining subgrade. Six inches of base should be used in parking areas while 8 inches of crushed concrete base should be used in truck parking and drive areas. A minimum clearance of 12 inches should be maintained between the bottom of the crushed concrete base and the seasonal high groundwater table.

The crushed concrete base should have a minimum Limerock Bearing Ratio (LBR) value of 100 and should be compacted to at least 98 percent of the modified Proctor maximum dry density (ASTM D-1557, AASHTO T-180). The crushed concrete should meet Graded Aggregate Base gradation requirements according to Section 204, of the Florida Department of Transportation Standard Specifications for Road and Bridge Construction, 2004 Edition. The subgrade beneath the crushed concrete base should consist of free draining sand compacted to at least 98 percent of the modified Proctor maximum dry density (ASTM D-1557, AASHTO T-180).

We note that if the contractor's means and methods include stabilizing soils beneath the crushed concrete base, then the stabilizing material should be coarse material (e.g; gravel). Low permeability soils (e.g; silt and/or clay) should not be used as stabilizing material beneath crushed concrete base.

Wearing Surface

A minimum 1½ inch layer of Type SP-9.5 or SP-12.5 asphaltic concrete should be used for a wearing surface in automobile parking areas. For truck parking and drive areas, 2 inches of Type SP-9.5 or SP-12.5 asphaltic concrete should be used. Specific requirements for the Type-SP asphaltic concrete wearing surface are outlined in Section 334 in the Florida Department of Transportation, Standard Specifications for Road and Bridge Construction, 2004 Edition. Equivalent Type S asphaltic concrete may be substituted for Type SP-9.5 or SP-12.5.

The latest specifications of Florida Department of Transportation shall govern the design and placement of the base and asphaltic concrete wearing surface. The above minimum requirements will satisfactorily support Traffic Level A*. If a heavier traffic pattern is anticipated, the design section should be increased accordingly.

QUALITY ASSURANCE

We recommend establishing a comprehensive quality assurance program to verify that all site preparation and foundation and pavement construction is conducted in accordance with the appropriate plans and specifications. Materials testing and inspection services should be provided by Ardaman & Associates.

As a minimum, an on-site engineering technician should monitor all stripping and grubbing to verify that all deleterious materials have been removed and should observe the proof-rolling operation to verify that the appropriate number of passes are applied to the subgrade. In-situ density tests should be conducted during filling activities and below all footings, floor slabs and pavement areas

---

* Reference: "Flexible Pavement Design Manual", Florida Department of Transportation. (2002)

to verify that the required densities have been achieved. In-situ density values should be compared to laboratory Proctor moisture-density results for each of the different natural and fill soils encountered.

Additionally for the pavements, Limerock Bearing Ratio tests should be performed. The base course(s) should be tested for density and thickness. Soil cement base should be inspected and sounded for hardness after a minimum 7-day wearing period. Areas determined during the 7-day inspection to be soft or otherwise insufficient should be removed and replaced or otherwise repaired according to the geotechnical engineer's recommendations. Samples of the asphaltic concrete should be obtained and tested in the laboratory for Marshall stability, flow, asphalt content, and aggregate gradation. Also, the asphaltic concrete thickness should be verified in the field.

Finally, we recommend inspecting and testing the construction materials for the foundations and other structural components.

IN-PLACE DENSITY TESTING FREQUENCY

In Central Florida, earthwork testing is typically performed on an on-call basis when the contractor has completed a portion of the work. The test result from a specific location is only representative of a larger area if the contractor has used consistent means and methods and the soils are practically uniform throughout. The frequency of testing can be increased and full-time construction inspection can be provided to account for variations. We recommend that the following minimum testing frequencies be utilized.

In proposed parking areas, a minimum frequency of one in-place density test for each 5,000 square feet of area should be used. The existing, natural ground should be tested to a depth of 12 inches at the prescribed frequency. Each 12-inch lift of fill, as well as the stabilized subgrade (where applicable) and base should be tested at this frequency. Utility backfill should be tested at a minimum frequency of one in-place density test for each 12-inch lift for each 200 lineal feet of pipe. Additional tests should be performed in backfill for manholes, inlets, etc.

In proposed structural areas, the minimum frequency of in-place density testing should be reduced to one test for each 2,500 square feet of structural area. In-place density testing should be performed at this minimum frequency for a depth of 2 feet below natural ground and for every 1-foot lift of fill placed in the structural area. In addition, density tests should be performed in each column footing for a depth of 2 feet below the bearing surface. For continuous or wall footings, density tests should be performed at a minimum frequency of one test for every 50 lineal feet of footing, and for a depth of 2 feet below the bearing surface.

Representative samples of the various natural ground and fill soils, as well as stabilized subgrade (where applicable) and base materials should be obtained and transported to our laboratory for Proctor compaction tests. These tests will determine the maximum dry density and optimum moisture content for the materials tested and will be used in conjunction with the results of the in-place density tests to determine the degree of compaction achieved.

CLOSURE

The analyses and recommendations submitted herein are based on the data obtained from the soil borings presented on Figures 4 through 14 and the stated loading conditions. This report does not reflect any variations which may occur adjacent to or between the borings. The nature and extent of the variations between the borings may not become evident until during construction. If variations then appear evident, it will be necessary to re-evaluate the recommendations presented in this report after performing on-site observations during the construction period and noting the characteristics of the variations.

This study is based on a relatively shallow exploration and is not intended to be an evaluation for sinkhole potential. Based on the results of all borings conducted for this exploration, no soil conditions resembling sinkhole activity were encountered. This study does not include an evaluation of the environmental (ecological or hazardous/toxic material related) condition of the site and subsurface.

This report has been prepared for the exclusive use of Sandor Development Company and Lochrane Engineering in accordance with generally accepted soil and foundation engineering practices. In the event any changes occur in the design, nature, or location of the proposed facility, we should review the applicability of conclusions and recommendations in this report. We recommend a general review of final design and specifications by our office to verify that earthwork and foundation recommendations are properly interpreted and implemented in the design specifications. Ardaman and Associates should attend the pre-bid and preconstruction meetings to verify that the bidders/contractor understand the recommendations contained in this report.

We are pleased to be of assistance to you on this phase of the project. When we may be of further service to you or should you have any questions, please contact us.

Very truly yours,
ARDAMAN & ASSOCIATES, INC.

APPENDIX I

Standard Penetration Test (SPT) Boring and
Auger Boring Procedures

STANDARD PENETRATION TEST

The standard penetration test is a widely accepted test method of *in situ* testing of foundation soils (ASTM D 1586). A 2-foot long, 2-inch O.D. split-barrel sampler attached to the end of a string of drilling rods is driven 18 inches into the ground by successive blows of a 140-pound hammer freely dropping 30 inches. The number of blows needed for each 6 inches of penetration is recorded. The sum of the blows required for penetration of the second and third 6-inch increments of penetration constitutes the test result or N-value. After the test, the sampler is extracted from the ground and opened to allow visual examination and classification of the retained soil sample. The N-value has been empirically correlated with various soil properties allowing a conservative estimate of the behavior of soils under load.

The tests are usually performed at 5-foot intervals. However, more frequent or continuous testing is done by our firm through depths where a more accurate definition of the soils is required. The test holes are advanced to the test elevations by rotary drilling with a cutting bit, using circulating fluid to remove the cuttings and hold the fine grains in suspension. The circulating fluid, which is a bentonitic drilling mud, is also used to keep the hole open below the water table by maintaining an excess hydrostatic pressure inside the hole. In some soil deposits, particularly highly pervious ones, NX-size flush-coupled casing must be driven to just above the testing depth to keep the hole open and/or prevent the loss of circulating fluid.

Representative split-spoon samples from the soils at every 5 feet of drilled depth and from every different stratum are brought to our laboratory in air-tight jars for further evaluation and testing, if necessary. Samples not used in testing are stored for 30 days prior to being discarded. After completion of a test boring, the hole is kept open until a steady state groundwater level is recorded. The hole is then sealed, if necessary, and backfilled.

AUGER BORINGS

Auger borings are used when a relatively large, continuous sampling of soil strata close to ground surface is desired. A 4-inch diameter, continuous flite, helical auger with a cutting head at its end is screwed into the ground in 5-foot sections. It is powered by the rotating action of the Kelly bar of a rotary drill rig. The sample is recovered by withdrawing the auger out of the ground without rotating it. The soil sample so obtained, is classified and representative samples put in bags or jars and brought back to the laboratory for classification testing.

Project Description/Assessment of Wetland Impacts

Project Description

Mesa-Sand Realty, LLC is making an application to the Suwannee River Water Management District (SRWMD) for a Conceptual Environmental Resource Permit. The project site is currently the subject of a large-scale land use amendment application submitted to the City of Alachua, Florida, for a parcel of land to be referred to as **The Market at Schmidt Farms**. The project site is located in northwest Alachua County in the southwest corner of the intersection of US Hwy 441 and NW 43rd Street (**Figure 1**). The project site consists of five (5) Alachua County tax parcels, which total 131.6 acres (**Figure 2**). The parcel numbers and acreages as found on the Alachua County Property Appraiser's website are shown in **Table 1**.

Table 1. Tax parcel numbers, owners, and associated acreages of the tax parcels that comprise The Market at Schmidt Farms project site.

Tax Parcel No.	Owner(s)	Acreage
05936-001-001	Herbert Matilski	3.458
05936-006-000	Nima, Inc.	8.509
05936-001-000	Ann Schmidt	94.165
05945-000-000	Ann Schmidt	11.281
05936-007-000	Jules E. Schmidt	14.193
TOTAL		**131.606**

The site is contained within Sections 2 and 3, Township 9 South, Range 19 East and Sections 34 and 35, Township 8 South, Range 19 East. A large-scale comprehensive plan amendment is presently submitted to propose a change in the Future Land Use for the property to be referred to as The Market at Schmidt Farms, City of Alachua, Florida. The large-scale comprehensive plan amendment (CPA) proposes creating a mixed-use development on a ±131.6-acre parcel located on the south side of US Hwy 441 and west of NW 43rd Street. The site currently carries a Future Land Use designation of Agriculture (Ag) and Commercial (COM) (**Figure 3**). These land use designations have historically resulted in agricultural uses such as cattle ranching. The proposed land use change will create a mixture of urban residential and non-residential uses on the ±131.6-acre site while protecting the significant natural areas in conservation and open space (**Figure 4**). This CPA will allow for a broad range of retail, office, and multi-family and/or single-family development in a manner consistent with the City of Alachua's Comprehensive Plan and Land Development Regulations (LDR). In addition and directly related to the land use change, this application proposes the creation of a new Future Land Use designation, Open Space. This category represents a hybrid of the existing conservation, recreation, and public, but it is designed for private lands. In addition, this category is appropriately located in areas adjacent to conservation where through best management practices limited development may occur. A summary of the comparative acreages contained in each existing and proposed future land use category is summarized in **Table 2**. The existing zoning occurring on the project site is

Figure 1. Project site location map showing location of proposed The Market at Schmidt Farms at the intersection of US Hwy 441 and NW 43rd Street.

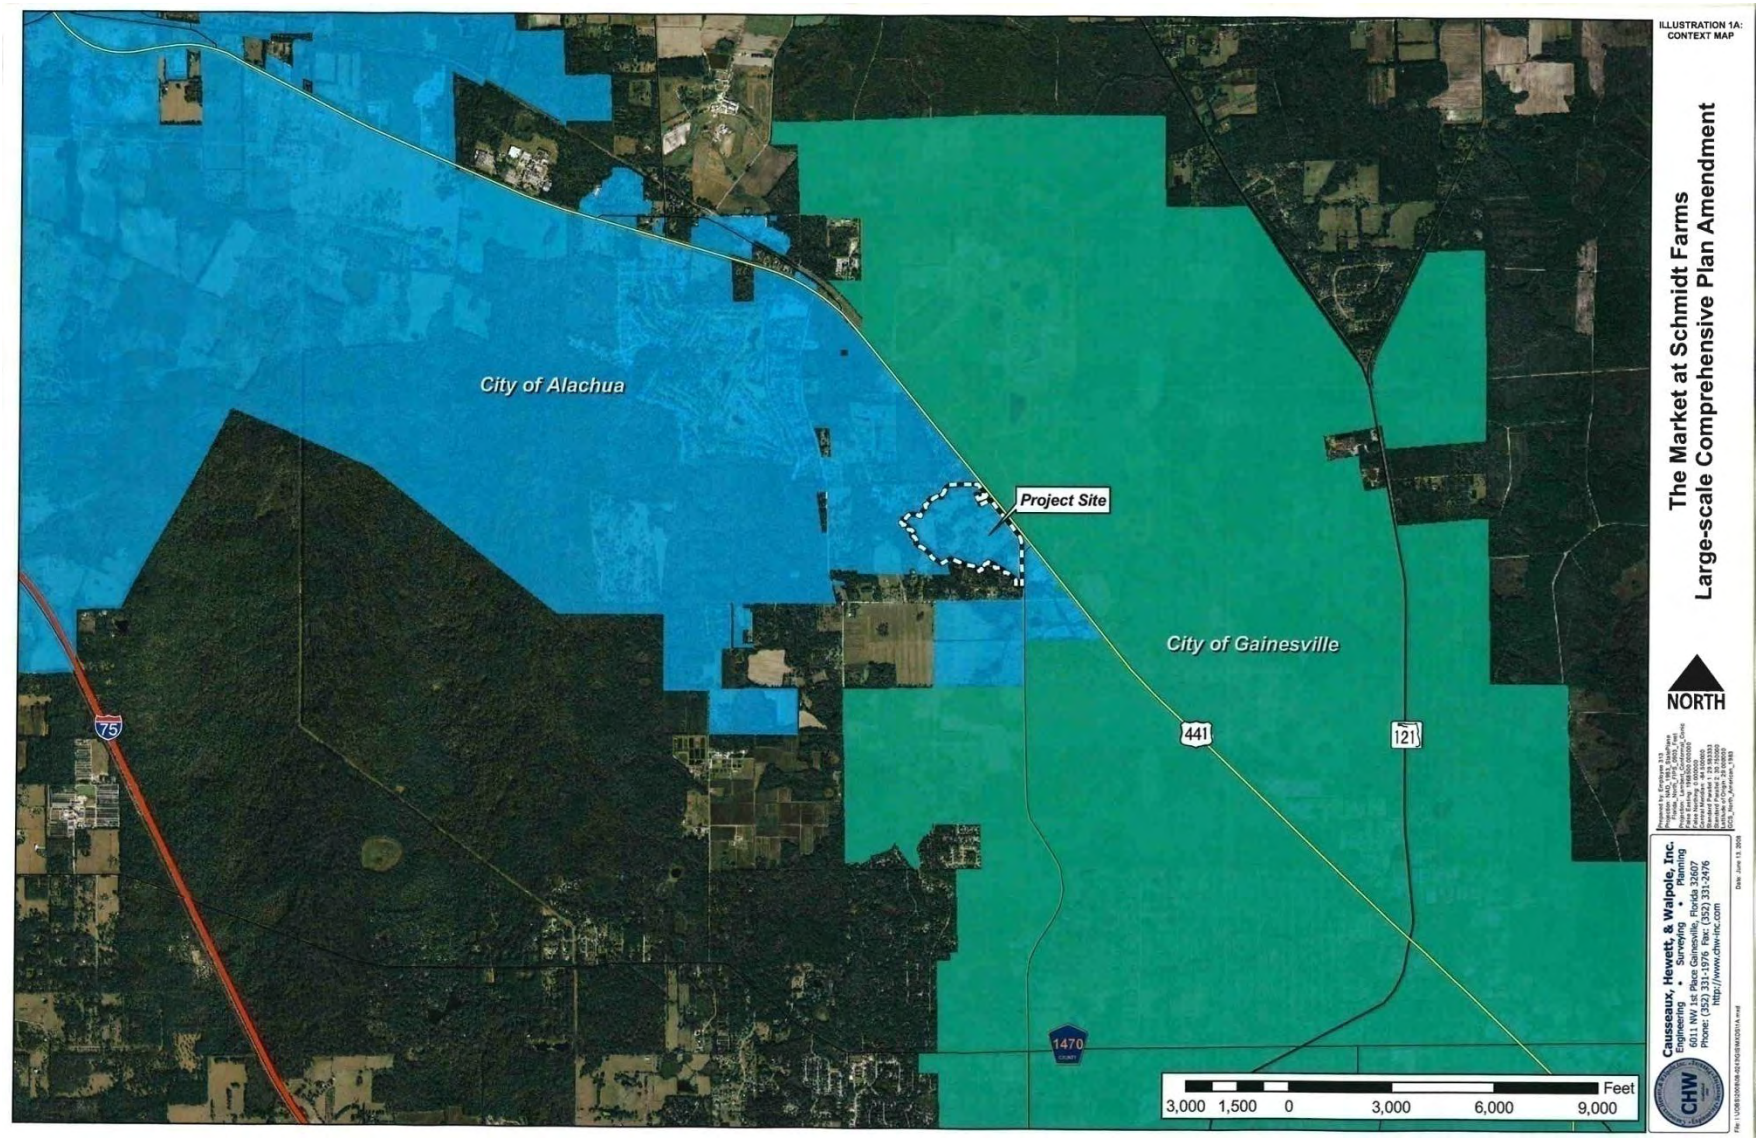

Figure 2. Parcel location map of The Market at Schmidt Farms project site showing surveyed property boundary and Alachua County Property Appraiser's parcel boundaries, and City of Gainesville and City of Alachua municipal boundaries.

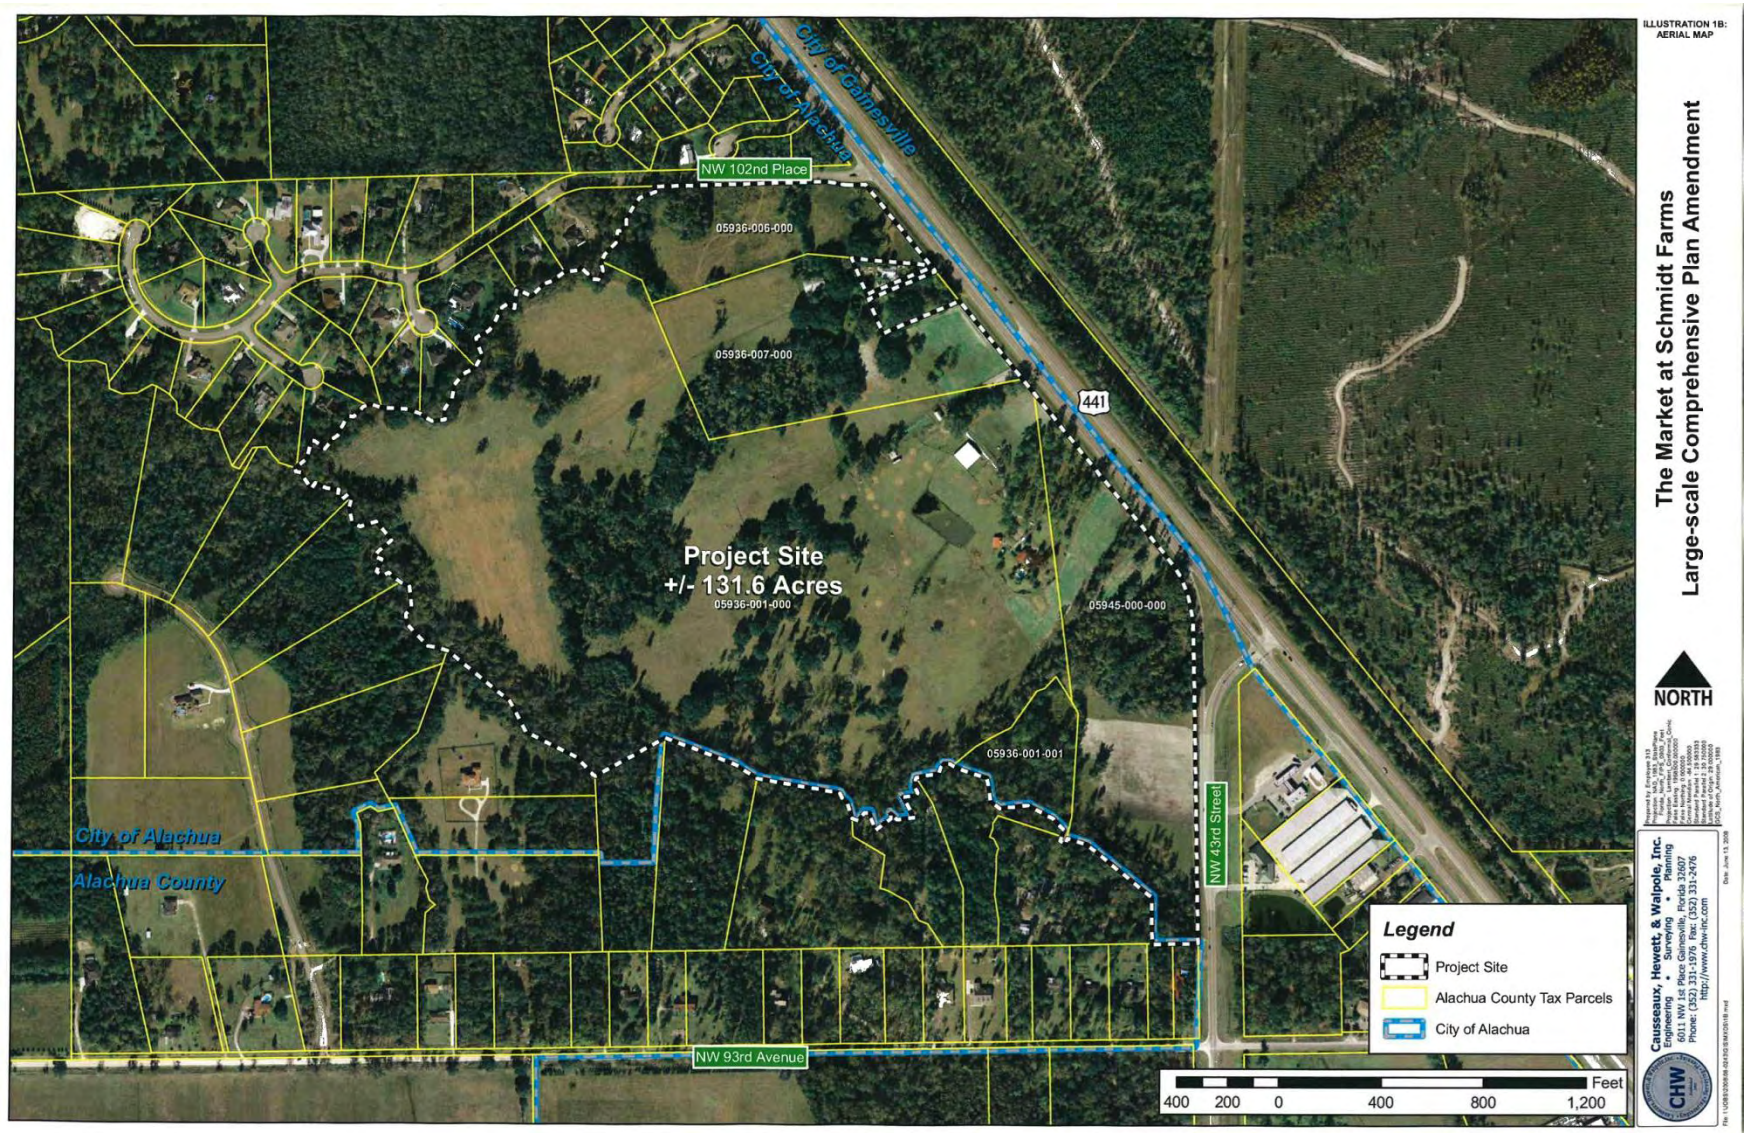

Figure 3. Existing Future Land Use map for The Market at Schmidt Farms.

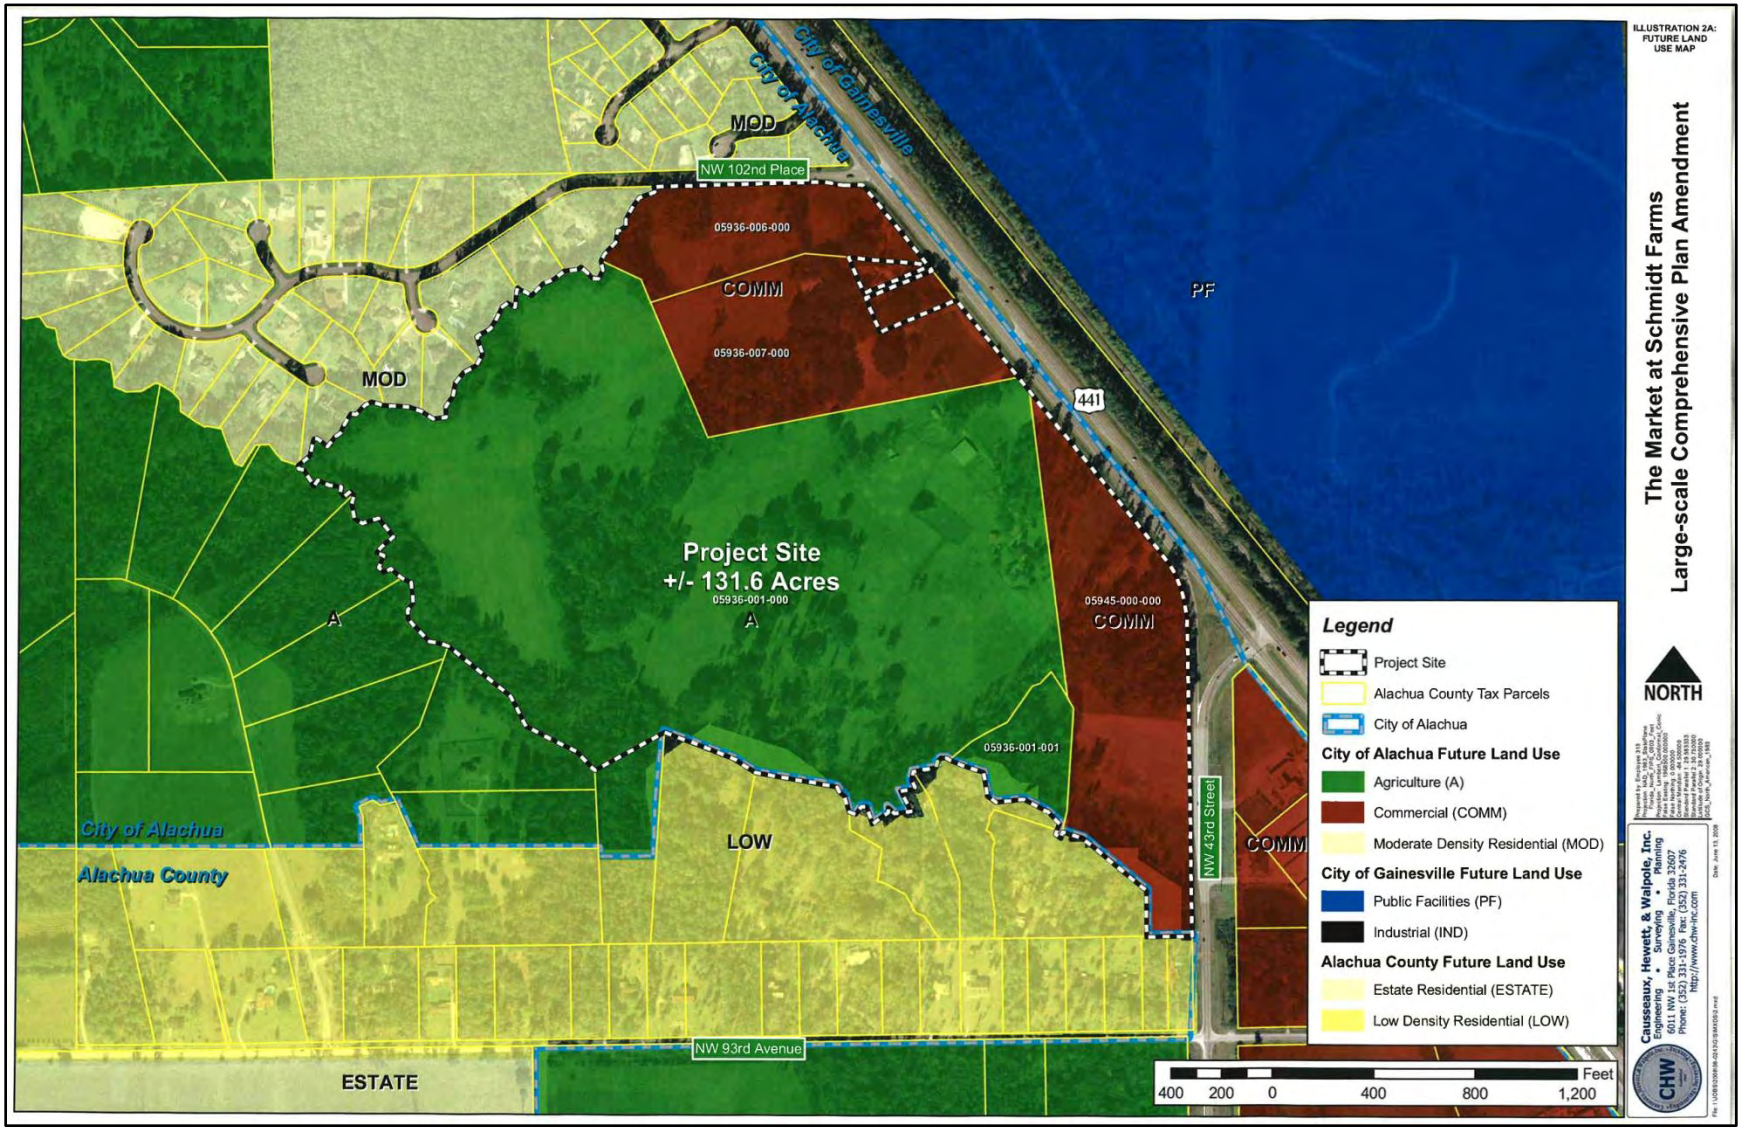

Figure 4. Proposed amendment to the Future Land Use map.

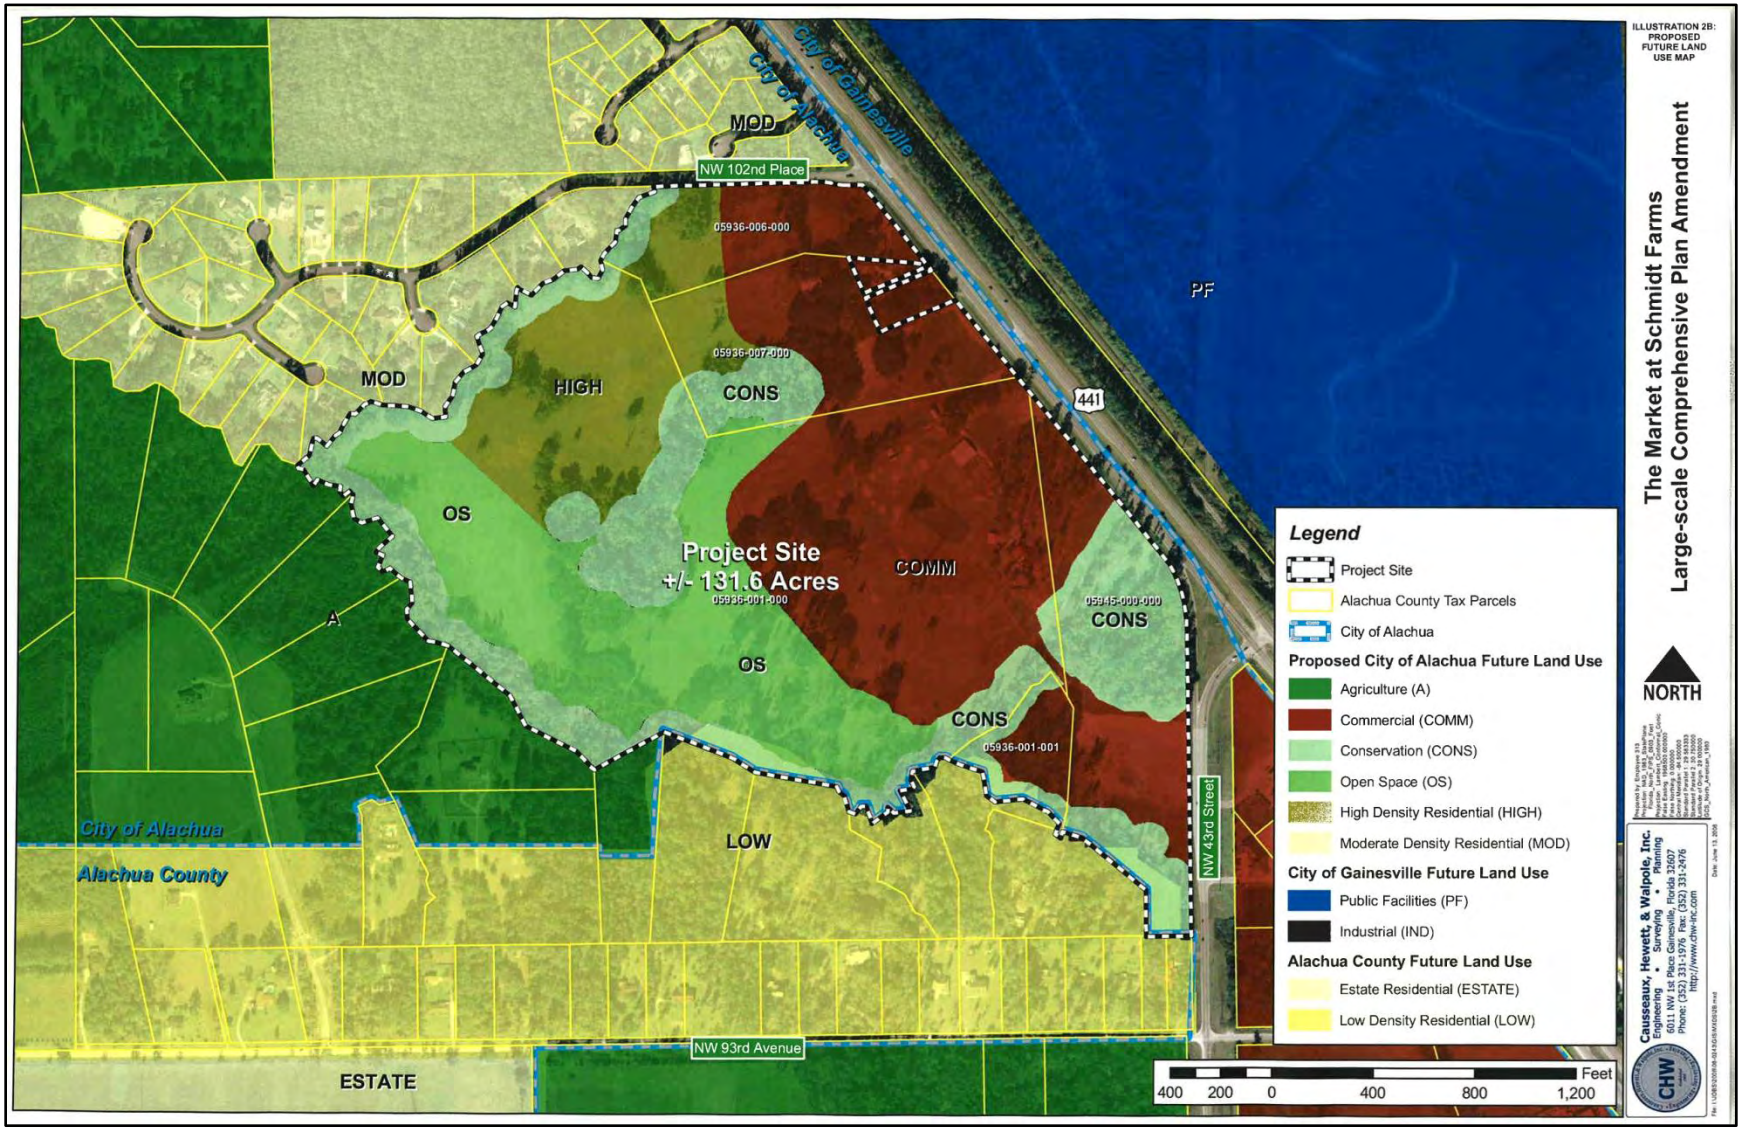

Table 2. Comparative acreages contained in the existing and proposed Future Land Use categories for The Market at Schmidt Farms project site.

Land Use Area (Acres)				
Land Use	**Existing**	**Proposed**	**Acreage Change**	**Percent Change**
Residential	0.00	17.00	17.00	100.00
Commercial	39.37	51.45	12.08	30.68
Agriculture	92.23	0.00	-92.23	-100.00
Conservation	0.00	36.38	36.38	100.00
Open Space	0.00	26.77	26.77	100.00
TOTAL	**131.60**	**131.60**		

shown in **Figure 5**. The conceptual ERP is presented to the District to conceptually address stormwater and wetland mitigation issues that will result during the construction phase of the project.

Assessment of Wetland Impacts

The Conceptual Development Plan for The Market at Schmidt Farms is presented in **Figures 6 and 7**. The proposed conceptual plan will result in 0.882 acres of direct wetland impacts, which will occur in four (4) areas of the project site (Figure 6). The impact areas nomenclature and association acreages are shown in **Table 3**. The plant community map for the project site is shown in **Figure 8.**

Table 3. Nomenclature and associated acreage of the impact areas in the proposed conceptual plan for The Market at Schmidt Farms.

Impact Area	Description	Polygon	FLUCCs Code	Impact Acreage
Area #1	Agricultural Pond & Drainage Ditch	17	535	0.777
Area #2	Existing Road Crossing	18	617.1	0.040
Area #3	Wetland “S”	16	660	0.064
Area #4	Wetland “T”	15	660	0.001
Total				**0.882**

To determine the amount of mitigation needed to offset the direct impacts proposed, the Unified Mitigation Assessment Method (UMAM) was used as described in Chapter 62-345 FAC. The Part II Quantification of Assessment (Impact or Mitigation) forms (Form 62.345.900[2] FAC) are included for each impact area in **Tables 4 through 7**, as follows:

Table 4 UMAM, Impact Area #1 (Agricultural Pond & Drainage Ditch)
Table 5 UMAM, Impact Area #2 (Road Crossing)
Table 6 UMAM, Impact Area #3 (Wetland “S”)
Table 7 UMAM, Impact Area #4 (Wetland “T”)

An extensive Environmental Resource Assessment report was prepared by ERC for this project site. The report details the existing conditions of the project site as related to plant communities, historical ecology, and threatened and endangered species. This report is provided as part of the conceptual ERP application under separate cover.

A brief description of each mitigation area is provided, as follows:

Impact Area #1 – Agricultural Pond & Drainage Area (0.777 Acres)

This is an excavated pond located within the site that was dug circa 1979 in an historic forested wetland area. The pond is severely affected by cattle use and water quality has suffered from this use. The surface is variously covered with Lemnoids (*Lemna* sp. and *Spirodella* sp.) and the littoral zone is severely trampled with sparse populations of soft rush (*Juncus effusus* L.), dotted smartweed (*Polygonum punctatum* Ell.), and maidencane (*Panicum hemitomon* Schult.) surviving the daily cattle use. This pond drains south to Turkey Creek through an excavated drainage ditch. This is an intermittent drainage of which only a small portion was considered to be a jurisdictional surface water as per criteria outlined in Chapter 62-340 FAC, *Delineation of the Landward Extent of Wetlands and Surface Waters*. The vegetation in the ditch is dominated primarily by bahiagrass (*Paspalum notatum* Fluegge.) and Bermudagrass (*Cynodon dactylon* [L.] Pers.). The drainage broadens into a natural drainage feature adjacent to Turkey Creek (Photo 9). The Agricultural Pond & Drainage community can be seen in **Photos 1 and 2**. Removal of this surface water results in a loss of 0.777 acres and functional loss of -0.414 credits (Table 4).

Photo 1. Panoramic view of the Agricultural Pond as seen looking northwest from the east side of the pond.

Photo 2. Panoramic view of the Excavated Ditch as seen looking southwest from the south perimeter of the pond.

Impact Area #2 – Road Crossing (0.040 Acres)

An access road is proposed that will provide access from NW 43rd Street (Figure 6) to the general development area. This access road will cross Schmidt Creek in an area where an existing crossing occurs. This crossing was constructed prior to 1937 and the general characteristics of the area are shown in **Photos 3 through 5.** The crossing occurs in an area where Schmidt Creek Swamp abruptly narrows into a well-defined riparian system (Figure 8). The groundcover vegetation in the area has been extensively disturbed by cattle foraging and water quality is continually affected by cattle waste inputs. The canopy is composed of laurel oak (*Quercus hemisphaerica* Bartr.), water oak (*Quercus nigra* L.), live oak (*Quercus virginiana* Mill.), sweetgum (*Liquidambar styraciflua* L.), sugarberry (*Celtis laevigata* Willd.), pignut hickory (*Carya glabra* [Mill.] Sweet), and southern magnolia (*Magnolia grandiflora* L.). The crossing will be a constructed bridge span to minimize impacts to the creek. Total direct impacts to occur equal 0.040 acres, but this includes all areas under the span, which overestimates the true fill area. The 0.040 presumed acreage loss results in a functional loss of -0.028 credits as calculated by UMAM (Table 5).

Photo 3. Panoramic view of the Agricultural Road Crossing located across Schmidt Creek as seen looking west.

Photo 4. Panoramic view of the Culvert in Schmidt Creek located at the agricultural road crossing as seen looking south.

Photo 5. Panoramic view of the Schmidt Creek Stream Channel south of the road crossing as seen looking southwest from the crossing.

Impact Area #3 – Wetland "S" (0.064 Acres)

This area is a small depressional wetland that is intermittently saturated during times of extensive rainfall. This wetland area occurs in a relic sinkhole area that appears as a small depression in the pasture characterized by gently rolling topography. The vegetation in the area has been adversely affected by more than 60 years of cattle activity. Currently, there is minimal wetland vegetation present that consists of dotted smartweed (*Polygonum punctatum* Ell.), soft rush (*Juncus effusus* L.), small dog-fennel thorough-wort (*Eupatorium capillifolium* [Lam.] Small), dwarf palmetto (*Sabal minor* [Jacq.] Pers.), elderberry (*Sambucus canadensis* L.), and common pokeweed (*Phytolacca americana* L.). There is extensive coverage of the exotic species tropical soda apple (*Solanum viarum* Dunal). The general habitat appearance of the wetland is shown in **Photos 6 to 7**. The project development will completely remove this wetland, resulting in 0.064 acres of direct impacts and functional loss of -0.030 credits (Table 6).

Photo 6. Panoramic view of the Depressional Wetland Areas 15 & 16 as seen looking west across the wetland (Photo taken November 2007).

Photo 7. Panoramic view of the Small Depressional Wetland 16 as seen looking northwest from the southwest boundary of the wetland (Photo taken June 2008).

Impact Area #4 – Wetland "T" (0.001 Acres)

This is a very small wetland area that lies adjacent to but is isolated from Impact Area #3 (wetlands). The description for Impact Area #3 is sufficient to describe this area but it should be stated that the location of this area is almost imperceptible on the ground, appearing much like the surrounding pasture. The general nature of this wetland is shown in **Photo 8**. The project will result in the removal of this wetland, which results in a wetland loss of 0.001 acres and functional loss of -0.0004 credits (Table 7).

Photo 8. Panoramic view of Small Depressional Wetland 15 as seen looking northeast.

It should be noted that both wetland impact areas #3 and #4 are isolated wetlands and are less than 0.5 acres; therefore, they should be exempt from District mitigation requirements. However, the applicant will mitigate for these areas by wetland creation to ensure that no net loss of wetland acreage occurs in the Turkey Creek drainage basin.

Proposed Mitigation Options

The functional loss for each impact area has been determined based on the methods described in Chapter 62-345 FAC (UMAM). The functional loss for the impact areas is summarized in **Table 8**.

Table 8. Functional loss calculations for the impact areas on The Market at Schmidt Farms.

Impact Area	Description	Wetland Loss	Functional Loss
Area 1	Agricultural Pond & Drainage	0.777	-0.414
Area 2	Road Crossing	0.040	-0.028
Area 3	Wetland "S"	0.064	-0.030
Area 4	Wetland "T"	0.001	-0.0004
Total		0.882	-0.4724

To mitigate for the functional loss of -0.4724, there are several active and passive mitigation components proposed by the applicant to be considered by the District. These components are described, as follows:

Mitigation Component #1: Mitigation for Direct Impacts by Wetland Creation

The applicant proposes to create a 0.882-acre wetland (Figures 6 and 7) to mitigate 1:1 for all direct wetland impacts that occur as a result of the project. The total impacts equal 0.882 acres (Table 8). This mitigation proposal ensures that **no net loss** of wetland acreage occurs as a result of this project. Creation of 0.882 acres of wetland results in a functional gain of 0.344 credits (**Table 9**; i.e., FG = 0.390 RFG x 0.882 acres = 0.344 FG credits). The conceptual plan view and generalized cross-sections of the mitigation area are shown in Figure 7. The wetland cross-sections are shown in close-up in **Figures 9 and 10**.

Table 9. Part II UMAM Assessment for the Wetland Creation Area.

PART II – Quantification of Assessment Area (impact or mitigation)
(See Sections 62-345.500 and .600, F.A.C.)

Site/Project Name	Application Number	Assessment Area Name or Number
The Market at Schmidt Farms		Wetland Creation Area

Scoring Guidance	**Optimal (10)**	**Moderate(7)**	**Minimal (4)**	**Not Present (0)**
The scoring of each indicator is based on what would be suitable for the type of wetland or surface water assessed	Condition is optimal and fully supports wetland/surface water functions	Condition is less than optimal, but sufficient to maintain most wetland/surface water functions	Minimal level of support of wetland/surface water functions	Condition is insufficient to provide wetland/surface water functions

.500(6)(a) Location and Landscape Support	w/o pres or current: 0	with: 6	The wetland will be created in an area which is presently pasture with a sparse canopy in some portions. The wetland will provide habitat and habitat support for a host of aquatic species.
.500(6)(b)Water Environment (n/a for uplands)	w/o pres or current: 0	with: 7	The wetland will have a surface water table which ranges from saturated to greater than 2 feet in depth. The majority of the wetland will be less than 1 foot deep.
.500(6)(c)Community structure 1. Vegetation and/or 2. Benthic Community	w/o pres or current: 0	with: 7	The wetland will be planted with a host of herbaceous species to provide for high quality emergent habitat. Trees will be planted around the perimeter to provide for roosting habitat.

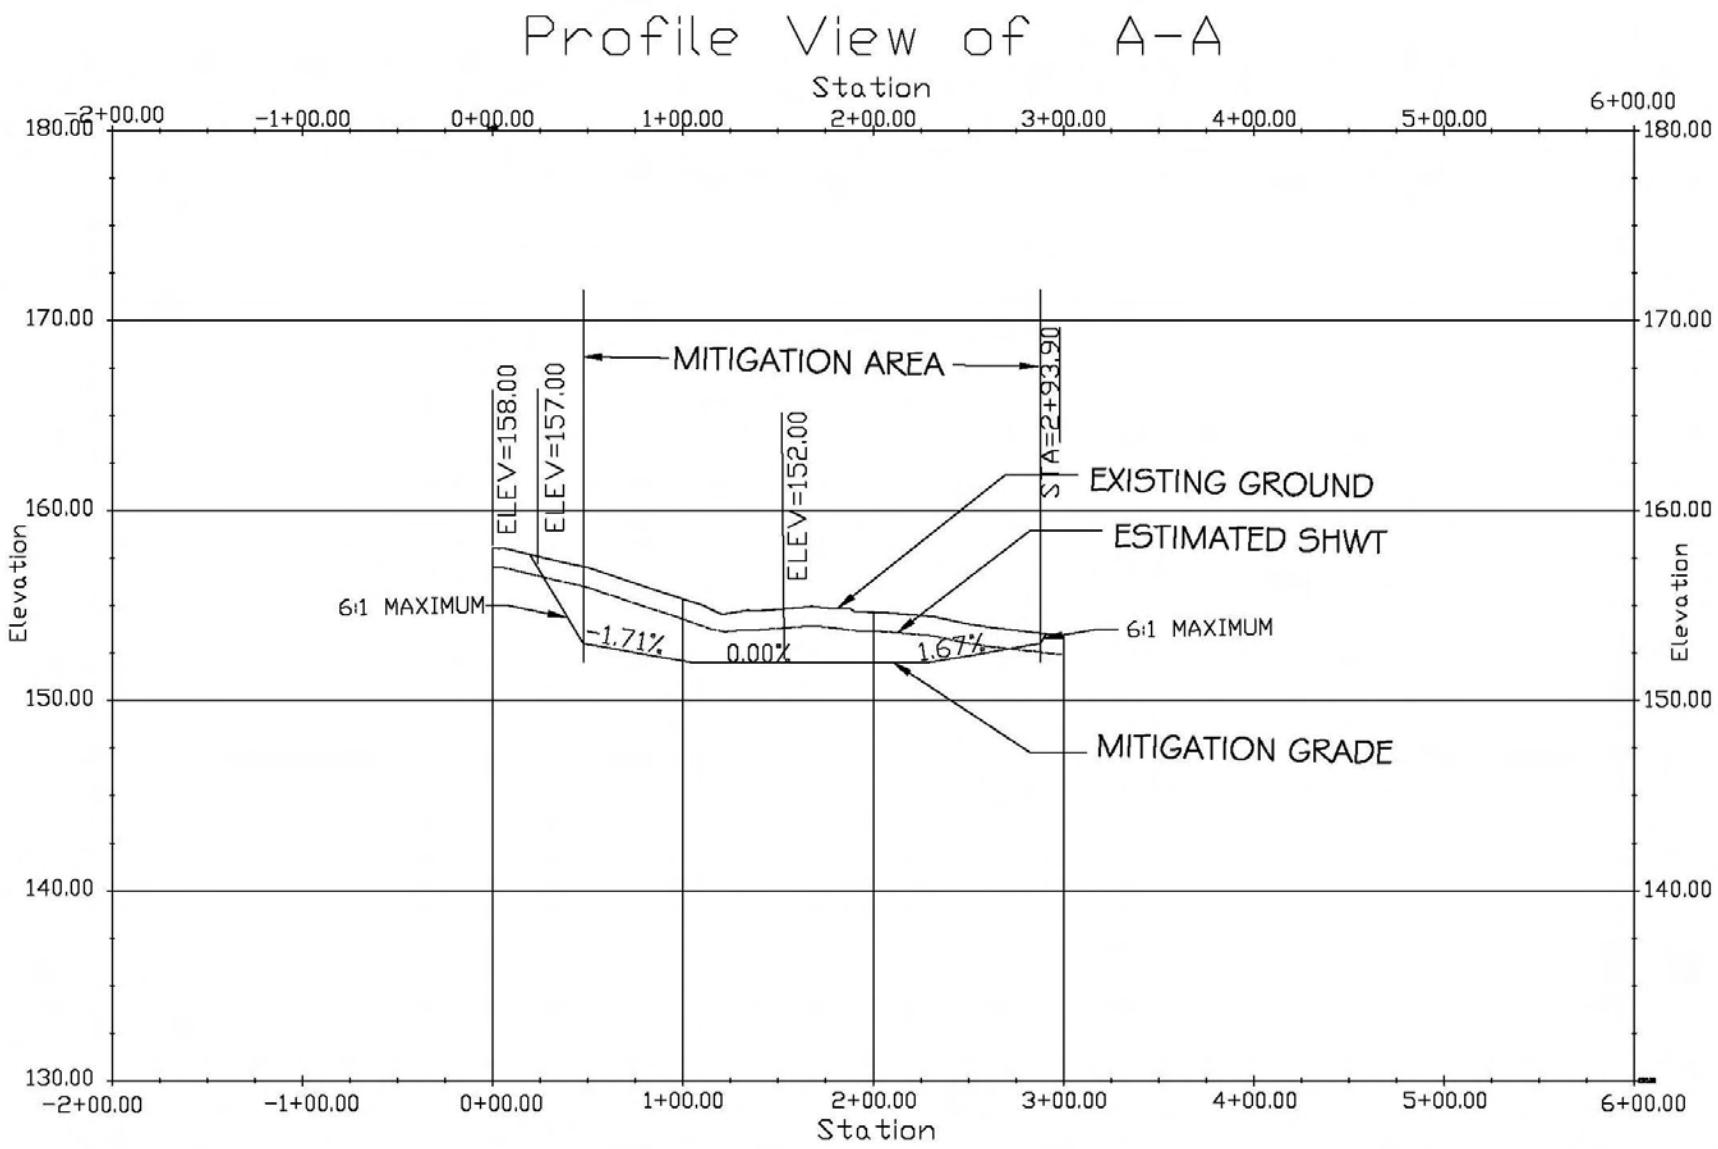
Score = sum of above scores/30 (if uplands, divide by 20)		
current or w/o pres	with	
0	0.667	

If preservation as mitigation,	For impact assessment areas
Preservation adjustment factor = NA	FL = delta x acres = NA
Adjusted mitigation delta = NA	

Delta = [with-current]	If mitigation	For mitigation assessment areas
0.667	Time lag (t-factor) = 1.14	RFG = delta/(t-factor x risk) = 0.390
	Risk factor = 1.50	

Form 62-345.900(2), F.A.C. [effective date]

Figure 9. Close-up view of the wetland cross-section.



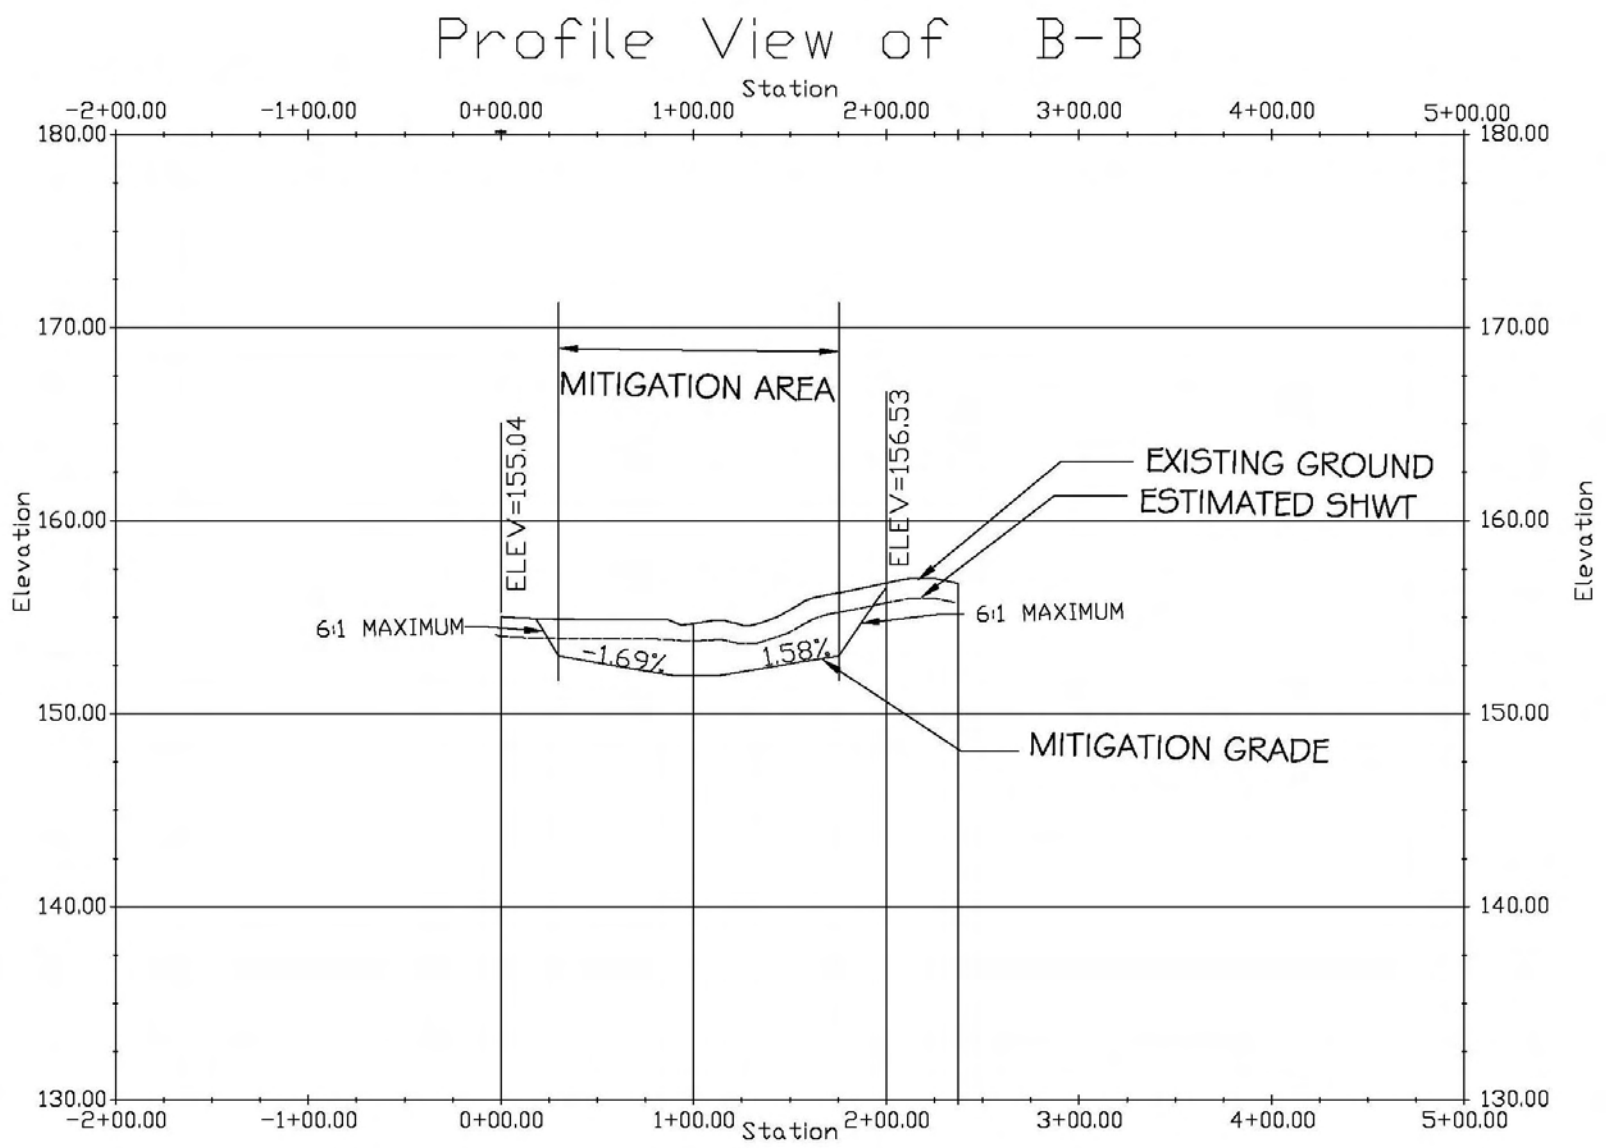


Figure 10. Close-up view of the wetland cross-section.

The mitigation area will be an herbaceous wetland that will be planted at a rate of 800 herbs/acre with a mix of the following species (**Table 10**):

Table 10. Species and planting zones for the mitigation area.

Species	Planting Zone*
Juncus effusus	-0.6 ft to + 1 ft
Spartina bakeri	0 ft to + 1 ft
Muhlenbergia capillaris	0 ft to + 1 ft
Panicum hemitomon	-1.0 ft to 0 ft
Saggitaria lancifolia	-1.5 ft to 0 ft
Pontederia cordata	-1.5 ft to 0 ft
Leersia hexandra	-1.0 ft to 0 ft
Nymphaea odorata	-3.0 ft to 0 ft

*Planting depths are relative to MHW elevations.

A total of 100 trees will be planted around the wetland perimeter to provide for water bird roosting habitat. Tree species will be bald cypress (*Taxodium distichum* [L.] L. Rich.), red maple (*Acer rubrum* L.), sweetgum (*Liquidambar styraciflua* L.) and Carolina ash (*Fraxinus caroliniana* Mill.). This mitigation plan will provide for higher quality and more expansive aquatic habitat than presently exists on site. The wetland will have at least 60% of the area with water depths ranging from 0 ft to -1 ft; 20% of the area will be between 1 and 2 ft deep with 20% being greater than 2 ft deep. This will ensure that both deep water and shallow, littoral zone habitat is provided in the creation area. The creation plan is designed to totally offset all direct impacts for wetland and surface water *acreage* that occurs on site. However, to totally offset all functional loss credits (-0.4724) would require a total of 1.211 acres of creation, calculated as follows:

$$Total\ Acres\ of\ Created\ Wetlands\ Needed = \frac{FL\ (Table\ 8)}{RFG\ (Table\ 9)}$$

$$= 0.4724 \div 0.390$$

$$= 1.211\ acres$$

The proposed creation provides for a total functional gain of *0.882 acres x 0.390 RFG = 0.344 credits*. This results in a deficit of *0.4724 – 0.3440 = 0.1284 credits*. The remaining 0.1284 functional loss credits will be offset passively and provided by the land use contained in the final design of the project. The functional loss will be provided, described as follows:

Mitigation Component #2: Conservation Land Use

The applicant has proposed a land use change to the City of Alachua for this project site. As part of this Land Use Application, all creeks and wetlands on site will be placed in a

conservation land use where no future development activity will be allowed. This conservation land use totals 36.38 acres (**Figure 11; Table 11**), which equals 27.6% of the project site. In addition, 26.77 acres will be placed in an Open Space Land Use where no development is allowed but stormwater management ponds will be placed in certain areas of this land use (Figure 11). The total conservation and open space equals 63.15 acres, or 47.9% of the project area. Examples of the habitat contained in this conservation area is shown in **Photos 9 through 12**. The conservation area includes buffers that extend 75 ft from the wetland line, which is far in excess of the district requirements. The extent of the conservation area is shown in Figure 11 with wetlands and buffers. There are also additional upland areas included in the conservation area that extend landward beyond the 75-ft buffer. These buffers (**Photos 13 and 14**) are now primarily pasture heavily affected by cattle. These buffers and wetlands will be allowed to succeed naturally to develop into native, forested systems. After removal of cattle, groundcover in these areas will recover quickly and forests will grow and water quality will be enhanced due to removal of significant cattle waste inputs.

Because the City of Alachua will not allow future activity in this area, a Conservation Easement should not be required. The enhancement of this area results in a total functional gain of 2.11 credits (0.058 RFG x 36.38 acres) (Table 11), which is scored very conservatively and significantly offsets the deficit of 0.1284 functional loss credits by a factor of 16.4 : 1 (2.110 ÷ 0.1284). This mitigation component also totally offsets the total functional loss for the entire project, which equals -0.4724 (Table 8).

Mitigation Component #3: Extended Wetland Buffers

As previously discussed, the conservation land use area includes all wetlands and buffers extending 75 ft from the wetland boundary. This is far in excess of the 25-ft buffer required by the District. If a UMAM is performed on just the buffer area extending from 25 to 75 ft (Figure 11) from the wetland area, the following functional gain (**Table 12**) is realized:

$$Total\ functional\ gain = 15.65\ acres\ x\ 0.117\ RFG = 1.831$$

Again, this placement of upland buffers (established beyond the District's regulatory boundary) results in a functional gain of 1.831 credits, which offsets the functional loss deficit of 0.1284 by a factor of 14.3 : 1. The functional gain of 1.831 also is sufficient to offset the total functional loss for the project of 0.4724 acres.

Form 62-345.900(2), F.A.C. [effective date]

Mitigation Component #4: Creation of Stormwater Basins

A fourth mitigation component to consider, which is a result of the project development and not an active mitigation plan, is the construction of stormwater basins on the site. The project will result in creation of three (3) storm basins that total 6.883 acres (Figures 6 and 7)

Pond A	0.4794 acres
Pond B	6.2080 acres
Pond C	0.1956 acres
Total	**6.883 acres**

These ponds, which provide for stormwater treatment, will also provide significant on-site aquatic habitat. The impacts that occur on site occur to a very disturbed agricultural pond, or surface water. This pond accounts for 88% (0.777 acres ÷ 0.882 acres = 88%) of the total impacts that occur on site; therefore, some consideration should be given for credit obtained by storm pond construction to mitigate for surface water habitat losses as a result of filling the pond. The UMAM (**Table 13**) calculated for the storm pond construction provides for 1.542 functional gain credits (0.224 RFG x 6.883 acres), which offsets the deficit functional loss credits of 0.1284 by a factor of 12.0 : 1 (1.542 ÷ 0.1284). These ponds will be constructed as wet ponds adjacent to conservation areas and contained in the open space land use. They will provide aquatic dependent animal habitat and provide for aquatic landscape support for the onsite creek systems that are much better than the existing landscape provides for today.

Summary

The proposed project will result in the loss of 0.882 acres of wetlands and surface waters. This acreage loss is equivalent to a functional loss of -0.4724 credits as calculated by UMAM. The loss, as compared to the functional gain described in this report, is summarized as follows:

Impacts	Acreage	Functional Loss
Wetland/Surface Water Impacts	0.882	-0.4724
Mitigation Components		
#1: Creation	0.882	+0.344
#2: Conservation Area	36.38	+2.110
#3: Extended Buffers	15.65	1.831
#4: Storm Pond Creation	6.883	1.542

As can be seen by this summary, Mitigation Components 2, 3, or 4 are individually sufficient to offset mitigation requirements as determined by UMAM. All components are being performed passively as a result of this project. The creation Component is being performed to ensure that ***no net loss of wetlands*** occurs in the drainage basin.

RE: Completeness Review for:
- 121 Acre Traditional Neighborhood Development (TND) Large Scale Comprehensive Plan Amendment (LSCPA)
- 121 Acre Traditional Neighborhood Development (TND) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr. Montalto:

On August 29, 2019 the City of Alachua received your application for a Comprehensive Plan Amendment to the Future Land Use Map for the 121 Acre Traditional Neighborhood Development (TND), which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential on a 121 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Traditional Neighborhood Development (PD-TND) on a 121 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000).

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is complete, conditional upon submission of certain information found below. Unless otherwise noted, this information must be submitted not later than 5 PM on September 12, 2019. If the requested information is not provided within the timeframe provided, the application shall be considered incomplete.

Please note, the comments below are based solely on a preliminary review of your application for completeness. The contents of the applications **have not** been thoroughly reviewed. An in-depth review of the content of the application will be performed subsequently and any further issues with content will be provided to you at

RE: -Schmidt Farms (2021) Large Scale Comprehensive Plan Amendment (LSCPA)
-Schmidt Farms (2021) Site-Specific Amendment to the Official Zoning Atlas (Rezoning)

Dear Mr Potts:

On August 25, 2021 the City of Alachua received your revised, completed application for a Comprehensive Plan Amendment to the Future Land Use Map for the Schmidt Farms project which proposes amending the City of Alachua Future Land Use Map designations from Agriculture and Commercial to Moderate Density Residential, Commercial, Community Commercial, and Conservation on a 121.56-acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The City also received your, revised completed Site Specific Amendment to the Official Zoning Atlas (Rezoning) application, which proposes rezoning the subject property from Agricultural (A) and Commercial Intensive (CI) to Planned Development – Residential (PD-R) and Planned Development – Commercial (PD-COMM) on a 121.56 acre subject property (Parcel Nos. 05936-001-000, 05936-007-000, 05936-007-002, and 05945-000-000). The proposed rezoning would permit a maximum of 489,400 square feet of non-residential uses and 515 dwelling units on the subject property. A Project Assistance Team meeting is scheduled to be held on October 4, 2021 to discuss this application.

The applications have been reviewed for compliance with the applicable review standards, including the City's Comprehensive Plan and Land Development Regulations (LDRs). Based upon Staff's review, revisions must be made to the applications before they may be scheduled for a public hearing before the City's Planning & Zoning Board (PZB). Please address all insufficiencies outlined below in writing and provide an indication as to how they have been addressed by 5:00 PM on **Monday, October 18, 2021.** A total of four (4) copies of the complete application package (i.e., all application materials and attachments) and a CD containing a PDF of all application materials must be provided by this date. Submission of an incomplete package may delay your tentative hearing at the Planning and Zoning Board. Upon receipt of your revised application, Staff will notify you of any remaining insufficiencies which must be resolved, if any, before the item may be scheduled for a public hearing before the PZB.

PO Box 9
Alachua, Florida 32616-0009

"The Good Life Community"
www.cityofalachua.com

Phone: (386) 418-6120
Fax: (386) 418-6130

Please address the following insufficiencies :

Deficiencies to be Addressed

** Unless otherwise noted, references to code sections are to the City of Alachua Land Development Regulations. **

LSCPA Review Comments

1. *General*
   a. Revise application cover and application to reflect change in agent for application. It is staff's understanding that Carter Thompson is no longer employed by JBPro.
   b. Revise application signature to reflect actual applicant or agent signature. Currently, Section B of the Application lists the agent as the applicant, however, the owner/ title holder of the property has signed the application.
   c. Identify small triangular shape area located near intersection of US 441 and NW 43rd Street that does not appear to be part of Conservation (D) area.
   d. Application provides legal description of overall property. Please provide legal description for each land use area (legal description for each area to be Moderate Density Residential, Commercial, Community Commercial, and Conservation).

2. *Urban Sprawl Analysis*
   a. Response II. a. located on Page 6 of Justification Report which relates to the application's consistency with Section 163.3177 (6)(a)(1)9.b(I), F.S, states the development abuts Turkey Creek. Please detail design considerations, including placement of lands within Conservation land use category that demonstrates compliance with this Section. Additionally, the response states that the buffer area will be undisturbed, but this area is identified on the related PD Master Plan application as being eligible for development including stormwater management facilities, roadways, utilities, etc.
   b. Response II. h. located on Page 7 of Justification Report which relates to the application's consistency with Section 163.3177 (6)(a)(1)9.b(VII), F.S., is unclear. Please reword to be clearer.

3. *Concurrency Impact Analysis*
   a. Submitted concurrency impact analysis for potable water, wastewater, traffic, solid waste only provides analysis for proposed residential dwelling units and not any of the proposed non-residential area. Please revise.
   b. Recreation impact analysis states that the proposed development will provide 1.29 acres in improved passive park space. Please clarify. Is this area intended to be dedicated to the City as a public park? If so, please provide location and call out in related PD Master Plan application.

4. *Needs Analysis*
   a. Submitted needs analysis provides state level data and analysis showing need for proposed development. Analysis should be more refined and include local analysis

showing need for residential and non-residential uses that would be permitted under this land use action.

5. *Comprehensive Plan Consistency Analysis*
   a. Page 18 of justification report states that the application is requesting medium density residential, however, map submitted with application and application cover indicate the application requesting moderate density residential. Please verify and correct throughout application.
   b. Page 25 of justification report addressed Objective 5.2 of the Future Land Use Element. The analysis states that the application has "clouted" their concurrency requirements. Please clarify or elaborate.
   c. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be necessary to include a portion as medium density residential or high density residential to achieve the 515 units on the subject property.
   d. Application does not address consistency with Objective 1.3 and Policy 1.3.d of the Conservation and Open Space Element. Please address.
   e. Application does not address consistency with Policy 1.10.b of the Conservation and Open Space Element. Please address.
   f. Application does not address consistency with Policy 1.12.d of the Conservation and Open Space Element. Please address.

6. *Outside Review Comments*
   a. See attached comments in an email dated September 13, 2021 from Brian Kanely of Volkert, Inc regarding submitted traffic study. Please revise and resubmit traffic study with corrections.
7. *Completeness Review Comments*
   a. Updated environmental report(s) must be provided.

PD-COMM and PD-R Rezoning Review Comments

1. *Site Specific Amendments to the Official Zoning Atlas (Section 2.4.2) and Planned Development Standards (Section 2.4.3)*
   a. Per Section 2.4.2 (E)(1)(e), the proposed zoning amendment must demonstrate that the uses permitted under the proposed amendment are not incompatible with existing land uses of adjacent lands and/or the uses permitted by the zone district classifications of adjacent lands. Please provide further detailed analysis including:
      i. Zoning and land use designations of all surrounding lands, regardless of jurisdiction.
      ii. Location of proposed uses proposed in relation to surrounding uses.
      iii. Location of existing uses in vicinity including commercial, industrial, or residential.
      iv. Any other information that address compatibly between proposed uses and existing uses.

b. Per Section 2.4.3 (E)(1)(g), the proposed zoning amendment must demonstrate that the uses permitted by the proposed amendment will not deviate from the development pattern (both established and as proposed by surrounding zone districts) of the area where the proposed amendment is located. Please elaborate on development pattern in area. Are there existing commercial or business uses already in the vicinity? Is there substantial residential development in the area?
c. Per Section 2.4.3 (E)(1)(j), the proposed zoning amendment must demonstrate that the proposed amendment will not result in development in a location where there are no plans by the City or other governmental entities to provide public facilities to serve the development (roads, potable water, wastewater, parks, stormwater management, and solid wastes), and there are no assurances by the private sector that public facilities are planned and will be available to adequately accommodate development. The rezoning application includes an infrastructure area improvement report that appears to be related to the financing of the needed improvements to serve the development. Please note that this may be a separate matter for the City Administration and Commission to consider. It is ultimately the developer's responsibility to finance and install any required improvements needed to serve the development site. Staff recommends the applicant work with the Public Services Department and/or City Manager's office to obtain feedback on the submitted infrastructure area improvement report.
d. Per Section 2.4.3 (E)(1)(k), the proposed zoning amendment must demonstrate that the proposed amendment would not result in significantly adverse impacts on the natural environment, including, but not limited to, water, air, noise, stormwater management, wildlife, vegetation, wetlands, and the natural functioning of the environment. Please elaborate on protections to be included. Please note the Conservation land use and development area, and permitted uses within those categories.
e. Per Section 2.4.3 (D)(3)(d), an analysis of the site's environmental conditions must be submitted during the rezoning process, as 1) environmental conditions may warrant design considerations and 2) certain standards or conditions may be required based on results of the environmental analysis. Please provide updated environmental analysis.

2. *General Standards for all PD Districts (Section 3.6.2)*
   a. The information provided within the justification narrative for development standards must be incorporated into the PD Master Plan sheets. A PD Master Plan may be multiple sheets.
   b. Per Section 3.6.2 (A)(1), the Master Plan must show the following:
      i. Master Plan must identify location of land use development areas with maximum number, type, and mix of land uses including residential densities and non-residential intensities within each development area. Proposed master plan must address the following:
         1. Additional sub areas should be considered as all uses provided in application materials may not be appropriate when adjacent to single family residential uses or multifamily uses or may require special design considerations. For example, the development area located in the southeast area of the site should not include gasoline sales or restaurants with drive-through/drive-in service. An additional development area within the PD-R zoning district should be

considered to provide for larger lots along the south and west property boundaries adjacent to Turkey Creek.

2. The location of all public facility sites serving the subject property including transportation, potable water, wastewater, parks, fire, police, EMS, storm water, solid waste and schools. This may be in graphical form or through a table displayed on the PD-Master Plan. If in tabular form, the table must show the distance in driving miles from site to public facility.
3. Please address inclusion of agricultural uses in PD-COMM zoning district.
4. Please address inclusion of upper-story dwellings in PD-COMM zoning areas. These are already permitted uses within the PD-Comm district. Does the applicant intend to preclude all other residential development types?
5. As residential is permitted within Development Areas A and B, dimensional standards must be provided for that development type.
6. Dimensional standards for cottage style residential uses located within Development Area C must be adjusted to have minimum width of 25', minimum side setback of 2.5', minimum lot size of 2,250 square feet.
7. For new residential development area to be created within PD-R District, cottage style and single family attached, and townhouses may be not be acceptable. Single family detached and 2 to 4 family may be appropriate.
8. If multiple family is proposed to be permitted in Development Area C, then dimensional standards need to be included.
9. For single family attached uses in any Development Area, please add dimensional standard that the "end cap" units must have a minimum 4,000 square feet lot size. For townhouse uses, please clarify that minimum lot size is 2,000 square per unit plus 4,000 square feet for each end unit.
10. Please revise transportation development area (E), to show how Development Area C will be accessed. If roadways are to be public, please create note that such roadways will be dedicated to the Public via platting process or infrastructure plan process.
11. Please include environmentally sensitive area map with future submittals showing wetlands and water bodies, with appropriate buffers as well as any special flood hazard areas.
12. PD Master Plan should clearly delineate areas to be zoned PD-R and PD-COMM.
13. Pages 23- 25 of the justification report includes multiple notes that relate to or modify the PD Master Plan. These notes, as corrected considering other comments made within this latter, must be incorporated into the PD Master Plan.
14. Note 2, a. -g., of the development standards notes list uses that are already permitted within the PD-COMM. Please clarify why these uses are separated and listed separately.
15. Note E.2), regarding signage. If signage is to vary from requirements of Section 6.5, a master sign plan will be required. Please review signage standards found in Section 6.5, especially 6.5.4 (C)(2)(b)(iii) and Section 6.5.4 (F)(5), which specifically reference signage within PD Districts.

16. Note 3) located page 25 of the justification report references Development Area F, but this area is not located on the PD Master Plan. Please verify/ clarify throughout application.
17. For cottage style uses, include minimum unit size of 600 square feet in dimensional standards.

c. Per Section 3.6.2 (A)(3), development along the perimeter of a PD district must be compatible with adjacent existing or proposed future development. A new development area should be created along south and west area of the subject property to provide for larger lots (minimum 10,000 square feet for single family detached; 15,000 square feet for 2 family; 20,000 square feet for 3 family, 30,000 square feet for 4 family).
d. Per Section 3.6.2 (A)(3), development along the perimeter of a PD district must be compatible with adjacent existing or proposed future development. The portion of development area A located in the southeast quadrant of the site immediately adjacent to NW 43rd Street, is in proximity to single family residential uses. Please include a development or dimensional standard that would require a 25' Type C buffer from all internal and external roadways, and any development area boundary.
e. PD Master Plan does not include a conversion schedule. While not required, a conversion schedule may be useful to ensure maximum flexibility.
f. The PD Master Plan must include a transportation, potable water and wastewater, parks, solid waste and stormwater component demonstrating that concurrency requirements have been met. Generally, this is provided through inclusion of Table from concurrency report into PD Master Plan.

3. *Additional Standards for PD Districts (Section 3.6.3 (A)) – PD-R)*
   a. Per Section 3.6.3 (A)(4)(b), provide minimum setbacks/ separations of Development Areas from adjoining residential uses.
   b. Per Section 3.6.3 (A)(5)(iii), design standards may be reduced where it is found that:
      a. The reduction or modification is necessary as a traffic-calming measure;
      b. The PD Master Plan provides for separation of vehicular, pedestrian, and bicycle traffic;
      c. Access for emergency service vehicles is not substantially impaired;
      d. Adequate off-street parking is provided for the uses proposed; and
      e. Adequate space for public utilities is provided within the right-of-way.
   c. Please include note in PD Master Plan that the alleys permitted will be private/ common area not to be maintained by the City.

4. *Additional Standards for PD Districts (Section 3.6.3 (D)) – PD-COMM*
   a. Note 4) provided on Page 25 of justification report outlines rights-of-way/street standards. These are generally acceptable for the residential areas, but separate standards should be outlined or deferred to best engineering design as a maximum roadway width may not accommodate the retail/ commercial uses allowed in PD-COMM district.
   b. Note 4) i. provides for on street parallel parking to be permitted. This is acceptable, but please clarify if the parking is included in the pavement width or separate from. Will traffic lanes be obstructed?

c. Given the dimensional standards (no maximum lot coverage and reduced setbacks), an alternative landscape plan may be advisable to provide maximum flexibility in internal site design. While no final landscape plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.
d. Given the dimensional standards (no maximum lot coverage and reduced setbacks), a master parking plan may be advisable to provide maximum flexibility in internal site design. While no final detailed parking plan is required at this time, the alternative landscape plan may provide general parameters that future landscape plans for future development within the PD districts may use.

5. *Comprehensive Plan Analysis*
   a. Page 11 of justification report states that the application is requesting medium density residential, however, map submitted with application and application cover indicate the application requesting moderate density residential. Please verify and correct throughout application.
   b. Page 18 of justification report addressed Objective 5.2 of the Future Land Use Element. The analysis states that the application has "clouted" their concurrency requirements. Please clarify or elaborate.
   c. Please provide calculation for number of permitted residential units. Application request 53.4 acres of Moderate Density Residential, which results in a maximum residential development of 213 dwelling units. However, the application states that the maximum number of residential units is 515. Please address. It may be necessary to include a portion as medium density residential or high density residential.
   d. Application does not address consistency with Objective 1.3 and Policy 1.3.d of the Conservation and Open Space Element. Please address.
   e. Application does not address consistency with Policy 1.10.b of the Conservation and Open Space Element. Please address.
   f. Application does not address consistency with Policy 1.12.d of the Conservation and Open Space Element. Please address
   g. Provide analysis of Objective 3.4, Objective 3.5, and Policy 3.7.a, Future Land Use Element regarding preservation of existing structures located on property.

6. *Concurrency Impact Analysis*
   a. Submitted concurrency impact analysis for potable water, wastewater, traffic, solid waste only provides analysis for proposed residential dwelling units and not any of the proposed non-residential area. Please revise.
   b. Recreation impact analysis states that the proposed development will provide 1.29 acres in improved passive park space. Please clarify. Is this area intended to be dedicated to the City as a public park? If so, please provide location and call out in related PD Master Plan application.

7. *Development and Subdivision Standards*
   a. Section 6.9.4 of the City's LDRs creates the Floodprone Area Standards for the City. Portions of the site appear to be located within Flood Zone A, AE, and X. Please note applicable code subsections within Section 6.9.4 for reference.

b. Section 7.3.9 requires fire protection improvements to be provided when a subdivision is connected to a publicly owned water system. The development must demonstrate compliance with the provisions of Section 7.3.9 prior to the approval of any Final PD Plan (preliminary plat or site plan). Applicant must coordinate with Alachua County Fire Rescue and City Public Services Department concerning compliance with applicable fire protection improvements or design requirements.

8. *Miscellaneous / General Comments*
   a. Certain uses, such as gasoline sales, for example, may be prohibited or conditioned based on environmental constraints of property.
   b. Provide legal descriptions for each area to be zoned PD-COMM and PD-R.
   c. Allowable uses column in Table on Master Plan sheet has typo in column title.
   d. Revise application cover and application to reflect change in agent for application. It is staff's understanding that Carter Thompson is no longer employed by JBPro.
   e. Revise application signature to reflect actual applicant or agent signature. Currently, the applicant lists the agent as the applicant, however, the owner/ title holder of the property has signed the application.
   f. In PD Master Plan Development Area Table, please bullet point or otherwise list the allowed uses for clarification purposes.

9. *Completeness Review Comments*
   a. Please submit updated environmental report(s).

10. *Outside Review*
    a. See attached comments in an email dated September 13, 2021 from Brian Kanely of Volkert, Inc regarding submitted traffic study. Please revise and resubmit traffic study with corrections.

11. Potential Development Conditions
    a. The following are preliminary potential conditions that are in the process of being developed and will be based on submitted data and information as well as consultation with outside experts and other agencies. Other conditions may be incorporated after review of subsequent approvals:
       i. Based on potential impacts to the surrounding roadway network and the recommendations by Brian Kanely, P.E., of Volkert Engineering, a condition may be considered that would require additional traffic studies at determined intervals in the future to ensure that the proposed development is not creating deficiencies, and if deficiencies are identified creating a method by which they will be addressed.
       ii. Because of the location in relation to surrounding wetlands, sustainable landscaping practices including limitations on use of pesticides and irrigation systems must be considered. These practices include:
          1. Requiring Compost fertilizing (as opposed to traditional/ synthetic fertilizers)
          2. Residential lots shall not be irrigated with potable water
          3. No new wells permitted on the property

4. All non-residential development shall be required to utilize Florida Friendly Landscaping practices

iii. Sidewalks will be provided along or within US Highway 441 right-of-way and NW 43rd Street right-of-way. Such sidewalks will be extended to NW 102nd Place and NW 93rd Ave.

iv. A limit of 12 gasoline pump stations located within Development Areas located within PD-COMM district.

v. A maximum 15,000 square feet of restaurant with drive-through use shall be permitted in PD-COMM development areas.

vi. No more than 225,000 square feet of non-residential shall be permitted through site plan until Certificates of Occupancy on 100 residential dwelling units have been issued within the PD-R or PD-COMM districts located on the subject property. A minimum of 40,000 square feet non-residential uses must be constructed with a Certificate of Occupancy prior to issuance of any development order for more than 100 dwelling units within the PD-COMM district.

vii. Prior to demolition of the existing structures on the property greater than 100 years old, the applicant must provide evidence from a licensed architect or structural engineer that rehabilitating the structures would not be cost feasible. Prior to demolition, the applicant shall supply a historic structure report that includes photos, architectural descriptions of the interior and exterior of the structure, known history of the structures and sites, and locations (longitude/latitude) of the structures.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com. We look forward to receiving your revised application.

Sincerely,

Adam Hall, AICP
Principal Planner

Updated US 441 Traditional Neighborhood Traffic Study

From : brian kanely <briank5030@outlook.com> Mon, Sep 13, 2021 02:31 PM
Subject : Updated US 441 Traditional Neighborhood Traffic Study
To : Adam Hall <ahall@cityofalachua.com>, Kathy Winburn <kwinburn@cityofalachua.org>

Adam:
I have reviewed the Traffic Study. There are some presentation errors that need to be cleaned up (listed below). The various calculations in the Study are correct and I agree with the conclusions. The errors that need to be cleaned up are as follows:

1. Study page 2 - the traffic volumes referenced should be 2031 volumes.
2. Figure 3 - this figure is 2019 data; it needs to be replaced with the 2021 data.
3. Figure 4 - this figure is 2019 data; it needs to be replaced with the 2021 data.
4. Figure 5 - this figure is 2019 data; it needs to be replaced with the 2021 data.
5. Figure 6 - this figure is 2019 data; it needs to be replaced with the 2021 data.
6. Figure 7 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
7. Figure 8 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
8. Figure 9 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
9. Figure 10 - this figure is 2019 data; it needs to be replaced with the 2021 data and retitled as 2031 Build Traffic.
10. Table 13 - the title of this table needs to be changed to SIGNALIZED INTERSECTION CAPACITY RESULTS - US 441/43RD STREET - MINOR MOVEMENTS.
11. Table 14 - the title of this table needs to be changed to UNSIGNALIZED INTESECTION CAPACITY RESULTS - NW 43RD STREET/ SOUTH SITE DRIVE/MARATHON DWY.

To be consistent with other traffic studies submitted to the City, copies of the appropriate pages from the ITE Trip Generation Manual should be included in the Study.

I will proceed to work up the draft Independent Review and submit it to you in the next several days. You can then submit it to Buckholz Traffic with the above minor corrections.

Another issue with this traffic study is has it been submitted to FDOT and Alachua County for review? There are modifications recommended on US 441 and NW 43rd Street that should require review and comment by FDOT and Alachua County. Has there been any coordination with FDOT and the County to date?

Have you received the proposal letter yet?

Call me if you have any questions on the above (352-262-3580).

Brian

CAUTION: This email originated from outside the City.

DO NOT respond, click, or open attachments unless you recognize the sender **(name AND email address)** and know the content is safe.

Should there still be any question on the origin of this email, contact the IT Department immediately.

FISH AND WILDLIFE SERVICE
North Florida Ecological Services Field Office
7915 Baymeadows Way, Suite 200
Jacksonville, FL 32256-7517
Phone: (904) 731-3336 Fax: (904) 731-3045

In Reply Refer To: August 29, 2021
Consultation Code: 04EF1000-2021-SLI-1484
Event Code: 04EF1000-2021-E-02318
Project Name: 121 TND

Subject: List of threatened and endangered species that may occur in your proposed project location or may be affected by your proposed project

To Whom It May Concern:

The enclosed species list identifies threatened, endangered, proposed and candidate species, as well as proposed and final designated critical habitat, that may occur within the boundary of your proposed project and/or may be affected by your proposed project. The species list fulfills the requirements of the U.S. Fish and Wildlife Service (Service) under section 7(c) of the Endangered Species Act (Act) of 1973, as amended (16 U.S.C. 1531 *et seq.*).

New information based on updated surveys, changes in the abundance and distribution of species, changed habitat conditions, or other factors could change this list. Please feel free to contact us if you need more current information or assistance regarding the potential impacts to federally proposed, listed, and candidate species and federally designated and proposed critical habitat. Please note that under 50 CFR 402.12(e) of the regulations implementing section 7 of the Act, the accuracy of this species list should be verified after 90 days. This verification can be completed formally or informally as desired. The Service recommends that verification be completed by visiting the ECOS-IPaC website at regular intervals during project planning and implementation for updates to species lists and information. An updated list may be requested through the ECOS-IPaC system by completing the same process used to receive the enclosed list.

The purpose of the Act is to provide a means whereby threatened and endangered species and the ecosystems upon which they depend may be conserved. Under sections 7(a)(1) and 7(a)(2) of the Act and its implementing regulations (50 CFR 402 *et seq.*), Federal agencies are required to utilize their authorities to carry out programs for the conservation of threatened and endangered species and to determine whether projects may affect threatened and endangered species and/or designated critical habitat.

A Biological Assessment is required for construction projects (or other undertakings having similar physical impacts) that are major Federal actions significantly affecting the quality of the human environment as defined in the National Environmental Policy Act (42 U.S.C. 4332(2)

(c)). For projects other than major construction activities, the Service suggests that a biological evaluation similar to a Biological Assessment be prepared to determine whether the project may affect listed or proposed species and/or designated or proposed critical habitat. Recommended contents of a Biological Assessment are described at 50 CFR 402.12.

If a Federal agency determines, based on the Biological Assessment or biological evaluation, that listed species and/or designated critical habitat may be affected by the proposed project, the agency is required to consult with the Service pursuant to 50 CFR 402. In addition, the Service recommends that candidate species, proposed species and proposed critical habitat be addressed within the consultation. More information on the regulations and procedures for section 7 consultation, including the role of permit or license applicants, can be found in the "Endangered Species Consultation Handbook" at:

http://www.fws.gov/endangered/esa-library/pdf/TOC-GLOS.PDF

Please be aware that bald and golden eagles are protected under the Bald and Golden Eagle Protection Act (16 U.S.C. 668 *et seq.*), and projects affecting these species may require development of an eagle conservation plan (http://www.fws.gov/windenergy/eagle_guidance.html). Additionally, wind energy projects should follow the wind energy guidelines (http://www.fws.gov/windenergy/) for minimizing impacts to migratory birds and bats.

Guidance for minimizing impacts to migratory birds for projects including communications towers (e.g., cellular, digital television, radio, and emergency broadcast) can be found at: http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/towers.htm; http://www.towerkill.com; and http://www.fws.gov/migratorybirds/CurrentBirdIssues/Hazards/towers/comtow.html.

We appreciate your concern for threatened and endangered species. The Service encourages Federal agencies to include conservation of threatened and endangered species into their project planning to further the purposes of the Act. Please include the Consultation Tracking Number in the header of this letter with any request for consultation or correspondence about your project that you submit to our office.

Attachment(s):

- Official Species List
- Migratory Birds

Official Species List

This list is provided pursuant to Section 7 of the Endangered Species Act, and fulfills the requirement for Federal agencies to "request of the Secretary of the Interior information whether any species which is listed or proposed to be listed may be present in the area of a proposed action".

This species list is provided by:

North Florida Ecological Services Field Office

Project Summary

Consultation Code: 04EF1000-2021-SLI-1484
Event Code: 04EF1000-2021-E-02318
Project Name: 121 TND
Project Type: DEVELOPMENT
Project Description: 121-acre project site in consideration for a Traditional Neighborhood Development

Project Location:

Approximate location of the project can be viewed in Google Maps: https://www.google.com/maps/@29.7441333,-82.39379557863518,14z

Counties: Alachua County, Florida

Endangered Species Act Species

There is a total of 5 threatened, endangered, or candidate species on this species list.

Species on this list should be considered in an effects analysis for your project and could include species that exist in another geographic area. For example, certain fish may appear on the species list because a project could affect downstream species.

IPaC does not display listed species or critical habitats under the sole jurisdiction of NOAA Fisheries[1], as USFWS does not have the authority to speak on behalf of NOAA and the Department of Commerce.

See the "Critical habitats" section below for those critical habitats that lie wholly or partially within your project area under this office's jurisdiction. Please contact the designated FWS office if you have questions.

1. NOAA Fisheries, also known as the National Marine Fisheries Service (NMFS), is an office of the National Oceanic and Atmospheric Administration within the Department of Commerce.

Birds

NAME	STATUS
Eastern Black Rail *Laterallus jamaicensis ssp. jamaicensis* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/10477	Threatened
Wood Stork *Mycteria americana* Population: AL, FL, GA, MS, NC, SC No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/8477	Threatened

Reptiles

NAME	STATUS
Eastern Indigo Snake *Drymarchon corais couperi* No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/646	Threatened
Gopher Tortoise *Gopherus polyphemus* Population: eastern No critical habitat has been designated for this species. Species profile: https://ecos.fws.gov/ecp/species/6994	Candidate

Amphibians

NAME	STATUS
Frosted Flatwoods Salamander *Ambystoma cingulatum*	Threatened

There is **final** critical habitat for this species. The location of the critical habitat is not available.
Species profile: https://ecos.fws.gov/ecp/species/4981

Critical habitats

THERE ARE NO CRITICAL HABITATS WITHIN YOUR PROJECT AREA UNDER THIS OFFICE'S JURISDICTION.

Migratory Birds

Certain birds are protected under the Migratory Bird Treaty Act[1] and the Bald and Golden Eagle Protection Act[2].

Any person or organization who plans or conducts activities that may result in impacts to migratory birds, eagles, and their habitats should follow appropriate regulations and consider implementing appropriate conservation measures, as described below.

1. The Migratory Birds Treaty Act of 1918.
2. The Bald and Golden Eagle Protection Act of 1940.
3. 50 C.F.R. Sec. 10.12 and 16 U.S.C. Sec. 668(a)

The birds listed below are birds of particular concern either because they occur on the USFWS Birds of Conservation Concern (BCC) list or warrant special attention in your project location. To learn more about the levels of concern for birds on your list and how this list is generated, see the FAQ below. This is not a list of every bird you may find in this location, nor a guarantee that every bird on this list will be found in your project area. To see exact locations of where birders and the general public have sighted birds in and around your project area, visit the E-bird data mapping tool (Tip: enter your location, desired date range and a species on your list). For projects that occur off the Atlantic Coast, additional maps and models detailing the relative occurrence and abundance of bird species on your list are available. Links to additional information about Atlantic Coast birds, and other important information about your migratory bird list, including how to properly interpret and use your migratory bird report, can be found below.

For guidance on when to schedule activities or implement avoidance and minimization measures to reduce impacts to migratory birds on your list, click on the PROBABILITY OF PRESENCE SUMMARY at the top of your list to see when these birds are most likely to be present and breeding in your project area.

NAME	BREEDING SEASON
American Kestrel *Falco sparverius paulus* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA https://ecos.fws.gov/ecp/species/9587	Breeds Apr 1 to Aug 31
Bald Eagle *Haliaeetus leucocephalus* This is not a Bird of Conservation Concern (BCC) in this area, but warrants attention because of the Eagle Act or for potential susceptibilities in offshore areas from certain types of development or activities. https://ecos.fws.gov/ecp/species/1626	Breeds Sep 1 to Jul 31

NAME	BREEDING SEASON
Great Blue Heron *Ardea herodias occidentalis* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Jan 1 to Dec 31
Henslow's Sparrow *Ammodramus henslowii* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/3941	Breeds elsewhere
Lesser Yellowlegs *Tringa flavipes* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9679	Breeds elsewhere
Magnificent Frigatebird *Fregata magnificens* This is a Bird of Conservation Concern (BCC) only in particular Bird Conservation Regions (BCRs) in the continental USA	Breeds Oct 1 to Apr 30
Prairie Warbler *Dendroica discolor* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 1 to Jul 31
Red-headed Woodpecker *Melanerpes erythrocephalus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska.	Breeds May 10 to Sep 10
Short-billed Dowitcher *Limnodromus griseus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/9480	Breeds elsewhere
Swallow-tailed Kite *Elanoides forficatus* This is a Bird of Conservation Concern (BCC) throughout its range in the continental USA and Alaska. https://ecos.fws.gov/ecp/species/8938	Breeds Mar 10 to Jun 30

Probability Of Presence Summary

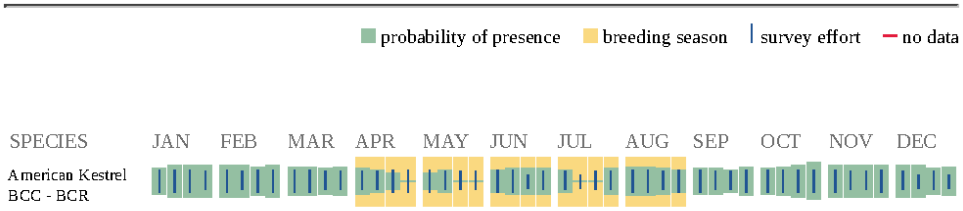
The graphs below provide our best understanding of when birds of concern are most likely to be present in your project area. This information can be used to tailor and schedule your project activities to avoid or minimize impacts to birds. Please make sure you read and understand the FAQ "Proper Interpretation and Use of Your Migratory Bird Report" before using or attempting to interpret this report.

Probability of Presence (■)

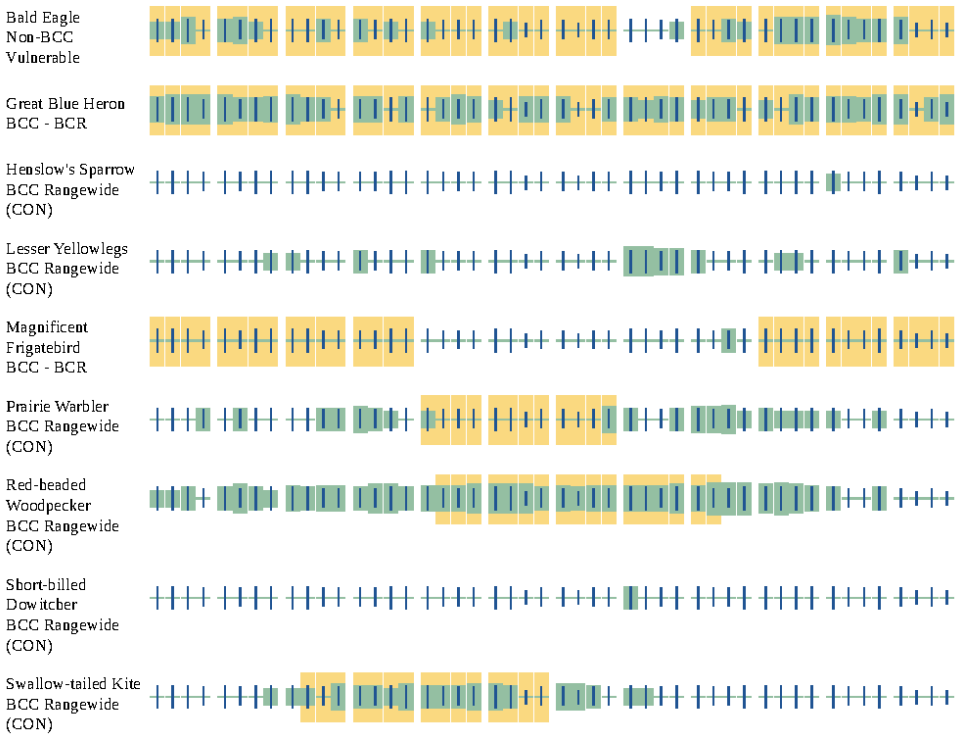
Each green bar represents the bird's relative probability of presence in the 10km grid cell(s) your project overlaps during a particular week of the year. (A year is represented as 12 **4**-week months.) A taller bar indicates a higher probability of species presence. The survey effort (see

below) can be used to establish a level of confidence in the presence score. One can have higher confidence in the presence score if the corresponding survey effort is also high.

How is the probability of presence score calculated? The calculation is done in three steps:



1. The probability of presence for each week is calculated as the number of survey events in the week where the species was detected divided by the total number of survey events for that week. For example, if in week 12 there were 20 survey events and the Spotted Towhee was found in 5 of them, the probability of presence of the Spotted Towhee in week 12 is 0.25.
2. To properly present the pattern of presence across the year, the relative probability of presence is calculated. This is the probability of presence divided by the maximum probability of presence across all weeks. For example, imagine the probability of presence in week 20 for the Spotted Towhee is 0.05, and that the probability of presence at week 12 (0.25) is the maximum of any week of the year. The relative probability of presence on week 12 is 0.25/0.25 = 1; at week 20 it is 0.05/0.25 = 0.2.
3. The relative probability of presence calculated in the previous step undergoes a statistical conversion so that all possible values fall between 0 and 10, inclusive. This is the probability of presence score.



Breeding Season (■)
Yellow bars denote a very liberal estimate of the time-frame inside which the bird breeds across its entire range. If there are no yellow bars shown for a bird, it does not breed in your project area.

Survey Effort (|)
Vertical black lines superimposed on probability of presence bars indicate the number of surveys performed for that species in the 10km grid cell(s) your project area overlaps. The number of surveys is expressed as a range, for example, 33 to 64 surveys.

No Data (–)
A week is marked as having no data if there were no survey events for that week.

Survey Timeframe
Surveys from only the last 10 years are used in order to ensure delivery of currently relevant information. The exception to this is areas off the Atlantic coast, where bird returns are based on all years of available data, since data in these areas is currently much more sparse.

Additional information can be found using the following links:

- Birds of Conservation Concern http://www.fws.gov/birds/management/managed-species/birds-of-conservation-concern.php
- Measures for avoiding and minimizing impacts to birds http://www.fws.gov/birds/management/project-assessment-tools-and-guidance/conservation-measures.php
- Nationwide conservation measures for birds http://www.fws.gov/migratorybirds/pdf/management/nationwidestandardconservationmeasures.pdf

Migratory Birds FAQ

Tell me more about conservation measures I can implement to avoid or minimize impacts to migratory birds.

Nationwide Conservation Measures describes measures that can help avoid and minimize impacts to all birds at any location year round. Implementation of these measures is particularly important when birds are most likely to occur in the project area. When birds may be breeding in the area, identifying the locations of any active nests and avoiding their destruction is a very helpful impact minimization measure. To see when birds are most likely to occur and be breeding

in your project area, view the Probability of Presence Summary. Additional measures or permits may be advisable depending on the type of activity you are conducting and the type of infrastructure or bird species present on your project site.

What does IPaC use to generate the migratory birds potentially occurring in my specified location?
The Migratory Bird Resource List is comprised of USFWS Birds of Conservation Concern (BCC) and other species that may warrant special attention in your project location.

The migratory bird list generated for your project is derived from data provided by the Avian Knowledge Network (AKN). The AKN data is based on a growing collection of survey, banding, and citizen science datasets and is queried and filtered to return a list of those birds reported as occurring in the 10km grid cell(s) which your project intersects, and that have been identified as warranting special attention because they are a BCC species in that area, an eagle (Eagle Act requirements may apply), or a species that has a particular vulnerability to offshore activities or development.

Again, the Migratory Bird Resource list includes only a subset of birds that may occur in your project area. It is not representative of all birds that may occur in your project area. To get a list of all birds potentially present in your project area, please visit the AKN Phenology Tool.

What does IPaC use to generate the probability of presence graphs for the migratory birds potentially occurring in my specified location?
The probability of presence graphs associated with your migratory bird list are based on data provided by the Avian Knowledge Network (AKN). This data is derived from a growing collection of survey, banding, and citizen science datasets .

Probability of presence data is continuously being updated as new and better information becomes available. To learn more about how the probability of presence graphs are produced and how to interpret them, go the Probability of Presence Summary and then click on the "Tell me about these graphs" link.

How do I know if a bird is breeding, wintering, migrating or present year-round in my project area?
To see what part of a particular bird's range your project area falls within (i.e. breeding, wintering, migrating or year-round), you may refer to the following resources: The Cornell Lab of Ornithology All About Birds Bird Guide, or (if you are unsuccessful in locating the bird of interest there), the Cornell Lab of Ornithology Neotropical Birds guide. If a bird on your migratory bird species list has a breeding season associated with it, if that bird does occur in your project area, there may be nests present at some point within the timeframe specified. If "Breeds elsewhere" is indicated, then the bird likely does not breed in your project area.

What are the levels of concern for migratory birds?
Migratory birds delivered through IPaC fall into the following distinct categories of concern:

1. "BCC Rangewide" birds are Birds of Conservation Concern (BCC) that are of concern throughout their range anywhere within the USA (including Hawaii, the Pacific Islands, Puerto Rico, and the Virgin Islands);

2. "BCC - BCR" birds are BCCs that are of concern only in particular Bird Conservation Regions (BCRs) in the continental USA; and
3. "Non-BCC - Vulnerable" birds are not BCC species in your project area, but appear on your list either because of the Eagle Act requirements (for eagles) or (for non-eagles) potential susceptibilities in offshore areas from certain types of development or activities (e.g. offshore energy development or longline fishing).

Although it is important to try to avoid and minimize impacts to all birds, efforts should be made, in particular, to avoid and minimize impacts to the birds on this list, especially eagles and BCC species of rangewide concern. For more information on conservation measures you can implement to help avoid and minimize migratory bird impacts and requirements for eagles, please see the FAQs for these topics.

Details about birds that are potentially affected by offshore projects
For additional details about the relative occurrence and abundance of both individual bird species and groups of bird species within your project area off the Atlantic Coast, please visit the Northeast Ocean Data Portal. The Portal also offers data and information about other taxa besides birds that may be helpful to you in your project review. Alternately, you may download the bird model results files underlying the portal maps through the NOAA NCCOS Integrative Statistical Modeling and Predictive Mapping of Marine Bird Distributions and Abundance on the Atlantic Outer Continental Shelf project webpage.

Bird tracking data can also provide additional details about occurrence and habitat use throughout the year, including migration. Models relying on survey data may not include this information. For additional information on marine bird tracking data, see the Diving Bird Study and the nanotag studies or contact Caleb Spiegel or Pam Loring.

What if I have eagles on my list?
If your project has the potential to disturb or kill eagles, you may need to obtain a permit to avoid violating the Eagle Act should such impacts occur.

Proper Interpretation and Use of Your Migratory Bird Report
The migratory bird list generated is not a list of all birds in your project area, only a subset of birds of priority concern. To learn more about how your list is generated, and see options for identifying what other birds may be in your project area, please see the FAQ "What does IPaC use to generate the migratory birds potentially occurring in my specified location". Please be aware this report provides the "probability of presence" of birds within the 10 km grid cell(s) that overlap your project; not your exact project footprint. On the graphs provided, please also look carefully at the survey effort (indicated by the black vertical bar) and for the existence of the "no data" indicator (a red horizontal bar). A high survey effort is the key component. If the survey effort is high, then the probability of presence score can be viewed as more dependable. In contrast, a low survey effort bar or no data bar means a lack of data and, therefore, a lack of certainty about presence of the species. This list is not perfect; it is simply a starting point for identifying what birds of concern have the potential to be in your project area, when they might be there, and if they might be breeding (which means nests might be present). The list helps you know what to look for to confirm presence, and helps guide you in knowing when to implement conservation measures to avoid or minimize potential impacts from your project activities,

should presence be confirmed. To learn more about conservation measures, visit the FAQ "Tell me about conservation measures I can implement to avoid or minimize impacts to migratory birds" at the bottom of your migratory bird trust resources page.

APPENDIX A: Photographic Atlas of the Proposed Project Site

Figure A–1. Locations where photos were taken showing current habitat conditions on the Planning Parcel. 241

Photo 1. View of Man-made Intermittent Pond at GPS location 15 (polygon 29) as seen looking southeast on 4 November 2019. 242

Photo 2. View of Non-Wetland Surface Water 5 at GPS location 16 (polygon 11) as seen looking northwest on 4 November 2019. 242

Photo 3. View of Non-Wetland Surface Water 5 at GPS location 203 (polygon 11) as seen looking east on 4 November 2019. 243

Photo 4. View of Non-Wetland Swale 2 at GPS location 20 (polygon 17) as seen looking southwest on 4 November 2019. This is overflow channel from polygon 11 that flows into the ground. 243

Alachua, Florida 32615

Re: **Schmidt Farms (Formerly US 441 Traditional Neighborhood)**
Updated Traffic Concurrency Study

Dear Mr. Hall:

Attached is the Traffic Concurrency Study. If you have any questions or comments regarding this study please contact me.

Sincerely,

Jeffrey W. Buckholz, P.E., PTOE
Principal

This item has been digitally signed and sealed by Jeffrey W. Buckholz, P.E. on 10/19/21. Printed copies of this document are not considered signed and sealed and the signature must be verified on any electronic copies.

INTRODUCTION

Schmidt Farms will be located in the southwest quadrant of the US 441/NW 43rd Street intersection and will contain 214 single family homes, 130 apartment units, 171 ñresidential-over-commercialò residential units and 300,000 gsf of retail space.

Previously a traffic access study was completed and submitted for the development. The purpose of this report is to complete a traffic concurrency study in accordance with City of Alachua requirements. Appendix A contains the existing traffic concurrency tables for the City of Alachua while Figure 1 shows the site location and the various roadway segments located within the Cityôs regional road network. Both daily traffic and weekday PM peak hour traffic are analyzed in this study.

TRIP GENERATION

Trip generation calculations were carried out using the 10th edition of ITE's Trip Generation Manual and referencing land use codes 210 (Single Family), 220 (Multi-Family Low Rise), 231 (Mid-Rise Residential with First Floor Commercial) and 820 (Shopping Center). Tables 8 through 10 of the previously completed traffic access study for this development summarize the expected weekday, weekday AM peak hour, and weekday PM peak hour trip generation results. These three tables are provided in Appendix B. During an average weekday the development is expected to generate 7444 **new external trips** (3722 entering and 3722 exiting) with 545 of these trips (282 entering and 263 exiting) occurring during the PM peak hour.

BASE TRIP DISTRIBUTION

The basic directional distribution, which was established using engineering judgement, is contained in Figure 2. A reasonable 10% trip attenuation for every 2 miles of distance is assumed along US 441.

During the previously completed traffic access study it was determined that, during the weekday PM peak hour, 21% of the site traffic is oriented towards the north along US 441. For the average weekday the percentage of traffic oriented to the north is estimated at 24% by taking the average of the AM (26%) and PM (21%) results from the previous study.

Applying the basic directional percentages contained in Figure 2 to the 24% produces the daily trip distribution percentages shown in Figure 3 and applying these basic directional percentages to the 21% produces the PM peak hour trip distribution percentages shown in Figure 4.

TRAFFIC ASSIGNMENT

Multiplying the Figure 3 directional percentages by the number of daily new external trips produces the daily traffic assignment shown in Figure 5. Multiplying the Figure 4 directional percentages by the number of PM peak hour new external trips produces the PM peak hour traffic assignment shown in Figure 6.

STUDY AREA

Since this development generates more than 1000 daily new external trips, the study area for the development includes all segments on the City of Alachua regional road network where site traffic compromises five percent or more of the roadway's Maximum Service Volume (MSV). Table 1 contains the study area calculations. No road segment meets this study area criterion.

The study area for the development also includes roadway links that are within one-half mile of the development's ingress/egress. The only road segment which meets this criterion is segment 3 (US 441 from the MPO Boundary to CR25A East). Therefore segment 3 is the only impacted link.

LINK SERVICE VOLUME

Table 2 is an updated version of the latest City Spreadsheet. The total project volumes in this spreadsheet are obtained from Table 3, which now includes the site traffic.

CONCURRENCY DETERMINATION

The percentage of the link service volume that will be consumed by future traffic is less than 100% for all impacted roadway links. Consequently, we can conclude that sufficient available capacity exists on the major roadway segments within the City to adequately handle the traffic that will be generated by the new development.

Re: **Schmidt Farms Traditional Neighborhood Development Traffic Study; Alachua County, Florida**

Dear Mr. Potts:

Attached is the requested traffic study. If you have any questions or comments regarding this study, please contact me.

Sincerely,

Jeffrey W. Buckholz, P.E., PTOE
Principal

This item has been digitally signed and sealed by Jeffrey W. Buckholz, P.E. on 10/28/21. Printed copies of this document are not considered signed and sealed and the signature must be verified on any electronic copies.

INTRODUCTION

This Traditional Neighborhood Development (TND) will contain 214 single family homes, 130 apartment units, 171 ñresidential-over-commercialò residential units, and 300,000 gsf of retail space. The site plan is provided in Appendix A.

The development will be located in the southwest quadrant of the US 441/NW 43rd Street intersection in northern Alachua County, Florida and it is currently anticipated that there will be two site drives. The North Drive will be a full access driveway on US 441 located north of the US 441/NW 43rd Street intersection and the South Drive will form the fourth (west) leg of the NW 43rd Street/Marathon Gas Station West Driveway intersection. It is proposed that the currently unused median opening on US 441 be moved approximately 250 feet to the south to serve this new development.

US 441 is a four lane divided urban principal arterial with exclusive left turn lanes accommodated within a grass median. It has a posted speed limit of 60 mph in each direction in the vicinity of the site and an FDOT access management classification of 3. NW 43rd Street is a two lane undivided urban minor arterial with a posted speed limit of 50 mph near the site.

Figure 1 shows the site location and surrounding road network while Figure 2 provides the current intersection and mainline lane configuration near the site. The development is expected to be complete and fully occupied by the beginning of 2031, therefore 2031 was chosen as the design year for this study.

EXISTING TRAFFIC VOLUMES

Buckholz Traffic personnel conducted weekday AM peak period (6:45 am to 8:45 am) and PM peak period (3:30 pm to 6:00 pm) turning movement counts at the US 441/NW 43rd Street intersection and the NW 43rd Street/Marathon West Driveway intersection during late August of 2021 with all schools in session. These counts, which were collected at 15-minute intervals, are provided in Appendix B with the peak hour volumes summarized in Figures 3 and 4.

Buckholz Traffic personnel also conducted a set of morning and afternoon directional enter/exit counts at a series of roadways located just north of the US 441/NW 43rd Street intersection. These 2019 counts are included in Appendix B. Three of the roadways serve residential developments while the fourth roadway serves the Gainesville Regional Utilities complex.

TRIP GENERATION OF SITE TRAFFIC

Trip generation calculations were carried out using the 10th edition of ITE's Trip Generation Manual and referencing land use codes 210 (Single Family), 220 (Multi-Family Low Rise), 231 (Mid-Rise Residential with First Floor Commercial) and 820 (Shopping Center).. Tables 1 through 4 contain the daily, AM peak hour, and PM peak hour trip generation calculations while Tables 5 through 7 provide the calculations which estimate the peak hour internal trip-making between the residential, retail and office land uses. Tables 8 through 10 summarize the expected weekday, weekday AM peak hour, and weekday PM peak hour trip generation results.

During an average weekday the development is expected to generate 9918 **external** weekday trips (4959 entering and 4959 exiting) with 491 external trips (206 entering and 285 exiting) occurring during the weekday AM peak hour and 763 external trips (386 entering and 377 exiting) occurring during the weekday PM peak hour. Since the primary goal of this study is to analyze the access situation for the planned development, we are interested in total driveway volumes and thus no adjustment has been made for pass-by capture. This results in site traffic volumes at the US 441/NW 43rd Street intersection that are conservatively high.

DISTRIBUTION AND ASSIGNMENT OF SITE TRAFFIC

Site trips were directionally distributed based on the results of our traffic counts (see Table B2 in Appendix B). The directional enter/exit counts taken at nearby side roads along US 441 were used to determine that, in the morning, 26% of the site trips are expected to be oriented to the north with the remaining 74% oriented to the south. In the afternoon, 21% of site trips are expected to be oriented towards the north with 79% oriented towards the south.

These trip distribution percentages were multiplied by the weekday AM and PM peak hour trip generation results to produce the site traffic assignment for external trips shown in Figures 5 and 6.

FUTURE TRAFFIC VOLUMES

The expected weekday AM and PM peak hour background (No Build) traffic volumes and total (Build) traffic volumes near the site are graphically depicted in Figures 7 through 10. The 2029 background traffic volumes were obtained by multiplying the existing traffic volumes by the appropriate FDOT seasonal adjustment factor (0.97) and then by a corresponding average annual growth rate (2.2%) obtained from two nearby historical FDOT counts (see Appendix C). The 2029 total traffic volumes were obtained by adding the external traffic generated by the new development to the 2029 background traffic volumes.

TURN LANE ANALYSIS

Using the 2031 Build traffic volumes a formal analysis was be made to determine if a right turn lane is warranted on US 441 at the North Site Entrance or on NW 43rd Street at the South Site Entrance. The methodology contained in NCHRP Report 279 was used to conduct this analysis. As is indicated in Figure 11, right turn volumes into the site will be high enough to warrant a right turn lane on US 441 at the North Site Entrance. This result is supported by NCHRP Report 420 which requires 40 right turns per hour to warrant a right turn lane on a multi-lane roadway with a posted speed greater than 45 mph.

However, Figure 12 reveals that right turn volumes into the site will not be high enough to warrant a right turn lane on NW 43rd Street at the South Site Entrance. This result is also supported by NCHRP Report 420 which requires 30 right turns per hour to warrant a right turn lane on a 2-lane roadway with a posted speed greater than 45 mph.

Using the 2031 Build traffic volumes a formal analysis was also made to determine if a left turn lane is warranted on NW 43rd Street at the South Site Entrance. The methodology contained in a paper written by M.D. Harmelink entitled: "Volume Warrants for Left Turn Storage Lanes at Unsignalized Grade Intersections" was used to conduct this evaluation. The results, which are depicted in Figures 13 and 14, indicate that 2031 Build traffic volumes will be high enough to warrant a left turn lane at the site drive.

SIGNALIZED INTERSECTION CAPACITY ANALYSIS

2021 Existing, 2031 No Build, and 2031 Build weekday AM and PM peak hour signalized intersection capacity analyses were performed for the US 441/NW 43rd Street intersection using the methodology discussed in Chapter 19 of the Sixth Edition of the Highway Capacity Manual. The existing signal timings for this intersection are provided in Appendix D. The intersection capacity results are summarized in Table 11 while Appendix E provides the supporting capacity analysis calculations. The intersection currently operates at level of service B during both weekday peak hours and is expected to continue to operate at level of service B under both 2031 No Build and Build conditions.

UNSIGNALIZED INTERSECTION CAPACITY ANALYSIS

Using 2021 Existing, 2031 No Build, and 2031 Build traffic volumes, capacity analyses for the unsignalized NW 43rd Street/Marathon West Drive/South Site Drive intersection were conducted using the two-way stop control methodology contained in Chapter 20 of the Sixth Edition of the Highway Capacity Manual. 2031 Build analyses were also performed at the new US 441/North Site Drive intersection. Appendix F contains the capacity analysis calculations with the capacity results summarized in Tables 12 through 14.

A review of Table 12 indicates that level of service F operation with moderate queueing and delay will occur for the side street left turn movement during both weekday peak hours if a full median opening is provided at the North Site Entrance. Table 12 also provides capacity analysis results with the installation of a directional median opening. Redirection of the northbound site traffic through the signalized US 441/NW 43rd Street intersection should have minimal impact on this intersection since an exclusive U-turn lane already exists on the north approach.

A review of Table 13 indicates that all minor movements at the US 441/NW 43rd Street intersection currently operate at an acceptable level of service B or higher and, under 2031 No Build conditions, are expected to operate at an acceptable level of service C or higher with minimal queueing and delay. Table 14 shows that, under 2031 Build conditions, all minor movements at this intersection will operate at an acceptable level of service C or better during the weekday AM peak hour. However, during the weekday PM peak hour the westbound approach is expected to operate at level of service F with moderate queueing and delay.

ACCESS MANAGEMENT EVALUATION

Eliminating the unused full median opening located approximately 250 feet north of the proposed North Site Entrance and replacing it with a directional median opening located at this entrance will improve the access management situation along US 441. The existing median opening is only 850 feet from NW 102nd Place to the north and only 1450 feet from NW 43rd Street to the south, both of which are much less than the required 2640 feet for a full median opening. The new median opening will be 1100 feet from NW 102nd Place and 1200 feet from NW 43rd Street and, although it will still violate the 1320 foot required spacing for a directional median opening, it will just barely do so.

RECOMMENDATIONS

The existing full median opening on US 441 should be relocated to the south at the new site entrance and consideration should be given to converting it into a directional median opening. An exclusive southbound right turn lane should be added on US 441 at the new driveway. A northbound left turn lane should be added at the entrance on NW 43rd Street and two egress lanes should be provided at this entrance. Traffic operations at the NW 43rd Street entrance should be monitored and additional measures taken if unsuitable conditions arise. These measures could include the installation of a roundabout at this location.

43RD STREET TND PLANNED DEVELOPMENT (PD) SPECIFICATIONS

1. LAND USES. LAND USES SHALL BE GENERALLY LOCATED AS SHOWN ON THE PD MASTER PLAN. THE MAXIMUM NUMBER OF DWELLING UNITS ALLOWED ON THE SITE SHALL BE 515 AND THE MAXIMUM NON-RESIDENTIAL AREA ALLOWED SHALL BE 489,400 SQ. FT. DWELLING UNITS MAY BE SINGLE-FAMILY DETACHED, ATTACHED, OR MULTI-FAMILY. LAND USES OTHER THAN RESIDENTIAL PERMITTED ON THE SITE ARE IDENTIFIED IN THE TABLE BELOW. THE FOLLOWING USES ARE ALLOWED IN DEVELOPMENT AREAS A, B, C, & D; COMMUNITY CENTER, POST OFFICE, PUBLIC SAFETY USES, RECREATIONAL TRAILS, PARKS, AND STORMWATER MANAGEMENT FACILITIES. USES FOR AREA E ARE AS LISTED BELOW.
2. PHASING. THE DEVELOPMENT SHALL CONSIST OF ONE PHASE AND MAY BE DEVELOPED ACCORDING TO MARKET CONDITIONS. THE DEVELOPMENT MAY BE FURTHER DIVIDED INTO SMALLER UNITS ACCORDING TO THE FINAL PD PLAN TO CREATE A LOGICAL AND/OR FUNCTIONAL DEVELOPMENT OR INFRASTRUCTURE PATTERNS.
3. ROADWAY BUFFERS. A TWENTY-FOOT (20') BUFFER SHALL BE PROVIDED ADJACENT TO ROADWAYS THAT EXIST ALONG EXTERNAL PROJECT BOUNDARIES. THE BUFFER MAY INCLUDE STORMWATER MANAGEMENT FACILITIES, PEDESTRIAN CIRCULATION, LANDSCAPING, AND SIGNAGE. ROADWAY BUFFERS MAY NOT BE PART OF PLATTED LOTS. LANDSCAPING SHALL BE CONSISTENT WITH APPLICABLE SECTIONS OF THE LAND DEVELOPMENT REGULATIONS (LDRS).
4. LOT SETBACK AND SEPARATIONS. HOUSING UNITS AND DESIGN SHALL AT A MINIMUM MEET THE REQUIREMENT OF THE FLORIDA BUILDING CODE. NOTWITHSTANDING THE SETBACKS ESTABLISHED WITHIN EACH DEVELOPMENT AREA AND DEFINED ON THE PD MASTER PLAN, AN ACCESSORY STRUCTURE, SUCH AS A DETACHED GARAGE, MAY SHARE A COMMON WALL WITH ACCESSORY STRUCTURES ON ADJACENT LOTS.
5. COMMON AREA. COMMON AREA AND OPEN SPACE, AS DEFINED BY APPLICABLE SECTIONS OF THE LDRS AND THE PD MASTER PLAN, SHALL ACCOUNT FOR A MINIMUM OF 10% OF THE COMPLETED PROJECT, INCLUSIVE OF THE DEPRESSIONAL AREA. OPEN SPACE AREAS MAY EXIST IN ANY LAND USE AREA AND MAY BE DEVELOPED AT ANY RATE. THESE AREAS MAY CONTAIN LOW-INTENSITY PASSIVE OR ACTIVE RECREATION OPPORTUNITIES SUCH AS NATURE TRAILS, WILDLIFE VIEWING AREAS, AND OTHER RECREATION ACTIVITIES.
6. CIRCULATION. THE CIRCULATION CONFIGURATION IS NOT INTENDED TO BE EXACT AND REPRESENTS ONLY A PORTION OF THE OVERALL ROADWAY NETWORK. ROADWAYS INTENDED TO BE DEDICATED TO THE PUBLIC MAY CONSIST OF A MIXTURE OF ROADWAY TYPES AND SHALL BE REQUIRED TO MEET THE APPLICABLE LDRS DESIGN CRITERIA, UNLESS OTHERWISE AUTHORIZED BY THE CITY COMMISSION THROUGH LDR SECTION 3.6.3 (A)(5)(B)(III). THE INTERNAL ROADWAYS NOT SHOWN ON THE PD MASTER PLAN ARE INTENDED TO BE NEIGHBORHOOD STREETS AND MAY NOT MEET THE ARTERIAL OR COLLECTOR ROADWAY DEFINITION.
7. LANDOWNER/DEVELOPER RESPONSIBILITY. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING RIGHT-OF-WAY AND EASEMENTS FOR CONSTRUCTING ON-SITE INFRASTRUCTURE LOCATED IN THE PROPOSED PD-R AND PD-COMM DISTRICTS, INCLUDING BUT NOT LIMITED TO ELECTRICAL UTILITY LINE, TELEPHONE LINES, CABLE TV LINES, OR THE UNDERGROUND CONDUIT FOR SUCH FEATURES. THE LANDOWNER/DEVELOPER IS RESPONSIBLE FOR PROVIDING AREAS FOR PUBLIC INFRASTRUCTURE AS REQUIRED BY CITY ORDINANCES. TO GUARANTEE CONSTRUCTION OF REQUIRED INFRASTRUCTURE, AND IF REQUESTED BY THE CITY, TO DEDICATE THESE IMPROVEMENTS TO THE CITY IN A FORM THAT COMPLIES WITH CITY REGULATIONS. ALL FACILITIES NOT DEDICATED TO THE CITY SHALL BE OPERATED AND MAINTAINED BY A PROPERTY OWNERS ASSOCIATION FORMED AS PART OF THE SUBDIVISION PROCESS.
8. ALLOWABLE LAND USE CLASSIFICATION DATA. FIGURES FOR ACREAGE ARE ESTIMATES AND HAVE BEEN ROUNDED TO THE NEAREST WHOLE NUMBER.

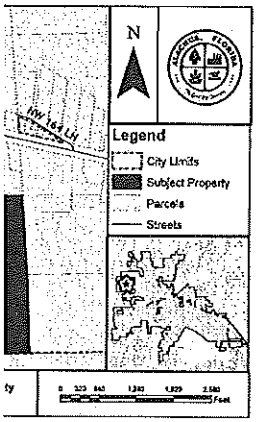
List of Changes from PZB Draft Ordinance



The table below shows the changes made to the Ordinance after Planning and Zoning Board hearing. These have been incorporated into the Staff Report as well.

Section/ Location	Change Description
Throughout	Added dates and ordinance number as applicable
Ordinance Title	Added end quote to “PD-COMM”
Recital 3	Clarified maximum floor area for non-residential
Section 3/ Line 2	Added “development” after non-residential
3- Condition 1 – Development Area A	Added stormwater management facility as allowed use
3- Condition 1 – Development Area A	Added “per City of Alachua LDRs”
3- Condition 1 – Development Area A	Added perimeter area setbacks
3- Condition 1 – Development Area A	Added minimum parking rate requirement for amenity center
3- Condition 1 – Development Area B	Added stormwater management facility as allowed use
3- Condition 1 – Development Area B	Added maximum FAR for non-residential development
3- Condition 1 – Development Area B	Added minimum lot size for non-residential
3- Condition 1 – Development Area B	Added minimum lot size for end cap units for single family attached
3- Condition 1 – Development Area B	Added setbacks for non-residential uses
3- Condition 1 – Development Area B	Added maximum building height for non-residential uses
3- Condition 1 – Development Area B	Added maximum building coverage for non-residential uses
3- Condition 1 – Development Area B	Amended minimum living area size for residential units
3- Condition 1 – Development Area C	Added stormwater management facility as allowed use , clarified allowed uses to be residential only
3- Condition 1 – Development Area C	Added maximum size for amenity center
3- Condition 1 – Development Area C	Added minimum lot size for end cap units for single family attached
3- Condition 1 – Development Area C	Added setbacks for cottage units
3- Condition 1 – Development Area C	Added minimum parking rate requirement for amenity center
3- Condition 1 – Development Area C	Added minimum size for cottage units
3- Condition 1 – Development Area D	Added stormwater management facility as allowed use
3- Condition 1 – Development Area F	Added stormwater management facility as allowed use
3- Condition 1 – Notes	Clarified interchangeability of uses within Development Areas A, B, and D
3 Condition 11 A	Clarified review process for non-residential applicable to development within PD areas (site plan and/or infrastructure plan)

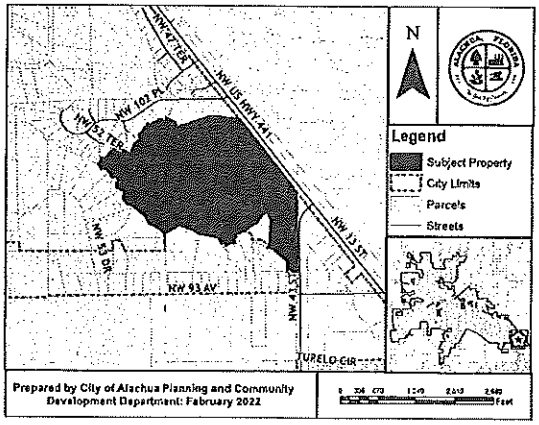
NOTICE OF PUBLIC HEARING BEFORE THE PLANNING AND ZONING BOARD OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the Planning & Zoning Board of the City of Alachua will hold a public hearing on March 8, 2022 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located at 15100 NW 142nd Terrace, Alachua, Florida, to consider the following: A request by David Meeks of DM Alachua Investments, LLC, property owner, for consideration of a Large Scale Comprehensive Plan Amendment to amend the Future Land Use Map (FLUM) on a ±121.1 acre subject property from Agriculture (±81.15 acres) and Commercial (±39.95 acres) to Conservation (±35.63 acres), Moderate Density Residential (±41.33 acres), High Density Residential (±17.8 acres), and Commercial (±14.33 acres); located west of the intersection of US 441 and NW 43rd Street, south of the Brooke Pointe subdivision; consisting of Tax Parcel Numbers 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, 05945-000-000. Existing FLUM: Agriculture and Commercial; Proposed FLUM: Conservation, Moderate Density Residential, High Density Residential and Commercial ; Existing Zoning: Agricultural (A), Commercial Intensive (CI).



At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

8th Mexican journalist killed this year

Country deemed most dangerous place for press

Fabiola Sánchez
ASSOCIATED PRESS

Photos of slain journalists are posted on the gate of Mexico's Attorney General's office during a vigil on Feb. 14. EDUARDO VERDUGO/AP

MEXICO CITY – Another journalist was shot to death in Mexico on Tuesday, the eighth murdered this year in an unprecedented spate of killings that has made Mexico the most dangerous place in the world for the press.

Reporters and photographers have been murdered this year in Mexico at the rate of almost one a week, while the government claims the situation is under control.

Prosecutors in the western state of Michoacan said reporter Armando Linares was shot to death at a home in the town of Zitacuaro. His killing came six weeks after the slaying of a colleague, Roberto Toledo, from the same outlet Monitor Michoacan. It was Linares who announced Toledo's death Jan. 31 in a video posted to social media.

Zitacuaro is one of the closest towns to the monarch butterfly wintering grounds in the mountains west of Mexico City.

The area has been plagued by illegal logging and drug gangs, local governance disputes and deforestation linked to expanding avocado production. Logging has damaged the pine and fir forests where the butterflies spend the winter after migrating from the United States and Canada.

Linares served as director at the Monitor Michoacan website, which on Tuesday continued to show an article he had written about a cultural festival celebrating monarch butterflies.

There was no immediate information on a possible motive in the killing.

Toledo, a camera operator and video editor for Monitor Michoacan, was shot Jan. 31 as he prepared for an interview in Zitacuaro.

At the time of Toledo's death, Linares said he had received several death threats after enrolling in a government journalist protection program.

Asked who he thought was behind the threats, Linares said, "They pass themselves off as an armed group, they pass themselves off as a criminal gang. We can't verify whether it is true or not that they are this armed gang."

Criminals in Mexico often claim they are part of a drug cartel in order to instill fear in their victims, whether or not they really are.

"We have organized crime, just like in the rest of the country, and Monitor worked on a lot of issues like illegal logging, given that we are near the monarch reserve," Linares said in early February. "We wrote a lot about illegal logging and also a lot of issues like corruption in the municipal government."

Drug cartels in Mexico often make money by protecting illegal logging, or extorting protection payments from avocado growers.

"The nightmare continues for the press in Mexico," the press group Reporters Without Borders wrote in its social media accounts.

Mexican President Andrés Manuel López Obrador has reacted angrily to worldwide criticism of the killings.

In February, López Obrador said U.S. Secretary of State Antony Blinken was misinformed, after Blinken wrote "I join those calling for greater accountability and protections for Mexican journalists."

The Inter American Press Association called on Mexican President Andrés Manuel López Obrador to "immediately suspend the aggressions and insults, because such attacks from the top of power encourage violence against the press."

López Obrador claims the government is investigating all of the killings and suggested Blinken received bad information from other U.S. agencies, mentioning the CIA, FBI and Drug Enforcement Administration.

"They're [illegible]cking him," he said. "We don't tolerat[illegible]e impunity of anyone."

And la[illegible] López Obrador issued an irate resp[illegible]o European Parliament criticism [illegible]rnalist killings in Mexico, accusing the Europeans of having a "colonialist mentality."

The Mexican president criticized EU support for Ukraine, and called European Parliament members "sheep."

"It is unfortunate that you vote like sheep to join the reactionary and coup-mongering strategy of the corrupt group opposed to the Fourth Transformation," as López Obrador calls his administration, he wrote in an open letter to the parliament.

The EU Parliament approved a resolution last Thursday urging López Obrador to stop his harsh verbal attacks on reporters who criticize him, and ensure their safety.

Press groups say López Obrador's daily criticisms of journalists, whom he calls "conservatives" and "mercenaries," make them more vulnerable to violence.

In February, the Inter American Press Association called on the president to "immediately suspend the aggressions and insults, because such attacks from the top of power encourage violence against the press."

The EU resolution "calls on the authorities, and in particular the highest ones, to refrain from issuing any communication which could stigmatize human rights defenders, journalists and media workers, exacerbate the atmosphere against them or distort their lines of investigation."

Journalists are often the targets of Mexico's drug cartels, which seek to intimidate and manipulate coverage of their activities and their rivals. Local politicians and government officials are also frequently linked to murders, according to the government, which has acknowledged that impunity in those killings runs above 90%.

In early March, gunmen killed Juan Carlos Muñiz, who covered crime for the online news site Testigo Minero in the state of Zacatecas.

Jorge Camero, the director of an online news site who was until recently a municipal worker in the northern state of Sonora, was killed in late February.

In early February, Heber López, director of the online news site Noticias Web, was shot to death in the southern state of Oaxaca.

PUBLIC NOTICE OF ENACTMENT OF AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on a proposed ordinance. The hearing will be held on March 28, 2022 at 6:00 p.m., in the James A. Lewis Commission Chambers in City Hall, located at 15100 NW 142nd Terrace, Alachua, Florida.

The ordinance title is as follows:

ORDINANCE 22-09

AN ORDINANCE OF THE CITY OF ALACHUA, FLORIDA, RELATING TO THE AMENDMENT OF THE OFFICIAL ZONING ATLAS; AMENDING THE OFFICIAL ZONING ATLAS FROM COMMERCIAL INTENSIVE ("CI") AND AGRICULTURAL ("A") TO PLANNED DEVELOPMENT – RESIDENTIAL ("PD-R") AND PLANNED DEVELOPMENT – COMMERCIAL ("PD-COMM) ON AN APPROXIMATELY 121.1 ACRE SUBJECT PROPERTY; LOCATED SOUTHWEST OF THE INTERSECTION OF NW 43RD STREET AND US HWY 441, EAST OF THE MORGAN MANOR SUBDIVISION, NORTH OF THE SANS SOUCI SUBDIVISION AND SOUTH OF THE BROOKE POINTE SUBDIVISION; TAX PARCEL NUMBERS 05936-001-000, 05936-007-000, 05936-007-002, 05936-007-001, AND 05945-000-000; REPEALING ALL ORDINANCES IN CONFLICT; PROVIDING SEVERABILITY; AND PROVIDING AN EFFECTIVE DATE.

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

Commission Agenda Item

MEETING DATE: 3/28/2022
SUBJECT: Burrows Minor Subdivision Final Plat: A request by Ronald Edwards, applicant and agent for Thomas and Phyllis Burrows, property owners, for a Final Plat, which proposes to replat Lots 15 and 16 of the Oak Ridge Crossing Subdivision, consisting of a ±5.0 acre subject property (Parcel 03925-010-015) (Quasi-Judicial Hearing).
PREPARED BY: Adam Hall, AICP, Principal Planner

RECOMMENDED ACTION:
Based upon the competent substantial evidence presented at this hearing, the presentation before this Commission, and Staff's recommendation, this Commission finds the application for the Final Plat to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and:

1. *Approves the Final Plat for Thomas and Phyllis Burrows ("Final Plat"); and,*
2. *Authorizes the Mayor and City Attorney to sign the Final Plat*

Summary

This application is a request by Ronald Edwards., applicant and agent for Thomas and Phyllis Burrows, property owners, for consideration of the final plat of Lots 15 and 16 of the Oak Ridge Crossings subdivision, which proposes the replat of a ±5.0 acre subject property into two lots. The purpose of the proposed replat is to modify an existing lot line to address an encroachment. As evidenced by the original plat, and surrounding adjacent parcels and lots, interior lots are permitted to be 2.0 acres in size.

The subject property consists of Tax Parcel Number 03925-010-015. The address of the property is 13018 NW 148th Terrace. There is an existing single-family residence on the subject property.

Section 2.4.10(G)(5) of the City's Land Development Regulations (LDRs) establishes the requirements for a final plat. An analysis of the application's compliance with the applicable standards of this section has been provided within this report.

At the March 8 Planning and Zoning Board meeting, the Board voted 5-0 in favor of forwarding the application to the City Commission with a recommendation to approve.

SURVEYOR'S NOTES
1. BEARINGS HEREON ARE BASED ON THE PLAT OF "OAK RIDGE CROSSING", ACCORDING TO THE PLAT THEREOF RECORDED IN PLAT BOOK "U", PAGE(S) 19-21 OF THE PUBLIC RECORDS OF ALACHUA COUNTY, FLORIDA.
2. BEARINGS ARE BASED ON A RECORDED CALL OF NORTH 79°09'30" EAST FOR THE SOUTH LINE OF LOT 16.
3. THE PURPOSE OF THIS REPLAT IS TO MODIFY THE EXISTING BOUNDARY LINE BETWEEN LOT 15 AND LOT 16.
4. THE ERROR OF CLOSURE OF THIS PLAT DOES NOT EXCEED 1':10,000'.
5. THIS SURVEY COMPLIES WITH THE FLORIDA STANDARDS OF PRACTICE AS SET FORTH BY THE FLORIDA BOARD OF PROFESSIONAL LAND SURVEYORS IN CHAPTER 5J-17 FLORIDA ADMINISTRATIVE CODE PURSUANT TO SECTION 472.027 FLORIDA STATUTES.
6. IT IS THE OPINION OF THIS LAND SURVEYOR BASED ON AN INTERPRETATION OF F.I.R.M. PANEL No. 120 OF 640, COMMUNITY PANEL No. "120664 0120 D" THAT THIS PROPERTY IS LOCATED IN FLOOD ZONE "X", (AREAS DETERMINED TO BE OUTSIDE THE 0.2% ANNUAL CHANCE FLOOD PLAIN), MAP EFFECTIVE DATE JUNE 16, 2006.
7. BOUNDARY SURVEY WAS COMPLETED ON 01-10-2022.

NOTICE:
THIS PLAT, AS RECORDED IN ITS GRAPHIC FORM, IS THE OFFICIAL DEPICTION OF THE SUBDIVIDED LANDS DESCRIBED HEREIN AND WILL IN NO CIRCUMSTANCES BE SUPPLANTED IN AUTHORITY BY ANY OTHER GRAPHIC OR DIGITAL FORM OF THE PLAT. THERE MAY BE ADDITIONAL RESTRICTIONS THAT ARE NOT RECORDED ON THIS PLAT THAT MAY BE FOUND IN THE PUBLIC RECORDS OF THIS COUNTY.

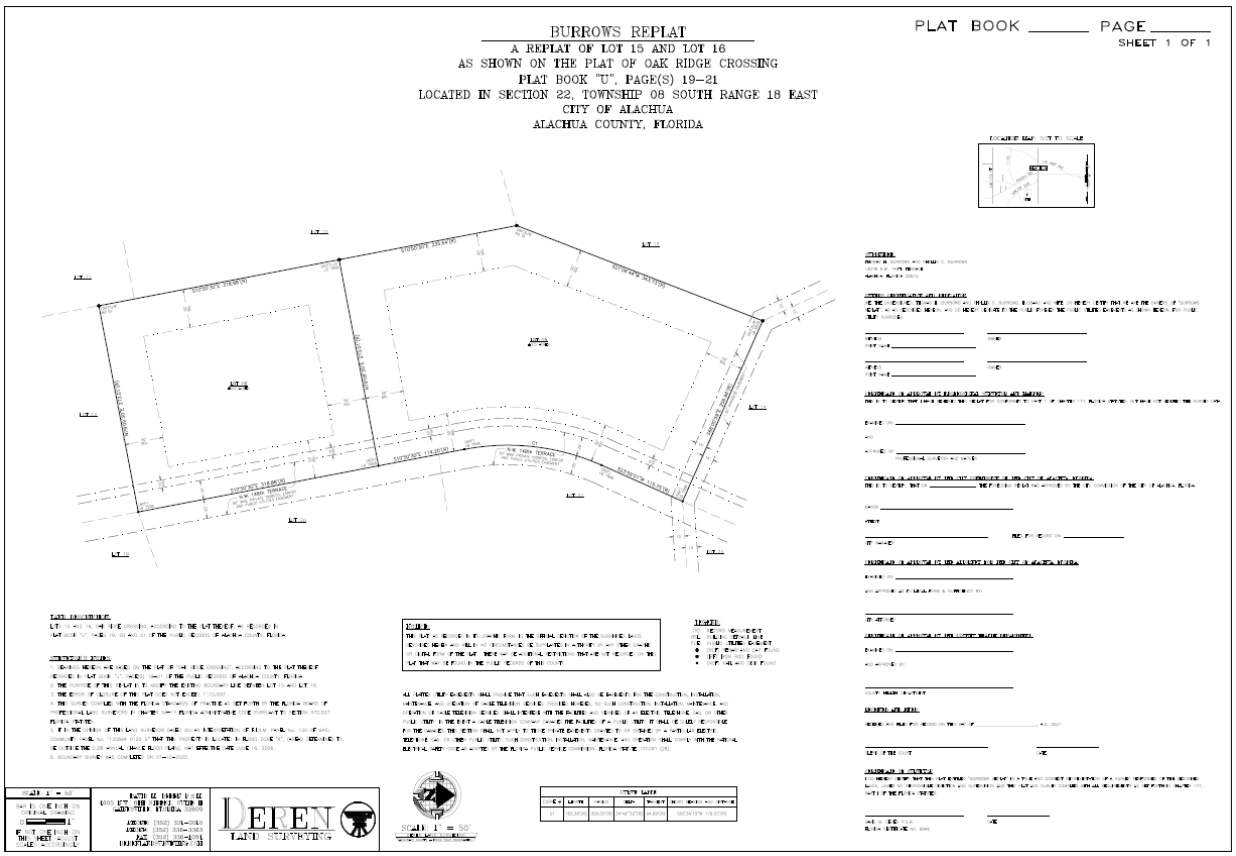
Planning & Community Development Department

Staff Report

Planning & Zoning Board Hearing Date: March 8, 2022
Quasi-Judicial Hearing



SUBJECT:	A request for a Final Plat for Alachua Crossings Minor Subdivision, which proposes the replat of Lots 15 and 16 of the Oak Ridge Crossing subdivision, along with common areas and an easement for ingress/egress
APPLICANT/AGENT:	Ronald Edwards
PROPERTY OWNER:	Thomas and Phyllis Burrows
LOCATION:	13018 NW 148th Terrace
PARCEL ID NUMBERS:	03925-010-015
FLUM DESIGNATION:	Agriculture
ZONING:	PUD
OVERLAY:	NA
ACREAGE:	±5.0 acres
PROJECT PLANNER:	Adam Hall, AICP, Principal Planner
RECOMMENDATION:	Staff recommends that the Planning & Zoning Board forward the application to the City Commission with a recommendation to approve the Final Plat for Thomas and Phyllis Burrows, subject to the three (3) conditions provided in Exhibit "A" and located on page 13 of the March 8, 2022 Staff Report to the Planning & Zoning Board.
RECOMMENDED MOTION:	*Based upon the competent substantial evidence presented at this hearing, the presentation before this Board, and Staff's recommendation, this Board finds the application to be consistent with the City of Alachua Comprehensive Plan and in compliance with the Land Development Regulations and recommends that the Planning and Zoning Board forward the application to the City Commission of the City of Alachua with a recommendation to approve the Final Plat for Thomas and Phyllis Burrows, subject to the three (3) conditions provided in Exhibit "A" and located on page 13 of the March 8, 2022 Staff Report to the Planning & Zoning Board.*

SUMMARY

This application is a request by Ronald Edwards., applicant and agent for Thomas and Phyllis Burrows, property owners, for consideration of the final plat of Lots 15 and 16 of the Oak Ridge Crossings subdivision, which proposes the replat of a ±5.0 acre subject property into two lots. The purpose of the proposed replat is to modify an existing lot line to address an encroachment and permit construction of a single-family home on a vacant lot. As evidenced by the original plat, and surrounding adjacent parcels and lots, interior lots are permitted to be 2.0 acres in size.

The subject property consists of Tax Parcel Number 03925-010-015. The address of the property is 13018 NW 148th Terrace. There is an existing single family residence on the subject property.

Section 2.4.10(G)(5) of the City's Land Development Regulations (LDRs) establishes the requirements for a final plat. An analysis of the application's compliance with the applicable standards of this section has been provided within this report.

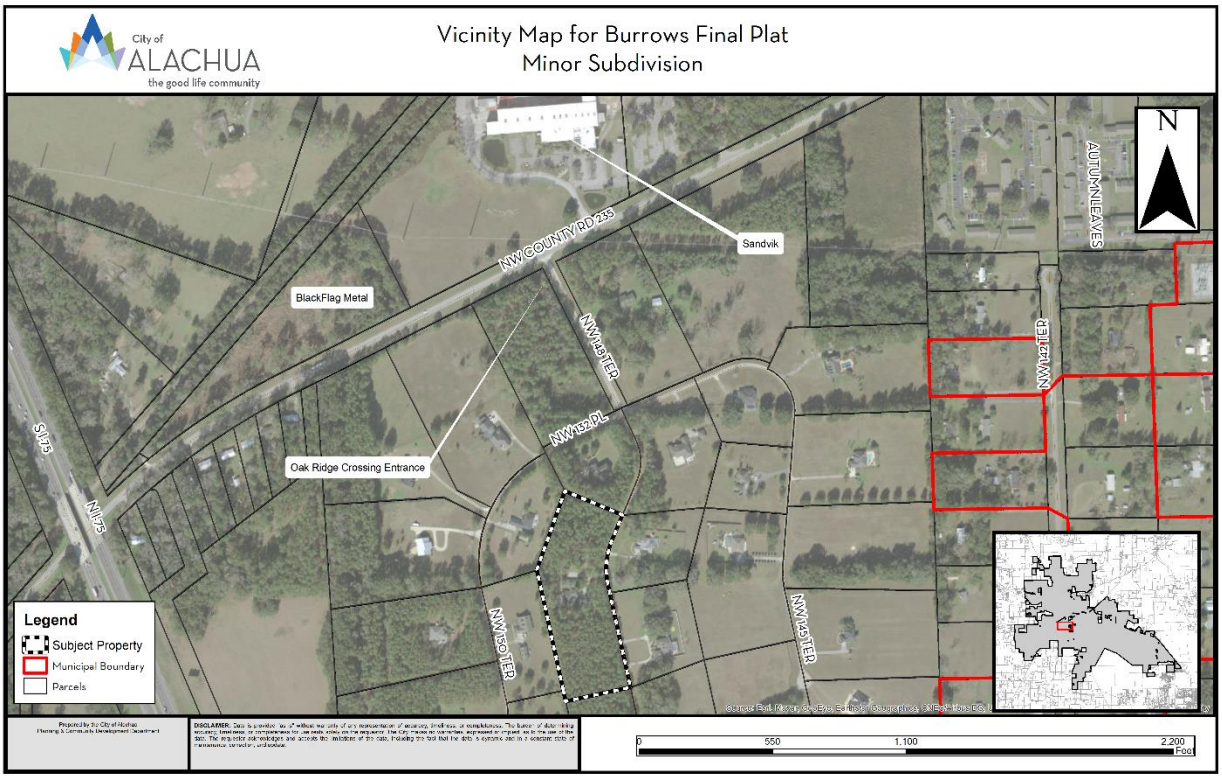
SURROUNDING USES



The existing uses, Future Land Use Map (FLUM) Designations, and zoning districts of the surrounding area are identified in Table 1. Map 1 provides an overview of the vicinity of the subject property. (NOTE: The information below is intended to provide a general overview of the area surrounding the subject property and to generally orient the reader. It is not intended

to be all-inclusive, and may not identify all existing uses, FLUM Designations, and/or zoning districts surrounding the subject property.)

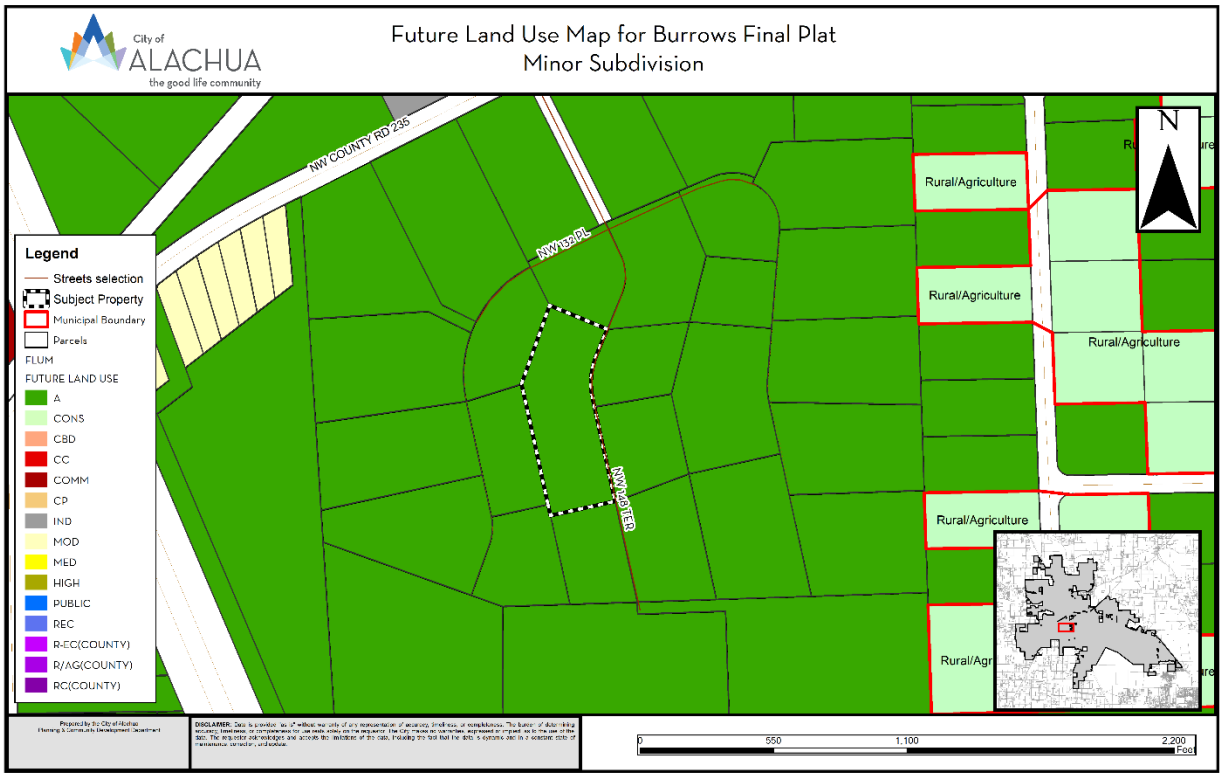


Table 1. Surrounding Land Uses

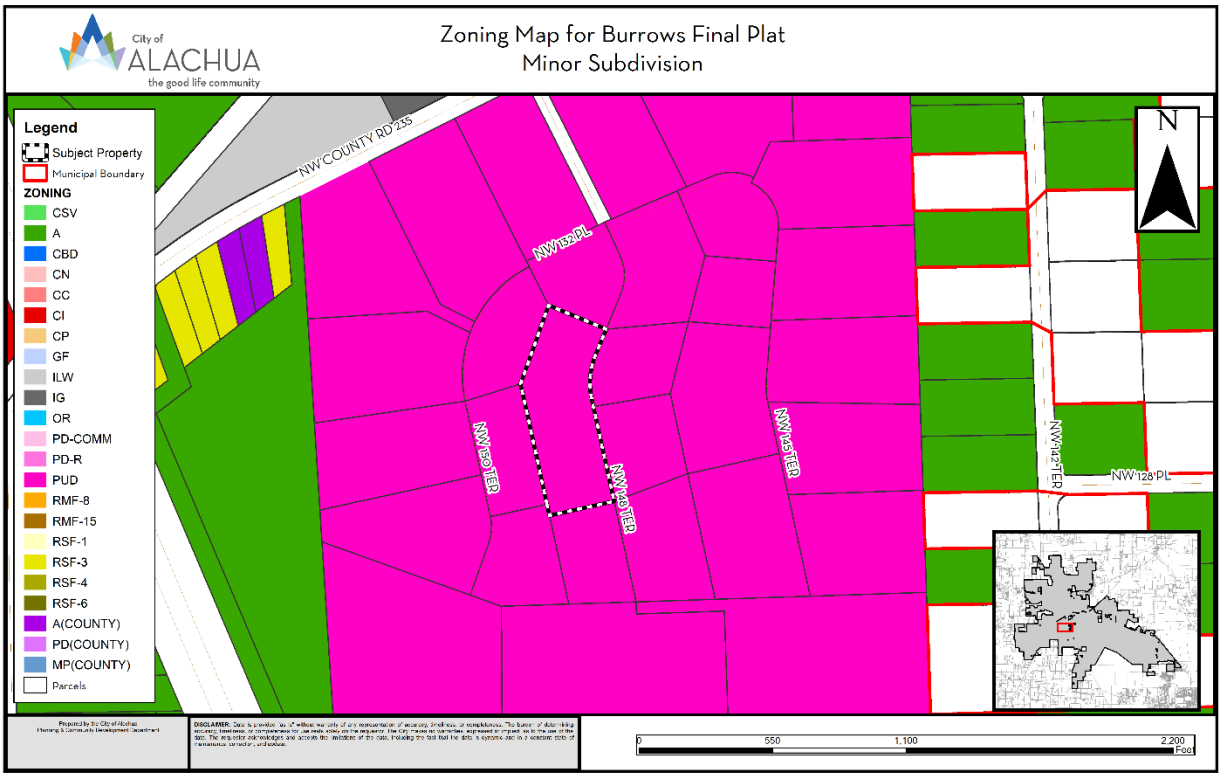
Direction	Existing Use(s)	FLUM Designation(s)	Zoning District(s)
North	Residential	Agriculture	PUD
South	Residential	Agriculture	PUD
West	Residential	Agriculture	PUD
East	Residential	Agriculture	PUD



Map 1. Vicinity Map

Map 2. Future Land Use Map

Map 3. Zoning Map

NEIGHBORHOOD MEETING

According to Section 2.2.4 (C) of the LDRs, a neighborhood meeting for a minor subdivision final plat is optional. No neighborhood meeting was held regarding this application.

CONSISTENCY WITH THE COMPREHENSIVE PLAN

The Goals, Objectives, and Policies (GOPs) identified below are provided to establish a basis of the application's consistency with the Comprehensive Plan. There may be additional GOPs which the application is consistent with that are not identified within this report. An evaluation and findings of consistency with the identified GOPs is also provided below.

Goal 1: *Future Land Use Map 2035*

The City shall maintain a Future Land Use Map in order to effectively guide development in a sustainable manner and to ensure economic prosperity and stability while maintaining a high quality of life for all of its present and future citizens, businesses, and visitors.

Objective 1.1: *Agriculture*

The City shall establish an Agriculture land use category in order to maintain agriculture operations within the city limits as well as preserve the rural character and small-town charm of Alachua.

Policy 1.1.a: *Residential uses*: Except as otherwise provided for in the Comprehensive Plan for conservation subdivisions, residential uses within with Agriculture land use category shall be developed at a maximum density of 1 dwelling unit per 5 acres. The following residential uses are allowed within the Agriculture land use category:

1. Single family detached dwelling units;
2. Manufactured, modular, and mobile homes, not to include mobile home parks;
3. Accessory dwelling units; and,
4. Group Living, as provided by special exception

Analysis of Consistency with Objective 1.1 and Policies 1.1.a: The existing use is single family residential. The applicant has stated that the purpose of the application is to allow development of single family residence, which is permitted by the Comprehensive Plan. While the lot sizes will be less than 5 acres, the subject property consists of two previously platted lots (Lots 15 and 16 of Oak Ridge Crossing). Only one single family residence was constructed on the property.

Objective 5.1: **Natural features**: The City shall coordinate Future Land Use designations with appropriate topography, soils, areas of seasonal flooding, wetlands and habitat during review of proposed amendments

to the Future Land Use Map and the development review process. Natural features may be included as amenities within a development project.

Policy 5.1.a: Topography: The City shall protect the natural topography of the City, including steep and seepage slopes, by requiring new development to include techniques to minimize negative impacts on the natural terrain. An emphasis will be placed on retaining the natural function of seepage slopes during development. Additionally, retention of existing native vegetation will be encouraged as one method of protecting slopes.

Policy 5.1.b: Soils: The City shall ensure soil protection and intervention measures are included in the development review process.

Policy 5.1.c: Flood prone areas: The City shall require as part of the development review process the identification of FEMA flood zone areas. Where necessary, base flood elevations and minimum finished floor elevations shall be established. The City shall also require finished floor elevations on subdivision plats, site plans and building permit plans when necessary to determine compliance with flood prone area regulations. The City shall establish standards for a limitation on filling in flood prone areas.

Policy 5.1.d: Wetlands: The City shall utilize statewide wetland delineation methodology in accordance with Florida Administrative Code (FAC) and regulations adopted by the FDEP and the Suwannee River Water Management District.

Policy 5.1.e: Habitat: The City shall require as part of the development review process, an inventory of listed species for all new developments in areas identified as known habitat for listed species if listed species are known to exist in close proximity to the development. The survey shall include detailed information regarding type, quantity, location, and habitat requirements for any listed species identified. A de minimus threshold for properties required to complete the inventory shall be established in the City's Land Development Regulations.

Analysis of Consistency with Objective 5.1 and Policies 5.1.a – e: Based on the best available data, there are no significant environmental resources that would limit or impact development.

Objective 5.2: Availability of facilities and services: All new development shall be planned and constructed concurrently with the availability of facilities and services necessary for the development.

Analysis of Consistency with Objective 5.2: The subject property is located within the City's potable water and wastewater service areas, as defined in Policies 1.2.a and 4.2.a of the Community Facilities and Natural Groundwater Aquifer Recharge Element of the Comprehensive Plan, and will be required to connect to the City of Alachua's potable water and wastewater system.

Objective 9.1: *Connections to Water and Wastewater Systems*

The City will require new development and significant redevelopment projects to connect to the City's potable water and wastewater systems when such connections can be made to such systems.

Policy 9.1: Any new development or redevelopment within a Commercial or Industrial land use category within the corporate limits, where potable water and wastewater service are available, as defined in Policy 1.2.a and Policy 4.2.b of the Community Facilities Element of the City's Comprehensive Plan, shall connect to the City's potable water and wastewater system.

Analysis of Consistency with Goal 9 and Policy 9.1: If the subject property is within the potable water and wastewater service area, a connection would be required.

Transportation Element

Objective 1.1: Level of Service: The City shall establish a safe, convenient and efficient level of service standard for all motorized and non-motorized transportation systems.

Analysis of Consistency with Objective 1.1: An analysis of the impacts to transportation facilities has been provided within this report. The proposed development would not result in a decrease in the level of service for transportation facilities monitored for concurrency.

Community Facilities & Natural Groundwater Aquifer Recharge Element

Policy 1.2.a: The City shall establish a Community Wastewater Service Area, which includes all areas where wastewater service is available. Wastewater service shall be deemed available if:

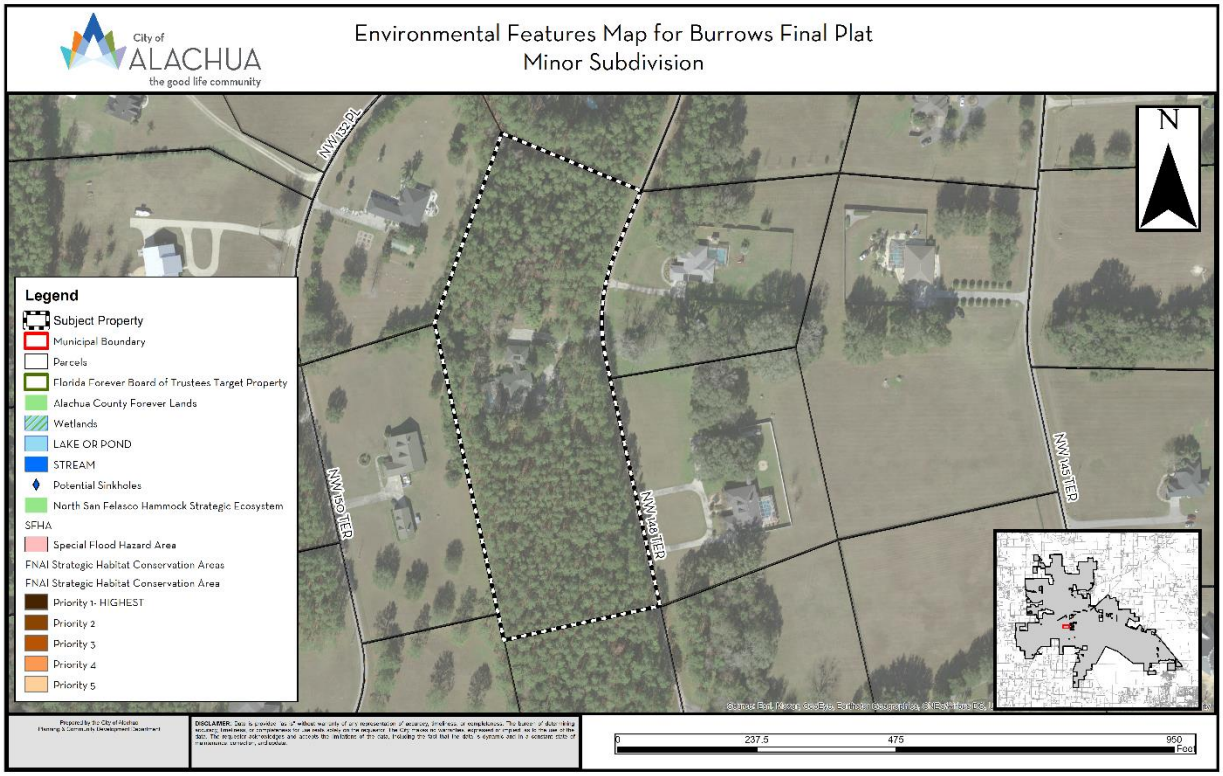
1. A gravity wastewater system, wastewater pumping station, or force main exists within · mile of the property line of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and the gravity wastewater system, wastewater pumping station, or force main can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 1.2.a: If the property is located within City's Community Wastewater Service Area, any future development would be required to connect to the system.

Policy 2.1.a: The City hereby establishes the following level of service standards for solid waste disposal facilities:

FACILITY TYPE	LEVEL OF SERVICE STANDARD
Solid Waste Landfill	.73 tons per capita per year

Analysis of Consistency with Objective 2.1.a: An analysis of the impacts to solid waste facilities has been provided within this report. The proposed amendment would not result in a decrease in the level of service for solid waste disposal facilities.



Policy 4.1.b: The City shall establish a Community Potable Water Service Area, which includes all areas where potable water service is available. Water service shall be deemed available if:

1. A water main exists within · mile of any residential subdivision with more than 5 units, or any multi-family residential development, or any commercial development, or any industrial development and water service can be accessed through public utility easements or right of ways. The distance shall be measured as required for construction of the infrastructure along public utility easements and right of ways.

Analysis of Consistency with Policy 4.1.b: The subject property is located within the potable water service area, and any future development on the subject property will be required to connect to the potable water system.

ENVIRONMENTAL CONDITIONS ANALYSIS

Map 4. Environmental Features

Wetlands

According to National Wetlands Inventory, there are no potential wetlands located on the subject property.

Evaluation: There are no potential wetlands identified on the subject property; therefore, there are no issues related to wetland protection.

Strategic Ecosystems

Strategic Ecosystems were identified by an ecological inventory project in a report prepared for Alachua County Department of Growth Management in 1996. The purpose of the inventory was to identify, inventory, map, describe, and evaluate the most significant natural biological communities in private ownership in Alachua County.

Evaluation: The subject property is not located within an Strategic Ecosystem, therefore, the development will have no impact upon any Strategic Ecosystem(s) identified within the ecological inventory report.

Regulated Plant & Animal Species

Based on the best available data, there are no regulated plant or animal species that would limit or impact development.

Evaluation: Based on the best available data, there are no regulated plant or animal species that would limit or impact development. If, however, a regulated plant or animal species is encountered during development, the applicant would be responsible for meeting all applicable state, federal, and local laws regarding the regulated species.

Soil Survey

Each soil type found on the subject property is identified below. The hydrologic soil group is an indicator of potential soil limitations. The hydrologic soil group, as defined for each specific soil, refers to a group of soils which have been categorized according to their runoff-producing characteristics. These hydrologic groups are defined by the Soil Survey of Alachua County, Florida, dated August 1985. The chief consideration with respect to runoff potential is the capacity of each soil to permit infiltration (the slope and kind of plant cover are not considered, but are separate factors in predicting runoff). There are four hydrologic groups: A, B, C, and D. "Group A" soils have a higher infiltration rate when thoroughly wet and therefore have a lower runoff potential. "Group D" soils have very lower infiltration rates and therefore a higher runoff potential. If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas.

Table 2. Soil Analysis

Soil Type	Hydrologic Group	Drainage Class	Dwellings without basements	% of Subject Property (may not total to 100% due to rounding)
Fort Meade fine sand, 0 to 5 percent slopes	A	Well drained	Not limited	99.6
Gainesville sand, 0 to 5 percent slopes	A	Well drained	Not Limited	0.4

Evaluation: The soil type located within the subject property do not pose any limitations for dwellings without basements, therefore, no issues related to soils.

Flood Potential

Panel 120D of the Federal Emergency Management Agency (FEMA) Flood Insurance Rate Map (FIRM) Series, dated June 16, 2006, indicates that the subject property

contains areas with Flood Zone "X" designations (areas determined to be outside of the 500-year floodplain)

Evaluation: The subject property is located in Flood Zone "X" (areas determined to be outside of the 500-year floodplain Therefore, there are no issues related to flood potential.

Karst-Sensitive Features

Karst sensitive areas include geologic features, such as fissures, sinkholes, underground streams, and caverns, and are generally the result of irregular limestone formations. The subject property is located within an area where sinkholes may potentially allow hydrologic access to the Floridan Aquifer System, however, best available data indicates that no sinkholes or known indicators of sinkhole activity are located on the subject property.

Evaluation: There are no geologic features located on the subject property which indicate an increased potential for karst sensitivity.

Wellfield Protection Zone

Policy 7.2.1 of the Future Land Use Element of the Comprehensive Plan establishes a 500 foot radial buffer around city-owned potable water well.

Evaluation: The subject property is not located within a City of Alachua wellhead protection zone as identified on the City of Alachua Wellfield Primary Protection Zones Map of the Comprehensive Plan, therefore, there are no issues related to wellfield protection.

Historic Structures and Markers

The subject property does not contain any historic structures or markers as determined by the State of Florida and the Alachua County Historic Resources Inventory.

Evaluation: There are no issues related to historic markers or structures.

FINDINGS OF FACT: COMPLIANCE WITH LAND DEVELOPMENT REGULATIONS

Section 2.4.10(G)(5)(d) of the City's Land Development Regulations (LDRs) establishes the standards with which all final plats must be found to be compliant. The application has been reviewed for compliance with the standards of Section 2.4.10(G)(5)(d). An evaluation and findings of the application's compliance with the applicable standards of Section 2.4.10(F)(3) is provided below.

2.4.10(F)(3) *Minor Subdivision standards.* The final plat for subdivision shall:

> Be approved on a finding that the application complies with the standards in Article 7, Subdivision Standards, all other relevant provisions of these LDRs, and all other relevant City ordinances and regulations.

Analysis of Consistency with 2.4.10(F)(3): The application has been reviewed for compliance with the standards in Article 7, and all other relevant provisions of the City of Alachua Land Development Regulations (LDRs) and is found to be in compliance with those standards and provisions.

PUBLIC FACILITIES IMPACT

Section 2.4.14 (C) of the City of Alachua Land Development Regulations outline eleven (11) types of development that are exempt from the requirements of concurrency compliance. 2.4.14 (C) (1) & (3) exempt developments that are vested or have no or de minimis impact on public facilities. The proposed replat would not result in any new lots and therefore would not have any new impacts on any public facilities. The impacts which would be generated by the proposed development are acceptable and are not anticipated to degrade the Level of Service (LOS) of any public facility.

RE: Notice of Hearing to be Scheduled for Tobias Veterinary Services Site Plan

Dear Mr Edwards:

On January 31, 2022 the City of Alachua received your applications for the above referenced projects.

Based on review of the materials submitted, the City has determined that this application can now be scheduled for a hearing before the Planning and Zoning Board.

You must provide two (2) *double-sided, three-hole punched, color sets* of each **complete** application package, seven (7) full size sets of site plans, and a digital copy of all materials in PDF format on a CD *no later than 10 business days prior to the PZB Meeting at which your application is scheduled to be heard.* The application has been scheduled for the **March 8, 2022** Planning and Zoning Board meeting; therefore, the above referenced materials must be submitted to the City no later than ***Tuesday, February 22, 2022.*** Materials may be submitted earlier than this date.

In addition, Section 2.2.9(D) of the Land Development Regulations requires the applicant to place posted notice signs on the subject property at least 14 days prior to the public hearing. The sign was posted by City of Alachua staff on February 17, 2022.

If you plan to utilize a PowerPoint presentation or would like other materials to be available for reference during the public hearing, please submit the presentation or materials no later than 12:00 PM on the last business day prior the PZB meeting (no later than Monday, February 7, 2022).Any presentation or materials may be submitted by emailing them to planning@cityofalachua.com .

Should you have any questions, please feel free to contact me at (386) 418-6100, ext. 108 or via email at ahall@cityofalachua.com.

Sincerely,

Adam Hall, AICP
Principal Planner

RE: Completeness Review of Burrows Final Plat Minor Subdivision Application

Dear Mr. Edwards:

On January 31, 2022 the City of Alachua received your application for the minor subdivision of the Alachua Crossings property, which proposes to subdivide an ± 5 acre tract (Parcel 03925-010-015) into two lots. The tract is comprised of two previously platted lots, Lots 15 and 16 of the Oak Ridge Crossing subdivision.

According to Section 2.2.6 of the Land Development Regulations (LDRs), upon receipt of an application, a completeness review shall be conducted to determine that the application contains all the necessary information and materials, is in proper form and of sufficient detail, and is accompanied by the appropriate fee. The Planning Department has reviewed the aforementioned application for completeness and finds that the application is complete, *conditional upon receipt of the information* below by **Tuesday, February 8, 2022.**

The comments below are based solely on a preliminary review of your application for completeness. An in-depth review of the content of the application will be performed, and the findings of the in-depth review will be discussed at a Project Assistance Team (PAT) Meeting to be scheduled later.

Please address the following:

1. **General Application Submittal Requirement-** Please submit digital copy of application in PDF format. This may be done by emailing a cloud/ftp link to planning@cityofalachua.org or by submitting physical media (CD or thumbdrive) to City Hall.

If the above information is not received by Tuesday, February 8, 2022, the application shall be deemed to be incomplete.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1603 or via e-mail at ahall@cityofalachua.com.

Sincerely,

Adam Hall, AICP
Principal Planner

RE: Informal Completeness Review: Burrows Minor Subdivision Application

Dear Mr. Edwards:

On January 24, 2022, the City of Alachua received your request for an informal completeness review of a Minor Subdivision application submitted for review on behalf of Thomas & Phyllis Burrows. The application proposes to reconfigure Lots 15 and 16 of Oak Ridge Crossing, a Planned Unit Development, as recorded in Plat Book U, Page 19, of the Official Records of Alachua County, Florida (Tax Parcel 03925-010-015).

The purpose of an informal completeness review is to allow Staff to provide feedback to the applicant about the content and form of the application materials before the applicant prints and submits all copies for review. A cursory review for completeness has been conducted. Without waiving or limiting the City's rights and responsibilities to review any subsequent application(s) submitted for review related to this project, the following comments are offered based upon the information submitted for review:

1. **Minor Subdivision Application, Section A.5., Parcel ID Number(s):** The application notes the parcel ID numbers as 03925-010-015 and 03925-010-016. The property is comprised of 03925-010-015 ***only***.
2. **Minor Subdivision Application, Section A.9., Acreage:** Please list the total acreage of the property (5.0 acres).
3. **Minor Subdivision Application, Signatory:** The application must be signed and notarized. A notary is available at Alachua City Hall.
4. **Authorized Agent Affidavit, Section A., Parcel ID Number(s):** The application notes the parcel ID numbers as 03925-010-015 and 03925-010-016. The property is comprised of 03925-010-015 ***only***.
5. **Authorized Agent Affidavit, Section A., Acreage:** Please list the total acreage of the property (5.0 acres).
6. **Authorized Agent Affidavit, Signatory:** The Authorized Agent Affidavit must be signed and notarized by one or both of the property owners. A notary is available at Alachua City Hall.

7. **Minor Subdivision Application, Attachment D.1., Plat:**
   a. **Attachment D.1.a:** The Plat must be printed on a 24"x36" sheet with a 3" left margin and 1/2" top, bottom, and right margins.
   b. **Attachment D.1.d.:** Delete "Preliminary" from the name of the Plat.
   c. **Attachment D.1.d.:** The name and address of the subdivider is not provided on the Plat.
8. **Minor Subdivision Application, Attachment 4, Concurrency Impact Analysis:** The project's impacts are de minimis as defined in Article 10 of the LDRs. A statement supporting the project's impacts are de minimis should be included with the application. A sample analysis considering a project with de minimis impacts is attached.
9. **Minor Subdivision Application, Attachment 7, Public School Student Generation Form:** The project is likely exempt from public school concurrency requirements. A Public School Student Generation Form must be completed, and the applicable exemption identified (existing legal lots eligible for a building permit) must be selected. A copy of the Public School Student Generation Form is attached.
10. **Minor Subdivision Application, Attachment 8, Mailing Labels:** A draft set of mailing labels has been included with the application package. With the formal application submittal, please include two (2) sets of mailing labels with the following comments addressed.
    a. **Properties within 400 Feet:**
       i. "Walker Joshua A & Brittney" were stricken, but are owners located within 400 feet of the subject property.
       ii. Property ownership records for Tax Parcels 03925-010-006 and 03925-010-019 appear to be restricted due to public records exemptions.
    b. **Persons/Organizations on File with the City:** Notice is required to all persons/organizations registered with the City to receive notice of development applications. The current list may be obtained here: https://www.cityofalachua.com/home/showpublisheddocument/535/637746538372430000. A copy of the list is also attached.

If you have any questions regarding the information above, please contact me at 386-418-6100 x 1602 or via e-mail at jtabor@cityofalachua.com.

Sincerely,

Justin Tabor, AICP
Principal Planner

BLACKWATER
CONSTRUCTION SERVICES

Concurrency Impact Analysis

Thermo Fisher Scientific- Covered picnic area/ Pavilion

The permit application and site plan propose to construct a new concrete slab picnic area with a roof overhead. This is located within the Progress Park at 13706 Innovation Drive Alachua FL 32615 on Parcel 03956-010-003 at the existing Thermo Fisher Scientific Laboratory / R&D facility. This project proposes to construct a new covered picnic area at the existing thermo Fisher Scientific (Formerly Brammer Bio) facility,1136 SF (1056 SF unenclosed building, 80 SF sidewalk).

- No increase in climate controlled/ enclosed building square footage is proposed.
- There is no proposed change in primary or area use for the parcel or facility.
- No new traffic shall be generated as part of this project or site plan application.

Article 10 of the City of Alachua LDR's defines 'de minimis' development activity as the following:

"De minimis impact means an impact of not more than ten average daily trips on the affected road from an existing parcel of record, contiguous commonly-held parcels, or a development proposal unless the impact exceeds the adopted level of service of a designated hurricane evacuation route."

As such, the project is exempt from the requirement to receive a certificate of concurrency compliance. The City of Alachua LDR, Sec. 2.4.14 states:

2.4.14 Certificate of concurrency compliance

(B) Applicability. Unless exempted by Subsection 2.4.14(C) of this section, Exemptions, the provisions of this section shall apply to all development orders specified in Subsection 2.4.14(D) of this section, Overview of certificates. A separate certificate of concurrency compliance shall not be required for each permit approval associated with an individual development order.

(C) Exemptions. The following forms of development shall be exempt from the requirements of this section:

(3) Development with a de minimis, or no impact on public facility levels of service as determined by the LDR Administrator;

Review Type: Admin

Public School Student Generation Form for Residential Development in the City of Alachua

A. APPLICANT

1. Applicant's Status (check one):

   □ Owner (title holder) □ Agent

2. Name of Applicant(s) or Contact Person(s): _____ Title: _____

   Company (if applicable):_____

   Mailing address:_____

   City: _____ State: _____ ZIP:_____

   Telephone:_____ FAX:_____ e-mail:_____

3. If the applicant is agent for the property owner*:

   Name of Owner (title holder): _____

   Mailing Address:_____

   City: _____ State: _____ ZIP:_____

   * Must provide executed Property Owner Affidavit authorizing the agent to act on behalf of the property owner.

B. PROJECT

1. Project Name:_____
2. Address of Subject Property:_____
3. Parcel ID Number(s):_____
4. Section_____ Township_____ Range_____ Grant_____ Acreage:_____
5. Existing Use of Property:_____
6. Future Land Use Map Designation:_____
7. Zoning Designation:_____
8. Development Data (check all that apply):

   □ Single Family Residential Number of Units _____

   □ Multi-Family Residential Number of Units _____

   □ Exempt (*see exempt developments on page 2*)

9. Review Type:

Preliminary Development Order	***Final Development Order***
□ Comprehensive Plan Amendment	□ Preliminary Plat
□ Large Scale	□ Final Plat
□ Small Scale	□ Site Plan
□ Site Specific Amendment to the Official Zoning Atlas (Rezoning)	
□ *Revised*	

10. School Concurrency Service Areas (SCSA): Based on the project location, identify the corresponding SCSA for each school type. Maps of the SCSAs can be obtained from the Alachua County Growth Management Department's Map Genius web page: https://mapgenius.alachuacounty.us/ Select the Layers tab under the Tools Tab located at the top left of the page. After expanding the Public School Layers tab, the elementary, middle, and high school concurrency service areas will be shown as options.

    Elementary:_____

Middle:_____

High:_____

Explanation of Student Generation Calculation: Student Generation is calculated based on the type of residential development and the type of schools. The number of students stations (by school type – Elementary, Middle and High School) used for calculating the school concurrency impacts is equal to the number of dwelling units by housing type multiplied by the student generation multiplier (for housing type & school type) established by the School Board. **Calculations are rounded to the nearest whole number.** Student Generation for each school type is calculated individually, in order to correctly assess the impact on the School Concurrency Service Area (SCSA) for each school type (Elementary, Middle and High School).

# of Elementary School Student Stations	=	# of housing units	x	Elementary school student generation multiplier
# of Middle School Student Stations	=	# of housing units	x	Middle school student generation multiplier
# of High School Student Stations	=	# of housing units	x	High school student generation multiplier

Student Generation Calculations: Single Family Residential Development

Elementary School	_____	units	x	_____	Elementary School Multiplier*	_____	Student Stations**
Middle School	_____	units	x	_____	Middle School Multiplier*	_____	Student Stations**
High School	_____	units	x	_____	High School Multiplier*	_____	Student Stations**

Student Generation Calculations: Multi-Family Residential Development

Elementary School	_____	units	x	_____	Elementary School Multiplier*	_____	Student Stations**
Middle School	_____	units	x	_____	Middle School Multiplier*	_____	Student Stations**
High School	_____	units	x	_____	High School Multiplier*	_____	Student Stations**

**** Student generation multipliers may be obtained from SBAC at:***
http://www.sbac.edu/pages/ACPS/Departments_Programs/DepartmentsAF/D_thru_F/FacilitiesMainConstr/Local_Certification_Packets/City_of_Alachua
***** Round to the nearest whole number***

EXEMPT DEVELOPMENTS (check all that apply):

- □ Existing legal lots eligible for a building permit.
- □ Development that includes residential uses that has received final development plan approval prior to the effective date for public school concurrency, or has received development plan approval prior to June 24, 2008, provided the development approval has not expired.
- □ Amendments to final development orders for residential development approved prior to the effective date of public school concurrency, and which do not increase the number of students generated by the development.
- □ Age-restricted developments that prohibit permanent occupancy by persons of school age, provided this condition is satisfied in accordance with the standards of the Public Schools Facilities Element or the ILA.
- □ Group quarters that do not generate public school students, as described in the ILA.

A completeness review of the application will be conducted within 5 business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

I/We certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

Completeness Date:
Review Type: P&Z; CC

Minor Subdivision Application

Reference City of Alachua Land Development Regulations (LDRs) Section 2.4.10

A. PROJECT

1. Project Name: BURROWS BOUNDARY ADJUSTMENT - OAK RIDGE CROSSING
2. Pre-Application Conference Date: DEC. 06, 2021
3. Phase/Unit Number (if applicable):
4. Address of Subject Property: 13018 NW 148th TER, ALACHUA
5. Parcel ID Number(s): 03925-010-015
6. Existing Use of Property: RESIDENTIAL
7. Future Land Use Map Designation: A
8. Zoning Designation: PUD
9. Acreage: 5.0

B. APPLICANT

1. Applicant's Status ☐ Owner (title holder) ☒ Agent
2. Name of Applicant(s) or Contact Person(s): RONALD EDWARDS Title: OWNERS AGENT
   Company (if applicable):
   Mailing address: 11620 NW 120th TER
   City: ALACHUA State: FL ZIP: 32615
   Telephone: 248-758-8958 FAX: - e-mail: RONEDWARDS48@yahoo.com
3. If the applicant is agent for the property owner*:
   Name of Owner (title holder): THOMAS & PHYLLIS BURROWS
   Mailing Address: 13018 NW 148th TER
   City: ALACHUA State: FL ZIP: 32615

** Must provide executed Authorized Agent Affidavit or other acceptable documentation (as deemed acceptable by the City in its sole discretion) which authorizes the agent to act on behalf of the property owner.*

C. ADDITIONAL INFORMATION

1. Is there any additional contact for sale of, or options to purchase, the subject property? ☐ Yes ☒ No
   If yes, list names of all parties involved:

D. ATTACHMENTS

1. Plat, to include the following information and be prepared in accordance with the following criteria:
   a. Sheet Size: 24" X 36" with 3" left margin and ½" top, bottom, and right margins.
   b. Graphic scale, not to exceed one (1) inch equal to 50 feet.

c. Name of subdivision shall be shown in bold legible letters, as required by Chapter 177, Florida Statutes. The name of the subdivision shall be shown on each sheet included and shall have legible lettering of the same size and type including the words "section," "unit," "replat," "amended," etc.
d. Name and address of subdivider.
e. North arrow, graphic scale, and date of plat drawing.
f. Vicinity map showing location with respect to existing streets, landmarks, etc., and acreage of the subdivision. The vicinity map shall be drawn to show clearly the required information, but shall not less than one (1) inch to 2,000 feet.
g. Exact boundary line of the property, determined by a boundary survey, giving distances to the nearest one-hundredth foot and angles to the nearest minute, shall be balanced and closed with an apparent error of closure not to exceed one in 5,000. Survey shall be signed and sealed by the surveyor, and shall be no older than two (2) years.
h. Legal description of the property to be subdivided.
i. Acreage of adjacent land. If adjacent land is within a subdivision, identify the subdivision name, and recording information.
j. Location of streams, lakes, wetlands, and required buffers from such areas, and location of land designated as a special flood hazard area on FEMA FIRM panels.
k. Bearing and distance to permanent control points on the nearest existing street lines of bench marks or other permanent reference monuments [not less than three (3)].
l. When the City corporate limits traverse, are adjacent to, or are within 500 feet of the property, the boundary shall be accurately tied to the boundary lines of the subdivision by distance and angles.
m. The closest lot corner shall be accurately tied to the boundary lines of the subdivision by distance and angles.
n. Location, dimensions, and purpose of any land reserved or dedicated for public or common use.
o. Exact locations, width, and names of all streets within and adjacent to the subdivision.
p. Street right-of-way lines must show deflection angles of intersection, radii, and lines of tangents.
q. Lot lines, dimensions, and bearings must be shown to the nearest one hundredth (1/100) foot.
r. Lots must be numbered in numerical order.
s. Location and description of required permanent reference monuments and markers.
t. Building setback lines.
u. Covenants and restrictions notice in accordance with Chapter 177.091(28), Florida Statutes.
v. If the property is encumbered by a mortgage, the owner of the mortgage shall join in the dedication or in some other manner subordinate the mortgagee's interest to the dedication of public right-of-way.

2. Title certification as required by Chapter 177.041, Florida Statutes.

3. Proposed covenants and restrictions, if any. If the subdivision shall be subject to existing covenants and restrictions, an amendment to such covenants and restrictions shall be provided.

4. Concurrency Impact Analysis showing the impact on public facilities, including potable water, sanitary sewer, transportation, solid waste, recreation (for residential development), stormwater, and public schools (for residential development) in accordance with Section 2.4.14 of the LDRs.

5. Analysis of Consistency with the City of Alachua Comprehensive Plan (analysis must identify specific Goals, Objectives, and Policies and describe in detail how the application complies with the noted Goal, Objective, or Policy).

6. Legal description with tax parcel number: (1) on 8.5" x 11" paper; and (2) electronic file in Word format.

7. For residential subdivisions, City of Alachua Public School Student Generation Form.

8. Two (2) sets of mailing labels for all property owners within 400 feet of the subject property boundaries – even if property within 400 feet falls outside of City limits (obtain from the Alachua County Property Appraiser's web site) – and all persons/organizations registered to receive notice of development applications (current list may be obtained from the Planning & Community Development Department).

9. Proof of ownership (i.e., copy of deed).

10. Proof of payment of taxes.

11. Environmental Resource Permit (or Letter of Exemption) from the Suwannee River Water Management District (SRWMD) or Self-Certification for a Stormwater Management System in Uplands Serving Less than 10 Acres of Total Project Area and Less than 2 Acres of Impervious Surfaces from the Florida Department of Environmental Protection pursuant to Section 403.814(12), Florida Statutes.

12. If access is from a County Road, access management permit from Alachua County Public Works.

13. If access is from a State Road, access management permit from Florida Department of Transportation.

14. **Fee.** Please see fee schedule for fee determination. No application shall be accepted for processing until the required application fee is paid in full by the applicant. Any costs associated with outside professional consulting services deemed necessary by the City in its sole discretion will be billed to the applicant at the rate of the consultant. The invoice for such services shall be paid in full prior to any public hearings on the application.

All 14 attachments are required for a complete application. A completeness review of the application will be conducted within five (5) business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

Under penalty of perjury, I/we certify and acknowledge that the information contained herein is true and correct to the best of my/our knowledge.

RE: Title Certification
Minor Subdivision Application, Tax Parcel 03925-010-015
Lots 15 and 16 Oak Ridge Crossing, Plat Book U, pages 19, 20-21
Alachua County, Florida.
Our Client: Ronald Edwards
Our File: 05-145A

Dear Mr. DaRoza:

In connection with my clients' request for a boundary adjustment, I have caused the Official Records of Alachua County, Florida, to be examined concerning the properties affected thereby, and report as follows:

The record title to Tax Parcel 03925-010-015 (Lots 15 & 16) is held by Thomas H. Burrows and Phyllis C. Burrows, husband and wife, by Warranty Deed recorded May 20,2005 in Official Records Book 3128, Page 538, a copy of which is enclosed. There are no mortgages on this property.

These are the only lots affected by this request.

Sincerely,

BINGHAM & MIKOLAITIS, P.A.

Warranty Deed

This Warranty Deed made this 18th day of May, 2005 between **Edmund Johnston and Jennifer Haggard, husband and wife** whose post office address is 13018 NW 148th Terrace, Alachua, FL 32615, Grantors, and **Thomas H. Burrows and Phyllis C. Burrows, husband and wife** whose post office address is 13018 NW 148th Terrace, Alachua, FL 32615, Grantees:

(Whenever used herein the terms "grantor" and "grantee" include all the parties to this instrument and the heirs, legal representatives, and assigns of individuals, and the successors and assigns of corporations, trusts and trustees)

Witnesseth, that said Grantors, for and in consideration of the sum of TEN AND NO/100 DOLLARS ($10.00) and other good and valuable considerations to said Grantors in hand paid by said Grantees, the receipt whereof is hereby acknowledged, have granted, bargained, and sold to the said Grantees, and Grantees' heirs and assigns forever, the following described land, situate, lying and being in Alachua County, Florida to-wit:

Lots 15 and 16, Oak Ridge Crossing, according to the plat thereof, as recorded in Plat Book "U", Pages 19, 20 and 21 of the Public Records of Alachua County, Florida.

Grantors hereby warrant and represent that they were continuously married from a date prior to acquisition of the subject property and the marriage has continued uninterrupted to the date hereof.

Subject to and together with covenants, easements, reservations and restrictions of record and taxes for the year 2005 and all subsequent years.

Together with all the tenements, hereditaments and appurtenances thereto belonging or in anywise appertaining.

To Have and to Hold, the same in fee simple forever.

And the grantor hereby covenants with said grantee that the grantor is lawfully seized of said land in fee simple; that the grantor has good right and lawful authority to sell and convey said land; that the grantor hereby fully warrants the title to said land and will defend the same against the lawful claims of all persons whomsoever; and that said land is free of all encumbrances, except taxes accruing subsequent to December 31, 2004.

In Witness Whereof, grantor has hereunto set grantor's hand and seal the day and year first above written.
Signed, sealed and delivered in our presence:

Title XII
MUNICIPALITIES

Chapter 177
LAND BOUNDARIES

View Entire Chapter

177.041 Boundary survey and title opinion or property information report required.—Every plat or replat of a subdivision submitted to the approving agency of the local governing body must be accompanied by:

(1) A boundary survey of the platted lands. However, a new boundary survey for a replat is required only when the replat affects any boundary of the previously platted property or when improvements which may affect the boundary of the previously platted property have been made on the lands to be replatted. The boundary survey must be performed and prepared under the responsible direction and supervision of a professional surveyor and mapper preceding the initial submittal of the plat to the local governing body. This subsection does not restrict a legal entity from employing one professional surveyor and mapper to perform and prepare the boundary survey and another professional surveyor and mapper to prepare the plat.

(2) A title opinion of an attorney at law licensed in Florida or a property information report showing that record title to the land as described and shown on the plat is in the name of the person, persons, corporation, or entity executing the dedication. The title opinion or property information report must also show all mortgages not satisfied or released of record nor otherwise terminated by law.

History.—s. 1, ch. 71-339; s. 1, ch. 72-77; s. 1, ch. 88-48; s. 3, ch. 98-20; s. 1, ch. 99-288; s. 1, ch. 2017-132.

AMENDED AND RESTATED DECLARATION OF COVENANTS, CONDITIONS, AND RESTRICTIONS FOR OAK RIDGE CROSSING

THIS INSTRUMENT was made on JUNE 25, 2006. the undersigned President and Secretary of Oak Ridge Crossing Homeowners Association, Incorporated a Florida not for profit corporation ("Association").

WITNESSETH:

WHEREAS, the plat for the subdivision of OAK RIDGE CROSSING, a Planned Unit Development, as per **Plat Book "U," Page 19,** in the Public Records for Alachua County, Florida; and

WHEREAS, the original *Covenants, Conditions, and Restrictions For Oak Ridge Crossing, A Planned Unity Development* were recorded December 18, 1998 in Book 227, Page 2111, Public Records of Alachua County, Florida ("Original Restrictions") and encumbered the platted lands.

WHEREAS, the Original Restrictions state that the record owners of two-thirds (2/3) majority vote of the Directors or members of the Association may at any time amend any or all of the Original Restrictions by written agreement. The Original Restrictions further provide that such amendment will not become effective until the instrument evidencing the amendment is recorded.

WHEREAS, the undersigned President and Secretary of the Association certify that more than two-thirds (2/3) of the Directors or members of the Association ("Owners") amended all the Original Restrictions and the undersigned further certify that the Association has the recorded minutes of the Association meeting when this instrument was adopted in its possession.

NOW THEREFORE, the President and Secretary state that the above recitals are true and correct, and they record this instrument evidencing said amendment to the Original Restrictions as follows:

ARTICLE I

DEFINITIONS

The following words when used in this Declaration (unless the context shall prohibit), shall have the following meanings.

(a) Association: "Association" shall mean and refer to OAK RIDGE CROSSING HOMEOWNERS ASSOCIATION, a Florida corporation, not for profit. This is the Declaration of Covenants, Conditions and Restrictions for OAK RIDGE CROSSING to which the Articles of Incorporation and Bylaws of the Association make reference.

(b) "OAK RIDGE CROSSING" or "Subdivision," shall refer to OAK RIDGE CROSSING, a Planned Unit Development, as per Plat Book U, Page 19, the Public Records of Alachua County, Florida.

(c) Developer: "Developer" shall mean and refer to GARLAND OF ALACHUA, INC., its successors and assigns.

(d) Lot: "Lot" shall mean and refer to any and all of the platted lots in OAK RIDGE CROSSING.

(e) Owner or Member: "Owner" or "Member" shall mean and refer to the record fee

simple title holder, whether one or more persons or entities, of a lot, including the Developer.

(f) Board: "The Board" shall mean and refer to the Board of Directors for OAK RIDGE CROSSING HOMEOWNERS ASSOCIATION, INCORPORATED.

(g) Drainage Easements: As located and identified on the Plat of OAK RIDGE CROSSING.

(h) Roadway Easements: "Roadway Easements" shall mean and refer to the 50 foot private easements for ingress, egress, and public utilities as shown on the Plat for OAK RIDGE CROSSING.

(i) 200 Foot Buffer: "200 foot Buffer or Buffers" shall mean and refer to the 200 foot buffer identified on the Plat for OAK RIDGE CROSSING.

ARTICLE II

COMMON AREAS

Section 1. Owners' Ownership Subject to Easements of Use and Enjoyment: Title to the land burdened by 50 foot private roadway easements shall remain in the ownership of the individual lots in the Subdivision. However, every owner shall have a right of use and enjoyment in and to all of the easements, These easements shall be appurtenant and shall pass with the title to every lot, subject to the following:

(a) The right of the Association (in accordance with its Articles and Bylaws), to borrow money for the purpose of maintaining the easements;

(b) The Association hereby reserves the right to dedicate to the public any portion of the easement areas, should same be deemed necessary or desirable by the Association. Should such dedication occur, and it become necessary that a public agency maintain said easements, or any portion thereof, or otherwise expend public funds, such costs shall be due and payable by the individual lot owners, and, if unpaid, shall become liens on individual lots;

(c) All provisions of this Declaration, the plat of the property of OAK RIDGE CROSSING, and the Articles and Bylaws of the Association;

(d) Rules and Regulations governing use and enjoyment of the easements adopted by the Association; and

(e) Easements and restrictions contained on any and all plats of all or any part of the easements or filed separately but in conjunction with such platting.

Section 3. Liability for Damages: Each owner shall be liable for any and all damages to the 'property which constitutes the, drainage facilities, and easements, which shall be caused by the negligence of said owner, his lessees, guests or invitees, and to the extent that such damage is not covered by insurance proceeds, such owner shall be assessed for the cost of repairs, which shall be collectable and enforceable as in the case of other assessments levied by the Association. Each owner shall promptly pay when due all repair bills and/or utility bills that may be a separate lien or charge against his lot.

Section 4. Maintenance: Easements shall not be obstructed, littered, defaced or misused in any manner.

ARTICLE
III
EASEMENTS

Section 1. Reservation of Easement: The Association, for itself, its successor, grantees, and assigns specifically reserves and retains an express easement for ingress and egress over and upon all roadway easements as shown on the record Plat of the Subdivision.

Section 2. Management Easement: The Association shall have an easement for access to all lots for ingress and egress as required by their respective officers, directors, employees and/or agents in order to perform their respective obligations and duties as set forth herein under this Declaration.

Section 3. Utility Easements: Easements are reserved through the property as may be required for utility service in order to serve OAK RIDGE CROSSING adequately. However, this section shall be limited to the easements shown on the Plat of the property duly platted of record and accepted by proper governmental authorities.

Section 4. Property Owners' Use Easements: Each lot owner is hereby granted a non-exclusive perpetual easement and right of way to use all of the easements existing within the Subdivision as more particularly described upon the recorded Plat.

Section 5. Easements to City of Alachua: Drainage easements, as more particularly set forth on the recorded Plat, have been conveyed to and are reserved for the City of Alachua, in connection with the dedication to the public of the 60 foot Right of Way as shown on the recorded Plat. Primary property management, such as mowing and tree removal is the responsibility of the Homeowner's Association.

Section 6. 200 Foot Buffer: The 200 foot buffer as shown on the Plat, has been created to protect the natural amenities of OAK RIDGE CROSSING, and no buildings shall be erected or placed within said buffer except as may be specifically allowed by the Association and the City of Alachua. Fences may be constructed within the buffers, and all maintenance, mowing, landscaping and upkeep shall be the responsibility of the individual lot owners for any portion of the buffer buying within that lot.

Section 7. 50 Foot Private Road Easements: Use of the roadway easements is limited to vehicular and pedestrian and equestrian traffic, and for ingress and egress, utilities and drainage purposes.

Section 8. Drainage Easements: Easements for drainage purposes are reserved for the benefit of all of the lots in the Subdivision, as shown on the Plat and on the Plans filed in conjunction with the platting of this Subdivision (herein referred to as "drainage easements" or "drainage facilities"). Drainage Easements must not be obstructed.

Section 9. Signage Easements: The Association hereby reserves an easement across Lots 3 and 4 as shown on the Plat, for the sole purpose of maintaining the signage and fencing constructed upon said lots as part of the entranceway to the Subdivision along County Road 235.

Section 10. Fence Maintenance: The Association hereby reserves an easement across Lots 1,2,3,4,5 and 6 for the sole purposes of maintaining the fencing constructed upon said lots along County Road 235 and NW 148th Terrace up to the intersection with NW 132nd Place.

ARTICLE IV
OWNERSHIP
ASSOCIATION

Section 1. Creation: Developer shall cause to be incorporated, pursuant to Florida Statutes, a corporation not for profit to be known as OAK RIDGE CROSSING HOMEOWNERS ASSOCIATION, INCORPORATED, in accordance with the Articles of Incorporation, a copy of which is annexed hereto as Exhibit "A", and made a part hereof by reference. The Articles of Incorporation of said Association, and its Bylaws, a copy of which is annexed hereto as Exhibit "B", are hereby made a part hereof by reference.

Section 2. Rules and Regulations: The Association shall have the right from time to time to adopt and promulgate rules and regulations pertaining to the use of the easements, buffers and of the individual lots. Such rules and regulations of the Association when so adopted shall be incorporated in and form a part of this Declaration to the same extent as if originally contained herein, and may include fines or other penalties for violation of the Declarations or of these rules and regulations.

Section 3. Board of Directors: Membership on the Board of Directors shall be open to the owners of all lots within the Subdivision.

Section 4. Duties: The Association shall have, in addition to its regular duties, the following special duties: maintenance of all roadways and maintenance of entranceway fencing and signage.

ARTICLE V

COVENANTS FOR MAINTENANCE ASSESSMENTS

Section 1. Creation of the Lien and Personal Obligations of the Assessments: Each Owner of any lot (by acceptance of a deed therefore, whether or not it shall be so expressed in any such deed or other conveyance), including any purchaser at a judicial sale, shall hereafter comply with all covenants and agree to pay to the Association:

(a) Any annual assessment or charges;

(b) Any special assessments for capital improvements or major repair; and

(c) General maintenance assessment (as set forth hereafter); such assessments to be fixed,
established and collected from time to time as hereinafter provided. All such assessments, together with interest thereon from due date at the highest legal rate of interest thereon and costs of collection thereof, including attorneys' fees, shall be a charge on the land and shall be a continuing lien upon the property against which each such assessment is made. No owner may waive or otherwise escape liability for the assessments provided for herein by non-use of the easements or abandonment.

Section 2. Purpose of Assessments: The assessments levied by the Association shall be used exclusively for the purpose of promoting the health, safety, and welfare of the residents of OAK RIDGE CROSSING and in particular, for the improvement and maintenance of the easements assigned to the Association, including but not limited to, the costs of taxes, insurance, labor, equipment, materials, management, maintenance and supervision thereof as well as for such other purposes as are permissible activities of the Association, and undertaken by it.

Section 3. Annual Assessments: The annual assessments, including funds for special improvement projects and for capital improvements, shall be determined by the Board of Directors of the Association who shall adopt an operating budget for the property in advance of

each fiscal year July 1 through June 30, which shall include the estimated funds required to defray the current expenses and shall provide funds for the reserves. The initial amount of the annual assessment shall be Two Hundred Dollars and 00/100 ($200.00) per year. Future annual assessments will be determined by the Board and will not exceed 115% of the previous year's assessment. The annual assessments shall be paid in equal semi-annual increments in advance on the first day of January and July of each year, a pro-rata portion of each annual assessment payable in each semi-annual period to commence on the first day of the first month following transfer of ownership from the seller to the buyer. The Association may amend the payment schedule of assessments at its discretion to a shorter or longer period, but no more often than monthly and no less than annually.

Section 4. Special Assessments: In addition to the regular assessments, the Board may levy in any assessment year a special assessment, applicable to that fiscal year only, for the defraying, in whole or in part, the costs of any construction, reconstruction, unexpected repair or replacement of a described capital improvement and other related fees and costs. Provided, however, no such special assessment shall be levied when the amount thereof shall exceed one-half (1/2) of the current regular assessment except upon a majority vote of all interests voting at a meeting duly called of members of the Association who are subject to such special assessment.

Section 5. Duties of the Board of Directors: The Board of Directors of the Association shall fix the date of commencement and the amount of the assessment against each lot for each assessment period at least forty-five (45) days in advance of such date or period and shall, at that time prepare a roster of the properties and assessment applicable thereto, which shall be kept in the office of the Association and shall be open to inspection by any owner. Written notice of the assessment shall be sent to every owner subject thereto not later than fifteen (15) days after fixing the date of commencement thereof.

The Association shall, upon demand at any time, furnish to any owner liable for said assessment, a certificate in writing signed by an officer of the Association, preferably the Treasurer, setting forth whether said assessment has been paid. Such certificate shall be conclusive evidence of payment of any assessment therein stated to have been paid.

Section 6. Effect of Non-Payment of Assessment-Lien; Remedies for the Association: If the assessments are not paid on the date when due, such assessment shall then become delinquent and shall, together with such interest thereon and cost of collection thereof, thereupon become a continuing lien on the property which shall bind such property in the hands of the then owner, his heirs, devisees, personal representatives and assigns.

If the assessment is not paid within thirty (30) days after the delinquency date, a late fee of $25 will be assessed and the assessment shall bear interest from the date of delinquency at the highest legal rate of interest. The Association may bring an action to foreclose the lien against the property, in like manner as a foreclosure of a mortgage on real property, and there shall be added to the amount of such assessment the costs of preparing and filing the complaint in such action, and in the event a judgment is obtained, such judgment shall include interest on the assessment as above provided, a reasonable attorney's fee to be fixed by the Court, together with costs of the action. Although no public authority is called upon to maintain the streets or roads lying within OAK RIDGE CROSSING, except as shown on the Plat, if a public authority is so called upon, such funds shall constitute a lien and shall be due and payable from the Association and the individual property owners to the same extent as an assessment for such purposes made by the Association.

Section 7. Subordination of the Lien to Mortgages: The lien of the assessment provided for herein shall be subordinate to the lien of any bona fide mortgage or mortgages (except from buyer to seller of a lot) now or hereafter placed upon the lot subject to assessment; provided,

however, that such subordination shall apply only to the assessments which have become due and payable prior to the sale or transfer of such lot pursuant to a decree of foreclosure, or any other proceeding in lieu of foreclosure. No sale or transfer shall relieve any lot from liability for any assessments thereafter becoming due, nor from the lien of any such subsequent assessment.

Section 8. The Association shall obtain through a reputable insurance agency authorized to conduct business within the State of Florida, hazard, public liability and worker's compensation insurance (if required), and such additional coverage as may be required by law or as it deems advisable. This insurance shall cover the easements, roadways and, improvements in said areas and any and all employees of the Association. The premiums for such insurance shall be paid by the Association and charged to the owners as a part of the total annual assessment as hereinbefore provided.

ARTICLE VI

MAINTENANCE

Section 1. Roadway Easements, and Drainage Easements: The Association shall be responsible for maintenance of the roadways. Each individual lot owner shall be responsible for clearing, mowing, tree trimming (or removal), of all the roadway easements and buffers within the perimeters of the individual lots. Each owner and future owners, shall agree to construct, maintain, repair, replace, operate, and care for real and personal property, including but without limitation, all lakes, ditches, canals, buffers, retention or detention areas, drainage, other surfacewater management works and preservation or conservation areas, wetlands, wetland mitigation areas, which are owned or controlled by them in a manner consistent with the ordinances of the City of Alachua and the permit issued by the Suwannee River Water Management District and the operation and maintenance plans. Additionally, the operation and maintenance of the surfacewater management system shall be the undivided responsibility of all owners and future owners of said lots.

Prior to the termination or release of any owner of the above described lots, all property, interest in property, whether real, personal or mixed which is directly or indirectly related to the surfacewater management system, including but without limitation, all lakes, ditches, canals, buffers, retention or detention areas, drainage, other surfacewater management works, and preservation and conservation areas, wetland and wetland mitigation areas which are owned or controlled by the owners of the above described lots, will be dedicated to and accepted for maintenance by the appropriate unit of government or otherwise transferred to and accepted for maintenance by an approved entity. Dedication or approval must be authorized by the Suwannee River Water Management District through modification of any or all permits or authorization issued by the District. Such modification shall be made under the lawfully adopted rules of the District in effect at the time of application for such modification.

These special limiting conditions shall be binding on all parties hereto, their heirs, personal representatives, successors, grantees, and assigns and shall run with the land.

Section 2. General Maintenance: The Association may provide general maintenance upon any lot which is deemed by the Association to be in need of clearing, mowing, tree trimming or removal, fence painting or other general maintenance or landscaping. The Association may take action if the height of the grass is over twelve (12) inches tall on any portion of the lot. Prior to the Association taking such action as hereinabove set forth, the Association shall notify the owner in writing at his last known address, stating what action needs to be taken by the owner and if after seven (7) days upon receipt of notice such action is not taken by the owner, the Association shall provide the necessary maintenance. The Association shall

assess the owner for any general maintenance work done by the Association, and the owner shall pay same in a timely fashion. If said charges are not paid within 30 days of billing, the Association shall proceed to collect same using all remedies allowed by law.

Section 3. Assessment of Costs: The cost of maintenance of the easements and general maintenance shall be assessed as follows:

(a) The cost of general maintenance shall be assessed upon the lot upon which said maintenance is performed, but shall not be considered to be a part of the maintenance assessment or charge for road, rights of way, easements or drainage facilities.

(b) Assessments for maintenance to easements shall be as set forth hereinabove in Article V. Each lot in the Subdivision shall bear 1/32 of the assessments for maintenance of the roadways and easements in the Subdivision including but not limited to the entryway, lighting and fencing fronting County Road 235.

Section 4. Access at Reasonable Hours: For the purpose of performing the general maintenance authorized by this Article, the Association, through its duly authorized agents or employees, shall have the right, after reasonable notice to the owner, to enter upon any lot or exterior of any unit or other structures located in OAK RIDGE CROSSING at reasonable hours on any day except Saturday or Sunday.

ARTICLE
VII
LAND USE

Section 1. Purposes: No parcel, part, portion or Subdivision lot of this property shall be used except for residential purposes, and as otherwise permitted by this Declaration and applicable zoning laws and regulations. No building shall be erected, altered, placed or permitted to remain on any portion of the herein described property other than a single family dwelling not to exceed two stories in height, and a private garage or carport. There may be incorporated in, or attached to, any such dwelling a garage or carport and storage, laundry or servants' quarters (for use in connection with and to serve the single family unit). Appropriate barns and other accessory structures may be built as detached buildings, provided they meet all setback requirements. No commercial activity shall be allowed except for those home occupations as may be properly licensed by the City of Alachua and involving no on-site advertising, signage or substantial additional traffic within the subdivision. Any out building will have the same color scheme as the residence, will not be located closer than 25 feet from the front lateral line of the residence, and will be maintained.

Section 2. Residence Construction: No residence shall be constructed upon any Homesite except one single family residence, which shall contain not less than eighteen hundred (1800) square feet, heated and cooled, including all stories, but exclusive of any porches or garage, the plans, specifications and color schemes for which must be first approved by the Architectural Control Committee as hereinafter set forth. Said Committee shall have the right to approve colors, materials and methods of construction to insure the type, grade and standard of materials and standard of quality as described hereafter. Neither mobile homes, manufactured homes, nor modular homes may be placed upon any building lot in the Subdivision. No garage or carport shall open toward any street or roadway abutting any lot without the approval of the Architectural Control Committee. Trash and garbage containers as well as air conditioning equipment and all other accessories shall be either fenced or screened with shrubbery so as not to be visible from abutting streets or adjoining lots. All construction must be completed within twelve (12) months from date of commencement of construction, unless an extension is granted by the Architectural

Control Committee.

Section 3. Fences: Fencing of the individual lots must conform to the fencing standards developed by the Architectural Control Committee. Fences are generally permitted, and required with horses. All fences along road fronts and fronting any portion of a roadway shall be four (4) board wooden fences of treated or comparable wood within 4x4 square posts, calculated to have a life expectancy of a minimum of ten (10) years. All four-board fencing will be constructed with all boards mounted facing the road, and shall be painted black.

Section 4. Setbacks: No building shall be placed on any lot or parcel unless it is totally within the building setback lines for that lot or parcel as shown on the Plat. For the purpose of construing the covenant and restriction contained in this paragraph, eaves and steps shall not be considered as a part of the building or dwelling.

Section 5. Temporary Structures: No structure of a temporary character, mobile home, trailer, tent, shack, garage or other outbuilding or recreational vehicle shall be used on any parcel or lot at any time as a residence either temporarily or permanently. No servants' quarters, or other building, including temporary structures, may be erected prior to the commencement of construction of the main residence, except for garages, barns, and building material and tool sheds. All temporary material and tool sheds must be removed promptly after the dwelling is completed.

Section 6. Commercial Vehicles: Commercial vehicles, boats and/or trailers or travel homes shall not be allowed to remain on the streets of this subdivided property except when conducting business. If an owner has a commercial vehicle, boat and/or trailer or travel home, it must be hidden from the street and neighboring lots by walls or shrubbery, and located at least fifty (50) feet from the street, but in no event less than the set-back set for any building, as not to be an unsightly nuisance to the neighborhood.

Section 7. Culverts: All culverts located under driveways or walkways shall have concrete end walls or head walls which shall be constructed in conformity with designs and standards as established by the Architectural Control Committee.

Section 8. Animals: No animals, livestock, horses, or poultry of any kind may be kept within any dwelling or upon the Subdivision property except for dogs, cats, and other household pets which may be kept on individual lots subject to rules and regulations from time to time adopted by the Association, and allowed by applicable City of Alachua ordinances and regulations. Notwithstanding the foregoing, each lot may maintain one horse per acre, subject to rules and regulations established by the Association. No horses without a current negative test (Coggins) for equine infectious anemia will be permitted at any time. In no event may any homeowner maintain a commercial venture in respect to the breeding and marketing of animals, except for horses within the above limits, without prior written approval of the Association.

Section 9. Nuisance: No activity shall be carried on upon any lot within the Subdivision property, nor shall anything be done thereon which may become an annoyance or nuisance to the neighborhood. No hunting or discharging of firearms for target practice, etc. is permitted. All lots, setback areas, yards, walkways, driveways, and parking areas shall be maintained and kept in a neat and clean condition, free of refuse and debris. No signs of a commercial nature may be kept or maintained on any property within the Subdivision at any time, without prior written approval of the Association.

Section 10. Vehicle Repairs: At no time shall there be any repairing, dismantling, or other mechanical work done on any automobiles, or other vehicles, except in an enclosed carport or garage, unless same is completed within 24 hours of commencement.

Section 11. Antennas: No towers, poles, or antennas, may be erected more than ten (10) feet above the roof ridge. No satellite dish larger than thirty-six (36) inches in diameter may be erected. The aforementioned items may not be attached to the street side of the residence.

Section 12. Waste and Sewage: Wells and septic tanks shall not be placed closer than fifty (50) feet to any lot line, or to the boundary of any easement shown on the Plat, nor closer than one hundred (100) feet to each other. No individual water supply system shall be permitted on any lot unless the system is located, constructed, and equipped in accordance with the requirements, standards, and recommendations of the Alachua County Health Department. No individual sewage disposal system shall be permitted on any lot unless the system is designed, located, and constructed in accordance with the requirements, standards and recommendations of the Alachua County Health Department.

ARTICLE VIII

ARCHITECTURAL CONTROL COMLMITTEE

Section 1. Appointment: The Architectural Control Committee shall consist of at least three (3) and not more than five (5) members of the Association in good standing who may employ architects and other professional consultants to assist the Committee. The Architectural Control Committee shall serve at the pleasure of the Board of Directors.

Section 2. Plan Approval: Every person desiring to construct, alter or repaint a different color, any residence, fence, mailbox, clothesline or other structure shall make a request in writing to the Architectural Control Committee for approval. The Committee shall, within thirty (30) days from the date it shall receive the last item required to be submitted, either approve or disapprove such request. Notification of such approval or disapproval shall be made in writing. In the event that any approved construction shall not be commenced within six (6) calendar months or completed within eighteen (18) months from the date of such approval, the proposed construction shall be deemed to have been abandoned and prior to the commencement of any such construction, a new request will be made to the Architectural Control Committee without regard to any prior request. In the event the Committee shall fail to act upon any request for approval within thirty (30) days, such request shall be deemed approved by the Committee.

Section 3. Waiver of Restrictions: The Architectural Control Committee shall have the power of affirmative vote to waive any provisions of this Article VIII or any other Article for any residence, fence or other structure, if by majority vote they determine that the enforcement of such provision would constitute a hardship.

ARTICLE IX

MAINTENANCE OF LOTS BY LOT OWNERS

Section 1. Parking Areas, Etc.: All setback areas, walkways, yards and driveways shall be maintained and kept in a neat and clean condition, free of refuse and debris.

Section 2. Landscaped Areas: All landscaped areas shall be maintained in a live, healthy and growing condition, properly watered and trimmed. Any planting of grass, shrubs or trees which become dead or badly damaged shall be replaced with similar sound, healthy plant materials. Except for trees removed at time of approved construction, trees over ten (10) inches in diameter may not be removed unless they pose a hazard, in which case removal must be approved by the Association. Each residence shall have at least minimum landscaping in accordance with city and county ordinances and state statutes. All residences not in compliance have eighteen (18) months from the date of ratification to bring their landscaping up to minimum standards.

Section 3. Covenant to Maintain: No dwellings or improvements located in the Subdivision property shall be permitted to fall into disrepair. All persons, firms, and corporations who may hereafter succeed to title or acquire any lien or interest against or in the above described real property and improvements situated thereon, do jointly and severally agree to keep and maintain the said improvements in a good state of repair and to properly care for and maintain all lawns and shrubbery in a neat and attractive condition.

ARTICLE

X

MISCELLANEOUS

Section 1. Duration: These covenants shall run with the land and shall be binding on all parties and all persons claiming under them for a period of twenty (20) years at which time said covenants shall be automatically extended for successive periods often (10) years, unless a majority of the then current owners of the lots sign and record an instrument revoking, or altering these covenants in whole or in part.

Section 2. Notices: Any notice to be sent to any member or owner shall be deemed to have been properly sent when mailed, postpaid, to the last known address of the person who appears as owner in the records of the Association.

Section 3. Enforcement: If the owners of any lot, or their successors, heirs or assigns, shall violate or attempt to violate any of the covenants herein, it shall be lawful for any other person or persons owning any real property situated in said Subdivision to prosecute any proceedings at law or in equity against the person or persons violating or attempting to violate any such covenant, and to prevent him or them from so doing, and to recover damages for such violations. The Association may also compel performance by the use of fines, as authorized by law.

Section 4. Severability: Failure to enforce any violation of these restrictions shall not in any manner be construed as a waiver of such provisions.

Section 5. Amendment: These restrictions, both affirmative covenants and restrictive covenants, may be amended by 2/3 vote of all interests voting at a meeting duly called of members of the Association.

Section 6. Notice of Non-Dedication: This Subdivision contains private roadways which have not been dedicated to, nor accepted by, the City of Alachua and the maintenance of such streets shall not be the responsibility of the City of Alachua.

Section 7. 100 Year Flood Prone Areas: Properties which have natural ground elevations below the 100 year flood plain as shown on the Plat of OAK RIDGE CROSSING are prone to severe flooding. Development on such properties may be subject to special regulation (based on the minimum standards of the Federal Emergency Management Agency, National Flood Insurance Program) by Alachua County, Florida, which requires that structures be elevated at least one foot above the 100 year flood levels. Such development may require special surveying, engineering, or architectural design to insure that flood hazard is not increased by the development.

EXPIRES: January 19, 2008
Bonded Thru Notary Public Underwriters

Attachment: Consent of ¾ majority of members of Oak Ridge Crossing Homeowners Association, Incorporated.

Burrows Boundary Adjustment

Minor Subdivision Application

D4. Concurrency Impact Analysis

The Minor Subdivision Application and site plan proposes to adjust the boundary between lots #15 and #16 as described on Parcel 03925-010-015 to increase lot # 15 to 3.0 acres and reduce lot # 16 to 2.0 acres. This is located within Oak Ridge Crossing at 13018 NW 148th Ter, Alachua, Fl 32615. This project proposes to move the dividing lot line between the 2 plated lots by approximately 75 feet.

-No increase in climate controlled/enclosed building square footage is proposed

-There is no proposed change in the primary or area use for the parcel.

-No new traffic shall be generated as part of this project or plan application

-No new lots are proposed

Article 10 of the city of Alachua LDR's defines 'de minimis' development activity as follows;

"De minimis impact means an impact of not more than ten average daily trips on the affected road from an existing parcel of record, contiguous commonly-held parcels, or a development proposal unless the impact exceeds the adopted level of service of a designated hurricane evacuation route."

As such, the project is exempt from the requirement to receive a certificate of concurrency compliance. The City of Alachua LDR , Sec. 2.4.14 States:

2.4.14 Certificate of concurrency compliance

(B) Applicability. Unless exempted by Subsection 2.4.14(C) of this section, Exemptions, the provisions of this section shall apply to all development orders specified in Subsection 2.4.14(D) of this section, Overview of certificates. A separate certificate of concurrency compliance shall not be required for each permit, approval associated with an individual development order.

(C) Exemptions. The following forms of development shall be exempt from the requirements of this section:

(3) Development with a de minimis, or no impact on public facility levels of service as determined by the LDR Administrator:

Burrows Boundary Adjustment

Minor Subdivision Application

Section D.5 Analysis of Consistency with City of Alachua Comprehensive Plan.

COMPREHENSIVE PLAN CONSISTENCY ANALYSIS

MINOR SUBDIVISION BOUNDARY REVISION REPLAT OF LOT 15,16 OAK RIDGE CROSSING

Goal 1 of the Future Land Usage Element sets forth a Future Land Use Map in order to effectively guide development in a sustainable manor and to ensure economic prosperity and stability while maintaining ahigh quality life for all of its present and future citizens, businesses and visitors. The PUD of Oak Ridge Crossing is located within the area designated as Agricultural.

Objective 1.1 of the Future Land Use Element establishes an Agriculture land use category in order to maintain agriculture operations within the city limits as well as preserve the rural character and small-town charm of Alachua.

Policy 1.1a sets forth Residential Uses within the Agriculture land use category at a minimum density of 1 dwelling per 5 acres (except that homesteaded lots may be developed at one unit per two acres Sec. 3.3.2)

This request revises the dividing boundary between 2 existing lots in the Oak Ridge Crossing PUD. The existing lots are each 2.5 Acre. The resultant lots will be 3.0 Acre and a minimum of 2.0 Acre. No change to usage as intended in the original PUD approval.

This requested boundary adjustment does not change any of the Goals, Policies or Objectives of the plan and does not change existing usage designation.

9. Review Type:

Preliminary Development Order	***Final Development Order***
☐ Comprehensive Plan Amendment	☐ Preliminary Plat
☐ Large Scale	☐ Final Plat
☐ Small Scale	☐ Site Plan
☐ Site Specific Amendment to the Official Zoning Atlas (Rezoning)	
☐ *Revised*	

10. School Concurrency Service Areas (SCSA): Based on the project location, identify the corresponding SCSA for each school type. Maps of the SCSAs can be obtained from the Alachua County Growth Management Department's Map Genius web page: https://mapgenius.alachuacounty.us/ Select the Layers tab under the Tools Tab located at the top left of the page. After expanding the Public School Layers tab, the elementary, middle, and high school concurrency service areas will be shown as options.

    Elementary: _____

Middle:_____

High:_____

Explanation of Student Generation Calculation: Student Generation is calculated based on the type of residential development and the type of schools. The number of students stations (by school type – Elementary, Middle and High School) used for calculating the school concurrency impacts is equal to the number of dwelling units by housing type multiplied by the student generation multiplier (for housing type & school type) established by the School Board. **Calculations are rounded to the nearest whole number.** Student Generation for each school type is calculated individually, in order to correctly assess the impact on the School Concurrency Service Area (SCSA) for each school type (Elementary, Middle and High School).

# of Elementary School Student Stations	=	# of housing units	x	Elementary school student generation multiplier
# of Middle School Student Stations	=	# of housing units	x	Middle school student generation multiplier
# of High School Student Stations	=	# of housing units	x	High school student generation multiplier

Student Generation Calculations: Single Family Residential Development

Elementary School	_____	units	x	_____	Elementary School Multiplier*	_____	Student Stations**
Middle School	_____	units	x	_____	Middle School Multiplier*	_____	Student Stations**
High School	_____	units	x	_____	High School Multiplier*	_____	Student Stations**

Student Generation Calculations: Multi-Family Residential Development

Elementary School	_____	units	x	_____	Elementary School Multiplier*	_____	Student Stations**
Middle School	_____	units	x	_____	Middle School Multiplier*	_____	Student Stations**
High School	_____	units	x	_____	High School Multiplier*	_____	Student Stations**

** ***Round to the nearest whole number***

EXEMPT DEVELOPMENTS (check all that apply):

- ☒ Existing legal lots eligible for a building permit.
- ☐ Development that includes residential uses that has received final development plan approval prior to the effective date for public school concurrency, or has received development plan approval prior to June 24, 2008, provided the development approval has not expired.
- ☐ Amendments to final development orders for residential development approved prior to the effective date of public school concurrency, and which do not increase the number of students generated by the development.
- ☐ Age-restricted developments that prohibit permanent occupancy by persons of school age, provided this condition is satisfied in accordance with the standards of the Public Schools Facilities Element or the ILA.
- ☐ Group quarters that do not generate public school students, as described in the ILA.

A completeness review of the application will be conducted within 5 business days of receipt. If the application is determined to be incomplete, the application will be returned to the applicant.

Warranty Deed

This Warranty Deed made this 18th day of May, 2005 between **Edmund Johnston and Jennifer Haggard, husband and wife** whose post office address is 13018 NW 148th Terrace, Alachua, FL 32615, Grantors, and **Thomas H. Burrows and Phyllis C. Burrows, husband and wife** whose post office address is 13018 NW 148th Terrace, Alachua, FL 32615, Grantees:

(Whenever used herein the terms "grantor" and "grantee" include all the parties to this instrument and the heirs, legal representatives, and assigns of individuals, and the successors and assigns of corporations, trusts and trustees)

Witnesseth, that said Grantors, for and in consideration of the sum of TEN AND NO/100 DOLLARS ($10.00) and other good and valuable considerations to said Grantors in hand paid by said Grantees, the receipt whereof is hereby acknowledged, have granted, bargained, and sold to the said Grantees, and Grantees' heirs and assigns forever, the following described land, situate, lying and being in Alachua County, Florida to-wit:

Lots 15 and 16, Oak Ridge Crossing, according to the plat thereof, as recorded in Plat Book "U", Pages 19, 20 and 21 of the Public Records of Alachua County, Florida.

Grantors hereby warrant and represent that they were continuously married from a date prior to acquisition of the subject property and the marriage has continued uninterrupted to the date hereof.

Subject to and together with covenants, easements, reservations and restrictions of record and taxes for the year 2005 and all subsequent years.

Together with all the tenements, hereditaments and appurtenances thereto belonging or in anywise appertaining.

To Have and to Hold, the same in fee simple forever.

And the grantor hereby covenants with said grantee that the grantor is lawfully seized of said land in fee simple; that the grantor has good right and lawful authority to sell and convey said land; that the grantor hereby fully warrants the title to said land and will defend the same against the lawful claims of all persons whomsoever; and that said land is free of all encumbrances, except taxes accruing subsequent to December 31, 2004.

In Witness Whereof, grantor has hereunto set grantor's hand and seal the day and year first above written.
Signed, sealed and delivered in our presence:

Re: Burrows Minor Subdivision Application

From: Justin Tabor (jtabor@cityofalachua.org)

To: ronedwards48@yahoo.com

Date: Wednesday, January 26, 2022, 06:23 PM EST

See attached

Mr. Edwards,

The margin requirement actually come from Chapter 177.091, Florida Statutes. The copies you have will be acceptable for review purposes, but please have the surveyor correct it for subsequent submittals.

The name of the subdivider should be the current property owners with contact information.

Sincerely,

Justin Tabor, AICP

Subject: Burrows Minor Subdivision Application

I have a couple more questions on this application. I have the full sized Plat but it has 3 in border on left and 1 inch border top, right and bottom. Is this acceptable?

Would the name and address of subdivider be as follows:

Ronald Edwards - Owners Agent
11620 NW 120th Ter
Alachua, Fl. 32615

thanks for all the help. I think I have everything else in the works.

Ron

Chapter 177
LAND BOUNDARIES

View Entire Chapter

177.091 Plats made for recording.—Every plat of a subdivision offered for recording shall conform to the following:

(1) It must be:

(a) An original drawing made with black permanent drawing ink; or

(b) A nonadhered scaled print on a stable base film made by photographic processes from a film scribing tested for residual hypo testing solution to assure permanency.

Marginal lines, standard certificates and approval forms shall be printed on the plat with a permanent black drawing ink. A print or photographic copy of the original drawing must be submitted with the original drawing.

(2) The size of each sheet shall be determined by the local governing body and shall be drawn with a marginal line, or printed when permitted by local ordinance, completely around each sheet and placed so as to leave at least a ½-inch margin on each of three sides and a 3-inch margin on the left side of the plat for binding purposes.

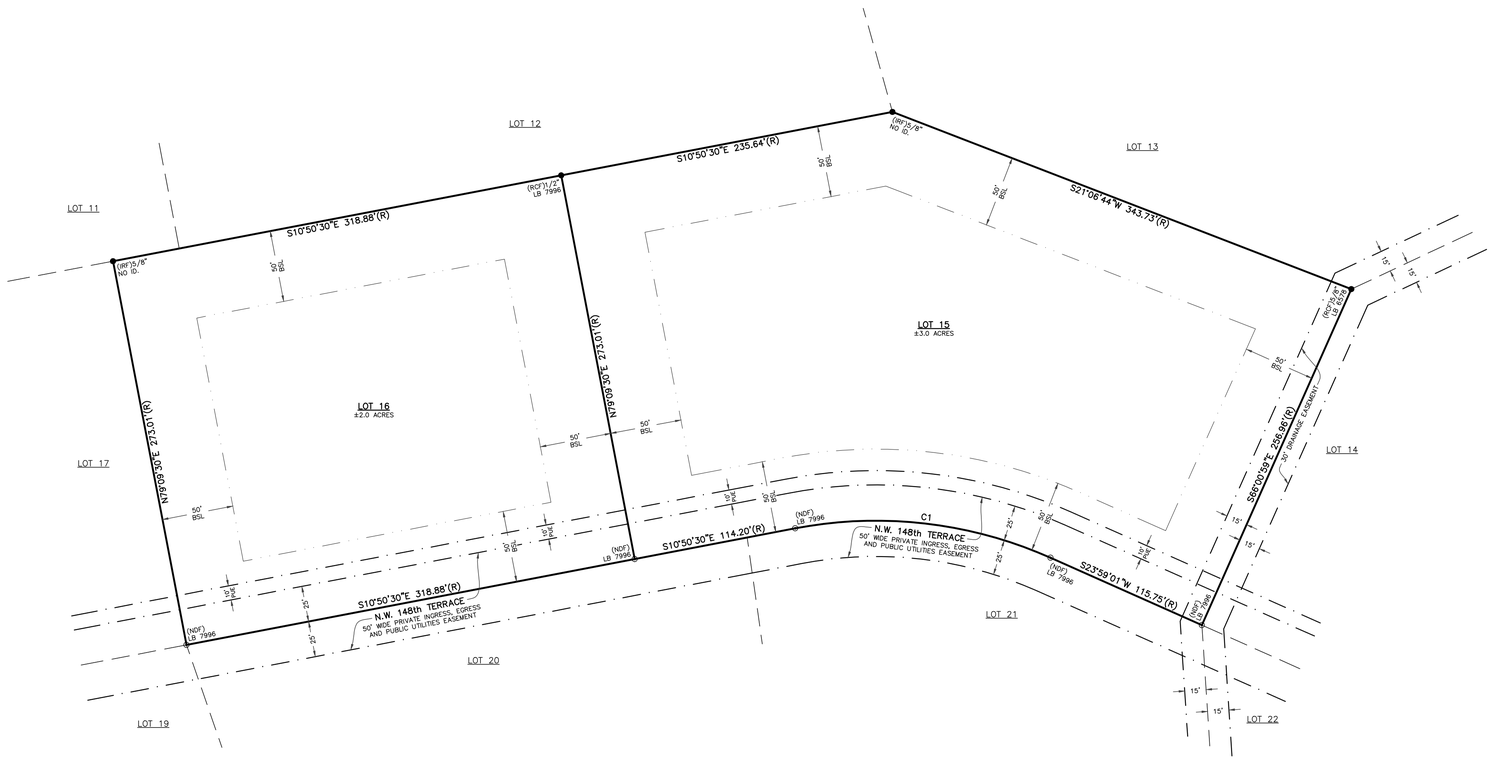
(3) When more than one sheet must be used to accurately portray the lands subdivided, an index or key map must be included and each sheet must show the particular number of that sheet and the total number of sheets included, as well as clearly labeled matchlines to show where other sheets match or adjoin.

(4) In all cases, the letter size and scale used shall be of sufficient size to show all detail. The scale shall be both stated and graphically illustrated by a graphic scale drawn on every sheet showing any portion of the lands subdivided.

(5) The name of the plat shall be shown in bold legible letters, as stated in s. 177.051. The name of the subdivision shall be shown on each sheet included. The name of the professional surveyor and mapper or legal entity, along with the street and mailing address, must be shown on each sheet included.

(6) A prominent "north arrow" shall be drawn on every sheet included showing any portion of the lands subdivided. The bearing or azimuth reference shall be clearly stated on the face of the plat in the notes or legend, and, in all cases, the bearings used shall be referenced to some well established and monumented line.

(7) Permanent reference monuments must be placed at each corner or change in direction on the boundary of the lands being platted and may not be more than 1,400 feet apart. Where such corners are in an inaccessible place, "P.R.M.s" shall be set on a nearby offset within the boundary of the plat and such offset shall be so noted on the plat. Where corners are found to coincide with a previously set "P.R.M.," the Florida registration number of the professional surveyor and mapper in responsible charge or the certificate of authorization number of the legal entity on the previously set "P.R.M." shall be shown on the new plat or, if unnumbered, shall so state. Permanent reference monuments shall be set before the recording of the plat. The "P.R.M.s" shall be shown on the plat by an appropriate symbol or designation.



(8) Permanent control points shall be set on the centerline of the right-of-way at the intersection and terminus of all streets, at each change of direction, and no more than 1,000 feet apart. Such "P.C.P.s" shall be shown on the plat by an appropriate symbol or designation. In those counties or municipalities that do not require subdivision improvements and do not accept bonds or escrow accounts to construct improvements,

City of ALACHUA
THE GOOD LIFE COMMUNITY

NOTICE OF PUBLIC HEARING BEFORE THE CITY COMMISSION OF THE CITY OF ALACHUA, FLORIDA

Notice is hereby given that the City Commission of the City of Alachua will hold a public hearing on March 28, 2022 at 6:00 p.m. The hearing will be held in the James A. Lewis Commission Chambers in City Hall, located at 15100 NW 142nd Terrace, Alachua, Florida, to consider the following: A request by Ronald Edwards, agent for Thomas and Phyllis Burrows, property owners, for consideration of a Final Plat. The final plat proposes a minor subdivision to replat Lots 15 and 16 of the existing Oak Ridge Crossing subdivision. The subject property is located at 13018 NW 148th Terrace. Tax Parcel Number 03925-010-015; Future Land Use Map (FLUM) Designation: Agriculture; Zoning: Planned Unit Development (PUD).

At the public hearing, all interested parties may appear and be heard with respect to the application. Copies of the application are available for public inspection at the Planning and Community Development Department, 15100 NW 142nd Terrace, Alachua, Florida, on any regular business day between the hours of 7:30 a.m. to 6:00 p.m. Written comments on the application may be sent to the following address: City of Alachua, Planning and Community Development, P.O. Box 9, Alachua, FL 32616. Notice is given pursuant to Section 286.0105, Florida Statutes, that, in order to appeal any decision made at the public hearing, you will need a record of the proceedings, and that, for such purpose, you may need to ensure that a verbatim record of the proceedings is made, which includes the testimony and evidence upon which the appeal is to be based. In accordance with the Americans with Disabilities Act, any persons with a disability requiring reasonable accommodation in order to participate in this meeting should call the City Clerk at (386) 418-6100 x 1501 at least 48 hours prior to the public hearing.

Commission Agenda Item

MEETING DATE: 3/28/2022
SUBJECT: Children's Trust of Alachua County Contract
PREPARED BY: Elliot Harris, Director of Parks and Recreation

RECOMMENDED ACTION:
Approve the City Manager to enter into negotiations with CTAC and to sign all appropriate documents to secure the grant.

Summary

On January 14, 2022, The Children's Trust of Alachua County released a RFP for summer enrichment programming. The past two years CTAC has awarded The City of Alachua funds to support the Legacy Park Summer Adventure Camp. City staff submitted a proposal to CTAC for summer funding, and on March 18, 2022, staff was informed that the proposal of $66,665 was granted to the City of Alachua Recreation and Culture Department.

FINANCIAL IMPACT: No

BUDGETED: No

AMOUNT:$66,665

ADDITIONAL FINANCIAL INFORMATION: This is the fourth consecutive year that the Recreation and Culture Department has held a summer camp at Legacy. Recreational activities not only enhances the quality of life for families, it also provides for children to grow physically, mentally, socially and emotionally.

COMMISSION GOALS:
Quality of Life, Community Enhancement
